I regret to inform you that M. ROYER-COLLARD expired on the 4th inst. at his country-seat at Châteauiveux, near St. Aignan, in his 82nd year. This distinguished politician has exercised great influence during the last 30 years—an influence which he owed as much to his character out of doors as to his eloquence in the Chamber. In 1814 LOUIS XVIII. confided to M. ROYER-COLLARD the general direction of the printing establishments and public libraries; he was subsequently grand-master of the university; but in 1819 he resigned his appointments, and fell off from the ministerial benches. At the period of VILLELE's administration he was avowedly a member of the Opposition; but, unlike the rest of his party, he separated himself entirely from the *partie gauche* as from that of the ministers. The former was then reduced to seventeen members. He spoke against the septennality of the Chamber, the laws of exception, those of entail and sacrilege, and in favour of the liberty of the press. M. ROYER-COLLARD by these measures secured immense popularity, and in 1827 was nominated by seven electoral colleges. He was a member of the French Academy, and Professor of Philosophy to the Faculty of Letters.

Our clever countryman Mr. BALFE has, as I am informed, accepted the *libretto* of the *Jew of Toledo*, written by M. HIPPOLITE LUCAS, which was returned by M. HALEVY, under the plea that he could not complete the opera within the seven months specified. What are you about in England thus to expatriate talent which is so thoroughly recognised here? Although "no man is a prophet in his own country," surely your musical *cognoscenti*, who are ready enough to encourage foreign talent, might bestow some portion of their attention and patronage upon native genius in so extreme a case as this.

Our wits are busy here on the subject of ALPHONSO KARR, upon whom the Cross of Honour has just been conferred. They say that he has laughed at it for a long time, and is caught at last; but that it is, at all events, very honourable and very fortunate for the order, and more than it deserves. What would a literary man in England say to such a distinction? Herein the French, and, indeed, all other European countries, set us an example, by which, however, we do not appear anxious to profit.

Although by no means a literary matter, I cannot omit to mention to you the invention of an extraordinary piece of me-

chanism, which, after the persevering labour of fifteen years, has just been perfected by a M. BARTHELEMY THIMOUNIER, a tailor at Amplepuis, in the department of the Rhône, and which is said to be as surprising from its simplicity, as by the vastness of its results, and the revolution which it is likely to effect in needlework. This machine is a sewing-frame. It executes on an average 200 stitches a minute, making them longer or shorter at will, by means of a screw; lends itself to all irregularities of outline, to all sinuosities, and varieties of material, and causes the needle to pass without difficulty, or any danger of its breaking, through the strongest and coarsest stuffs. Such are its incredible results. In making great coats, there is no seam which it cannot sew, and no necessary work which it cannot accomplish, save making button-holes.

I much crave indulgence for this last piece of intelligence, as being somewhat out of my department, but I thought it too curious to be passed over in silence; and the rather as it has, in all probability, not yet been heard of in England.

JOURNAL OF GERMAN LITERATURE.

GLANCES OF GERMAN LITERARY INTELLIGENCE.

(*From our Correspondent.*)

IN our last number we meationed an excellent work on the poets of the present time, *Poeten der Jetztzeit, in Briefen an eine Frace*, including the poets of other countries than Germany. The first part, we stated, is devoted to the Polish poet, ADAM MICKIEWITZ, who is now at Paris, where his talents are lying idle. The second concerns two celebrated names; the first is the Italian poet GIACOMO LEOPARDI, who died in 1837; his poems were about that time translated into German, by R. L. RANNEGIESSER, and published, we believe, at Leipzic. After a short examination into the characteristics of LEOPARDI, the writer comes to PLATEN. He will not, we think, enlist the judgment of many with him when he declares PLATEN to be among the finest poets that Germany has seen. Any one who reads through his poems cannot but perceive that their author possesses the true poetical temperament, and expresses his feelings in elegant and appropriate diction; but the genuine creative power, without which no man is a poet, he does not possess. For this reason PLATEN fell into the habit of adopting foreign forms in his verses—forms in which the absence of this power was less plainly seen; but under this mask it needed not a discriminating eye to perceive the want attempted to be concealed. SCHEER acknowledges, in spite of his overweening partiality for PLATEN, that his dramas all fail in vigour. PLATEN no doubt fancied himself higher than he was, and his failure sufficiently accounts for his bitterness against HONWALD and MULLNER, against IMMERMAN and HEINE. It is to be objected also that the selections from his poems given in these volumes are not the most favourable that might have been made.

The third part leads to the Suabian poets. HERR VON SCHEER, who is thoroughly Suabian, heart and soul, therefore, must be forgiven if affection leads him a little astray in his judgment concerning the poetry of his nation. We can hardly say that there is such a thing as a Suabian school of poets, yet some *have* classed UHLAND, SCHWAB, KERNER, MORIKE, and PFIZER together under that designation. At the conclusion of his character of UHLAND, the writer pens an address to him, regretting that he has now ceased to write, and urging him again to lift up his voice and sing. GUSTAV SCHWAB follows UHLAND. The field in which he has laboured most was scarcely the lyric—it was more a combination of the lyrical and descriptive, a kind of narrative, combining the legend, the romance, the ballad. JUSTINER KERNER is a writer of more individuality. His poems abound in pain and sorrow, and resignation, while his prose works are of a remarkably gay and cheerful spirit—at times they are really humorous; witness his *Barenhäuter in Salzbad*, and the *Reiseschatten*. PFIZER is a writer of great talent, more didactic, perhaps, than poetical.

The fourth part comprehends HEINRICH HEINE alone. The author declares himself to be thoroughly wearied out with the unceasing discussion called up by this name; and doubtless there are very many who are quite of his opinion. HEINE is decidedly wanting in that earnestness of purpose which is equally essential to the successful statesman, the warrior, the philosopher, as to the poet; and of this not a trace is to be met with in him. His late, and most unexpected, union with the spirits of Young Germany was quite a new phase in his character. For the last fifteen years, or about that time, he had exerted no small influence upon that literary clique; now writing in the *Augsburg Gazette*, now publishing a sonnet here and there, when, all at once, he changed his place, and entered boldly upon the struggle. It may be doubted whether his talent will much increase their strength. Some years since, HEINE was the poet of the new generation; since the school of UHLAND had been silent, he had seized upon the mind of the public, and centred its interest on himself alone; and perhaps, for the time, nothing could have been better suited to it. In 1840, when HERWEGH, DINGELSTEDT, and their associates, stirred all Germany with their political songs, HEINE appeared to be quite out of date; the sonnetteer was really lost, and probably would have been utterly forgotten, had he not suddenly determined to join them, and thrust himself at once into the very centre of their ranks. He plunged with such violence into the *mêlée*, as, apparently, to cause as much alarm to his new friends as he had ever done to his enemies. At least, to us, this seems to have been the effect produced by the publication of his *Neue Gedichte*. It is always an advantage when a poet returns to the study of true poetry. HEINE'S first productions appeared in the form of a book of songs. Since then, he has, as we mentioned above, now and then inserted a few verses in the public journals, and last year witnessed the publication of his *Atta Troll*, a work concerning which opinions are many and various, but in our belief it must, at least, be styled clever and amusing. His latest work is the *Neue Gedichte*, of which we may doubt whether the value, a few years hence, will be very great, when the events (sometimes trivialties) on which they are based will have utterly escaped the memory. They contain much that is clever, and even brilliant, though we may be far from agreeing with those who pronounce them to be the most remarkable poems that Germany has seen for a long time. It is quite impossible to deny their originality, particularly after reading a volume either of PRUTZ or of HERWEGH; but, perhaps, they are too bitter, too harsh. HEINE wounds his country too deeply ever to be able to control it. He has evidently lost all confidence in Germany, and therefore she defies him. This is a consequence which he must expect, or, at all events, endure; it may be difficult, perhaps impossible, for him to alter his strain, but remaining as it is, the effects upon the readers cannot be otherwise than they are.

The fifth part of the *Poeten der Jetztzeit* is inscribed "Young Germany." The first violent rush of Young Germanism has passed away. SCHEER does not speak partially—he is no party man—he only writes and describes historically. He is of opinion, and we cannot agree with him, that these lyrical effusions are totally independent of political tendency. Even HOFFMAN, of Fallersleben, himself is not independent of it, and he is the strongest spirit among this circle of singers. DINGELSTEDT and HERWEGH stand indisputably in connection with Young Germany. The revolution of July 1830, and the condition of Poland, gave them their first incentive. They tried every thing, the novel, the political pamphlet, the romance, and, at last, the drama. The experiment with the drama was the most unfortunate. GUTZKOW is the most distinguished among these dramatists, but it is to be hoped he will soon quit a path which is by no means adapted to one of his peculiar talents. WIENBARG is another powerful and industrious author, who often attains the really poetical. MUNDT we spoke of in a former notice; he has been satirically styled, "the clever cook." He composes, or, perhaps, *compounds* every thing, gives it some name high-sounding or peculiar, and it is done. IMMERMAN is rightly described as a man who excites no sympathy. He has not the pliability of GOETHE, and yet he will imitate GOETHE, as, for instance, in his *Epigonen;* he looks down upon SCHILLER, and considers the *Braut von Messina* a total failure. There is, too, a tone of TIECK, if we may so express it, throughout other of IMMERMAN'S works, particularly in the *Munckhausen*.

This work is deservedly thought very beautiful, though if one examines into the admiration it has excited, it will be found to be based only on the episode of the Westphalian "Oberhof;" and that of "Elsbeth and the Hunter"—the history of Munckhausen himself — that of his daughter—of the schoolmaster Agesel—all is in the genuine style of TIECK. The *Tristan und Isolde* of IMMERMAN should not be passed over. It might have been better had this fine old poem been left in its own form. The tales and ballads added to it are good in themselves, but they were not wanted. The unfortunate GRABBE is next treated; he was a poet of much power, almost amounting to violence, but wanting in flexibility and tenderness; so that his mirth rises to bacchantic rage, his melancholy tones become a demoniac laugh, and his very thoughts involuntarily assume the sharpness and poignancy of the epigrammatic form. To him follows FRIEDRICH RUCKERT. His *forte* is the lyrical, as we find even in the dramas he has of late attempted. He is as much at home, too, in the gentle gossip of the child's world as in the depths of the most earnest inquiry.

Another part is devoted to the French. With some few observations, the author passes from "the nightingale with eagle's claws," as BERANGER was named by BORNI, to VICTOR HUGO. The dramas of this latter furnish an abundant matter for discussion, with those of DELAVIGNE, ALEXANDRE DUMAS, &c. Then a short analysis of the characteristics of LAMARTINE, which evidences more strongly to Herr V. SCHEER'S delightful talent for this kind of writing. Then follows a chap-

ter on an Austrian poetical triumvirate. The first of these is, of course, ANASTASIUS GRUN. It was a calumny which was once said of him, that he was an apostate to his own principles. He himself has well said, "When freedom has once cast a beam into the heart, it remains ever warm." The *Nibelungen im Fraek* is a humorous *capriccio;* but many may differ in according the places next to GRUN and NIKOLAUS LENAU to KARL BECK, as the author has done. ZEDLITZ rather deserved it before him. BECK has talent, but not of the first order; his early high-strained admirers have long since left him; his first step was one of much promise, but no after-time has seen him advance. LENAU is a genuine German poet; he has the tenderness and love of a woman, coupled with great power and energy; his *Faust* contains many beautiful things—many deep truths nobly expressed. His *Savonarola*, too, is a poem full of charms, equally admirable in form and invention. An objection to the *Albigensern* may be justly made, that it contains no centre of personal interest, for neither Pope INNOCENT III. nor Count RAYMOND of Toulouse can claim to be such; consequently, the poem is rather a collection of distinct passages than an organised whole. Herr SCHEER is unaccountably oblivious of ZEDLITZ; his poem *Waldfraulein*, which appeared but lately, is really beautiful, and evidences a fine poetical mind.

The next is also an interesting topic, *Dichtende Frauen* (Poetical Women). BETTINA stands foremost among them. Many persons look upon BETTINA as a fanciful visionary; here, in England the mass of readers have not yet learned to appreciate her, but in her own country she ranks high, we believe, beyond any of her female contemporaries. Charming as are the novels of Madame HAHN HAHN, of Frau VON PAALZOW, and FREDERIKA BREMER, none of these women can be placed near Madame VON ARNIM. She possesses a remarkable independence and originality of opinion. One never sees in her any thing repeated as others repeat it, never any thing imitated; every idea bears on itself the stamp of its origin in her own mind. How different is she in this to that highly estimated woman Madame DE STAEL, who just transcribed all that her friend SCHLEGEL told her upon German art, German life, and German philosophy. All that comes from BETTINA comes unconsciously, without affectation, as if she had no conception of the power and importance of her observations; a great evidence of the originality of her thoughts.

FREILIGRATH of course is duly mentioned among the others that follow. The poet of the desert is no favourite with SCHEER; his poems he calls rhymed prose, and his translations of ROBERT BURNS, which on all hands are allowed to be excellent, he declares are not to be compared to many that have been attempted before. MOZEN we have referred to above, so we will not repeat what SCHEER may remark of him here. LEOPOLD SCHEFER, VON SALLET, C. DULLER—SCHEFER in particular, are examined at some length. DULLER perhaps is the greater poet of the three, his *Furst der Liebe* is very fine, and shews the flow of his thoughts, the freedom of his ideas. SPINDLER is a poet of much merit, but better known perhaps as a romance writer. He has, we believe, been lately employed upon some village tales (Dorfgeschichten). The political lyric closes this interesting volume. Of those who cultivate this modern branch of poetry, HOFFMAN of Fallersleben must be ranked the highest, he has the power of penetrating and moving all classes.

This work of SCHEER's shews much critical judgment, and it is particularly praiseworthy that the author does not stand forth as the champion of any individual party. He has of course his antipathies as well as his prepossessions, and is occasionally unjust in his estimations, as, for instance, in the judgment he passes on BECK, ZEDLITZ, and one or two others. It is addressed to a lady, by which the writer doubtless implies that he has undertaken no deeply critical or investigating labour; and according to his intentions, he has done well.

JOURNAL OF ITALIAN LITERATURE.

Isabella Orsini, Duchessa di Bracciano. Da F. D. GUERRAZZI. 1845.

THE last work which we brought under the notice of our readers, as having had a great success in Italy, was one which remounted to the thirteenth century for the subject which it selected. The author of the book before us has taken a period still more stirring, though his story is of a somewhat more domestic character. ISABELLA DEI MEDICI, daughter of COSMO, and sister of FRANCESCO, was married at an early age to a distinguished Roman, PAOLO GIORDANO DI ORSINI, Duke of Bracciano. Warlike and ambitious, the young duke plunged into the contests of the period, and wound up the first part of his military career by his skill and valour at the battle of Lepanto. Returning to Rome, and remaining there some time with the Cardinal FERDINAND DEI MEDICI, he left his family at Florence, where since his departure they had remained under the guardianship of the Grand Duke FRANCESCO, and in charge of a cousin of his own, TROILO ORSINI by name. But while at Rome, he received a message from FRANCESCO to repair at once to Florence, for the irregular life of ISABELLA was already a matter of notoriety. Indeed, the Medici family, never remarkable for morality, had now sunk into absolute degradation; and the following conversation between PIETRO, the brother of the grand duke, and that prince himself, will graphically set forth some of the excellencies of the house of Medici.

Francesco, having composed a little the quilt that covered him, said, in a gentle voice,

"Enter, Don Pietro."

"God preserve your serene highness."

"Thanks for your prayers."

"I wait your highness's commands."

"I thought just now that four or five summonses had been neglected."

"I feared to disturb business of state, such as your highness's manufacture of porcelain; and besides, "he comes soon enough who comes in time.'"

"You should recollect a little more frequently than you seem to do, that you are my subject; and if you have no respect for the head of your family, at least you should reverence the majesty of your sovereign. But what are you doing?—why are you walking about the room so? Pray sit down, and listen quietly to me."

"Don Francesco, I came here on the faith of your princely word, and as you know that it is a long while from July to Lent, I pray you not to assassinate me with a sermon."

"Sit down. I sent for you not on my account, but yours. My motives are love for you and care for your reputation and prosperity."

"Indeed! What has caused this sudden fit of fraternal love? Has King Sebastian sent it from Lisbon with a ship-load of pepper? I must really have some reason assigned for these tendernesses, for they are enough to make a dog stare!"

"Do I merit this? have I not given and do I not continue to give proofs of my love for my family, my respect for my blood?"

"I never heard of your trying to slacken its course."

"You are angry at my not shewing you more favour; you fill my court with complaints, and write to the cardinal about it; and suppose I now determine to *discourage* you, and to turn your insolence into meanness?"

"My brother, you will not succeed in making me angry; I am already half of your opinion, but, to save trouble, I will accept the other half too."

"Well, then, you absolve me from ceremony; I will, therefore, tell you plainly, that you are the most abject, vile, and infamous gentleman in all Christendom."

"Very noisy words—pass to facts."

"Your wife is an adultress."

"Well, I know it."

"What! you know it, and remain unrevenged?"

"Why, the fact is, that we Medici are not lucky in our wives."

"What! What do you mean?" exclaimed Francesco, springing up in bed. "Of what crime can you accuse the late Grand Duchess Giovanna?"

"Heaven keep her in peace, she was a saint."

"And Bianca?"

"Oh! Bianca; I know nothing against her since you married her, but before that—"

"Before that she did not belong to me, and I have no right to investigate her conduct before she became mine."

"Others assume it, at all events."

"When we cast over her our grand ducal mantle, the *woman* disappeared—the princess only remained; raising her to our throne, we regenerated her with a baptism of majesty."

"Let me remind your highness also that even alkali will not wash out every thing; that the cloth gives way sometimes before the stain; and you must have a certain red spot on your hands of which not all the water of the Arno can rid you; and this spot is made by the blood of Bonaventuri."

"Who dares to say that I caused the death of Bonaventuri? Even if my own father were to assert it, I would give him the lie in his throat. I did not order it, nor am I at all concerned in it; I can swear it."

"Between ordering, insinuating, foreseeing, imagining, contriving, and the like, if the judges of this world have to decide, your pettifoggers can find so many and such subtle distinctions, that no one will condemn you; but before God you will not be able to plead by procurators or proxies. Do you think you hide the stain from him with your sleeve, or do you give him to understand that it is a ruby?"

"Ingrate and insolent! How much have my enemies given

you to kill me with passion? Are these the manners to adopt towards your lord, who, if he pleased, could cut you down like brushwood? and this, too, when I am seeking your interest."

The conversation goes on with great spirit, and the grand duke informs his brother that he has discovered the paramour of Donna ELEONORA (PIETRO's wife) and has put him to death.

"Poor gentleman! He deserved it—but he was a worthy man."

"And who told you that he was a gentleman?"

"Bernardino Antenori, whom you have had strangled in the prison by Bargello. Who told me? Here's a question! One, it seems, who knew all about it."

PIETRO then lectures the grand duke very severely upon *his* misdeeds, and their interview ends with giving up his wife to death, and receiving 40,000 ducats from his brother.

It will not seem strange after this to find that ISABELLA, the sister of such brothers, has a son, a few months old, by TROILO ORSINI, her husband's cousin. The early part of the work is occupied by the adventures of a page, who becomes desperately enamoured of the beautiful but profligate duchess, and is murdered by TROILO in the act of offering violence to her. Unhappily these adventurers are but too strictly in accordance with the spirit of the age and of the actors.

To return, then, to ISABELLA and her husband. As soon as this latter received the summons from FRANCESCO, which brought him (*secretly* it must be remarked) to Florence, he decided on his course of action. He obeyed the grand ducal mandate, and made his appearance in the palace at the time when FRANCESCO and BIANCA were at supper.

Certainly neither poet nor novelist could have desired a richer opportunity of displaying their powers of description than that which the hall in which the grand duke and duchess were sitting presented. There were few, if any, courts of that period capable of vying with that of Florence in magnificence of plate and furniture, nor was the material so costly as the art. Tables of silver, flagons, cups, dishes, lamps—alike splendid for gold and gems, and for sculpture and chasing, attested at once the riches and the taste of the princely merchants who ruled Tuscany.

The duke, although accustomed to Roman profusion, was struck with surprise at the immense abundance of dishes, and his surprise was even increased at their variety. Sparrows potted with the yolks of eggs, and with flour mingled with saffron and sprinkled with sugar, Indian herbs, red onions raw, with German radishes, centuary, and shallotts, besides large crystal vases filled with pickles, ginger, black and red pepper, cloves, mace, and other then costly spices. In the midst a pyramid of eggs, and on every side ragouts and entrées of strange appearance, and many kinds of cheese placed in ice between plates of silver.

As the dishes which the Duke di Bracciano knew were not much to his taste, he ventured to taste some of the unknown, and very much amazed he was to find them composed of the flesh of partridges, pheasants, quails, and woodcocks, but so spiced that they made the tears start to his eyes. He remembered the history of Porcia, who swallowed burning coals; but he could not comprehend how any man could take such things as ordinary food; frequently did he ask for drink to mitigate the burning which they occasioned, but every beverage presented to him was so iced that his teeth ached and the nerves of his head were shaken. Then came pungent and brandied wines, two cups of which would be sufficient to turn any head. It appeared to him an infernal banquet, and that in order to become accustomed to such aliments, the grand duke and his duchess must have had more difficulty than Mithridates, who ate and drank without danger any poison how strong soever it might be.

In a short time he had rather silenced than appeased his hunger and thirst, and now sat to gaze on his kinsman, who was silently intent on his meal with a species of madness which at last became intolerable to behold;—he devoured strong red onions powdered with ginger, then breaking off the top of a large egg, he poured into it a spoonful of black pepper, and drank it from the shell. Then again he returned to his spiced onions, and from time to time demanded "*drink*." His cup-bearer replied to each of these demands by bringing him a small vessel of wine with a decanter of water, and a vast goblet or rather basin, into which the grand duke poured both wine and water, and swallowed the whole at a draught. All this was not attended with any species of apparent enjoyment, for the perspiration ran down his face, and his countenance became now red, now yellow as the candles of unbleached wax burning before him; his eyes seemed starting from their sockets, and he looked to Giordano like a man who wished to destroy himself, only it was a question whether throwing himself from the top windows of the palace might not have been a somewhat less uncomfortable mode of doing it.

Another practice of his serene highness will seem strange to English readers. Flushed and fevered with the very extraordinary supper of which we have just seen a description, he ordered his bed to be *cooled*, and accordingly a *cooling-pan* was filled with ice and snow, and passed between the sheets.

In order to understand fully some of the allusions made in the foregoing extracts, we must remember that the manufacture of porcelain with his own grand-ducal hands was a favourite amusement of FRANCESCO DEI MEDICI; that he had monopolized to himself the trade in spices by a treaty with SEBASTIAN, king of Portugal, and that the practice of presenting wine and water in the manner related in the text is also noticed by MONTAIGNE, who, in reference to these very personages, says that FRANCESCO drank a vast quantity of water with his wine, but that BIANCA did not mix it at all.

After the grand duke's bed is *cooled*, he sends for GIORDANO, and relates to him the evidence which he has of ISABELLA's infidelity, advising him at the same time to put her to death. GIORDANO is unwilling to proceed to such extremities without further proof, and the conversation exhibits him in a very attractive light. The means, however, which he adopts to obtain the certainty which he seeks and yet fears, are of the most treacherous description. Two attached servants of his house are despatched to summon Father Marcello, a confessor highly esteemed, and to whom GIORDANO knows that his duchess intends to go the next morning to confess. The men seize upon Marcello whom, under pretext of taking him to a penitent, they have induced to leave his convent, and go with them into a remote part of the city. There they strip him of his priestly robes, and convey him blindfolded into an apartment of GIORDANO's palace. Titta, one of the servants alluded to, attires himself in Fra Marcello's robes, and repairs to his usual confessional in the church of Santa Croce. Here he hears many confessions, and much astonishes the penitents who apply to him. His military morality, and strange notions of penance, make them think the holy father stark mad. He was not long engaged, before ISABELLA and her attendant approached, and from her Titta learns, by much cross-examination, the history of her guilt. He refuses to reply to her demand for absolution, and she, putting her hand into the confessional, is astonished and struck with consternation to find it vacant. The priest has fled!

After an anxious day spent by the brethren of the convent, the true Marcello returns to his cell, and the Duke of BRACCIANO nerves his mind for the execution of his terrible resolution. ISABELLA, from the moment of her husband's return, reads her fate, in spite of his assumed confidence and gentleness, and her deep sorrow and sincere repentance, her too late appreciation of the baseness of her paramour, and her re-awaked love for GIORDANO, make a picture of deep and absorbing interest. GIORDANO takes his family to Ceretto, an estate which he possessed some miles from Florence, and there, in the middle of the night, TROILO, who believes his iniquity to be undiscovered, is summoned to the apartment of his kinsman.

Troilo entering, saw Paolo Giordano seated by the side of a bed, and whether it was fancy, or the manner in which the light fell upon him, it seemed as though in one hour he had grown old. Giordano, without lifting up his eyes, said, "Sit down, Troilo."

These words contained no menace—no rancour; they were calm, sorrowful, and resigned; and yet they did not seem spoken with the lips; they appeared as if they came at once from the heart, as from a sepulchre, and they had power to freeze the very blood in the veins of Troilo.

And now follows a conversation which would have given an additional leaf to the laurel of SCOTT. A dialogue, which for intense dramatic power is scarcely to be paralleled in the compass of romance, but our space will not permit us to cite it. GIORDANO reminds TROILO of all that he has left in his care—of the promises which TROILO had made him—of the trust which *he* had reposed—and then gives a vivid picture of his withered hopes and blighted life.

He represses TROILO's interruptions and expressions of doubt as to the extent of ISABELLA's guilt, and at last tells him that he has had from her own lips the confession!

"Now tell me, Troilo! your name is Orsini. Is it my blood that runs in your veins?"

"Why should I tell you what you know so well?"

"I must hear it *from you*. I am so surrounded by traitors, that by any one save my own blood, it seems to me that I may be betrayed. You *are* my kinsman; tell me then—Isabella—shall I pardon her or shall I ——"

"Alas! what counsel can I give you?"

TROILO counsels GIORDANO to pardon his offending wife; for a moment the base, mean wretch, becomes elevated, he pours forth a torrent of eloquence. GIORDANO draws him on by arguments in favour of death, which he overthrows, and by family reasons of honour, which he combats, till at length GIORDANO, fixingh is hollow and lustreless eyes on TROILO's face, says:—

"And I would do so; but she will not confess the name of her paramour!"

"She absolutely refuses?"

"Absolutely; by no prayers, by no menaces; not even by the fear of infamy, or the hope of pardon."

"And have you tried all possible ways?"

"I have—all!"

"Had I known how far her obstinacy would extend, I would have counselled you differently."

"What—differently!"

"Aye; even the contrary!"

GIORDANO breaks into passionate exclamations as to the depth of the injury which has been done him, and TROILO now unveils the unmeasurable extent of his villainy. Trusting to the lofty spirit of his beautiful and penitent victim, he hopes that if she dies, his miserable secret may die with her, and his worthless life be safe. He hints at her destruction; but GIORDANO starts up from his seat and exclaims fiercely,—

"No hints—tell me plainly your counsel."

"Then in that case, I——"

"Well; why do you hesitate?"

"The jealous honour of the family requires that Isabella should be removed."

"You are right," replied Giordano, and flinging back the curtains of the bed by which he stood, he added, "AND I HAVE SATISFIED IT."

"Oh, the vengeance of God!" shrieked Troilo; and leaping back, with his hands behind his head, he fell violently against the opposite wall. There lay the lady Isabella Orsini, half-reclining, half-seated, her hair loose and dishevelled, her arms bound—her face dark, and matted with blood—her eyes open, staring, and starting from their sockets—round her white and delicate neck was bound a thin cord, the ends of which were lost to sight in the darkness of the room.

The passion which GIORDANO had thus far repressed now burst forth with irrepressible fury. Taxing TROILO with being the author of her death and his misery, the duke places a sword in his hand, and exclaims, "Take it and defend yourself, and though you have lived like a traitor, at least die like a gentleman."

But the craven wretch, springing to a window, threw himself out on the soft grass beneath, and escaped. He was shortly afterwards put to death by one of GIORDANO's agents in France, and the death of ISABELLA was attributed to apoplexy.

And now, before we take leave of a writer of greater power than we ordinarily meet with among novelists, we have a fault to find. These pages will be read in Italy, and will reach M. GUERRAZZI himself, and it is to him, and not to the English reader, that this remark is addressed. We are delighted with the moral purity of modern Italian romance, it forms a pleasing contrast with that of our Gallic neighbours; but there is one blot in this book, which, though it occupies only half a page, is sufficient to make us shudder. Let M. GUERRAZZI cancel as soon as he can the conclusion of p. 311 and the commencement of p. 312, and never, if he wishes to be reputed a virtuous writer, commit such a fault again.

JOURNAL OF AMERICAN LITERATURE.

Tales. By EDGAR A. POE.

(*Concluded from page* 381.)

TURNING from these mesmeric revelations, we present our readers with a portion of a tale of a very different character. It is a descent into the Maelstrom. The description is thrilling, and the reader feels a frightful and giddy interest as if he was actually whirling in the "hell of waters."

DESCENT INTO THE MAELSTROM.

"Our boat was the lightest feather of a thing that ever sat upon water. It had a complete flush deck, with only a small hatch near the bow, and this hatch it had always been our custom to batten down when about to cross the Ström, by way of precaution against the chopping seas. But for this circumstance we should have foundered at once—for we lay entirely buried for some moments. How my elder brother escaped destruction I cannot say, for I never had an opportunity of ascertaining. For my part, as soon as I had let the foresail run, I threw myself flat on deck, with my feet against the narrow gunwale of the bow, and with my hands grasping a ring-bolt near the foot of the foremast. It was mere instinct that prompted me to do this—which was undoubtedly the very best thing I could have done—for I was too much flurried to think.

"For some moments we were completely deluged, as I say, and all this time I held my breath, and clung to the bolt. When I could stand it no longer, I raised myself upon my knees, still keeping hold with my hands, and thus got my head clear. Presently our little boat gave herself a shake, just as a dog does in coming out of the water, and thus rid herself, in some measure, of the seas. I was now trying to get the better of the stupor that had come over me, and to collect my senses so as to see what was to be done, when I felt somebody grasp my arm. It was my elder brother, and my heart leaped for joy, for I had made sure that he was overboard—but the next moment all this joy was turned into horror—for he put his mouth close to my ear, and screamed out the word '*Moskoe-ström!*'

"No one ever will know what my feelings were at that moment. I shook from head to foot, as if I had had a most violent fit of the ague. I knew what he meant by that one word well enough—I knew what he wished to make me understand. With the wind that now drove us on, we were bound for the whirl of the Ström, and nothing could save us!

"You perceive that in crossing the Ström channel, we always went a long way up above the whirl, even in the calmest weather, and then had to wait and watch carefully for the slack—but now we were driving right upon the pool itself, and in such a hurricane as this! To be sure, I thought, we shall get there just about the slack—there is some hope in that—but in the next moment I cursed myself for being so great a fool as to dream of hope at all. I knew very well that we were doomed, had we been ten times a ninety-gun ship.

"By this time the first fury of the tempest had spent itself, or perhaps we did not feel it so much, as we scudded before it, but at all events the seas, which at first had been kept down by the wind, and lay flat and frothing, now got up into absolute mountains. A singular change, too, had come over the heavens. Around in every direction it was still as black as pitch, but nearly overhead there burst out, all at once, a circular rift of clear sky—as clear as I ever saw—and of a deep bright blue—and through it there blazed forth the full moon with a lustre that I never before knew her to wear. She lit up every thing about us with the greatest distinctness—but, oh God, what a scene it was to light up!

"I now made one or two attempts to speak to my brother—but, in some manner which I could not understand, the din had so increased that I could not make him hear a single word, although I screamed at the top of my voice in his ear. Presently he shook his head, looking as pale as death, and held up one of his figers, as if to say 'listen!'

"At first I could not make out what he meant—but soon a hideous thought flashed upon me. I dragged my watch from its fob. It was not going. I glanced at its face by the moonlight, and then burst into tears as I flung it far away into the ocean. It had run down at seven o'clock! We were behind the time of the slack, and the whirl of the Ström was in full fury!

"When a boat is well built, properly trimmed, and not deep laden, the waves in a strong gale, when she is going large, seem always to slip from beneath her—which appears very strange to a landsman—and this is what is called riding, in sea phrase. Well, so far we had ridden the swells very cleverly; but presently a gigantic sea happened to take us right under the counter, and bore us with it as it rose—up—up—as if into the sky. I would not have believed that any wave could rise so high. And then down we came with a sweep, a slide, and a plunge, that made me feel sick and dizzy, as if I was falling from some lofty mountain-top in a dream. But while we were up I had thrown a quick glance around—and that one glance was all sufficient. I saw our exact position in an instant. The Moskoe-ström whirlpool was about a quarter of a mile dead ahead—but no more like the every-day Moskoe-ström, than the whirl as you now see it is like a mill-race. If I had not known where we were, and what we had to expect, I should not have recognised the place at all. As it was, I involuntarily closed my eyes in horror. The lids clenched themselves together as if in a spasm.

"It could not have been more than two minutes afterward until we suddenly felt the waves subside, and were enveloped in foam. The boat made a sharp half turn to larboard, and then shot off in its new direction like a thunderbolt. At the same moment the roaring noise of the water was completely drowned in a kind of shrill shriek—such a sound as you might imagine given out by the waste-pipes of many thousand steam-vessels, letting off their steam all together. We were now in the belt of surf that always surrounds the whirl; and I thought, of course, that another moment would plunge us into the abyss—down which we could only see indistinctly on account of the amazing velocity with which we were borne along. The boat did not seem to sink into the water at all, but to skim like an air-bubble upon the surface of the surge. Her starboard side was next the whirl, and on the larboard arose the world of ocean we had left. It stood like a huge writhing wall between us and the horizon.

"It may appear strange, but now, when we were in the very jaws of the gulf, I felt more composed than when we were only approaching it. Having made up my mind to hope no more, I got rid of a great deal of that terror which unmanned me at first. I suppose it was despair that strung my nerves.

"It may look like boasting—but what I tell you is truth—I began to reflect how magnificent a thing it was to die in such a manner, and how foolish it was in me to think of so paltry a consideration as my own individual life, in view of so wonderful a manifestation of God's power. I do believe that I blushed with shame when this idea crossed my mind. After a little while I became possessed with the keenest curiosity about the whirl itself. I positively felt a wish to explore its depths, even at the sacrifice I was going to make; and my principal grief was that I should never be able to tell my old companions on shore about the mysteries I should see. These, no doubt, were singular fancies to occupy a man's mind in such extremity—and I have often thought since, that the revolutions of the boat around the pool might have rendered me a little light-headed.

"There was another circumstance which tended to restore my self-possession; and this was the cessation of the wind, which could not reach us in our present situation—for, as you saw yourself, the belt of surf is considerably lower than the general bed of the ocean, and this latter now towered above us, a high, black, mountainous ridge If you have never been at sea in a heavy gale, you can form no idea of the confusion of mind occasioned by the wind and spray together. They blind, deafen, and strangle you, and take away all power of action or reflection. But we were now, in a great measure, rid of these annoyances—just as death-condemned felons in prison are allowed petty indulgences, forbidden them while their doom is yet uncertain.

"How often we made the circuit of the belt it is impossible to say. We careered round and round for perhaps an hour, flying rather than floating, getting gradually more and more into the middle of the surge, and then nearer and nearer to its horrible inner edge. All this time I had never let go of the ring-bolt. My brother was at the stern, holding on to a small empty water-cask which had been securely lashed under the coop of the counter, and was the only thing on deck that had not been swept overboard when the gale first took us. As we approached the brink of the pit he let go his hold upon this, and made for the ring, from which, in the agony of his terror, he endeavoured to force my hands, as it was not large enough to afford us both a secure grasp. I never felt deeper grief than when I saw him attempt this act—although I knew he was a madman when he did it—a raving maniac through sheer fright. I did not care, however, to contest the point with him. I knew it could make no difference whether either of us held on at all; so I let him have the bolt, and went astern to the cask. This there was no great difficulty in doing; for the smack flew round steadily enough, and upon an even keel—only swaying to and fro, with the immense sweeps and swelters of the whirl. Scarcely had I secured myself in my new position, when we gave a wild lurch to starboard, and rushed headlong into the abyss. I muttered a hurried prayer to God, and thought all was over.

"As I felt the sickening sweep of the descent, I had instinctively tightened my hold upon the barrel, and closed my eyes. For some seconds I dared not open them—while I expected instant destruction, and wondered that I was not already in my death-struggles with the water. But moment after moment elapsed. I still lived. The sense of falling had ceased; and the motion of the vessel seemed much as it had been before, while in the belt of foam, with the exception that she now lay more along. I took courage, and looked once again upon the scene.

"Never shall I forget the sensations of awe, horror, and admiration with which I gazed about me. The boat appeared to be hanging, as if by magic, midway down, upon the interior surface of a funnel vast in circumference, prodigious in depth, and whose perfectly smooth sides might have been mistaken for ebony, but for the bewildering rapidity with which they spun around, and for the gleaming and ghastly radiance they shot forth, as the rays of the full moon, from that circular rift amid the clouds which I have already described, streamed in a flood of golden glory along the black walls, and far away down into the inmost recesses of the abyss.

"At first I was too much confused to observe any thing accurately. The general burst of terrific grandeur was all that I beheld. When I recovered myself a little, however, my gaze fell instinctively downward. In this direction I was able to obtain an unobstructed view, from the manner in which the smack hung on the inclined surface of the pool. She was quite upon an even keel—that is to say, her deck lay in a plane parallel with that of the water—but this latter sloped at an angle of more than forty-five degrees, so that we seemed to be lying upon our beam-ends. I could not help observing, nevertheless, that I had scarcely more difficulty in maintaining my hold and footing in this situation, than if we had been upon a dead level; and this, I suppose, was owing to the speed at which we revolved.

"The rays of the moon seemed to search the very bottom of the profound gulf; but still I could make out nothing distinctly, on account of a thick mist in which every thing there was enveloped, and over which there hung a magnificent rainbow, like that narrow and tottering bridge which Mussulmen say is the only pathway between Time and Eternity. This mist, or spray, was no doubt occasioned by the clashing of the great walls of the funnel, as they all met together at the bottom—but the yell that went up to the Heavens from out of that mist I dare not attempt to describe.

"Our first slide into the abyss itself, from the belt of foam above, had carried us a great distance down the slope; but our farther descent was by no means proportionate. Round and round we swept—not with any uniform movement—but in dizzying swings and jerks, that sent us sometimes only a few hundred yards—sometimes nearly the complete circuit of the whirl. Our progress downward, at each revolution, was slow, but very perceptible.

"Looking about me upon the wide waste of liquid ebony on which we were thus borne, I perceived that our boat was not the only object in the embrace of the whirl. Both above and below us were visible fragments of vessels, large masses of building timber and trunks of trees, with many smaller articles, such as pieces of house furniture, broken boxes, barrels, and staves. I have already described the unnatural curiosity which had taken the place of my original terrors. It appeared to grow upon me as I drew nearer and nearer to my dreadful doom. I now began to watch, with a strange interest, the numerous things that floated in our company. I must have been delirious—for I even sought amusement in speculating upon the relative velocities of their several descents toward the foam below. 'This fir tree,' I found myself at one time saying, 'will certainly be the next thing that takes the awful plunge and disappears,'—and then I was disappointed to find that the wreck of a Dutch merchant ship overtook it and went down before. At length, after making several guesses of this nature, and being deceived in all—this fact—the fact of my invariable miscalculation—set me upon a train of reflection that made my limbs again tremble, and my heart beat heavily once more.

"It was not a new terror that thus affected me, but the dawn of a more exciting hope. This hope arose partly from memory, and partly from present observation. I called to mind the great variety of buoyant matter that strewed the coast of Lofoden, having been absorbed and then thrown forth by the Moskoe-strom. By far the greater number of the articles were shattered in the most extraordinary way—so chafed and roughened as to have the appearance of being stuck full of splinters—but then I distinctly recollected that there were some of them which were not disfigured at all. Now I could not account for this difference except by supposing that the roughened fragments were the only ones which had been completely absorbed—that the others had entered the whirl at so late a period of the tide, or, for some reason, had descended so slowly after entering, that they did not reach the bottom before the turn of the flood came, or of the ebb, as the case may be. I conceived it possible, in either instance, that they might thus be whirled up again to the level of the ocean, without undergoing the fate of those which had been drawn in more early, or absorbed more rapidly. I made, also, three important observations. The first was, that, as a general rule, the larger the bodies were, the more rapid their descent—the second, that, between two masses of equal extent, the one spherical, and the other of any other shape, the superiority in speed of descent was with the sphere—the third, that, between two masses of equal size, the one cylindrical, and the other of any other shape, the cylinder was absorbed the more slowly. Since my escape, I have had several conversations on this subject with an old schoolmaster of the district; and it was from him that I learned the use of the words 'cylinder' and 'sphere.' He explained to me—although I have forgotten the explanation—how what I observed was, in fact, the natural consequence of the forms of the floating fragments—and shewed me how it happened that a cylinder, swimming in a vortex, offered more resistance to its suction, and was drawn in with greater difficulty than an equally bulky body, of any form whatever.

"There was one startling circumstance which went a great way in enforcing these observations, and rendering me anxious to turn them to account, and this was, that at every revolution we passed something like a barrel, or else the yard or the mast of a vessel, while many of these things which had been on our level when I first opened my eyes upon the wonders of the whirlpool, were now high up above us, and seemed to have moved but little from their original station.

"I no longer hesitated what to to do. I resolved to lash myself securely to the water-cask upon which I now held, to cut it loose from the counter, and to throw myself with it into the water. I attracted my brother's attention by signs, pointed to the floating barrels that came near us, and did every thing in my power to make him understand what I was about to do. I thought at length that he comprehended my design—but, whether this was the case or not, he shook his head despairingly, and refused to move from his station by the ring-bolt. It was impossible to reach him; the emergency admitted of no delay; and so, with a bitter struggle, I resigned him to his fate, fastened myself to the cask by means of the lashings which secured it to the counter, and precipitated myself with it into the sea, without another moment's hesitation.

"The result was precisely what I had hoped it might be. As it is myself who now tell you this tale—as you see that I did escape—and as you are already in possession of the mode in which this escape was effected, and must therefore anticipate all that I have farther to say—I will bring my story quickly to conclusion."

Although this volume has many redeeming points of goodness, we cannot conscientiously recommend it to the libraries. We have given reasons, and we think strong ones, for this opinion, and if we have erred, it is from our squeamishness in selecting the best works for the librarian and the public.

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

SKETCH OF A TOUR IN THE TYROL.

(*Concluded from page* 403.)

THE tourist will remark, during his walk to Varenna, several old castles, promontories jutting into the lake, rocks, banks richly covered with vines, and at the edge of the lake, olive and fig trees, several villages and numerous houses, built of very small stones of a reddish grey, all which objects will present many beautiful and picturesque views. He will pass through several tunnels hewn out of the solid rock, and about fifteen or twenty feet high. He may join the steamboat at Varenna, and proceed down the lake to the town of Como. During his progress down it, the lake will afford many very rich and beautiful scenes, including many villages and villas. When we saw those scenes, the mountains near the side of the lake were streaming with many silvery torrents in consequence of the rain that had recently fallen, which added much to the beauty of the views. In about two hours after going on board the steamer he will arrive in Como. Here there will be an omnibus ready to start for Milan, and in which he must be quick in securing a place. He will then arrive in Milan after a ride of about four hours and a half, and having travelled over a rich country, producing in abundance maize, mulberry-trees, &c. When tired of Milan, he may proceed to Varona by the diligence, and he will then pass through Bergamo and Brescia, and close to the foot of the Lago di Garda, where there is a strong fortress called Peschiere. If he leave Milan at four o'clock in the afternoon, he will be in Varona at half-past twelve in the morning of the following day. At Varona he may bargain for a carriage to take him to Trent. He will pass over a rich-looking plain until he comes suddenly among the hills again, entering a very narrow gorge where the Adige has made itself a passage through the rocks, which are perpendicular, and like walls on both sides; there is barely room for the river and road, which latter has been in part cut out. Near here is Rivoli. He will then proceed up a narrow defile until he reaches Ala, at which place, if he left Varona about the middle of the day, he will arrive in the evening, and may rest there for the night. He will have passed Volargne and Incaffi; near the latter place is the remarkable convent and church of Madonna della Corona, situate on the steep side of a mountain (nearly 3,000 feet above the river), at about 400 feet from the top, and approached from below by steps cut in the rock, and from above by ropes. He will thence resume his journey early in the morning, and will soon see the Slovino di San Marco, where part of a mountain has fallen, and is now a scene of desolation. He will pass through Roveredo, where a great quantity of silk is produced, and will arrive in the middle of the day at Trent, unless he wish to see the fine scenery at the head of the Lago di Garda, in which case he should proceed from Roveredo to Trent by way of Riva, which will prolong his journey; we had not time for this. The Hôtel de la Rose d'Or, at Trent, is very good.

He should here see the cathedral, a fine old building of the round Gothic or Romanesque style, and should not forget to visit the church of Santa Maria Maggiore, where the Council of Trent sat for eighteen years, and see the painting of the Assembly, which it contains. He should also see the Castle of Buon Consiglio, formerly the episcopal residence, and which is of a great extent, but now ruinous, and containing barracks. The situation of the town is fine. The view of it from the banks of the Adige below the town is very beautiful. A pleasant walk may be taken by the side of the river, and through the vineyards, where the vines, when we saw them, were heavily laden with grapes. We bought some at the gate of the town for three-farthings per pound. The tourist may travel by the *Stellwagen* from this place to Botzen. He will pass a great many vineyards, the small town of Lavis, the village of San Nichele, near which he will see the entrance to the valley of the Non Salurn, where there is a castle, situate very high on the face of the rock, seeming almost impregnable, Newmarkt, and Branzoll; and he will see near Botzen, on the other side of the river, the extensive ruins of the castle of Sigmondskrone, situate on a hill. Parts of this valley are very marshy and unhealthy, particularly about Branzoll. The valleys of the Non and Sole are said to be very picturesque, and if the tourist have time, he should not omit to visit them: we had not time to do so. Or, if he wish to shorten this tour, he may proceed at once from Bormio, through these valleys, and join the route again on his exit from them; by this means it will be considerably shortened. We arrived at Botzen at one o'clock, and found the Kaiser-krone an excellent hotel. The view of the mountains from Botzen is fine; those near this place contain much porphyry. The neighbourhood of Botzen is particularly rich in vines, trained on trellises, with yellow pumpkins growing under them. Fig, olive, and mulberry trees are also cultivated here. If the tourist leave this town early in the afternoon, he may walk up the valley of the Eisach, by Deutschen, as far as Kollman, about fifteen miles, where he may sleep. His walk will be up a picturesque narrow mountain defile, with high rocks on each side, and high mountains behind them. He will obtain a glimpse of some of the peaks of the dolomite formation. In the morning he may advance up the valley. He will see near Kollman the castle of Trostburg, at the entrance to the Grödnerthal; he will pass through the town of Klausen, one long narrow street, and will see near it, on a hill 700 feet high, the nunnery of Seben, a fine object in the view, and will reach Brixen after about three hours and a half's walk from Kollman, having walked through picturesque scenery all the way. About Brixen the valley opens a little. There are many convents in this town, three nunneries, one of them for English ladies. From Brixen we returned direct to Innsbruck over the Brenner, having occasion to go there, and came back again by the same route to the point where the road to Brunecken leaves the valley of the Eisach. But the tourist who does not wish to return immediately to Innsbruck may, before he passes over the Brenner, make the detour which we afterwards made, and proceed direct from Brixen to Muhlbach, visiting, however, the very strong fortress called Franzenveste, erected by the Austrian government, when the road from the Pusterthal comes into the valley of the Eisach. He had better take a carriage for part of this day's journey. From Muhlbach, it is about four hours' walk to St. Lorenzen, proceeding up the Pusterthal by the side of the river Rinz. At one mile from Muhlbach the road passes through the two arches of an old fortress in ruins, which formerly commanded the pass. The valley continues narrow all the way, bounded by low, well-wooded hills on both sides. At St. Lorenzen, on a hill by the road-side, and within the walls of a ruined castle, stands the convent of Sonnenberg. The tourist may either stay all night at St. Lorenzen, or go on about a mile further to Brunecken. We preferred doing the former, in order to shorten our next day's walk, which was a long one. The tourist must therefore set forward very early in the morning, and enter the Gaderthal, otherwise Enneberg. At its entrance he will have a very fine view across the Pusterthal, and to Brunecken, having on his right a very picturesque old castle on a hill, and in front well-wooded hills, rising one above another, and backed by mountains partially covered with snow, the convent, at some points of the view, being a fine object. The Gaderthal is very narrow, with banks sloping down to the river, and well wooded; it expands a little before reaching St. Martin's; it again contracts, and continues narrow to La Badia or Abtei, about eighteen miles from St. Lorenzen. A few miles up the valley is seen on the left the valley of Enneberg Proper, a pretty valley, with dolomite

mountains at the extremity. The Wengenthal will also be passed on the left at about two miles from St. Martin's. About the middle of the day he will arrive at La Badia, where he should dine. Here is the church of St. Leonhard. At La Badia he will have a fine view of the mountains of that very singular geological formation called dolomite. Close behind the village is the very precipitous dolomite mountain called Kreuths Kofel, and on the other side of the valley another very precipitous mountain of the same formation. As he proceeds, after leaving La Badia, more dolomite mountains will open out to his view, with fine effect, very precipitous, perfectly barren, and of a pale reddish-yellow colour, with picturesque, serrated outlines, sharp peaks, deep clefts, and chiefly vertical strata; some of the dolomite rocks, when broken, are pure white, and sparkle like loaf-sugar. The valley of La Badia opens considerably. The larches, as we saw them, with their autumnal livery, and mixed with the dark firs, had a rich effect. After he passes Colfosco, he will have to ascend a considerable ridge which separates the Gaderthal from the Grödnerthal, and from which he will have a magnificent view of the dolomite mountains. He will then descend into the Grödnerthal, coming down upon Plana, where he may procure bread and wine, which will help him on his journey. The valley is narrow, and Lang Kofel will soon come into view, a very remarkable mountain, which towers aloft in solitary grandeur, no other mountain being near it, with a high, narrow peak, somewhat round at the top. He will arrive rather late in the evening at Saint Ulrich, after a walk of thirty-eight miles, and without feeling much fatigued, for he will now be well inured to walking. The inhabitants of this valley are celebrated carvers in wood. Soon after leaving Saint Ulrich, early next morning, he must enter a narrow valley on the left, and passing Puffels, cross ober the Seiser Alp (6,500 feet in elevation), from which he will have a splendid view of the snowy mountains at the head of the Zillerthal, and the dolomite mountains near at hand. A little further, a very fine view opens out over the valleys of the Eisach and Adige, terminated by a magnificent range of snowy mountains, including the Orteler Spitz. After descending, by a very rough road, passing Castelruth, with very beautiful views, he will re-enter the valley of the Eisach at Steg. Here he may, perhaps, procure an *Einspännig* to take him to Batzen, where he will arrive in the middle of the afternoon. He should there dine at the Kaiser Krone, and afterwards go forward with an *Einspännig* to Meran. He will pass through the Vintschgau, a valley abounding in vines, but marshy in some parts. He will, perhaps, arrive at Meran about eight in the evening. Before leaving this town, he should walk to the bridge for the sake of the view from it. The town is placed in a very beautiful situation, and is surrounded with vineyards, and a great many old castles are seen on the hills around it. He may then march forward on foot up the Passeyerthal; the lower part of this valley abounds in vines trained on trellises, under some of which this road (a rough cart-road) passes. When we walked along this road, the grapes were hanging in abundance, very temptingly within our reach; we, however, refrained, and purchased a few for a trifle. Higher up, the river spreads nearly all over the bottom of the valley. Fine walnut-trees and white marble are plentiful here. The men wear broad-brimmed hats, jackets, with broad, bright red facings on each side of the breast, and broad leather braces, passing round the neck, and in front cut into three broad divisions. The women wear similar jackets. In about three hours and a half the tourist will reach the house in which the patriot Andreas Hofer was born. It is an inn close to the river side, and called Am Sand, sign, a crown, and now kept by the son-in-law of Hofer, his daughter being dead, leaving three children. He will there see a written book containing some memorials of Hofer. When he has walked forward about a mile from this inn, he will reach St. Leonhard, where he must commence the ascent of the Jauffen. After three hours' hard climbing by a rough mule-path, he will find himself at the Jauffen house, where he may rest awhile. From this house it is another half hour's ascent to the top of the pass (6,400 feet high). He will then descend towards Sterzing, where he will arrive in about two hours and a half, after a walk of about thirty miles from Meran. The Krone, at Sterzing, is an excellent inn. From this place he may, either by the *Stellwagen* or on foot, cross over the Brenner to Innsbruck. He will pass through a narrow valley, with picturesque rocky scenery, and on the top of the pass he will see the sources of the Eisach and the Sill; the former runs into the Adige, and the latter into the Inn. He will also travel through several small villages. At the end of sixteen miles he will reach the town of Steinach, where he may dine. From Steinach to Schonberg the scenery is beautiful and picturesque. Near the latter place, on a favourable day, a very magnificent view may be obtained, including the beautiful Stubeythal, with the gorgeous mountain dazzling with snow at the head of it, and the splendid Solstein and other mountains on the other side of the Innthal, and a richly-wooded country, varied with smaller hills in the foreground and middle distance. A fine new road is now being made from Innsbruck past Schonberg, intended to join the old road near Mattrey. The view of Innsbruck obtained in descending towards it is extremely beautiful. When the tourist is ready to leave Innsbruck, he may now direct his course towards Switzerland. He may again join the *Stellwagen* for Landeck. At Landeck he may take an *Einspännig* for St. Anton, about four hour's ride from Landeck, passing through a narrow picturesque valley, in which he will see the old castle of Wissberg, close to the river Rosana. From St. Anton, he will cross over the Arlberg te Stuben, seven miles, a wild romantic pass; the mountains seen from the top (where is the Hospice of St. Cristophe) are very barren. At Stubea he may take another *Einspännig* for Dalaas—one post. He will pass through Klosterli, whence the valley is called the Klosterthal. At Dalaas, a place prettily situate, he may take another *Einspännig* for Bludens—one post, a town of 19,000 inhabitants; the country around it abounding in fruit-trees. Another *Einspännig* will take him to Feldkirch, one and a half post, where I shall leave him, having conducted him into Switzerland; and I shall be happy if, during his progress, he shall derive the least benefit from my little experience. He may now either turn to his right, towards Breyenz and the Lake of Constance, or to his left, towards Wallenstadt and the Lake of Zurich, as he may think proper. When he arrives in Switzerland it will be with more money in his pocket than he expected; for pedestrian travelling in the Tyrol is remarkably cheap. The Tyrolese have not yet been spoiled by the shoals of English, who have increased the expense of travelling in Switzerland; and I trust that the Tyrolese will never lose their simplicity and uprightness of character by any influx of strangers amongst them. If the tourist should follow the whole of the route I have marked out for him, he will be able to form a very good conception of the glories of Tyrolese scenery, and I think he will then agree with me in what I stated at setting out, that the Tyrol surpasses Switzerland in richness and picturesque beauty, and in some parts at least approaches very near it in sublimity; it is, however, inferior in the beauty and magnitude of its glaciers, as also in the size of its lakes. He will also have laid up for himself a store of food for contemplation for many years, and will return home with invigorated health, and an enlarged mind, yet humbled by an increased sense of his own weakness, when compared with the majesty of Nature, seen, as it were, upon her throne. He will also have learned to look up to the God of nature with a stronger conviction of the truth of the words of the Psalmist: "Oh Lord, how manifold are thy works; in wisdom hast thou made them all; the earth is full of thy riches." "They shall speak of the glory of thy kingdom, and talk of thy power." A. T.

A Word in Season.—Of late there has grown up on the hotels along the Rhine and in the main route through Switzerland a practice of charging a franc per night for candles. A pretence for this is made by putting one wax candle into your room, of which you burn, it may be, half an inch, of the value of a penny at the most. During a tour I have been taking in the course of the present summer, I was at first induced to pay this charge without objection, though with many inward murmurs. At length, at Lucerne, I was tempted to resist. I would not permit the wax candle to be lighted, but was content with the ordinary mould candle of the bedchamber. The bill containing the usual charge for candle being presented, I remarked that I had not used the wax-light. The charge was immediately withdrawn. I observe that Murray recommends travellers in all cases to resist the charge, but they cannot with propriety do so if they use the candle. The plan adopted so successfully by me may be advantageously followed by other travellers, and thus one of the many growing impositions will be suppressed.—G. R. M.

Lucerne.—During the present summer, a new hotel has been opened at Lucerne. It commands a fine view of the lake, and I found its *table d'hôte* excellent, its apartments comfortable, and its charges moderate. It is called the *Swiss Hotel*. As it is not mentioned in Murray, I avail myself of the columns of The Critic, so useful to tourists, to supply the information to those about to visit that finest of the Swiss lakes.—Viator.

ART.

Art on the Continent.—M. Schwanthaler has received an order from Norkoeping, in Sweden, to execute a statue of the late King (Bernadotte) for that city, of colossal dimensions (twelve feet high), and to be cast in the Royal Foundry. The completion is expected in a few months. In the same establishment the statues of Ziska, the leader of the Hussites, and of several other eminent characters, ordered by a Bohemian private gentleman, are in progress. At the same time the statue of the Duke of Zachringen, for Switzerland, after the model of a Swiss artist, will shortly be executed. A splendid steel engraving, representing Schwanthaler's group of the gable pediment of the

Walhalla, executed by M. Schleich, the celebrated engraver, of Munich, and published by M. Manz, publisher and printseller of Ratisbon, will shortly appear. The above group is of eminent beauty and great interest. The centre figure, Arminius, of colossal proportions, the left foot resting on crushed legion eagles and standards, appears tranquilly to await the approach of the invading Romans. Behind the hero are seen, in emblematic representations, the characteristic features of the life of both the respective enemies—Roman warfare and German patriotism, together with Poetry, Devotion, Veneration of Female Virtue, and Love; the Romans partly advancing, partly retreating; Pharus's suicide; a dying standard-bearer proclaims the loss of the legions; a warrior, perishing in a swamp, alludes to the German morasses. The whole group is executed in beautiful Tyrolese marble, in extent of about seventy feet. The engraver's work is of a beautiful execution, alike soft and bold where these contrasts are necessary. He is at present also occupied on an engraving of a composition of M. Kaulbach, whose subject is taken from Wieland's "Musarion."—In the glass-painting establishment at Munich, will shortly be executed three large church-window paintings, ordered by the chapter of the cathedral of the city of Agram. They represent the "Glorification of the Holy Virgin," and both the tutelary saints of Hungary, Stephen and Ladislaus.—M. Schoenlaub's statues for St. Mary's, at Au (suburb), have been placed in the walls below the nave-windows; they are of a character much superior to the common works of art of that description. Several eminent artists have formed a sort of an Etching Club, and published part of their interesting work, in which a great deal of humorous wit prevails; among those who have already contributed are—Klein, Morgenstern, Neureuther, Heinzmann, Zimmermann, Gail, Eberle, &c., whose likenesses are strikingly represented in the title-page of the first number of the work, in the act of adorning a "Christmas tree."

THE NATIONAL GALLERY.—The National Gallery closed for the annual vacation on Thursday, and will not re-open for public inspection till the 27th of October next.

MUSIC.

The Songs of Henry Russell. Part II.
London: G. H. Davidson.

THESE songs bear the usual characteristics of Mr. RUSSELL'S music. The airs are generally pleasing; but sadly deficient in variety. Mr. RUSSELL seems to have one ideal melody in his head, which he adapts by inversion to words of every kind, accommodating it as well as he may to the sentiment and feelings which the poetry embodies. In his drinking, hunting, naval, and bandit songs—in short, in all those wherein energy and motion are to be conveyed, he is far more successful than in erotic and plaintive compositions. The songs are clearly printed on moveable types, and, as ten are furnished for half-a-crown, are cheap enough, at least, to become, without obstacle of this nature, popular.

We regret to learn that Donizetti, the celebrated composer, who recently arrived in Paris, is labouring under a severe fit of illness.

PUBLIC AMUSEMENTS.

ROYAL POLYTECHNIC INSTITUTION.—We uniformly feel pleasure on each successive visit to this institution. Genius is progressing at railroad speed, and the proprietors of this useful establishment seem desirous to run neck to neck with the mechanical skill and ingenuity of the day. We trust the support rendered by the public is commensurate at least with the exertions and expense incurred in maintaining this splendid school of science. The lectures of Dr. BACHHOFFNER on Natural Philosophy and Chemistry still continue to attract. The admirable manner in which he delivers them deserves the golden opinions he daily receives. The exhibition of the chromatrope and dissolving views display their wonders in the theatre of the institution, and are particularly adapted to please the young. There is another very interesting instrument, called the physioscope, which magnifies the human face; another called the proteoscope, by which flowers and fruit are also highly magnified. By this instrument it is possible to magnify opaque objects, which is accomplished by the oxy-hydrogen microscope. In this way a small plaster-cast was magnified, and had all the appearance of a well-finished piece of colossal statuary. Another source of amusement, highly gratifying to the visitors, is the music, which, like the painter's last touch, gives a most agreeable finish to the whole entertainment. This department is conducted by Dr. WALLIS.

ROYAL ADELAIDE GALLERY.—It would be out of our province here to comment on the unpropitious events which have lately occurred in New Zealand, but we may call the attention of our readers to the circumstance that a series of lectures are now being given at the above gallery, by a New Zealand Chief. We have had pleasure in attending them. From their nature, and the lucid manner in which they are delivered, the public have the best of opportunities of learning the true character of the New Zealanders, as the Chief (who lectures in the full costume of the country) very fully enters into all their manners and customs, giving anecdotes and detailed descriptions, occasionally exemplified by instruments and models of the modes of tattooing, warfare, domestic habits, and fireside amusements of this extraordinary people. Great credit is due to the Chief (himself an Englishman) for having been instrumental in converting several of the tribes from cannibalism, a conversion, he doubts not, which ere this has become general. The concerts at this agreeable place of amusement are still conducted in the same efficient style as usual. The model of Pilbrow's atmospheric railway continues to attract a vast number of scientific people, anxious to test the comparative merits of this and the principle adopted on the Croydon line.

ORIGINAL CONTRIBUTIONS.

TO THE EDITOR OF THE CRITIC.

MANZONI'S "CARMAGNOLA."

SIR,—You have given a choice extract from this fine tragedy in the last CRITIC, and beautifully translated it is, though I cannot see why the translator has been at the pains of putting into rhyme what is blank verse in the original. From the introductory notice it would seem that the whole tragedy has been translated by your contributor, H. B. I was not aware that an English version had ever been published.* I did one myself some ten years ago, and it still remains a MS. in my portfolio, partly from doubts as to whether it is fitted for the critical eye of the public, and partly from the impression that no one buys or reads modern tragedies now-a-days.

Should you think the following soliloquy of the unfortunate Count worthy of insertion in THE CRITIC, as a *pendant* to "Marco's Soliloquy" just alluded to, you are very welcome to it. I am, Sir, yours, &c. M. H. R.
Translator of *Ettore Fieramosca*, &c.

[Count Carmagnola, General of the Venetian forces, being suspected by the Council of Ten of meditated treachery in not following up some splendid victories in the manner intended by them, is entrapped by an invitation to return to Venice, expecting a triumphant reception, in the place of which he is immediately arrested, and, after a mock trial, condemned to death. The Countess and her only child, Matilda, are about to visit him in his dungeon, having just been stunned with the unexpected and dreadful intelligence.]

Scene, A Prison.

THE COUNT (*solus*).

By this time they have learnt my fate. Ah! why
Could I not far from them at least have died?
'Tis true, with horrible effect such news
Their hearts would then have stricken—yet the hour,
The solemn hour of grief would have been past,
Whilst now 'tis yet to come: and harder still,
Together we must drain the bitter draught,
And drop by drop.—Oh! breezy, open plains!
Oh, cheering, sunny blaze! Oh, mighty clash
Of glitt'ring arms! Oh, joy-inspiring danger!
Soul-stirring shouts of heroes in the field!
My gallant charger! Happiness it were
Amongst ye to have died! But . . . . shall I, then,
Look on my destiny repugnantly?
And, like convicted felon, to the place
Of execution let myself be dragged,
Venting the while vain, useless threatenings,
Or querulous complaints? . . . . Marco—Alas!
Can *he* too have betrayed me? Why suspect?
'Tis a vile doubt. Oh, that before I die
It may be banished from my heart! But no!

* Nor has there. Our correspondent is under a misconception owing to an oversight of the printer in the introduction to the translation in our last number. The words translated from the Italian should have a separate head-line.—ED. CRITIC.

Of what avail to trouble now my breast
With cares of life; and backward turn my gaze
Where 'tis forbidden me to tread? . . . . And thou,
Duke Philip, wilt enjoy my misery—
What matters it? I too have felt these joys,
These impious, earthly joys; and now I know
Their wretched worthlessness. But oh, the grief
Of seeing once again my dearest ones!
To hear their groans of anguish—from their lips
To listen to a last farewell—to find
Myself encircled by their arms, and then
For ever tear myself from their embrace!
Ah! they are here! Oh, God! with pity look
Upon them!

N.B.—The concluding scene which follows the above is, though short, one of surpassing beauty.

BEAUTY.

Every grand and lovely thing
Reigns like an eternal king,
All that's bright, and all that's fair,
Hath its children everywhere.
Where the silken butterflies
Use like fans their painted wings,
Fanning the young summer's eyes,
There the brown bee sucks and sings.
Beauty never comes alone,
But hath beauties in its train;
If it be a music tone,
Echo utters it again.
If it be a star or sun,
Then the stream makes two of one
By the magic of its mirror;
O believe it not an error,
For the soul to cling and linger
Here on earth, and gladness feel!
Beauty is God's mighty finger,
Multiplying beauty still.
Look on night, and look on day,
When they come or glide away;
Sister queens, they often meet,
But we hear no fairy feet.
Though they morn and eve salute,
Like their feet, their kiss is mute,
But, lest beauty should be missing,
Twilight cometh of their kissing.
Though we cannot, like King Midas,
Change to gold all dust and dross,
Beauty ever stays beside us,
And the tiniest bit of moss
That a child's white hand will pull,
Is than gold more beautiful.
Let us not like fools despise,
Earth which is a seat of beauty,
But the love-light of our eyes
Turn unto it as a duty.
Beauty *here* hath done its mission,
When it guides us to death's portal,
For its presence is a vision
Of a *beauty all immortal.*

E. H. BURRINGTON.

CRITIC OF TRADES, INVENTIONS, ETC.

Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

NEW LETTER FILE.—We have been favoured with the particulars of a new letter file, invented by Mr. W. W. Fyfe, of Paisley, which is undoubtedly a great improvement over all articles of the kind heretofore made public. It takes the form of the boards of a book, of which the left hand board is moveable upon a sliding hinge of a simple construction, so as not only to admit of its opening outwards, like its counterpart the corresponding board, but also that it may slide down upon the latter, or remain up from it, at any height requisite to accommodate the "letters received." The construction of the other hinge admits of the sliding-board being turned over free of the points of the files by which it is perforated, leaving space for the operation of filing on letters. When letters are placed upon the points of the files, this board being turned over above them, presses them securely down to their destination on the file. The files are fixed on the under board, and perforate the moveable or upper one. The index is attached to the inside of the sliding-board, fastening up with a catch, just clear of the prongs or files, and jointed to the front of the board inside. It is the usual alphabetical index. This file effectually excludes dust, which is so objectionable in all other inventions of the kind. The file, too, may be secured by a Chubb's lock, or by a chain and padlock. The index renders it of real practical value, as every one who has had to deal much with letters which have been kept in the ordinary way must have frequently felt the need of such an assistant. This useful file we can safely recommend to the attention of the readers of THE CRITIC.

Experimental trips have been made on the Croydon Atmospheric Railway, which, with allowance for the fact that every thing is not yet in complete working order, have been very satisfactory. The line is five miles long, extending from the Dartmouth Arms to Croydon. On Friday week several trains were run; and on Tuesday a number of the proprietors were conveyed upon the line. The average speed, only one engine being employed for the five miles, was thirty miles an hour; the greatest velocity forty-five. A greater speed was attained on the Friday. The train passed up the viaduct across the Brighton line, which has an incline of 1 in 50, at the same rate as the other parts. In a report to the Directors, Mr. Samuda, the engineer, remarks—"A speed of seventy miles per hour has been attained with a train of six carriages, and a speed of thirty miles per hour with a train of sixteen carriages, using only one steam-engine over two sections of main. In a length of five miles we have found it practicable to obtain a vacuum of twenty-seven inches in the whole length, and have run trains at upwards of sixty miles an hour over the five miles, with the aid of one engine only."

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

TO THE EDITOR OF THE CRITIC.

"Quodcunque utile, omnibus notum esse debet."

SIR,—I send you two cases of *mental travelling*, which may tend to strengthen the facts already known, and at the same time afford an opportunity to others to investigate a faculty which to most is new—at least it is so to myself.

Both patients are relatives—one my sister-in-law, the other my niece; both have been cured of severe illness by Mesmerism, and consequently have been frequently mesmerised: both are good phrenomesmeric patients; but, until the experiment I am about to detail, neither could travel mentally, nor were in the least clairvoyant.

Case the First.

A lady, for whom I had extracted TEN teeth whilst in the mesmeric state, and whose case I enclose, wishing to have a few lessons in Mesmerism, I became her preceptor. On one occasion the lady, having thrown my sister-in-law (Jane) into the sleep, was very desirous to have her house in the country described; and every effort was used by her to induce the sleeper to travel, and for a long time without effect. Almost tired with the affair, I—almost without a thought, certainly without any expectation of a realization of our wishes—placed my fingers upon *locality;* the instant I did so, she began to describe the exterior of a somewhat old-fashioned house; taken by surprise, I removed my fingers, and the patient became silent. Delighted at the discovery, we prepared for our investigation. The lady was placed *en rapport*, and desired to think as strongly as possible, and I placed my fingers again on "locality."

The patient first described the grounds and the different entrances to the house correctly—then said the house was an old one. Here my antiquarian predilections came into play; and, supposing it might be an old manor-house, with possibly a porch and seats, I asked what kind of door there was; she said it was painted like mahogany, and that there were seats—garden-seats on each side: the lady, on being appealed to, said the house was undergoing repairs, and, for aught she knew, it might be mahogany, but she did not know; that they had seats to put out in

fine weather, but they were not out when she left home; but she would make a note of it, and let me know on her return. Jane next correctly described the entrance-hall; staircase; dining, drawing, and breakfast rooms; the situation of the windows, &c.; when the lady asked the patient to go into her studio.

Lady.—What kind of room is it? *Jane.*—O, it's all in confusion. *Lady.*—That I'll be bound it is; I'm very untidy. What do you see about the room? *Jane* (*after a pause*).—Oh, nothing particular, it's all in a litter. *Lady.*—Do you not see a great many pictures on the walls? *Jane.*—There are no pictures about the walls. *Lady.*—There she is not right; the walls are covered with pictures and drawings. *Jane* (*suddenly*).—O, here they are; they are all upon the ground, with the faces turned to the wall. *Lady.*—Then they are cleaning out my studio! Now I'll try her. How many chairs are there in the room? *Jane.*—Two. *Lady.*—That's not right: I never allow a second to be in the room. Are you sure there are two? *Jane.*—Yes, to be sure. *Lady.*—Describe the chairs. *Jane.*—O, one is a large-looking chair; it seems as if it had been cut down at the back. *Lady.*—She is quite right; my chair has been cut down at the back.

Here another note was reserved respecting the two chairs; and I subsequently received a letter from the lady, stating that the description given by my sister-in-law was in every respect correct. Her studio had been cleaned, the pictures were on the ground, and there were two chairs—the second probably brought in to stand upon to take down the pictures.

The patient seeming much distressed, I thought it desirable she should be awakened.

Case the Second.

My niece, Harriett, suffering from severe head-ache, requested I would mesmerise her and remove the pain. Accordingly I put her to sleep in two minutes, and having dismissed the headache by the usual passes, and which was accomplished in less than a minute, I excited several of the phrenological organs, catalepsed the arms, &c. to the infinite astonishment of a party of friends then assembled. At the request of Mrs. P. I endeavoured to get her to travel to *Norwich*, where my mother resides, for the purpose of knowing if she was in good health.

Having placed my fingers upon *locality*, without doing which I could not succeed, we began. She would not go by rail but by coach. I had great difficulty to get her to describe the road; when we arrived at the coach-office, St. Giles, Norwich, she described it accurately; we then came at once to my mother's residence.

Purland.—Where are we now? *Harriett.*—Standing at a door. *P.*—What kind of house is it? *H.*—Very old-fashioned. (*Quite right.*) *P.*—What do you see opposite? *H.*—Nothing. *P.*—Look again; be particular. *H.*—I don't see any thing. *P.*—Nonsense! are there no houses? *H.*—No, there are no houses, I tell you. (*She was correct; it is a churchyard.*) *P.*—Now let us go into the house; what kind of passage is it? *H.*—Passage! it don't look like a passage; it's a curious looking place—it's wide. (*Quite right.*) *P.*—Describe the staircase. *H.*—It's a very funny old-fashioned one. *P.*—What is the colour of the wood? *H.*—Very dark. (*It's of oak.*) *P.*—Any carpet on the stairs? *H.*—No. (*Quite right.*) *P.*—Now let us go into the room on the left side; do you see it? *H.*—Yes. *P.*—Who is there in it? *H.*—There is no one there. *P.*—Let us go up stairs; are we there? *H.*—Yes. *P.*—Any body in it? *H.*—Yes. *P.*—How many? *H.*—Three. *P.*—What kind of people are they? *H.*—O, as old-fashioned as the house. *P.*—Ladies or gentlemen? *H.*—One gentleman and two ladies. *P.*—What are they doing? *H.*—Two are talking, and one lady is standing in the middle of the room. *P.*—What kind of person is the gentleman? *H.*—He's short; very short. (*Quite right.*) I think I have seen him before. *P.*—Where? *H.*—I don't know, but I think I have seen him before. (The patient was quite correct; the gentleman was my mother's brother; he is very short in stature, and I think she had seen him once or twice, when in London, about eighteen months since.) *P.*—What kind of a person is he talking to? *H.* (*suddenly*).—Oh, the lady standing in the middle of the room is *your mother!* *P.*—My mother?—oh no. *H.*—Yes it is; I'm sure of it. *P.*—How does she look? *H.*—Very well indeed.

The patient described the third person to be "very neat and tidy" in her dress. (It was my aunt.)

Now I think every man with "one poor grain" of common sense will come to this conclusion, that the patients certainly saw what they described; that it was not all mental transfer (albeit I take mental transfer to be as wonderful); that is, that in some points, for instance, the *two chairs*, the pictures, the door, and the seats, the patient could derive no assistance from the party *en rapport*, but that they were decidedly cases of clairvoyance. When the patient in case No. 2 exclaimed, "Oh, the lady standing in the middle of the room is your mother!" I was thinking strongly of my aunt, and therefore the patient acted quite independently of mental transfer.

I am aware that I am already recorded in the books of the *wise* (?) as an enthusiast, or something worse, and I am also conscious that this communication will extend my reputation in that particular quarter; but I beg to state that so long as I can alleviate the torment of suffering humanity, I shall patiently bear the contumely of the narrow-minded, the selfish, and the proud; and I take leave to offer this piece of advice (gratis!):—

That instead of M.D.'s and others wasting their time in witnessing and condemning the experiments of others, they would be better employed in investigating this subject themselves.

I have the honour to remain, Sir, your obedient servant,

T. PURLAND,
Surgeon-dentist to the Mesmeric Institute,
59, Mortimer-street, Cavendish-square.

TO THE EDITOR OF THE CRITIC.

SIR,—As you have expressed (in THE CRITIC) a desire for all the *facts* you can elicit relative to mesmeric cures and the phenomena of clairvoyance, I have pleasure in sending you the following account, the result of my own experience; and I am most happy to add my testimony to the truthfulness not only of the *curative* effects of Mesmerism, but also to the more exalted state called *clairvoyance*.

A dear young relative (whose name I forbear to mention, she being ignorant in her natural state of ever speaking while in the mesmeric *coma*, to which she seems to entertain an aversion) suffering from a malady of some years' standing, and whose medical attendants had ceased to visit her, declaring they had done all that medical skill could devise, was, while in a paroxysm of extreme suffering, mesmerised by a gentleman casually visiting at the house, and, after being kept in the trance for an hour, was demesmerised, and awoke *comparatively well*. Our kind friend remained with us a week, during which time he mesmerised her for an hour three times a day, viz. at eleven o'clock a. m., at three, and at at seven o'clock p. m., and each time with an increased beneficial result.

On the evening of our friend's departure, his patient, about seven o'clock, the time she was accustomed to be mesmerised, fell voluntarily into the mesmeric sleep, and on moving her arms, they (as usual) became cataleptic. Her mother, who with another relative and myself were with her, became much alarmed, and entreated me to try if I could demesmerise her (our friend had instructed me how to act, in case I should think it desirable she should be again mesmerised). With a palpitating heart I confess I essayed to restore the limbs to their natural position, and with a thankful spirit saw that I succeeded in so doing. Having now a feeling of confidence in my own powers, I commenced demesmerising her; and, happily, in a short time, restored her to consciousness.

Afterwards, when I saw symptoms of a return of her malady, I induced her to let me mesmerise her, and always succeeded in giving her relief. Her sufferings, mental and bodily, had been very great, and sometimes were so (to all appearance) in her mesmeric sleep, so that all my energy was exerted to soothe her pains and give relief. I never thought of trying experiments either to induce her to speak or otherwise, when, one evening having mesmerised her, and seeing her sleep calmly, I stretched out my hand to take up a newspaper that lay on the table, when in a serious tone of voice she asked "What are you going to do?" I replied I was about to read the newspaper; "Then you will do me no good; *your mind and thoughts must be on me.*" She then proceeded to explain to me, that any other person than her mesmeriser being in the room during her sleep disturbed her; she said their essences amalgamated with mine and hers, and made her uneasy and uncomfortable.

I scarcely need say I was surprised at these manifestations, but happily felt neither alarmed nor flurried, and proceeded to ask why she so *winced* whenever I snuffed the candles. She said "she could not tell why, but when I touched the snuffers she felt *all drawn up*, but that the sensation was only momentary." On another occasion she told me "she knew my most inmost thoughts; that she had never really known me till then." She has also voluntarily told me the dispositions of various persons, some of whom she never saw; and being requested so to do, described the disease of a lady residing more than a hundred miles distant, and whom also she never saw. Having once occasion to mesmerise her before I had breakfasted, I requested my coffee might be brought to me, when, to my surprise, she not only appeared to swallow when I drank, but made a face as though not agreeable to her palate. I asked her what she was drinking.—"Coffee." "Why do you make a face?"—"Because it is too sweet"—(she drank *no sugar* in her tea, and very little in her coffee). When I ate my toast, she also ate; I asked her what she was eating.—"Dry toast."

Amongst other phases of her malady she sometimes had tic douloureux in her face, for which she was in the habit of using creosote. When in her mesmeric sleep, I asked if it did not injure her teeth;—"Yes, and the coats of my stomach also." I then

begged her to promise me not to use it again. "As far as I *can* promise I *will*; but I must not promise unless I am sure I have strength of mind to keep my word—if in my waking state I were as I am now, I should not hesitate to make the promise." Although repeatedly attacked with the same disease, she never used creosote afterwards. She once told me if I would keep her in the mesmeric trance for three whole days I should completely cure her, but her mother's timidity negatived the attempt. Sometimes when I have asked her a question, she has said, "Give me time, *you know not, cannot* know, my sensations; *I feel as though I were buried.*"

Once in answer to a question I put to her, she requested I would not then urge her to speak, "*as her body felt as though it were swollen;*" at the same time a tear stole gently from under either eyelid, and rested on her cheeks. I afterwards knew, had she answered my question, it would have given pain in her waking moments both to herself and others, and though then unable to account for her apparent emotion, subsequent circumstances fully developed its cause.

Many other things I could relate, but trust what I have adduced will sufficiently prove (except to those predetermined not to be convinced) the *truthfulness of clairvoyance.*

The above manifestations were elicited in a private drawing-room (with rarely, for fear of giving the poor sufferer pain, any one present but my dear patient and myself), the clairvoyance arising spontaneously, the result neither of experiment nor the desire to satisfy or gratify either the sceptic or believer.

Anxious only to relieve her sufferings and restore her to full health, my questions, after finding her clairvoyant, chiefly pertained to that end, and for the benefit and relief of others (perhaps I ought to have mentioned she prescribed medicine and treatment both for herself and those to whom I directed her attention); for having in my own person evinced much mesmeric power, I not only became curative Mesmeriser-general to my own family, but to many of my friends; and have happily succeeded (without always putting to sleep) in removing headaches, toothaches, stiff necks, rheumatism, and also more serious and generally obstinate diseases, such as ringworm in the head and inflammation; and if among the manifold cures by Mesmerism you have already received, you should deem my anxious efforts worthy the attention of THE CRITIC, I shall be happy to furnish you with a few cases, and with much pleasure add my humble testimony to the wonderful power of Clairvoyance and the beneficent and curative effects of Mesmerism.

As a guarantee for the truthfulness of my unsupported testimony, I send (for your private perusal, with leave also to give the names of the parties to any person feeling disposed to make inquiry) reference to highly respectable individuals, some of whom have known me upwards of twenty years, and all of whom will, I doubt not, bear evidence to my rectitude and strict integrity.

I am, Sir, yours respectfully,
ELIZABETH NEWMAN WARE.

Liverpool, Sept. 9, 1845.

[The above communication was accompanied by references to parties of very high respectability in London, Birmingham, and Liverpool. Our correspondent, however, seems to have misconstrued the term Clairvoyance. Strictly, it does not apply to the phenomena exhibited by her niece. The case, however, is an interesting one, and bears upon its front the true impress of authenticity.—ED. CRITIC.]

TO BOOKSELLERS.—*A stamped copy of* THE CRITIC *sent regularly to any Bookseller, for his own use, at the cost of stamp and paper only, on prepayment of* half a year's subscription, at least (4*s.* 4*d.*), *which may be transmitted in penny postage stamps.*

BOOKSELLERS *and Keepers of Circulating Libraries are requested to communicate to* THE CRITIC *the results of their experience as to books and classes of books most in demand, and other similar information. Books wanted to purchase inserted in the weekly list without charge.*

BOOKSELLERS' CIRCULAR.

LITERARY PIRACIES.

The *Journal des Débats* expresses great indignation at a new phase in Belgian piracy—or rather merely a deeper plunge down the "easy descent" of that commercial *Avernus*—in which we see nothing at all that was not certainly to be expected, so soon as the Belgian publisher should feel satisfied that he could bring up from that further depth any thing that would pay. Hitherto, if the Belgian freebooter published an imperfect, ill-printed, or illegible edition of a work, the purchaser of the stolen goods knew, at any rate, that the Belgian was responsible for those defects—not the author or native bookseller. But this shadow of responsibility is beginning to sit uneasily on the Belgian conscience—not for moral, but pecuniary, reasons; and the bait offered by the *Œuvres Choisies de Gavarni*, now publishing at Paris, by Hetzel, has seduced one of the confraternity to produce, in Belgium, a wretched imitation—art and all; on the cover of which he has had the genius to write, instead of his own name and capital,—"*Paris*, Aug. Ozanne, Editeur, Rue Richelieu." The ingenuity of this combination is greater than may, at first sight, appear. In the first place, it is intended to deceive the European market by insinuating that the publication is the "true and original" edition:—then it will necessarily, under that supposition, impede the sale of all other Belgian editions: next, the re-introduction of the work into France, by contraband, is greatly facilitated by this fraudulent cover: and, best of all, the pirate, instead of selling his wares, as usual, 60 per cent. under the price of the French edition, may still secure his advantage over that, in the European market, at a price relatively much greater. But the subtlety of the worthy Belgian is not exhausted by these considerations. Of course, there is no "Aug. Ozanne," a publisher in Paris:—why did not the Belgian complete his theft, in all its parts, by stealing M. Hetzel's name, as well as all the rest?—Why, if he had done so, the foreign orders would have gone direct to M. Hetzel himself, who would scarcely have handed them over to the pirate. So, the latter did all he dared—stopping short just where he should (one of the most difficult tests of genius):—not venturing on the name of the French publisher, he assumed, at any rate, that of the street in which the latter is established as a bookseller. There is nothing in all this which might not have been expected in any country where piracy has been long practised and openly defended. There are reasons for rejoicing in such extreme expressions of the Belgian sin as this last case, because the very excess of the profligacy will, in spite of royal patronage, rouse the morality of nations to the cure. Neither France herself, nor, unhappily, England, has been free from this stain; but the former country has taken so noble a tone and attitude in shaking off the shame, that she is well entitled to give voice to her indignation at this most barefaced attack of all upon her literary property. It is well to echo the denunciation of the *Journal des Débats*, that readers may be put on their guard against purchasing from "M. Ozanne." Meantime, the Madrid papers announce that the booksellers of that capital, encouraged by the lucrative character of the Belgian example, are about to claim their own share in the pickings of the French brain, and have made arrangements for reprints, in the original language, of the works of Thiers, Chateaubriand, Victor Hugo, Alexandre Dumas, D'Arlincourt, De Balzac, Eugène Sue, Jules Janin, and Georges Sand.

REGISTER OF NEW PUBLICATIONS,

From Sept. 13 *to Sept.* 20.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded* by letter *will be duly inserted.*

Whittaker's Hand-Book of Musical Instruction; Singing, by G. H. Rodwell, 12mo. 1s. sd.—Wilson's Sharebrokers and Speculators' Account Book, oblong, 4s. leather.—Wandering Jew, by Eugène Sue. Vol. III. 8vo. 7s. cl.; ditto, complete, 3 vols. 8vo. 1l. 3s.—Willison's (Rev. J.) The Afflicted Man's Companion, 18mo. 2s. 6d. cl.

BOOKS WANTED TO PURCHASE.

No charge is made for insertion in this list. Apply to the Publisher of THE CRITIC, stating prices.

Illustrations of Ornithology, by Sir William Jardine, P. J. Selby, &c. 1st series, in 3 vols. royal 4to. extra half-bound, or in parts, royal 4to. or imperial 4to.

GLEANINGS.

ORIGINAL AND SELECT.

THE EAGLE-SLAYER.—We think we may very justly apply this designation to Mr. Alexander Lamont, gamekeeper on Corndavon, Braemar, as the following facts will shew:—Since he has been gamekeeper at Corndavon Lodge, he has succeeded in destroying the surprising number of twenty-one magnificent eagles, some of them of enormous size, measuring no less than from eight to nine feet between the tips of the wings. The last, which he killed on the 9th of March, this spring, measured nearly eight feet. Mr. Lamont's most successful method of destroying the "lords of the air" was by trapping; and the place where his traps succeeded best was on a large stone on the top of one of the high mountains on the Invercauld property, well known to the sporting community as the "Brown Cow." Six of these champions of the Grampians were thus caught. On one occasion, on going to look at his traps, Mr. Lamont saw, to his great surprise, an enormous eagle in the act of rising in the air with one of the traps attached to his leg, having succeeded in breaking the chain. By the help of his musket, however, both trap and bird were quickly brought to the ground by the hand of this most determined and successful enemy of the king of birds.—*Aberdeen Journal.*

IRISH HUMOUR.—"Is there a ford here?" asked an English gentleman, who, in making a tour in the west of Ireland, was suddenly stopped by a mountain stream. "Oh! to be sure, your honour," said an honest native, "there *was* a ford." "When was it?" asked the gentleman. "Before the bridge was built, yer honour," replied the good-humoured Hibernian; but after the passengers used the bridge, it got *out of habit*." "Well," said the traveller, "now the bridge is broken down, I suppose the ford may have got *into habit* again. Is it safe?" "To be sure, yer honour; *all but in the middle*. But that is nothing; and *if you can swim*, there is not a better ford in all the country." "But I cannot swim," replied the gentleman. "Then, yer honour," retorted Paddy, "the only safe way that I know of is, as soon as you get out of your depth to walk back again."

A cavern, remarkable in an archæological point of view, has just been discovered at about eight leagues from Guelma, in Algeria, on the side of the Mlaia Mountains. It is hollowed out of an immense calcareous rock, and a circular entrance of seven or eight yards in diameter, is about 400 yards in depth, and runs from 1,000 to 1,200 yards in length; taking an inclined direction, and requires 35 minutes to reach its extremity. A thousand stalactites of various forms adorn its inside, and the ground is encumbered with a prodigious quantity of enormous blocks fallen from the vault. But what gives it its greatest interest is the number of Latin inscriptions at the entrance. They are for the most part illegible, but the name of Donatus is to be deciphered in more places than one. It belongs to the earlier times of Christianity, as the names of unknown martyrs appear, and there is no doubt the cavern was the refuge of the then persecuted Christians. The Arabs have many fabulous legends on the subject, and dread entering it, lest they should be seized and detained for ever by an evil genius or spirit. And yet it was an Arab, the Chiek Deradji Ben Kerad, who led some Frenchmen into this cave, the silence of which has not been before disturbed for ages.

A curious phenomenon has been discovered for some time past at Durham. Carbureted hydrogen, or coal-gas, has risen in considerable quantities from the bed of the river near Framwellgate-bridge, doubtless from the stata of coal beneath. A trial is to be made of collecting it for the purpose of lighting the bridge.

ADVERTISEMENTS.

The following is the moderate scale of charges for Advertisement adopted by THE CRITIC.

For 6 lines and under..... 5s.
For every three lines above ..... 1s.

The volumes of THE CRITIC *neatly half-bound, as completed, for 4s. 6d. each, if the numbers be forwarded to the office. The stamped edition may be sent by post with the ends open, and a letter of advice should contain directions how it is to be returned.*

A portfolio, on a novel and convenient plan, for preserving the numbers of the current volume of THE CRITIC *may be had at the office, or by order, of any bookseller in the country, price 4s. 6d.*

THE CRITIC *may also be had in monthly parts, sewed in a wrapper price 1s. 6d. each.*

To Readers and Correspondents.

AN OLD SUBSCRIBER (Maxfield).—*The word being a proper name, there is no strict rule for it—the pronunciation is arbitrary; we have heard it given each of the ways named, and, for what we can see, with equal authority. Questions of this nature do not come within our rule of reply; it would open to us a wide and profitless field of occupation.*

GIORGIO.—*Ollendorf's German and M'Henry's Spanish Grammar.*

C. M. (Birmingham).—*We know of none better than Lord Leveson Gower's—certainly it is the most equal of all the translations we have read. The price may be learned and the work procured at any respectable bookseller's.*

HELEN, A. L. (Stone).—*We are obliged by the verses forwarded. They need but two requisites to be fitted for our columns—equality and finish. The imagery is choice and natural, and the sentiment for the most part appropriate. The fair authoress, however, should be more careful of her quantities and the balance of her sentences. She has also strength enough, if she will exert it, to avoid such hackneyed rhymes as "weep" and "deep," "sighing" and "dying." But for these sins, the stanzas beginning "Late gazing on sweet Deva's stream" would do credit to any one. The best place to procure the works required we should say is Nutt's, in Fleet-street. Mr. Nutt, we have no doubt, will forward a catalogue if applied to.*

ERRATUM.—In review of French Literature, page 398, column 2, for *misalliance* read *mésalliance.*

ADVERTISEMENTS.

BORROW a RAZOR!!! "Go a borrowing, go a sorrowing," is an old lady's adage, and may be true with reference to gold or silver, but it is not true as regards Steel Razors, and ought not to influence gentlemen, either young or old.

The DIAMOND-EDGE UNPOLISHED RAZORS* at 2s., 2s. 6d.; and ivory 3s. 6d. each; and JOHN TEETGEN'S LONDON RAZOR STROP (Philosophical) of 1845, at 1s. to 6s. each, are submitted for trial on LOAN. The proprietor,

JOHN TEETGEN, 10, OPPOSITE BISHOPSGATE CHURCH,

hopes that this offer will be embraced by all who do not shave as they can and should do, viz. quite clean, and with a sense of pleasurable relief; those who from painful experience may be doubtful of this being effected, are entreated to give J. T. the benefit of the doubt; try his Razors, be astonished and delighted.

The RAMBLER POCKET DRESSING CASE, 7 inches long, 3½ wide, and 1¼ deep, contains Strop, Razor, and Comb; Tooth, Nail, Shaving, and Hair Brushes. 15s. 4d. complete.

* Made by bonded contract (20 years) solely for J. T. Beware of imitations!—There are some!

ROWLAND'S UNIQUE PREPARATIONS.

(Under the Patronage of the several Sovereigns and Courts of Europe, and universally preferred.)

ROWLAND'S MACASSAR OIL,

For the Growth, Preservation, and for Beautifying the Human Hair.—Price 3s. 6d.—7s. Family Bottles (equal to four small), 10s. 6d. and double that size, 21s. per bottle.

ROWLAND'S KALYDOR,

For improving and Beautifying the Skin and Complexion.—Price 4s. 6d. and 8s. 6d. per bottle, duty included.

ROWLAND'S ODONTO,

OR PEARL DENTIFRICE,

For the Teeth and Gums.—Price 2s. 9d. per box, duty included.

CAUTION.

SPURIOUS COMPOUNDS are frequently offered for sale, under the same names (some under the implied sanction of Royalty), the Labels, Bills, and Advertisements of the original articles are copied, and either a Fictitious Name, or the word "Genuine," is used in the place of "ROWLAND'S."

It is therefore imperative on purchasers to see that the word "ROWLAND'S" is on the wrapper of each article. For the protection of the public from fraud and imposition, the Hon. Commissioners of Stamps have directed the Proprietors' name and address, thus,—

A. ROWLAND & SON, 20, Hatton-garden,

to be engraved on the Government Stamp, which is affixed on the Kalydor and Odonto.

Sold by the Proprietors, and by Chemists and Perfumers.

*** All others are FRAUDULENT COUNTERFEITS!!!

THE CRITIC,
And Journal of Literature.

SATURDAY, SEPTEMBER 27, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

JOURNAL OF ENGLISH LITERATURE.

BIOGRAPHY.

The Autobiography and Correspondence of Sir Simonds D'Ewes, bart. during the reigns of James I. and Charles I. Edited by JAMES ORCHARD HALLIWELL, Esq. In 2 vols. London, 1845. Bentley.

IN spite of the extent and intensity of the railroad mania, which would merge all things ancient in oblivion, and sacrifice every memorial of the past that the express train might do the distance from Land's End to John O'Groat's half an hour sooner, we see with pleasure that there is an increasing interest in every thing relating to the antiquities and history of our own country. The efforts of the Camden, Percy, Shakspeare and other societies have been eminently successful in rescuing from time-honoured dust valuable records of the political and social life of our ancestors, and publishers have been zealous and enterprising in the same cause. The stores of family papers, and the collections in our libraries have given up not a few of their treasures to public view, and still the search is proceeding with success. Among the latest and most interesting of these publications is the *Autobiography of Sir Simonds d'Ewes*, the well-known compiler of that most valuable work, *The Journals of all the Parliaments during the reign of Queen Elizabeth*.

This "autobiography" has even more than usual claims to our attention, from the high character of the author. It was compiled by him from his own diary, and presents, therefore, his thoughts and feelings in their original freshness, not tinged with that colouring from subsequent events which is seen more or less when a history of the earlier portion of a man's life is drawn from memory alone.

Sir SIMONDS D'EWES was a formal, precise man, in religion inclining towards Puritanism; in politics belonging to the popular side, because in the ascendancy of the church and king party, he saw danger to the interests of religion, but still anxious for moderate measures, and willing to do justice to his opponents. He was bred to the study of the law, but, after his marriage, he gave up this as a profession, and employed his time in his favourite study of history, amid the musty records and parchments of the Tower, the Rolls, and other public and private collections; for this was to him "the most ravishing and satisfying part of human knowledge." In 1640 he was elected member for Sudbury, mainly on account of his known moderation. CHARLES I. conferred a baronetcy upon him in 1641, but this did not tempt him from the path of consistency, and he sided with the popular party at the breaking out of the war, but was soon got rid of by PRIDE's purge, as an impediment to the hotter spirits of the Long Parliament, and two years subsequently he died. Unfortunately his autobiography ends in 1636, and from this circumstance, as well as from the character of D'EWES, it is more interesting as an illustration of the social and domestic life of that period than of the political; but as a picture of individual character and habits, it will not yield in completeness even to Mrs. HUTCHINSON's Memoirs. It contains also numerous notices of his contemporaries, and not a few incidental indications of the real feelings of the people during the twenty years previous to the actual outbreak, a period which cannot be too much studied by those who seek to appreciate the true nature of the contest and the characters of the opposing parties. His professional studies we shall not notice at length, but the sketch of Cambridge in 1620 is too characteristic of the man to be omitted.

But the main thing which made me even weary of the college was, that swearing, drinking, rioting, and hatred of all piety and virtue, under false and adulterate nicknames, did abound there and generally in all the university. Nay, the very sin of lust began to be known and practised by very boys; so as I was fain to live almost a recluse's life, conversing cheerfully in our own college with some of the honester fellows thereof. But yet no Anabaptistical or Pelagian heresies against God's grace and providence were then stirring, but the truth was in all public sermons and divinity acts asserted and maintained. None then dared to commit idolatry by bowing to, or towards, or adoring the altar, the communion-table, or the bread and wine in the sacrament of the Lord's Supper. Only the power of godliness in respect of the practice of it, was in a most atheistical and unchristian manner contemned and scoffed at.

His comments, too, upon the fire which destroyed the greater portion of the Six Clerks' office, shew that the region of Chancery compensation jobs was not even then remarkable for honesty. After observing that it is every man's duty under calamity to consider for what sins he is being punished, he proceeds:—

Two especial sins there were which the Six Clerks were at this time for the most part guilty of: one, first, was their extreme tenacity and love of the world, daily plotting how to keep short the gains of their under-clerks and *to advance their own*, which fault, even after the fire, I heard not that any of them amended. The other was their atheistical profanation of God's own holy day, sitting (except one Mr. Henley, come in but a few years before, that had some religion) in their studies most part of the Sunday, in the afternoon to take their fees and do their office business, many of their under-clerks following their profane example.

As might be expected from one of D'EWES's cold temperament and strict morality, he is somewhat censorious in his observations upon the characters of his contemporaries; but one of his gossiping stories against BACON is too gross to be believed upon the unsupported authority of any one man, however incapable of intentional slander. The faults alluded to in the following passage are more venial:—

LORD BACON.

By letters patent, dated the 27th day of January, was Sir Francis Bacon, Lord Verulam, created Viscount St. Albans, all men wondering at the exceeding vanity of his pride and ambition; for his estate in land was not above 400*l.* or 500*l.* per annum at the uttermost, and his debts were generally thought to be near 30,000*l.* Besides, he was fain to support his very household expenses, being very lavish, by taking great bribes in all causes of moment that came before him, so as men raised very bitter sarcasms or jests of him, as that he was lately *very lame*, alluding to his barony of Verulam, but now, having fallen into a consumption (of purse, without all question), he was become *all-bones*, alluding to his new honours of St. Albans; nay, they said Nabal, being folly or foolishness, and the true anagram of Alban, might well set forth his fond and impotent ambition.

Of SELDEN and COTTON he writes thus:—

On Tuesday, September the 28th, going, as I frequently used, to visit Sir Robert Cotton, England's prime antiquary, I there met Mr. John Selden, of the Inner Temple, a man of deep knowledge and almost incomparable learning, as his many published works do sufficiently witness, with whom Sir Robert, our joint friend, brought me acquainted, and we held ever after a good outward correspondence; but both of them being more learned than pious, I never sought after, or ever obtained unto any great entireness with them, yet I had much more familiarity with Sir Robert Cotton than with Mr. Selden, being a man exceedingly puffed up with the apprehension of his own abilities.

But D'EWES's zeal for antiquities more constantly led him to Sir R. COTTON's than would be inferred from this observation. We have said D'EWES was no enthusiast. In his heraldry and pride of family he will yield to none. He gives a "short memorial" of his wife's pedigree, filling twenty pages; and even his father's loss of 6,000*l.* by the fire before mentioned did not afflict him so much as the destruction of a parchment pedigree brought out of Gelderland by his great-grandfather ADRIAN D'EWES. So, also, the chief cause of regret when he anticipated that none of his sons would live was, that his name would not be enriched by the high dignity of the long muster-roll of his wife's ancestors.

Perhaps the most curious portions of this autobiography are the love-passages, or rather the quiet calculations of match-making parents and relations, by which all preliminary arrange-

ments were considered before the parties usually supposed to be most interested in such matters were consulted. A marriage was little else than mere matter of attorneyship, although there were apparently opportunities of drawing back without the fear of eloquent orations about wounded feelings, and the more touching appeals of heavy damages.

D'Ewes's first courtship was unsuccessful, but it did not grieve him much. After relating the progress of the arrangements prior to the interview, he proceeds thus coolly:—

The next day, being Friday, May 25, I arrived at Colchester between twelve and one; and that afternoon saw Miss Jemima with Lady Bingham, her mother (whom, having been the widow of Sir Richard Bingham, Knight, Mr. Waldegrave had married to his second wife), and had some discourse with the old lady, and some short view of the gentlewoman; whom I did not take to be so handsome at this first view as I thought her afterwards. I went not home at this time with the old lady, but lay at a town called Langham, near to Lawford, at one Mr. Littlebury's house; from whence, the next day, I went with him to Mr. Waldegrave's in the afternoon, and had full access in private discourse afforded me with the young gentlewoman. That night I returned again with Mr. Littlebury (who had used a great deal of faithful care to make up this match) to his house; where having staid till Monday, May 28th, in the forenoon we went again to Mr. Waldegrave's, and dined there. After which ended, I had several discourses with the young gentlewoman, and received from her so many remonstrances of acceptation and affection, as her own father acknowledged she never had done before; and we all thought the business in fair forwardness for the consummation thereof. But I, fearing my father's inconstancy, by reason he was to settle above 1,100*l.* per annum upon me, and to receive no portion, had all my expectations even at this present mixed with doubts; which were the more increased upon my return to him next day to Newplace (for, his coach-horses going cheerfully, I went the whole thirty-eight miles from Lawford thither in a day), where, having related to him my unexpected sucess, I found him in some strait, as if he knew not well now how to break it off, or go back.

At my next return therefore thither, he wrote a strange letter to the young gentlewoman, and gave it me in charge to bring him an answer from her. It was penned in a good phrase, but mixed with some unseasonable imperious passages; so as, presaging what effects it would produce, I kept it two or three days ere I delivered it after I was come to Mr. Waldegrave's; but fearing my father's displeasure if I still kept it, and so an abortive issue of this overture, I at last rather chose to put it to the hazard. Truly, both the father and the young gentlewoman, whose affection I had gained very far, were content for my sake to have passed it over; but the Lady Bingham, her mother, told me plainly, my father took so early authority upon him as her daughter should never come under his power; and so, after all that cost bestowed by my father, being near upon 80*l.* and all the travel and pains which had been bestowed by myself and others to effect this business (although it hung in suspense till the 19th day of September next ensuing), yet all was finally dashed.

His courtship with his very juvenile wife is detailed at length, and we have the following euphuistic:—

LOVE-LETTER IN THE REIGN OF JAMES THE FIRST.

Fairest,—Blest is the heart and hand that sincerely sends these meaner lines, if another heart and eye graciously deign to pity the wound of the first, and the numbness of the latter; and thus may this other poor inclosed carcenet, if not adorn the purer neck, yet lie hidden in the private cabinet of her whose humble sweetness and sweet humility deserves the justest honour—the greatest thankfulness. Nature made stones, but opinion jewels; this, without your milder acceptance and opinion, will prove neither stone nor jewel. Do but enhappy him that sent it in the ordinary use of it, who, though unworthy in himself, resolves to continue your humblest servant,

Simonds D'Ewes.

Sundry other passages had we marked for extract, but we must be content with referring our readers to the work itself, as one which should be read by every person who takes any interest in that period of our history, or in the unreserved display of individual character. We conclude with his opinion of James I. which may atone to some for his condemnation of "the men who call themselves Protestants, as Bishop Laud, Bishop Wren, and their wicked adherents," and his high admiration of the emigrants to New England for conscience sake.

THE CHARACTER OF JAMES I.

It did not a little amaze me to see all men generally slight and disregard the loss of so mild and gentle a prince, which made me even then to fear that the ensuing times might yet render his loss more sensible and his memory more dear unto posterity. For though it cannot be denied but that he had his vices and deviations, and that the true Church of God was well near ruined in Germany whilst he sat still and looked on, yet if we consider his virtues and learning on the other hand, his care to maintain the doctrine of the Church of England pure and sound; his opposition against James Arminius, Conradus Vorstius, and other blasphemous Anabaptists, and his augmenting the liberties of the English rather than oppressing them by any unlimited or illegal taxes and corrosions, we cannot but acknowledge that his death deserved more sorrow and condolement from his subjects than it found.

The allusion here to the condition of Protestantism abroad is one among the numberless proofs of the personal interest felt by the parties in England in the religious wars then raging upon the continent. D'Ewes even thought it appropriate to his diary to insert each year an account of foreign affairs; and although these notices do not give us any new information, they increase the value of the work by shewing what was the opinion of cotemporaries of those great events which were then taking place. The indifference of Hume to all religious discussions was his great disqualification as an historian of the 16th and 17th centuries.

The second volume contains some interesting extracts from the correspondence of the D'Ewes family, and a secret history of the reign of James the First, by a cotemporary, which, however, does not afford much additional information. The Editor has performed his duty with great judgment, and no parade of useless notes.

VOYAGES AND TRAVELS.

Sketches on the Shores of the Caspian, Descriptive and Pictorial. By William Richard Holmes. London, 1845, Bentley.

In November, 1843, Mr. Holmes, who occupies a place in the office of our Consul at Erzeroum, resolved to devote a few months to a tour on the shores of the Caspian. The region is one little known to us; it lies out of the ordinary route of travellers; it abounds in material for amusing and instructive narrative, and Mr. Holmes is gifted with so many of the qualifications for the tourist and the tour writer, that the result is a volume full of lively, pleasant, readable composition, so graphic in its descriptions and so abounding in novelty, that we follow him to its close without wearying, and are only sorry when the last page tells us that there is nothing more to be enjoyed.

The region traversed by Mr. Holmes on the Caspian shores extended from the river Astara, on the frontiers of Russia, to Astrabad, the extreme Persian town. Thence he proceeded to Teheran, and returned to Erzeroum by Tabreez.

It is in his sketches of the people that Mr. Holmes's excellence lies. Pictures of towns and buildings and scenery are always dull, because in truth the image in the writer's mind cannot by mere words be conveyed to the mind of the reader. It is to the former, therefore, that we shall for the most part limit the extracts by which we purpose to exhibit some of the more attractive features of this agreeable volume. Indeed it is by extract only that a book of travels can be noticed in a literary journal. It is not a subject for criticism, nor is it capable of analysis; the reviewer has little other duty to perform than to pass a brief judgment on its general character as a composition, and then to cull the most amusing and novel passages he can find for the display of its worth and the amusement of his readers. At this season of dulness with the publishers, we thankfully accept the small boon thus provided, and shall be more lavish of extract than at a busier time.

The starting is thus described:—

On the afternoon of the 4th of November, 1843, we left Tabreez, accompanied by our English friends, who, as is customary in Persia, came a short distance with us before taking leave. The weather was lowering, and a little rain fell, which was considered peculiarly lucky by the Persians; for, as it is of such vital importance to agriculture in this dry climate, they have connected with rain a superstitious idea of general good fortune. Our party consisted of Mr. A. her Majesty's consul at Tehraun, his meerza (scribe), five servants, and a gholaum, Mohamed Rahim Beg,

who had been sent by the prince, Bahman Meerza, as our mehmandar, to procure lodgings and provisions, and to see that we were treated with proper attention. We were all armed, but our servants were so loaded with weapons, than in case of an attack they would have proved more an incumbrance than a protection. Their formidable appearance alone would have sufficed to keep a party of double their number at a respectful distance; and we might reasonably congratulate ourselves on the prospect of travelling unmolested, and arriving safe at our journey's end, provided our followers possessed one tithe of the courage and devotion they boasted while quietly riding through the suburbs of the town. The meerza, however, was essentially a man of peace, and seemed to entertain a profound antipathy to any thing warlike. Instead of sword and dagger, he carried in his girdle a roll of paper and a calemdaun (Persian inkstand), the peculiar type of the professors of the pen. Our baggage had preceded us to the village of Borringe, about six miles from Tabreez, accompanied, and supposed to be defended, in case of need, by four grooms, the cook, and the muleteers.

This is the general aspect of the shores of the Caspian:—

The bushes on the mountain were full of blackbirds and thrushes; and the change from the dreary barren country through which we had passed, where nothing like a bush was visible, was exceedingly refreshing. We continued over these hills on a beautiful smooth turf for about two miles, when we happened to start a hare close to the road-side. Being well mounted, and having a couple of greyhounds with us, we gave chase, when, to our surprise, we found that almost every bush contained a hare; they started out in all directions, and, dodging among the brushwood, completely puzzled the dogs, who could not keep the same animal in view for two seconds. After a great deal of hallooing and scampering about to no purpose—every one calling the dogs to the particular hare he had just started, and they attending to no one, but enjoying a little hunting for their own individual amusement—we thought our firearms were likely to do more execution, and therefore dismounted; several of our attendants who had guns following the example. I had not proceeded many yards before I put up a hare, which I shot, and the report of my gun raised an immense covey of partridges. Meanwhile a very brisk fire commenced on all sides, and even pistols were discharged at the astonished animals. The scene was very animating; and the servants, hallooing and rushing hither and thither, seemed to have gone mad. I found the golaum in a thicket literally filled with hares, blazing away at them sitting, without the least effect on his part, and with as little apparent fear on theirs. This man was a great sportsman in a small way; and on the road, if the report of a gun was heard, it was sure to be Mohamed Rahim Beg shooting at a crow. The meerza, with his mouth wide open in amazement at the uproar, seemed to think it just possible that an odd shot might come his way; and to add to his comfort, being no sports man, he was left in charge of about seven horses, which occasionally exhibited symptoms of pugnacity, and nearly pulled his arms off. Unfortunately we had some distance to go, and it was getting late; so, in about a quarter of an hour, we mounted, and hastened to the village of Meezaum, where we had determined to put up for the night. The abundance of hares was quite inconceivable, and we likewise raised some immense coveys of partridges; these, however, were very wild. Notwithstanding the abundance of hares, we only bagged four, for the bushes were too close to give us a fair chance, and we were distracted by the numbers: our attendants shot nothing. The day had been cloudy and threatening rain; the evening was cold and foggy, and the sun had long set ere we reached Meezaum. The inhabitants vacated for us a most filthy hut, the best, however, the place afforded; and we endeavoured to make ourselves as comfortable as circumstances would permit. During the operation of removing the furniture, we were sitting outside, surrounded by the people of the place, staring at us open-mouthed. I had ample time to observe their physiognomies, and I think I never before beheld such unparalleled ugliness; some of them were hardly human—one man's forehead being about an inch high, and his chin three or four inches long; there were noses of every shape imaginable, and no one had two eyes looking the same way. Two or three old women were peering over a wall, and their hideous and wrinkled features were perfectly astonishing. This village is about twenty-two miles distant from Ahar: it is mostly in ruins, and appears a miserable place. We passed a sleepless night, but felt thankful that we were not entirely devoured by the vermin with which our room swarmed.

Refinement in eating is a point in civilization not yet attained by the Persians. Mr. HOLMES presents this picture of

PERSIAN FEASTING.

After tea, the Beg left us to ourselves for about an hour; when he returned, accompanied by his two brothers, Nooroollah Beg and Shookroollah Beg, a brother of Mehmet Khan, chief of the Shah-sevens, and some other friends, and dinner immediately followed. A tray containing a chillo and pillo, radishes, fried eggs, a stew of meat, and a bowl of sherbet, was allotted to each two persons; and, at the word "Bismillah" (in the name of God), the company fell to in silence, unbroken during the whole time save by the sound of the various jaws in process of mastication. Hands were thrust deep into the greasy dishes, rice squeezed into balls and swallowed with astonishing rapidity, and in less than a quarter of an hour little remained of the immense piles which had been set before them. Water was then brought in, and each guest slightly wetted his fingers, afterwards wiping them on his pocket-handkerchief or his coat, as the case might be; which ceremony had scarcely been performed, when our Shah-seven friend and one or two others, loosening their belts, immediately lapsed into a state of torpidity. My companion and myself had made a plenteous meal, but our dishes appeared comparatively untouched. The Persians are very large eaters, particularly those of the lower classes. Five of our servants, who dined together, devoured every day about twenty pounds of bread, besides a good allowance of meat and fruit; and one evening three of the grooms ate among them ten pounds of rice, and were grumbling because they could not get any more. The Persians say that the English do not eat—they only play with their food. * * * * About twelve o'clock, the usual Persian time, we were summoned to breakfast, and all returned to the house exceedingly sharp-set. The meal was a repetition of dinner, and the same feeding-scene took place as on the previous evening. I have often heard it remarked with respect to the Eastern custom of eating with the fingers, that it was a mistake to regard it as unpleasant, and that the hands, which were thoroughly washed, were cleaner implements than our knives and forks. In Persia, I can only say that I found the washing a very inefficient ceremony: no soap is used, a little tepid water being merely poured over the hands before and after dinner; and they are oftentimes wiped with a pocket-handkerchief which has not been washed for perhaps six months. The voracious manner in which they swallow their food is disgusting. In general, Persians admire the European custom of using the knife and fork, and confess that it is more decent in appearance, and cleaner in reality, than their own; but Ferrajoollah Beg, while admitting this, observed that after all he preferred eating with the hand, as it imparted a flavour to the food: judging from the colour and appearance of his own hand, I should think the observation correct.

And here is

A ROYAL INTERIOR.

In the evening we went to dine with the prince. We were shewn into the same room as on our first visit, and found his royal highness seated on a small rickety chair, at the head of the Russian table before mentioned. It was covered with various nondescript little dishes, and saucers of pickles, chiefly garlic; there were also two water-bottles of sherbet, two black bottles, conspicuously marked "London Stout," one of which, however, contained rum, and several square decanters of Persian wine. Four glass candlesticks of Russian or German manufacture occupied the corners: they were ticketed just as they came from the shop; the tallow ran in streams upon the table from the candles, which were all of different lengths; and there being no such convenience as a pair of snuffers, Abbas Kooly Meerza, who sat at the shahzadeh's right, occasionally snuffed them with his fingers, which he wiped on the skirts of his dress.

Travellers in Persia, as elsewhere, must submit to some troubles; and it is not in Persia only that the form of nuisance described in the next extract assails the weary but sleepless wanderer.

On an eminence above the village stand the ruins of an old castle which had not been inhabited within the recollection of the natives, who were also ignorant of its history. The houses here are built as usual of mud; but the foundations appeared to be partly of stone. On arriving, wet and cold, we were shewn into a most wretched hovel: the roof was pierced with holes, and the rain trickled through in every direction, rendering it quite uninhabitable. The people, however, solemnly assured us that all the houses were in the same condition. This was consolatory, inasmuch as we were no worse off than others; but, as it by no means improved our situation, we sent our gholaum to find a more habitable dwelling if possible. In about half an hour he returned with the joyful intelligence that he had at last secured a good house, and thither we removed. Though very small, it was at least water-tight, of which advantage hardly any other house in the village could boast. Here, then, we established ourselves; and having with some difficulty procured wood for a fire, we dried our clothes, and after a comfortable dinner hoped to forget the discomforts of the day in the vis of the night. But no: after all the complicated miseries of w water, and cold; after all the fatigues of rocky passes an

long day's journey, we were subjected to a most awful infliction of fleas. We suffered in patience for a long time; but there is a point beyond which no patience will extend; so, lighting candles again, we commenced an attack on the invaders with an ability and enthusiasm only to be acquired by long practice and a thirst for vengeance. But, though thousands fell, thousands still came on with unabated vigour; and my friend declared he could see them charging in heavy squadrons over the carpet. This alarming discovery put an end to the battle: we fairly gave in; and, I need scarcely add, did not close our eyes during the remainder of the night. The first person I saw in the morning, on going out of the house, was our meerza, looking the picture of misery. He shook his head mournfully and exclaimed, "Ah, Sahib, Sahib! this menzil is very bad; it has many fleas; I have not slept." I could not forbear a smile at his woe-begone expression of countenance, and felt a kind of selfish consolation that we had not suffered alone. The quantity of vermin, however, must have been very unusual to have caused him any uneasiness. We left Soomaree at a quarter to ten, in a heavy snow-storm, which soon turned to mist and rain; and passing over some low hills, entered the plain of Ardebeel.

A Persian prince is thus described:—

Ardeshir Meerza is a man of middling size, inclining to corpulency, with a jolly-looking round visage, bearing a strong resemblance to the rest of the royal family. He was dressed in a plain, single-breasted drab-coloured coat, buttoned to the throat by about forty gilt buttons, placed as close together as possible; round his waist he wore a belt of gold lace; and over all a dark plum-coloured cloak. He was very polite and affable; hoped that we had been well treated in his territory, and asked many questions regarding our journey. He inquired after all the English he had known in Persia; and the conversation turning on India and the East-India Company, he begged to know whether the report he had heard that they had killed the "Coompanee" was the fact or not. We presently ascertained that he alluded to the death of Sir William Macnaghten.

We had heard that the shahzadeh was a great drinker; and his weak and bloodshot eyes seemed confirmatory of the report: but I could not suppress a smile, when tea was brought in, to see his servant draw forth from the recesses of his pocket a black bottle of rum; we of course accepted a little in our tea, while the prince held out his already half-empty cup, which the servant filled to the brim.

Ministers in Persia, as in other parts of the world, are accomplished in the art of pleasing, refusing nothing, but never promising—giving hope to all, well knowing that ,when the boon is obtained, instead of a crowd of excellent friends devoted to his service, a many is sure to find "a hundred discontented and one ungrateful."

Behold the picture of

A VIZIER.

Every one in Persia laughs at the vizier; but he is perhaps as much liked as it is possible for a man in his situation to be. He is humane, and often interferes in behalf of those whom he thinks suffer harsh treatment at the hands of the king. One great secret of his popularity is, that he makes a point of never refusing any thing. A man, for instance, asks for a pension: the hadgee grants it in the most gracious and flattering manner; and perhaps immediately gives a government order for the sum on Bahman Meerza at Tabreez. The applicant goes away delighted, while the hadgee secretly writes to the prince not to pay the order. Subsequently, the man finds his beraut useless; but this does not altogether efface the impression originally given of the hadgee's kindness; and the applicant feels much comforted by the idea that the pension has positively been granted to him, and that, though he does not get it, he has a right to it.

The minister has done some good on a small scale in the vicinity of Tehraun. He has built several villages, and has been lately cutting a canal from the river Keredge to Tehraun, where the water is scarce and bad. He lately went there to inspect the works; and, on arriving, was accosted by an Isphahaunee donkey-driver, who had long been employed in the work, but received no pay. "Hai, Aga," said he, throwing himself before the hadgee's horse, "I have been long working here, but I get no wages: I and my asses are starving: do not allow me to be thus treated!" "Dog of an Isphahaunee!" said the minister, "who are you? What dirt are you eating? Go and die—what more is an Isphahaunee fit for?—go, go!" The attendants seized the man, forced him aside, and the party proceeded. The donkey-driver, however, piqued at his abuse as an Isphahaunese, was not thus to be intimidated; and again throwing himself before the hadgee, cried out, "Aga, Aga, listen to me: it is true I am an Isphahaunee, and only fit to die: I am content; but my donkeys, Aga, my donkeys are all Toorks, must they starve too?" The hadgee is of a Toork tribe; and the laugh which this witticism raised was the means of obtaining for the donkey-driver his just demand.

By way of summary, we take from the earlier pages a sketch that includes a variety of objects.

Having a long day's journey before us, we rose early, and left Kerghanagh, accompanied by Ferrajoollah Beg and Shookroollah Beg. The former soon took leave; but the latter continued with us to the village of Jellowdar, where a house had been cleared and a capital breakfast prepared. The house I will describe, as a fair specimen of the dwellings throughout Taulish and Gheelaun, though perhaps rather better furnished than the generality. It consisted of a single room plastered with mud, having two or three arched recesses in the walls. The fire was placed in a shallow semicircular hole in the earthen floor, immediately in front of a projecting mass of clay about four feet in length and breadth, and two feet high, serving to support the cooking utensils. There was no outlet for the smoke except through the door, which was made for this purpose the whole height of the apartment, and had of necessity to be kept open while the fire was burning. The ceiling was formed of square wooden beams packed close together, which had become blackened by the constant action of the smoke. The mudwork of the walls was very neatly executed; and the recesses were edged with white plaster, though this is dispensed with in the poorer cottages. The roof was of good rice-straw thatch, projecting many feet from the walls, and supported by wooden pillars; thus forming a verandah, where in fine weather the women sit and spin. Breakfast being over, we left the village, still accompanied by Shookroollah Beg, and proceeded through the forest towards the seashore. As we went along, he occasionally ordered the men we happened to see in the way to follow him, so that in a short time we had six or eight fellows, armed with rifles and kummers, marching in our train. "My followers are always ready," observed he; "and when I go abroad, I leave home alone, and collect them in this manner as I journey onwards." Having accompanied us some distance, the Beg and his followers took leave, and we continued our march, regretting much that we could not afford time to stay longer with these wild foresters, whose kindness and hospitality had gained our esteem. Their mode of life reminds one of that of the Scotch Highlanders in days of yore; they are divided into clans, each chief having his own retainers, who are always armed, both from habit and as a protection against wild beasts. The kummer is a favourite means of defence, which they are seldom without. It is a forminable two-edged pointed weapon, very much like the ancient Roman sword, with a blade about a foot and a half long and three inches broad, generally very sharp, and capable of inflicting the most deadly wounds. The people consider it cowardly to stab, and use it only for cutting; a thrust would probably be fatal. During our march I perceived a man fishing at the mouth of a small river, and bought from him a fine trout, weighing about seven pounds, for a sahib kurraun (one shilling), though I was afterwards told that this was nearly double the usual price. The flesh was not very red, but proved well-flavoured. At this season these fish quit the rivers, and the fisherman, with a long fork in his hands, was watching on the shore at the mouth of the stream for those which were accidentally thrown within his reach by the surf. They say salmon abound in these rivers from June till the end of October; which, with the sefeed-mahee (white-fish), resembling a grey mullett, and many other kinds of fish, form the chief food of the inhabitants. Further on we came to several small reed-huts, serving as a shelter during the night for men who catch wild ducks. In many places near the coast are extensive swamps, the resort in winter of immense numbers of wild-fowl, where long nets are suspended to high poles in various directions; and below them are placed decoy-ducks, tied by the legs to a short piece of twine, which is fixed by a peg in the bottom. During the night the wild-fowl are attracted by the cry of the tame birds, and flying low, are caught by the neck in the meshes of the nets. Another method is also practised. A large net is fixed upright, and kept in that position by a long cord held by the fowler, who is concealed among the high reeds. Decoy-ducks are placed within its range, and on the wild-fowl alighting among them the string is let go, and the net falling over the birds makes them fly upwards, when they are caught in the meshes. This method is always practicable; but the other only succeeds on dark stormy nights, when one man may sometimes take ten or fifteen ducks. All along the coast, both in Gheelaun and Mauzunderoon, multitudes of these birds are annually thus captured.

The Persians appear to be very curious about our Freemasonry, of which they entertain very magnificent notions.

In the morning we received a visit from the governor, who seemed rather a dull person, though very polite and civil. He asked a great many questions regarding the Feramoosh Khoneh, as they call the Freemasons' Hall in London; which is a com-

plete mystery to all the Persians who have heard of it. Very often the first question we have been asked is, "What do they do at the Feramoosh Khoneh? What is it?" They generally believe it to be a most wonderful place, where a man may acquire in one day the wisdom of a thousand years of study; but every one has his own peculiar conjectures concerning it. Some of the Persians who went to England became Freemasons; and their friends complain that they will not tell what they saw at the hall, and cannot conceive why they should all be so uncommunicative.

But we must pause here, at least for the week. Possibly we may return again to this pleasant work, which we can confidently commend in the meanwhile to the regards of the libraries and book-clubs.

FICTION.

The White Slave; or, the Russian Peasant Girl. By the Author of "Revelations of Russia." In 3 vols. London, 1845. Colburn.

The manufacture of romances has been reduced to so regular a system, that every man who can compose a decent sentence deems himself qualified to undertake the task. It used to be thought by critics and readers that the novelist should have some special aptitude for his vocation. It was demanded of him that he should possess some imagination, much of the dramatic talent, tolerable facility in the conception of character, and power to portray it. Then there was needed the constructive skill requisite for the framing of a plot that should seize upon the reader's attention and carry him forward unwearied to the end. These various faculties were supposed to be the gift of nature, capable of improvement indeed by industry and art, but the absence of which was fatal to the ambitious aspirations of the author.

It is far different now-a-days. Our novelists are not necessarily "to the manner born." They write not from the fulness of their inspiration, nor because of any special fitness for the work, but, as it were, by rule and compass, mechanically and after a model. It is supposed that anybody who can write any thing can write a novel. Accordingly everybody who writes any thing else successfully forthwith sets himself to the writing of a novel. A tourist returns and publishes his diary; it finds favour; then nothing will do but he must repeat the substance of his tour diluted into three volumes of stupid romance. So is it with poetry, history, and even with science itself. Nobody appears to be content with success in any walk of literature, but forthwith he must set up as a novelist and load the shelves of circulating libraries with three volumes of trash purchased by the unlucky speculators on the faith of a name known for some other achievement in another walk.

Such is precisely the history of *The White Slave*. The author, as our readers will remember, some time since published a curious and interesting book entitled *Revelations of Russia*. It was a work that could not fail to please from the novelty of its contents and the apparently intimate acquaintance of the writer with the country whose characteristics he was describing. It was as successful as it deserved to be. But the anonymous author was not content with this legitimate reputation. Nothing will do but he must betake himself to reproducing the same facts under the form of a fiction. Accordingly he hashes up a meagre plot, laying the scene in Russia, and in this guise reiterates the information so pleasantly, because so unpretendingly, conveyed in his original publication, and substitutes for a narrative of facts a mixture of fact and fancy, in which it is impossible for the reader to assure himself how much of the description is due to the memory and how much to the imagination.

The plot of *The White Slave* is sufficiently improbable. The story is that of a Russian slave, who, without being liberated from his serfdom, had been educated like a gentleman and endowed with wealth. He travels, marries a rich and proud Englishwoman, whom he takes with him to his native country. Arrived there, he finds his friend and patron dead, and the estate passed into the hands of Prince Issakoff, with whom he had quarrelled, and who owed him a deadly hate. With the estate passed also the ownership of the slaves belonging to it, and Mattvei, not having been formally liberated, becomes the property of his enemy. The difficulties and troubles that thence arise are complicated with other difficulties and troubles of other personages, all very far-fetched and improbable. As he proceeds, the reader is continually pained by a sense of this, which mars the pleasure he might otherwise glean from some lively writing and clever descriptions. The law of Russia may be as the novelist asserts, and the time may have been when such tyranny might have prevailed. But sure we are, that, whatever be the letter of the law, the practice at the present day could not be as it is represented. And even if such were the practice, the reader feels that no man in his senses would place himself within the power of such a law, as the hero is made to do, nor could any such combination of incidents occur as is here constructed in order to bring about the necessary conclusion when the allotted space of three volumes draws to its close.

In the conception of character, the author of *The White Slave* is utterly wanting. His men and women are all unnatural and impossible beings. They are the creations that figure in the worst style of melodrama—exaggerations of virtue and of vice—unredeemed scoundrels or embodied angels. Accordingly they excite in us no sympathies, for they are not of kin to our human nature.

The merit of the romance, for some merits it has, lies in its pleasant and lively manner, and in the vividness of its descriptions of things which have come within the author's personal experience. This is precisely as might have been anticipated from his previous publication. Its success was due to these very qualities, which are admirably adapted for plain narrative. But many more faculties than keen observation and powers of description are demanded for the novelist; and, wanting these, the author of the *Revelations of Russia* should not have attempted to quit the walk for which he is so well qualified, for one in which the experience of a few pages might have shewn him that he could not hope to succeed, wanting the gifts of nature that distinguish the novelist from the mere narrator.

Such being the character of this romance, we cannot recommend it to *general* patronage. It may be added to extensive libraries in preference to many of the works of fiction that proceed from our prolific press; but all who are required to exercise a choice, whether in buying or reading, whose time or purse is limited, would be wise not to encumber themselves with *The White Slave*.

As an agreeable specimen of the author's better moments, we take one passage, intended to throw ridicule on the taste of the Emperor. It is a clever, but we suspect somewhat exaggerated satire.

"Is the Emperor in town?" inquired the poet.

The senator shrugged his shoulders, as if in pity of such ignorance or affectation.

"Of course," replied Madame de Baval; "and he must have arrived before two, for at that hour the imperial standard was flying above the winter palace, and the telegraph working."

"Do you know," observed Madame de Rudiger to Horace, "that he works the telegraph with his own august hands? When you see its black ladders moving, the Emperor is personally transmitting orders to his fleet in the Black Sea or the Gulph of Finland, or to his representative in Warsaw, or to his lieutenant in the interior of the empire. You have not yet seen our Emperor?"

"Pardon me," said Horace, "I have both seen and conversed with him."

"Conversed with him!" echoed the bystanders with one accord, for they had all been narrowly watching for his presentation. "Pray tell me where and when?" exclaimed Madame Rudiger, half in astonishment, and half in disbelief.

"This morning," answered Horace, "under singular circumstances."

"Oh! tell us all about it," said Madame Obrassoff, in a tone gently insinuating.

"Most willingly. You must know that I was this morning wandering through the imperial picture-gallery of the Hermitage; and I was tempted to visit the atelier of a certain talented countryman of mine, who, making a ladder of his artistic merit, has stepped into the drawing-room from the guard-house, though his manners still savour a little of its coarseness.

"Ah! Lesseps," exclaimed Madame de Baval: but she added, in a tone of profound respect, "the Emperor takes great notice of him."

"Oh, he is a charming painter," chimed in the senator; "there is something very winning in his soldier-like frankness."

"Well," continued Horace, "you are probably aware that

the imperial munificence has set aside a room in the Hermitage for the foreign artists."

"We know, and are proud of it," said the senator again.

"In this atelier, then, I was inspecting one of the painter's pictures—a battle-scene, full of spirit, in spite of all its Dutch minuteness. But Lesseps himself seemed in ecstasies over the very insignificant figure of a drummer in the back-ground. 'I believe,' he observed to me, with immense satisfaction, 'that no man but myself could have shewn so distinctly what that fellow is doing.' I remarked that the action of the drummer was unmistakeable, but that I certainly did not conceive the peculiar merit of its representation. 'Ah!' said the artist, with one of his terrific oaths, 'he is beating the drum—anybody can shew a drummer striking the parchment: but *what* is he beating?

"I suggested that he should have marked the tune with notes and bars upon the drum.

"'So much for fame!' said Lesseps, throwing down his palette with a comic air of desperation: 'paint for a public which thus appreciates your talent! Now, Sir,' he continued, 'this is the most striking part of the picture. No drum-major in the world could look upon the position of that drummer's wrists and not perceive that he was beating the retreat. Just look upon this figure,' he said, 'and then on me;' and he seized a drum and drum-sticks, and began tattooing,—for the atelier was like an arsenal, with instruments musical and warlike. First he beat the 'Diane,' and then the march, and then the retreat; awakening all the echoes of the endless apartments of the galleries. 'Now,' he repeated, 'look first on me and then upon my figure:' but as he paused, we heard, to our utter astonishment, behind another easel, the sudden rolling of another drum; and an officer in uniform, a man of colossal stature and imposing aspect, who had entered unperceived and snatched up another instrument, appeared before us."

"Ah! the Emperor," exclaimed Madame Rudiger.

"Exactly: Lesseps acknowledged his presence by a similar rolling; and for more than twenty minutes I was deafened by their rattling in emulation of each other on the sonorous parchment."

"'Ah, ah! Lesseps; you did not expect to be rivalled thus,' at length said the Emperor.

"'*Milles bombes!*' replied the artist, 'I did not think there was another man in the empire, out of a drummer's uniform, who could have sustained that vigorous *male* and faultless roll! A foot-soldier, Sire, has been made in six weeks; Condé became a general in six months; and in our Revolutionary war we made commanders as quickly as we baked a batch of biscuits. In a word, there have been heaven-born soldiers and heaven-born generals; and to make an emperor, a man has only be born in the purple, as a chicken is hatched in a hen's egg; but who ever saw a heaven-born drummer?'

"'You are right, Lesseps,' replied the Emperor; 'we both know that no man on earth could learn to roll with that perfection under a twelvemonth of assiduous practice.' And then his Majesty took up a musket, and went rapidly through the exercise."

Dr. Hookwell: or, the Anglo-Catholic Family. In 3 vols. London, 1842. Bentley.

THE novel, the title of which is prefixed to this notice, is now some three years old. It has, however, but recently fallen into our hands, and this must be an answer to those among our readers who find a review of such a book at such a time unseasonable. We regard the fact of its having been sent to us for critical purposes as a challenge of our sentiments upon its style and merits; and therefore, although a lengthened notice would be out of place, we shall advert with our usual freedom to certain matters connected with *Dr. Hookwell*, which seem worthy of comment. The first of these is one suggested at once by its name, and is an offence so grievous to good taste and feeling, that we hope never to see it repeated. No one can by any possibility doubt that Dr. W. F. Hookwell, Vicar of Leeds, is intended for the actual vicar of that place, WALTER FARQUHAR HOOK, D.D. Few will fail to recognise the very names and circumstances of other living and well-known members of the Church of England. Now, we are aware that it is very common to enliven modern novels by the portraits or the caricatures of living characters. Boz has done it repeatedly, so has SAMUEL WARREN, so have others of less note. But there are circumstances which make the present instance stand upon a very different footing. In the first place, in the cases to which we have alluded, it might fairly be urged that the character was fictitious and a few traits only borrowed: here the circumstances admit of no possible explanation of this kind. In the next place, it is not the same, or a similar thing to depict the peculiarities of conduct and manner, and to represent the whole tone of religious feeling, sentiment, and argument. No man has a right to represent another as holding certain religious doctrines, basing them upon certain reasons and applying them in a certain manner, when all the while the doctrines themselves, or the reasons for or the application of them, may be such as the person represented would disown. Further still, no man ought to be subjected to such treatment as that of being dragged prominently forward in the way that Dr. HOOK is brought forward in this novel. Again, all the world knows that Lord PETRE is one of the leading Romanists of England. In this novel one Agnes Petre, a daughter of a Lord Petre, is made almost to forsake Romanism, and to die wavering in her adhesion to the Romish Church. Perhaps there may be nothing in the history of the PETRE family bearing any resemblance to this. But the feelings of a family like that of Lord PETRE ought to be respected, and it can surely be no pleasing thing for any member of that family to find themselves, and real or imaginary relations, presented to public observation in the manner which we have mentioned. These instances might be multiplied; but we have said enough. Henceforth we say to the author of *Dr. Hookwell*, "We pray you avoid it."

There is another and a much more general consideration that occurs to us upon the perusal of such a book as this, namely, the difficulty of persuading ourselves that the three volume fashionable novel is the best vehicle for conveying religious instruction, or the most desirable peg upon which to hang theological dissertations. It may be alleged, and with much show of truth, that there is a very large class of persons who are only accessible by these means; who read scarcely any thing but novels, and who must be instructed thereby or not at all. But, apart from the question whether such persons would not at once throw *Dr. Hookwell* aside as not possessing those ingredients which make novel-reading so essential to their mental comfort, there is some doubt whether such converts are worth making at all, and whether, when made, their stability can for a moment be relied upon. Perhaps, in some measure, to the influence of *Dr. Hookwell* may be attributed the existence of a set of persons and opinions of late years considerably upon the increase, among whose ranks may be found fair girls who mingle Anglo-Catholic theology with the conversation of a quadrille, and whisper ecclesiastical dogmas in the turns of the polka. We do not decry such specimens of orthodoxy, nor are we sorry to acknowledge that they are in some sort the sign of what is passing in the public mind, an index of the direction in which the sentiments of society are beginning to flow. But we are hardly ready to admit that the good effected by them is considerable, and we are much inclined to think that this *modus operandi* produces infinitely more evil than benefit. Nothing can detract more from sublime truths than that they should be frittered away in the silly talk of silly people, weakened and impaired by the amalgamation with vanity, ignorance, sophistry, and shallowness to which they are thus exposed. It is this sort of thing that has made the Exeter Hall school so contemptible; it would be a great pity that a higher and nobler system should be menaced with a similar fate.

Lastly, we would put it to the author of *Dr. Hookwell* himself, whether it be just to his own powers and to the nature of the cause which he advocates, to dilute himself and it in the manner which in this, we hope his first and last novel, he has done. The arguments and the quotations which form a large portion of these volumes, prove that their author is a man of no ordinary ability, and that his mind is richly stored with the result of a long, indefatigable, and judicious course of study. With such weapons he might enter into the arena of polemical controversy, or he might apply himself to the more tranquil task of solemn and earnest admonition with every prospect that his labour should not be in vain. We would advise, nay, beg him not to lay aside his pen, but to employ it in a nobler field than among the crowd where he will be jostled by the author of *Pelham* and *Ernest Maltravers* and the chronicler of *Jack Sheppard* and *Dick Turpin*. Novel-writing is no task for clergymen, least of all for men who are learned in all the learning of Patristic and Anglo-Catholic divinity. Upon higher ground than where he has now chosen to place himself, the author of *Dr. Hookwell* will find more worthy companions, and he will be less exposed to those temptations, by yielding to which he has admitted into his work so much that is painful and objectionable.

POETRY.

Memorials of a Tour on the Continent, in Prose and Verse; to which are added, Miscellaneous Poems. By ROBERT SNOW, Esq. London, 1845. Pickering.

THE continent is no longer like the Phœnix, a thing to be wondered at. By the "light of his own fire-side" a man may now sit and hear the Alps hold noisy converse with old Jura quite as audibly as BYRON did. Ætna is as familiar to the man who never placed his foot on a foreign strand as a brewer's furnace fire. Neptune's temple, like a fisherman's hut, is a very common thing; and even the washerwomen desecrating the classic fountain of Arethusa are such ordinary facts, that, like the washerwomen of England, we hear the work of their busy hands without a sigh.

When a subject is hackneyed, it requires greater genius to bring it to a reading point. Readers require, and have a right to demand of an author, one or the other of two things; either that he shall develope a new fact, or reiterate in a superior manner facts already developed. When an author fails to do this, then his book is only a numerical addition to a number of anterior books, but it is no intellectual addition to previous knowledge. Such is the volume before us, and its highest value is that of strengthening the memory on topics already in its possession.

Mr. SNOW narrates both in prose and verse, but his prose savours of the petty of composition, and his verse has too much of the mappings of a geographical chart. We take the following from among some lines on Monte Barbaro:—

Beyond
The Monte Nuovo lay the Lucrine Styx,
Avernus, and Fusaro, and the coasts
Of mystic Cumæ. Baiæ and its port;
The Mare Morto, and Elysian fields;
The triple peak of Ischia fiery once;
And in the south, Miseno, classic cape,
Dowered through all ages with a lasting name.
Here lay thy ancient mole, Puteoli,
There in the distance Capri; Nisida
Hard by, and Solfatara; o'er the bay
Sorrento, and the snow-clad craggy peaks
Above Castelamare; whence the eye
Passed over mount Astruni, and reposed
On Naples and Vesuvius.

We assure Mr. SNOW that he need not trouble himself to do the work of a geographer. Such an array of names is likely only to astonish the ignorant; the learned are well acquainted with them through the pages of history. Of what, then, is their utility? They will never become a part and parcel of a reader's life, and it is the fault of all such angular measure that it rather drives away the young enthusiastic reader of poetry than entices him by its flexile beauty.

We remarked that Mr. SNOW's prose savoured of the *minute* in composition, which we could prove by many extracts, were we so disposed. In the "Ascent of Mount Ætna," Mr. SNOW observes, that in setting off from Catavia, "Mr. T——'s mule made a most vicious attack with teeth and heels on the mule of Mr. K——; bites and kicks were exchanged unpleasant even to witness." But what follows? Were the mules and riders thrown down some frowning precipice, or something more horrible to relate? Nothing of the kind; but Mr. SNOW very calmly adds—"*However, the animals were quieted without accident.*"

There is too much of the manuscript journal here. It may be taken as a rule in literature, that whatever is not required by the main thread of the story, or whatever is useless in itself, is inelegant. Elegancy in writing, like the elegancy of physical nature, lies partly in utility. The slender limbs of a fawn would be less beautiful were they less necessary to succour their possessor by flight. Expletives in writing are the synonyms of the "dummies" in Bob Sawyer's apothecary's shop. They are the annihilators of space, but not the creators of intellectual wealth.

Having pointed to the failings of the volume before us, it is but just that we should turn to beauties, if such can be found. PETER PINDAR remarked, that "marriage would be too sweet without some sour," and, by contrary reasoning, a reviewer's task would be too sour without occasionally meeting with something worthy of praise.

Mr. SNOW sat in the sunshine of poetry when he wrote his lines on "Shadows." The "Blind Girl," the "Foster Sisters," and lines on an "Etruscan Vase," are, in our opinion, too good to be in company with many of the stilted, buckram-dressed verses which are found in the volume. On the whole, Mr. SNOW writes better prose than he does poetry, for the obvious reason that his prose has less of the evidences of labour. It requires labour to write good poetry, but the labour must be skilfully concealed. This happy concealment of poetic labour is the secret key to the temple of fame. We should not forget to mention Mr. SNOW's observation on "Imitations in Sculpture." They exhibit the author's observation and critical power, but, like the other parts of the book, are evidences of learning rather than evidences of creative and constructive genius. We cannot with strict honesty recommend *Memorials of a Tour on the Continent* to the book-club or circulating library.

Miscellaneous Poems. By ELIZABETH PIDDOCKE ROBERTS. London, 1845. Darton and Clarke.

COMPARATIVELY, we have but few women whose names stand high on the poetic register of our country. This, we think, arises not from an inferiority of mind, but simply because woman is not educated for poetry. It is true, in a worldly sense, that she is educated for it, but she does not exercise that self-abstraction which MILTON and WORDSWORTH used, making poetry the business of a life. Woman is surrounded by poetic influences, and is herself the personification of poetry, as much by innate sensation as by domestic relations, yet she makes the mistake of cultivating poetry only as an accomplishment. She reduces it to the same level as chattering French, or strumming a fantasia on the piano. JOANNA BAILLIE and LÆTITIA ELIZABETH LANDON are very unfashionable poets. Their verses have none of the scent of albums upon them. One had a masculine way of grappling with thought, and the other made poetry the aim and end of life, while both set about writing it with deliberate purpose. Very vulgar this in Miss BAILLIE and L. E. L.! We do not require to be told that such and such a new volume of poems has been written by a female hand. Their character is known by their dress, as a Quaker by his coat. But our figure is incorrect. The peculiarity of a Quaker's coat is its stiffness, while that of a fashionable lady's poems is a marked lightness, as if the writer, when she wrote, had "half holiday," as schoolboys say. The mistake lies partly in this, that Melpomene is looked upon as a hard country girl, while her sister Erato is considered a pink who has blossomed in a boarding-school. Miss BARRETT is the female writer of the year who has bid high for fame; *fame* that is not subject to the hammer of Mr. GEORGE ROBINS.

In contrast to Miss BARRETT we do not place Miss ROBERTS, and say that the poems of the latter are failures,—far from it. "My Highland Brooch," "Our Old Ancestral Home," and "O Hone, or Rie of Glengarry," are in themselves much, and promise more. As a whole, the verses in this volume may have the epithet of *pretty*, but they are not vigorous. Sir WALTER RALEIGH is said to have scratched on glass some lines that met the quick eye of Queen ELIZABETH, and Miss ROBERTS has kept the sense of RALEIGH'S lines in her verse, but changed the words into

To polished verse and phrases fine
My rustic muse could ne'er incline.

But, notwithstanding this, we think that Miss ROBERTS may climb a little higher—perchance much higher. She is perfect in the art of versification, but she requires to cultivate taste so as to discountenance such a piece as the "Rat Hunt." With the advice to Miss ROBERTS that she should study long and earnestly, we close our notice with a poetic tribute of love for Ireland:—

THE LAND OF THE WEST.

There's a sunny isle that is seen to smile—
A gem mid' the foaming sea—
Where hearts are as gay as the sparkling spray,
And each and all with a smile can say
The land of the west for me.

Long time hath been since its emerald green
Hath nurtured the true and free;—
For in slavery's band is that verdant land,—
And ruled with the sway of an iron hand,
The land of the west we see!

Her sons are bold, and their faith untold,
And her daughters fair to see,
And as true and wild as the mountain's child
Whom the world's vain dreams have ne'er beguiled,
The land of the west for me!

'Tis a lovely home, and the day will come
When her sister lands shall see,
That green Erin's isle once again shall smile,
And Liberty reign in her halls the while,
And the land of the west be free!

MISCELLANEOUS.

The Women of Israel; or Characters and Sketches from the Holy Scriptures and Jewish History; illustrative of the past History, Present Duties, and Future Destiny of the Hebrew Females, as based on the Word of God. By GRACE AGUILAR. In 2 vols. London, 1845. Groombridge.

MISS AGUILAR is a Jewess, amiable, accomplished, enthusiastic, but steeped in the bitterest prejudices of her race against the religion, if not against the professors, of Christianity. But there is an evident sincerity in her bigotry which commands our respect. Hers is no wavering regard, no doubtful dislike, but a profound and hearty love for Judaism, and a good, honest hatred fo all other opinions. Barring this defect, if such that can be called which really gives an interest to a work, these sketches contain a great deal that will gratify the reader, mingled with much at which he cannot but smile. Miss AGUILAR, resolved to begin with the beginning, opens her memoirs of the Women of Israel with no less important a personage than "our general mother," EVE, to whose biography she devotes just *thirty-six pages!* From this curious document we must take a few passages to exhibit the manner of the authoress and the current of her thoughts. Of the creation of woman she observes:—

The whole creation had had its origin in the Omnific love which, created to enjoy,—called out of darkness and chaos a world teeming with life and beauty, that innumerable sources of happiness might spring forth from what had before been nought; but woman's creation was a still greater manifestation of love than all which had gone before it. She was created not only to feel happiness herself, but to make it for others; and if that was the design of her existence in Eden, how deeply should we feel the solemn truth, that it is equally so now, and that woman has a higher and holier mission than the mere pursuit of pleasure and individual enjoyment!

And again—

Her affections, the impulses of the heart, fresh from the creating hand of love, had full play—created as the perfecting finish to man's happiness, beholding him, the lord of all on which she gazed—earth formed to yield him her fruits—water and air, to unite for his refreshment—every animal obeying his authority—instinctively feeling, too, the mighty power of his intellect, the strength of his mind and frame, the deepest reverence must have mingled with, and so perfected, her love. Nor would this acknowledgment tend to degrade woman in the scale of creation. * * * His mission was to protect, and guide, and have dominion—hers to soothe, bless, persuade to right, and "help" in all things "meet" for immortal beings.

The fall is thus described—

Eve had walked forth, secure in her own innocence, in the consciousness of love lingering within, and all around her; the young animals gambolling about her, calling forth her caresses and her smile; the little birds springing from tree to tree in joyous greeting, or nestling in her bosom without one touch of fear; the gorgeous flowers, in all their glowing robes and exquisite fragrance, clustering richly around her; the very buds seemed to look up into her sweet loving face, to reflect increase of beauty from her gaze—so may our fancy picture her, as she neared that tree under whose fair branches so much of misery lurked. Coiled at its root, or twisted in rainbow-coloured folds around its trunk, lay the serpent. * * * In one brief hour the whole nature of Eve was changed: the seeds of frailty, of whose very existence she had been scarcely conscious before, sprung up into influencing poison. Curiosity, presumption, the overweening trust in her own strength, the desire to act alone, independent of all control. * * * Weak, frail, unguarded—for the still small voice of the soul was lost in that hour's tempest—was it marvel that she fell? Could she have done otherwise? The bulwark of FAITH was shivered; her heart was open and defenceless; she was alone, alone. * * * She was INDEPENDENT, had acted by herself, had shaken off all control; and the full tide of guilty pleasure so swept over her soul, as to permit, for the moment, no thought but of herself.

Then follows a scrap of polemics, in which Miss AGUILAR, proves herself to be no very profound theologian. She denies that the curse of the serpent is to be read in other than its literal sense.

This is not the place to enter into a dissertation on the punishment awarded to the serpent: suffice it that there seems no hidden or allegorical meaning in the inspired historian's simple words. The serpent, as a beast of the field, beguiled, and, as a beast of the field, was punished. Nor can an Israelite acknowledge any allusion to, or any necessity for, a crucified and atoning Saviour in the very simple words, "I will put enmity between thee and the woman, between thy seed and her seed; it shall bruise thy head, and thou shalt bruise his heel." For a Hebrew, the words can only be taken in their purely literal sense. We are particular on this point; because, thus early, in the perusal of the sacred Scriptures, the Jewish and Gentile readings differ; and from childish readings of Bible histories by Gentile writers, we may find ourselves giving credence to an assertion for which we have no Mosaic authority, and which, in after years, we would gladly root out from the mystical and contradictory opinions with which it confuses our ideas.

And the results of the fall are painted in such rhapsodical fashion as this:—

The birds flew aloft, trembling to approach that gentle bosom which had before been their resting-place; the young animals fled in terror from her step; and there was that in the changed fierce aspects of the beasts of the field, which caused her heart to sicken with deadly fear. The very flowers hung their heads, and drooped when gathered; they could not bear the touch of sin.

Perhaps we have already given too much space to such a work. But it is a curiosity in its way, and will amuse by its manner, as much as in some parts it will certainly instruct by its matter. There are biographies in the after pages written with excellent taste, glowing with eloquence, and rich in the fine tone of sentiment that distinguishes the true woman. The contrast between these and the passages we have cited is so striking, that it is difficult to believe them the productions of the same mind.

Nimshi. The Adventures of a Man to obtain a Solution of Scriptural Geology, to guage the vast Ages of Planetary Concretion, and to open Bab-Allah, the Gate of God. 2 vols. 8vo. pp. 574. London, 1845. Cunningham.

THIS is the maddest of all the mad books that have crossed us in the performance of our critical labours. As such, it is a curiosity; and it is only as an instance of the strange freaks which mind will play when reason is shaken on the throne, that we pause even for a moment to notice the two volumes whose title-page we have copied above. The author's purpose appears to have been to assail every existing system of cosmogony, and set up one of his own—the dream of a maniac! His fitness for entering upon the calm, contemplative fields of science may be judged by the opening.

Perhaps there is not a cardinal thought of sentimental value revolving within the area of human rationality,—nor an intellectual faculty, calculated to influence the local destiny of free and generous thinkers, but what might be moulded, either into an approbative configuration, or an antagonistical formula.

In this strain the author proceeds with the narrative of his adventures, continually interrupting it with rhapsodical interjections. An interview with Moses is thus related:—

"I presume, then, that you are Moses;" and "from you, venerable spirit, upon the invulnerable fortifications of chemical truth, I morally require the solutions of those seven-fold data which you have encompassed as the primitive chronologer of material and immaterial states." "Star of youthful age, of wandering habit! be composed; let serenity pervade thy thinking rationality, and I will lead thee to the first chapter of biblical information. Thou shalt know its datale intention in its septennial arrangements; thou shalt explore its regions of laminated types, and unbosom the fossiliferous relics of past ages, sufficient to convince thee and all the reasoning faculties of humanity of an Intelligent Cause, generating life in the elementalism of infinitude." "Good heavens! O Moses! you have well said, and well begun the interlocution of this conference; and notwithstanding I may not at all times be able to comply with your

laudable imperative on serenity, yet in the pleasurable anxiety of my youthful spirit I will wait the solution of your first datale position; and should you communicate any ideality to me contrary to the geological lamina of planetary concretion, I shall report you to the Moral Court of Consistency."

One other passage, and we close, commending the author to the care of his friends. We hope he may be left at large without danger.

However, I am not to be outdone,—my ascension is still on the right angle, until I pass eight thousand stars of equally distant strata as the former, which makes the length of my angle of ascension two hundred and ninety-six thousand billions of miles,—that is, two hundred and ninety-six thousand millions of millions of miles from the point of the globe I left (296,000,000,000,000,000): and then, even to ascend to this rectangular altitude, I must live—I must experience the age of about forty-eight thousand years, travelling at the amazing rate of about twelve millions of miles per minute! And then, O good God!—am I in the empyrean heaven, where the blessed saints and angels live? No!—the geology of the heavens says No! the astronomical universe of an Eternal echoes No! The concavous firmament is still above me; two hundred and ninety-six thousand billions of rectangular miles is but a thin lamina of stars,—and forty-eight thousand years rushing upwards, at twelve millions of miles per minute, is but a short space of time!

JOURNAL OF FRENCH LITERATURE.

Géraldine. By Madame Charles Reybaud. 2 vols.

Under the guise of a novel, Madame Charles Reybaud has here produced a well-digested and accurate account of the war of the *Camisards*, under Louis XIV. when that short-sighted and over-estimated monarch sought to extirpate Calvinism from his dominions. Careless of the machinery employed to effect the desired result, the king gave unlimited powers to those who were intrusted with the suppression of the discountenanced religion, without investigating either their capabilities or their discretion; and the natural consequence of this cold-hearted indifference was a series of wrongs and butcheries at which the mind sickens. The persevering industry with which Madame Reybaud has collected her materials, and the talent with which she has rendered them effective, are worthy of each other. In noticing the works of this lady, our task is always a pleasant one, for we are called upon only for degrees of praise, and in the present instance our award is indeed an ungrudging one. The noble simplicity with which she tells her tale; the fearless frankness with which, despite national and sectarian prejudices, she exposes the truth; the total absence of that feverish and forced clap-trap which so many of her contemporaries mistake for eloquence; all combine to give a value to her volumes far beyond any which could attach to them as a mere work of fiction, however cleverly conceived. There is a subdued and sober earnestness about the style of the book well suited to its subject; it is as though the facts revealed themselves; and the author is nowhere prominent, although her spell is over all.

The scene is laid in the department of the Lozère, subsequently to the revocation of the Edict of Nantes, while the work of extermination, or, as we should be authorized in saying, of annihilation, was going forward against the persecuted Calvinists. At the base of the wooded mountains which are mirrored in the clear waters of the Tarn, and upon a mass of rock terminating the valley through which it flows, still exist the ruins of the château of La Roche-Champlay, which, so lately as the commencement of the last century, was inhabited by the venerable Count Hugues of that name, who was destined to be the last representative of his ancient and noble family. The grey old man was childless, for his only son had died in the prime of life; but he was not solitary, for the broken-hearted widow of that son had bequeathed to him as she expired three infant children; two boys of tender age and the fair Geraldine, the heroine of the tale. Weary of war, and placing his best ambition in rendering his dependants happy, the count had lived for years in his isolated castle, unmolested, and had at length brought himself to the belief that his harmless mode of existence had purchased his impunity. But it was not so; his time of suffering came at last. Two Romanist priests of rank, the Abbot of Chayla and an agent of Père La Chaise, present themselves as guests on a stormy evening in autumn, and are recognised by one of the household of the count. Aware that the imprisonment of his family would ensue immediately that they were joined by an armed force, which he had already ascertained to be in the neighbourhood, the old nobleman made instant arrangements for a general evasion. The unwelcome visitors had no sooner retired to their apartments than the melancholy little train set forth. A band of freebooters, headed by a certain Captain Poul, had consented to receive the wages of the government, and to assist in the work of pillage and murder which was devastating the country, and writing upon the page of history with a pen of blood. In constant danger of falling into the hands of this bandit, the fugitives endeavoured to make their way to the mountains, amid whose fastnesses the *Camisards* had established their head-quarters; but ere they reached the desired haven, they were met by a party of their own people, who, after placing Geraldine in safety, returned to La Roche-Champlay with the count and his grandsons, in order, if possible, to rescue a portion of the valuable property before the castle should be garrisoned. They arrive too late; an engagement ensues, in which the young brothers fall, and their ancestor is grievously wounded; while, in the *mêlée*, the château becomes a prey to the flames. The heart-struck old man is carried off by his followers to a hut in the woods, where he is for a time tenderly nursed by Geraldine, and where he ultimately dies, at the instant when Captain Poul and a party of his banditti, having discovered his place of retreat, arrive to seize him. The orphan countess and the old steward of Count Hugues become their prisoners; and Geraldine is conveyed to Nîmes by Captain Poul himself, and delivered into the hands of M. de Basville, the commissioner of Languedoc, the most powerful public officer in the province, and the sworn enemy of the Calvinists.

On recovering from the death-faint into which her terror had thrown her, the orphan girl finds herself in a sumptuous apartment, carefully tended, and in the presence of a beautiful young woman, who is the daughter of the commissioner. As the heiress of La Roche-Champlay has become, through the death of all her relatives, the possessor of immense wealth, the whole of which is recoverable in the event of her conversion to the Romish faith, it is considered advisable to spare her life, and to offer her the alternative of recantation and the hand of M. de Basville's only son. Vainly, however, does the Countess de Brasci (his sister) coldly and sternly insist upon her adopting this measure; she firmly refuses to purchase life upon such terms; and it is ultimately decided that she shall, in order to weaken her mental energy, undergo an examination before the commissioner himself.

AN INTERVIEW.

M. de Basville was seated before a tall bureau of walnut wood. He was a man of about sixty. His regular features were stern and lowering, and were singularly imposing in their expression. Beside him stood a young man who was arranging some of the scattered papers which covered the desk. From his resemblance to Madame de Brasci, it was at once visible that they were related.

The commissioner rose when the ladies entered, and motioned them to be seated in two arm-chairs which were placed in front of the bureau.

"Mademoiselle," said he, addressing Geraldine, "I dispense, in your case, with the parade of justice, and those interrogatories to which persons in your position are commonly subjected. I am aware of your name, and I have but few questions to ask. His Majesty inclines to treat you with clemency. His Majesty will have none but Catholics in his dominions; you have embraced the faith of his rebellious subjects; any other than yourself would have expiated this crime with her life; but, in your case, a public attendance at the ceremony of the mass will efface all; this is the sole condition of your pardon."

"I will obey the orders of the king," answered Geraldine in a trembling voice.

"I receive the assurance with pleasure from your own lips," said M. de Basville.

"His Majesty will have none but Catholics in his dominions," she resumed, in an accent which accorded but ill with the firmness of her words. "I will comply with his orders by leaving the kingdom; the only favour which I ask is to be permitted to live in exile."

"Ah! it is thus that you propose to comply with the will of the king!" interposed M. de Basville; "we shall see. Madam," he added, turning to his daughter, "I place Mdlle. de Champlay in your hands. Make her understand her interests, and the necessities of her position; her fate depends upon herself. His Majesty is extremely anxious that the example of an

illustrious conversion should be given to the rebels. He must be satisfied."

"He shall, Sir, I pledge myself," said Madame de Brasci, coldly.

Geraldine had sufficient power over herself to conceal her agitation and terror; she, at least preserved an appearance of calm which deluded those who watched her into the belief that she possessed considerable strength of character. She withdrew in dismay, and with a sinking heart, but her apparent tranquillity deceived even Madame de Brasci, who whispered to her brother, "She is at once obstinate and gloomy, but we will yet see!"

Having afforded an idea of the persons into whose power the unfortunate Geraldine had fallen, under circumstances in which their own interests and hopes were at work, we will now introduce the commissioner as a mere public official, following the bent of his natural tastes, and exerting his frequently self-imposed and self-constituted duties.

A NOBLE GAOLER.

It was midnight; M. de Basville laid down his pen, and hastily collected the papers which were strewn over his bureau. "Is the Abbé Gassard there?" he asked, raising his voice.

The ecclesiastic appeared at the door of the cabinet.

"Come!" said the commissioner, taking a small key from one of the drawers of his desk, "let us go and see what those people are saying, Abbé."

Both then descended the stairs to a hall on the basement story of the hôtel, and the commissioner opened a door which concealed a narrow and steep flight of steps.

"Go down carefully," said M. de Basville, holding out his lamp.

After having gone down about five-and-twenty steps, they proceeded along a vaulted passage, which terminated in a second door much stronger than the first, and thickly plated with iron. The commissioner knocked lightly. The door instantly opened, and they entered a dark, vaulted chamber. A lantern fastened to the wall afforded a feeble light.

"My lord," said a stout man, who held in one hand a bunch of keys, and in the other an old cap, which respect had compelled him to remove from his greasy hair, "My lord, where am I to conduct you?"

"To the condemned cell," said the commissioner. "Where are Robert and the handsome Francis?"

"They are waiting in the large hall for my lord's orders."

"Very well; let them come with us. In which cell are the condemned prisoners?"

"We must go a little lower," said the gaoler, unhooking the lantern; "I have put them down below, my lord."

An iron grating protected the entrance of a spiral staircase, which appeared to descend into a well. At its termination there was a landing-place; then three or four more steps, and finally a second door, which closed the dungeon.

"Listen, my lord," said the gaoler, pausing as he was about to open it.

A dull murmur could be heard within; and then a single voice gave forth these sentences from the Psalms:—

"I have been surrounded on every side by those who seek my ruin.

"They have pierced my hands and my side; my bones might have been numbered.

"They have found pleasure in looking upon my misery; they have shared my spoils, and rent my vestment.

"Deliver my soul from their bloody sword; deliver me, Oh Lord!

"Save me from the jaws of the lion; save me from the fury of the dogs that devoured the impious Jezebel."

"Open the door!" exclaimed M. de Basville.

The gaoler entered first, and, raising his lantern, he threw a light over the frightful cell. The four prisoners whom it contained were ironed both hands and feet, and were seated upon huge stones adhering to the wall. The commissioner glanced around him in search of the victim for whom he came.

"Make this man walk out;" he said, pointing to one of the captives.

The gaoler unfastened a padlock, which secured the prisoner's chain to a large ring in the wall, and the unhappy man rose with difficulty.

"Walk out," said the gaoler, thrusting him towards the door; but the want of nourishment had prostrated his strength, and he fainted.

"My lord," said the gaoler, "if you are going to take him to the hall, he will die under your hands if you plague him much."

"Let him be carried up, and give him some wine," said the commissioner; "the king does not supply the prisoners with food that they should be sent to the gibbet, already half dead with hunger."

"My lord," answered the gaoler, "it was by your orders that I kept back the last allowance. The stronger they are, the more they persist in talking. Moses Dairus sang psalms on the wheel for two hours; and he would, perhaps, be singing still if William had not cut off his words at the same time as his neck."

"Enough," said M. de Basville; "henceforward let them have only half allowance."

The prisoner was carried into the hall which M. de Basville had entered before descending to the dungeons; he recovered consciousness at the end of a few moments, and, gazing around him, appeared astonished to find himself in such society; then, bending his head upon his breast, he remained motionless. The commissioner made a sign to his followers to withdraw, and he remained alone with the ecclesiastic in front of the prisoner.

"Sir," he said to him, "you know your fate."

The captive nodded acquiescence.

"I have come to see if you will save at once your life and your soul," pursued M. de Basville; "I am come to offer you your pardon." As the prisoner did not reply, he added, "You are a gentleman by birth, Sir, although you have committed yourself in this revolt of a rabble. The king will pardon you on conditions which will compensate for your error. Your abjuration will cause all to be forgotten."

The prisoner turned away his head, and exclaimed, as he raised his eyes to heaven, "O God! silence those impious lips; deliver me from the words of the wicked! He utters blasphemies against thee; his mouth is full of lies and perjuries."

"Miserable madman!" murmured M. de Basville with angry contempt.

"My brother," said the Abbé Gassand, "you are at the foot of the scaffold, but you are not yet upon it. Profit by the moments that are left to you; one word will rescue you from death; will you not utter it?"

"My mouth," said the prisoner, "shall only open to pronounce my last prayer; ask me nothing; I belong no more to this world."

"Brother," persisted the ecclesiastic, "your earthly career has scarcely commenced; it might be happy and brilliant; and it is your own obstinacy which is about to bring it to so fatal a termination. Your attachment to the cause of a few miserable wretches is hurrying you to your ruin; open your eyes; do not reject the means of safety which you still possess; in pity to yourself, recant, and you will save your life."

The captive remained dumb and motionless.

"Say no more to him—it is useless," exclaimed the commissioner abruptly; "come, let us go, abbé."

As he was leaving the hall he added, "Master Robert, it shall be at mid-day to-morrow; three gibbets and one stake."

On the morrow, at mid-day, Madame de Brasci was seated in her own apartment. Her old nurse, standing behind her, was arranging the ringlets of her beautiful auburn hair. Geraldine, leaning against the mantel, was absorbed in a melancholy reverie. Her eyes were fixed upon a large portrait of the king, whose stern and haughty countenance appeared to her to be full of menace. Suddenly an uproar was heard in the street.

"What a tumult!" exclaimed Madame de Brasci, moving to the window, to the great annoyance of the nurse, who was anxious to finish dressing her hair.

Geraldine, carried away by an instinctive movement of curiosity, followed her to the balcony. A multitude filled the street, and jostled each other with ferocious anxiety round four prisoners, who were escorted by a troop of mounted dragoons. The mob covered them with insult as they passed along; on every side resounded the terrible cry of, "To the gibbet with the Huguenots!! Blood!—blood! The *Camisards!* To the stake with the preacher!"

"My God! my God!" cried Geraldine, as she started back with a shriek of horror at the sight of the doomed men; "Monsieur de Sauvelet! Is he then going to die?"

The fatal procession was precisely in front of the balcony. Sauvelet (the captive of the dungeon) raised his head, and for a moment stood still. He had recognised Geraldine. "Wait upon the Lord, and continue firmly in his paths, my child," he said in a high voice; "fear not the clamours of this people, for our *God* is not like their idols, and he will have vengeance of all who have persecuted his saints!"

The crowd had listened to these words in gloomy silence; but, awaking from its stupor, it swept the captives forward, uttering the most fearful yells. * * * * * Madame de Brasci, assisted by her woman, raised Geraldine, who was on her knees in the balcony, pale as death, and dumb with terror. They placed her in an arm-chair; and, roused by the motion, she hid her face in her hands, and a torrent of tears came to her relief.

"Let her weep," said Madame de Brasci, returning to her toilette-table; "it was very thoughtless of me to let her see them. Come, Pionna," she added, addressing her nurse; "the wind has blown out all my curls; recommence your task, and give me the third volume of *Cyrus*."

Some one knocks softly at the door.

"Come in, Albert," said Madame de Brasci; "I am just in the humour to receive you this morning."

Geraldine was weeping in silence, her face hidden in her handkerchief. The chevalier looked towards his sister as if to ask the reason of her tears.

"It is nothing," said the countess; "those poor wretches passed under my window; she recognised them, and screamed; but that will go off. After all, justice must be done."

"But why," exclaimed the chevalier, "did you not spare her such a sight?"

"She followed me to the balcony without my perceiving it."

"The negligence was cruel!"

"Chevalier," said the countess in a low voice, "a truce to remonstrances, I request, or I shall interfere no further in your affairs."

"Nay, my fair sister, you well know that I cannot dispense with your influence," answered the young man deprecatingly; "but I do pray—I do entreat——"

"You are about to utter some new folly," said the countess.

"I do entreat of you," he persisted, heedless of the interruption, "to be more merciful."

Despite the caution of her gaolers, Geraldine is rescued by a party of the Huguenots, under the command of their young leader Cavalier, who, in order to release her, venture to the gates of Nîmes, and force their way into a pavilion in which Madame de Brasci has given a brilliant fête. When she is beyond the reach of pursuit, Cavalier resigns her to the guardianship of Lhomond, the old steward, who conducts her to the mountain where her friends have sought refuge. On gaining its summit, the travel-worn orphan is surprised to see among the rocks a small valley rich with vegetation, and in the midst of this oasis, a blue and placid lake, partially overshadowed by the willow and the weeping birch. In five minutes more they reach its bank.

A REFUGE.

"Yonder is Mary the prophetess," said Lhomond, detaining Geraldine, that he might point out to her a woman seated upon a fallen tree, a few paces from them. Her appearance was truly striking. She was extremely tall; a white cap without any border descended low upon her forehead, and partially concealed her hair, which was of a bright red. Her features were handsome and regular, and her complexion of a fairness that was dazzling. She seemed to be about twenty years of age, but all her person had a feeble and delicate appearance, which was the result of her unusual height and excessive thinness.

She rose at the approach of Geraldine. * * * Mary turned towards a huge perpendicular rock, whose base was concealed by a small mass of trees. Geraldine and Lhomond followed her in silence. She led them to the very foot of the rock, which appeared to form a wall in front of them. Then she pulled a little bell suspended from the branches of an oak, whose summit reached a crevice in the rock. Immediately a ladder of cords appeared upon the edge of the cleft, unrolled itself, and fell nearly to the ground. Mary took the lead, and ascended lightly, and then she turned to assist Geraldine, who had some difficulty in following. "Enter there," she said, taking the hand of the orphan, and pointing towards a narrow opening.

Geraldine hastened to obey her, for it was with some trouble that they could both stand upon the narrow ledge; Lhomond followed, and they entered the cavern. The aspect of the place was at once grand and fearful. The vault, at first very low, gradually increased to the height of more than forty feet. An iron lamp, suspended against the living rock, cast a pale light, which only served to make the distant shadows more dense. The bubbling of a spring could be distinctly heard, but the soil upon which they stood was firm and dry.

An aged woman whom Mary addressed as sister Susan took down the lamp, and walked before them. By this flickering light, Geraldine could distinguish a sort of pathway worn in the sand; and beyond, in every direction, windings of which the eye was unable to measure the extent and depth. A confused murmur announced to the orphan the presence of the inhabitants of this melancholy retreat. Old Susan turned an angle, and the pilgrims found themselves in a spot where the declension of the vault and the approximation of the masses of rock formed a species of chamber. In this space were collected a few old men and about twenty women. Some were weaving, others knitting; not one individual was unemployed.

"Sisters," said Mary, "I bring to you the granddaughter of Count Hugues de Champlay. Our brother Cavalier has rescued her from the hands of the Amalekites; let us return thanks to GOD for her deliverance and her arrival among us."

All rose in an attitude of religious thanksgiving; and the prophetess, placing herself in the midst, poured forth a prayer.

"Now," said Mary, "that we have performed our pious duty, we may administer to her bodily wants."

Instantly the women were busied in pressing upon their guests all that might be necessary to their comfort. Geraldine, affected by this welcome, looked around her with surprise mingled with pity. The sort of hall in which she sat was a spacious cavern. Lamps affixed to the rock gave out a sufficient light to reveal all the pale and serious faces of its persecuted tenants. They looked as though, deprived of the invigorating influence of the sun, they had lost in this species of tomb a portion of the animation of life. No exhibition of curiosity, no question, was seen or heard; each resumed her work in silence, and soon nothing was audible but the jarring of the frames.

Mary approached Geraldine. "Come with me," she said, "I will lead you to a place where you can rest more commodiously than here."

They left the cavern, and walked for twenty paces by the light of the lantern which Mary carried; and then they stopped in a little nook formed by an angle of the rock and some stakes resting against each other. A bundle of dry leaves, covered over with a piece of white linen, occupied the farthest corner of the cave; two boards served as a table, and a block of stone afforded a seat.

"This is my room," said the prophetess; "you may, if you please, share it with me."

"How much I thank you!" exclaimed Geraldine gratefully.

"It is to God, who inspired me with the wish to console and assist you, that you must render thanks, my daughter; do not forget, as sleep steals upon you, to give him your last thought."

"Forgive me," said Geraldine, gazing about her; "I do not know how to explain to you what I feel; you will say that I am a child."

"Why?" asked Mary, with a slight smile.

"You are going to leave me alone her;" hesitated the timid girl; "and I cannot suppress a feeling of terror."

"I can understand it. It is impossible to exchange at once a sumptuous dwelling for the depths of a cavern without being sensible of the contrast."

"Oh, of all which is wanting here, I regret only the light of day; it is this eternal night which terrifies me."

"My child, I understand these emotions, they are inherent to our weak nature. Be comforted, I will watch over you."

Geraldine cast herself upon her bed of leaves, and soon slept soundly; while Mary, seated beside her, read earnestly from a collection of manuscript sermons.

The character of Mary, *the prophetess*, is very ably drawn. The daughter of a noble family, murdered by the king's troops, the poor young creature becomes partially deranged, and mistaking religious fanaticism, and a gnawing desire of revenge upon her enemies, for divine inspiration, in which delusion she is strengthened by a prescience for which she is indebted to an extreme acuteness and great powers of combination, she acquires a strong influence over the persecuted Huguenots. The more feeble nature of Geraldine is entirely governed by the exalted enthusiasm of her wild companion, who, amongst other extraordinary caprices, induces the timid girl to become the spectator of a fierce battle between their own soldiery and the king's troops, in which the latter are completely routed. After the engagement, the following scene takes place in the cavern:—

A SURPRISE.

A dull noise, issuing from the extreme end of the subterranean, struck upon the ear of the prophetess; she precipitately quitted the sort of hall in which the *Camisards* were assembled, and then, returning hurriedly, she exclaimed, "We are discovered——we are lost—the enemy are in the cavern!"

She had scarcely uttered these words when the dragoons appeared in all directions. The whole party remained motionless. The prophetess, pale and excited, with her hands raised to heaven, alone prayed aloud. By an instinctive movement, Mademoiselle de Champlay flung herself on her knees beside her. At this moment a cadaverous figure, lean as a skeleton, and covered with a sheet, which looked like a shroud, stationed itself behind Mary.

"We are in the power of the Philistines," it whispered, rolling its haggard eyes; "but there is a method of preventing the egress of any one."

"Which?"

"The powder-magazine!"

The prophetess knit her brows, and remained motionless.

"There is a lamp upon the table in the infirmary," she murmured hoarsely.

Geraldine had heard all, and an indescribable terror took possession of her; never had she dreamt of death in a form so frightful. "In the name of heaven," she said, as she seized Mary by her dress, "do not thus hasten our last moment. Who knows but we may yet be saved!"

The prophetess laid her hand upon the arm of the sinister

figure beside her, and held him fast. All this scene had passed more rapidly than we can repeat it.

"Secure the prisoners, two and two," said Lieutenant-General Lalande to the dragoons who had followed him.

"Listen!" said Mary, moving forward; "the powder-magazine is close at hand; if your people advance one step, I will set fire to the train, and we shall all perish together." The general shrank back; the soldiers made no attempt to obey his order; and for a moment all was silence.

Suddenly Mary raised her head, and appeared to listen attentively to a distant sound which met no other ear; "God assists us!" she exclaimed; "his children are always his children!"

Nevertheless, the general, whom her threat had for a moment startled, resumed his self-possession. "My lads," said he, turning to his men; "it is a bravado. They in all probability do not possess powder enough to make a cartridge. To your duty."

As he spoke he advanced, and laid his hand upon the prophetess. "Approach not!" she exclaimed, and she thrust him back; "the justice of the Lord is about to overtake you—he has opened to us a way of salvation; he does not allow his people to perish under the same ruin as the sinners! In another moment you will recognise the arm that saved Israel!"

"Maniac!" interrupted the general; "if I were capable of making war upon a woman, I would split your tongue with my sabre."

The noise which Mary had heard became more distinct, and regular steps were audible, from the side of the cavern which opened on the plain.

"Who comes there?" challenged an officer gazing anxiously into the darkness without distinguishing an object.

"Cavalier!" answered the leader of the *Camisards*, as he advanced at the head of his men.

A flash of light was followed by an explosion which was echoed back for several instants by the recesses of the subterranean.

"Lie down flat upon the earth if you would save your lives!" cried Mary to the women and the aged men who surrounded her. Nothing could equal the horror and the tumult of the scene that followed. A few torches which the dragoons had stuck into the walls of the cavern at the first moment of their entrance, afforded only an uncertain and lurid light. Cavalier, with his drawn sword in his hand, encouraged his soldiers, who were mercilessly putting to death an enemy who no longer dreamt of either flight or defence. The carnage was horrible; a few of the dragoons succeeded with considerable difficulty in gaining the valley, where the *Camisards* did not venture to pursue them, as the darkness prevented their ascertaining whether there were other troops in ambush to support their comrades. The victors destroyed all the wounded, and the cavern was choked with the dead. A few groans were heard, which blended frightfully with the shouts of triumph and of vengeance. Upright amid the corpses of the slain stood one of the preachers; his sleeves rolled up above the elbow, and his gown rent into fragments; brandishing his weapon, he exclaimed hoarsely, "Here is the sword of Gideon; it has exterminated the Midianites! Israel has overthrown her enemies! Glory be to the Lord."

"Solomon," interposed another, whose wounds had compelled him to remain an inactive spectator of the bloody scene; "Solomon, your arm has missed that child of the devil whom the Philistines call Lalande. He has escaped."

"What say you? He was one of the first who fell."

"Search; you will not find him."

Solomon Codebee took a torch, and examined closely the ghastly faces of the slain.

It was too true that the lieutenant-general had escaped.

We had marked another chapter for extract, but we have already reached our prescribed limits, and must reluctantly abandon it. At this moment of sectarian schism and controversy, it is really frightful to remember the enormities to which the miscalled "religious wars" of earlier times gave birth. These two small volumes contain a solemn warning which ought not to prove altogether useless. They illustrate a passage of history at which humanity shudders; and where the mind, swayed to and fro as each party becomes in its turn the aggressor, ends by loathing the bigoted superstition which seeks to serve a God of mercy by human sacrifices suited only to a pagan deity.

LITERARY GOSSIP IN PARIS.

(*From our Correspondent.*)

All fears are at an end on the subject of M. THEOPHILE GAUTHIER, who was believed to have been made captive by the Arabs. He has just arrived *sain et sauf* in Paris, all delight at the results of his voyage, and all admiration of the Moors and Jews of Algiers. He is said to be more convinced than ever that ABD-EL-KADER is not in existence.

L'Esprit Public announces in its first number, just out, that it will publish a novel by M. ALEXANDRE DUMAS. *Le Commerce* and *L'Epoque* continue to put forth the same pledge; while it is asserted that *La Presse*, which has *exclusively* engaged this popular writer, is endeavouring to compel him to sign his works ALEXANDRE DUMAS *Senior*; and that *Le Constitutionnel*, which is equally *exclusive*, puts in its undivided claim to the contributions of the contested author. Poor M. DUMAS! One thing, at least, has been made apparent in the struggle—that there are, at all events, two Simon Pures, a fact which naturally diminishes by one half the miracle of the forty volumes!

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

Alloa and its Environs; a Descriptive and Historical Sketch. Alloa, J. Lothian, 1845.

EVERY tourist whose route lies through Alloa or its environs should make a point of procuring this little work, which will give to him, in a very agreeable form, all that local information which it is so desirable for a traveller to possess, and the knowledge of which adds vastly to the pleasure with which the objects around him are beheld. The author of this hand-book is not a mere catalogue-maker, nor even a mere describer. He is also an historian, and that which is still better, a story-teller. He narrates the legends associated with the various places he paints, and we need not say that a romantic legend attaches more interest to an old ruin or a romantic spot than any number of accurate dates and references. Our author, however, gives both, and hence the worth of his unpretending work.

A SHORT TOUR IN THE WEST HIGHLANDS.

GLASGOW, the commercial metropolis of Scotland, the capital of the West Highlands, and, it might almost be added, of the Irish province of Ulster, the third city in point of wealth, trade, and enterprise, the second, we believe, in respect of population and the first in amount of steam tonnage in Great Britain—is by far the most favourable point from which to start in the exploration of the West Highlands. Glasgow is now very easily reached from all quarters. From London, steamers ply to Leith almost daily; from Hull and Newcastle twice a week; and the communication from Edinburgh to Glasgow, by railway, is cheap and speedy, occupying little more than an hour and a half. From Liverpool, also, there is almost daily communication with Glasgow; the splendid steamers on that line being quite unrivalled in Britain. Then from Dublin by Belfast, the communication is equally regular, speedy, and cheap.

But suppose ourselves fairly landed in Glasgow, and that, after admiring the beauties of its neighbourhood—the picturesque loveliness of its Necropolis, adorned with the statues of John KNOX, M'Gavin "the Protestant," the foolish unknown man who bequeathed 10,000*l.* to build a monument over him, and many other fine works of art; after inspecting the sepulchral gloom of the old cathedral, and peering among the dark pillars where Rob Roy stood listening to the preaching of the Calvinistic divine, after inspecting Baillie Nichol Jarvie's house in the Saut-market, walking through the Candleriggs, peeping into the Tontine and the Royal Exchange, and after viewing the fast-spreading city from the high ground of Blythswood-square, casting the eyes up to the numerous Free Church spires which strive to pierce the heavens in all directions, and then down to the barefooted trottors of the population (none of the cleanest by the way), which run about in all weathers, denuded of external vesture; after promenading the famous Green, now encroached upon by circuses, menageries, and the "Wizard of the North's" theatre;—after all this, and a day is too little to do it in, say that all is prepared for a short tour, and after a sound night's rest, we start by an early morning steamer from the Broomielaw.

Enter any one of them, you can scarcely go wrong. There is one bound for Loch Lomond, by Dumbarton and Balloch, and the fare is amazingly cheap—up this queen of lochs and down again for the cabin fare of 2*s.* 6*d.*! Or, should you choose to cross the country, about three or four miles, to Arrochar, and

return by Loch Long, the cabin fare is only 5s. A whole day's sailing through the most beautiful scenery in Britain—scenery unsurpassed by any on the Rhine or the Danube—and all for 5s. first class! Surely this is the acmé of cheapness.

But perhaps the tourist would wish to take a sail round by Loch Fyne—that beautiful inland sheet of salt water—and here, at the Broomielaw, is a handsome boat, just ready to start. She goes by way of Dunoon, Rothesay, the Kyles of Bute, Loch Gilphead, to Inverary, the capital of "the Argyles'" country; fare also 5s. for the first class. Or, would you prefer a trip to Oban by the short cut of the Crinean Canal, visiting the far-famed Staffa and Iona by the way, inhaling the breezes of the wide ocean, and riding on the backs of the waves that roll in, spent and languid, from the two thousand miles off coast of Labrador?

But no, here is our boat! the steam is up, sputtering and fizzing like fury; the bell has rung, and passengers are stepping on board; she is not too crowded, and looks a nice boat. Come, let's a-board of her. She is the *Loch Long*, and is bound for Loch Long and Loch Goil Head, whither passengers can easily get across the country by coach; the first class fare, all the way to Inverary, is only 5s.

We are now on board, and steaming down the Clyde; passing on either side huge Goliaths of steamers—towering up like huge castles—underneath the shadow of which we pass along like little pigmies. On and on we go, through forests of masts and funnels; past docks, and works, and factories; and though the morning is early, crowds of steamers meet us as they pass down the river. The sun is shining forth, and as the mist is dispelled, the fresh green banks, spotted here and there with the snug little country seats of the Glasgow merchants, look bright and gay as we proceed. Here is a lumbering brig, laden to the water's edge, beating up with the aid of wind and tide, to deposit her cargo of West Indian produce in the Glasgow warehouses; there a huge steamer from Belfast, filled with Irish butter, eggs, and bacon, the passengers on board surveying the scenery around with delighted eyes. Now we pass Blythwood, the seat of the great Glasgow Campbell, a merchant-prince, far more powerful and influential than his feudal lord, the Duke of Argyle, whose glories have dwindled away before the commercial progress of these latter times; then we pass Erskine House, the ancient seat of the Blantyre family, and a little lower down, the more ambitious and aristocratic-looking mansion, the owner of which has lately wedded a daughter of that prince of Highland clearings, the Duke of Sutherland. Further on, near Port Dundas, we pass the mouth of the Forth and Clyde Canal, and then the ruins of the ancient fort which terminated the great Roman wall, built across the island under Antoninus, to prevent the inroads of the wild Caledonians of the north. Where formerly a wall was built to exclude, a canal is now formed to facilitate communication. And on the old ruin of the fort, a monument is reared to Bell, the founder of the Clyde Steam Navigation; Civilization rearing its triumphal monument on the ruins of ancient Barbarism.

The transcendant beauties of the Clyde now open upon us; and nothing can be fairer, more picturesque, more grand, more lovely. All the finest characteristics of scenery are here mingled—the soft, the *riante*, the wild, the beautiful—wood, water, hill, and valley, with beetling crag and frowning portalice. There straight before us, bold and rugged, rises the castle-rock of Dumbarton, almost erect from the bosom of the Clyde: an old and interesting relic, the scene of one of the greatest exploits of the patriot Wallace—a name still fondly cherished by his countrymen.

We have now passed the old rock, at the foot of which we discern a Highland sentry pacing his lonely rounds, for the place is still garrisoned, and now emerge upon the Firth of Clyde, new and beautiful views opening to our vision. Before us, to the right, is Helensburgh, a sweet little bathing village: and Roseneath, one of the country seats of the Duke of Argyle; to the left is Port Glasgow, considerably decayed since the Clyde was deepened, and ships of large burden were enabled to ascend the river. Lower down we see the thriving town of Greenock, and in the distance, closing the view, are the towering hills of Lorn, in Argyleshire.

Nothing can be finer than the view of the Clyde, looking towards Dumbarton. In the centre is the lofty old rock, a most picturesque object, washed by the waters of the Clyde, which extend far and near on every side: the lofty hills behind, here and there wooded to the summit, with knolls of green occasionally peeping forth; and lower down, the grassy lawns sweeping in miles of fresh sward to the water's edge,—the graceful and busy steamers, whose very smoke is picturesque, as if drawn by the magical pencil of Turner; the far-off town, its spire alone distinctly discernible,—the sun glancing in the clear waters, all furnish such a picture of landscape beauty as we have never seen surpassed even in the most famed of continental countries.

Greenock is now passed, and the bathing village of Gourock, and the sloops, brigs, and schooners beating about the bay; and now we stand in for Loch Long, and in another half-hour are steaming up between two ridges of lofty hills in an arm of the sea rather less than two miles in width. The population are here very thinly scattered, only a few fishermen's cottages being occasionally discernible, with here and there a gentleman's shooting-box. We now diverge from Loch Long and enter Loch Goil, a small arm of the same, rocky and picturesque. About half-way up this loch is pointed out the scene of "Lord Ullin's daughter."

> Now who be ye, would cross Lochgyle,
> This dark and stormy water?

There is still the projecting point of land from which the "chief of Ulva's Isle" endeavoured to cross with his bride to the castle on the opposite side of the loch. The boatman's hut is now "cleared off," and the chief's castle is in ruins—and all that remains—more immortal than either cot or castle—is the beautiful ballad of Thomas Campbell.

At Loch Goil-head, the steamer is run up to a rude pier of logs jutting out from the land, and the passengers step ashore. An original description of stage-coach is in readiness to transport us to St. Katherine's Ferry, six miles across the country, opposite Inverary. The passengers were chiefly natives, who, strange to say, were occupied the greater part of the road in canvassing the merits of certain *railways* which had been advertised to run through the very heart of these rocky and muirland mountain districts! Strange—that a country which, little more than a century ago, was inaccessible to civilization—the resort of wild thieves or caterans—the feeder of insurrections and the centre of rebellions—should now be eagerly demanding to have its hills bored, its rivers spanned, and its valleys exalted, to facilitate the incursions of "the Sassenach" upon its simple population. But the Gaels are wise; formerly they sallied forth from their fastnesses to carry off "the geir" of the Lowlanders; whereas now they would invite and allure them into the heart of their country to prey upon them at their quiet leisure! Does it not speak to reason? Is not this a proper illustration of the modern march of intellect.

The mountain road across from Loch Goil-head is at length traversed about six miles, and now we come in sight of Loch Fyne, another long arm of the sea, celebrated all over "braid Scotland" for the fineness of its herrings, which are "better" (the natives say) "than any trout, and far mair wholesomer." The descent to the loch from the hill above Cairndow is very fine, the prospect is really superb; on the other side of the water, about a mile or more across, is descried the pretty little town of Inverary; near it the great Macgillimore's castle of Inverary, and behind and around it the extensive park, finely wooded for many miles, and abounding with deer. The passage across is made in a tiny little steamer, little bigger than a fishing-boat, though big enough for its work.

We are landed at the Inverary pier, for certainly a ducal town is not unentitled to the honour of one, and make our way to Walker's Hotel, an inn which, for accommodation, attendance, and bill of fare, may be pronounced equal to any in Great Britain. The charges are also reasonable, more so than those of many a second-rate inn which we met with in the course of our route. The view from the front windows is exceedingly fine across the loch, land and water embracing each other in all possible attitudes of beauty. Right opposite, the lofty and picturesque peak of Dunniquoich raises its scathed brow into the middle sky, a solitary watch-tower perched upon its top like an eagle's nest, commanding a view, it is said, almost unequalled, even in the Highlands.

After a capital dinner (enjoyed *cum dignitate*, three waiters opening the proceedings with a great display of plate), we engaged a jaunting-car, of which there are always plenty to be had, and started for an afternoon drive to Loch Awe. (It may just be stated here, that the usual charge for a car of this kind throughout the Highlands is 9d. a mile, exclusive of the driver.) The day being fine and the road good, the enjoyment was great. The route was over heath and muirland, by river, burn, and tarn, and often under the shadow of mountains whose heads seemed to touch the sky. Loch Awe at last came in sight, lying in sweet repose at the foot of the gigantic, broad-shouldered, magnificent Ben Cruachan, who needs a base of more than twenty miles to support him! Loch Awe is, indeed, a sweet and lovely sheet of water; more than that, it is surrounded by the majestic and the sublime. In the centre of the loch, near its upper end, which is by far the finest, we observed several wooded islands, on one of which are the ruins of a nunnery, on another those of a castle. One of these tradition points out as the paradise of the neighbourhood. At the upper extremity is situated the fine old ruin of Kilchurn Castle, once a portalice of the Macgregors—afterwards a hunted and proscribed race. A few hours may be spent very agreeably on the lake, and boats are to be had at a reasonable rate. After satisfying ourselves with the beauties of this loch, we returned to Inverary, where we slept.

Next morning we started by coach to Tarbet, by the head of

Loch Fyne and the head of Loch Long. The drive up the banks of Loch Fyne, in the bracing air of the morning, the fishermen drying their nets on the beach, others dredging for salmon, was exceedingly beautiful. About four miles up from Inverary we pass a ruined house, said to have been an ancient stronghold of the Macnaughtons, a race now nearly extinct.

"He was a great man in former days, was the owner o' that castle," remarked the coachman, pointing to the ruin. "A blast o' a horn at ony time wud hae brocht a thousand men around him in a jiffy."

"But there seems very little population hereabouts, my good fellow."

"Ou, very true, Sir; the puir folk hae a' been herried out o' the country—they're a' gane to Glasgo' or to Canada; very few are left noo."

"What is the reason of the people leaving the country in such numbers?"

"Ou, Sir, the lairds dinna like mony folk aboot the land. It was different when they had to fecht for the laird; but noo they cannot pay such great rents as the big farmers, and so they are obliged to leave the country to mak' room for the sheep. There's a farm"—pointing to a farm-house on the opposite side of the loch—"for which the laird gets near 2,000*l.* a year for the sheep-walks."

An interesting conversation brought out the facts, that the shores of this lake, once the most populous in the country, are now comparatively unpeopled; and but for the fishermen, who are able to pay pretty high rents, the shores would be deserted. The men whose ancestors fought for the ancestors of the present lairds with their broadswords, and did not grudge to lay down their lives for them at any time, are now driven out of the country, and, instead of people, we have—sheep!

About eight miles from Inverary we get round the head of Loch Fyne, and breakfast at Cairndow. Glorious herrings, "warstling" out of the loch that morning. Another start, and we enter upon a longer stage and more difficult road. The drive is through narrow gorges and defiles, by tumbling cataracts and mountain tarns. Nothing can be more rugged, wild, and gloomy. Mountains as if tumbled upon each other, their jagged heads projecting into the sky; sometimes huge rocks overhang the road, and seem as if a breath would precipitate them on the passer-by. The road winding down the steep declivity only a few feet between us and destruction,—narrow, dark, and desolate passes, the only living objects to be seen being the distant sheep, which spotted the hills on either side, struggling far upwards in search of the sweet mountain pasture. After emerging from this deep and awful glen, which is about six miles long, and passing the foot of the comical mountain called "The Cobbler," from the exact similitude which its top bears to a cobbler with last on knee, we came down upon the shores of Loch Long, near its upper extremity. The loch lay sleeping in the sun—a heron winging its way across—here and there a fish leaping up into the air, and falling back with a plash, the circling eddies spread far around—the shingle spread upon the beach, for the tide comes partially up to this remote part;—on the other side the little straggling Highland village of Arrochar, in front of which some of the Highland nymphs are disporting themselves in the waters (for this is a fashionable bathing-place among the rural population of the neighbourhood), and, far across the isthmus and loch, we discern the huge shoulder of Ben Lomond heaving himself up into the sky, his head still covered with his morning mist.

The next seven miles were soon passed, the road lying through finely undulating and partially cultivated country. About midway, in a green dell, we perceived a new building of small size, and, on inquiry, were told it was a "Free kirk, Sir," the modern Reformation in Scotland having penetrated into these remote Highland districts, which the first Reformation scarcely touched. Landed at Tarbet, we waited for the steamer on its way up Loch Lomond, on whose shores we now were. The shores, as far as the eye could see, were finely wooded, the lofty Ben towering like a giant above all, and throwing its dark shadow into the water. The jutting promontories here and there run into the lake, green and waving; and behind one of these, far in the distance below us, we discerned the dim smoke of the steamer. We were soon on board, and ploughing up the waves, past rock and glen and cataract. Here, to the right, is pointed out Rob Roy's Cave, a huge rock hanging over the entrance, and in which a party of about fifty persons not long since were accommodated. A little above it is shewn the spot where Robert Bruce slept the night after his defeat in the passes of Glenfinglas by the Lord of Lorn, his implacable enemy.

The loch now becomes contracted and narrow, and the boat at length enters the little river which empties itself into it at the northern extremity, along which we pass to a rude sort of pier, and are landed at the Inn of Invernan, where the coaches from Inverness, Oban, and Killin meet the passengers by this route. After a short stay here, we return down the loch, the principal accession to the passenger party being a family of Highland peasants on their way to the sea-bathing quarters at Arrochar. In a conversation with them we find them lamenting the decay of the old Highland customs, and the modern innovations of "fashion," bustles, Sassenach tenantry, and Sassenach language! Even the Gael in the end cannot withstand the inroads of the persevering Saxon.

At Inversnaid, the steamer puts on shore a number of passengers, and ourselves among the number. "The Lass of Inversneyde" of Wordsworth induced us to make some inquiry about that fair maiden; but, alas! "all that's bright must fade!" We discovered she had grown into a brawny Highland woman, with red arms and sturdy "understandings;" one of her chief occupations being to aid her husband, a hard-handed Highland boatman, in rowing visitors to and fro upon the loch. In the towsy-headed, broad-cheeked, hard-handed, labouring woman, one would have the utmost difficulty in discovering the

> Sweet Highland girl! a very shower
> Of beauty is thy earthly dower!

The road across the country to Coalbarns, at the head of Loch Kateran, is very rugged and uneven; but there are droskies and ponies enough to be had at a cheap rate—a shilling for a ride *in* the one, and eightenpence for a ride *on* the other; and we are piloted by stout Highlandmen, who are ready to carry on their shoulders any imaginable quantity of luggage. On the road we pass the ruins of an old fort, where General Wolfe spent some time before being sent out to Quebec; and a little further on we discover the ruins of the cottage in which Helen Macgregor, the famous Rob Roy's wife, first saw the light. Coalbarns is at length reached, and we betake ourselves to the loch—the celebrated Kateran—a beautiful sheet of water, about two or three miles broad and eleven long. Each passenger pays the small sum of sixpence for being conveyed to the other end of the lake, this marvellous cheapness being the result of a free-trade and competition system, which has just penetrated to this neighbourhood, to the immense saving of the pockets of tourists. A few years ago the charge was five shillings a-head! Those who would have a description of the Trosachs—and beautiful they are exceedingly—must read Scott's *Lady of the Lake*, where they are delineated with the pencil of the true poet. Here we have not room, even had we the ability, to describe the varied loveliness commingled with grandeur of the scenery.

Those tourists who like to pay long bills may stop all night at Stewart's Trosachs Inn, where the charges are high and the accommodation by no means first-rate; but those who do not had better hire a car on to Callendar; or, if they prefer walking as far as the Brig o' Turk, between three and four miles from the landing-place at the Trosachs, they may obtain a drosky or other conveyance at a reasonable rate. Mrs. Ferguson, the landlady at the Brig o' Turk "public," is a buxom, brawny, great flesh-and-blood woman, who does honour to the mountain-dew, if such she should really imbibe. From thence, Callendar, the key to the Highlands of Perthshire, Inverness-shire, Dumbartonshire, and Argyleshire, is easily reached; and there we rested the second night from Glasgow.

From Callendar to Stirling, a beautiful old town, with its interesting old royal palace and castle, which we need not here stop to describe; and then, by the banks of the Forth to Edinburgh—"Edina! Scotia's darling seat"—where we slept the third night, and rested from our labours for a time, ready for another tour, which we may yet find time and opportunity to describe.

Here, then, we have given an outline of a short tour, almost unequalled for beauty and variety, and presenting far more points of interest than many a six weeks' tour on the continent. And then it is *at home*—almost at our own doors—certainly brought within the easy reach of every person of moderate means who would spend a few days pleasantly away from home. But to shew the time and expense of the above tour, it may perhaps be well to sum up by a short table, as follows:—

	s.	*d.*
First Day's Journey.		
To Inverary, 59 miles, fare	6	6
To Claddich (shores of Loch Awe) and back, 18 miles, for a party of three, each	4	0
Second Day's Journey.		
Inverary to Tarbet, 26 miles, fare	9	0
To Invernan, 9 miles, to Inversnaid, 4 miles, one fare	2	6
Inversnaid to Coalbarns, 8 miles, drosky fare	1	0
Coalbarns to Trosachs, 11 miles, boat	0	6
Trosachs to Callendar, 9 miles, from Brig o' Turk	2	0
Third Day's Journey.		
Callendar to Stirling, 21 miles, coach	6	0
Stirling to Edinburgh, 40 miles, steamer	2	6

The expenses of living in inns may be averaged (unless in the case of wine-drinkers) at about 10*s.* a day.

S. S.

THE LAKES.

I HAVE travelled over the northern part of France, Belgium, and Holland, but I have seen nothing in the natural beauties of any of those countries which can be at all placed in competition with the scenery of the north of England, and included in the counties of Westmoreland, Cumberland, and Lancashire. The routes by which the lake district may be visited are various, each possessing its own peculiar advantage. That by the North Union Railway to Lancaster, and from thence by coach to Kendal, is perhaps the most frequented, and this will be rendered still more expeditious by the completion of the Lancaster and Carlisle Railway to Kendal, and also of that from the latter place to Bowness, both of which, it is expected, will be opened in about a twelvemonth from the present time, bringing the tourist at once to the very borders of Windermere. There are other routes terminating in the same point, in all respects equal, and in many superior, to the first; namely, by railway to Fleetwood, and from thence to Ulverston by sea, also by the steamer from Liverpool direct to Ulverston, and this latter, as far as economy is concerned, is the most practicable. Let us then commence our journey from the latter place. But we must, first of all, make an excursion of seven miles to Furness Abbey, an ancient ruin founded in the year 1127 by Stephen, afterwards King of England, for the reception of monks of the Cistercian order. On returning to Ulverston, Coniston Water, at the distance of nine miles in a northerly direction, ought to be first visited. At the foot of the lake there is an inn from which a boat may be had, or the journey may be continued by land to the Waterhead Inn, where the most comfortable accommodation may be had for any length of time. Coniston Old Man, the highest point of a range of mountains called Coniston Fells, must be visited from here. It is 2,577 feet in height, and commands a fine view of the bays and estuaries of Lancashire, with the Isles of Walney and Man, also of Coniston and part of Windermere, although the prospect is much limited by the mountains rising up on all sides, amongst which are Scawfell Pikes and Bowfell. Having paid a visit to the copper mines and whatever else may be thought deserving of notice in the neighbourhood of Coniston, passing on our way the small lake of Estlewaite, and crossing over Windermere at the ferry, we arrive at Bowness. This is a small village on the banks of Windermere, opposite to Bell Isle, and surrounded by rocks, from the summit of which there are fine views of the whole length of the lake, with the lofty mountains at the head of it, which, together, form a panorama not to be exceeded perhaps by any in England. Every luxury and accommodation are to be met with here on the most reasonable terms. From Bowness we continue our route, either by the steamer which has been lately established on Windermere, or by land, passing the Low Wood Hotel, which is very conveniently and beautifully situated near the head of the lake, to Ambleside. It is advisable to make this place head-quarters for some little time, in order to explore the neighbouring mountains. The Salutation is the best hotel, although there are one or two others little inferior to it. Wansfell Pike is naturally the first, as it is the nearest object to be visited; on the way, we pass the romantic and beautiful little waterfall called Stock-gill-Force, which is half a mile from Ambleside.

Although Wansfell Pike is only 1,500 feet in height, there is a most beautiful view from it of Ambleside and Lake Windermere, together with the small lakes of Rydal and Grassmere. At the distance of a mile and a half north of Ambleside, is the small village of Rydal, celebrated as being the residence of the poet laureate, immediately above which is the steep, craggy rock called Nab Scar, from whence, on a clear day, it is said, eight lakes may be seen. Some minerals and fossils have been found here. Grassmere is a small village two miles further on, on the banks of the lake to which it gives the name.

About twelve miles from Ambleside are the rocky mountains called Langdale Pikes, 2,400 feet above the level of the sea, from which there is a fine view of Lake Windermere and the neighbouring mountains. There is a waterfall here called Dungeon Gill, falling between a huge chasm in the rocks, over which a rock has fallen in such a position as to form a natural bridge. From Ambleside we proceed to Patterdale, a small village on the banks of Ullswater, from which Helvellyn may be visited; the lead mines also in the side of the mountain are well worth seeing. Coniston Water is six miles in length; at the head of it there is a large hotel. From Patterdale, after a beautiful drive through Gowbarrow-Park, from which there are fine views of the lake, we arrive at Keswick; and here we are so completely surrounded with the natural beauties of the scenery, that we cannot but feel some hesitation to which out of the many objects before us we shall first turn our attention. Keswick is situated in a vale perfectly level, and surrounded on all sides by a ridge of mountains, conspicuous amongst which are Skiddaw and Saddleback. At one end of the vale is Lake Bassenthwaite, at the other Derwentwater. The ascent of Skiddaw is so gradual that it is often performed on horseback by ladies, and the extent of the view from it has been thought by some to exceed that of any of the other mountains, Helvellyn alone excepted. On Lake Derwentwater there is a floating island, which makes its appearance every two or three years for a short time, generally after a hot summer, and again sinks to the bottom. The principal objects to be visited from Keswick are Borrowdale, Lowdore, with its black-lead mines, Lakes Buttermere, Crammock Water, Lower Water, and Ennerdale.

Although many of the hotels in the Lake district are on a large scale, the charges are for the most part extremely moderate, and the people generally are not only willing, but are pleased with the idea that they are able to furnish you with any information you may require.

VIATOR.

CAUTION TO TRAVELLERS ON THE CONTINENT.—Letters have reached us from various parts of the continent, calling attention to the proceedings of a certain military personage, at present travelling in Switzerland or Germany, and levying a species of "black mail" upon the hotel-keepers and others, under pretext of being able to recommend their establishments in Guides, &c. As we never lightly give publicity to charges against any individual, we declined inserting these communications, as they were for the most part anonymous. The following letter, however, from Geneva, written by a known correspondent, enters into such particulars of these widely-practised impositions, that it becomes a duty to publish it, as a caution to those who would otherwise suffer by them, and also as a warning to the offender himself, whose name we refrain from making public at present, in the hope that this significant notice of his proceedings may put an end to them:—"Geneva.—Gentlemen, You would be doing a great service to hundreds of your subscribers in various parts of the continent—namely innkeepers, by putting the latter on their guard against the notorious ———, who has recommenced his system of victimising proprietors of hotels, tradesmen, professors, &c. which flourished so amazingly in 1839, 40-41. You may probably recollect a letter, about eighteen months ago, respecting this person from Mr. Murray, who either did not know, or, more probably, with a good but mistaken feeling of generosity, omitted to give the name of the person of whom he complained. What Mr. Murray stated was perfectly true; going from town to town, obtaining large sums of money from innkeepers, tradesmen, and others, under the plea of recommending their respective establishments; on others he quartered himself, and paid his bills in the same coin. Sometimes he received as much as several hundred francs, and his career may be traced from Antwerp to Naples, where he was arrested at the suit of some deluded victim, and thrown into prison for swindling. I write this to acquaint your subscribers that he is again abroad for the same purpose, and is, or was, at the close of last month at Interlacken. Having passed through Friburg a little time ago, he tried the old game on the proprietor of the Hotel Zahringen, but found that his notoriety had spread further than he had calculated. The captain possesses the peculiar gift of the gab, and is remarkably pompous. In 1837, he kept a lodging house at Baden Baden, and at Geneva in 1838, where he caused to be reprinted, *verbatim*, a guide to Switzerland, to which he attached his name, to be used, no doubt, as a decoy duck, where he found it necessary to appear as an author of a guide-book. The statements herein contained you may rely upon, and the entire responsibility of exposing this most impudent swindler I most willingly undertake."—*Galignani.*

ART.

SILVER EPERGNE FOR THE DUKE OF NASSAU.—Messrs. Emanuel, brothers, the eminent silversmiths in Hanover-square, have just completed a silver centre-piece, or epergne, for the Duke of Nassau, having been honoured with a commission for the same by his Royal Highness. It is a magnificent piece of workmanship, standing about three feet high, and containing 1,500 ounces of metal. The design is remarkably chaste and imposing. Surrounding a centre shaft is a richly-carved group of St. George combating the dragon, executed in frosted silver, with the prominent parts of the armour and accoutrements highly burnished, the effect of which, in contrast with the deadened surfaces, is beautifully sharp and lustrous. The figure of St. George, who is lifting his sword high over his head, is full of spirit and animation, but the muscular substance of the horse, though characteristic of strength and vigour, tends to obliterate the idea of grace and activity. The snorting dragon, pierced with a broken spear, denotes fearful exasperation; and its huge body, adjusted in picturesque folds upon the basement mass of rockwork, seems writhing with agony. This group is overshadowed by a range of branches, upon which baskets for flowers or sweetmeats are supported, alternating with others for wax tapers—the undulating stems of each serving as perches for

a series of Russian eagles. The apex of the shaft sustains a crown and cushion, which, however, can be removed for the reception of a floral vase, or any other suitable decoration. The triangular pedestal is supported by three lions resting on vertical shields bearing the ducal arms of Nassau. The general effect of the design is grand and massive, and is highly creditable to the artist who composed it, as well as to the artificers who have wrought it out. The surface of the silver is principally worked in a deadened hue, as is the case with the figures, relieved with polished scrollwork. Nothing can be more strikingly beautiful than the *coup d'œil*.

Wood Carvings.—We were much gratified the other day by an inspection of some fine carvings in wood, at Mr. Rogers's establishment in Great Newport-street. These works, which are all executed by Mr. Rogers himself, or under his immediate superintendence, are of singular beauty, and display in the most satisfactory manner the progress that has been made in this country in the cultivation of a style of art which was formerly elevated to so great a height by the celebrated Grinling Gibbons. One of these works is a magnificent chimney-piece in carved oak and ebony, nine feet in height and eight feet wide; the double cornice of which is supported by eight fluted columns, highly enriched with festoons of flowers and foliated capitals. Between the upper columns are two exquisitely carved figures of Hope and Prudence, twenty inches high, and, in the centre of the richly-ornamented panel, a figure of Justice. We also observed in the same room a highly-enriched frame for a painting from Spencer's *Faery Queen*. It is composed of the lightest Venetian foliage, bound together with garlands of flowers, in which are gambolling boys with musical instruments. The frame is surmounted with the well-known ruff of Queen Elizabeth, and a gorgeous scarf of richly-fringed brocade. It is to be chased in the manner of the old Venetian work, and gilt in burnished gold. The elaborate nature of this frame may be conceived when it is mentioned that it projects at least sixteen inches, and looks as light and elegant as if really composed of the delicate materials, which are only imitated in wood. We should imagine that when gilt it will be one of the most sumptuous frames in Europe. There are also some light and graceful carvings of an entirely different school—the refined Italian—intended to ornament a cabinet for the new mansion of Signor Mario, the singer, at Paris. The friezes are composed of grotesque masks, and infant genii, sporting in the foliage; the tablets below have boldly sculptured trophies of sports, shields, monograms, &c.; above the cornice are six flamingo-like boys, half-life size, representing the Seasons, &c. The execution of this piece of carving does great credit to Mr. Rogers. But perhaps the most interesting object of the whole is a gorgeous carving on a gold ground about five feet square, which Mr. Rogers is preparing for presentation to the King of the French, as a specimen of the art of wood-carving in this country. It is a trophy, representing the sister arts, insignia of royalty, sports, and state decorations, including medallion portraits, very finely executed, of her Majesty and Louis Philippe. The composition of this trophy displays great taste and elegance, and is a most elaborate specimen of wood-carving. The whole is in pear-tree, softly polished.—*Herald*.

Plaster Casts.—A question has recently been made, by the revenue officers, with respect to the proper rate of duty chargeable on plaster cast figures; being casts of statues, busts, or other figures, which are imported by private individuals and others to some extent—the same being painted or otherwise ornamented—which the parties claimed to have delivered as figures, at the duty of 2s. 6d. per cwt. but which the officers detained, in consequence of having been so painted or otherwise ornamented, as goods manufactured and liable to the *ad valorem* duty of 20 per cent. The party has since made a representation to the Customs Board on the subject for their delivery as requested; and further, in order to avoid their detention in future by the officers on a similar ground, that a general order should be issued directing the admission of all plaster casts of figures at the lower rate of duty mentioned:—and the Board being of opinion that all casts of busts and figures, however ornamented on the surface by gilding or colouring, and not otherwise enumerated in the table of duties contained in the Act relating thereto, are entitled to be admitted at the duty of 2s. 6d. per cwt. the officers have been instructed to govern themselves in regard to future importations of such articles accordingly. It will be recollected that, a short time since, a question was made with respect to the duty chargeable on the different ornamental cups, mugs, &c. made of Bohemian glass, when mounted or otherwise ornamented with ormolu or metal of any kind—in which cases they were directed to be charged with the *ad valorem* duty; and these casts were probably detained on a similar ground for the same rate of duty. But then it should be distinctly understood that these casts must be merely painted, gilded, or otherwise ornamented, to entitle them to be admitted at the rated duty of 2s. 6d. per cwt.; if they be mounted in any way, so as to cause them to undergo a further process of manufacture, they will be chargeable with the *ad valorem* duty. It is considered that it is the evident intention of the Legislature, by admitting the bronze and other works of Art duty free, to be very liberal in the construction of the Act with regard to importation into this country, from abroad, of such articles generally; and hence the reason of it not being strained to meet the detention of these casts, in the instance alluded to.—*Times*.

THE DRAMA AND PUBLIC AMUSEMENTS.

Private Theatricals.—An amateur dramatic performance took place on Saturday evening, at Miss Kelly's theatre, in Dean-street, got up by a party of gentlemen distinguished in the literary world. The play was *Every Man in his Humour*, followed by the farce of *A Good Night's Rest, or Two o'clock in the Morning*. Ben Jonson's celebrated comedy is rarely performed now-a-days. It has not a great deal of what may be called vulgar interest; the chief circumstance, *Kitely's* insane jealousy of his wife, producing no distress or anxiety for the *dénouement*. But it is full of wit, and gives a most lively and amusing picture of manners, and of the prevailing "humours" or follies of the old dramatist's day. From the names of the principal actors we were entitled to expect a thorough knowledge of the author, and intelligence and discrimination in the reading of their parts; and in this we were not disappointed. But what we did not expect was the easy and unembarrassed action which generally distinguishes the professional performer from the amateur, but which, nevertheless, they exhibited in a surprising degree. The part of *Captain Bobadil* was admirably performed by Mr. C. Dickens, whose personation of the cowardly braggart has probably never been surpassed. Mr. Douglas Jerrold entered completely into the character of the "melancholy and gentlemanlike" *Master Stephen;* and Mr. Leech was scarcely less happy in *Master Mathew*. Mr. Mark Lemon was a capital *Brainworn*, supporting the part, under its various disguises, with infinite truth and spirit. Mr. Forster, in *Kitely*, acted with much force and passion; and Miss Fortescue (who gave this performance the aid of her talents) was charming in *Dame Kitely*. The subordinate characters were well sustained, and the play went off with great spirit and the warmest applause. The farce, which has only two characters, was performed by Mr. Dickens and Mr. Lemon, and kept the audience in a roar. All the accessories of the performance were complete. There was some beautiful scenery, painted by Stanfield; and the costumes were rich, and in strict keeping with the period of the play. The elegant little theatre was filled by a brilliant assembly, invited by the givers of the entertainment.—*Chronicle*.

Colosseum.—Among the distinguished persons who have visited the Colosseum during the last week we have noticed the Earl of Denbigh and family; the Earl and Countess of Shrewsbury; Princess Czartichoff and family; Lord Lincoln and family; Bishop of Jamaica and family; Lady Elizabeth Lowther and family; Lord and Lady Montague; Lords Beaumont, Rokeby, Wilton, Dudley Stuart, Fielding; Lady Kenmure; the Russian, Brazilian, and Sicilian Ministers, &c.

Royal Polytechnic Institution.—We are pleased to see that the Directors of this national institution have commenced their winter campaign with great spirit and judgment. We are glad to find that Dr. Ryan has returned from the continent with renovated health, and has this week commenced a series of instructive lectures on the laws and phenomena of heat, introductory to an extended popular course, explanatory of the economy and uses of steam as a motive power. As his beautiful illustrations of Boutigny's experiments were somewhat abruptly terminated by ill health in July last, we are glad to find that the Doctor is again introducing them to his auditors; nor could the peculiar phenomena of sensible and latent heat be more strikingly explained than by the strange experiment of freezing masses of water in a moment merely by the process of evaporation either in hot or cold vessels. The subject of manufacture of artificial ice also gives Dr. Ryan an opportunity of explaining Master's very ingenious apparatus for making ice in a few moments, so as to supply, in the hottest season of the year, any required quantity of that refreshing substance. The classes for naval officers and for railway engineers we perceive open as usual in October next, under the direction of Dr. Ryan, who is assisted in the mathematical department by Mr. Hobson, B.A. of St. John's College, thus forming a most complete school for the study of natural philosophy in all its relations and aspects.

Royal Adelaide Gallery.—The New Zealand chief continues to delight the frequenters of this gallery with his varied descriptions of the manners and customs of the New Zealanders; and he is prepared with so much original information concerning this extraordinary and barbarous people, that it is quite miraculous how he could have been allowed to escape to give so much excellent information, as we must bear in mind the horrible state of cannibalism in which they were living when he was

thrown among them. The three islands forming the group inhabited by these tribes have now become an object of great interest to this country, in a trading point of view, and many enterprising speculators have established colonies on them, as it is not only the soil that is so beneficial, but the coast abounds in whales, from which the finest description of oil is obtained; and it has been calculated by scientific persons that a flax farm, 100 acres in extent, would yield a net annual income of 3,000*l*. There are now so many projects for adopting the atmospheric principle to railways, that we strongly recommend an inspection of the model laid down here, which is Pilbrow's patent, that being the plan, as we are given to understand, intended to be applied to many of them. The morning lectures on chemistry, &c. are still given, and exemplified by many interesting experiments.

Herr Staudigl, the famous *basso*, with Madam Staudigl, were among the passengers of the *Antwerpen*, on Sunday last for Antwerp, on his way home (Vienna), where he has accepted an engagement for six months, from the new management of the theatre Ander-wien, as the *primo-basso* and stage-manager. He intends to make his *début* there on the 1st of October next.

ORIGINAL CONTRIBUTIONS.

MOULIN HUET BAY, GUERNSEY.

'Tis a scene self-dependent, that recks not of clime,
Nor changes with season, nor lessens with time,
A bare intermarriage of salt sea and stone,
Where Nature stands forth in her splendours alone.

From the gaunt rocks that girdle those emerald bays,
A beauty of steadfastness welcomes the gaze,
While ocean coquettishly fickle in range,
Delights the beholder with beauties of change.

Those minaret crags in the sunshine defined
Are like the bright thoughts on the surface of mind,
Those caverns of labyrinth gloom seem akin
To the secrets of sadness that darkle within.

'Tis a scene that might urge thee, if lone, to repine
That a slenderer arm is not resting on thine,
As the words in which spirit to spirit replies
Are born in the focus of lovelier eyes.

'Tis a scene where the painter for ages might be,
A scene for the bard in his proud reverie;
A vision that fancy might linger upon
Till life with its day-dreams is silently gone.

G. C. SWAYNE.

CORRESPONDENCE.

THE VALHALLA FOR ENGLAND.

TO THE EDITOR OF THE CRITIC.

SIR,—I cordially approve of your proposition for this establishment, so much wanted in England. Places of worship are not the proper temples for the statues and busts of our men of science or genius,—our poets, lawgivers, and warriors; what we want is something upon a broad and national basis, a delightful and improving recreation for the people, a lounge for the gentleman and philosopher, as well as a refining and elevated enjoyment for the artisan, the shopkeeper, his assistants, and the working man and his family. For years I have been entreating the disinterment of the statue of Lord Byron from its shameful hiding-place. I offered to pay for its removal from the dock warehouses. I wrote to Sir John Cam Hobhouse on the subject, but received no reply to my note. And if we ask where his once friends, Irvine, Rogers, and Hobhouse, are exerting themselves in this business, Echo answers, Where? Had there been a Valhalla, or Hall of Fame, what a triumphant multitude might have followed the procession of the statue to one of its most honoured pedestals. Alas, when I gazed on the original model in the studio of his admiring brother-genius, Thorwaldsden, at Rome, I thought of his generous, noble character, which traits are so much concealed, while his errors are so loudly trumpeted forth. "Men's foolish deeds we write in brass; their noble, brave, and virtuous ones in water." I have been thinking, Sir, you might form a committee, to fix upon a site for this temple of fame, to open subscription-books, to enlist the names of shareholders of 10*l*. as proprietors, with certain privileges, and a share of the emoluments; the entrance-money should be four-pence, with the privilege of admitting one or two children gratis, and half-price on Sundays, instead of double charge, as by omnibuses, which is a cruel tax upon our toiling, ill-paid, industrious classes. I should like some elevated spot, near the river and one of its bridges, easy of access, central, and open to view by all strangers and foreigners visiting London. I have in my mind's eye a very good site on the road to Kew, but I fear it would be too distant; another situation near Battersea-fields. Land might be had cheap, and the new railway to Richmond and Windsor would pass near to such a site. The ground around this Temple of Fame might be laid out with shrubs and flowers, like Kensington Gardens walk; and if cemeteries pay so well, the money-worshipping priests and people of England would not lose but gain by this noble speculation in honour of the great, the mighty dead. I am a leisure man, Mr. Editor, and would cheerfully give my time, and a hundred pounds with it, at four or five per cent. interest, to support so laudable an undertaking, and let the statue of the hater of hypocrisy, Byron, and the persecuted poet, Shelley, be the first tenants of our Valhalla, or Hall of Fame. I wait your opinion, and beg to subscribe myself an admirer of men of genius, whether they be of the Church or the chapel, Catholic or Protestant, the credulous or the freethinking, gentle or simple, a Paley or a Payne; Bacon, Burns, Bloomfield, or Byron, all should have a niche by the will and wish of yours.

E. K.

CRITIC OF TRADES, INVENTIONS, ETC.

Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

THE PATENT READING EASEL.—Under this title the inventor has patented a very elegant and useful little reading-desk, from the use of which ladies and invalids cannot fail to derive both comfort and advantage. It is easily attached, by a screw, to a chair or sofa, and supports a book at the height and focus that may be desired. The contrivance is at once simple and ingenious, and only requires to be generally known in order to be adopted as a piece of drawing-room furniture. We understand that her Majesty and Prince Albert have patronized this invention.

PARIS ACADEMY OF SCIENCES.—THE POTATO DISEASE.—SITTING OF SEPTEMBER 15.—Several communications were received relative to the disease which has this year manifested itself in the potato. The writers who treat on this subject scientifically are divided in opinion as to whether the disease is the result of the invasion of a parasitical mushroom, or solely attributable to the unfavourable nature of the season. One writer thinks that the parasitical invasion alluded to is common to the potato, and that it has been developed more extensively by the coldness and dampness of the summer. With due deference to the scientific gentlemen who have turned their attention to the visitation, we beg to observe that it is comparatively of little importance whether the disease have one origin or the other. The great questions to be considered are, first, whether the diseased potato is, as people suppose, generally poisonous, or in any way injurious to health; secondly, whether, supposing this not to be the case, the disease has deprived the tubercle of its nutritive properties; and, thirdly, whether these diseased potatoes can be used as seed for the next year's crop. M. Philippon and M. Pouchet say that they have eaten potatoes in their diseased state without suffering from them in any way. This is tranquillizing news; but these gentlemen do not tell us to what extent the potatoes which they ate were diseased, or whether, supposing that the diseased potato is not poisonous, it has not in its affected parts lost all its farinaceous character. We have examined diseased potatoes of the present year in all the stages of the disease, and have eaten some of those which were least infected, first, however, removing all the unsound parts with a knife, and certainly we did not experience any ill effects. This shews that the malady has only invaded such parts of the tubercle as give evidence of its existence; and there cannot be the least doubt that such parts as remain sound are fit for food, whether for man or beast. As to the diseased parts, we have no hesitation in saying that they are wholly unfit for food, whether they be poisonous or not, for they can have no nutrition whatever. As to whether the diseased potatoes may be safely used as seed for the next crops we do not think it requires much science to give an answer. If any part of the potato remain sound, it may germinate, and produce as good stock as that from a potato that is not diseased, and it is very improbable that the diseased portion should have the power of propagation, for it

is a mass of putrid matter; but it remains to be seen whether the malady will not continue its ravages between this time and the period of planting, and so deprive the tubercle of all power of propagation. A letter then was read from M. de la Rive, of Geneva, on the possibility of rendering the electric light available for the use of the workmen in mines. This gentleman states that five or six elements of a pile of copper and an amalgam of potassium sufficed to render incandescent two cones of charcoal inclosed in a small glass globe. Messrs. Ledoyen and Raphael informed the Academy that they had obtained a liquid of great utility for the purpose of disinfection in the emanations from animal excretions, by dissolving 125 grammes (4 oz.) of nitrate of lead in two pounds of water. This is a valuable discovery for Paris, half the houses in which are infected by these emanations to an extent which is dangerous to health as well as repugnant to the olfactory organs. There were a few other chemical and some medical communications read in this sitting, but they did not possess general interest.

PATENT SALTING INSTRUMENT OR MEAT PRESERVER.—This instrument, which in appearance much resembles an ordinary force-pump, is the invention of Mr. J. Carson, for the purpose of curing, by an almost instantaneous process, meat of all descriptions. This is effected by forcing the brine into the pores of the meat by means of a pressure of upwards of 1,000lbs. to the square inch, obtained through the action of the machine.

This invention has already been extensively used by the leading butchers and exporters of provisions, who speak highly of its utility; but as the proof of its merits can be best shewn by reference to actual practice, we extract the following testimonial from the respectable agent at Plymouth of the New Zealand Company, Mr. J. D. Haswell:—

"Having given Carson's patent instrument for salting and curing meat a fair trial, I have much pleasure in bearing testimony to this excellent invention, as by it much trouble and expense are saved, in comparison with the old and uncertain mode of attaining the same effect. By this method the juices and flavour of the meat are not destroyed; this, together with the short time necessary to produce a perfectly corned or salted joint of meat, renders it a most valuable addition to the kitchen utensils.

"To ships (especially those proceeding to tropical climates) it will prove invaluable, as formerly it was impossible, in hot weather, to preserve meat even at sea (where the temperature is always much lower than on land) above a day or two. By Carson's instrument I have no doubt it may be effectually done for as long a time as is required. The sea stock of corned beef may, by this process, be perfectly corned in a short time, and the loss that so frequently occurs by the old method, from the want of care and cleanliness, be avoided. I speak from an experience of twenty-five years in command, partly in her Majesty's navy, and partly in the mercantile marine.

"The instrument, I have no doubt, will not only prove useful to every family, but indispensable to every ship, both as regards convenience and economy; and that hundreds of pounds of beef will be saved to every owner who puts one on board his ship. I wish the inventor every success he deserves."

GLOBES OF THE SOCIETY FOR THE DIFFUSION OF USEFUL KNOWLEDGE.—In these globes an endeavour has been made to combine a degree of accuracy, such as is only possessed by the best modern maps, with the lowest price at which excellence can be obtained. The terrestrial globe has been compiled from the most recent geographical surveys, with the aid of the accounts given by the best travellers; and there is annexed on the 18-inch globe a table of the population of the different countries in the world, compiled from the latest official returns, and, where these are wanting, the best other authorities which could be obtained, by Mr. G. S. Brent, Fellow of the Statistical Society of London. The astronomical information which has been supplied of late years upon the positions and nomenclature of the fixed stars has rendered a perfectly new celestial globe a most desirable acquisition to the student of astronomy. The labours of Piazzi, Bradley, Lacaille, Johnson, &c. in determining the places of the stars, and those of Baily in the correction of their nomenclature, have been carefully consulted in the celestial globe issued by this society. The stars in the northern hemisphere are all which are given by Piazzi, with the addition of such of Bradley's (from the Tabulæ Rigiomontanæ) as are not in Piazzi. The stars in the southern hemisphere comprise all those given by Lacaille and Johnson. The magnitude of each star is that by which it is designated in the catalogue from which its place is taken: and the several orders of magnitude are so distinguished from each other as to be read, after a little practice, without the necessity of counting the number of points in the star-figure. The double and multiple stars have been marked from the catalogues of Sir W. Herschel and Struve, and Flamsteed's numbers have been annexed as they stand in Mr. Baily's edition of the "British Catalogue;" which work has also been followed in the omission of all letters except those which are found in Bayer's maps. All the positions have been brought up to 1850. The figures of the constellations are printed from different plates and in a distinct colour from that of the more important parts: this, independently of its obvious tendency to prevent confusion, admits of the globe being purchased either with or without the drawings of the constellations.

NECROLOGY.

MR. WILLIAM UPCOTT.

It is with infinite regret that we are called upon to record the death of this well-known and respected gentleman, after a very short illness. The melancholy event took place on Tuesday morning, at his residence at Islington. Mr. Upcott was for many years librarian to the London Institution, for which office he was eminently qualified by his extensive acquaintance with every department of literature. He took an active and leading part in placing before the public some of the most popular and valuable works that have issued from the press during the last thirty years. In the course of his useful career he had felt a pride in collecting and arranging the autograph letters of illustrious persons who flourished during the last and present centuries. The fame of this invaluable collection of documents had rendered his name familiar to every lover of literature, both at home and abroad. His advice and assistance were eagerly sought by all engaged in the preparation of works of historical importance, and he was ever ready to afford to all who applied to him the benefit of his great experience. In every circle Mr. Upcott was a welcome visitor and a universal favourite. His cheerful and agreeable conversation, his profound judgment on all literary matters, his retentive memory, which furnished an inexhaustible fund of anecdote, combined with his kindly disposition and agreeable manner of relating what had passed under his immediate observation, will not easily be forgotten by those who had the pleasure of his acquaintance. His loss will be long and deeply felt, and the void occasioned by his decease, more especially in the world of literature, will not be readily supplied.—*Globe.*

TO BOOKSELLERS.—*A stamped copy of* THE CRITIC *sent regularly to any Bookseller, for his own use, at the cost of stamp and paper only, on prepayment of* half a year's subscription, at least (4*s.* 4*d.*), *which may be transmitted in penny postage stamps.*

BOOKSELLERS *and Keepers of Circulating Libraries are requested to communicate to* THE CRITIC *the results of their experience as to books and classes of books most in demand, and other similar information. Books wanted to purchase inserted in the weekly list without charge.*

BOOKSELLERS' CIRCULAR.

LITERARY INTELLIGENCE.

A REMINISCENCE OF RABELAIS.—There is at the present moment a house undergoing repairs at Orleans, in the Rue de Gourville, which formerly went by the name of the "House of the Twelve Chandeliers;" on one of the garden walls is a medallion in relief, about a metre and a half in height by one metre in breadth, representing Rabelais, the celebrated satirist of France. The figure is moulded with a composition of plaster of Paris and lime, forming a plastic material, on which the outlines of the model are delineated to perfection. The author of *Gargantua and Pantagruel* is represented wearing a doctor's cap. All around are represented, as attributes, the violin and the bagpipes of the curate of Meudon, four small comic masks, some grapes, a bottle, and the book of the master. The book and the bottle are connected together by bands. Three natural sea-shells are fixed at the base of the socle by iron stalks. This medallion, which formerly surmounted a fountain, long since destroyed, is of a pure design, and very elegant and tasteful. The style is that of the commencement of the reign of Louis XV. Rabelais was born at Chinon, in the Tourraine, in 1483. After his release from the penalties which he had incurred by abandoning his monastic orders, he was appointed in 1542 to the cure of Meudon by his friend the Cardinal de Bellay, in which situation he continued till the hour of his death, in 1553. It is reported of him that he was ever mindful at Meudon to instruct his flock, and made it a part of his business to give their children a knowledge of church music, of which he was himself a thorough master. His knowledge of medicine, too, rendered him doubly useful to his parishioners, and he was the physician no less of their bodies than of their immortal souls.

The mother of M. Arago, the eminent natural philosopher, died at Estagel, in the Eastern Pyrenees, a few days ago, at the advanced age of ninety-one years.

THE BRITISH MUSEUM.—On Monday, pursuant to instructions from the Commissioners of Woods and Forests, the last portion of the old British Museum, formerly known as Montagu-house, was disposed of by public auction, and which is to be cleared away for the site on which the new front is to be erected. This consisted of the centre building, with the lofty dome, the entrance-hall, the grand staircase, with the various painted ceilings in the different apartments on the ground floor, comprising about twenty tons of lead, the library, the show-rooms, the brick-work, &c. The lead fetched 354*l.* and the entire brickwork 342*l.*; and the whole realized about 1,300*l.* The painted ceilings being executed on the plaster, went for no higher price as a work of art, but the auctioneer offered a guinea for one of the figures on the ceiling in the secretary's room if it could be taken down perfect. The whole of the building must be cleared away in twenty-eight working days, when the new stone front will be put up. This, it is expected, will be shortly raised, as the walls are erected. In the interim the public will be admitted, on Mondays, Wednesdays, and Fridays, at a temporary entrance to the west of the large gates.—*Globe.*

Mr. Lyell has, we understand, left England for another tour of the United States,—having been engaged by the Alpha-Beta-Kappa Society of Boston, and other learned institutions of America, to deliver a new course of lectures on Geology.

ST. JOHN'S GATE, CLERKENWELL.—Notwithstanding a report to the contrary, we are glad to learn that this venerable relic, to which attach so many interesting associations, is likely to be preserved, a subscription being proposed for the reparation of the decorative portions of the gate—such as tapping or testing each stone in the north and south fronts, carefully rubbing those that are sound, and replacing those which are too much decomposed with new stone, not squared, but inserted so as to conform with the present appearance of the building. The committee recommend carrying up the battlements in stone in front of the angular turrets, to their original height; inserting new labels to the doors and windows—strong courses and bands around; new and proper mullions with cinque-foil heads to the large windows in the north and south fronts; removing the unsightly Roman doorway and shop window on the south side, and placing a new window and doorway in keeping with the old gate; and pointing up the sides of the building with stone or slate set in good mortar, finished with blue ash mortar to preserve a uniform colour.

ANASTATIC PRINTING.—Intelligence has been received from Rome, that this invention, on which Mr. Faraday gave a lecture in the Royal Institution, has already been practised, twelve years ago, in that city, by M. Knecht, a resident in Paris, but originally a German, and nephew of the celebrated Sennefelder. The means and results are asserted to have been quite the same as were shewn by a few specimens executed in the lithographic establishment of Bosio, Via della Croce. At a later period the same gentleman sent to his acquaintances a small French pamphlet of several sheets, which had been reproduced by the same process.

Suffering as the book-interest in Paris has long been from the foreign pirate, its members have just had the further provocation (for it is *that*, even while it is also a good fortune) to discover a nest of pirates at their own door. By the skilful management of M. Bailleul, Inspector in Chief of Libraries and Printing-offices, the detection has been complete of an establishment in which this infamous traffic has been carried on upon a most extensive scale. In the printing-office at Cognac, by a rapid and well-concealed movement, the forms were seized on the press, thousands of sheets half or quite printed, pages set up in the chases, on the stones, and in the galleys, and at the warehouse, in Angoulême, in a space contrived between the exterior and inner walls, upwards of eighteen thousand volumes, principally standard books of education and science, but including also the works of De Lamartine, and even a publication so recent as *Thiers's History of the Consulate and the Empire.* Printers and proprietors, together with the evidences of their crime, are all in the hands of justice.—*Athenæum.*

LIVERPOOL FIRST IN PHILOLOGY.—It is said that the Collegiate Institution of Liverpool has engaged a Chinese professor, who speaks the purest Peking dialect, to teach the Chinese language there; so that its traders, captains of merchantmen, supercargoes, mates, &c. may be enabled to hold *viva voce* intercourse with the natives at Hong-Kong, Canton, and other ports. This is a very sensible measure, and does credit to Liverpool enterprise.

Her Majesty and his Royal Highness Prince Albert have been graciously pleased to accept copies of Mr. Nisbet's poetical romance, *The French in Rheinstadt.*

MACREADY IN LIVERPOOL.—This great tragedian, in the course of his dramatic tour through the provinces, has arrived in Liverpool, where he has been performing at the Theatre Royal. He met with such extraordinary success, notwithstanding the rivalship of the operatic and ballet company exhibiting at the Liver Theatre, that Mr. M. H. Simpson instantly entered into a second engagement with him to perform five more nights before he proceeds elsewhere. Macready had already appeared last week in *Hamlet, Lear, Macbeth, Richelieu,* &c. and this week he agreed to repeat some of his great characters in the following succession:—*Macbeth* on Monday, *Richelieu* on Tuesday, *Lear* on Wednesday, *Julius Cæsar* on Thursday, and *Hamlet* on Friday; which would fill up the time he was able to devote to Liverpool.

REGISTER OF NEW PUBLICATIONS,

From Sept. 20 to Sept. 27.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded* by letter *will be duly inserted.*

LIST OF NEW BOOKS.

Bakewell's (Mrs. J.) Conversation Cards on Intellectual and Moral Subjects, 2s. 6d. in case.—Blencowe's (Rev. E.) Plain Sermons, Addressed to a Country Congregation, 12mo. 7s. 6d. cl.

Cudworth's Intellectual System of the Universe, translated by John Harrison, 3 vols. 8vo. 2*l.* 2s. cl.

Dickson's (Dr. S.) Principles of the Chrono-Thermal System of Medicine, with the Fallacies of the Faculty, 4th edition, with Notes and Introduction, by Dr. Turner, of New York, royal 8vo. 2s. 6d. swd.

Fountaine's (F.) Harvest Surveyors' Best Assistant, 18mo. 1s. 6d. cl.—Fox and the Geese, new edit. 4 col. plates, square, 1s. 6d.

Goldsmith's History of England, with Continuation to 1845, by J. Dymock, 12mo. 3s. 6d. roan lettered.

Hand-Book of Horsemanship, by Hershberger, imp. 32mo. 1s. swd.—Heidelberg, and the Way Thither, by Nil, fc. 8vo. 5s. cl.

Johnson's Greek Epigrams, new edit. 12mo. 3s. 6d. cl.

Ladies' Hand-Book of Knitting and Netting, Second Series, 6th edit. imp. 32mo. 1s. swd.—Lee's (J.) Manual for Ship Masters, 12mo. 5s. cl.

Morgan's Memoirs of Elias, 12mo. 3s. 6d. cl.—Moor's Greek Grammar, by Tate, new edit. 12mo. 2s. 6d. bd.

Williams (Dr. T.) On Procuring Sleep in Insanity, post 8vo. 4s. cl.

GLEANINGS.

ORIGINAL AND SELECT.

METEOROLOGICAL PHENOMENA.

(From the *Malta Mail.*)

We mentioned in our paper of the 27th of June, that the brig *Victoria,* on her voyage from Newcastle to Malta, had met with an extraordinary occurrence at 9 30 p. m. on the 18th of the same month, when in latitude 36 deg. 40 min. 56 sec. and longitude 13 deg. 44 min. 36 sec. The circumstances were as follow:—Being becalmed at the time and without any appearance of bad weather, her top-gallant and royal masts suddenly went over the side, as though carried away by a sudden squall. Two hours after it came on to blow very hard from southward and eastward, and whilst the hands were aloft, taking a reef in the topsails, it suddenly again fell calm, and they complained of an overpowering stench of sulphur and an unbearable heat. At this moment three luminous bodies were seen to issue from the sea, at about the distance of half a mile from the vessel, which remained visible for about ten minutes; soon after it came on to blow hard from the S.E. and the vessel ran into a current of air the very reverse of that just experienced.

We have now been favoured with a letter from Ainab, on Mount Lebanon, mentioning, that on the very same day, at about half an hour after sunset (which brings it to very nearly the same time), the heavens presented a most extraordinary and beautiful though awful spectacle; a fiery meteor, composed of two luminous bodies, each presenting an appearance of being at least five times larger than the moon, with streamers or appendages to each joining the two, and looking precisely like large flags blown out by a gentle breeze, appeared in the west, remained visible for an hour, taking an easterly course, and gra-

dually disappeared. The appendages appeared to shine from the reflected light of the main bodies which it was painful to look at for any time.

The moon had risen about half an hour before, and there was scarcely any wind.

We have also accounts from Erzeroum, in Asia Minor, describing a sudden fall on the 21st of June of the thermometer (which usually ranges in the summer at between 20 to 22 degrees) to 5 degrees, and a further fall of two more degrees, during a heavy snow-storm which lasted three days, after which the thermometer as suddenly rose to 21 degrees. The greatest consternation prevailed among the inhabitants, who thought the world was coming to an end; and even accustomed as they are to cold, it was only by kindling large fires that they could keep from falling victims to its intensity.

At Malta for some days past the heat has been excessively oppressive, the thermometer ranging at 87 degrees in doors in the shade, and at 136 degrees exposed to the hot air. We understand that even at St. Antonio, perhaps the coolest spot in the island, his Excellency the Governor has been compelled to rig up Indian punkahs, and order out an extra supply of ice.

Mesmerism.—A girl, named Mary Farriss, aged fourteen, an inmate of the Cork workhouse for two years, was presented to the board on Wednesday. It appeared she had been deaf for four years, and incapable of receiving instruction in the school of the house, owing to the infirmity. She was mesmerised last week, and to the surprise of all present, during the sleep, answered questions asked in the usual tone of voice. To-day she has replied to questions put in a whisper.—*Cork Constitution.*

Supposed Volcanic Eruption.—Our Orkney correspondent mentions a phenomenon of rare occurrence in Britain, which has caused considerable surprise and excitement among the peaceful denizens of that remote region, and which has led to the impression that these islands have just been visited by the effects of a volcanic eruption, although in which part of the world it has occurred they had no other source of information than conjecture, and the remembrance of what had happened a number of years ago. In reference to this matter our correspondent says, "We have been much astonished here at a very extraordinary phenomenon which took place lately; a great fall of dust, which continued many hours. The men at the herring fishing describe it as being like a thick shower of snow-drift from the north-west. It began to fall before daylight, and continued very thick for a few hours, and afterwards more slightly till about midday. Those who had clothes out bleaching had them completely blackened, and it seems very difficult to wash off. The white flowers in the gardens are quite destroyed, and every 'kail blade' is covered. The only way of accounting for it is by supposing that Mount Hecla has had an eruption, as the wind was exactly from that quarter, and it is quite evident the dust is volcanic. Dr. Barry, in his History of Orkney, says that, in 1783, the last dreadful eruption of Mount Hecla, the dust fell here in the same manner, though it does seem surprising that it could be carried so far—upwards of 400 miles. It will be some time before we hear if an eruption has really taken place. The fishermen were so terrified at the uncommon and inexplicable sight, that several of them refused to go out to sea next day, and some believe it may have a slight effect on the herring trade."—*Edinburgh Advertiser*, Friday.

Prodigious Fossil Animal.—The *Mobile Daily Advertiser* of May 23, announces the discovery by Dr. Koch of another prodigious fossil animal in the yellow limestone formation of the county of Washington and state of Alabama. In consequence of the trick he played to increase the stature of the Missourium (now so greatly reduced in size in the British Museum, whither it was taken, with its fraudulent additions, from the Egyptian Hall a few years ago), we are not inclined to pin our faith to this new discovery, to which the finder has given the euphonious name of *Zeulodon Sillimanii*. He describes the skeleton as that of the king of reptiles, in length 104 feet; the solid parts of the vertebræ from 14 to 18 inches long, and 8 to 12 in diameter; its jaws very long, and armed with 40 foreteeth (incisors), 10 dog-teeth or tusks, and 8 grinders, fitting into each other when the jaws are closed, and proving the animal to be carnivorous. The eyes large and prominent, limbs like oars or fins, but small in proportion to the size of the body. The Doctor is putting the parts together, and no doubt it will be a formidable monster.

York.—The great Peter Bell in York Minster is now safely suspended in its own tower. The weight of the bell and its appendages, together with the frame, is calculated to be 29 tons, but the strength of the tower is equal to triple that weight. The bell is the largest in the kingdom, being five tons heavier than "Old Tom" of Oxford, and seven tons heavier than the celebrated "Tom" of Lincoln. The cost of it is above 2,000*l.*; its height seven feet four inches, and its diameter eight feet four inches. It is placed (at a height of nearly 200 feet) diagonally in the tower, for the greater security to the building, and above 300 cubic feet of timber have been used for its support. It may be rung with two wheels, and will revolve entirely, if necessary. *Leeds Mercury.*

Singular Fact.—A somewhat novel incident occurred very recently at the terminus of the South-Western Railway at Vauxhall. A carrier pigeon was seen in an exhausted state; it was caught by hand, but died shortly afterwards. A label was appended to one of its legs, addressed to his Grace the Duke of Wellington, which stated that three pigeons were thrown up at the island of Ichaboe, and bore date July, 1845. The distance is computed to be between 2,000 and 3,000 miles from the place where the pigeon appears to have been liberated to its destination in London. The bird, with its appendage, was immediately forwarded to Apsley House, and the Duke of Wellington, by an autograph note, the next day courteously acknowledged the receipt to the party who sent the bird. It has been stuffed, and in the process it has been discovered that the bird was shot, otherwise there can be no doubt that it would have reached home, and it is supposed not to have had strength to cross the Thames.—*Globe.*

The following is an extract of a letter from Beyrout, dated July 31:—"It is well known that the Druses have burnt at Abeza a convent in which was a venerable priest named Father Carlo. The French Consul has taken steps on this subject with the Pacha, who has promised to use his utmost endeavours to bring the delinquents to justice. On Saturday last we were surprised by the sudden arrival of the famous Scheick Hamna at the head of 300 regular troops. He was immediately taken to prison, and it is said that he will very shortly be executed at the demand of the French Consul. Whilst the Christians celebrate this as a triumph, the Druses are becoming every day more and more discouraged, and it is hoped that they will take a warning from this lesson, and refrain from exercising so much cruelty towards the Christians. Thanks to the energetic intervention of the European Powers, tranquillity is completely restored in our mountains, and the effect of the change is already visible in the revival of commercial affairs.

Staines.—Discovery of an Interesting Historical Relic.—On Thursday, the 11th inst. a tradesman of this town observed on a market-stall a small plate, on which was engraved a long but well-executed inscription, which he purchased for twopence. On closer examination, the plate proved to be of solid silver, and the tenor of the Latin inscription was diligently inquired for. From one hand to another it passed, until it reached Dr. Beasley, who found that the plate had been attached to a chest formed from a pile driven by Cassivellanus to prevent the passage of Cæsar and his army across the Thames, at the Coway, Walton. That several of these stakes had been found from time to time in the bed of the river has been long known, and brought as evidence of the length of time which the exclusion of the air by water, &c. will preserve timber. A short notice of the fact relating to this passage of the Thames will be found in Camden, under the head of Walton. The circumstance of a silver plate being purchased for twopence at an old iron stall furnished a subject for gossip, and the person who had sold the plate soon found the "cista," and brought it to the doctor, who lost no time in making the purchase. No doubt of identity was entertained, as the plate had been carefully let into the wood. It remains only that the plate be recovered to make this most interesting relic of olden time once more complete. Of so little value had it been considered by its late owner, that the lid of the chest or caddy, having been split, was burnt, and the chest itself would have speedily followed the same fate, if the Latin inscription had not saved it.—*Windsor Express.*

Battle Church.—Curious Discovery.—On cleansing and scraping the old wash from the walls of Battle church, previous to their being re-washed, the walls have been discovered to be full of paintings, of a very ancient and curious character, some of them very well executed, which appear to have been done during the reign of one of the Edwards, or probably before; there is also some writing, but it cannot (except a word or two) be deciphered. Only a portion of the walls has been scraped. I am fearful the whole will not be similarly treated, as one of the churchwardens appears averse to any more being scraped, and, indeed, annoyed that such operations should have been commenced.—*Sussex Advertiser.*

ADVERTISEMENTS.

The following is the moderate scale of charges for Advertisement adopted by The Critic.

For 6 lines and under..... 5s.
For every three lines above ..... 1s.

The volumes of The Critic *neatly half-bound, as completed, for 4s. 6d. each, if the numbers be forwarded to the office. The stamped edition may be sent by post with the ends open, and a letter of advice should contain directions how it is to be returned.*

A portfolio, on a novel and convenient plan, for preserving the numbers of the current volume of The Critic *may be had at the office, or by order, of any bookseller in the country, price 4s. 6d.*

The Critic *may also be had in monthly parts, sewed in a wrapper price 1s. 6d. each.*

THE CRITIC,
And Journal of Literature.

SATURDAY, OCTOBER 4, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

TO READERS.

AN influx of advertisements has induced us to present to our readers a DOUBLE NUMBER of THE CRITIC without additional charge, rather than trench too largely upon the columns that properly belong to them.

Should the same gratifying proof of the growing confidence of advertisers in the worth of THE CRITIC as an advertising medium recur frequently, as we have reason to hope, the same gratuitous enlargement shall be made to meet the demand.

The great accessions that have recently appeared in our List of Booksellers and Library-keeper Subscribers will more than ever adapt THE CRITIC for the circulation of all those classes of advertisements that are addressed to the trade as well as to the public.

The advertising of entire catalogues of second-hand books is a new but most excellent feature in our pages, and will be found of not a little utility to our readers.

JOURNAL OF ENGLISH LITERATURE.

PHILOSOPHY.

The Nature of the Scholar, and its Manifestations. By JOHANN GOTLIEB FICHTE. Translated from the German, with a Memoir of the Author. By WILLIAM SMITH. London, 1845. Chapman.

AT this moment of wild speculation, when the one thought absorbs the community, how wealth may be obtained without labour; when cares for the material interests of man have expelled all higher and holier regards; when religion is practically neglected, morality dishonoured, philosophy laughed at, poetry despised, right welcome is a book which calls back the errant thoughts to God and Nature, shews us our duty and our destiny, and awakens the literary men, the scholars of the land, to the memory of the task which of right belongs to them, and to the due discharge of the office they have taken upon themselves by virtue of their calling.

The readers of THE CRITIC are acquainted with the principles upon this great subject which it is established to support; how earnestly it has deprecated the tendency of the age to materialism; how heartily it has striven to revive in the young hearts of the country a sense of religion, in its loftiest meaning; a love for philosophy, a regard for poetry, a desire to cultivate the more exalted studies that belong to our spiritual and immortal nature. Nor do these in any manner necessitate a sacrifice of any knowledge of material science. Intimate acquaintance with the laws of hydraulics and mechanics is not incompatible with researches into the laws of mind and thoughts about God and Nature. A man may be at the same time an excellent chemist and a first-rate philosopher. We ask not the sacrifice of a tittle of the one to the other; we but call upon our generation to pay equal honour to both; to give to both the attention that is their due, and in the pursuit of studies that multiply wealth and the material enjoyments, which perish and pass away, not utterly to renounce those researches which affect the undying soul, and belong to man by virtue of the Divinity that is in him.

As aiding to this, the great end and purpose of THE CRITIC, a translation of FICHTE'S Lectures is received with reverence and joy. They are a lofty and eloquent appeal on behalf of the higher philosophy against the materialism that pervades society practically, if not admitted in theory. That appeal is made to the persons whose special vocation it is to lead the straying steps of the community into the better path and to direct their apirations to loftier objects. To the man of letters, says the translator in his preface, "we must look with deep interest and anxiety for the springs of that reformation which is to lead us back from sense and worldliness to completeness and nature. It is his voice which must be raised, amid the clang of our industry and the bustle of our commerce, to re-awaken in men their reverence for the divine —to teach them that there is in the human soul a nobler impulse than self-interest, and that virtue is higher and holier than love of happiness. To do this is the vocation of the literary man in all ages; it is especially his duty to an age in which materialism pervades all existing modes of thinking and acting among men."

To the Lectures that contain this appeal is prefixed a memoir of the philosopher from the pen of the translator. This we propose to notice in a distinct article under its proper classification of biography, and to limit our present notice to the Lectures.

The general plan of the subject is stated in the first lecture: the design is to give "a description of the nature of the scholar, and its manifestation in the world of freedom."

To make FICHTE'S argument intelligible, it is necessary rightly to comprehend the meaning of a term which he uses perpetually to designate a notion for which our language has no name, although the idea itself will be instantly recognised by every person who has ever had a thought beyond the present and the palpable.

The idea to which we refer may be thus described. The wonders of the whole material world, and man more especially, are beheld under two aspects;—that which appears to the senses, as developed in form and colour, and that which appears to the mind, viewing them in their relations to each other and to God; their origin, their functions, their destinies, their duties and offices in time and space. For all this there is a reason; the appearance is only the type or expression of something unseen behind it. This concealed cause of appearance is by FICHTE termed "*the divine idea.*" It is God manifest in his works, and is the foundation of all the higher branches of human knowledge—of Philosophy, Æsthetics, Poetry, which are all tracings of the *divine idea* through the forms and substances of things.

It follows, then, that "the whole of the training and culture which an age calls learned education, is only the means towards a knowledge of the attainable portion of the divine idea; and is only valuable in so far as it actually is such means, and truly fulfils its purpose." He only, therefore, is strictly a scholar "who has, through the learned culture of his age, arrived at a knowledge of the idea." How, then, must he maintain the life of a scholar?

FICHTE answers shortly, "by his inherent, characteristic, and all-engrossing love for the idea." He becomes, in fact, the manifestation, the exponent and interpreter of the idea, which possesses him wholly, speaks through him, is the spring of all his thoughts, words, and deeds; for it he lives, nor can he exist otherwise; it flows forth from him, as it were, unconsciously, and his life and works are embodiments of it.

Such being the high destiny, the grand calling of the true scholar, how shall he attain to it? what must be his bearing? how is he to conduct himself,—first, as the student; secondly, as the finished scholar; thirdly, as the ruler; fourthly, as the teacher; fifthly, as the author? To exhibit this is the purpose of the lectures that follow.

We cannot, within our circumscribed space, pretend to follow the lecturer through all his arguments. The utmost we can hope to do is to awaken in the readers of this notice a curiosity to make further research in the volume itself, after the store of wisdom it contains, and of which we can only cull a few partial scraps, to shew what may be anticipated from the perusal of the whole work.

The second lecture is devoted to a further definition of the Divine Idea, and contains many passages of profound wisdom. Here is one—

LIFE IN GOD.

Man is not placed in the world of sense alone, but the essential root of his being is, as we have seen, in God. Hurried along by sense and its impulses, the consciousness of this life in God may be readily hidden from him, and then, however noble may be his

nature, he lives in strife and disunion with himself, in discord and unhappiness, without true dignity and enjoyment of life. But when the consciousness of the true source of his existence first rises upon him, and he joyfully resigns himself to it till his being is steeped in the thought, then peace and joy and blessedness flow in upon his soul. And it lies in the Divine Idea that all men must come to this gladdening consciousness—that the outward and tasteless Finite Life may be pervaded by the Infinite, and so enjoyed; and to this end all who have been filled with the Divine Idea have laboured and shall still labour, that this consciousness in its purest possible form may be spread throughout the race of man.

In the the third lecture FICHTE discourses of the progressive scholar in general, and in particular of Genius and Industry. Genius he asserts to be the Divine Idea taking full possession of a man, impelling him against the will and wish of his sensual, personal nature, as though he were a passive instrument, forward to universal activity—to the skill which is demanded for its exercise, and to the industry which is necessary for the acquisition of that skill. But inasmuch as it is impossible to ascertain at once whether true genius be in a man, the lecturer offers this sensible advice to all students.

This disposition of things, which is as wise as it is necessary, leaves but one course open to the youthful student, who cannot know with certainty whether or not Genius dwells within him,—this, namely, that he continue to act as though there were resident within him that which must at last come to light; that he subject himself to all the conditions, and place himself in all circumstances, in which, if present, it may come to light; that, with untiring industry and true devotion of his whole mind, he avail himself of all the means which learned culture offers to him. In the worst case,—if at the termination of his studies he finds that out of the mass of learning which he has accumulated not one spark of the Idea has beamed upon him, there yet remains for him, at least, a consciousness which is more indispensable to man than even genius itself, and without which the possessor of the greatest genius is far less worthy than he,—the consciousness that if he has not risen higher no blame can attach itself to him—that the point at which he has stopped short is the place which God has assigned to him, whose law he will joyfully obey. No one need pride himself upon genius, for it is the free gift of God; but of honest industry and true devotion to his destiny any man may well be proud; indeed this thorough integrity of purpose is itself the Divine Idea in its most common form, and no really honest mind is without communion with God.

In the next lecture he treats of integrity in study, meaning by this that the scholar should devote himself to his task with singleness of purpose, for the sake of the knowledge itself, and not for any personal ends to be achieved by it. This is

THE IDEA OF INTEGRITY.

Man shall *be* and *do* something; his temporal life shall leave behind it in the spiritual world an imperishable and eternal result—a particular result arising from the life of each individual, belonging to him alone and demanded of him alone. It is thus that the true-minded man looks upon all personal life in time, and particularly on that life which lies nearest to him—namely, his own. He in whom this integrity has become a living idea cannot conceive of human life in any other way than this;—from this principle he sets forth, to it he constantly returns, and by it he regulates all his other modes of thought. Only in so far as he obeys this law and fulfils this purpose, which he recognises as his being's end and aim, is he satisfied with himself: every thing in him which is not directed to this high end—which is not evidently a means to its attainment, he despises, hates, desires to have swept away. He looks upon his individual person as a thought of the Deity; and thus his vocation—the design of his being—is to him as a purpose of God himself. This, and nothing else, is the *idea* of integrity,—whether he who is ruled by it calls it by this *name* or by another.

And thus will the honest student reason with himself:—

I, this sent, this expressly commissioned individual as I may now call myself, am actually here—have entered into existence for this cause and no other,—that the eternal counsel of God in this universe may through me be seen of men in another, hitherto unknown light,—be made clearly manifest, and shine forth with inextinguishable lustre over the world; and this phase of the Divine Thought, thus bound up with my person, is the only true living being within me; all else, though looked upon even by myself as belonging to my being, is dream, shadow, nothing;—this alone is imperishable and eternal within me; all else will again disappear in the void from which it has seemingly, but never really, come forth.

Thus in this thought does "the student become holy and honourable to himself above every thing else, not in respect of what *he is*, but of what he *should be*, and what he evermore must strive *to become*." How this integrity shews itself is the theme of the fifth lecture. The sum is, that "he shuns the contact of the vulgar and ignoble of soul."

After treating of academical freedom, the lecturer proceeds to review the bearing and duties of the finished scholar, which he concludes with this eloquent exhortation:—

Would that I could make myself intelligible to you,—would that I could persuade you,—touching this one point which we now approach on every side!—Whatever man may do, so long as he does it from himself, as a finite being, by himself, and through his own counsel,—it is vain, and will sink to nothing. Only when a foreign power takes possession of him, and urges him forward, and lives within him in room of his own energy, does true and real existence first take up its abode in his life. This foreign power is ever the power of God. To look up to it for counsel—implicitly to follow its guidance,—is the only true wisdom in every employment of human life, and therefore most of all in the highest occupation of which man can partake,—the vocation of the true scholar.

The eighth lecture considers the scholar as ruler, and the last sentence sums up the requirements:—

It is the business of all mankind to see that the conviction of the Divine Existence, without which the very essence of their own being dwindles into nothing, should never perish and disappear from among them;—above all, it is the business of the rulers, as the highest disposers of human affairs. It is not their part to bring forward the *theoretical* proof of this from human reason, or to regulate the mode in which this proof shall be adduced by the second class of scholars; on the contrary, the *practical* proof of it, in their own lives, and that in the highest degree, devolves peculiarly upon them. If firm and intrepid will—if clear and all-comprehensive vision—if a spirit of order and nobility speak to us in their conduct, then in their works do we see God face to face, and need no other proof;—GOD IS, we will say,—for they are, and He in them.

The scholar as teacher is next examined, and his duties are minutely set forth. One bit of advice may be useful in many quarters.

In every word uttered by the academical teacher in the exercise of his calling, let it be knowledge that speaks,—let it be his longings to extend her dominion,—let it be his deep love for his hearers, not as *his* hearers, but as the future ministers of knowledge: knowledge, and these living desires to extend her dominion,—let these speak, not the teacher. An effort to speak for the mere sake of speaking—to speak finely for the sake of fine speaking, and that others may know of it—the disease of word-making—sounding words, in which nevertheless no idea is audible,—is consistent with no man's dignity, and least of all with that of the academic teacher, who represents the dignity of knowledge to future generations.

Lastly, he reviews the duties that devolve upon the scholar as author, and in this he is especially severe upon booksellers and book-writers, and especially upon reviews and reviewers. He appears to feel a great aversion to Literary Journals, but he mistakes our vocation. It is not so much to pass judgment upon books and authors as to make known to the busy world, who could not possibly read every book that is published, what is doing in the world of mind, what books make their appearance, what is their subject-matter, and generally the manner of their execution, to the intent that the reader may judge for himself, and select from the multitude such as may please his taste or pique his curiosity. Thus do we perform an essential service alike to authors, booksellers, and the public, for without the intervention of the Literary Journal nine-tenths of all the books that appear would perish without so much as their names, much less their merits, being made known to the public.

The first duty of the author, says FICHTE, is to proclaim the truth, fearless of consequences.

He will not allow himself to be restrained, by forbearance towards any person, from demolishing error and establishing truth in its place. The worst insult that could be offered, even to a half-educated man, would be to suppose that he could be offended by the exposure of an error which he entertained, or the proclamation of a truth which had escaped his notice. From this bold and open profession of truth, as he perceives it, without regard to any man, he will suffer nothing to lead him astray, not even the politely expressed contempt of the so-called fashionable world, which can only conceive of the literary voca-

tion by comparison with its own social circle, and would impose the etiquette of the court upon the conduct of the scholar.

Once more we commend these Lectures to the study of our readers. We shall hereafter notice the prefixed memoir in its proper place.

HISTORY.

Memoirs of the Reign of King George III. By HORACE WALPOLE. Now first published from the Original MSS., with notes by Sir DENIS LE MARCHANT, Bart. Vols. III. and IV. London, 1845. Bentley.

WE have already noticed the two first volumes of this work, and the remarks then made upon them are amply sustained by the perusal of their successors. HORACE WALPOLE'S Memoirs are not History, but only materials for History. This, however, by no means detracts from their value for the book-shelf, and certainly adds largely to their attractions for the general reader. The best regular history that ever was penned could not so rivet the attention and carve itself upon the memory, as do the easy, rapid sketches from the life, drawn by the careless and elegant courtier, who describes what he saw and is inspired by recollections of emotions he had himself felt. Personal likes and dislikes may somewhat colour his pictures; but that detracts little from their worth, for they seldom lead him to distortion or suppression of facts; and upon the whole we may regard these Memoirs of the reign of the third GEORGE as the best and most correct account we have yet received, for they reveal to us the secret springs of much that we were wont to attribute to causes far different.

But all the worth of these volumes is not comprised in the Memoirs. The Editor has added a profusion of notes, further illustrative of the times and topics treated of in the text, and which he has gleaned from numerous original and authentic sources. Many valuable records have been laid open to him by the kindness of friends. The treasures preserved in the family archives of the Duke of GRAFTON, Lord MINTO, the Duke of BEDFORD, Lady C. LINDSAY, and others, have been freely offered to his investigation, and the gleanings are sufficient in quantity and in interest to have formed a distinct work, instead of being attached as notes to another text. We hope that even yet a volume may be selected by the judicious eye of Sir D. LE MARCHANT, which shall give us the cream of the rich stores that have been submitted to his inspection. It would be a welcome addition to the library, and an attractive dish for the public.

The volumes before us carry on the Memoirs of WALPOLE from 1767 to 1771, and conclude with an appendix by the Editor. The narrative relates for the most part to the second ministry of Lord CHATHAM, that "piece of joinery," that "diversified mosaic," immortalized by the description of BURKE. Its results are shewn in the following extraordinary scene, which took place on the occasion of DYSON moving for leave to introduce a bill affecting certain powers of the East-India Company.

It was on that day, and on that occasion, that Charles Townshend displayed in a latitude beyond belief the amazing powers of his capacity, and the no less amazing incongruities of his character. He had taken on himself, early in the day, the examination of the Company's conduct; and in a very cool, sensible speech on that occasion, and with a becoming consciousness of his own levity, had told the House that he hoped he had atoned for the inconsideration of his past life by the care he had taken of that business. He had scarce uttered this speech, but, as if to atone for that (however false) atonement, he left the house and went home to dinner, not concerning himself with Dyson's motion that was to follow. As that motion was, however, of a novel nature, it produced suspicion, objection, and difficulties. Conway being pressed, and not caring to be the sole champion of an invidious measure, that was in reality not only in Townshend's province, but which he had had a principal hand in framing, sent for him back to the house. He returned about eight in the evening, half-drunk with champagne, and more intoxicated with spirits. He rose to speak without giving himself time to learn, and without caring what had been in agitation, except that the motion had given an alarm. The first thing he did was to call God to witness that he had not been consulted on the motion—a confession implying that he was not consulted on a business in his own department; and the more marvellous, as the disgrace of which he seemed to complain or boast was absolutely false. There were sitting round him twelve persons who had been in consultation with him that very morning, and with his assistance had drawn up the motion on his own table, and who were petrified at his most unparalleled effrontery and causeless want of truth. When he sat down again, Conway asked him softly, how he could affirm so gross a falsehood? He replied carelessly, "I thought it would be better to say so;" but before he sat down, he had poured forth a torrent of wit, parts, humour, knowledge, absurdity, vanity and fiction, heightened by all the graces of comedy, the happiness of allusion and quotation, and the buffoonery of farce. To the purpose of the question he said not a syllable. It was a descant on the times, a picture of parties, of their leaders, of their hopes and defects. It was an encomium and a satire on himself; and while he painted the pretensions of birth, riches, connections, favour, titles; while he affected to praise Lord Rockingham and that faction, and yet insinuated that but parts like his own were qualified to preside; and while he less covertly arraigned the wild incapacity of Lord Chatham, he excited such murmurs of wonder, admiration, applause, laughter, pity, and scorn, that nothing was so true as the sentence with which he concluded, when speaking of Government; he said, it was become what he himself had often been called, a weathercock. Such was the wit, abundance, and impropriety of this speech, that for some days men could talk or inquire of nothing else. "Did you hear Charles Townshend's champagne speech?" was the universal question. For myself, I protest it was the most singular pleasure of the kind I ever tasted. The bacchanalian enthusiasm of Pindar flowed in torrents less rapid and less eloquent, and inspires less delight, than Townshend's imagery, which conveyed meaning in every sentence. It was Garrick writing and acting extempore scenes of Congreve. A light circumstance increased the mirth of the audience. In the fervour of speaking Townshend rubbed off the patch from his eye, which he had represented as grievously cut three days before: no mark was discernible, but to the nearest spectators a scratch so slight that he might have made, and perhaps had made, himself, with a pin. To me the entertainment of the day was complete. He went to supper with us at Mr. Conway's, where, the flood of his gaiety not being exhausted, he kept the table in a roar till two in the morning, by various sallies and pictures, the last of which was a scene in which he mimicked inimitably his own wife, and another great lady with whom he fancied himself in love, and both whose foibles and manner he counterfeited to the life. Mere lassitude closed his lips at last, not the want of wit and new ideas.

WALPOLE'S account of the manner in which the king dealt with ministries to which he was not personally favourable is creditable to his good sense, and somewhat different from the conduct usually attributed to him. Thus writes WALPOLE in 1767.

Nothing now remained but to resettle the administration as we could on its old bottom, no new forces being to be had. But I must make a few observations. In all my experience of the king, or knowledge of his measures, he never interfered with his ministers, scarce took any part in his own business (I speak of the past years of his reign), unless when he was to undo an administration. Whether hating or liking the persons he employed, the moment he took them he seemed to resign himself entirely to their conduct for the time. If what they proposed was very disagreeable to him, at most he avoided it by delay. How far he had entered into his mother's and Lord Bute's plans while they were all-powerful, at the beginning of his reign, cannot be known. Afterwards he had, undoubtedly, confidence in none of his ministers; which, according with his extreme indolence and indifference to all men, his ministers found little obstruction to their views from the closet, till the greater indolence of the Duke of Grafton and Lord North taught his majesty to act on his own judgment, assisted by the secret junto of the creatures of Lord Bute. The sensible disgrace that fell on the crown from so frequent a change of ministries had at last alarmed the king, and made a lasting impression; and yet the ruling principle of the reign—which had been, by breaking and dividing all parties, to draw attention and dependence only to the king himself—had succeeded so happily, that even these storms tended to strengthen the unbounded influence at which the king aspired, and which he pursued invariably on every returning calm. The ductility and congenial indolence of the Duke of Grafton, accompanied with much respect and good breeding, fixed his majesty in preferring him to all the men whom he could employ: and though the duke not long afterwards fell into a connection of very ill-odour at court, yet the tedious tyranny of Grenville, and the inveteracy of Rockingham to Bute, were so much more dreaded, that Grafton did not cease to be almost a favourite; with the additional comfort to the king, that if forced to sacrifice him, it would be the loss of an useful tool, rather than of a minister for whom he had any fondness. Another observation is, that during the whole preceding negotiation the names of Lord Chatham and Charles Townshend were scarce mentioned, so insignificant had both rendered themselves to the nation and

to every faction in it. I cannot help reflecting, too, that had the Duke of Cumberland or the Duke of Devonshire lived, men in the prime of their age, many of the follies I have been recounting had probably been avoided. The excellent sense of the former would have kept Lord Rockingham and the Cavendishes within bounds; and the deference of his royal highness for the Crown would have restrained them from the excesses into which they fell against the king, the princess, and the favourite; for though nobody had less partiality to the two latter, he would not have encouraged a useless inveteracy, when himself would have enjoyed so much credit in the government.

Our readers must be sufficiently familiar with the story of the last days of the CHATHAM ministry, when the great orator having, or feigning, illness retired into his chamber, and doggedly refused either his presence or counsel in the urgency of public affairs. It was in these circumstances that an attempt was made to form a new ministry by a union of opposing interests. The meeting and its results are thus graphically described by WALPOLE.

On the 20th, a meeting was held at the Duke of Newcastle's, of Lord Rockingham, the Duke of Richmond, and Dowdeswell, with Newcastle himself, on one part; and of the Duke of Bedford, Lord Weymouth, and Rigby on the other. The Duke of Bedford had powers from Grenville to act for him, but did not seem to like Lord Rockingham's taking on himself to name to places. On the latter asking what friends they wished to prefer, Rigby said, with his cavalier bluntness, "Take the Court Calendar and give them one, two, three thousand pounds a year." Bedford observed that they had said nothing on measures: Mr. Grenville would insist on the sovereignty of this country over America being asserted. Lord Rockingham replied, he would never allow it to be a question whether he had given up this country: he never had. The duke insisted on a declaration. The Duke of Richmond said, "We may as well demand one from you, that you never will disturb that country again." Neither would yield. However, though they could not agree on measures, as the distribution of places was more the object of their thoughts and of their meeting, they reverted to that topic. Lord Rockingham named Mr. Conway; Bedford started; said, he had no notion of Conway; had thought he was to return to the military line. The Duke of Richmond said; it was true Mr. Conway did not desire a civil place; did not know whether he would be persuaded to accept one; but they were so bound to him for his resignation, and thought him so able, they must insist. The Duke of Bedford said, Conway was an officer *sans tâche*, but not a mnister *sans tâche*. Rigby said not one of the present cabinet should be saved. Dowdeswell asked, "What! not one?"—"No."—"What! not Charles Townshend?" "Oh," said Rigby, "that is different; besides, he has been in opposition." "So has Conway," said Dowdeswell; "he has voted twice against the Court, Townshend but once." "But," said Rigby, "Conway is Bute's man." "Pray," said Dowdeswell, "is not Charles Townshend Bute's?" "Ay, but Conway is governed by his brother Hertford, who is Bute's."—"So is Charles Townshend by his brother, who is Bute's."—"But Lady Ailesbury is a Scotch-woman."—"So is Lady Dalkeith." From this dialogue the assembly fell to wrangle, and broke up quarrelling. So high did the heats go, that the Cavendishes ran about the town, publishing the issue of the conference, and taxing the Bedfords with treachery.

We must not omit a specimen of WALPOLE's portrait-painting. Here is his

CHARACTER OF LORD NORTH.

He had knowledge, and though fond of his amusement, seemed to have all necessary activity till he reached the summit. Yet that industry ceased when it became most requisite. He had neither system, nor principles, nor shame; sought neither the favour of the Crown nor of the people, but enjoyed the good luck of fortune with a gluttonous epicurism that was equally careless of glory and disgrace. His indolence prevented his forming any plan. His indifference made him leap from one extreme to another; and his insensibility to reproach reconciled him to any contradiction. He proved as indolent as the Duke of Grafton, but his temper being as good as the duke's was bad, he was less hurt at capital disgraces than the duke had been at trifling difficulties. Lord North's conduct in the American war displayed all these features. He engaged in it against his opinion, and yet without reluctance. He managed it without foresight or address, and was neither ashamed when it miscarried, nor dispirited when the Crown itself became endangered by the additional war with France. His good humour could not be good-nature, for at the beginning of the war he stuck at no cruelty, but laughed at barbarities with which all Europe rung. It could not be good sense, for in the progress he blushed at none of the mischiefs he had occasioned, at none of the reproaches he had incurred. Like the Duke of Grafton, he was always affecting a disposition to retire, yet never did. Unlike the duke, who secured no emoluments to himself, Lord North engrossed whatever fell in his way, and sometimes was bribed by the Crown to promote acts against which he pretended his conscience recoiled—but it never was delicate when profit was in the opposite scale. If he had ambition, it was of very mean complexion, for he stooped to be but a nominal prime minister, and suffered the king's private junto to enjoy the whole credit of favour, while, between submission and laziness, Lord North himself was seldom the author of the measures in which he bore the principal part. This passive and inglorious tractability, and his being connected with no faction, made him welcome to the king; his having no predominant fault or vice recommended him to the nation; and his good-humour and wit to everybody but to the few whom his want of good-breeding and attention offended. One singularity came out in his character, which was, that no man was more ready for extremes under the administration of others, no man more temperate than Lord North during his own; in effect, he was a man whom few hated, fewer could esteem. As a minister he had no foresight, no consistence, no firmness, no spirit. He miscarried in all he undertook in America, was more improvident than unfortunate, less unfortunate than he deserved to be. If he was free from vices, he was as void of virtues; and it is a paltry eulogium of a prime minister of a great country, yet the best that can be alloted to Lord North, that, though his country was ruined under his administration, he preserved his good-humour, and neither felt for his country nor for himself. Yet it is true, too, that he was the least odious of the ministers with whom he acted; and though servile in obedience to a prince who meant so ill, there was reason to think that Lord North neither stimulated nor was more than the passive instrument of the black designs of the Court.

It would be absurd to attempt an abstract of a history so varied as this. A few anecdotes gathered from the Editor's notes will, however, be acceptable. Sir DENIS has collected, under the year 1768, a curious account of some of the political squibs and other partisan publications of the day, from which he has extracted passages of considerable wit and smartness. A mock-heroic poem, entitled *Rodondo*, written by DALRYMPLE, was a bitter attack on CHATHAM. Here is a passage that will exhibit its spirit:—

He raised the nation's apprehensions
With court-corruption, places, pensions:
Words which, when well dissected, mean,
That *I* am *out* and you are *in*;
And which, when properly repeated
In every question that's debated,
Can ope a thousand mouths at once,
And make a hero of a dunce.
Your IF is good at making peace:
Rodondo went to war with these.
* * * * *
The nation knows
My maxim ever was, *Oppose*;
And be the minister who will,
My maxim is, Oppose him still.
For though to Britain necessary,
'Tis good for me that all miscarry,
Excepting *one*—I need not name him,—
Envy herself would blush to blame him.

WALPOLE's summary of the characters of his contemporaries, and of the designs of the monarch, is not calculated to exalt our estimate of the public men of that day:

Let it be observed, however, that, when I impute to the king and his mother little more than a formed design of reducing the usurped authority of the great lords, I am far from meaning that there were not deeper designs at bottom. Lord Mansfield was by principle a tyrant; Lord Holland was bred in a monarchic school, was cruel, revengeful, daring, and subtle. Grenville, though in principle a republican, was bold, proud, dictatorial, and so self-willed that he would have expected Liberty herself should be his first slave. The Bedford faction, except the duke himself, were void of honour, honesty, and virtue; and the Scotch were whatever their masters wished them to be, and too envious of the English, and became too much provoked by them not to lend all their mischievous abilities towards the ruin of a constitution, whose benefits the English had imparted to them, but did not like they should engross. All these individuals or factions, I do not doubt, accepted and fomented the disposition they found predominant in the cabinet, as they had severally access to it; and the contradictions which the king suffered in his ill-advised measures, riveted in him a thirst of delivering himself from control, and to be above control he must be absolute. Thus on the innate desire of unbounded power in all

princes, was engrafted a hate to the freedom of the subject, and therefore, whether the king set out with a plan of extending his prerogative, or adopted it, his subsequent measures, as often as he had an opportunity of directing them himself, tended to the sole object of acting by his own will. Frequent convulsions did that pursuit occasion, and heavy mortifications to himself. On the nation it heaped disgrace, and brought it to the brink of ruin; and should the event be consonant to the king's wishes of establishing the royal authority at home, it is more sure that the country will be so lowered, that the sovereign will become as subject to the mandates of France as any little potentate in Europe.

We now close this work, which is one of the most valuable of modern contributions to the already rich stores of English history.

VOYAGES AND TRAVELS.

The World Surveyed in the Nineteenth Century; or, recent Narratives of Scientific and Exploratory Expeditions (undertaken chiefly by command of Foreign Governments). Translated and (where necessary) abridged by W. D. Cooley. Vol. I.—*Parrot's Journey to Ararat.* Longman and Co. 1845.

The plan of this publication is excellent. At present the English people have but an imperfect notion of what other countries are effecting in geographical research. The only information that reaches us at all is to be found in the foreign reviews which occasionally notice foreign books of travel. But this affords too superficial an acquaintance with a work abounding in valuable facts to satisfy curiosity. Mr. Cooley therefore deserves cordial support in his bold endeavour to supply, by means of careful translations, the large addition to our store of geographical and ethnological knowledge accumulated by the travellers of other countries.

And a journey to Ararat has been most judiciously selected for the opening of the series. There could not be a more attractive subject. It will interest alike the general reader and the votary of science. It is a region of which our knowledge is singularly deficient, few travellers having devoted so much time to the mountain, although the neighbourhood has been pretty well explored.

Dr. Friedrich Parrot is a Professor of Natural Philosophy at the University of Dorpat, in the Russian dominions. He had long entertained the project of exploring Ararat and its neighbourhood, but was deterred by the state of the country, then in the hands of the Persians. On the conclusion of peace, however, he resolved to gratify his early wishes; and having been liberally aided by the Emperor Alexander, who sent with him an astronomer named Vassili Federov, and a field-jäger, he set forth in April 1829. Two medical students and a friend versed in mineralogy volunteered to join him, and thus the expedition was swoln to six persons.

On the 10th of May they arrived at New Cherkask, when they found themselves among the Kalmuk Tartars, who inhabit the plains that surround the city, and of whose roving habits M. Parrot gives a minute and curious account. They refuse to live in fixed habitations, but use a sort of portable house, which they call a kibitka, and which they can erect or remove in an hour. They acknowledge a sort of rude religion, and one of their temples is thus described:—

> Here, hang a number of distorted representations of their divinities on the walls; there, is reverentially preserved a brazen idol, cast for their principal god, who is generally represented as a female, like many others among them, and often with four or six arms, and similar hideous deformities of shape. In another place lie piled in chests their sacred writings, obtained from Mongolia or Tibet, and which are intelligible, or rather legible, to none but the initiated; that is to say, their high priest or lama, and the officiating minister or gellong. Their religious service, too, judging from what I had an opportunity of observing, is in no respect more elevating. The priests seat themselves in the kibitka, with their legs bent under them, and the soles of their feet turned upwards, or, as the Mongolians express it, in sceptre fashion, so as to be ranged in two lines opposite to each other from the entrance. In this posture they remain, as immoveable as statues, and chant or sing their prayers on a sort of rosary, interrupted from time to time by the harsh, discordant tones of a peculiar kind of brazen cornets, accompanied with the clang of kettle-drums and cymbals, and the deep but clear bass notes of two straight wooden trumpets, six feet long; which latter, however, I only saw introduced in the elegant stone church built at Astrakhan, by the Kalmuk chief whom I have already mentioned. As for the laity even of the same khatun only taking a part in the daily worship of their gods, they are effectually precluded from that, by the smallness of the kibitka in which it is performed; much less can the inmates of those khatuns which are six or twelve miles distant, catch the sound even of the music. They content themselves with the assurance that the lamas and gellongs are offering up their prayers enjoined by their ritual for the welfare of the Kalmuk community. As the constitution of their church teaches no distinction between Sundays and weekdays, their prayers are limited to a short formula, which they repeat as a sort of charm or spell upon every important occurrence, and without any very clear conception of its import.

But we cannot follow him through his route to Ararat. To do this would occupy half-a-dozen Critics; and justice to other works of equal worth compels us to be brief with this, therefore we come at once to the main object of the expedition, the ascent of Ararat.

> It was early on the morning of the 12th of September that the party began their ascent from the hermitage of St. James. After crossing a deep gorge, they began to climb the rough and rocky sides. They found the task extremely tedious, in consequence of the steepness and ruggedness of the path; and it was not until nearly sunset that they reached the boundary of the snow, where they resolved to rest for the night. At early morning they renewed their journey, climbing now amid snow and ice broken by the projecting points of huge steep rocks. Thus they passed the first glacier, and so wearisome was it, that ere they reached the other side, two of the attendants had turned back in fear. Another glacier was crossed in like manner, and then they reached the edge of the crown of ice that covered the entire head of the mountain. They were now nearly 14,000 feet above the level of the sea. The ascent of the sea of ice was a tremendous task; it was difficult to find a secure footing and the small, rough ledges, to which they were compelled to trust, frequently gave way beneath them and they were only saved from slipping down the precipice by the Alpen-stuck, with which they made holes in the ice, and sustained themselves as they advanced from one perilous step to another. By three o'clock they had reached a height equal to that of Mont Blanc, and yet the peak of Ararat was still glowing in the sky far above them. It would have been impossible to reach it before night-fall, so they determined on descending. As usual, there was more danger and difficulty in this even than in the ascent. Nor did they escape without an accident.
>
> Satisfied with the result, and with having ascertained that the mountain was by no means wholly inaccessible on this side, and having made our barometrical observations, we turned about and immediately fell into a danger which we never dreamt of in ascending. For, while the footing is generally less sure in descending a mountain than in ascending it, at the same time it is extremely difficult to restrain one's self and to tread with the requisite caution, when looking from above upon such a uniform survey of ice and snow, as spread from beneath our feet to the distance of two-thirds of a mile without interruption, and on which, if we happened to slip and fall, there was nothing to prevent our rapidly shooting downwards, except the angular fragments of rock which bounded the region of ice. The danger here lies more in want of habit than in real difficulty. The active spirit of my young friend, now engaged in his first mountain journey, and whose strength and courage were able to cope with harder trials, was yet unable to withstand this: treading incautiously, he fell; but, as he was about twenty paces behind me, I had time to strike my staff before me in the ice as deep as it would go, to plant my foot firmly on my excellent many-pointed ice-shoe, and, while my right hand grasped the staff, to catch M. Schiemann with my left, as he was sliding by. My position was good, and resisted the impetus of his fall; but the tie of the ice-shoe, although so strong that it appeared to be of a piece with the sole, gave way with the strain; the straps were cut through as if with a knife, and, unable to support the double weight on the bare sole, I also fell. M. Schiemann, rolling against two stones, came to a stoppage with little injury, sooner than myself; the distance over which I was hurried, almost unconsciously, was little short of a quarter of a mile, and ended in the debris of lava, not far from the border of the glacier.
>
> A few bruises, however, were all the injury that M. Parrot received; but the barometer was broken, and that was an irreparable loss. They found their attendant waiting for them

at the foot of the glacier, and on the following evening they reached again the hermitage of St. James.

Undismayed by their narrow escape from destruction, our adventurous travellers resolved once more to make the attempt, and having refreshed the mules by rest, they set forth again upon the hazardous expedition. But this time they availed themselves of past experience, and they enlisted the services of some volunteer recruits. The party now consisted of the three travellers, with the deacon ABOVIAN, four Arminian peasants, three Russian soldiers, and a driver with four oxen carrying provisions, clothing, &c. They commenced the ascent on the north-west side of the mountain. Their way led first over grass land, then came sands and lava, then an extensive plain. From this the mountain rose abruptly, and the climb was steep and stiff, until they reached the ice. So far they were enabled to urge on the oxen, but here it was found necessary to form a sort of encampment, the provisions and clothing being stowed away for use, and the animals turned out to feed. In about two hours they gained the limits of eternal snow.

For an instant we halted at the foot of the pyramid of snow which before our eyes was projected with wondrous grandeur on the clear blue sky: we chose out such matters as could be dispensed with, and left them behind a rock; then serious and in silence, and not without a devout shuddering, we set foot upon that region which certainly since Noah's time no human being had ever trodden. At first the progress was easy, because the acclivity was not very steep, and besides it was covered with a layer of fresh snow, on which it was easy to walk; the few cracks in the ice, also, which occurred, were of no great breadth, and could easily be stepped over. But this joy did not last long; for, after we had advanced about 200 paces, the steepness increased to such a degree, that we were no longer able to tread securely on the snow, but, in order to save ourselves from sliding down on the ice beneath it, we were obliged to have recourse to that measure, for the employment of which I had taken care to equip myself and my companions, namely, the cutting of steps. Although that which is called ice on such mountains is in reality snow converted into a glacier, that is to say, permeated with water and again frozen, in which case it is far from possessing the solidity of true ice, yet like this it does not yield to the pressure of the foot, and requires, where the slope is very rapid, the cutting of steps. For this purpose some of us had brought little axes, some bill-hooks, while others again made use of the ice staff. The general rule in the ascent was, that the leader should only cut the ice, just enough to allow himself to mount, and that each as he followed should enlarge the step; and thus while the labour of the foremost was lightened, a good path was prepared for the descent, wherein much firmer footing is required than in ascending.

It should be mentioned that they had brought with them a cross, which they intended to plant on the mountain top. This, however, they found a great incumbrance in their tedious climbing. Scaling crags and slipping over ice peaks, they gained, after a long lapse of time, a small platform of snow, above which the peak of Ararat was still seen to soar into the sky. They ascertained that they were now 16,000 feet above the level of the sea, the highest point ever reached by man. The night was coming; they were exhausted with fatigue: a damp wind was blowing that betokened a snow-storm. Reluctantly they resolved to proceed no further, but here to set up the cross, and then descend. Having performed the pious ceremony, they turned their steps, and, without accident, regained the point at the edge of the snow where they had left their oxen, provisions, and warm clothing, and on the following day they were again at the hermitage.

M. PARROT, however, was not satisfied. He still entertained a wish to make one more trial. At length an opportunity offered. A few days afterwards, his companions having rambled forth on a botanical excursion, the weather being fine, M. PARROT resolved to make one more attempt. Accompanied by the Deacon ABOVIAN, two soldiers, a volunteer from Dorpat, and a peasant, he started on the 8th of October, and reached again the border of the snow, where they passed the night, almost in comfort, the consequence, he says, of eating profusely of onion soup, which he recommends to travellers on the mountains. This time his perseverance was rewarded. But let us hear his own account of the achievement.

At the first dawn we roused ourselves up, and at about half-past six proceeded on our march. The last tracts of rocky fragments were crossed in about half an hour, and we once more trod on the limits of perpetual snow nearly in the same place as before, having first lightened ourselves by depositing near some heaps of stones such articles as we could dispense with. But the snowy region had undergone a great, and for us by no means favourable change. The newly fallen snow, which had been of some use to us in our former attempt, had since melted, from the increased heat of the weather, and was now changed into glacier ice, so that notwithstanding the moderate steepness of the acclivity, it would be necessary to cut steps from below. This made our progress a laborious affair, and demanded the full exertion of our strength from the first starting. We were obliged to leave one of the peasants behind at the place where we spent the night, as he complained of illness; two others, tired in ascending the glacier, stopped at first only to rest, but afterwards went back to the same station. The rest of us, without allowing ourselves to be detained an instant by these accidents, pushed on unremittingly to our object, rather excited than discouraged by the difficulties in our way. We soon after came again to the great crack which marks the upper edge of the icy slope just ascended, and about ten o'clock we found ourselves exactly in the place where we had arrived on the former occasion at noon, that is to say, on the great plain of SNOW, which forms the first step downward from the icy head of Ararat. We saw from a distance of about half a mile the cross erected on the 19th September, but it looked so uncommonly small, perhaps owing to its black colour, that I could not help doubting whether I should be able to make it out, and to recognise it with an ordinary telescope from the plain of the Araxes. In the direction of the summit we had before us an acclivity shorter but steeper than that just passed over; and between it and the furthest pinnacle there seemed to intervene only a gentle swelling of the ground. After a short rest, we ascended with the aid of hewn steps the next slope (the steepest of all), and then another elevation; but now, instead of seeing immediately in front of us the grand object of all our exertions, a whole row of hills had developed itself to our eyes, and completely intercepted the view of the summit. At this our spirits, which had never fluctuated so long as we supposed that we had a view of all the difficulties to be surmounted, sank not a little, and our strength, exhausted by the hard work of cutting steps in the ice, seemed hardly adequate to the attainment of the now invisible goal. Yet, on calculating what was already done and what remained to be done, on considering the proximity of the succeeding row of heights, and casting a glance at my hearty followers, care fled, and "boldly onwards!" resounded in my bosom. We passed without stopping over a couple of hills; there we felt the mountain wind; I pressed forward round a projecting mound of snow, and behold, before my eyes, now intoxicated with joy, lay the extreme cone, the highest pinnacle of Ararat. Still, a last effort was required of us to ascend a tract of ice by means of steps, and that accomplished, about a quarter past three on the 27th September (9th Oct.), 1829, WE STOOD ON THE TOP OF ARARAT.

The top of Ararat was found to be a platform, nearly cruciform in shape, about two hundred paces in circumference, and sloping off suddenly on all sides—a huge table of ice. The height by the barometer was noted as 17,210 feet above the level of the sea. The view was dimmed by a haze, but still it was magnificent. The mercury stood only at seven degrees below freezing-point. Here they remained about three-quarters of an hour, and then, having erected a cross, they descended, and with much difficulty regained their resting-place.

M. PARROT thus alludes to the event with which the name of Ararat is so auspiciously associated.

Should any one now inquire respecting the possibility of remains of the ark still existing on Ararat, it may be replied that there is nothing in that possibility incompatible with the laws of nature, if it only be assumed that immediately after the Flood the summit of that mountain began to be covered with perpetual ice and snow, an assumption which cannot reasonably be objected to. And when it is considered that on great mountains accumulated coverings of ice and snow exceeding 100 feet in thickness are by no means unusual, it is obvious that on the top of Ararat there may be easily a sufficient depth of ice to cover the ark, which was only thirty ells high.

We are bound to add, that very considerable doubt has been thrown over the veracity of the latter portion of M. PARROT'S narrative, and great controversies as to the practicability of the feat have been provoked among the geographers by the publication of his work. Into this learned quarrel we will not enter. We give the traveller's statements as we have them, and we can recommend his book to our readers or the book-club, as a very interesting and a very instructive contribution to our knowledge of the world we live in.

Journals of Expeditions of Discovery into Central Australia, and Overland from Adelaide to King George's Sound, in the Years 1840—1; *including an Account of the Manners and Customs of the Aborigines and the State of their Relations with Europeans.* By E. J. EYRE, Resident Magistrate, Murray River. 2 vols. T. and W. Boone.

As the title led us to suppose, these volumes are totally different from each other in their aim as well as substance, one being a journal of an expedition into the interior of Australia, and the other containing notes on the manners and customs of the natives of that new and promising colony.

Being more conversant with the land of his adoption, from Adelaide North and West, than any other explorer, the author of these volumes was chosen by his fellow-colonists and the Government to be the pioneer of an expedition to the centre of the Australian continent. At first he bore to the north, and soon arrived at Spencer's Gulf, an unfertile and ungratifying region. Lake Torrens was the next great object in his path. This lake is *apparently* filled with water, though whether it really be so or not, our author's information does not acquaint us, as he saw nothing but a kind of sludge. But let us hear his own description of this

MUD LAKE.

I found Lake Torrens completely girded by a steep sandy ridge, exactly like the sandy ridges bounding the sea-shore; no rocks or stones were visible anywhere, but many saline coasts peeped out in the outer ridge, and upon descending westerly to its basin, I found the dry bed of the lake coated completely over with a crust of salt, forming one unbroken sheet of pure white, and glittering brilliantly in the sun. On stepping upon this I found that it yielded to the foot, and that below the surface the bed of the lake consisted of a soft mud, and the further we advanced to the westward the more boggy it got, so that at last it became quite impossible to proceed, and I was obliged to return to the outer margin of the lake without ascertaining whether there was water on the surface of its bed further west or not. The extraordinary deception caused by mirage and refraction, arising from the state of the atmosphere in these regions, makes it almost impossible to believe the evidence of one's own eyesight: but as far as I could judge under these circumstances, it appeared to me that there was water in the bed of the lake at a distance of four or five miles from where I was, and at this point Lake Torrens was about fifteen or twenty miles across, having high land bounding it to the west, seemingly a continuation of the table land at the head of Spencer's gulf on its western side.

Being thus disappointed, after several other futile attempts in various directions, passing over much country exceedingly unproductive and barren, Mr. EYRE crossed the peninsula behind Port Lincoln, intending, at the first available opportunity, to advance inland in a westerly direction. The burning north-east winds convinced him that the attempt would be vain; and this was borne out by the information of some natives, that no water nor trees could be found inland. The great Australian bight was the next object of his adventurous enterprize; but the loss of his most valuable horses, and other reverses and sufferings, damped his ardour, and forced him to desist. Such an occurrence as the one here related may truly be deemed

A MISFORTUNE.

Leaving my artificial horizon on the ground outside, whilst I remained in the tent, waiting until Altair came to the meridian, I then took my sextant and went out to observe this star; but upon putting down my hand to take hold of the horizon-glass, in order to wipe the dew off, my fingers went into the quicksilver—the horizon-glass was gone, and also the piece of canvas I had put on the ground to lie down upon whilst observing so low an altitude as that of Vega. Searching a little more, I missed a spade, a parcel of horse-shoes, an axe, a tin dish, some ropes, a grubbing-hoe, and several smaller things, which had been left outside the tent, as not being likely to take any injury from the damp. It was evident I was surrounded by natives, who had stolen all these things during the short time I had been in my tent, certainly not exceeding half an hour. The night was very windy, and I had heard nothing; besides, I was encamped in the midst of a very dense brush of large, wide-spreading tea-trees and other bushes, any of which would afford a screen for a considerable number of natives. * * * * As soon as I missed my horizon-glass, and entertained the suspicion of natives being about, I hurried into the tent, and lighting a large blue light, run with it rapidly through the bushes around me. The effect of this was very beautiful amidst the darkness and gloom of the woods, and for a great distance in every direction, objects could be seen as well as by day. The natives, however, were gone; and I could only console myself by firing a couple of balls after them through the underwood, to warn them of the danger of intruding upon me again. I then put every thing which had been left outside into the tent, and kept watch for an hour or two, but my visiters came no more. * * * Rising very early, I set to work with an axe to clear away the bushes from around my tent. I now discovered that the natives had been concealed behind a large tea-tree, not twenty yards from the tent. There were numerous foot-marks there, and the remains of the fire-sticks which they had brought with them, for a native rarely moves at night without fire.

He, however, at length succeeded, and gained the bight, but only to be the more disappointed, for his party and drays were wholly unable to proceed. Our traveller was now in an unenviable dilemma. To advance with his party would be certain death, and to return with them would be the signal for contempt, the result of failure, and consequent disgrace. He therefore resolved to send his companions home, reserving to himself only his overseer and three native lads. The arrival at Adelaide of a detachment of his party gave rise to many unpleasant rumours, and the explorer's determination to prosecute his discoveries was regarded as the freak of a madman. Not so, however; it was the result of cool thought and resolution, founded upon close and scientific calculation. With his train thus reduced, he pursued his onward course. Large tracts of land, on which neither fodder nor water could be found, were now traversed. Hundreds of miles were thus crossed, under a tropical midsummer sun. Nor was this their only suffering. Two of the natives who still accompanied him proved faithless, murdered his overseer, and carried off his fire-arms. His other companion, too, was a doubtful personage. Yet, even in this awkward strait, Mr. EYRE'S philosophy did not forsake him, and his presence of mind remained unimpaired. Resolved to know his companion's purposes, he resorted to the following mode of testing

AUSTRALIAN GRATITUDE.

During the day, Wylie had caught two opossums, and as these were entirely the fruit of his own labour and skill, I did not interfere in their disposal; I was curious, moreover, to see how far I could rely upon his kindness and generosity, should circumstances ever compel me to depend upon him for a share of what he might procure. At night, therefore, I sat philosophically watching him whilst he proceeded to get supper ready, as yet ignorant whether I was to partake of it or not. After selecting the largest of the two animals, he prepared and cooked it, and then put away the other where he intended to sleep. I now saw that he had not the remotest intention of giving any to me, and asked him what he intended to do with the other one? He replied, that he should be hungry in the morning, and meant to keep it until then. Upon hearing this, I told him that his arrangements were very good, and that for the future I would follow the same system also, and that each should depend upon his own exertions in procering food, hinting to him, that as he was so much more skilful than I was, and as we had so very little flour left, I should be obliged to reserve this entirely for myself, but that I hoped he would have no difficulty in procuring as much food as he required. I was then about to open the flour-bag, and take a little out for my supper, when he became alarmed at the idea of getting no more, and stopped me, offering the other opossum, and volunteering to cook it properly for me. Trifling as this little occurrence was, it read me a lesson of caution, and taught me what value was to be placed upon the assistance or kindness of my companion, should circumstances ever place me in a situation to be dependent upon him. I felt a little hurt, too, at experiencing so little consideration from one whom I had treated with the greatest kindness, and who had been clothed and fed upon my bounty for the last fifteen months.

Saint George's Sound was at length reached, being a distance of 1,000 miles from the place of departure. During a considerable part of the journey no vegetables were procurable and water was scarce—so much so, that its discovery once in three or four days by digging in the earth was deemed great luck. Some parts, on the contrary, were exceedingly fertile, and the scenery is described as being often beautiful in the extreme.

Such is an *outline* of the exploring expedition of Mr. EYRE; and that this attempt at discovery was not in itself as promising or definite in its results as was anticipated by its projectors, is perhaps to be lamented. But with this we have nothing to do: the book being the subject of our comments.

That portion of the work devoted more particularly to the natives, their manners and customs, is certainly replete with interest as great as the hair-breadth escapes, the daring and undaunted attempts in search of knowledge, the privations and the misfortunes, which are recorded in the early part of the work.

From his public situation as resident magistrate of the Murray district, Mr. EYRE's testimony as to the natives intellect and character is acceptable, and can be confidently depended upon. It is his decided opinion that the Australians are not inferior to other savage races in mental endowments, and he asserts that a desire for moral improvement is observable in them. It is evident now, we believe, that those of the aborigines who have proved refractory and have become the enemies of the settlers were made so by the aggressions of those who now complain of their conduct. Driving them from their lands, and killing their women and children,—such was the greeting with which the natives were first saluted by the white men. What but pillage and war could be expected in return? But Mr. EYRE shews that a different conduct would have had the contrary effect, and here is his testimony:—

As resident magistrate of the Murray district, I may almost say that for the last three years I have lived with the natives. My duties have frequently taken me to very great distances up the Murray or the Darling rivers, when I was generally accompanied only by a single European, or at most two, and where, if attacked, there was no possibility of my receiving any human aid. I have gone almost alone among hordes of those fierce and blood-thirsty savages, as they were then considered, and have stood singly amongst them in the remote and trackless wilds, when hundreds were congregated around, without ever receiving the least injury or insult. In my first visits to the more distant tribes I found them shy, alarmed, and suspicious; but soon learning that I had no wish to injure them, they met me with readiness and confidence. My wishes became their law; they conceded points to me that they would not have done to their own people, and on many occasions cheerfully underwent hunger, thirst, and fatigue to serve me. Former habits and prejudices in some respects gave way to the influence I acquired. Tribes that never met or heard of one another before were brought to mingle in friendly intercourse. Single individuals traversed over immense distances and through many intervening tribes, which formerly they never could have attempted to pass, and in accomplishing this the white man's name alone was the talisman that proved their safeguard and protection. During the whole of the three years I was resident at Moorunde, not a single case of serious injury or aggression ever took place on the part of the natives against the Europeans; and a district, once considered the wildest and most dangerous, was, when I left it in November 1844, looked upon as one of the most peaceable and orderly in the province.

A slight further proof that the natives have hearts, like other men, is this account of

A WELCOME PRESENT.

I persuaded one of the natives, named "Wilguldy," an intelligent, cheerful old man, to accompany us as a guide; and as an inducement, had him mounted on a horse, to the great admiration and envy of his fellows, all of whom followed us on foot, keeping up in a line with the dray through the scrub, and procuring their food as they went along,—which consisted of snakes, lizards, guanas, bandicoots, rats, wallabies, &c. &c.; and it was surprising to see the apparent ease with which, in merely walking across the country, they each procured an abundant supply for the day. In one place in the scrub, we came to a large circular mound of sand, about two feet high and several yards in circumference: this they immediately began to explore, carefully throwing away the sand with their hands from the centre, until they had worked down to a deep narrow hole, round the sides of which, and imbedded in the sand, were four fine large eggs of a delicate pink colour, and fully the size of a goose-egg. I had often seen these hills before, but did not know that they were nests, and that they contained so valuable a prize to a traveller in the desert. The eggs were presented to me by the natives; and when cooked were of a very rich and delicate flavour. The nest was that of a wild pheasant (Leipoa), a bird of the size of a hen-pheasant of England, and greatly resembling it in appearance and plumage. These birds are very cautious and shy, and run rapidly through the underwood, rarely flying unless when closely pursued. The shell of the egg is thin and fragile; and the young are hatched entirely by the heat of the sun, scratching their way out as soon as they are born; at which time they are able to shift for themselves.

Mr. EYRE, perhaps from a misunderstanding of his meaning by the natives, once or twice was likely to get into difficulties with them. But his skill in quelling any disturbance and silencing complaints without resort to harsh means saved him from many a squabble. A few more extracts from this work, on whose contents we have already feasted so largely, must suffice:—

NATIVE SENSIBILITY.

Upon meeting children after a long absence, I have seen parents "fall upon their necks, and weep" bitterly. It is a mistaken idea, as well as an unjust one, that supposes the natives to be without sensibility of feeling. It may often be repressed from pride or policy, but it will sometimes break forth uncontrolled, and reveal that the best and genuine feelings of the heart are participated in by savage in common with civilized man. The following is an instance in point:—A fine intelligent young boy was, by his father's consent, living with me at the Murray for many weeks; but upon the old man's going into Adelaide, he took his son away to accompany him. Whilst there the boy died, and for nearly a year I never saw any thing more of the father, although he occasionally had been within a few miles of my neighbourhood. One day, however, I was out shooting about three miles from home, and accidentally fell in with him. Upon seeing me he immediately burst into tears, and was unable to speak. It was the first time he had met me since his son's death, and my presence forcibly reminded him of his loss. The same circumstance occurred when he accompanied me to the house, where every thing he saw recalled the memory of his child.

Many of their habits and customs shew a want of moral sense, and such does their mode of taking and treating wives. No marriage ceremony is performed and a wife is regarded merely as a slave.

AN AUSTRALIAN MARRIAGE.

In those cases where I have witnessed the giving away of a wife, the woman was simply ordered by the nearest male relative in whose disposal she was, to take up her "rocko," the bag in which a female carries the effects of a husband, and go to the man's camp to whom she had been given. Marriage is not looked upon as any pledge of chastity; indeed no such virtue is recognized. But little real affection consequently exists between husbands and wives, and young men value a wife principally for her services as a slave; in fact, when asked why they are anxious to obtain wives, their usual reply is, that they may get wood, water, and food for them, and carry whatever property they possess. In 1842 the wife of a native in Adelaide, a girl about eighteen, was confined, and recovered slowly; before she was well the tribe removed from the locality, and the husband preferred accompanying them, and left his wife to die, instead of remaining to attend upon her and administer to her wants.

The bravery of the natives cannot be disputed, but many defects and vices depress them in the scale of humanity. Chastity is unknown, and the aged and useless of their tribes are left in the wilds to die of starvation.

We must now close these interesting volumes, not, however, without expressing our high approval both of the matter they contain and of the manner of their compilation. We rise from the perusal of them with a feeling similar to that which follows the enjoyment of a pleasant work of fiction. The poet with his vaulting imagination, and the matter-of-fact reader in his more circumscribed arena, may alike find much material for meditation. The truth developed is assuredly stranger than any freaks of fancy, and we may at once greet the author as the Mungo Park of Australia.

FICTION.

Marco Visconti. From the Italian of TOMASO GROSSI. London, 1845. Burns.

THIS, we believe, is the first appearance of *Marco Visconti* in an English dress, and wearing the tasteful fashion for which Mr. BURNS is famous; elegantly bound, exquisitely printed, it cannot fail to be welcome to all readers of fiction, and especially to those who love the pure historical romance. The author candidly avows himself a disciple of MANZONI, and an imitation of the defects as well as of the excellences of the style of this latter is vexatiously apparent. We use this term because GROSSI has no need to be an imitator; he possesses powers in himself sufficient to permit him to rely on his own resources, and strike out his own pathway.

The plot is of profound interest; the characters are well imagined and accurately defined: the dialogues are lively, though at times somewhat too much extended, and the same fault is chargeable upon the descriptions. Minuteness is not necessarily accuracy; more effect is often produced by a few bold strokes than by hours of patient stippling. The translator has performed his task with eminent success; he has rendered the Italian into pure English, without sacrificing the peculiar characteristics of the original. He has caught and reflected the manner as well as the matter of the author. The pictorial illustrations are extremely clever. Mr. BURNS is advancing the arts as well as literature by the admirable series of works he is giving to the English public. While on this topic, let us recommend to him a republication of GRIMM'S Tales, similar to those some years since illustrated by CRUIKSHANK. They would be very popular, and the series might be enlarged.

The Levite; or Scenes Two Hundred Years ago. By ELIZABETH MURPHY. In 3 vols. London, 1845. Ollivier.

A CONTEMPORARY has taken the needless trouble formally to anatomize this very worthless production; exhibiting the absurdities of its plot, the stupidity of its characters, the meanness of its dialogues, its sins against sense and grammar, to the mingled laughter and indignation of the reader. Richly as the flagellation is deserved, the object of it was unworthy of the labour bestowed upon the task. It was breaking the butterfly upon the wheel. Miss MURPHY'S pretensions to authorcraft must be apparent to any person opening her volumes at any page. The only wonder is how a person of ordinary intelligence could have seen such trash in the proof without perceiving its worthlessness even in spite of parental blindness. We notice *The Levite* but to warn our readers against the purchase of it. For the same reason we briefly notice many other miserable works, believing that thus we perform an essential service to the members of book-clubs and to the circulating libraries, who are often tempted to order books, and especially novels, on the faith of the mere advertisement, and the name of a respectable publisher appended to it. Such might be the case in the present instance but for this warning. Mr. OLLIVIER is usually choice in his productions; he has brought out some really excellent works, and upon that reliance this might be selected. But the publisher must have trusted the perusal of *The Levite* to some other counsellor than his own good judgment, or he certainly would not have given to it the sanction of his name. We would advise him to be more cautious for the future.

POETRY.

Poems. By WILLIAM ANDERSON. Edinburgh: Menzies.

IN a recent review of Mr. MACKAY'S *Legends of the Isles*, we approved of the philosophy of the author, who concluded from his highly poetic thoughts that "the reward of song is in its utterance." Mr. ANDERSON inquires of the poet,

> And why should he his notes prolong
> If no one listen to his song?

Here is evidently a misgiving as to the purpose of poetry; a misgiving of its hold as a feeling and a sensation in the writer's mind, which is made more certain by this other question,

> Why strike with truest hands the string,
> If all his strains must *die?*

At the moment Mr. ANDERSON penned these lines he had forgotten the object and the power of poetry. Inasmuch as any number of poems written by an individual is sure to contain an infusion of some kind and quality of beauty, so it becomes an impossibility that such can die. "A thing of beauty is a joy for ever," KEATS remarks, and any thing worthy the name of poetry is such a thing. We are *not* cognizant of all that lives and dies in the world of letters. Men are too apt to think that all compositions die that are forgotten, and that all live which are sung in merry, and repeated in lonely, moments as the means of increasing mirth or solacing grief. Such is not the fact. An Irishman will often sing the songs of MOORE, and a Scot those of BURNS, but the fame of MOORE and BURNS is not limited by the faithfulness of the memory or the readiness of the tongue. Scores of songs that are not known by name, and never uttered, are still imprinted in mind. The recollection knows nothing of their individual existence, but the mind, like a mirror, has caught the reflection of a light and a beauty from the past, and which lives and acts through all future life. We read a poem in childhood, and having passed from such a state of existence to passionate youth, or more sober manhood, some new and glowing circumstance surrounds us. Then after a long life of slumber, there awakens, as the violet does, slowly but beautifully, the remembrance of our having seen, or felt, or read a corresponding circumstance. Of such a scene we had read, but the name of the author and of the poem were forgotten; yet the mind had singled out its more valuable part, and treasured it without the knowledge of the possessor of that mind. It may be that our actions and thoughts are governed in no mean degree by the influence of these unknown impressions. How then shall we decide of what lives or what dies of a poet's compositions? It is highly important that a poet should have a knowledge of the value of his labours. Wanting this knowledge, he can never be a great poet. The celebrated PASCAL dwindled to a puny and ignorant critic, when he said "Poetry has no settled object," and the bard who believes that "all his strains will die," commits like PASCAL an egregious error, and works, as SISYPHUS did, against the hill.

Thus earnest we have been, not so much to give advice to Mr. ANDERSON, as to give it to those timid poets who faint under the idea of oblivion, because their verses are not "familiar in men's mouths as household words." We know that a poet writes from the feeling of the moment, and therefore we are prepared to meet with contradictions. Very unlike the lines that we quoted in the commencement of this review, are Mr. ANDERSON'S high-souled stanzas entitled

THE SUNSHINE OF POETRY.

> Think not the poet's song
> Worthless or idle; do not deem his lay
> Fantastic, that he offers by the way,
> To make it seem less long.
>
> His numbers have their use,
> Though foolish they may sound to wordling's ear;
> His own lot, if no other's, they may cheer;
> His own content produce.
>
> Does he not add a light
> To earth-born beauty, wanting it unknown?
> To bloom give balm, to melody a tone,
> Make brightness seem more bright?
>
> Does he not fill the air
> With sights, and shapes, and shadows?—make the sky
> The dwelling-place of beings, which no eye
> But his can image there?
>
> And more than all, his lay
> Awakes new feelings in the human heart,
> And visions brings that never can depart,
> When once they feel his sway.
>
> To him the power is given
> To soothe the broken heart, the careworn mind;
> And the waked soul in dreams ecstatic bind,
> And bear away to heaven:
>
> For to none else does earth
> Look with so fair a promise; yea, to none
> Speaks she with such an eloquence of tone,
> Or to such thoughts gives birth.
>
> Ah! who may analyse
> The cloistered feelings of the poet's soul,
> When Nature's impulse vibrates through the whole,
> And Truth, that never dies!
>
> Creation's beauties bring
> Renewed enjoyment, and his genius fire;
> For every sight, and every sound, inspire
> His inmost heart to sing!
>
> His birthright is to live
> In citizenship with Nature;—and to hold
> Communion with her mysteries, his old
> And high prerogative!
>
> Seeks he for wealth, denied
> By wordlings, lucre-led, of sordid mind;
> His heritage,—free, fertile, unconfined,—
> Is Nature's pastures wide.

Pants he for peace, to throw
A solace on his soul! The voice that breathes
Its music, 'mong the wild flowers' clustering wreaths,
Does to his heart bestow

A bliss that none can share,
Save him whom Nature to some far-sought wild
Has led, anointed as her chosen child,
And made her sacred care.

Where'er the breezes roam,
The mountains soar, or ocean's wave is thrown,
The poet's spirit, free as Nature's own,
Finds for itself a home!

The above we have copied from *Landscape Lyrics*, which are honoured by a second edition, and which are decidedly the best of Mr. ANDERSON'S compositions. In the midst of verdant fields Mr. ANDERSON has schooled his muse, and therefore we find it speaking with a voice like the music of singing birds and rippling streams. Nature is still fresh and green, notwithstanding all that has been written about her. The gorgeousness of *A Midsummer Night's Dream* did not exhaust, although it drew largely from, her store of description. Nature is a very CLEOPATRA, and the custom of writing cannot "stale her infinite variety." As a volume of miscellaneous poems, we have seen few for the season more creditable. Mr. ANDERSON has the qualifications of a poet. His easy versification is less a recommendation than the earnest manner in which he has set about writing poetry. Walking in meadows, or sitting in the quiet of his study, he has still kept his fancy in subserviency to discriminating thought, without reducing that fancy to a frigidity or a formality. There are two things which poets would do well to avoid. One is, the clipping of fancy until it becomes too scholastic to be natural; and the other is the allowing it sufficiency of rein to make it extravagant. The education of taste is indispensable to a poet. Some of Mr. ANDERSON'S Scottish songs are choice, and marked with genuine simplicity; and we conclude this notice with stanzas contributed to the book of Scottish songs:—

I CANNA SLEEP.

I canna sleep a wink, lassie,
When I gang to bed at night,
But still o' thee I think, lassie,
Till morning sheds its light.
I lie an' think o'thee, lassie,
And I toss frae side to side,
Like a vessel on the sea, lassie,
When stormy is the tide.

My heart is no my ain, lassie,
It winna bide wi' me,
Like a birdie it has gane, lassie,
To nestle saft wi' thee.
I canna lure it back, lassie,
Sae keep it to yoursel';
But oh! it sune will brak, lassie,
If you dinna use it well.

Where the treasure is, they say, lassie,
The spirit lingers there,
An' mine has fled away, lassie,
You needna' ask me where.
I marvel oft if rest, lassie,
On my eyes and heart wad bide,
If I thy troth possessed, lassie,
And thou wert at my side.

EDUCATION.

Notes on English Grammar, for the Use of Juvenile Pupils. London, 1845. Simpkin and Co.

THE peculiarity of these notes on English grammar is their adaptation to the capacities of childhood. The authoress has carefully avoided the use of a single hard word, unless it were an indispensable one, and then it is accompanied with a familiar explanation of its meaning. The teachings are put forth in short and simple sentences, that are readily committed to memory, and will be likely to affix themselves there. We have seldom seen a more practical little book for beginners.

POLITICS AND POLITICAL ECONOMY.

National Education; with Remarks on Education in general, &c. By Colonel J. R. JACKSON. Second edition. London, Baillière.

THERE is good sense and eloquence in this pamphlet. The author endeavours to lay down the principles that should regulate any system of national education in this country. These he bases upon a view of our mental and social condition, which is certainly too deeply shaded. That many of the faults he ascribes to Englishmen do belong to them cannot be denied; but he does not give to his countrymen sufficient credit for the virtues that are theirs also. As a contribution to the cause of education, his labours are to be applauded; still we cannot but think that there is more strong writing than truth in the following picture of the social state of our country:—

We shall merely observe, that our present social—or, more correctly, unsocial—state is marked by one predominating feature, *the love of wealth*. Money is the god of our idolatry, and in the efforts we make to become rich, we trample upon every principle human and divine. No ties of kindred or of blood are respected; conscience is stifled, and the heart steeled against every noble and generous sentiment. Selfishness is our ruling vice, and never, since the world began, was there seen such an all-absorbing egotism as in England.

Every defect with which we are so justly reproached by other nations, springs from the vile, sordid, money-getting spirit by which we are animated. Our unsociability is notorious—our pride of purse nauseating and intolerable—our arrogance offensive as it is ridiculous—our vanity ludicrous—our general bearing rude and unpolished; and, proud as we are of our country, and of the name of Englishmen, there never existed less patriotism than there now is in England.

Nor are we more free than patriotic. Our railroads, our steam conveyances, our manufactures, our commerce and agriculture may flourish, and individual wealth may be obtained;—our fleets and armies may guard us from aggression, and we may boast the privilege of printing the most scurrilous abuse of all that civilized men have been taught to venerate and respect; we may lavish millions in an ostentatious display of charity, and refuse to the government the few paltry thousands deemed necessary for the maintenance of its proper dignity; we may boast of our modern Babylon and of all the conveniences which calculating interest has devised for the current business of life; we may call ourselves independent, and with all this be, as we are, the most discontented, unhappy slaves that ever walked the earth. Slaves we are to prejudice and money. To owe no man a farthing is, in England, to be independent; to have the command of a large capital is to be little less than a god; to be poor or unfortunate is to be vile; to over-reach is to be clever; to go to church is to be religious; to know Latin and Greek is to be learned; to be hard-hearted is to be prudent; to be morose, suspicious, and unsocial is to keep up one's dignity. In a word, the social state of our country exhibits the strange anomaly of a people having retrograded from real civilization, just as they have made progress in the mechanical arts. That there are many admirable points in our national character cannot be denied, but they are counteracted by the spirit of egotism which pervades all classes from the highest to the lowest. To correct this, therefore, should be the main object of national education.

The Isle of Wight System of Roads and System of Guardians of the Poor not a Model but a Warning to the Legislature, &c. Southampton: Fletcher and Co.

A PAMPHLET which appears to have grown out of some local differences to which an importance has been attempted to be given by converting them into a national question. In the neighbourhood it will doubtless be read with interest and profit, but it will scarcely prove attractive to distant readers, at least it has not to us.

MISCELLANEOUS.

Priests, Women, and Families. By J. MICHELET. Translated by G. COCKS. London, 1845. Longman and Co.

THE reader of this little volume will not be surprised to learn that it has caused a great sensation in France, and indeed in all Catholic countries. In many ways it is a remarkable production. The author is an historian deservedly holding a high station in the literature of his native land. It is a calm appeal to the reason, nay, to the experience of his fellow-men, and in so

far widely differing from the tone of ribaldry or abuse in which such topics are usually treated by the antagonists of existing ecclesiastical institutions. It is marked by sincerity and earnestness everywhere, and at times by a strain of nervous eloquence that carries with it the assent if not the conviction of his audience. A question of vast import to the community, one that comes home to the heart of every man, and upon which even those who dare to think have not dared to utter their thoughts, has been handled with the calm dignity of the philosopher, uttering that which he believes to be a great truth, careless of consequences and fearless of reproach. It will surprise no one to learn, that such a book on such a subject has been eagerly read in France; that it has rapidly passed through several editions, and that it has stirred up the active hostility of those whose practices it assails; that it has been prohibited in other Catholic countries where governments have more power and the people less; but that, in spite of precautions, it is smuggled about and read with anxiety and applause, and that a translation into English has been well executed by Mr. Cocks, in reliance upon its popularity upon the continent helping it to a reputation here.

The mischief against which M. Michelet has thus lifted up his voice needs not to be reprobated among us. It was banished at the Reformation, and it has never yet succeeded in regaining so much as a temporary footing upon English ground. We suspect that something more than accident has produced this marked difference between the influence of priestcraft in this country and in France. We think it will be found to be due to the different characters of the people. It is worthy of remark, as an apparent anomaly, that in France, where infidelity so prevails that it has been not unjustly termed "the religion of the country," priestcraft flourishes in a guise so dangerous, that such a protest against it as this has been elicited from one of the ablest of her historians; while in England, whose people are so religious that it is a characteristic of the country, priestcraft has almost entirely failed to extend its empire. The cause, doubtless, is contained in the fact. It is because the men of France have no religion at all that her women are abandoned to the guidance of the priests; and it is because the men of England share with her women the religious spirit, that their influence takes its natural course, a rational piety is produced by the mingling of the enthusiasm of the one sex with the sober sense of the other, and in minds thus preoccupied priestcraft cannot find room to employ its spells.

This it would appear is M. Michelet's opinion, for he throws out a hint to that effect in the latter part of his essay. And with these preliminary remarks, let us follow him through his argument, and we will do so at somewhat more length than is our wont, the interest and importance of the subject being our excuse with our readers.

The essay is in three parts. The first is historical, and treats of "Direction" in the seventeenth century, that being the name by which he designates the office claimed by the clergy, and which had its origin with the Jesuits. In the second part he considers the present state of this office of "Direction," and in the third, which is entitled "Of the Family," he exhibits the effects of that influence upon the happiness and well-being of families, and thence upon society.

In his preface M. Michelet thus states the evil into which he was about to institute an inquiry.

> The question is about our family;—that sacred asylum in which we all desire to seek the repose of the heart, when our endeavours have proved fruitless, and our illusions are no more. We return exhausted to the domestic hearth; but do we find there the repose we sigh for?
>
> Let us not dissemble, but acknowledge to ourselves how things are: there is in our family a sad difference of sentiment, and the most serious of all.
>
> We may speak to our mothers, wives, and daughters, on any of the subjects which form the topics of our conversation with indifferent persons, such as business or the news of the day, but never on subjects that affect the heart and moral life, such as eternity, religion, the soul, and God.
>
> Choose, for instance, the moment when we naturally feel disposed to meditate with our family in common thought, some quiet evening at the family-table; venture even there, in your own house, at your own fireside, to say one word about these things; your mother sadly shakes her head, your wife contradicts you; your daughter, by her very silence, shews her disapprobation. They are on one side of the table, and you on the other—and alone.
>
> One would think that in the midst of them, and opposite you, was seated an invisible personage to contradict *whatever you may say*.
>
> But how can we be astonished at this state of our family? Our wives and daughters are brought up and governed by *our enemies!*

This enemy, he asserts, is Jesuitism, which he deems to be more dangerous now than at any former period of its history. He proceeds in this strain:—

> That which constitutes the gravity of this age, [illegible] may even say its holiness, is conscientious work, which promotes attentively the common work of humanity, and facilitates at its own expense the work of the future. Our forefathers dreamed much, and disputed much. But we are labourers, and this is the reason why our furrow has been blessed. The soil which the middle ages left us still covered with brambles, has produced by our efforts so plentiful a harvest, that it already envelopes, and will presently hide the old inanimate post that expected to stop the plough.
>
> And it is because we are workmen, and return home fatigued every evening, that we need more than others the repose of the heart. Our board and fireside must again become our own; we must no longer find, instead of repose, at home, the old dispute which has been settled by science and the world; nor hear from our wife or child, on our pillow, a lesson learnt by heart, and the words of another man.
>
> Women follow willingly the strong. How comes it, then, that in this case they have followed the weak?
>
> It must be that there is an art which gives strength to the weak. This dark art, which consists in surprising, fascinating, lulling, and annihilating the will, has been investigated by me in this volume. The seventeenth century had the theory of it, and ours continues the practice.

Full of interest and learning as is his review of "Direction" in the seventeenth century, we must reluctantly pass it by with a single extract, that we may come to the more immediately important portion of this volume. The passage is a brilliant sketch of the character of that century:—

> I cannot help pausing a moment to admire how Equivocation triumphed throughout this age. On whatever side I turn my eyes, I find it everywhere, both in things and persons. It sits upon the throne in the person of Madame de Maintenon. Is this person a queen who is seated by the king's side, and before whom princesses are standing—or is she not? The equivocal is also near the throne in the person of the humble Père La Chaise, the real king of the clergy of France, who from a garret at Versailles distributes the benefices. And do our loyal Gallicans and the scrupulous Jansenists abstain from the equivocal? Obedient, yet rebellious, preparing war though kneeling, they kiss the foot of the pope, but would like to tie his hands; they spoil the best reasons by their *distinguo* and evasions. Indeed when I put in opposition to the sixteenth and eighteenth centuries this Janus of the seventeenth, the two others appear to me as honest centuries, or at the very least, sincere in good and in evil. But what falsehood and ugliness is concealed under the majestic harmony of the seventeenth! Every thing is softened and shaded in the form, but the bottom is often the worse for it. Instead of the local inquisitions, you have the police of the Jesuits, armed with the king's authority. In place of a Saint Bartholomew, you have the monitor of a religious revolution, called the Revocation of the Edict of Nantz, that cruel comedy of forced conversion; then, the unheard-of tragedy, of a proscription organised by all the bureaucratical and military means of a modern government! —Bossuet sings the triumph; and deceit, lying, and misery reign everywhere! Deceit in politics: local life destroyed without creating any central life. Deceit in morals: this polished court, this world of polite people receives an unexpected lesson from the *chamber of poisons*: the king suppresses the trial, fearing to find every one guilty!—And can devotion be real with such morals?—If you reproach the sixteenth century with its violent fanaticism, if the eighteenth appear to you cynical and devoid of human respect, confess at least also that lying, deceit, and hypocrisy are the predominant features of the seventeenth. That great historian Molière has painted the portrait of this century, and found its name—Tartuffe.

M. Michelet deems the source of the mischief to be in the celibacy of the priesthood. He describes its effects thus eloquently:—

> Why torment a blind man by speaking to him of colours? He answers vaguely; occasionally he may guess pretty nearly; but how can it be helped?—he cannot see.
>
> And do not think that the feelings of the heart can be guessed

at more easily. A man without wife or child might study the mysterious working of a family in books and the world for ten thousand years without ever knowing one word about them. Look at these men: it is neither time, opportunity, nor facility that they lack to acquire knowledge; they pass their lives with women who tell them more than they tell their husbands; they know, and yet they are ignorant; they know all a woman's acts and thoughts, but they are ignorant precisely of what is the best and most intimate part of her character, and the very essence of her being. They hardly understand her as a lover (of God or man), still less as a wife, and not at all as a mother. Nothing is more painful than to see them sitting down awkwardly by the side of a woman to caress her child; their manner towards it is that of flatterers or courtiers—anything but that of a father.

What I pity the most in a man condemned to celibacy is, not only the privation of the sweetest joys of the heart, but that a thousand objects of the natural and moral world are, and ever will be, a dead letter to him. Many have thought, by living apart, to dedicate their lives to science; but the reverse is the case. In such a morose and crippled life, science is never fathomed; it may be varied, and superficially immense; but it escapes—for it will not reside there. Celibacy gives a restless activity to researches, intrigues, and business—a sort of huntsman's eagerness—a sharpness in the subtilities of school-divinity and disputation: this is at least the effect it had in its prime. If it makes the senses keen and liable to temptation, certainly it does not soften the heart. Our terrorists in the fifteenth and sixteenth centuries were monks. Monastic prisons were always the most cruel. A life systematically negative—a life without its functions—developes in man instincts that are hostile to life; he who suffers is willing to make others suffer. The harmonious and fertile parts of our nature, which on the one hand incline to goodness, and on the other to genius and high invention, can hardly ever withstand this partial suicide.

The motive to the exercise of this influence being thus assigned, he examines *the means* by which the desired control is sought to be established. Among the most obvious are the rites of the Church, so well calculated to attract the enthusiastic and the imaginative.

What an immense place is this church, and what an immense host must inhabit this wonderful dwelling! Optical delusion adds still more to the effect. Every proportion changes. The eye is deceived and deceives itself, at the same time, with these sublime lights and deepening shades, all calculated to increase the illusion. The man whom in the street you judged, by his surly look, to be a village schoolmaster, is here a prophet. He is transformed by this majestic framework; his heaviness becomes strength and majesty; his voice has formidable echoes. Women and children tremble and are afraid. * * * Do you see that solemn figure, adorned with all the gold and purple of his pontifical dress, ascending, with the thought, the prayer of a multitude of ten thousand men, the triumphal steps in the choir of St. Denis? Do you see him still, above all that kneeling mass, hovering as high as the vaulted roofs, his head reaching the capitals, and lost among the winged heads of the angels, whence he hurls his thunder? Well, it is the same man, this terrible archangel himself, who presently descends for her, and now, mild and gentle, goes yonder into that dark chapel, to listen to her in the languid hours of the afternoon! Delightful hour of tumultuous, but tender sensations! (Why does the heart palpitate so strongly here?) How dark the church becomes! Yet it is not late. The great rose-window over the portal glitters with the setting sun. But it is quite another thing in the choir; dark shadows envelope it, and beyond is obscurity. One thing astounds and almost frightens us, however far we may be, which is the mysterious old painted glass, at the farthest end of the church, on which the design is no longer distinguishable, twinkling in the shade, like an illegible magic scroll of unknown characters. The chapel is not less dark on that account; you can no longer discern the ornaments and delicate moulding entwined in the vaulted roof; the shadow deepening blends and confounds the outlines. But, as if this chapel were not dark enough, it contains, in a retired corner, a narrow recess of dark oak, where that man, all emotion, and that trembling woman, so close to each other, are whispering together about the love of God.

The confessional is another source of unbounded influence; and scarcely less is the habit of incessantly communicating with the priest, not merely as a teacher of religion, but as a director of the whole mind.

Stand at this window every day, at a certain hour in the afternoon. You will see a pale man pass down the street, with his eyes cast on the ground, and always following the same line of pavement next the houses. Where he set his foot yesterday, there he does to-day, and there he will to-morrow; he would wear out the pavement if it was never renewed. And by this same street he goes to the same house, ascends to the same story, and in the same cabinet speaks to the same person. He speaks of the same things, and his manner seems the same. The person who listens to him sees no difference between yesterday and to-day: gentle uniformity, as serene as an infant's sleep, whose breathing raises its chest at equal intervals with the same soft sounds.

You think that nothing changes in this monotonous equality; that all these days are the same. You are mistaken; you have *perceived* nothing, yet every day there is a change, slight, it is true, and imperceptible, which the person, himself changed by little and little, does not remark.

It is like a dream in a bark. What distance have you come whilst you were dreaming? Who can tell? Thus you go on, without seeming to move—still, and yet rapidly. Once out of the river, or canal, you soon find yourself at sea; the uniform immensity in which you now are will inform you still less of the distance you go. Time and place are equally uncertain; no sure point to occupy attention; and attention itself is gone. The reverie is profound, and becomes more and more so—an ocean of dreams upon the smooth ocean of waters.

A pleasant state, in which every thing becomes insensible, even gentleness itself. Is it death, or is it life? To distinguish, we require attention, and we should awake from our dream.—No, let it go on, whatever it may be that carried me along with it, whether it lead me to life or death.

Alas! 'tis habit! that gently-sloping, formidable abyss, into which we slide so easily! we may say every thing that is bad of it, and also every thing that is good, and it will be always true.

But spiritual despotism is not always the limit of the dominion. If it were, then has human nature ceased to be itself. "Is spiritual dominion complete," he exclaims, "if it does not comprehend the other? Then comes the hideous fallacy—"If the inferior part be without sin, the superior grows proud, and pride is the greatest sin; consequently the flesh ought to sin, in order that the soul may remain humble; sin, producing humility, becomes a ladder to ascend to heaven."

Then comes the question, why do the men, who know better, who feel the wrong of the system, submit so patiently to its existence? There are six hundred and twenty thousand girls in nunneries in France, being trained passive instruments of this system; they, the mothers of the next generation. How is this?

The mother has already succeeded as far as concerns the daughter; by her persevering importunity, she has, at length, overcome the father's repugnance. A man who, every evening, after the troubles of business and the warfare of the world, finds strife also at home, may certainly resist for a time, but he must necessarily give in at last; or he will be allowed neither truce, cessation, rest, nor refuge. His own house becomes uninhabitable. His wife, having nothing to expect at the confessional but harsh treatment as long as she does not succeed, will wage against him every day and every hour the war they make against her; a more gentle one, perhaps; politely bitter, implacable, and obstinate.

She grumbles at the fireside, is low-spirited at table, and never opens her mouth either to speak or eat; then, at bed-time, the inevitable repetition of the lesson she has learned, even on the pillow. The same sound of the same bell, for ever and ever: who could withstand it? what is to be done? Give in, or become mad!

The husband flatters himself with the belief that time and age will destroy the influence of early impressions, so he abandons the education of his daughter to those who, he knows, will make an ill use of their power. Vain hope!

What she heard the first time in that grand church, under those resounding roofs, and the words, pronounced with a solemn voice by that man in black, which then frightened her so, being addressed to *herself*;—ah! be not afraid of her ever forgetting them. But even if she could forget them, she would be reminded of them every week: woman is all her life at school, finding in the confessional her school-bench, her schoolmaster, the only man she fears, and the only one, as we have said, who, in the present state of our manners, can threaten a woman.

What an advantage has he in being able to take her quite young, in the convent where they have placed her, to be the first to take in hand her young soul, and to be the first to exercise upon her the earliest severity, and also the earliest indulgence, which is so akin to affectionate tenderness, to be the father and friend of a child taken so soon from her mother's arms. The confidant of her first thoughts will long be associated with her private reveries. He has had an especial and singular privilege which the husband may envy: What?—why, the virginity of the soul, and the first-fruits of the will.

This is the man of whom, young bachelors, you must ask the girl in marriage, before you speak to her parents.

M. MICHELET'S remedy is, that the husband should avail himself of the ascendancy he is sure to obtain at the beginning of wedded life to link the mind of his wife to his own permanently, by admitting her to a more equal participation of his thoughts and mental existence.

Marriage gives the husband a single and momentary opportunity to become in reality the master of his wife, to withdraw her from the influence of another, and make her his own for ever. Does he profit by it? Very rarely. He ought, in the very beginning, when he has much influence over her, to let her participate in the activity of his mind, his business, and ideas, initiate her in his projects, and create an activity in her by means of his own.

To wish and think as he does, both acting with him and suffering with him—this is marriage. The worst that may happen is not that she may suffer, but that she may languish and pine away, living apart, and like a widow. How can we wonder, then, if her affection for him be lessened? Ah, if, in the beginning, he had made her his own, by making her share his ambition, troubles, and uneasiness: if they had watched whole nights together, and been troubled with the same thoughts, he would have retained her affections. Attachment may be strengthened by grief itself, and mutual sufferings may maintain mutual love.

He confesses that this sympathy is but too rare, and, wanting that of her natural ally, woman will seek it elsewhere, and first where it will be most readily found, and where without reproach she may look for it and receive it, to her spiritual pastor. The fault is not that of the Jesuits alone. "No," he says, "we ought rather to accuse ourselves."

If dead men return in broad daylight, if these Gothic phantoms haunt our streets at noonday, it is because the living have let the spirit of life grow weak within them. How is it that these men reappear among us, after having been buried by history with all funeral rites, and laid by the side of other ancient orders? The very sight of them is a solemn token, and a serious warning. * * * * Modern strength appears in the powerful liberty with which you go on disengaging the reality from the forms, and the spirit from the dead letter. But why do you not reveal yourself to the companion of your life, in that which is for you your life itself? She passes away days and years by your side, without seeing or knowing the grandeur that is within you. If she saw you walk free, strong, and prosperous in action and in science, she would not remain chained down to material idolatry, and bound to the sterile letter; she would rise to a faith far more free and pure, and you would be as one in faith. She would preserve for you this common treasure of religious life, where you might seek for comfort when your mind is languid; and when your various toils, studies, and business have weakened the vital unity within you, she would bring back your thoughts and life to God, the true, the only unity.

I shall not attempt to crowd a large volume into a small preface. I shall only add one word, which at once expresses and completes my thought.

Man ought to nourish woman. He ought to feed spiritually (and materially if he can) her who nourishes him with her love, her milk, and her very life.

Our adversaries give women bad food, but we give them none at all.

To the women of the richer class, those who seem to be so gently protected by their family, those brilliant ones whom people suppose so happy, to these we give no spiritual food.

And to the women of the poorer class, solitary, industrious, and destitute, who try hard to gain their bread, we do not even give our assistance to help them to find their material food.

These women, who are or will be mothers, are left by us to fast (either in soul or in body), and we are punished especially by the generation that issues from them for our neglecting to give them the staff of life.

I like to believe that good-will generally is not wanting, only time and attention. People live in a hurry, and can hardly be said to live; they follow with a huntsman's eagerness this or that petty object, and neglect what is important.

You man of business or study, who are so energetic and indefatigable, you have no time, say you, to associate your wife with your daily progress; you leave her to her *ennui*, idle conversations, empty sermons, and silly books; so that falling below herself, less than woman, even less than a child, she will have neither moral action, influence, nor maternal authority over her own offspring. Well! you will have the time, as old age advances, to try in vain to do all over again what is not done twice, to follow in the steps of a son, who, from college to the schools, and from thence into the world, hardly knows his family; and who, if he travels a little, and meets you on his return, will ask you your name. The mother alone could have made you a son, but to do so you ought to have made her what a woman ought to be, strengthened her with your sentiments and ideas, and nourished her with your life.

The isolation of woman from the pursuits and interests of the other sex is again strongly animadverted upon in another place.

We cannot repeat it too often, for nothing is more true—woman is alone. She is alone, if she has a husband; she is also alone, even with a son. Once at college, she sees him only by favour, and often at long intervals. When he leaves college, other prisons await the youth, and other exiles. A brilliant evening party is given:—enter those well-lighted rooms, you see the women sitting in long rows, well dressed, and entirely alone. Go, about four o'clock, to the Champs-Elysées, and there you will see again the same women, sad and spiritless, on their way to the Bois de Bologne, each in her own carriage, and alone. Others, at the further end, are from their shops; but they are also alone. There is nothing in the life of women, who have the misfortune to have nothing to do, that may not be explained by one single word—loneliness, *ennui*. *Ennui*, which is supposed to be a languishing and negative disposition of the mind, is, for a nervous woman, a positive evil impossible to support. It grasps its prey, and gnaws it to the core: whoever suspends the torment of a moment is considered a saviour. *Ennui* makes them receive female friends, whom they know to be inquisitive, envious, slandering enemies. *Ennui* makes them endure novels in newspapers, which are suddenly cut short at the moment of the greatest interest. *Ennui* carries them to concerts, where they find a mixture of every kind of music, and where the diversity of styles is a fatigue for the ear. *Ennui* drags them to a sermon, which thousands listen to, but which not one of them could bear to read. Nay, evening the sickening, half-worldly, and half-devout productions, with which the neo-catholics inundate the Faubourg St. Germain, will find readers among these poor women, the martyrs of *ennui*. Such delicate and sickly forms can support a nauseous dose of musk and incense, which would turn the stomach of any one in health.

More especially does he plead the peculiar fitness of his own countrywomen for the companionship he demands for them. There is a great deal of truth in the following, which may be advantageously studied here as well as in France:—

Frenchwomen are superior to those of England or Germany, and, indeed, to any other women, in being able not only to assist man, but to become his companion, his friend, his partner, his *alter ego*. None but the commercial classes, generally speaking, are wise enough to profit by this. See, in the shop-keeping quarter, in the dark storehouses of the *Rue des Lombardes*, or the *Rue del a Verrerie*, the young wife, often born of rich parents, who nevertheless remains there, in that little glazed counting-house, keeping the books, registering whatever is brought in or taken out, and directing the clerks and porters. With such a partner, the house will prosper. The household is improved by it. The husband and wife separated by their occupations during the day, are the better pleased to unite together in common thought. Without being able to participate so directly in the husband's activity, the wife might also, in other professions, be able to associate with him in his business, or at least in his ideas. What makes this difficult (I have not attempted to disguise it), is the spirit of speciality which goes on increasing in our different professions, as well as in our sciences, and driving us into minute details; whereas woman, being less persevering, and, moreover, less called upon to apply herself with precision, is confined to a knowledge of generalities. The man who will seriously initiate a woman in his own life, can do it safely and completely, if she love him, but he would require to possess both patience and kindness. They have come together, as it were, from the two opposite poles, and prepared by a totally different education. Since it is so, how can you expect that your young wife, intelligent as she is, should understand you at once? If she do not understand you, it is too frequently your own fault: this almost always proceeds from the abstract, dry, and scholastic forms which you have imbibed from your education. She remaining in the sphere of common sense and sentiment, understands nothing of your formulas, and seldom, very seldom indeed, do you know how to translate them into plain language. This requires address, will, and feeling. You would want, sir, let me tell you, both more sense and more love. At the first word she does not understand, the husband loses his patience. "She is incapable, she is too frivolous." He leaves her, and all is over. But that day he loses much. If he had persevered, he would gradually have led her along with him; she would have lived his life, and their marriage would have been real. Ah! what a companion he has lost; how sure a confidant! and how zealous an ally! In this person, who, when left to herself

seems to him too trifling, he would have found, in moments of difficulty, a ray of inspiration and often useful advice.

M. MICHELET entertains an exalted notion of the power of education, but it is scarcely exaggerated.

Education! a mere trifle, a weak power, no doubt, which the father may, without danger, allow his enemies to take possession of! To possess the mind, with all the advantage of the first possessor! To write in this book of blank paper whatever they will! and to write what will last for ever! And, remember well, it will be in vain for you to write upon it hereafter; what has once been indited cannot be erased. It is the mystery of her young memory to be as weak in receiving impressions, as it is strong in keeping them. The early tracing that seemed to be effaced at twenty re-appears at forty or sixty. It is the last and the clearest, perhaps, that old age will retain. What! will not reading, and the press, the great overruling power of our own days, give a stronger education than the former one? Do not rely on this. The influence of the press partly annuls itself; it has a thousand voices to speak, and a thousand others to answer and destroy what it has said. Education does not make so much noise; it does not talk; it reigns. Look, in that little class, without witness, control, or contradiction, a man is speaking; he is master, an absolute master, invested with the most ample power to punish and chastise. His voice, not his hand, has the power of a rod; the little, trembling, and believing creature, who has just left her mother's apron, receives his weighty words, which enter the soft tablet of her memory, and stick into it, like so many nails of iron.

And there is eloquence and earnestness in his pleading for a prolonging of the period of maternal teaching. Most cordially do we concur with him in this energetic appeal.

When we reflect that ordinary life is so short, and that so many die very young, we hesitate to abridge this first, this best period of life, when the child, free under its mother's protection, lives in grace, and not in the law. But if it be true, as I think, that this time, which people believe lost, is precisely the only precious and irreparable period, in which among childish games sacred *genius* tries its first flight, the season when, becoming fledged, the young eagle tries to fly—ah! pray do not shorten it. Do not banish the youth from the maternal paradise, before his time; give him one day more; to-morrow, all well and good; God knows it will be soon enough! To-morrow, he will bend to his work and crawl along the furrow. But to-day, leave him there, let him gain full strength and life, and breathe with an open heart the vital air of liberty. An education which is too zealous and restless, and which exacts too much, is dangerous for children. We are ever increasing the mass of study and science, and such exterior acquisitions; but the interior suffers for it. This one is nothing but Latin, the next shines in mathematics; but where is the *man*, I pray you? And yet it was the *man*, precisely, that was loved and taken care of by the mother. It was the man she respected in the wanderings of the child. She seemed to depress her own influence, and even her superintendence, in order that he might act and be both free and strong; but, at the same time, she ever surrounded him as if with an invisible embrace.

We conclude with a passage which does equal honour to the heart and the head of the writer. It is a delightful tribute to a mother's love:—

Whilst writing all this, I have had in my mind a woman, whose strong and serious mind would not have failed to support me in these contentions; I lost her thirty years ago (I was a child then); nevertheless, ever living in my memory, she follows me from age to age.

She suffered with me in my poverty, and was not allowed to share in my better fortune. When young, I made her sad, and now I cannot console her. I know not even where her bones are. I was too poor then to buy earth to bury her.

And yet I owe her much. I feel deeply that I am the son of woman. Every instant, in my ideas and words (not to mention my features and gestures), I find again my mother and myself. It is my mother's blood that gives me the sympathy I feel for bygone ages, and the tender remembrance of all those who are now no more.

What return, then, could I, who am myself advancing towards old age, make her for the many things I owe her? One, for which she would have thanked me—this protest in favour of women and mothers, and I place it at the head of a book believed by some to be a work of controversy. They are wrong. The longer it lives, if it should live, the plainer will it be seen, that, in spite of polemical emotion, it was a work of history, a work of faith, of truth, and of sincerity;—on what, then, could I have set my heart more?

We now close this volume, with profound respect for the intellect that inspired, and the courage that prompted its publication. Many of its truths have a wider application than the locality to which they were immediately addressed. The evil here exposed is not confined to Catholic countries; it exists, in a less formidable shape, even among those who call themselves Protestants. The exercise of influence over women is the form in which priestcraft, everywhere, and at all times, has chosen to pursue its path to power. It is something gained to know the tactics of an assailant, for we are not so likely to be taken by surprise. Forewarned is forearmed; and for the service he has done, M. MICHELET will deserve, and doubtless will receive, the thanks of his fellow-men at home and abroad.

Four Years' Service in the East. By Capt. J. M. B. NEILL, 40th Regiment. 8vo. London, 1845. Bentley.

THE greater portion of Captain NEILL'S narrative has been anticipated by many previous publications. His recollections are of the war in Affghanistan, and he describes again the sad scenes so often pictured to our imaginations; but inasmuch as he wants the genius that can give an air of freshness and originality to the most familiar objects, his book is liable to the imputation of tediousness that attaches proverbially to a twice-told tale. Captain NEILL served under General NOTT, in the campaign that succeeded the destruction of the army of ELPHINSTONE. Starting from Deesa, he follows the march to the Indus, and by that highway to Kurrachee. While there a portion of the regiment was commanded to Shikapoor, to suppress some disturbances among the Belooches; thence they proceeded to Candahar, and joined the main body of the army by whom the honour of our arms was restored in Affghanistan.

Captain NEILL writes in a plain, straightforward, soldierly fashion, without any pretensions to elegance or eloquence. He has not the art of book-making. He says his say in the fewest words; but there is a good sense and shrewdness in his remarks which commend them to the man of business, as being more to be relied upon than the laboured narratives of paragraph-makers. As a book for reading it is not so agreeable as it might have been; but as a contribution to our military history it will no doubt be held in esteem by future historians. A few extracts will exhibit both the faults and merits we have noted, and we will seek for such as are likely to be the least familiar to our readers.

His picture of the Khourd Cabul Pass has a simplicity of horror almost amounting to sublimity.

Entered the Khourd Cabul Pass; the road very narrow, but better for marching than the Bolan, being less stony; as in the latter, however, there is a stream, which, in its serpentine course, crosses and re-crosses the road, and which we had to ford upwards of twenty times. On either side of the road, steep, nay, almost perpendicular hills tower to an immense height; in many places the path is overhung by rocks and cliffs, which it would be perfectly impossible to crown from the interior of the pass; and, if well defended, it would require an army not only strong in courage, but in numbers also, to carry it. Even now the cold was intense, the water forming in icicles on the wheels of the guns as they passed through the stream; judge, then, what must have been the sufferings of our famished, disheartened, and devoted troops, who traversed it in the month of January, when the ground was covered with snow, and they were exposed to the heavy and too unerring fire of the Affghans! The path was literally strewed with the horrid remains of men—skeletons they could not be called, for in many the features were so hideously perfect, that little difficulty was experienced in recognising, in this sad and changed state, those who had been known in life. Mingling with the corpses of our comrades were those of camels, horses, &c. In some places the slain lay in heaps, probably marking the place where they had made a gallant but ineffectual stand; in others they were to be seen crowded in the caves and crevices whither they had fled from one sure death to meet another, even more dreadful and lingering. Nor were the evidences of death confined to those whose loss we were here to avenge. Several corpses of the straggling followers of the divisions in front, who had been cut up and plundered, were lying about. All around was horror—the very birds of prey seemed scared by such a sickening, such a revolting spectacle!

> For, oh! to see the unburied heaps
> On which the lovely moonlight sleeps—
> The very vultures turn away,
> And sicken at so foul a prey!

The painful feelings connected with our march through this appalling scene of death were augmented by its being impossible

to avoid driving the guns over the remains of our slaughtered comrades: the wheels crushed the bones of those unburied masses, and the harsh, agonizing sound struck mournfully and direfully on the heart. There was no sun to impart a ray of cheerfulness to the bold and beautiful mountain-scenery around—nothing to dispel the gloom and horror of our associations, and lead the mind to happier subjects for contemplation than the sad, affecting, and humiliating scene through which, in this "valley of the shadow of death," we had passed, and from which at length, in sorrow and in heaviness, we emerged.

And personal perils added to the terrors of the spot.

All the baggage and the old rear-guard having cleared the pass, our companies were withdrawn, and we also retraced our steps. I was ordered to move in advance with two companies; following me were the two guns, and bringing up the rear were the remaining companies of the 40th and the two of the 41st. During our passage through the narrow defile, a continued fire from matchlocks was kept up on us; occasionally the bullets whistled unpleasantly near, but, thanks to the intense darkness of the night, the Affghans could not take good aim. They were completely out of our sight, and it would have been useless attempting to fire at them. One young soldier, notwithstanding the caution to reserve his fire, thinking he saw something moving along the top of one of the ridges, could not withstand the temptation to try and dislodge it: the flash from his musket giving the enemy a correct idea of where we were, brought down upon us a volley, but, strange to relate, only one man was hit. After running the gauntlet between the high rocks for about a mile and a half, we cleared the pass with only one man wounded, although several hundred rounds had been discharged at us: so much for the Affghans as marksmen.

Ten days afterwards we find the following record:—

24th. Sultanpoor, nine miles, road good over a sandy plain; the enemy still continuing to follow us, several of them were cut up to-day, without doing much injury to us. Poor Ravenscroft, 3rd cavalry, died this morning of the wounds he had received in the cavalry affair on the 28th of August last. At night all his old friends attended to pay the last tribute of respect to his memory. To guard against the remains of our comrades being disinterred, it was necessary to bury them with the greatest secrecy, the ground being afterwards carefully levelled, and generally a fire lighted on it, to mark, as it were, the spot where some of the soldiers had been cooking. Ravenscroft's grave was dug inside the mess-tent of his regiment. Here we all assembled; a few wax candles glimmered faintly round the grave, and at ten P.M. the solemn service of our church was read over his body, which was lowered by some of his troopers; the grave was then filled up and made even with the rest of the ground. In the morning the tent was struck, and a fire was kindled on another of those graves of the brave o'er which "not a soldier discharged his farewell shot."

In a different strain is the description of the attack on Candahar.

Early on the 10th, large bodies of the enemy began to assemble near Candahar, occupying the gardens in the vicinity, and the cantonments also; during the day their numbers increased, and it was evident that their object was to attack the city. All the gates were shut, and every thing was deemed secure. After sunset, a villager, professing to have come from a great distance, but who must have been well aware that the regulations of the garrison allowed no one to enter after that hour, came to the Herat gate, which was commanded by Lieutenant Cooke, Second Regiment Bengal N.I., and requested permission to take in a donkey-load of faggots he had with him; this of course was refused; upon which the villager said he would leave the wood till the next morning; and, throwing it down against the gate, he departed. Nothing was then suspected; but, about eight o'clock, a party of the enemy stole up unobserved, and, pouring oil and ghee over the faggots, set them on fire; and the flame quickly communicated itself to the gate, which burned like tinder.

The stratagem having proved successful, a most spirited attack was made on the gate; but the measures of the Commissary-General were as admirably devised; seeing the danger, he threw open the stores, and, procuring all the assistance he could, succeeded just in time in forming a barricade on the gateway of the bags of flour taken from thence. The enemy rushed boldly on; the barricade was gained, but they were driven back: again and again they renewed the assault; but the destructive fire kept up by the gallant defenders at length prevailed, and the Affghans retired discomfited over a rampart formed by the bodies of their own countrymen.

It is curious to observe how very often the success or defeat of our plans depends on events in themselves most insignificant—how often the slightest accidental circumstance operates momentously on our destinies. To use a common phrase, our possession of Candahar on the night of the 10th hung by a thread.

The enemy's plan was to have fired all the gates at once, and made a simultaneous attack on them; and that this was not carried into effect was certainly the result of a most fortunate accident.

He thus indignantly vindicates the army from the charges of cruelty preferred by so many of our home critics. It is at least gratifying to be assured that there were no just grounds for such an imputation.

Scarcely (says Captain N.) had we cleared the passes when we were assailed by accounts, in the columns of part of the Indian press, of the horrible excesses we had committed. Enormities unheard or unthought of were most unblushingly laid to our door. Men unprincipled enough had been found to detail the perpetration of crimes which they well knew had never disgraced our army;—individuals there were fiendish enough to seem "loosed out of hell to speak of horrors," which had their existence only in their own black and malignant hearts. Such was the return for our services from a contemptible section of our countrymen!—such the gratitude of a tribe of hirelings, who, perched aloft on their tripod stools, dared to vilify the members and impugn the actions of an army, the meanest spirit in which soared immeasurably superior above their traducers! Well might General Nott with difficulty curb his indignation when he was required to answer queries called forth by the propagation of falsehoods so base and dastardly. "I am desired to state," writes this illustrious man, "whether unresisting individuals were destroyed in cold blood for mere vengeance? and whether women were either violated, or murdered for their ornaments?—I will endeavour to suppress my scorn and indignation while I shortly reply to this charge, or suspicion, or whatever it may be called by the persons from whom it emanated." Our armies had marched to Cabul through scenes well calculated to excite the most revengeful and bitter passions. On the one hand, the walls of the citadel of Ghuznee were written over with accounts of the indignities and ill-treatment our captive countrymen there experienced; on the other side, General Pollock advanced through passes where almost every step spoke of treachery—where the blood of our yet tombless dead was still crying aloud for vengeance. Yet forbearance and humanity undeviatingly marked our progress. The honour due for the practice of that difficult forbearance—the brightest jewel in the crown of glory which our soldiers had achieved—their malicious calumniators would fain have wrested from them; but it was in vain. A nobler and better spirit actuated the people of England! to them the integrity of our actions needed no vindication—proudly and dearly will they cherish the remembrance of our services in Affghanistan. To us the recollection of those services is hallowed by the approbation of our sovereign, and endeared by the admiration of a grateful country!

We now close the volume, which we cannot recommend the the libraries to order.

JOURNAL OF FRENCH LITERATURE.

LITERARY GOSSIP IN PARIS.

(*From our Correspondent.*)

We are all alive just now, thanks to the speculators in newspapers, and cannot imagine where the present manía will end. The railroad fever never was more virulent. How, in these "piping times of peace," all are to succeed, is more than any looker-on can venture to determine; but there appears to be little doubt on the minds of the projectors. Each boldly asserts that he is certain of popularity. You good people in England will perhaps tell us, that the pigmy sheets which in France are dignified by the name of public journals require little filling; but even this argument will not avail, for two of the new daily papers, *L'Epoque* and *Le Soleil*, are of gigantic magnitude, while here is the list of the remaining candidates which have just put forth their claim to public favour:—

DAILY PAPERS.

L'Esprit Public; Le Mouvement; Le Monde; La Gazette du Commerce; Le Pays; Le Commerce, and *Le Courrier Français*.

WEEKLY REVIEWS.

Le Dimanche; La Semaine; L'Universel; La Gazette Diplomatique, and *La Revue du Courrier Français*.

The liberty of the press appears to have taken a fresh impetus; and while we are all asking ourselves *à propos de quoi*, Paris is inundated by these Sybilline leaves. I am not yet able to give you a fair "taste of their quality," but hope to do so ere long.

During the late regattas at Venice, two ex-inhabitants of Versailles have been conspicuous; MARIE LOUISE, whose fifty-

five years have made a wreck of the beauties which she boasted when, in 1810, she became the bride of NAPOLEON, and who "assisted" at the fêtes from a balcony; and the Duchesse DE BERRY, who throughout the races remained seated in her gondola. Truly, the royalties are just now as locomotive as a railway engine, and "go to and fro upon the earth" with a security and an absence of all *prestige*, which are, after all, the marvel of the century.

The *Corsaire-Satan* tells a good story—good enough to be true—against M. DE SAINTE-BEUVE. It asserts that a few days ago, in a literary society, he exclaimed with a foppery quite academical, "It is extraordinary what a number of young writers have imitated my style and manner in their critical essays. For example, CHARLES DE MAZADES, who edited the *Revue de Paris* at the period of its extinction, was, if I may be pardoned the expression, merely the reflection of my moon." "He had, at least, one advantage over you in that case," remarked the Countess DE B——; "What was that, madam?" "He reflected."

JOURNAL OF ITALIAN LITERATURE.

Nicolò de' Lapi; ovvero I Palleschi e i Piagnoni, di Massimo d'Azzeglio.

Of all modern Italian romances, that which we are about now to introduce to the reader has been most favourably received. More popular even than MANZONI's *Promessi Sposi*, it has almost escaped criticism, and has won for its author a reputation second to none in Italy. The story is founded on events which took place during the memorable siege of Florence in 1529, when the army of CHARLES V. under the command of the PRINCE of ORANGE, invested the city with a view to reimpose on the people the yoke of the Medici. Nicolo dei Lapi, one of the chiefs of the popular party, and who then, at the age of ninety years, displayed undiminished energies as well as unshaken patriotism, as one of the principal characters of the narrative, gives his name to the work. At the period when the tale commences, Baccio, one of the sons of Nicolo, had just fallen in a skirmish, and a description of his funeral in the church of San Marco dei Dominicani introduces the story, Nicolo and his sons, attending the obsequies of Baccio, were made aware by many unmistakable signs that they were in a besieged city; and even while the solemn ceremony was proceeding, a ball from one of the guns without struck a window of the church, and drove inwards with a terrific crash mullions and glass, to the temporary consternation of those within; but one person, viz. the officiating priest, did not so speedily recover his equanimity, and the lay brother who attended him burst out, after many attempts to stifle it, into a most uncanonical roar of laughter. This lay brother, who afterwards occupies a very prominent place in the work, was one of those thirteen Italians who, in the year 1503, challenged as many Frenchmen at Barletta, and remained victors. The contest was considered the most chivalric that had for many years taken place, and those who were concerned in it found no difficulty in placing themselves with the most distinguished captains of the time. Fanfulla, for that was the name of the hero in question, took afterwards a part in every action of eminence that occurred till the sacking of Rome, under the Constable Bourbon, when, struck with remorse at the enormities which he witnessed, and in which he was compelled to participate, he withdrew into the monastery of St. Mark, and assumed the habit of that order. The circumstances however which attended the funeral of Baccio dei Lapi convinced him that he had mistaken his vocation, and he obtained leave from the superior to go out again into the world in a military character. The military leader of the Florentines at that time was Malatesta Baglioni, a man of great astuteness and address, and no small skill in the field, but treacherous, licentious, and altogether unprincipled. It was to him that our soldier-monk applied for a post among the troops of the republic, well knowing that one of the conquerors at Barletta was not likely to be refused. The picture of the general himself is very graphic, it refers to a period early in the morning of the day in which Fanfulla presented himself.

MALATESTA BAGLIONI.

The people of Florence were well prepared for their defence—their walls were strong, their troops were numerous and well disciplined, their treasury was full, their garrison was well victualled; all were full of daring and patriotism; but there was a serpent in the bosom of Florence, and this serpent was Malatesta. At first a mercenary soldier in the service of Venice, and then lord of Perugia, he had become, as we see, captain of the Florentines,—type of those tyrant lordlings that for ages have risen, fallen, and reappeared in the Italian cities—now princes, now leaders in the service of other princes, and not unfrequently captains of freebooters. He was cold in heart, brave in action, and above all things a master in the arts of fraud and dissimulation. Such men usually finished by the hands of more potent enemies, by the dagger of the assassin, or by the contrivance of their own households. It can hardly be expected that among persons of this character could be found much sense of religion; yet there were those among them who built churches and endowed monasteries, and nearly all were believers in witchcraft, alchemy, and astrology. Malatesta was no exception to this rule; he had his Hebrew astrologer, named Barlaam, a native of Hungary, who to his attainments in the occult sciences, united considerable knowledge of medicine. He lived at his ease in the Baglioni palace, followed Malatesta in all his enterprises, and became rich at his expense. It cannot be said that he was altogether a robber, for he certainly gained fairly a part of his large appointment, by the care which he took of his invalid lord. That tremendous malady by which America has so fully avenged itself upon Europe, and which in the sixteenth century was rarely if ever cured, was slowly consuming the life of Malatesta. Naturally of a powerful constitution, tall and robust in person, with thick, black hair and beard, he had been an incarnation of vigour. To what condition now reduced we shall shortly see. He was slowly sipping a large glass of some decoction which his physician had prepared for him, and eyeing with a sardonic grin a person in the dress of a friar seated at some distance from him.

Malatesta was at this time plotting the restoration of Florence to the Medici, and among those who appeared at his levee, were some with whom he was already on correspondence on this subject. Two persons deserve special mention. Benedetto dei Nobili, a monk, and another monk who acted as messenger between them; and when these had left his presence, he cried aloud twice, Barlaam!

A HEBREW PHYSICIAN.

There appeared a little dry old man, with a face so seamed with wrinkles, that it appeared made of skeins of thread. His nose was large and hooked, and his eyes small, bright, and black, like grains of pepper; a mouth ever smiling, but with that smile which is unaccompanied by any joy in the rest of the countenance, completed the picture.

"It seems to me," said Malatesta, peevishly, "that the half of these cursed drugs which you have been making me swallow these three months would have made a pile big enough to burn you alive, and Heaven knows whether I should have been any the worse for it."

"Your magnificence would have had one faithful servant the less."

"But do you not know that I have not an hour's rest in a whole night. My very bones are being bored through with needles. Is there no plant—no powder—no devil that you can find to give me an hour's sleep. By the faith of God, I will not always be paying a tormentor.

"I shall find this summer the celidony, a stone which grows in the entrails of the swallow, and if your magnificence will cause it to be put into a case of cloth, and wear it under the left breast, so that it may touch the skin,—or, stay, there is a mountain in Hungary, where if I could go—"

"Better go to Satan!—but I fear I shall be there before you. Leave me—go, call back Benedetto, and be quick."

The old man retired.

The conversation that took place between these choice spirits, Malatesta and Benedetto, turned upon the mode in which all that took place within the walls was to be related to the Prince of Orange without. And it was resolved that one Troilo degli Ardinghelli, who had, as was supposed, privately married a daughter of Nicolo dei Lapi, should betake himself to Florence—seek to ingratiate himself with the old patriot, and then give intelligence of all that passed within to the prince. But there was some obstacle to this in the capricious character of Troilo, who had no desire to be shut up in a besieged city, and put off so often his departure from the camp, that it was plain he would never go unless obliged. One thing to be done in order to bring about this much-wished-for conclusion was to make Nicolo aware of what had taken place in his own family, and this Benedetto readily undertook to do.

And now we must pass to another person and other adventures, for in this book as in old *Ariosto*, we have half a dozen heroes, and half a hundred adventures, and all wonderfully

connected at last, in this particular differing therefore from *Ariosto*.

In the family of Nicolo was a youth named Lamberto, the son of an artisan, who had, at the loss of his own, saved the life of Nicolo. When dying he bequeathed to his friend the care of his wife and yet unborn child—a legacy which Nicolo cheerfully accepted, and faithfully fulfilled all the obligations it imposed. The young Lamberto, who has only the fault of being a great deal too perfect, falls in love with Nicolo's eldest daughter Laudomia, but his humility prevents him from making to her any acknowledgment of his passion, though, had he done so, it would not have been unreturned; afterwards casting his eyes upon the less perfect Lisa, the younger daughter, he proposes to her, is accepted, and then, feeling a desire to raise himself by his own deeds to an equality with the object of his love, he leaves the house of Nicolo, and enters into the service of Giovanni dei Medici. His adventures in general we shall pass over, merely remarking that he saved from drowning a Swiss foot soldier, who afterwards became his servant, and shall confine ourselves to one person, with whom the whole of the succeeding history is more or less connected. In the camp of Giovanni he met one of those female followers of camps, who differed as much in beauty as in mind from the majority of her unhappy class. His companions in arms, after a few days had passed by, recognised in Lamberto an austerity of virtue not often seen in camps in the sixteenth century; and this, if it made him somewhat less popular, did not cause him to be less respected. But one day, sitting on a bank alone, and meditating on the setting sun, this woman, Selvaggia by name, addressed him. The conversation between them is very dramatic. She relates her history—tells him that she is the daughter of a Hungarian Jew, who sold her in her extreme youth to a captain of banditti (or rather of mercenary soldiers), who was struck by her beauty; that from his hand she passed into those of others, till she became the degraded being she then was. The reader will easily perceive that our friend Maestro Barlaam is involved in this recital. Then, casting herself on the groond before him, she exclaimed,

"Oh, young man! who have no crimes weighing on your soul, who are brave and virtuous, and who, in the midst of wars and labours, can repose your mind on the thoughts of those who have ever loved you—if you knew what it is to be born with a heart, ardent, capable of loving most deeply, and yet fated never to be loved in return, not even by a father—if you knew this, you would wonder that I have preserved in my aspect, and perhaps in my heart, somewhat human; you would wonder that I have not flung myself, like a wild beast, on all of that cruel and perfidious race I could find—that race that has betrayed me—degraded me—driven me out into this abyss of misery. Oh! if I could find one being who would not utterly despise me, who might dry these burning tears, and whose good will—for I ask not love—I might obtain—Oh, God of Heaven! my happiness would be too great; I could not survive so intense a joy. I would go through the world to seek it, and if such a friend I saw, even where a lake of fire separated us, I would rush through it. Oh! if you knew how little would content me—your heart, I know, is fixed on a worthy object—but you love your war-horse;—I ask you to wrong no one for me—you love the hound that licks your hand;—Oh! if after these I might have a place in your thoughts, were it only to say, poor child! I pity thee. Oh, God! he will not reply;" and the unhappy girl broke forth into loud wailing.

Selvaggia afterwards follows Lamberto, in a suit of mail, and unknown to him; she is by his side in battle and in danger, and only loses sight of him when struck down herself by the pike of an enemy. She is obliged to be many months in a military hospital. Ultimately she finds him again in Florence; but seeing that he still treats her with studied coldness, she leaves him in a desperate rage, vowing to be bitterly revenged on him for his cruelty.

To return to the family of Nicolo. Soon after Lamberto's departure, Lisa accidentally sees Troilo from a window of her father's house. She is seen also by him, and this short glance was productive of innumerable misfortunes. Lisa becomes acquainted with Troilo; is induced by him to consent to a private marriage, which marriage is performed by a servant of Troilo's disguised as a monk. She then returns to her father's house, and gives birth in due time to a son, who is named Arriguccio. It was some time after the birth of this child that Fra Benedetto undertook to make Nicolo aware of his daughter's marriage; and this he thought fit to do by an anonymous letter addressed to the gonfaloniere Carduccio, by means of an institution somewhat resembling the "lion's mouth" at Venice, and called at Florence "*Tamburagione*." As soon as this letter came to Carduccio's hands, he sent it by a friend of both parties (Ferruccio) to Nicolo, whose rage at its contents can scarcely be conceived. He rushed to the apartments of his daughters, burst open the door, and found Lisa in the act of suckling her infant. Seizing the unfortunate girl by the hair to the door of her chamber, he finally turned her out of the house. By this act of barbarity, however, he unconsciously frustrated the designs of Malatesta—at least for a time. The family of Nicolo were filled with anguish at their sister's misfortune; and Bindo, the youngest son, left the city to avenge his sister's disgrace, for so they considered it, though they thought the marriage valid. Attiring himself as a girl, he went to the camp of the Prince of Orange, and demanded to see Troilo. This latter, suspecting some adventure which might terminate unpleasantly, called four soldiers to follow him; and when Bindo, violently attacking him, called on him to defend himself, and insulted him by the name of traitor, Troilo gave the youth in charge to the four soldiers, and he was about to pay the penalty of his rashness on the gibbet; but Baccio Valori, the pope's commissary, who knew who Bindo was, determined to save him, and accordingly interposed just as the too daring youth was on the point of being hanged. The saving the life of Bindo, which Valori took care to make appear as the act of Troilo, was a new claim on the family of Nicolo; and thus another reason was given for Troilo to leave the camp, and repair in the character of a spy to Florence.

(To be continued.)

JOURNAL OF AMERICAN LITERATURE.

The Poets and Poetry of Europe, with Introductions and Biographical Notices. By HENRY W. LONGFELLOW. Philadelphia. Carey and Hart, 1845.*

To the student of poetry, who is not acquainted with the languages of continental Europe, this large and handsome volume will bring a great store of amusement and instruction. Within a moderate compass, it gives him the means of gaining a connected view, and one as complete and perfect as can be obtained without a knowledge of the original tongues, of the poetical literature which exists in ten languages. Six of these, the Anglo-Saxon, Icelandic, Danish, Swedish, German, and Dutch, belong to the great Gothic family of the North; while the remaining four, the French, Italian, Spanish, and Portuguese, are daughters of the Latin. We find here some of the editor's own beautiful translations, most of which, however, had previously appeared in print, from eight of these languages; and in this great crowd of translations by different hands, certainly very few appear equal to Professor LONGFELLOW'S in point of fidelity, elegance, and finish. The work is an honourable memorial of his great attainments as a linguist, in which character, rather than as a poet, his fame will be sustained and advanced by this publication.

The plan of the work, so far as we know, is wholly original and peculiar. The editor's intention was to give as perfect an idea of the poetical literature of modern Europe as could be gained from the rhythmical translations that have been made at divers times by English poets and linguists. The bulk of the volume, therefore, is composed of excerpts from the publications of BOWRING, HERBERT, COSTELLO, TAYLOR, JAMIESON, BROOKS, ADAMSON, THORPE, and a crowd of other versifiers, who have clothed foreign poetry in an English garb. As might be expected from its comprehensive character, "the work is to be regarded as a collection, rather than as a selection," many pieces being admitted without reference to their poetical merit, but as the only versions into English which could be found to illustrate the poetry of a particular nation or age. Viewed merely as translations, some are very literal, others are loose and paraphrastic; many have been worked over into smooth and sounding English verse, while others are mere rough copies, that preserve the sentiment and imagery, but sacrifice entirely the metrical characteristics, of

* It is intended occasionally to extract or translate from the Foreign Reviews the ablest criticisms upon their own literature, as specimens of the state of criticism abroad. The above very beautiful and interesting article is taken from the *North American Quarterly Review*.

the originals. The former resemble foreign coins that have been melted down and stamped anew in the English mint; the latter have merely had the foreign mark effaced, and are here presented only as bullion, or rude material, which may afterwards receive a new form and impression, and circulate again as currency.

The arrangement of these borrowed materials is the distinctive feature of this publication. The translations from each language are brought together, and arranged according to the dates, or with reference to the age of the poets from whom they are taken. The object is not merely to illustrate the literature of another country at a particular time, or during its Augustan age; but to present at least a few specimens from every period in its annals, and thus to give a general idea of the history of poetry in each nation. An introductory sketch is given of the peculiarities of the language, and of the several epochs into which the literary history of the country is divided. These sketches were meant to be brief, but comprehensive; we cannot speak particularly of their merits, because several of them are taken from articles which appeared for the first time in this journal. These are followed by the selected translations from the poets, beginning with the most ancient in each land, and coming down to those who are our cotemporaries, save when, as in the case of the Anglo-Saxon, the history alike of the language and the literature was long since closed. The extracts are preceded by biographical or critical notices of the poets, quite brief for the most part, but sometimes giving occasion for very agreeable excursions into the domains of biography and literary disquisition. Most of these are written by Professor FELTON, to whose taste and learning the merit of a large portion of what is most original and agreeable in this volume is entirely to be ascribed. His prefatory notices form a kind of dictionary of the poets of modern Europe; and though, in many cases, the information given is quite scanty, those only who have had some experience in this kind of work can judge of the amount of labour and research which he has expended upon the undertaking.

Thus far we have considered the book as prepared for that class of English readers who can acquire a knowledge of the poetry of other countries only through the medium of translations. To the scholar who is well versed in the languages of continental Europe, the volume will appear curious and valuable when considered as a collection of specimens to shew the comparative degree of skill and taste of many translators of foreign poetry into English verse. The task of such versifiers seems an humble one, when compared with the high vocation of the true "maker," or poet. The translator is a literary slave; the humblest or the boldest attempt at originality of thought or expression on his part must be viewed as an imperfection or a crime. He is bound to follow his master with servile fidelity, to copy defects, as well as merits, with a kind of Chinese accuracy. He is a dealer in nothing but words, an artist only in style and metrical arrangement; he has no right to any ideas of his own, and it is high-treason in him to alter or modify those of another, though it be only to mend them. Imitation, indeed, is the province of art in general; but it is imitation of a free and daring kind, which superadds grace, beauty, and dignity to the original, which exalts the humble, restores the depraved, illumines the obscure, and animates the dead. This is the work of the sculptor, the painter, the musician, and the poet. The translator labours in a far humbler walk, as he aims at imitation only in the strictest sense of the term. His office, indeed, is rather to transfer than to imitate; like the merchant, he imports goods from beyond sea, allowing them to suffer as little change or loss as is possible during the passage.

This, at any rate, is the theory of translation now most in vogue among the critics. With them, verbal accuracy is the great point; like charity, it is held to cover a multitude of sins. A poetical translation may be harsh, obscure, unmusical, ill-adapted to an English taste, still deformed by idiomatic peculiarities of the language whence it was drawn; but if it be literal, if it render not only line for line, but word for word, it is held up as the only faithful translation, the only copy that gives one a true idea of the original. We do not accept this canon of criticism, as we hold a far higher idea of the dignity and importance of the translator's office. We prefer POPE'S Homer to COWPER'S, and though scholars will scoff at such an avowal, the whole multitude of unlearned readers probably will agree with us in opinion. A mere child is fascinated with the former, to which some of the most remarkable men who have lived during the last hundred years—poets, statesmen, and philosophers—have been indebted for the first decided impulse which their minds received, for the earliest awakening and direction of their genius. No one but a Greek scholar ever read COWPER'S version through, and he not without much labour and weariness of spirit. At most, he is glad to throw it aside, and recur once more to the sounding hexameters of the glorious original; the lagging and heavy translation had pleased him not for its own sake, but because it called more vividly to mind the well-remembered Greek. The first object of the poet, whether trading upon his own stock, or upon borrowed capital, is to impart pleasure; he does not aim primarily to instruct or convince; it is no part of his business to teach another language, or to daguerreotype some work of art in another clime so faithfully that the copy will bear examination under the microscope. As a translator, it seems to us, his first purpose is to produce a beautiful English poem; his second to preserve the lineaments of the original so far as the difference between the two languages and the attainment of the former and higher object will admit.

Of course, verbal accuracy is an excellence, when it is compatible with these ends; but to exalt it over all the other qualities of a translation is to make the business of the translator a mere contest of difficulties with words and idioms. His success is a trial of this sort, like the feats of a juggler or a rope-dancer, we may view with curiosity or astonishment, but with no real pleasure or lasting gratification; the thing done has no intrinsic value or beauty, but we wonder that he should be able to do it at all. An eminent German critic, more remarkable for learning and arrogance, than for taste or sound judgment, once undertook to translate the *Odyssey* into German hexameters, rendering line for line, and cæsura for cæsura, so that the version should be an exact transcript of the original. He began the task, but had not gone over a tenth part of the first book before he stopped short in the middle of a line, and declared that there was not a man in all Europe who was able to finish it. We hope no one was silly enough to make the attempt. This fragment of a version we have never seen; but we think it must be a queer specimen of crabbed diction and halting versification, fit to be locked up in a cabinet of curiosities with a copy of the *Odyssey* written out in so fine a hand as to be all contained on a single sheet of paper; no person who had any regard for his eyes or his patience would undertake to read either the manuscript or the translation.

The German critic MENZEL makes some pungent remarks upon the very literal translations of J. H. Voss from the Greek, which are so apposite, and so fully sustain our views, that we place them before our readers. We quote from Professor FELTON'S translation, which is cited on the 301st page of this volume.

For more than half a century, he undertook the Sisyphean toil of rolling the rough runestone of the German language up the Grecian Parnassus; but

Back again down to the plain rebounded the ragged rock swiftly.

He had the fixed idea, that the German language must be fitted to the Greek in mechanical fashion, syllable for syllable. He confounded his peculiar talent for these philological trifles, and the predilection which flowed out of it, with a universal capacity, and with a universal want of the German language and poetry, as if a rope-dancer were to insist upon everybody's dancing on the rope. The most obvious means of trailing the German language over the espalier of the Greek was naturally translations. Here the German language was brought so near the Greek, that it was forced to follow all its movements, like a wild elephant harnessed to a tame one. Voss is celebrated as the most faithful translator, but only so far as regards the materials of language and its mechanical laws; spirit and soul have always vanished under his clumsy fingers. In his translations he has banished the peculiar character and the natural grace of the German language, and put a strait jacket upon the lovely captive, which allowed her to move only in a stiff, unnatural, and constrained manner. His great merit consists in having introduced into the language of literature a great number of good, but antiquated words, or those used only among the common people. He was forced to this, because it was necessary that he should have a wide range of words to choose from, in order to fill out always the prescribed Greek measure with the greatest exactness. He has, moreover, like Klopstock, de-

veloped the powers of the German language, by these difficult Greek exercises; just as the money-diggers, though they found no money, yet made the soil more fertile. I am very far from denying him this merit with regard to the language,—a service as laborious as it was useful; but his studies cannot pass for masterpieces; they were only the apparatus, the scaffolding, the school, and not the work of art itself. They were distortions of the language, in order to shew how far its capability extended, but did not exhibit the grace of its proper movement. No one could talk as Voss wrote. Everybody would have thought it vexatious and ridiculous who had been required to arrange his words like Voss. They never sound like anything but a stiff translation, even when he does not in fact translate. These translations, however, are often so slavishly close, and, therefore, not German, that they are unintelligible, until we read the original. And yet that fidelity could not express the spirit and the peculiar character of the foreign author, together with the sound of the words. On the contrary, the painful stiffness of constraint is the universal badge of all his translations; and in this they are all alike; this was the last upon which he stretched them all. Whether Voss translates Hesiod, Homer, Theocritus, Virgil, Ovid, Horace, Shakspeare, or an old Minnesong, everywhere we hear only the goat-footed steed of his prose trotting along; and even the mighty genius of Shakspeare cannot force him out of his own beat for a moment.—Pp. 301, 302.

When a work of art is to be copied, fidelity to the original includes something more than an exact version of the words. Its spirit, harmony, and grace, its ease and finish, are to be transferred or imitated, or the copy will resemble nothing more than an exquisite piece of tapestry when viewed on the wrong side, every thread appearing in its due place, while the artistic effect of the whole has entirely disappeared. "Poetry is of so subtile a spirit," says Sir JOHN DENHAM, "that in pouring out of one language into another, it will all evaporate; and if a new spirit be not added in the transfusion, there will remain nothing but a *caput mortuum*." The mere verbal copyist strains at a gnat, but swallows a camel; he is a slave to the letter, while he violates the spirit; he preserves the meaning, while he destroys the poetry. WALTER SCOTT, in summing up the merits of DRYDEN, assumes it as one of his highest excellences, that he had assisted "to free translation from the fetters of verbal metaphrase, and to teach posterity the powerful and varied poetical harmony of which their language was capable." Glorious JOHN is the most copious, and, on the whole, most successful, poetical translator that English literarature can boast of; and he shewed, both by precept and example, his careful observance of the precept given by HORACE:—

> Nec verbum verbo curabis reddere, fidus
> Interpres.

The true law of poetical translation we hold to be this: to produce such a work on the given topic, and with the given materials of thought, as the author probably would have written, if he had been of the same country, and had spoken the same language, as the translator. The problem will then be solved, as far as the infirmity of our nature or the smallness of our means will permit,—to enable those who are readers only of the vernacular to derive as much pleasure from the poem as the scholar does who is well acquainted with the language in which it was first written. The scholar, indeed, will always have an additional enjoyment peculiar to himself, founded on the power of comparing the copy with the original. But this is only a secondary pleasure, though the translator who piques himself on verbal fidelity produces this effect and nothing else; the characteristic excellence of his work can be appreciated only by one who understands the original, and who, therefore, has no need of any translation. The word or phrase which may give him pleasure, as a happy rendering of a difficult passage, may only offend the reader who is trying the poem by a taste formed exclusively upon English models. That this law of translation, which appears so obvious and reasonable, should be so frequently disregarded or violated, must be ascribed to the evil habits formed by the petty carpings of small critics, who follow a spirited translation of a noble poem with the original in one hand and a dictionary in the other, ready to pounce on every happy alteration of an epithet as a crime. Neither thought, taste, nor feeling is necessary for such criticism. The most that they gain by it is to display their own knowledge of the language, and to exult in a moment's fancied superiority over the translator.

Mr. LONGFELLOW's theory of translation does not coincide with our own. He belongs to the straitest sect, even to the Pharisees; and if others were as fortunate as he is in reconciling the severity of their principles with ease, grace, and idiomatic finish, we might be tempted to reconsider our position. In this bulky volume, however, filled with translations of every degree of fidelity and poetical merit, we find an abundance of examples wherewith to confirm our doctrine, and even to convict the editor of some inconsistency in the application of his principles. In every case in which he had any choice, he ought to have preferred the more faithful translation; but his good taste has often triumphed over his theory, and compelled him to put aside the literal, but spiritless version, and make room for the elegant or daring paraphrase. Mr. ELIOT's translation of "The Song of the Bell" is one of the most flowing and tasteful, but certainly not the most literal, of the numerous versions of that poem. We find, also, copious extracts from LOCKHART's very beautiful Spanish Ballads, which are so paraphrastic that they can hardly be called translations. More faithful transcripts of these poems were at hand, if the editor had seen fit to adopt them. We do not complain of these violations of his principles, but rejoice over them. We rather complain of the opposite class of cases, in which he seems to us to have followed his theory, in spite of his taste and better judgment. Thus, he has given W. TAYLOR's vapid rendering of BURGER's wild ballad *Lenore*, instead of the fine and bold imitation of it by WALTER SCOTT.

The quantity of material given to illustrate any one period in a nation's literary history is not always proportioned to the richness or excellence of the native mine whence it was drawn. Not professing to give new translations, except in a very few cases, the work is made up of the labours of others, and in its comprehensive survey necessarily passes over some tracts where they have done but little, and where, consequently, but little could be gleaned. Translators have worked in squads, as it were, expending great labour on certain poets and particular epochs, and passing over others very lightly. The earlier and more eminent Italian poets have been done into English by a great number of hands, and with every degree of excellence. So it has been with the later poets of Germany, of whose works translations have been multiplied even to wearisomeness; thus proving that the number of students of the German language is now so much increased, as greatly to diminish the demand for more versions into English. On the other hand, from what we are apt to regard as the Augustan age of French literature, from the middle of the seventeenth to the middle of the eighteenth century, judging from the extracts in this volume, there are very few English metrical translations. He who desires to know the poets and dramatists of the age of LOUIS the Fourteenth, who would become acquainted with CORNEILLE, BOILEAU, RACINE, MOLIERE, and VOLTAIRE, must study them in the original. Of the satires of BOILEAU, however, he will find some very elegant and spirited imitations in the earlier volumes of this journal. One of these has been adopted by Mr. LONGFELLOW, and this, with a scene from *The Cid*, translated by COLLEY CIBBER, one from *Andromaque*, imitated by AMBROSE PHILIPS, a brief anonymous translation from the *Misanthrope*, and two short extracts from AARON HILL's version of *Alzire*, is all that one finds to illustrate this remarkable group of satirists and dramatists.

But it is time to take a brief view of the contents of this volume, in the order in which they are presented. First come the translated specimens of Anglo-Saxon poetry, consisting of extracts from the old epic poem of *Beowulf*, the monk CÆDMON's paraphrase of portions of Holy Writ, King ALFRED's version of the metres of BOETHIUS, and a few historic odes and miscellaneous pieces. Most of the translations are by TAYLOR, THORPE, INGRAM, KEMBLE, and LONGFELLOW. The specimens are mostly unrhymed, and more literal than rhythmical, so that they must be read rather as curious illustrations of the age and nation to which they belong, than with any expectation of poetical merit. The short, broken lines and abrupt diction are well suited to the rude simplicity of the narrative and descriptive passages and to the wild and forcibly depicted imagery. The extracts bear about the same resemblance to poetry that the clink of hammers in a blacksmith's shop does to music. Our great ancestors, after all, were a rough and barbarous set,

and the cause of civilization had little to expect from their descendants, till the breed was crossed by the more refined and chivalrous Normans. We have room to copy but a small portion of the old monk's account of the destruction of PHARAOH :—

The folk was affrighted,
The flood-dread seized on
Their sad souls;
Ocean wailed with death,
The mountain heights were
With blood besteamed,
The sea foamed gore,
Crying was in the waves,
The water full of weapons,
A death-mist rose;
The Egyptians were
Turned back;
Trembling they fled,
They felt fear:
Would that host gladly
Find their homes;
Their vaunt grew sadder:
Against them, as a cloud, rose
The fell rolling of the waves;
There came not any
Of that host to home,
But from behind inclosed them
Fate with the wave.
Where ways ere lay,
Sea raged.
Their might was merged,
The stream stood,
The storm rose
High to heaven;
The loudest army-cry
The hostile uttered;
The air above was thickened
With dying voices;
Blood pervaded the flood,
The shield-walls were riven,
Shook the firmament
That greatest of sea-deaths:
The proud died,
Kings in a body;
The return prevailed
Of the sea at length;
Their bucklers shone
High over the soldiers;
The sea-wall rose,
The proud ocean stream,
Their might in death was
Fastly fettered.
The tide's neap,
With the war-enginery obstructed,
Laid bare the sand
To the fated host,
When the wandering stream,
The ever cold sea,
With its ever salt waves,
Its eternal stations,
A naked, involuntary messenger,
Came to visit.

(*To be continued.*)

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

NEW SOUTH WALES.

AN occasional correspondent has sent us the following account of a first visit to an up-country station in New South Wales.

I left Sydney on horseback alone, and with my valise attached to the saddle, to ride about 230 miles. I rode the first 120 quietly in three days, then called upon a friend, who insisted that I should stay the Saturday and Sunday with him, and this invitation I accepted. On the Monday I rode on 60 miles, and the following day 50 miles completed my journey. I was not the least tired, but my horse began to flag on the last two days. I rode this whole distance of 230 miles, with very little exceptions, through large woods or forests of the never-ending gum-trees, with scarcely a spot which could be called picturesque. In the road there are two or three incipent townships, and many settlers' habitations a few miles from the road. The township of Yass, our post-town, is a miserable place, it is true, but this is not considered as in the bush, Yass being within the boundaries of the colony, and a post or mail cart runs twice a week both to Sydney at the north, and to Port Philip at the south. Demonderil is the name of the country, or station which we have purchased, together with the 7,716 sheep which are now upon it; and, as my previous letter tells you, the estate or *right* of this station extends sixteen miles in length by seven miles in breadth, being almost 70,000 acres, over which large extent we have full right and authority, as much as if it was *bonâ fide* our private property. The country itself is very pretty, and only wants elms, oaks, and other English trees in lieu of the everlasting gum-trees, and it would decidedly be most picturesque scenery. There is a creek or gully runs through the whole length, but there is at present but very little water, and it is only here and there in the deeper holes. There have been no rains here for three months, but this I understand is unprecedented; still, while our neighbours are complaining of want of water and cattle, wild cattle come to our water-holes from a distance of sixty miles. We have quite enough for our own sheep purposes; nevertheless, I have ordered several of the water-holes to be railed round, so that the thirsty and strange cattle must go elsewhere. Of the buildings upon the stations I can give you but a faint idea, living as you are in luxury and comfort in dear old England. I have just now agreed with a man to pull down and again erect the principal building, consisting of the kitchen and servants' room, &c. for the sum of ten pounds; the other principal building, which M—— and I at present inhabit, will require some such similar doctoring, and at no greater expense: it is at present a building of 30 feet long by 20 feet broad, having three rooms and sculleries. We have not had time to get up any furniture from Sydney, so that we are obliged to put up with things as we find them; for instance, our chairs are tea chests, and my bed is a hard mattress laid upon the hard floor in the sitting-room; and as the weather is cold, I put the mattress within a couple of feet of a large roaring wood fire, such a fire as you have never seen in England, and here I lay and dream, and sleep, and roast until awoke at sunrise by the notes of the magpies. We rise with the sun, and our first duty is to mount our horses and hasten to one or other sheep-station, where are one or two flocks of sheep (of about 1,000 each flock) depasturing, and we look at the sheep and perhaps count them before they have left their hurdles to go out and feed; the same is often done at night at sunset, when the sheep come from their day's feed. In this manner a watchful eye is kept over the shepherd, though care is taken that the sheep are out to feed early in the morning, and not brought in before the sun has set; and also, that no sheep are missing or die without our being immediately informed of it. If a sheep is missing, a hue and cry is raised, and it must be found; such a case has not yet occurred here, and as the shepherd is always in fault when it does occur, we intend to make an example of the first man who so far neglects his duties by making him pay twice or thrice the value of the sheep lost.

AN ACCOUNT OF CERTAIN CURIOUS PHENOMENA IN THE TUSCAN APENNINE.

In the summer of 1843, I was going from Florence to Bologna, and had posted in the diligence the main chain of the Apennine. On my arrival at the Albergo dello Vulcano, a small inn situate near the village of Pietramale, at the bottom of the long ascent, the top of which is the frontier of the Papal states, I was induced to leave the dilgence and perform the rest of the journey the next day on foot. The natural phenomena which I then found existed in the neighbourhood induced me to forfeit half my fare. This *albergo* lies about a quarter of the distance up a mountain, whose structure bears a strong resemblance to that of Monti Epomeo, in the island of Ischia, near Naples, being apparently of ridgy volcanic sand. Facing the *albergo*, at the other side of the valley, the traveller who arrives at night sees a clear light, like that of a lighthouse, which appears to be close to the road, though distant from it two English miles. This flame is extremely faint by daylight, and when I proceeded to examine it the morning after my arrival, I had considerable difficulty in finding the spot.

On arriving there, I perceived a bare clayey spot on the side of an easy slope, which seems to be formed of detritus from the mountains above. I formed this supposition from observing the steep banks of a brook which made a geological section just below. On this bare spot, which was slightly damp, several blue flames were playing, particularly in the dampest spots, of different sizes, but of uniform appearance. They burnt with a continuous rushing sound, which increased when the wind blew hard, and resembled alcohol on fire. There was no hole or chink of any kind. The stones which were strown over the surface appeared somewhat calcined and discoloured, and covered with smut on the surfaces most exposed to the flame, and smelt like nitrous ether. When water is thrown on the flames, it puts them out for a time, but they soon burst out again. The peasantry assured me that this combustion is fiercer in rainy weather and when the ground is covered with snow; but the probability of this may be doubted. Paper, being applied to the flames, caught fire; and the stones on the surface were too hot to be touched. The people also told me that there is a phenomenon of the same kind higher up on the mountains above. The mountain which overhangs the inn has a volcanic appearance; but the opposite mountains, on a bed of the detritus of which these flames appear, have a slaty stratification.

On the left side of the Bologna road, a little farther on, at the corner of a grass field between the *albergo* and Pietramale, about 300 yards from the road, and close behind a thatched cottage with a mossy roof, is an insignificant-looking pool, about eight inches deep, with a soft muddy bottom. It appears boiling, as numerous bubbles continually rise to the surface, but is perfectly cold. When I applied a lighted lucifer match to these bubbles, the surface caught fire, and a lambent flame played over the pool till a gust blew it out. The boy who guided me told me that in warm weather and sunshine, the pool took fire spontaneously, but not in damp or cloudy weather, such as that in which I visited the place.

As one proceeds to Bologna, the hills for a considerable distance on the left resemble the country about Solfatara and Poz-

zuoli, near Naples. They appear to be composed of yellow, ridgy, volcanic sand, and occasionally rise in isolated cones, planed flat at their peaks.

These phenomena deserve well the delay of a few hours on the road from Florence to Bologna. The Albergo dello Vulcano is one of the best specimens of an Italian country inn; the hostess is obliging, and the accommodations good. Its position is also commanding, and the surrounding scenery is beautiful. As even the midsummer air is bracing at this altitude, I should strongly recommend the *albergo* as a traveller's home; and in an equal measure to the votary of health, science, and the picturesque.

A GENTLEMAN TRAMPER.

ART.

Peter Parley's Annual for 1846.

WE have had an opportunity of seeing the engravings, and the letter-press so far as printed, of this popular juvenile work, and certainly cannot do otherwise than commend the volume in the warmest manner to the earliest notice of all who take delight in promoting the pleasure and profit of the rising generation. It contains several steel-engravings by GRIFFITHS in an entirely new style resembling mezzotint, but of a much more finished character. The book is further embellished with a frontispiece and vignette-title printed in colours, and contains upwards of 130 fine wood-engravings by the first artists. The binding, we are informed, is to be more than ordinarily attractive. In our own limited circle of friends and acquaintances, we have seen the appearance of this souvenir anticipated by the juveniles with as much delight, and its possession hailed with as much pleasure, as they are wont to feel at the advent of the Christmas vacation. When the complete volume reaches us, we will give a more extended notice, and shall endeavour to find room for an extract.

WOLFF'S CALIGRAPHIC BLACK LEAD PENCIL.—We have received some specimens of this excellent invention, and a portfolio of drawings executed with them has been submitted to our inspection. The effects produced by the rich hue of the lead, and the softness, almost rivalling that of chalk, which the new pencil gives to the drawing, are recommendations which the artist will gratefully acknowledge, and which must secure for the ingenious makers the large patronage they have deserved. These aids to the artists will do much to restore the taste for pencilling, which has somewhat declined of late years.

The workmen employed in the restoration of the Cathedral at Brunswick have made a discovery of great interest. In removing the plaster coating from one of the lateral walls of the nave, they have found the latter covered with fresco paintings in its entire length and breadth. These are divided into compartments—each one containing a subject from the life of Duke Henry, surnamed the Lion, born in 1129, and who died in 1195—the founder of the city of Brunswick and builder of the Cathedral. The paintings are of the highest finish; but have, unhappily, suffered much from the removal of the plaster which overlaid them, notwithstanding the utmost precautions used in the operation. The Government has ordered their careful restoration—as also their publication by engraving. They are supposed to be of the 14th or 15th century. It is hoped that other frescoes will be found in the same edifice—probably on the opposite lateral wall, at any rate.

MUSIC.

Oh! why so cruel, fairest Maid? Ballad. Poetry by Dr. R. M. COLEY; Music by GEORGE J. O. ALLMAN. London, 1845. Prowse.

MR. ALLMAN continues to exhibit signs of diligent study and consequent improvement. He relies more upon his genius and less upon his memory. He ventures to be original, and to depart somewhat from conventional paths. Hence the growing worth of his compositions. The one before us is a decided step in advance of its predecessors; it is considerably above mediocrity. The idea of the air is new, and the music in which it is expressed is at once scientific and bold. This ballad will form an acceptable addition to the portfolio.

STAUDIGL.—Extract of a letter from Vienna:—"On the day of Staudigl's arrival here, from his visit to England, a grand serenade will be given him, before his house; the street will be guarded by police, and a grand *fête* will take place. First will be a chorus, with quartets, a young Englishman (Mr. John Gregg), who is studying the art of singing there, is intrusted with the solo part. The celebrated Strauss, with the whole of his band, about 100. The chorus will be from 50 to 60 persons. Staudigl is to know nothing of this. A friend of his will engage him to his favourite game of *chess* while things are prepared. The serenade will not take place until ten o'clock at night. The whole of the street will be illuminated. There will be an assembly of about 1000 persons. This will be the first serenade ever given to any singer in Vienna. After the serenade there is to be a grand supper, at which will be all the principal singers, in full dress."

PUBLIC AMUSEMENTS.

ROYAL POLYTECHNIC INSTITUTION.—A new apparatus for making ice, in a very few minutes, and in almost any quantity, has been patented. Consistently, therefore, with the spirit of that most excellent institution, which professes to bring before the public all that is new and useful in science, Doctor RYAN is daily lecturing upon heat and cold, and the various methods of producing the latter state in great intensity. The interest occasioned by the Doctor's simple yet lucid explanations of the phenomena of heat and cold is very great, his lecture being crowded daily, notwithstanding the almost deserted condition of town. At the termination of each lecture, Mr. MASTERS'S apparatus for freezing, in two or three minutes, a large block of ice, is amusingly exhibited to the audience. We ought not to forget that, among other means of producing cold, Doctor RYAN performs daily, with great success, BOUTIGNY'S experiment of freezing water in red-hot vessels. The beautiful optical instruments, invented by Mr. LONGBOTTOM, viz. the physioscope and opaque microscope, have lost none of their interest, but continue to elicit constant applause; and, indeed, we feel bound to admit, that it is not more than they deserve, from the intellectual pleasure which all persons must derive from witnessing what is not to be seen at any other exhibition in the metropolis, namely, a man's face twelve feet in diameter. We only wish that there was space to magnify the whole man; but as it would require a room ninety feet in height to accomplish it, we must be content with the face alone. The opaque microscope has been enriched with a new series of living and inanimate objects, among which the colossal gold-fish and the love-bird shine most conspicuously. A new set of dissolving views have been introduced this week, which are extremely beautiful, giving accurate views of the most interesting places visited by her Majesty during her sojourn in Germany; the music has been newly harmonized as an accompaniment for them and the chromatrope, and these alone make the visit well worth the price of admission.

ROYAL ADELAIDE GALLERY.—We have much pleasure in noticing this Gallery. It is still conducted in the same spirited manner, and the amusements are as varied as ever. The lectures of the New Zealand chief deservedly fill a conspicuous part in the entertainments, and from the crowded attendance appear to have lost none of their interest. The manners and customs of the New Zealanders are so totally different (as narrated) to most of the savage tribes, that we think too much encouragement cannot be given to an individual who has been so instrumental in converting them from cannibalism, the main step towards making such valuable soil as the islands of New Zealand are composed of available for cultivation. The chief gives the war-dance—description of warfare—music—and fireside amusements of the natives, in the same animated style and throughout his lectures fully explains the most minute particulars. The atmospheric principle, as about to be applied by Mr. PILBROW to railways, is here shewn by a very large model, and explained by a descriptive lecture and drawings.

MISS CUSHMAN.—This lady has been lately playing at Manchester, where she has made no little sensation. The accounts which appear in the local papers speak in glowing terms of the intelligence, and the delineative skill she displays. The reputation of this actress is travelling far and wide; and in a short time there can be no doubt it will equal that of Miss O'Neill. She is engaged, we have been informed, to appear at the Princesses Theatre in the course of a week or two.

NECROLOGY.

BARON F. THEODORE DE LIECHTENSTEIN.

From Berlin, we hear of the death of another literary veteran, the Baron Ferdinand Theodore de Liechtenstein, a dramatic poet of distinction; to whom the German stage owes a large number of original productions, and many translations from the operatic drama of the French. Possessed of an ample fortune, M. de

Liechtenstein's passion for his art was not restrained by any of those unspiritual considerations which temper the enthusiasm of the less favoured of fortune—"making I *cannot* wait upon I would." For many years he performed gratuitously the functions of manager of the Grand Opera of Berlin,—and subsequently, those of vice-director of the music of the same theatre. —*Athenæum.*

MADAME HOFFMAN.

The ill-starred world of the Polish emigration has to deplore the loss, at Passy, at the premature age of forty-eight, of one of the most distinguished writers of its body, Madame Hoffman, whose maiden and national name was Tanska. Her works were principally directed to the business of moral education; and the first of them, which passed through fifteen editions, was published at the early age of eighteen. The attention of the Government was soon drawn to the value of her productions; and she was still in her youth, when she was appointed inspectress-in-chief of the schools and boarding-houses for young women throughout the now deceased kingdom of Poland. In 1831 she accompanied her husband into exile, and took up her abode in Paris, where she continued her literary labours—publishing at Leipsic and Breslau, and thence circulating her works throughout all the provinces of Poland. At the wish of her friends, she had undertaken an historical work, destined for the especial instruction of the youth amongst her countrymen, when death brought to a close her useful and honoured career.

SIR CHARLES GORDON.

We regret to state that Sir Charles Gordon, the well-known and highly-respected secretary of the Highland and Agricultural Society, died at his house, No. 6, Albyn-place, on Thursday evening last. Sir Charles, we understand, was in the fifty-third year of his age, and had held the important situation of secretary of the Highland Society for upwards of twenty years. He received the honour of knighthood from William the Fourth in 1836. He had long been in a delicate state of health, though, we understand, his death was very unexpected at the last.—*Edinburgh Witness.*

ORIGINAL CONTRIBUTIONS.

SONNET.

By CALDER CAMPBELL.

THE UNATTAINABLE! Why calleth it,
With never-dying voice, our heart-desires
To languish for the mountain-top, whose fires
Expel harsh ashes from a burning pit;
In whose mysterious womb man's subtlest wit
Faileth to guess the things that hide? Strange lyres
Sound in our ears, that with a martial call
Summon our steps to climb cloud-ladders, where
A visionary banner floats in air,
And conquest crowns a visionary wall!—
Thus mount we all, scaling with hope and prayer
The inaccessible to foot and hand;—
Oh! happy he, who seeketh that safe land
Where prayer and hope do more than toil and mute despair!

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

Mesmeric Experiences. By SPENCER T. HALL, author of "The Forester's Offering," &c. London, 1845. H. Balliere.

THIS interesting little volume advocates the true method by which the study of Mesmerism is to be advanced. It is a plain, unvarnished statement of the experiences of one man, who tells us simply what he has personally witnessed, and for the truth of which he vouches. No hearsay is admitted; there are no second-hand narratives, no stories that somebody has somewhere told the author. All that he has here set down, he has seen and tried; the facts he tells have carried conviction into his own mind, and in the fullness of his faith he addresses himself to others.

The utility of such a publication as this is twofold. To those who are already satisfied that Mesmerism is a fact in nature, it is interesting as a record of phenomena, many of which will probably be new, and as aids to their own researches, and hints upon which thought may employ itself. To the sceptical or uninformed it will serve as a spur to inquiry. They will argue thus with themselves. "Here is the statement of a man of some note in the literary world, whose veracity I have no right to impugn, who was himself, like me, an unbeliever until he made trial and thus obtained assurance that this which he had believed false was a very truth. He describes the process by which he was converted; he records, with the authentication of names, dates, and places, hundreds of instances in which the alleged phenomena of Mesmerism have been exhibited and cures performed, where the skill of the mediciner had wholly failed, of diseases hitherto deemed incurable. All these cases cannot be falsehoods of the author or imaginations of the patient. There are the names and addresses; inquiry may be made by any who doubt, and if he have uttered that which is false, detection is inevitable. Mr. HALL *may* be self-deluded. I am not bound to believe in his assertion; but this I am bound to do; it is my duty to inquire; as an honest man, I have no right to deny facts I have not witnessed, but should go and make trial of the experiments with my own hands and eyes, and then, and not till then, may I fairly venture upon an opinion on one side or the other."

A perusal of Mr. HALL's volume cannot fail to lead the thoughts of any honest and truth-seeking man through some such train of reasoning as this, and that is all the students of Mesmerism demand. They ask not that any man shall believe on their assertion; they request only that judgment may be suspended until trial made, and they tell the sceptic not to take any thing upon trust, but to go and assure himself by personal experiment whether their statements be true or not. The proof is easy, and it is the only rational and satisfactory one; and if it be declined, then certain it is that the opponent is not honest, and the vain attempt to combat him must be abandoned.

Mr. HALL is a practised writer, and the advantage of it is manifest in these pages. As a mere literary work, it deserves high commendation. The style is rich, pure, and vigorous, as befits a narrative, with here and there touches of loftier strain, that betray the hand of the poet. Hence there is none of the dryness that usually marks a collection of cases. Every description is graphic; every sentence pregnant with thought. Although strictly adhering to his topic, seldom or never wandering into disquisition, the book is as readable as any novel, and more absorbing in its interest, as the wonders of nature surpass the marvels of fiction.

It was at M. LA FONTAINE's that Mr. HALL first witnessed an exhibition of Mesmerism; what he there saw made him an inquirer, and inquiry speedily induced conviction. His first patient delighted him by the exhibition of the phrenological phenomena, which were then but just discovered; and it was the more convincing, as the youth was entirely ignorant of phrenology. Everywhere he found the same manifestations; and one case that deserves especial notice, not so much for its strangeness, for we have seen such, but for its beauty.

As time passed on, other evidence of the same character (making allowance, of course, for peculiar idiosyncrasies) became rife enough. By the cottage fire-side, in Sherwood Forest, or in remote Yorkshire valleys, where mesmerism had never been heard of before, and where the parties operated upon did not know the meaning of the word phrenology, I tried the same experiments with analogical results, and found that the most loutish ploughboys, shepherds, smiths, and weavers, could thus have particular faculties so stimulated by these manipulations, as to manifest for the time the most exalted powers of gesticulation, oratory, and song, each according to his natural gift or bent. There was one young man, of the name of Wilkinson, a penknife cutler, of Sheffield, on whom I operated before Dr. Elliotson, and William and Mary Howett and other friends, in London, and who in his somniloquence composed the most beautiful poetry, the theme of which might be changed, or modified, in an instant, as I moved my finger from one part of his head to another; and that without inducing the slightest pause, or a fault in the logic, or without injuring the measure or rhyme of the poem in any degree! On touching a point in the region

marked in the popular charts as *Ideality*, he began to compose. If, in addition to this, I touched *Philo-progenitiveness*, he would discourse of the beauty, affection, and innocence of infantile life; or, under *Inhabitiveness*, of the scenes of home and of domestic felicity. Under the influence of *Causality*, he would inquire in the most philosophical yet impassioned manner into the origin of nature. Add *Wonder*, and he would penetrate into the dimmest regions of mystery; *Self-esteem*, and he would rhapsodise on the natural dignity of man, and his privilege to explore the vast and the marvellous; *Veneration*, and he would bow with submission, and expatiate on the goodness, and majesty, and sufficiency of God; *Hope*, and he would look with delight for communion with supernal intelligences, and sing of heaven—thus developing the poetry that was in him, as I have known others develope, in an equal degree, their mechanical, oratorical, or histrionic powers. Those who know me and my previous writings, will not wonder that with evidence like this to encourage me, I prosecuted my investigations with increasing vigour and delight.

It is not surprising that so thoughtful a man as Mr. HALL should have been startled by the grandeur of the views that opened upon him as he proceeded with his investigations. He found his silent will, nay, his very thoughts, responded to by susceptible patients. It was evident to him that as yet the laws of sympathy are very imperfectly understood. Without being conscious why, how often do the ideas of persons come up in the mind, and we talk of them, and when they are in sight we use the familiar proverb, and call it a coincidence? May it not be an impression received without consciousness of the manner? Here is an instance.

Being called one day to an intelligent young lady, in a very delicate state of health, and who had first been mesmerised by a female friend, I found her so susceptible that I had only to *will* her to be somnolent and she almost immediately became so. Then, whatever I did ideally she represented actually, even to the extent of conversing with one of her acquaintance, who was not present. I thought of creation, Providence, and prayer, when she knelt most gracefully, and lifted her hands in silent adoration. Then of firmness and independence, when she arose and assumed the appropriate attitude of lofty determination. I next willed that she should approach and shake hands with me, which was scarcely accomplished when, on changing my mood to one of scorn, she turned away and looked indignant. Benignity and other sentiments in myself, were all represented with equal truthfulness by her; until, at last, indulging in a feeling of sober cheerfulness, in which of course she joined, I awoke her from the trance by gentle wafting, when she was utterly oblivious of all that had occurred. On a subsequent occasion, she described occurrences at the moment they were transpiring at a great distance, which in due course were proved to have been exactly accordant with her words; and she even went so far as to divine my very thoughts with accuracy. This was altogether without any observable organic excitement.

Other instances of similar sympathy in a waking state are given by Mr. HALL. In one of them, when experimenting with a sceptic upon the head, it was agreed that the organ to be excited should be written, not named, and the paper passed behind the patient's back. The patient, however, instantly read it, and not only that, but he exhibited the expression of the organ intended to be excited at the instant that the thought came into the mind of the experimentalist.

Mr. HALL adds a large collection of cases that have fallen within his own personal experiences. They comprise cures of a multitude of diseases, and some novel and interesting phenomena. His account of "Little Henry" is similar to that already given to the readers of THE CRITIC in the report of the proceedings of the Society for the Investigation of Mesmerism. Among the diseases cured or relieved are Hysteria, Epilepsy, Headache, Tic Doloureux, Spinal Affection, Swellings, Stiff Joints, Inflammation of the Eye, Deafness, Stammering, General Debility, St. Vitus's Dance, Neuralgia, Paralysis, Gangrene, Toothache, Lameness.

Mr. HALL's greatest triumph, however, was the famous cure of Miss MARTINEAU, since so fiercely disputed by her medical attendant, Mr. GREENHOW. But Mr. HALL's statement throws a new light upon the matter. According to this, the application was made to him by Mr. GREENHOW in the first instance, and it is quite evident that he would not have done this had he considered, as now he says, that the cure was already begun. The dialogue that took place between them previously to Mr. GREENHOW informing Mr. HALL for whom his services were required, is decisive against the subsequent assertions of the former, for it proves what were his impressions at the moment as to the desperate character of the case:—

The following, as near as I can recollect, is the substance of our dialogue:—

Mr. Greenhow.—"The experiments I saw you perform the other evening, Mr. Hall, have certainly impressed me as somewhat remarkable; but without any further reference to them, I would like very well to introduce you to a case—that of a lady who has been long confined to the house—in which I think the use of mesmerism, if true, might be tested with great advantage. I have private reasons for not naming the lady until you have given me your answer. But I may go so far as to observe, that if you knew her, you could not fail, from what I judge of your character, to feel highly gratified by such an opportunity of putting mesmerism to the test; and should you succeed, I am sure you will not have reason to regret it whilst you live. The case is one of internal disorder. The chief object in applying mesmerism to it is the superseding of the use of opiates—that being all, I apprehend, you could do for it; and if you knew all the circumstances attending it, and are as enthusiastic as you seem in the desire to advance your cause, I am sure you would not refuse. The patient lives a few miles from the town, and if you think well we can go this afternoon. Yes, or no?"

My Reply.—"Well, Mr. Greenhow, frank and open in all things myself, I do not like ambiguity in others. You talk of *tests*, as though you were still sceptical about mesmerism, to me, who not only believe but practise it, and since I have no more right to have faith in you, who are a doubter, than you have in me, who am an advocate; and since you are so indefinite, that it is impossible for me to know whom you would have me thus go to, blindfolded as it were; you cannot object, if I consent, that we should be accompanied by some other medical gentleman, who is not opposed to mesmerism, that he might diagnosticate the case and watch the result. This would allow me to infer accurately at any given period, if there were any change in the patient's condition, how far that change might be owing to my manipulations. For, although there may be a powerful sanative influence exercised, it is possible we may have no speedy and striking external indication of it. We must remember (I continued) that Greatrakes and Mesmer, in their cures, seldom or never induced that condition which is termed sleep; yet, from the general, but erroneous opinion, which now obtains, you might consider that condition to be the only test of mesmeric power."

Mr. Greenhow (who had been eyeing me very steadily and keenly during this reply).—"What medical gentleman would you think of for this purpose?"

Reply.—"Dr. ——, who has privately avowed to me his belief in mesmerism."

Mr. Greenhow.—"It cannot be. The delicacy and privacy of the case preclude it. The patient herself would object to the presence, or even cognizance, of another party."

My Reply (emphatically).—"Then, sir, I am compelled, in justice to myself and to mesmerism, to decline the experiment. An apparent failure in such a case might not be set down to any peculiar idiosincrasy, or to my own inability, or to any adventitious influence to which it might be justly due, but to mesmerism, which has already suffered too much from tests that were, in reality, no tests at all; and I would not like it to be said, when mesmerism, or what goes by that name, shall be universally recognised, that I was ever one of those who retarded it by indiscretion."

Mr. Greenhow (with a slight indication of displeasure in his manner).—"You form a wrong estimate, Mr. Hall, of my own motives and the case altogether. It is delicacy and duty towards the patient alone that prevent me being more explicit with you. But as the negotiation seems now at an end, I must take your denial, for which I am exceedingly sorry, and bid you good morning."

As Mr. Greenhow moved towards the door, I begged him to remember that it was not from fear of a fair investigation, but of possible misunderstanding, that I had manifested so much wariness, and that if he knew all I had suffered from medical sceptics, he would not think hardly of me for the course I had taken;—when suddenly turning again towards me, he said—"Mr. Hall, my anxiety regarding this case—the fact that the patient herself is desirous of a trial—that she has suffered long—and that not only herself, but humanity, since she is a very kind and superior person, would gain much if you could relieve her—and as I am not myself without hope that your efforts might be of great service—I will, notwithstanding what has passed, ask you again, and I pledge myself as a man who highly values his character, that if you go with me, whatever be the result, nothing shall transpire at all inimical to your own feelings or reputation, or to mesmerism; whilst, whatever good is done, I am quite sure you will have the credit of, and the fullest justice will be done to mesmerism."

Mr. HALL gives in a subsequent chapter an account of a number of experiments made upon himself. He was first affected by a child whom he was trying to mesmerise. On one occasion he was surprised to find, in his waking state, that a patient on whom he was operating possessed the power of exciting his mental faculties. The result is very interesting, as shewing what is the *modus operandi* in Phreno-Mesmerism.

Directing him to apply his finger to the centre of the posterior region of my head, with a view to test, if possible, whether it was the seat of *Inhabitiveness*, or of *Concentrativeness*—I soon found my anticipation altogether over-ruled by the apparition of *two infants*, so palpably present to me, that I felt as though it would be possible to take hold of them. What is more curious, these were mother and daughter—*a dear sister of my own, as I had known her when an infant, and her daughter, then an infant.* This was evidently a manifestation, neither of *Inhabitiveness* nor *Concentrativeness*, but of *Philoprogenitiveness;* and having no children of my own to engage that affection, it appears to have been occupied by such other fitting objects as stood nearest in relation to me.

The effect of this first excitement being removed, the operator next, by my own direction, placed his finger a little higher, when my native cottage appeared quite as palpably before me as though I had really been at and about to walk into it. This must have been *Inhabitiveness.*

On touching another point in the same region—instead of *one* sole spot—appeared to me, as if concentrated in one scene, *all* the remarkable places I had ever visited. Old cathedrals, castles, parks, mountains, forests—every place of note to which I had made a pilgrimage, all seemed to be combined in one idea, mirrored in one glowing affection; and this was no faint vision: it appeared at the moment a striking reality.

A chapter is devoted to cases of Clairvoyance, Mental Travelling, &c. All of the latter recorded by Mr. HALL appear to resolve themselves into that sympathy of mind which is one of the conditions of the mesmeric state. But one is so beautiful and curious, that we extract it. It was the case of a lady.

She had been mesmerised a few times by another gentleman, but no phenomena of a very exalted character had up to that time been elicited in her case. It was not long, however, before I found her to be so susceptible to the most refined mental influences, that I had only to *think*, when she immediately gave expression to a corresponding thought. I imagined a strain of music, and she said it was as if she heard it; then a beautiful landscape, and she saw and described it as accurately as though a picture of it were before her eyes! When the music was changed, she described the difference; and when my ideal of the landscape changed, after the manner of a dissolving view, she described that too! One of the gentlemen present then wrote upon a paper (which she had no opportunity of reading), what kind of a landscape they wished me next to compose. It was to be a plain, without a river. This she described. The next suggestion, made to me in writing, was that the plain should have a river winding through it, and hills in the background, with cattle grazing in the foreground, and a house in a particular direction. Immediately, she defined this, and it was again suggested, in writing, that I should introduce a plantation of pines at a particular bend of the river, when she said, "Stay awhile; I also see some tall dark trees by that beautiful curve of the river!" During the whole of this time the young lady was perfectly awake, and sat at a distance from me of several yards.

A remarkable case of Clairvoyance was attested by many witnesses.

In the winter of 1843-4, Dr. Willson Cryer, a very candid and dispassionate inquirer, at Bradford, and Mr. W. Prest, brought several striking cases to my notice there. One was that of a poor weaver-boy who, notwithstanding his sad deficiency of education, would display, when in the mesmeric trance, as accurate a knowledge of the internal anatomy of the human body, as if he had been a well-schooled physiologist. At times his lucidity was marvellous, even to a mesmerist; and I always noticed that it was much more exalted when occurring spontaneously than when hastened by our own eagerness, and was exceedingly liable to be influenced by the minds of those about him; so that when tested in an improper spirit, he would reflect the impropriety. On one occasion, Mr. Andrews, an eminent architect residing in the neighbourhood, was desirous that I should mesmerise a subject of this class, for the purpose of obtaining a diagnosis of a disease from which his lady had been suffering for a long period, and under which she was fast sinking, without the Faculty being able to relieve, or even define it. We have the most incontestible grounds of confidence that the little weaver-boy, whom I selected for this occasion, knew nothing of Mrs. Andrews or her disease previously; nor of the interior of the house in which she resided: it is even questionable if he had noticed the existence of it before. It was arranged that nothing should be said regarding her disease and its previous treatment, so that it was impossible he could speak by virtue of any inference drawn from that source, but from his own direct preceptions alone; since not a hint was given him as to the seat of pain, either before or while in the sleep. When I had mesmerised him by the ordinary mode of contact, he went immediately towards Mrs. A., and described her condition at the moment with an accuracy that astounded her; nor was her astonishment lessened when he proceeded to tell her, as minutely as if he had kept a regular diary of her case from the first, how her disease began; how it proceeded; how many, and what kind of doctors she had consulted; and what advice they gave her, with the effect of their various treatment, &c., defining, with the utmost accuracy, every feature of the case from first to last, and what course it was necessary for her then to pursue, to prevent an extension of the disorder. Having done this, and being left to himself for a few seconds, he suddenly exclaimed that he could see all that was going on in the kitchen—into which room he had never been—describing the dresses of the people in it, the form and colour of a dog lying near the fire, and various other matters. Next he said he could see every plant in the greenhouse, beyond the kitchen—although the greenhouse had never been named, and Mr. Andrews declared the boy could never have been in or seen it. He described the relative position of all the plants, as clearly as if he had himself been a party to their arrangement; and at last coming to one that especially pleased him, he was expatiating upon it, when Mr. A. asked him what was the character of the plant rising next to that he was so admiring, when he replied, with a smile, "Why, if you'll just grasp it in your hand, you'll know more about it than you wish, without learning of me." "Right, my boy," said Mr. Andrews; "it is a prickly cactus." The same evening, being invited to meet a few of the most respectable residents, at a party given by Mr. Foster (a member of the Society of Friends), I took this boy with me, when he was no less strikingly accurate in his description of the cellars and chambers of the house (in which he never could have been), noting many things accidentally out of place, as well as others not usual in the places they there occupied, so minutely as to leave no doubt in the minds of many who had hitherto remained sceptical regarding the higher phenomena of mesmerism, that he was perfectly lucid.

We now close this valuable contribution to science, heartily commending it to all who seek an insight into the truths of nature. It is a book that must make the most thoughtless think, and startle the most sceptical into inquiry.

TO THE EDITOR OF THE CRITIC.

SIR,—In the present state of animal magnetism, there are two most necessary works to be accomplished: first, to rescue it from the ignorant contempt of the learned and scientific; second, from the ignorant practice of presumptuous men, who employ it rather as an amusement than a solemn and momentous act of Christian charity.

The only means of rescuing the practice from both these evils (a slow but sure remedy) is, that those who take upon them to magnetise at all, should make a rule of doing it only for serious purposes, *i. e.* the alleviation or cure of disease—and of avoiding curiosity and experiment. I wish every magnetizer would only adopt the rules, and act under the sense of responsibility manifested by M. Aubin Gauthier in his *Traité Pratique*, and the cause would soon stand on a right footing.

And this leads me to ask the aid of any of your correspondents towards improving my own knowledge of the past results of magnetism. First, where is the *Instruction Pratique* of Deleuze to be procured in London? I have tried to obtain it, and the answer of the booksellers is, "out of print." But I know this is often said incorrectly. Can any of your readers inform me where it is to be got?

Again; there is a book repeatedly referred to by M. Gauthier, under the title of *Exposé des Cures:* I am anxious to read this book; can your readers inform me of its full title, and where it is to be obtained? I am, Sir, yours, &c.

A STUDENT.

TO BOOKSELLERS.—*A stamped copy of* THE CRITIC *sent regularly to any Bookseller, for his own use, at the cost of stamp and paper only, on prepayment of* half a year's subscription, at least (4*s.* 4*d.*), *which may be transmitted in penny postage stamps.*

BOOKSELLERS *and Keepers of Circulating Libraries are requested to communicate to* THE CRITIC *the results of their experience as to books and classes of books most in demand, and other similar information. Books wanted to purchase inserted in the weekly list without charge.*

THE CRITIC,

And Journal of Literature.

SATURDAY, OCTOBER 11, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

A GREAT WORK.

AN advertisement in another column announces the provisional registration of a company for the purpose of accomplishing that which all admit to be wanted, to be most profitable, to be certain of success, but which nobody knew how to perform, because the capital required was more than any private purse would supply.

This great work is the establishment of a daily morning journal, which should, in all its appointments, its writers, reporters, correspondents, expresses, and other machinery of a newspaper office — thoroughly equal the *Times*, and at the same time excel it in honesty, in courtesy, and in regard for the commercial interests of the country.

It is obvious that such a work would be practicable only through the medium of a Joint-Stock Company, in which an union of capital and of interests will permit of competition on equal terms with the giant monopoly of Printing-house-square.

Such a company is now in course of formation. Its capital has been fixed at 400,000*l.* by way of security, but with an almost certainty that not more than one half of it will ever be called for. It is proposed to subscribe this in 40,000 shares of 10*l.* each; the shares being fixed so low in order to give to as many persons as possible a direct interest in the prosperity of the journal.

The strict provisions of the Joint-Stock Companies' Act will be ample security to the shareholders against any misapplication of their moneys, and, indeed, the deed of incorporation will provide for this, and will also limit the liabilities of each shareholder to the amount of his share.

The same statute has fixed the amount of deposit which may be taken on the shares in companies that do not require an Act of Parliament (of which this is one) at 10s. for each 100*l.* Thus by the Act no more than 1s. per share deposit can be required, and no more will be called for until the company is finally formed and completely registered, and surrounded by the securities so abundantly provided by the wholesome law of last year.

As to the politics of the new journal, they must be those of strict independence and neutrality of party, but adhesion to constitutional *principles*, keeping pace with the spirit of the times, but not preceding it. It is another advantage of a large proprietary, that no party influences can prevail to warp it from its path of patriotism.

Its name will be short and expressive of its design—The MORNING MAIL.

To the commercial affairs of the country it will especially dedicate itself, and the fullest and most correct intelligence of all kinds under this branch of news will be collected in its columns.

With ample means, it will be enabled to employ the best heads and hands in every department, and establish a regular corps of foreign and home correspondents.

In the distribution of the shares, the first allotment will of course be made to auctioneers, solicitors, booksellers, directors of companies, and others who can aid the journal by their influence. Then the remainder will be divided among the general public, *in the order of their application*.

The profits of a paper so established and so supported cannot but be very great, and as an investment for money the opportunity is an excellent one. It may be as well to add, that as diffusion of the shares is an important object, not more than 100 will be allotted to one person.

Such is the plan of the company. The promoters are prudently unwilling to incur needless cost until it is ascertained that shares will be subscribed. The Publisher of THE CRITIC has undertaken to receive applications for shares until it may be deemed prudent to take an office for the purposes of the company. As the shares will be allotted in the order of application, it would be well to lose no time in transmitting applications, and it is desirable that the opinion upon it should be ascertained as soon as possible, for the regulation of future proceedings.

We shall probably return to this subject, which is really one of great public interest.

JOURNAL OF ENGLISH LITERATURE.

HISTORY.

The History of the British Empire in India. By EDWARD THORNTON, Esq. Author of "India, its State and Prospects," &c. Vol. VI. Allen and Co.

THE preceding volumes of this valuable history have been successively reviewed in the columns of THE CRITIC. The one just laid upon our table completes the work, and, looking at it in its entirety, the judgment pronounced upon it by the reader will be, that while it is wanting in the loftiest qualities of history,—eloquence, philosophy, and that power of word-painting which brings scenes and persons palpably before the mind,—it is nevertheless remarkable for its pains-taking research, for happy selection of the most salient points of the subjects treated of, and for an easy flow of narrative that is less tiresome if less impressive than the stately march usually looked for in the regular history.

The period over which the chapters in this volume extends is from the renewal of the charter to the recall of Lord ELLENBOROUGH through the direct interference of the company. And although Mr. THORNTON was necessarily engaged upon themes of stirring interest, in which his contemporaries have played a conspicuous part, and was called upon to treat of men and measures that belong to our own time and are still within the pale of party politics, he has contrived to preserve the strictest impartiality, and with such rare success, that, on closing the volume, it is difficult to say to which side his personal inclinations lean. This habitual fairness, which must belong to his disposition, adds vastly to the worth of his history; and it is not until the reader has perused a few pages that he learns with how much interest events that have occurred within his own memory may be invested by an impartial narrator; how many prejudices such a book will tend to soften, as he discovers how much of that which at the moment he condemned has proved to have been rightly done, and how, not unfrequently, measures he applauded have failed in practice. This is one of the advantages to be derived from reading a fair contemporary history. It enlarges the mind, subdues prejudices, teaches charity, and humbles self-conceit; and few will rise from the perusal of Mr. THORNTON'S volume without acknowledging some of these benefits to have been produced in himself.

One of its most attractive features is the clear, succinct, and well-connected account of the Affghan war from its inception to its close. Much light is thrown upon the origin of that unfortunate struggle, hitherto hidden under a load of parliamentary blue-books and an avalanche of state papers.

From a volume so varied in its attractions, we might gather much that would interest our readers. But the effect of scraps of history thus taken from their contexts is not a little marred by the isolation, and it is scarcely fair to an historian to permit a judgment to be formed of him upon such garbled

testimony. It is due to Mr. THORNTON especially to make this observation, because the value of his narrative lies in its even current and completeness; and not in brilliant bursts. Hence it is a work that will please more in the reading than in the review, and we hope that a hostile opinion may not be passed upon its character, from the evidence of the few specimens we shall adduce.

The government of Sir CHARLES METCALFE, which preceded that of Lord AUCKLAND, was remarkable for an act the propriety of which has been ever since, and still is, fiercely debated. He established the liberty of the press in India. Mr. THORNTON thus relates an event which, whether for good or evil, is fraught with tremendous consequences to the interests of India.

For a long period preceding the year 1818, the press had been subject to a censorship, a measure first resorted to during the war with France, with a view of preventing the emissaries of the enemy in India conveying intelligence derived from the newspapers published there to the French cruisers in the Indian seas. The Marquis of Hastings was induced to introduce a different system—partly, it may be presumed, by the influence of one of his ruling passions, the love of popularity; but partly, also, by another motive. The editors of newspapers were generally Europeans, and disobedience to the orders of the censurate was liable to be visited with deportation—the Company's government having at that period the power of removing, from all parts of India, any person, not native born, whose residence there was considered dangerous. An Anglo-Indian editor, at length, recollecting that this punishment could not be applied to him, set the government at defiance, and refused to be restrained by the directions of the censor. The government then made a merit of necessity, and removed the censorship, but substituted a set of rules to which they required the conductors of the periodical press to conform. This was regarded as equivalent to the establishment of a free press, or at least it was professed to be so regarded by those who wished to commit the governor-general to such a measure, as well as by the governor-general himself, who uxuriated in the public congratulations poured in upon him with reference to this extraordinary exercise of liberality. The press, indeed, was relieved from the censurate, but editors were enjoined to comply with the rules introduced in the place of that more direct check upon publication—they were rebuked by the government, of which the Marquis of Hastings was the head, when the rules were disregarded, and reproof on these occasions was not unmingled with reference to the power of inflicting summary punishment upon European offenders. The governor-general, indeed, who had eulogised a free press, and taken credit for bestowing this boon upon India, could not, with decency be a party to the infliction of such punishment for using the privilege which he pad professed to grant. His immediate successor, Mr. Adam, was not so shackled; and an editor who persevered, after many warnings, in passing the bounds prescribed by the rules, was ordered to quit the country. The authority of the Supreme Court was subsequently obtained to the passing of more stringent rules, and under these rules one or two newspapers were suppressed. The above were the changes to which the press was subjected in Bengal. At Madras, the censorship had never been abolished. At Bombay, the regulations of the Marquis of Hastings were introduced by Mr. Elphinstone, and the censorship abandoned. The more severe regulations, established in Bengal under the government of Mr. Adam, were subsequently adopted at Bombay; but as the Supreme Court refused to register them their effect was limited. Such was the state of the press when Lord William Bentinck arrived in India, and his lordship, though an ostentatious upholder of liberal measures, made no change. During his administration, indeed, little or no interference with the press took place; either none was needed, or Lord William Bentinck was from principle averse to interference, or it might be that the press was, for the most part, laudatory of the governor-general and his measures. Some attempts were made to induce him to take a more decided course, and his lordship answered, that the subject was under consideration. Consideration, however, was all it received, and it was left to Sir Charles Metcalfe to reap the harvest of popular applause consequent upon removing all restraint upon the publication of opinion. Under his brief and temporary administration, an act was passed repealing the existing regulations, and giving to the press, in regard to the publication of political periodicals, a greater degree of freedom than is enjoyed in England. On this measure, as may be supposed, opinions, both in India and at home, widely differed. By some it was eulogised for its liberality—by others condemned for its imprudence. Of this latter quality it seems impossible altogether to acquit it. Whether the repeal of all restrictions on the press were or were not good in itself, serious objections lay against the time chosen for effecting it, and the circumstances under which it was accomplished. Sir Charles Metcalfe held the reins of government but as the substitute for another. He was aware, not only that his administration was temporary, but that its term would be short. He had reason to believe that his successor was on the sea, and he knew that with the arrival of that successor his authority ended. He might readily imagine that the expected governor-general would be in possession of the views of the home authorities on so important a subject, which Sir Charles Metcalfe certainly was not; and this adds greatly to the amount of his imprudence. He knew that in setting free the press he was binding the government to an act which could not be recalled without multifold inconvenience. The home authorities had indeed the legal power of rescinding the law, but such a step would have been attended by consequences which, to a mind so acute as that of Sir Charles Metcalfe, could not fail to present themselves. He ought not, therefore, to have placed them in a situation which virtually deprived them of the power with which the law invested them. A governor-general permanently appointed ought not to have thus acted—still less should such a course have been taken by a governor-general acting only provisionally. If he thought the press ought to be free, it was his duty to represent his opinion to the home authorities, and to ask their sanction to the passing of an Act to give to that opinion effect. The great danger with regard to governments at a distance from the supreme power at home is, that they should become in practice, if not in theory, absolute and independent. The evidence of history strikingly illustrates this principle, and every advance, in such a direction, should be carefully restrained. These remarks apply especially to the position of Sir Charles Metcalfe. The question, whether or not the press, in a country situated as is India, should be free, is not perhaps so easily answered. It may readily be conceded that in England, and in every country similarly situated, the press should enjoy perfect liberty; that every individual should have the right of publishing, without control, whatever may please him; and that, after publication, he should be liable to no legal penalties, except in cases where he may have offended against the laws of morality, or given utterance to that which is false as well as scandalous. This much may be granted: but then follow the questions—Is India in the same situation with England? and, if not, can the same degree of liberty which may be safely enjoyed in England be safely conceded to India? No one will answer the former question in the affirmative; and before replying to the latter it would be well to bear in mind the many peculiarities of our position in India. A handful of foreigners exercise rule over millions of natives—some of them of warlike habits—many of excitable temperament. We hold our dominion by a native army composed of men such as have just been described. The people of India, too, it should be remembered, have never been accustomed to the use of a free press, nor to any free communication of opinion—they have no experience of free institutions at all; such institutions have not, as with the great Saxon communities, grown with their progress as a people, and gathered strength from their gradual development—they are in India exotics, and like other exotics, are in danger either of perishing from neglect, or, from injudicious culture, of running into wild and rank exuberance.

It is evident that Mr. THORNTON questions the policy of this concession.

It appears that Sir Charles Metcalfe was aware of the dangers attending his favourite measure, and that he knowingly risked those dangers in carrying it out. Alluding to the difficulties of framing a law to restrain the excesses of the press, he expressed his belief that on such a point legislation was set at defiance—that the enjoyment of the liberty of the press involved the necessity of being exposed to its licentiousness. The laws in England, he remarked, had failed in preventing the licentiousness of the press, and he intimated, though with some appearance of doubt, that they could not be made more efficient without endangering its freedom. The expression of doubt was superfluous. Any attempt to give to the law additional means of curbing the licentiousness of the press would certainly destroy its liberty; and in England we must, in the language of Sir Charles Metcalfe, "submit to the attendant evil for the sake of the predominant good." But here the good is predominant. A man in robust health may indulge in exercises which would be injurious to an invalid, and may derive benefit from them. A man of mature age and competent knowledge may direct, to his own benefit and that of society, those powerful elements of nature which, judiciously employed, become useful ministers to the wants of man, but which, in the hands of a child, or of one unacquainted with their management, would produce nothing but mischief. The child in time may become qualified to guide them aright, and India may in time be prepared for an extent of freedom not inferior to that enjoyed by the nations most favoured in this respect. But time is wanting. The freedom of Englishmen is the growth of centuries. Why should it be thought that in India the same results can be suddenly attained by inscribing

words on a piece of paper or parchment? In all colonial communities—or communities which, though not strictly colonial in their origin, are in the position of dependencies—the character of the press is far inferior to that of the parent or protecting country—inferior in talent, knowledge, and high principle. Local squabbles—for it would be wrong to give to such disputes a more dignified name—furnish a large proportion of their material, and local libels supply the place of better sources of excitement. This difference of character Sir Charles Metcalfe seems to have passed over, for he could not have been ignorant of it. With him a free press was a blessing, not only whatever might be the circumstances of the country, but, apparently, whatever might be the character of the press. It is true that, in the course of his address, he did advert to the possibility of freedom being abused, and that he read the editorial world a lecture, by which it is charitably to be hoped they were edified. It is true he warned them that by the abuse of the freedom of the press "its proper influence" was destroyed; but it does not seem to have occurred to him that it still might have an influence which, though not "proper," would be wide and powerful—powerful for evil, though feeble for good. He opened the flood-gates, and then conjured the water to flow softly.

Mr. THORNTON defends the Affghan war with more energy of argument than is usual with him.

In judging of this most important measure, as of all of similar character, two questions occur—Was it just? and if just, was it expedient?

The tenure of sovereign power in the East is for the most part so fragile and insecure, that far less attention is due to hereditary right than might properly be required in Europe. Usurpation is so common, and meets such ready acquiescence, that the possession of actual sovereignty is generally regarded as a sufficient title, if the person in possession be strong enough to maintain it by the only conclusive argument, that of the sword. The family of Futteh Khan, who had usurped the sovereignty of the greater part of Affghanistan, had no very respectable title to boast; neither could their thrones be regarded as possessing any unusual degree of stability. Yet they were treated by the British Indian Government as the rulers of the country which they had appropriated; and as the English were not bound, like knights of old, to enter the lists of mortal combat in defence of all who had been deprived of their rights, they were justified in recognising the authorities (such as they were) which were found in existence, without any very nice inquiry as to their origin. They did thus recognise them, and sought to establish relations of friendship and alliance. Their overtures being rejected, there was no obligation to continue to profess respect for a very bad title, or to abstain from aiding any one who had a better, in seeking to give it effect. Shoojah-ool-Moolk had a better title, for he was a member of the family formerly ruling in Affghanistan, and recently expelled by a violent revolution. No one can say that he had not a right to enforce his claim; *and if this be so, those who aided him could not be wrong*, unless they were involved in some special obligation, which precluded them from lawfully affording him assistance. The English were under no such obligation; for the reigning chiefs of Kabool and Kandahar, when the opportunity offered, had declined to bring them within the operation of any. It cannot be urged that the British Government in India is precluded from interfering in disputes relating to the possession of sovereign authority in other countries; for it is certain that the governments of Europe do interfere on such subjects, and that in our own times many instances of such interference have occurred. Fervently is it hoped that in all cases where interference takes place, those who exercise it have due regard to the question of right; but it cannot be supposed that in any case they altogether overlook their own interest in the success of the cause which they espouse; and it is not too much to believe that a regard to this is generally the chief motive for interfering. The British Government thought it for their interest to interfere in the affairs of Affghanistan for the support of Shoojah-ool-Moolk; but it must not be disguised that his claim to the throne was not indisputable. Mahmood, who like himself had been expelled, was his elder brother: he left a son, who was reigning at Herat: and as Mahmood had been in actual possession of the throne, the title of his son Kamram was valid. As against Kamram, therefore, the title of Shoojah was not unassailable; but in states which would feel it derogatory to be compared with the wild and lawless tribes of Affghanistan, such occurrences as the preference of a younger to an elder branch of the royal house occasionally take place. In France, a prince who has been thus preferred sits calmly on the throne, and is acknowledged by every state in Europe as the lawful monarch of the country over which he bears rule. In Russia, too, which pretends to be a civilized state, the ordinary rule of succession was departed from when its last emperor, Alexander, perished childless. The brother next in age was summarily set aside (for every thing is summary in Russia, even the deaths of its sovereigns), and a younger brother substituted. As the title of Louis Philippe was good against all but the elder branch of his house—as the title of Nicholas was good against all but Constantine—so was that of Shoojah-ool-Moolk against every one but Kamram; and the British Government were not called upon to support a prince who suffered his claim to slumber, and appeared to acquiesce in the diminution to which his dominions had been subjected. If character were admitted as an element of choice, that of Kamram, it may be observed, was by no means calculated to attract. But whether or not the claim of Shoojah was valid against Kamram, was not the question to be settled—it was good against the adventurers who had possessed themselves of the larger part of Affghanistan, and that was enough.

We conclude with his sketch of

LORD ELLENBOROUGH.

Of Lord Ellenborough, as Governor-General of India, it is as yet difficult to speak with the freedom which may be used towards the statesmen of a former age. It is certain, however, that his Indian administration disappointed his friends; and if a judgment may be formed from his own declarations previously to his departure from Europe, it must have disappointed himself. He went to India the avowed champion of peace, and he was incessantly engaged in war. For the Affghan war he was not, indeed, accountable—he found it on his hands; and in the mode in which he proposed to conclude it, and in which he would have concluded it but for the remonstrances of his military advisers, he certainly displayed no departure from the ultra-pacific policy which he had professed in England. The triumphs with which the perseverance of the generals commanding in Affghanistan graced his administration seemed completely to have altered his views, and the desire of military glory thenceforward supplanted every other feeling in his breast. He would have shunned war in Affghanistan by a course which the majority of his countrymen would pronounce dishonourable. He might without dishonour have avoided war in Scinde, and possibly have averted hostilities at Gwalior; but he did not. For the internal improvement of India he did nothing; he had, indeed, little time to do anything. War, and preparation for war, absorbed most of his hours; and in a theatrical display of childish pomp many more were consumed. With an extravagant confidence in his own judgment, even on points which he had never studied, he united no portion of steadiness or constancy. His purposes were formed and abandoned with a levity which accorded little with the offensive tone which he manifested in their defence, so long as they were entertained. His administration was not an illustration of any marked and consistent course of policy; it was an aggregation of isolated facts. It resembled an ill-constructed drama, in which no one incident is the result of that by which it was preceded, nor a just and natural preparation for that which is to follow. Every thing in it stands alone and unconnected. His influence shot across the Asiatic world like a meteor; and but for the indelible brand of shame indented in Scinde, like a meteor its memory would pass from the mind with its disappearance.

We have so often before commented upon this history in the course of its publication in volumes, that nothing more remains to be said of it than that it is one which may be advantageously ordered in the book-club or added to the library.

BIOGRAPHY.

The Life of Mozart, including his Correspondence. By EDWARD HOLMES, Author of "A Ramble among the Musicians of Germany." London, 1845. Chapman and Hall. THIS, we believe, is the first of the Biographical Division of Messrs. Chapman and Hall's monthly series of original works, intended to be published at prices very considerably less than those hitherto affixed to books of such a class. A more interesting subject for an opening volume could not have been selected. Hitherto the only biography of MOZART in our language has been a translation from the French of BOMBET, itself a translation from the German of SCHLICTEGROLL, and at the best a mere sketch, too brief to satisfy the curiosity that attaches to the name of the musician.

Mr. HOLMES, from his acquaintance with the music of Germany, and his personal researches in the neighbourhood where the composer passed large portions of his life, was peculiarly qualified to supply this defect in our literature; and not only has he done it well, so far as sound judgment and literary skill are concerned, but he has enjoyed certain advantages which of themselves would have pointed him out for the task. NISSEN, who married the widow of MOZART, had

made a large collection, in the original German, of the composer's correspondence, intending to arrange and shape it into the form of a memoir. He died, however, before the task of editing was well begun, and the manuscripts were subsequently placed in the hands of Mr. HOLMES, and of course are a remarkable and interesting feature of his Biography.

JOHN CHRYSOSTOM WOLFGANG AMADEUS MOZART was born on the 27th January, 1756. His father was LEOPOLD MOZART, valet-musician to the Archbishop of SALZBURG, who had seven children, of whom two only, *the* MOZART and a girl named ANNA MARIA, survived the period of infancy.

LEOPOLD MOZART was himself a musician of some eminence, and a first-rate violinist; and to his excellent training of the genius of his son the world is doubtless indebted for no small portion of the science that has directed that genius to the noblest triumphs of the art.

Accident, as usual, revealed its presence. The sister, then aged seven, was a skilful player on the clavier. Her brother, then only *three* years of age, would listen with delight, striking the thirds and other harmonious intervals.

At four, he could always retain in memory the brilliant solos in the concertos which he heard; and now his father began, half in sport, to give him lessons. The musical faculty appears to have been intuitive in him, for in learning to play he learned to compose at the same time—his own nature discovering to him some important secrets in melody, rhythm, symmetry, and the art of setting a bass. To learn a minuet, he required half-an-hour; for a longer piece, an hour; and having once mastered them, he played them with perfect neatness and in exact time. His progress was so great, that at four years of age, or earlier, he composed little pieces which his father wrote down for him.

For two years he continued to improve both in play and in composition, and at the age of six it was determined to take him to Munich, and exhibit him to the Bavarian court as a prodigy. His character at this time is thus described:—

The boy was always extremely animated and intelligent. Before he applied himself to music he entered into the usual pastimes of childhood with such interest, that over a pleasant game he would forget every thing, even his meals; but afterwards he lost much of his relish for these recreations, or liked them only in proportion as they were mixed with music. One of the great favourites of Wolfgang, and his especial playmate, was Andreas Schachtner, the principal trumpeter in the archbishop's band; a man of cultivated mind and considerable talent in poetry, the intimate friend of the family. Whenever the playthings were removed from one chamber to another, if this companion were with him, it must be done to music; and he who carried nothing must play or sing a march. Such was the ascendancy that the art had gained.

His disposition was characterized by an extreme sensibility and tenderness, insomuch that he would ask those about him ten times a day whether they loved him, and if they jestingly answered in the negative, his eyes would fill with tears.

His thirst was great for all kinds of knowledge, and he seemed to learn as it were by intuition. Here is a scene at six years old:—

One day as Leopold Mozart, accompanied by a friend, had just returned home from church, he found little Wolfgang very busy with pen and ink. "What are you doing there?" said his father. "Writing a concerto *for* the clavier," replied the boy. "The first part is just finished." "It must be something very fine, I dare say—let us look at it." "No, no," said Wolfgang, "it is not ready yet." The father however took up the paper, and he and his friend began at first to laugh heartily over this gallimatias of notes, which was so blotted as to be scarcely legible; for the little composer had continually thrust his pen to the bottom of the ink-stand, and as often wiped away with the palm of his hand the blot thus brought up, intent solely upon committing his thoughts to writing. But as the father examined the composition more attentively, his gaze became rivetted to the page, and tears of joy and wonder began to roll down his cheeks, for there were ideas in this music far beyond the years of his son. "See," said he, smiling to his friend, "how regularly and correctly written it is; though no use can be made of it, for it is so immensely difficult, nobody could play it." "It is a concerto," returned little Wolfgang, "and must be practised before it can be performed. It ought to go in this way." He then began to play it, but was unable to accomplish more than give a notion of his design. This concerto was written with a full score of accompaniments, and even *trumpets and drums*.

From Munich they went to Vienna, everywhere enchanting their audiences; the talented children were received with enthusiasm, and even the stiffness of Courts was relaxed in their favour, as witness their reception at the Court of Austria, thus described by the happy father:—

At present I have not time to say more than that we were so graciously received by both their Majesties, that my relation would be held for a fable. Woferl sprang into the lap of the empress, took her round the neck, and kissed her very heartily. We were there from three to six o'clock, and the emperor himself came into the antechamber to fetch me in to hear the child play on the violin. Yesterday, Theresa's day, the empress sent us, through her private treasurer, who drove up in state before the door of our dwelling, two robes—one for the boy, the other for the girl. The private treasurer always fetches them to court.

The delicate organization of the young musician was shewn in the horror he felt at the sound of a trumpet; it caused him to turn pale, and fall to the ground. On one occasion he observed that a fiddle was "half a quarter of a tone flatter than mine," and on trial it was proved to be so.

The wonder that his talents created, and the applause that he received, had no ill effects; he remained a simple and affectionate child, free from vanity, dutiful to his parents, who governed him rather by looks than words, and so obliging, that how long soever he might have played, he was always ready to return to the instrument without a murmur, if his father desired it. He carried his obedience so far, that he would not accept presents, still less venture to eat any thing offered him by friends, without permission.

When he had reached eight years of age, his father determined to take another musical tour, in the course of which they visited Paris. But though so well received by the nobility and at all the courts, and laden with handsome presents, they reaped but a poor harvest of money, as appears by the correspondence of the elder MOZART, from which extracts are given.

At Paris he writes, "The people are all crazy about my children." At Versailles the children were received with marked distinction. Here the young WOLFANG published his first work. On this the father remarks:—

The engraver has now in hand four sonatas by Mr. Wolfgang Mozart. Imagine the noise these sonatas will make in the world, when people read on the title-page that they are the work of a child seven years old, and one who, if unbelievers demand a proof, which has happened ere now, is in condition to set the bass, or the second violin part, to any minuet that may be laid before him, without troubling the clavier. You will in time hear how excellent these sonatas are; an *Andante* in one of them is of especial taste. I may tell you that God daily works new wonders in this child. On our return he will, please God, be able to do good service in the court music. He now accompanies at all public concerts. He transposes *prima vista* the airs he accompanies, and everywhere plays off at sight whatever pieces may be placed before him, whether Italian or French.

From Paris they proceeded to London, where they remained more than a twelvemonth. His first appearance at the English court is thus described in a letter from LEOPOLD:—

On the 27th of April, five days after our arrival, we were with their majesties from six to nine o'clock. The present we received on leaving the royal apartments was twenty-four guineas only, but the condescension of both the exalted personages is indescribable. Such were their friendly manners, that we could not believe ourselves in the presence of the King and Queen of England. * * * What we have here experienced surpasses every thing. A week afterwards, we were walking in St. James's-park, when the king and queen came driving by, and although we were all differently dressed, they knew and saluted us; the king, in particular, threw open the carriage window, put out his head, and laughing, greeted us with head and hands—particularly our Master Wolfgang.

On the 19th of May we were again with their majesties from six o'clock to ten. Nobody was present but the two princes, the brother of the king and the brother of the queen. Twenty-four guineas again on going away.

We are going to take what they call a benefit on the 5th of June, though the usual concert season is now over, and as the expenses will be forty guineas we cannot hope to get much. *Basta!* We shall do well enough, if through God's blessing we all keep well, and particularly our intrepid Wolfgang.

The king placed before him pieces by Wagenseil, Bach, Abel, and Handel, all of which he played off. He played on the king's organ in such a manner that his hearers preferred him on the

organ to the clavier. He then accompanied the queen in an air, and a performer on the *flauto traverso* in a *solo*. At last he took up the bass part of one of Handel's airs that by chance lay in the way, and upon the mere bass performed a melody so beautiful that it astonished every body. In a word, what he was on leaving Salzburg is but the shadow of what he is at present; he surpasses all that you can imagine.

They quitted London for Holland; when the little Wolfgang fell ill, and was for some time in danger. On his recovery, he wrote a symphony for the Installation Feast of the Prince of Orange, composed a set of six sonatas, and produced an oratorio!

As usual, success produced envy, and envy, lying and abuse. The *established* musicians of Europe and those of Vienna especially, could not endure thus to be eclipsed by a child, and their evil passions knew no bounds. Open hostility, secret intrigue, were directed against him by turns. But as it has been, so it is now, and so it will ever be. All novelties are assailed after this fashion.

The plan of operation adopted by these gentry (clavier players and composers) is to avoid every opportunity of seeing us, and of inquiring into the scientific attainments of Wolfgang. For why? In order that in the many instances in which they are asked, whether they have heard the boy, and what they think of him, they may answer—that they have not heard him; that it is impossible; that it is all quackery and harquinade; that it is got up beforehand; that he has already learned the things put before him; that it is ridiculous to believe he composes.

Now you understand why they shun us. For whoever has seen and heard, cannot thus speak without the risk of losing his character.

Among other forms of hostility, there was a combination to defeat an opera he had composed by performing it badly. "The whole hell of music," writes the angry father, "has bestirred itself to prevent the talent of a child from being known."

Returning to Salzburg they remained there for a few months, and then departed on a tour through Italy. Their reception was most gratifying. The sensitive Italians were charmed with the talent of the boy, and they did not share the jealous heartburnings of his compatriots, so their applauses were unrestrained and enthusiastic.

Amid the many recorded incidents of this memorable tour, we can take only two or three of the most curious. On one occasion he carried away in his memory and afterwards committed to paper the entire of the famous *Miserere*, preserved at the Sistine Chapel in Rome, in MS. and not permitted to be printed. He accomplished this feat in two visits. From Naples he addressed to his sister, for whom his affection was unbounded, this comical letter:—

Make my elaborate compliments to Herr von Schidenhofen *tralaliera—tralaliera*—and tell him to learn the Repeat Minuet on the clavier in such a manner that he do not forget it. And tell him to *do* it soon, that he may *do* me the pleasure of *doing* him an accompaniment. And *do* make my compliments to all other good friends, male and female, and *do* take care of yourself, and *do* not die—that you may *do* me another letter, and I *do* one to you, and so we continue to *do* till we are *done* for;—still I am he that will *do*, till there is nothing more to be *done*. Meantime I *do* remain, W. M.

At Milan he brought out his opera of *Mithridates* which was entirely successful. Indeed his Italian tour was one continued ovation.

Before their return to Salzburg the archbishop died and a new one was appointed, whose character is thus described:—

In figure he was tall and commanding; much devoted to horses and field sports, and fond of being surrounded by a brilliant assemblage of ladies. He had not the least taste for music, and was long before he could be brought to perceive that there was any thing extraordinary in his young concert-master. When it is added that with his singular qualifications as an ecclesiastic, he combined *hauteur* and moroseness of manner, the relation of the parties may easily be conceived; and although their acquaintance seems to have begun favourably, their good understanding was of short duration.

We have not space even to name his journeyings and compositions during the following three or four years. We meet him once more domesticated at Salzburg at the age of 19, where, for his brilliant services, and for his post in the archbishop's household, he received a salary of about 1*l.* 1s. English per annum!

Three years he patiently submitted to this degradation, and then he resolved to throw himself upon the world and seek his fortunes—offering his services to the first prince who would accept them. At this lapse of time the result would appear to be beyond question. Not so in fact. Genius found not in those days the ready reception it meets with now. Why? Because then it relied upon princes, now it appeals to a public. But hear Mr. Hughes.

The correspondence of this period presents a kind of autobiography, in which there is much of that kind of truth which is said to be "stranger than fiction," and which, in some of its phases, can with difficulty be associated with so fascinating a talent. But if the history of the great musician's first practical acquaintance with life raise indignation at the dulness of the age that could refuse shelter and patronage to one as modest in his demands as he was rare in his powers, it is at least consoling to see the triumph of genius over circumstances. Mozart may be seen unworthily treated; he may occasionally appear in a pathetic aspect; but he is never humiliated, nor dispossessed of the bright reward of his own conscious superiority. And it may be here remarked that even the vulgar distresses, which form but too prominent a part in the adventures of genius, acquire, through the softening influences of time, somewhat of the colouring of romance.

For the details of his wanderings from court to court, in the vain endeavour to find a patron, the reader is referred to the volume, which gives many extracts from his correspondence at this period of disappointment. A very sensible letter from his father follows:—

. . . I must now address you very seriously. You know for how many years together they have been trying our patience at Salzburg, and how frequently both you and I have desired to get away. You will remember, too, the arguments which I used, and which prevented our *all* giving up Salzburg at once. They are now put to the test; great expenses on a journey, and few, or at least very slow, receipts to meet them—what would this be to encounter with a whole family? To have suffered you to go by yourself, and to leave the thousand things that are necessary to be looked after on a journey to your care. You who were unaccustomed to do without assistance; little acquainted with the various kinds of money, and totally ignorant of that of foreign parts; without the least notion of packing, &c.; for you to have travelled under such circumstances, was, at that time, impossible. I often represented to you, that even if you should stay at Salzburg for a couple of years over your twentieth, you would lose nothing; for in that time you would have an opportunity of looking into some other branches of useful science, and of enlarging your mind by the perusal of good books in different languages, as well as of practising the languages themselves. I further represented to you, that a young man, though he should have fallen from heaven, and was enabled to see far, far beyond all living masters, would still never get the reputation he deserved, age being essential to that; and while a man is under twenty the envious, the malicious, and the persecuting find the materials of their trade in youth itself, and an easy argument to prove out of few years small experience. Can you doubt that something of this sort has been at work with the elector respecting the teaching of his children? Moreover, I am as little a friend to servility of conduct as yourself, and you may remember what I wrote about Munich, that you were not to *throw yourself away;* and all these endeavours to be able to stay by the aid of a little society of ten persons are, in my opinion, *too crawling*. You have, however, been thus induced, through the persuasions of good-hearted and well-meaning friends; but these are straw fires that quickly burn out, and end in smoke. That I now wish you an appointment is true—but such an appointment only as you might get at Mannheim, or Munich, or some other place, where you would not be refused an occasional tour; but on my account no appointment *per decretum* for life. If you had such a place for a couple of years only, it would not prevent your travelling into France and Italy. You yourself know well enough that it is through years, and through titles, such as composer to an elector, that consequence and respect are obtained. And it was my opinion, with respect to Munich, that there was no meanness or servility in seeking a temporary engagement there, because that alone would afford the opportunity of displaying the extent of your knowledge and ability; there being so many people about courts who are always ready to prevent this, and time and opportunity being essential to it.

By the advice of his father he abandoned his pursuit after the patronage of petty German princes, and betook himself to Paris, where he hoped to find a public more liberal than his countrymen had proved themselves.

The same ill-fortune, however, attended him here. Every body heard and applauded him, but they did not *pay*. One of his letters describes the manner of this profitless honour.

You advise me to visit a great deal, in order to make new acquaintances, or to revive the old ones. That is, however, impossible. The distance is too great, and the ways too miry to go on foot; the muddy state of Paris being indescribable; and to take a coach, one may soon drive away four or five livres, and all in vain, for the people merely pay you compliments, and then it is over. They ask me to come on this or that day—I play, and then they say, "*O c'est un prodige, c'est inconcevable, c'est étonnant;*" and then "*à Dieu.*"

His mother had come to visit him at Paris, and while there was taken suddenly ill, and died. This terrible misfortune was severely felt by the young composer; the more so, as all the family beside were far distant, and days must elapse before they could even be informed of their bereavement. His letters to his father, on the occasion of this calamity, are full of interest, but too long for extract.

In the mean while the archbishop had learned what a treasure he had suffered to escape, and desirous of winning him back, offered a salary of 500 florins. This was accepted; and on the 26th of September, 1778, MOZART quitted Paris to return to his native city. On his way he visited Strasburg and Munich. At the former place his reception was by no means gratifying. At the latter he first met the lady whom he afterwards married, CONSTANCE WEBER, who became his pupil at the pianoforte, and for whom he contracted a warm attachment. Here he lingered for some time, until, urged by his father, he hastened his movements, and reached Salzburg in the middle of January, 1779.

At this point we must pause, reserving the remainder of the memoir for another notice.

VOYAGES AND TRAVELS.

Scenes on the Shores of the Atlantic. In 2 vols. London, 1845. Newby.

THIS fine long name means nothing more than a Tour on the Western Coast of Ireland, accomplished by a lady who preserves the anonymous. Gifted with keen perceptions and very considerable powers of description, she appears to have taken note of whatever she witnessed as novel or characteristic in scenery, costume, or manners, and afterwards expanded them to the size and shape in which they are now presented to the public. The result is scarcely worth the labour and cost, but the volumes contain much light, pleasant reading, although not of sufficient value to justify a recommendation of them to our readers. A single passage will suffice to exhibit the authoress's manner, and it will do so in its most agreeable aspect:—

THE DECENCIES OF DEATH.

There is one very striking characteristic of the Irish peasantry, and which I believe they possess in common with other nations in a backward state of civilization, an extreme solicitude about their burial. To have a well-attended funeral, to be a "handsome corpse," and above all to be interred with their own kindred, are objects of the highest ambition. Those who are totally regardless of the decencies of life, hold the decencies of death in such estimation, that to procure a good coffin, grave-clothes, and the wherewithal for a "creditable wake," they will undergo the greatest privations. I have known a poor woman pawn her only flannel petticoat on a bitter winter's day to procure a meal for her starving children reduced to pinching want, rather than intrench on the sacred hoard kept carefully for the funeral expenses. Some there are who keep their coffin at the head of their bed for years, and old persons have generally some good clothes stored up to "dress their corpses in." An old woman applied to us for an under garment, and having received one, together with a cap, exclaimed in the greatest joy—"Oh! such linen, fit for a lady; and a cap with elegant frills to it, bordered all round. The likes of them are much too grand for a creature like me to wear. I'll keep them for the day of my death, and they'll look beautiful at the wake." "But," we remonstrated, "they were not given you for that. They are meant to make you comfortable while you are alive, and you must wear them now." "And not have a decent rag to cover me in the coffin! Ladies dear!" she added in the most appealing tone, "sure now you wouldn't be so onreasonable." But we were "onreasonable," and insisted on the garments being worn; suggesting, however, as a mitigation of the case, that as the old woman was so far advanced in years, they might possibly last long enough to answer the double purpose. This was a bright and happy thought on our parts, and our old friend departed, expressing a fervent wish that she might die before such "elegant clothes" were worn out. When I was a child, we had a house-carpenter named Murphy, a very faithful creature, but one to whom the French saying "*ses qualités surpassent ses charmes*" applied most strongly. He was a most ugly man; big-headed, hard-featured, and forbidding-looking. His person was distorted from having fallen off a high ladder in his youth, which had injured his spine and legs, and made him a cripple for life. In short, to any one not accustomed to his appearance as we were, he must have looked something monstrous. One morning, poor Murphy came limping up with a most rueful countenance, complaining of feeling very ill with "pains in every bone in his body, and such an impression on his heart (the lower orders always call chest affections by this name) that he could scarcely draw his breath." He had evidently caught a violent cold. Various remedies were proposed, and he seemed greatly comforted by the prospect of approaching relief. My dear mother recommended a warm plaster to his chest, and gave him one to put on. He looked very suspiciously at it. "This is a warming-plaster, ma'am, is it?" Yes; a very good thing for your oppression." "May be so. Would it hurt a body, now?" "Oh no; you will find it very comfortable, on the contrary." "Thank you, ma'am; but will you tell me, would it leave any mark behind it?" "It reddens the skin a little, that's all." "Ah, that's what I misdoubted all along, from the looks of it. I'm greatly obliged to you, ma'am, and thank you kindly, every bit as much as if I had made use of it. But (returning the plaster), I wouldn't put this on for the world; no, not if it was to save my life. I wouldn't put a mark or sign on myself for all the gold you could give me, or do any thing that would hinder me from making a handsome corpse, plaze God; and that's what I'd be if I was to die this night, without speck or spot, or any such thing upon my whole skin." And no argument could induce poor Murphy, unsightly and crippled and ill-favoured as he was, to run the risk of spoiling a "handsome(!) corpse" by applying the warm plaster. It was a strange, but, among his class, a very common species of vanity.

FICTION.

Ravensdale, a Tale. By a Lady. In 2 vols. Dublin, 1845. Curry and Co.

THE lady authoress of this tale has prudently concealed her name, probably from a lurking consciousness that no honour would be reflected upon it by the production to which it belonged. *Ravensdale*, indeed, is not a bantling for a mother to be proud of, save upon the parental plea that a sickly child is loved the most. It was not necessary to read many pages in order to discover the character of the volumes submitted to us; "the Lady's" entire unfitness for authorship was apparent in the very first page. She has yet to learn the art of writing. Even were she possessed of the other qualifications of a novelist, she is wanting in that essential one of ability to compose agreeable sentences. We would fain hope that she is a very young lady, for then she may amend with practice, and she may be forgiven for rushing into print so unprepared, on the plea of inexperience. If, however, she have reached that most uncertain period of life called "a certain age," we must look upon her case as hopeless, and the remonstrance of the reviewer will be vain.

In all respects, this is so jejune a performance that we should not be justified in dwelling upon it for a moment. It has no pretensions to a place upon any book-shelf, not even upon that of the lowest-class circulating library. We would advise the authoress, if she be young, to practise and study for half-a-dozen years at the least before she again ventures into print, and if she be *not* young, to betake herself to knitting, fancy work, Dorcas Societies—any thing rather than to novel-writing. In the one she will be a very respectable personage; in the other she exposes herself to the pity of the kind-hearted, and the ridicule of the cruel.

PERIODICALS AND SERIALS.

ANOTHER heap of these having accumulated, we proceed, as is our wont, briefly to notice their various claims to patronage. Periodicals and Serials form no unimportant portion of the literature of the day, and no record of that literature would be complete which omitted mention of them.

First in importance are the Quarterlies, of which two are before us. The first is *The New Quarterly Review, or Home, Foreign, and Colonial Journal*, now in its twelfth number, and therefore almost past the perilous season of youth. Its contents exhibit that improvement which only experience can teach. They are extremely varied and interesting, and some of the articles are remarkable for their learning, and others for their graceful writing. The review of "The Novels of the Past Season," belongs to the latter class, and good taste has presided over the critic's judgment. Another paper that has greatly pleased us, is one on "Living German Poets," which contains some clever translations. In a like strain is the article, on "Goldoni and Modern Italian Comedy," evidently the production of one well versed in the literature of Italy. This Quarterly has been always famous for its commercial essays, and here it preserves its reputation by discoursing of the "Commercial Tariffs of Portugal," and "The Financial Policy of Sir Robert Peel." A charming composition, independently of the profound interest attaching to the subject, is the paper on "The Life and Compositions of Beethoven." In a review of "The Dramatic Works of R. H. Horne," the critic exhibits an appreciation of the loftier walks of literature and art, of which we hope to find him a steadfast advocate, not only in this periodical, but in others of more frequent appearance. "Russian Laws and White Slavery," is an examination of the existing social condition of the vast empire that already throws its shadow over Europe. Lastly, an essay on "Railway Speculation," aims at a loftier view of the question than the mere profit and loss. It views the matter as a social problem, and deeming the mania to be the result of the "*auri sacra fames*," it looks upon it as fraught with future mischiefs to the community, and calls for the imposition of some legislative check. In common with all reflecting men, the reviewer regrets that the Government had not at the first interfered to direct the laying down of railways upon a system; even now he thinks it ought to be attempted.

The government, it is alleged, cannot now interfere; they cannot reclaim their abdicated power, or deny to the many what they have granted to the few. It was on this principle Dr. Dodd was hung, because other forgers had suffered before him. And so future generations are to risk their lives and sacrifice their comfort, because others have submitted to the same hazard, and suffered the same inconvenience. The argument is scarcely tenable. The virtue of parliamentary consistency is not always so delicate. On religious questions it has bowed to the rule of expediency; why not where railways are concerned? The rights of property are too sacred. There is only one right of property, that is the parliamentary right to all property where the public interest is concerned. This, if not the principle, is at least the practice. If parliament can drive through a man's house for the benefit of a company, it can drive through an act of parliament for the benefit of the majority, even though that act secures to a company great and peculiar privileges.

The consequences of the mania are thus prophesied:—

We shall be told that speculators are the glory of England, and railroad companies its most patriotic guardians. Counsel will plead—barristers pocket their fees; for this, if not the golden age, is at least for them the age of gold. And when this fair land has become one vast forum for brokers and usurers, and the fortunes of thousands shall have been swept away in some of those panics which are incident to all extensive gambling transactions; when the wild excitement which follows upon all great changes shall have passed away, and men learn that even railroads cannot cheapen bread, or bid sorrow be still, they will bitterly look back upon the conduct of a parliament which acted as the high priest at the sacrifice of the moral welfare of the country.

The Church of England Quarterly Review for October is a publication that well deserves the support of churchmen; for not only is it moderate and rational in its views, but it mingles with its peculiar theme a great deal of excellent general literature. "Scriptural Geology" is the subject of the first article, and it opposes with some warmth the cosmogony of the scientific geologists, whom it reproaches with teaching scepticism under a mask. The next is a sweeping assault upon that world-renowned work, *Vestiges of the Natural History of Creation*, whose positions, or rather, we should say, whose assumptions, it unmercifully demolishes. But, amid a great deal of mere theory and hazardous conjecture, the work has too much substantial truth to be despised. "Mr. Oakeley, and his claim to hold," is next considered, the reviewer deciding in the negative. A very learned article introduces us to "Hebrew Philology." "Infant Schools and Wilderspin's System," are examined minutely by one who brings experience to the aid of his inquiry. This is followed by a pretty severe exposure of "Socialism in France," as it now prevails. "Sacred and Profane Chronology" are compared with vast learning. Some timely remarks are made upon "Mr. WARD'S Secession." "The Congress of Vienna," and "FORSTER'S Arabia," are the subjects of the two remaining essays; and pleasantly vary the more sober and serious contents.

We turn now to the monthly magazines; and first we take up the *Dublin University Magazine* for October, a periodical which has earned the title of the Irish Blackwood. That name will not be dishonoured by the contents of the present number. In literary articles we have another charming group of poems from the relics of the late lamented Mrs. JAMES GRAY. From these we take one that embodies a sweet thought.

TO A CANARY BIRD.

Sing, little bird with the silken wing,
And tell us where thou hast learned to sing.

Thou wast not nurst in the greenwood free,
Thy birthplace was not in the rustling tree,
Where the leafy whispers around thy nest
Might fill the dreams of thine infant breast;
No echo of the wandering rill
Hath taught thee that melodious thrill,
Yet sweetly and gladly it flows along,
Even as the wild bird's happiest song.

Nor hast thou caught the spring's first breath,
And the summer's smiles on the open heath;
That chirp so clear thou didst not learn
From the grasshopper amidst the fern,
Nor hast thou soared aloft to mark
The rising morn, like the happy lark,
Whose notes of triumph overflow
The heavens above and the earth below.

Sing, little bird, fold thy silken wing,
And tell us where thou has learnt to sing.

'Tis not the memory of hills or woods,
Nor the sounding voice of remembered floods,
'Tis not the sweeping of the wind
That hath left its thrill on thy heart behind;
Ever hath been thy doom
A narrow cage and a prisoning room,
Yet dost thou pour forth melody
As sweet as the songs of liberty.

There's a spirit within that heart of thine
That sends a spell thro' its feeble shrine,
At the tone of love that heart can bound,
And echo back its blessed sound,
And day by day that song hath power
To lighten many a lonely hour;
God is thy teacher—the God of love
Who rules the choiring hosts above;
Perhaps thy voice is as dear to him
As the songs of the holy cherubim,
It may be he hears its gladsome tone
Through the musical thunders around his throne.

Sing, little bird, rejoice and sing,
Thy songs arise from a heavenly spring.

An essay on "The Æsthetical Condition of England" is another proof of a growing party among our writers who aim to exalt the character of our literature, by directing it to a philosophy that concerns itself with the world of mind, and contemplates, as FICHTE says, the divine idea that lurks below the external aspect of all things in this world. After reviewing the present prostrate state of poetry, high art, and music in England, the author, nevertheless, does not despair. He considers that we have reached the lowest depths, and that a reaction is nigh at hand, to aid in bringing about which is the design of THE CRITIC. In this eloquence of indignation he repels the taunt that poetry is dead among us.

Let us not then despair! Though fog and cloud obscure the face of day, above them the sun is still bright, heaven is still serene! Even thus, though veiled for a time by the dense exhalations of materialism, the higher ideas of the soul exist in unsullied brightness. Virtue and beauty have not abandoned this world, and the muse of Poesy* still lives.

* "Poetry" is used here (and elsewhere) by a natural *synecdoche*, for the æsthetical principle generally.

Ay, and will ever live! for, do the proclaimers of her demise know the necessary conditions of the death of poetry? We will tell them. First of all, blot from the heart of man the affections which attach his being to beings other than himself, which call forth the dream-like world of sympathy, which waken the fitful music of love, the pure transports of its meeting, the passionate anguish of its parting; which find beauty in forgetfulness of self, sublimity in self-sacrifice—blot out these, for these are in themselves poetry! Next, take his mind. Tear from it at once the faculty of imagination, and the idea of beauty; let him find in the pleasures of sense the highest object of his desires; let him rest contented with the mediocrity around him, conceiving no greater perfection, and therefore aiming at none; let music be to him a mere succession of sounds; let Raphael rank below Teniers; let the statue be a spoilt block of marble; let the azure heaven suggest no higher thought—let

> The primrose by the river's brim,
> A yellow primrose be to him,
> Be this, and nothing more!

Do all this, but think not yet that you have checked the fountain of poesy. No! you must dive still deeper into the mysteries of humanity, you must lay your profane hand upon the *soul*; for there, in that holy place, exists the very spring and centre of the poetic feeling. Quench there the idea of infinity—the vague consciousness of immortality—quench the restless longing for perfection ever wearying of the pleasures of this material life, ever turning "from all that it has brought to all it *cannot* bring"—do this! crush the heart, mutilate the intellect, obliterate from the soul its hope of heaven, its image of God, and then, *but not till then*, will poetry abandon a world which, from a creature overflowing with life and with beauty, has become beneath your suicidal hands, a corrupt and misshapen corse.

In topography this magazine has been always rich, and here we have a delightful paper on "Irish Rivers." "The Whychcots" is an amusing tale. The "Gallery of Illustrious Irishmen," is enriched with a portrait of WM. MAGEE, Archbishop of Dublin. Two political articles are very local in their themes; to wit, "Ireland and her Church," and "Sir Robert Peel and the Protestants of Ireland."

The *Art-Union* for October is a beautiful and attractive periodical. It is devoted exclusively to art, and it adds to clever writing and extensive information, a profusion of pictorial embellishments. A curious article is the opening one—a history of "Head Coverings in England." The variety of forms, when grouped upon the page, makes one smile for their absurdity. Only Prince ALBERT's was wanting to perfect the series. "The Living Artists of Europe" introduces us to CARL HEIDELOFF, of whom a spirited portrait is given. Excellent notices are added of the "Foreign Picture Galleries," and there is a large collection of intelligence relating to art in all parts of Europe.

Dolman's Magazine for September and October continues to be an acceptable addition to Roman Catholic literature, which it ably represents. "Pictorial Art in its Christian Development" is a very fine and thoughtful essay on a noble subject. The tale entitled "The Countess Clemence," by the editor, is also an attractive feature. We much like the gossiping paper called "A Peep at all Things and a few others."

Douglas Jerrold's Shilling Magazine for October more than maintains its ground; it improves in popularity and desert. Besides the clever continued articles we have already noticed, the new ones in this number are attractive. "Serving the People" is a useful commentary on railway accidents. "The Philosopher Married," and "Cromwell in the Shades," are lively and amusing, and not too long. "Confessions of a Quack" convey a moral by which the community might profit.

George Cruikshank's Table-Book for October contains a richly humorous frontispiece from the pencil of the artist who gives name to the magazine, on the happy theme of a "Return from a delightful Trip on the Continent." It illustrates an equally clever prose sketch, entitled "Oddities from the Rhine." The rest of the contents offer nothing calling for special notice. They are not above mediocrity.

The Connoisseur for October is a periodical dedicated to music and the arts. Its best features are a portrait of MURILLO, and a piece of music. The articles are tolerably well-written, but they cannot compete with the *Art-Union*.

The Philathenic Literary Magazine for October is one of those publications which always provoke the question, Who buys? They have no positive excellence—no novelty in any shape; wherefore, then, do they appear?

The Local Historian's Table-Book for September and October is a curious collection of remarkable facts, traditions, ballads, &c. in the counties of Northumberland and Durham; just what a local periodical ought to contain, and which must be popular in its neighbourhood, because its information has a direct interest for every resident. It is illustrated by some very respectable woodcuts of local objects. The diary form is adopted, and the annual volume forms a complete and valuable record of the principal events of the year as affecting those districts. The Traditions, Ballads, and Biographies, are paged separately from the local Chronology. We should expect that every inhabitant of the two counties would possess himself of this repertory of facts.

Knight's Political Dictionary, Part IX. has been so often reviewed and recommended, that we have only to observe that this part extends from International Law to Criminal Law, and includes the now all-absorbing subject of Joint Stock Companies.

The O'Donoghue, by HARRY LORREQUER, Nos. X. and XI. hasten forward the tale with abounding interest, and four spirited engravings increase its attractions.

Memoirs of an Umbrella, by HERBERT RODWELL, Part I. is the commencement of a sort of periodical novel. The tale, so far as it has proceeded, promises well; and the illustrations, from the pencil of PHIZ, are really of a very superior class, both in design and execution; another new feature is the introduction of music. Altogether, Mr. RODWELL's idea is a happy one, and is likely to prove very popular.

The 10th Part of *Fox's Lectures, addressed chiefly to the Working Class*, discourses of such interesting topics as "Harvest Time"—"The Use and Abuse of Sunday"—"Historical and Biographical Associations connected with the Month of October"—"Self Culture," &c. The fervid eloquence which distinguishes these effusions is not their sole attraction; they are the vehicle for a fine moral and social philosophy, peculiarly useful, falling upon the ear stunned with the clamorous contentions of speculators and money-getters, not always very regardful of the means by which they attain their ends. In proof, take the close of the lecture on "The Study of Moral Philosophy:"—

> I would only say,—let the aim of each be not to *seem*, but *to be*, that which he appreciates. Let him look to reality rather than to externals. Let sincerity be enshrined in his very heart of hearts; let him learn from all science and arts—from moral or philosophical writers—that truth—truth to one's self—is the great thing to hold most sacred. If every individual were to do this, and speech were ever the representative of thought, it would be a very short time before some of the world's worst abuses would be swept away, never to be heard of more. The genuine voice of truth and earnestness cannot be disregarded by multitudes, by constituted authorities, or by the loftiest in station. They may cherish the dream that intelligence sleeps, that moral principle is dwindling away in the world, that they can reward patriotism with a gaol, if not a scaffold, and yet never be called to account, nor hear the thunders of condemnatory opinion from millions of voices; but whenever the honest mind in individuals acts for itself—when, regardless of conventionalism, heedless whether one's opinions are the same as those around us, we maintain the sacred truth to ourselves—then, indeed, is the triumph of truth at hand in the world, over thrones, dominations, and powers—over whatever ancient bulwarks or modern prejudices or influences may be opposed to its advancement. Be this, then, the aim of each and all: to become virtuous, moral, and excellent. You have only to be human in the fair, natural, and full development of human nature. The sacred impress is on your own hearts—the voice of God is within you, telling you thus to realize all of which your faculties are capable, and towards which your aspirations point; and thus may be won the finest of eulogies which that great and mighty observer of human nature, Shakspeare, has left us—the noblest praise which he has awarded—containing the very pith and essence of all which each should covet for himself as the epitaph which will do his memory most honour:—
>
> His life was gentle, and the elements
> So mixed in him, that Nature might stand up
> And say to all the world, THIS WAS A MAN.

The 11th part of *Mores Catholici* is as curious a collection of extracts from rare old books, strung together by eloquent original remarks, as were its predecessors, which we have reviewed before.

JOURNAL OF FRENCH LITERATURE.

The Pasha's Slave. By X. B. Saintine. 1 vol. 1845.

We confess—we who are old travellers and sojourners in the East—that few things surprise us more, in the progress of our literary career, than the temerity with which writers—ay, and clever men, who write advisedly and judiciously upon subjects within their own cognisance—venture on the difficult path of oriental fiction, beset as it is with the most intricate and imperative questions of local costume and manners. It is true that, especially to those who have only looked at the East through the prism of imagination, and who have accepted as authority the wild fancies of others as ill-informed as themselves, there is much tempting fascination in the mysterious and gorgeous visions in which they indulge; and thus, in the very security of their ignorance, they invent party-coloured and distorted fables, replete with oriental names, while sinning against oriental feelings and habits; and, unconscious that they are each moment violating not only probability, but even possibility, they amuse themselves by producing hybrid tales which have no legitimate home or country, and which, consequently, can induce only a sickly and unwholesome interest, instead of putting forth their strength in a healthy attempt to embody the consistent and the true with which they are familiar. Such is our cause of regret in the present instance. M. Saintine is a clever man, whose talent has long been acknowledged. He is, moreover, distinguished by a certain eccentricity of style, which is not without its grace; and thus he might very safely have confined himself to subjects whereon he is competent to write, and at less expense of trouble to himself, and with more advantage to his readers, have produced, instead of the otherwise brilliant tale under notice, an attractive fiction of European life.

Such, however, it was not his pleasure to do; and it is the more to be lamented, that upon the very threshold of his task he makes considerable parade of the oriental knowledge of a travelled friend, from whom he professes to have derived his story, as well as to "have profited by his knowledge of men and places." This objection advanced—and we by no means wish to deny that we consider it to be a very serious one—we are bound to award all praise to M. Saintine for the style and finish of the work, and for the industry with which he has endeavoured to portray what he evidently believed to be the details of Eastern costume and feeling. Were it only *possible*, what can be more gracefully touched than this picture of the Mingrelian heroine?

THE PASHA'S SLAVE.

Towards the middle of the month of June of the year 1841, in the *pashalique* of Sivas, in the vast gardens situated near the Red River, a young girl, dressed in the Turkish costume, her head bent upon her bosom, was walking slowly, followed by an old negress. From time to time she turned abruptly, and when her glance, in the midst of the clumps of maples and sycamores, could distinguish the angle of a large building with gilded gratings, and balconies of finely-chiselled cedar-wood, then her complexion, usually of a dull and transparent white, flushed suddenly, her little foot smote the earth, her chest heaved, and it was not without an effort that she suppressed the sigh which sought to escape from it.

Still silent and preoccupied, she paused, and pointed with her finger towards a palm-tree. The negress immediately entered an elegant kiosque a few paces from the spot, and returned carrying a tiger-skin, which she spread at the foot of the tree. After the negress had made several journeys from the tree to the kiosque, and from the kiosque to the tree, the young girl, seated with her legs crossed upon the tiger-skin, and with her back resting against the stem of the tall palm, from which, however, she was separated by a thick cushion of black velvet, held carelessly in her left hand a *narghilé* pipe, with a tube of Persian cherry-wood, and in her right, in a slight stand of gold filigree, shaped like a cocoa-nut, a little cup of Chinese porcelain, which the old slave filled, time after time, with burning moka.

Baila was seventeen; her black and lustrous hair veiled her temples like the wings of a raven; her slender eyebrows, forming a perfect arch, although of the same colour as her hair, were, nevertheless, as well as her long lashes, and the borders of her eyelids, covered with a preparation of antimony, called *sourmah*; a narrow black line, descending vertically from her forehead, separated her arched eyebrows. Other colours had also been employed in order to give more effect to her beauty. The ruby of her lips had disappeared under a slight tinge of indigo; while, by a contrary process, just beneath her eyes, where the delicate network of her veins would naturally produce a light shade of blue, glittered the purple dye of the henna, a sort of vegetable carmine extremely popular in the East, which also reddened the nails of her hands, of her feet, and even her heels, which were visible in her small open slippers, embroidered with gold and pearls. Thus tatooed in the Asiatic manner, Baila was not the less beautiful. Her dress was simply composed of a caftan of velvet, pantaloons of muslin, striped with silver, and a girdle of enchemire. But all the gewgaws of oriental luxury completed her costume. The double row of sequins which trembled around her head, the large gold bracelets which adorned her arms and ankles, and the chains and jewels which covered her hands and bosom, glittered at the extremities of her long flowing tresses, and even flashed upon her pipe, relieved, by a strange charm, her young attractions.

Here is, as we have already admitted, a very glowing picture; and were it only a *tableau de genre*, or a fancy piece, we should be ready to pardon its incongruities and exaggerations in favour of its bold touches and gorgeous colouring; but alas! for the *local* tinting of the work, as faithful critics we are obliged to condemn it altogether; for scarcely one of of its details is correct. The *narghilé*, which is simply a Turkish *hookah*, instead of having a stick of cherry-wood, has a long elastic tube of gilded leather; and this description of pipe, which requires, when first ignited, a powerful effort of the lungs in order to drive the vapour drawn from the bowl through the cistern of scented water, by which the strength and flavour of the tobacco is modified to the smoker, is never used by Turkish females, whose sedentary habits do not leave them sufficient power of chest to expend upon such an amusement. Where *young* Osmanli women *do* smoke—and the custom is so far from being a common one, that it is, before a certain age, always regarded as an excess—they make use of a small-sized *chibouque*, with a mouthpiece of amber, a stick of cherry or jasmine-wood, and a bowl of gilt clay. Then, again, we must vehemently protest against the idea of the beautiful Baila extending her tiny cup of china porcelain, in order that the old slave might fill it "time after time with burning moka." We will pass over the absurdity of a garden *kiosque*, containing a coffee-mill, coffee-roaster, and heated brazier, all three things indispensable to a woman of Baila's rank, ere she could be provided with coffee that she would esteem presentable; but we must hint to M. Saintine that he has degraded his little beauty into as very a drunkard, as though he were to exhibit one of his European heroines engaged upon her second bottle of claret. A Turkish gentleman will rarely venture upon a third cup of coffee between his repasts; and a woman who should do so would be the theme for conversation in all the harems of the neighbourhood. In costume, our author has been guilty of solecisms as great as those which he has exhibited in manners. The favourite of a powerful pasha, with a string of sequins about her head, would be about as consistent as a peeress in a cotton cap; while the "tatooing in divers colours," to which we are introduced in this delineament of Turkish luxury and taste, is positively laughable. Be it remembered that the scene of the story is laid in 1841, when even the use of *henna* was rapidly declining, and *soormah* had already been abandoned by women of rank. The leg-bracelets, or anklets, are another impossible monstrosity, being adopted only by the *almè*, or dancing-girls, the most impure race in Turkey. We will not, however, pursue our objections further, than to regret that M. Saintine, who gives a very stringent rebuke to divers travellers and artists who have invested, by their details and sketches, the slave-market of Constantinople with a character of revolting indelicacy which it is very far from presenting, and who inveighs upon the unfairness of advancing mistatements based on the ignorance of fact, should himself have fallen into the same error. When M. Saintine talks of the fair Mingrelian attending the Pasha in her *palanquin*, we only feel inclined to laugh, and to regret the absence of the elephants who should bear it company; but when he quietly introduces a man, and that man a Frank and a *Giaour*, into the saloon of the harem, during the Pasha's hours of relaxation, and places him face to face with the Turk and his favourite *Odalique*, then we begin once more to question by what *right* a popular author sits down to confound right with wrong, and to put forth absurd and erroneous notions of other countries. Let those who read to learn as well as to be amused decide the point.

The difficulty of producing correct, as well as entertaining fictions, based upon oriental habits and feelings, is sufficiently

manifest in the fact that England has produced only two first-rate Eastern story-tellers, MORIER and FRASER, while France cannot shew one. Both these gentlemen are acclimated alike to the customs and localities of the country about which they write; are familiar with its language, and conversant with its prejudices; and yet how sparingly do they venture upon sketches of harem life and of Turkish interiors, where they must necessarily write from hearsay.

But to return to M. SAINTINE'S story. The fair slave has not sat very long beneath the palm-tree, nor has she exhausted all her stock of moka, when she is startled by the apparition of a Frank, gazing at her (as well he might!) with eyes full of astonishment from the midst of a group of flowering shrubs. In her surprise the cup falls from her hand; their gaze remains rivetted upon each other; the negress has fallen asleep over the fumes of the boiling coffee; and the stranger ventures to approach, and to address the goddess of the spot in very excellent Turkish. Baila has already drawn forth the diamond-hilted dagger, which from time immemorial romance-writers and opera-managers have placed in the girdles of all Eastern heroines, when the negress suddenly awakes, and the adventurous young Frank retreats with all possible expedition, but not before Miriam, the negress, has caught a glimpse of his flying figure. Thenceforward, as a matter of course, all Baila's thoughts are occupied by the bold and spirited young Frenchman; and at length, through the medium of the old slave, who is devoted to her, she discovers that the stranger is still in Sivas, and still endeavouring to obtain another and a more satisfactory interview with the beautiful Odalique of the Djezzar (Butcher) Pasha.

As a natural consequence, the vain and unoccupied favourite soon imagines herself to be in love with the stranger who is willing to incur such risks for the sake of looking upon her once more; and she accordingly takes advantage of the temporary absence of the Pasha, who visits the city of Tocata to levy tribute; and through the agency of Miriam, and a *bostangi* whom she bribes with a rich present, the Frank is introduced into a garden pavilion in a stand of flowers, where he is shortly joined by Baila.

A STOLEN INTERVIEW.

By the pale light emitted from two scented tapers, placed upon a stand, she saw the stranger standing with his face buried in his hand, in an attitude of meditation.

At the rustling of her dress, at the light sound of her footsteps, he looked up, and crossed his hands above his breast in a sort of ecstatic transport; while his eyes, raised to the gilded roof, took so bright an expression, that they appeared to the Mingrelian to have doubled the light about her.

When Miriam had disappeared in order to watch over their safety, and Baila found herself alone with the unknown, with the loved one of her dreams, all at once casting back her veil, she revealed herself to him in all the glory of her Georgian beauty. For an instant she enjoyed in silence his agitation and his astonishment; and then, seating herself at the angle of the sofa, she invited him by a sign to take his place beside her. The stranger, however, remained motionless, his only motion having been that of hastily covering his eyes, as though he had been suddenly blinded. Her vanity satisfied by the stupifying effects of her beauty, Baila repeated her gesture.

Then the Frenchman, although not without considerable hesitation and embarrassment, walked towards the sofa, and, bending nearly to the ground before her, with his eyes cast down, grasped the hem of the long veil which she had flung off, and drawing it forward, with averted head, once more threw it all over her: "Listen to me;" he said in an agitated voice, as he seated himself beside her; "listen to me with attention, Madam; the present moment may become, for you as well as myself, the commencement of a new era of glory and salvation."

She did not understand; she drew nearer to him.

"You were born a Christian, Madam;" he continued; "Mingrelia was your birthplace." Baila imagined for an instant that he might himself have come from the ancient Colchidus—that he had seen her family. * * * "Are you then a friend of my brothers?" she asked; and in that moment of emotion she gently touched his hand. The stranger shuddered, and making the sign of the cross as he rose, he said solemnly—"Yes, Madam, I am the friend of your brothers—of your brothers the Christians, now crushed by the tyranny of a cruel despot, whose nature you alone can soften. The terrible Dahor, master of a part of Syria and Palestine, after having selected as his minister Ibrahim-Sabbar, a Christian, became the protector of the disciples of Jesus Christ. Do you not possess over your master a greater power than Ibrahim could boast over his? God made use of Esther to touch the heart of Ahasuerus; He has marked you, as he did her, with his seal, that you may assist in the deliverance of his people. This has been revealed to me by faith. Thanks to you, the Pasha of Sivas, Ali-ben-Ali, the butcher, the executioner, will no longer turn his rage against any save the enemies of the church; the divine light, descended from the cross of Calvary, has at times penetrated even into the most hardened hearts."

"Wretch!" exclaimed Baila, recovering from the stupor which this unexpected discourse had occasioned; "what are you come to do here?"

"To teach you to weep over your past life; to assist you in washing away your stains; to save you, and to save with you and by you, our brothers the Christians of Sivas."

"Begone, apostle of the demon! Begone!" cried the beautiful Odalique, as, in her turn, she folded her veil about her, in order to conceal herself from his profane gaze; "begone, and be accursed!" * * *

With the intention of appeasing her, and with a supplicating gesture, the stranger made a step forward.

"Do not approach!" exclaimed the Mingrelian.

Then rising, shudderingly, she called for Miriam. She was about to leave the pavilion, still uttering aloud her imprecations, when, the portress thrust hastily aside, the Pasha appeared, surrounded by soldiers, and carrying in his girdle a perfect arsenal of arms of every description.

Either the anger of the favourite had reached its climax, or the sentiment of self-preservation awoke imperiously within her, and rendered her pitiless.

"Kill him! kill him!" she uttered, as she pointed out the unhappy Frenchman to the vengeance of the Pasha.

The young man fastened upon Baila a reproachful and melancholy look, which made her tremble, and then he offered his head to the stroke. A soldier raised his sabre, but Djezza turned it aside. "No," said he, "he must die more slowly." And, glancing alternatively upon the two agitated beings before him, he murmured emphatically this fearfully poetical phrase:—"His blood must not flow forth at once like the water of the fountain, but fall slowly, like that of a spring which issues drop by drop from the living rock."

In the East, there is poetry everywhere.

Then he said a few words in the ear of a Maugrebin slave who stood near him, and the Christian was led away.

Our next extract suggests itself. Startled by the violence of Baila, and by the words which fell from her as he entered the pavilion, Djezzar, amid all his suspicions, finds it impossible to decide upon her guilt, but still his trust is gone, and he resolves upon testing her truth by a brutality worthy of his savage nature. Despite all his reproaches, and his evident acquaintance with all the movements of his Frankish prisoner, the fair favourite soon discovers that her share of blame is still unknown; and she presumes the more readily upon this fact as she never doubts that the fate of the stranger is already decided. Thus mutually deceiving, if not deceived, Baila and her master are once more *tête-à-tête* in the harem, if, indeed, we except a tame lion, the pet and companion of the Pasha.

A HAREM SCENE.

In his palace of Kizil-Ermak, the red river, Djezzar passed the greater portion of the day, extended upon cushions at the feet of his beautiful slave, smoking the roses of Taif and Adrianople, mixed with the tobacco of Malatia or Latakia, adding occasionally a leaf of Naschick, a grain of opium, or even of arsenic (?) to exalt his imagination. Sometimes Baila put her lips to the hookah, and, as they both reclined there, plunged in a sort of waking dream, educed by the juices of the Indian weed and the poppy of Aboutig; the one had visions of the eternal hourii, and the other of the audacious stranger; while the lion Haider, drawing in his claws, stretched himself familiarly beside them. Baila leant negligently on the neck of the formidable animal, while the Pasha dropped his head upon her knees; and it was a strange picture, that of this graceful young creature, clad in gauze, reposing quietly between two ferocious animals. She had long ceased to fear either the one or the other. Both the lion and the man had been tamed. * * *

"Listen!" said the Pasha, enforcing silence by a gesture, and appearing himself to lend an ear to some sound without. She listened, but could hear nothing save a dull, confused, and monotonous noise, like that of threshing.

"What is it?" she asked.

"Nothing—nothing yet," was the reply. Both remained for a moment listening attentively; the noise still continued, but did not increase. Djezzar became impatient, and clapped his hands.

"Have my orders been executed?" he demanded of the Maugrebin slave who obeyed the summons.

"They have, son of Ali; but in vain against this Christian have we employed the cross knotted with lead, or the thongs of

hippopotamus' hide; in vain have we washed and irritated his wounds with pepper and citron-juice; he has neither cried nor groaned."

"What does he do, then?" roared the Pasha.

"He prays," answered the slave.

"Has he revealed nothing?"

"Nothing, son of Ali."

"If my blows cannot move him to speech, my clemency may perhaps succeed," said Djezzar, with a fearful smile. "Let him be brought before me. By Allah! I will teach him how to talk."

When the Mangrebin retired, Djezzar resumed his place near Baila, and became once more, by a rapid transition of will, at once effeminate and luxurious. He caused the slave to retain her position on the sofa, and laid himself at her feet to smoke the *narghilé*, to all appearance engrossed by watching the vapour of his Persian pipe escaping on one side in cloudy volumes, and on the other rising from the crystal vase of perfumed water; and thus he indolently awaited the appearance of his prisoner.

The young missionary, for such he was, who had fallen under the brutish displeasure of Djezzar, contrary to the apprehension of the trembling Baila, does not betray the secret of his mode of admission to the harem. There is considerable power in the scene which follows.

THE CHRISTIAN CAPTIVE.

When, after his preliminary suffering, Ferdinand Lasserre, with his hands bound tightly behind him, was brought before the Pasha, that individual was still lying upon his cushions; his head, and the arm which upheld the tube of the *narghilé*, reposed upon the knees of the Mingrelian, and his lion, Haider, with his forepaws stretched out, his muzzle against the ground, and his eyes half closed, lay near him. At a sign of Djezzar the slaves withdrew, and the Pasha, the Odalique, the Christian, and the lion were left alone. * * * *

"It is then understood," said Djezzar, whose impassibility formed a strange contrast with the enthusiasm of the young Frenchman: "you wish to die, and you shall die; but do you understand the fate which is in reserve for you?"

"Whatever it may be, I am ready," said the captive.

"Then, in this mortal life, you have nothing to regret?"

"Nothing," answered the young man, without raising his eyes, "if it be not that in my last moments I am deprived of the presence of a priest of my holy religion."

Djezzar appeared to reflect, and then a faint smile rose to his lips: "If your desires extend no further," he said, "they may be fulfilled."

At his summons the Mangrebin reappeared.

A few minutes afterwards an aged man, bald, but wearing a long white beard, and fearfully attenuated, was introduced. At the presence of the Pasha he trembled as violently as though he felt that his last hour had arrived. He was a poor Maronite monk, lately sent by the patriarch of Mount Liban, to replace the superior of the convent of Perkinik, who was just dead. On that very day, when traversing this Catholic village of the environs of Sivas, the Pasha had endeavoured to levy a tax upon this miserable convent, in which three monks, clad in rags, lived by the labour of their hands, in the midst of a population as wretched as themselves. Not having been able to extort a sum of money which they did not possess, Djezzar had carried off their superior as a hostage until the ransom should be paid.

"*Kafir*," he said, "you have refused to pay the taxes of the *miri* and the *karadj*."

"The Christians of Liban have been exempted from them since the capitulation of the holy King Louis," replied the unfortunate monk, whose voice betrayed the most violent emotion; "the Viceroy Mehemet Ali holds us exempt also."

"To hell with the old fox!"

"But the Sultans themselves have recognised this law, highness."

"There is no law here save my will," shouted the Pasha.

"What can I do to disarm your rigour?" stammered the poor old man, turning a terrified gaze upon the lion of Djezzar, of which he already believed himself the prey; "I possess nothing in this world but my life, and that I hold at your pleasure."

"And I will take it, if you do not obey me on the instant."

"But for this tax ——"

"By the Koran, who is now speaking of the tax? Of the *karadj* and the *miri* I will hold you free, you and yours—free for ever; and you are at liberty to depart hence, carrying away a greater number of piastres than I claimed from you; but, first, you must curse this dog who stands bound before me." Then, turning towards the captive, he added, "Yes, you are about to die, and to die cursed by a priest of your religion. Inshallah! Will you speak now?" With heroic resignation, Ferdinand Lasserre bent his knee and bowed his head, surrendering himself at once to the sword and to the curse, when he heard the voice of the old cenobite of the Liban, who had spread out his hands above him, exclaim in affecting accents—"If you are a Christian, may you be blessed, my son!"

These holy words were scarcely uttered, when the old man fell, struck by a pistol bullet; Baila, with involuntary horror, threw herself back upon her cushions; and the Pasha, meanwhile, calmly replaced the weapon in his girdle. Suddenly he aroused himself to restrain the lion, which he held back by the mane, as, animated by the scent of blood, it was about to spring with a roar upon the body of the Maronite.

"Remove that carrion," said Djezzar to the Mangrebin, "and leave us."

The body carried away, and the slave gone, turning once more towards the lion, which, with open jaws and wrinkled and quivering lips, was roaring in an under tone, and turning its flashing eyes towards the spot where its prey had lain, "Hola!" he said, caressing it with his hand: "Hola! patience, Haider, you shall soon receive your share; you will lose nothing by the exchange."

He then resumed his original attitude; and while the lion, which he still restrained, continued to roar uneasily, with its eyes fixed on a stain of blood which was perceptible upon the carpet, he addressed himself to Baila, affecting not to remark the agitation which shook her delicate frame.

"Yes, we will divide the infidel between us—each shall have his share. His head shall be mine, his body shall be Haider's, and you, my rose of Ineour, you shall have his heart. Did he not himself bestow it on you? Now, then, go and take it."

Baila, irresolute and full of horror, knew not how to interpret the command. "Go, and take it," repeated Djezzar. "See! look! unable to defend himself, does he not seem to renew the offer? Go, my soul; and if your own dagger will not suffice for the work, make use of mine."

The Odalique bent towards him: "You jest with me, All, do you not?" she murmured in his ear.

"Do you not hear? or will you not understand?" was the formidable answer. This man must die—at once—and by your hand, or I shall believe you to have been his accomplice, and your head shall fall before his own. I swear it by Mahomet and the four Caliphs!"

Being reduced to choose between her own death or giving death to another, Baila felt the blood freeze in her veins, and the paleness of the grave settled upon her brow.

"You hesitate!" said the Pasha.

Her trembling hand moved towards her dagger.

"Take mine," said Djezzar.

The hand of Baila fell back upon the shoulder of the tyrant, and remained there for a time as if paralyzed; her dim eyes turned involuntarily towards the young Frenchman, only that very morning the object of her dreams—towards the young martyr, whose first word might have destroyed her, and who was about to die—to die through her agency—without giving utterance to that fateful word!

"Will you obey?" asked the tyrant, with a gesture of impatient rage.

The hand of the Odalique felt for the shoulder of Djezzar, and wandered as if unconsciously, among the arms in his girdle.

"You tremble; you will not do it? You love him, then?" exclaimed the Pasha furiously.

"Yes, I love him!" answered the Mingrelian; and, with a sudden bound, she buried the blade of his own *yataghan* deep in the bosom of the Pasha.

Although he had received his death-stroke, Djezzar made a movement to seize his remaining pistol, but, in obedience to a gesture from Baila, the lion Haider, excited afresh by the sight of blood, sprang upon his master, and terminated his efforts with his life.

While Ferdinand Lasserre, horror-stricken by this double murder, closed his eyes, and writhed in his bonds, the Mingrelian girl, suddenly endowed with extraordinary presence of mind, collected hastily in a corner of the hall the light furniture and draperies by which it was ornamented, and then, having set the pile on fire, and grasped the cord with which the young Frenchman was bound, she dragged him towards a secret issue which led to the lodging of the Abyssinian negress.

The Palace of Kizil-Urmak, being of Turkish construction, that is, built of wood, was almost entirely consumed.

Despite its exaggeration, it will be conceded at once that M. SAINTINE has produced a tale of great interest, and, so long as he retained his actors upon Eastern ground, the *prestige* of the locality helped his readers very cleverly over the inaccuracies of the story; the climax is, however, "too bad." Little indeed can he understand the nature of Oriental women, when, after having transplanted the haughty Mingrelian to Paris, he metamorphoses her into—an Opera-dancer! She, the favourite of a powerful pasha, upon whom the beams of the sun were scarcely permitted to look, degraded into an

unsexed and unblushing instrument of voluptuous luxury, at once the gaze and theme of a multitude!

That M. Ferdinand Lasserre should, instead of marrying the preserver of his life, very contentedly retain her as his mistress, and assist in her miserable apotheosis, does not startle us half so much. An individual who, at five-and-twenty was crazy enough to attempt conversion after the system which he adopted at Sivas, was very likely to display other symptoms of madness quite as unequivocal during his subsequent life; but how M. SAINTINE could reconcile it to himself to grind under the heel of his fancy the beautiful Baila, the high-souled favourite, the lion-tamer, into a *coryphée*, surpasses our comprehension. Pity it is that his travelled friend was not able to inform him that the cases are by no means rare in Turkey, on the decease of a pasha of rank, of his women absolutely refusing to become the inmates of any other harem where the master is of inferior station; indeed, so jealous are they of their acquired position that, rather than submit to what they consider as a degradation, they will suffer themselves to be shut up for life in some deserted palace belonging to the family and there end their days in weariness and neglect.

The next time we meet this writer, we trust to do so on European ground, where he possesses a *carte du pays*. In the present instance he has frittered away his talent, and, like Tony Lumpkin's chariot, has only found his way home through bogs and byways, all which, although they tend to lengthen the journey, by no means add to its pleasantness.

JOURNAL OF GERMAN LITERATURE.

The History of the Seven Years' War, for the German People, from the pen of RUDOLPH JOHN; *with Portraits of Frederick II. and Maria Theresia.* (*Die Geschichte des Siebenjährigen Krieges, für das Deutsch Volk, bearbeites von* RUDOLPH JOHN; *mit Bildnissen Friedrichs' II. und der Maria Theresia.*) Leipsic, 1844.*

IN these days it is a good thought to write the history of the seven years' war for the German people; what then was wrested and wrung by one party from the other has since brought general benefit to the German nation, thus in full measure compensating for the mournful fact of brother fighting against brother. And it can hardly be said to have been the German *people* who thus rose in arms against each other; the command of kings and princes led them to the field against FREDERICK II., whose conquests in North and South Germany were heard of and welcomed with joy and triumph, even by those who stood under the banner of the enemy. To this Germany owes much of its present national feeling, its national worth, so long seemingly passive; and we have not merely, as GOETHE says, to estimate FREDERICK II. as the most influential founder of our literature,—not only in this intellectual light must we regard him,—but we must look upon the history of his deeds as a bond of firm interest to Germany at large, firm in proportion to the distinctness of its separate parts. The many volumes of memoirs, &c. published during late years, memoirs of all or any who excited interest in those times, are of themselves sufficient evidence of this; and we may add to them the excellent parts referring to FREDERICK II. in TIECK'S novel, *Die Gesellschaft auf dem Lande*. Neither must it remain unnoticed, that the new direction and political form of Germany, which, during a peace of almost thirty years, has ripened and developed the noblest deeds in art, knowledge, industry, and commerce, owe their present condition, if not their entire origin, to the deeds of FREDERICK II. and his compatriot. All this, and many other considerations, combine to give the seven years' war not only the utmost weight in Prussian history, but to lend it, also, a deep significance for all Germany. And nothing but unjust and one-sided animosity to Prussia can deny that its consequences, notwithstanding the war of the Revolution, and the evils of the French invasion, are still visible, and that the true history of FREDERICK II. yet lives both in the mouths and the hearts of the people.

We know not whether the editor of this work be a Prussian subject or not, but we must give him our testimony that he has described the actions of the heroic king and his followers in hearty good-will and honest admiration, without at the same time discarding strict impartiality or love of truth. With the praiseworthy feeling that it is essentially impossible to separate Prussia and Germany the one from the other, he has kept in close view the interests of Germany at large, with the consequences of the war to the entire nation, even though, as we before remarked, the latter were not clearly evident until long after its termination. His immediate predecessor, as writer for the people, ARCHENHOLZ, wrote as a Prussian officer would write, and it is not to be denied, that owing to the immediate influence of events upon himself, owing also to his intimate acquaintance with military affairs, and also to his lively reminiscence of the Prussian monarch, for whom his veneration is evident in every line, his book acquired a popularity which it has retained almost to the present day. The advantages of personal inspection were, of course, not in the grasp of Herr JOHN, but he had that of bringing to the benefit of his contemporaries the great stores of information which from that time to this have gradually been accumulating on the subject of the war. He has not only had the invaluable good fortune to be able to use the writings of one so learned as PREUSS, whose "*Lebensgeschichten Friedrichs*" deservedly ranks among the first works of its class which modern historical writing has produced; but references to other excellent works have been open to him, such as the entertaining *Beiträge* of STUHR; the clever and authentic biographies of the Prussian heroes, by VARNHAGEN VON EUSE; the industrious collections of RODENBECK, and the military works of RETZOW, COGNIAGO, GAUDI, THIELE, and the officers of the Prussian staff, which, in value and variety of information, far outweigh the highly prized work of TEMPELHOF, of the time of ARCHENHOLZ. Though we cannot perhaps find directly the immediate traces of such authorities, the sensible use that has been made of them is evident in the general tone of the work, rendering it such as must prove a source of information to the young, and of willing entertainment to the old.

When now we turn to details, we shall see that every battle, every siege, is described with as great care and freedom as is within the power of a non-military writer. For example, we may cite the battles of Prague, Rossbach, Leuthen, Zorndorf, Rollin, and Hochkirch, the blockade of the Saxons at Pirna, the disaster of Fink at Maxen, the sieges of Olmutz, Dresden, Schweidnitz, and Kolberg, in all which the author has made industrious use of his knowledge of the ground (whether acquired from personal observation, or merely from books, we know not); and in particular we must refer to the description of the camp of the Prussians at Bunzelwitz, in 1761, and of the battles of Tongan and Burkensdorf. We may also thank Herr JOHN for his clear analysis and representation of the oblique line of battle, so celebrated through FREDERICK II. The earnest desire of the author to make his own impressions clear is to be seen in the industry he has bestowed upon the details of various military operations, in which respect he stands far beyond ARCHENHOLZ, especially in the painting of the campaigns of Prince HENRY of Prussia, and the Duke FERDINAND of Brunswick, the important victories of Strehla, Freiberg, Minden, and Crefeld.

In another respect, too, we may rank Herr JOHN above his predecessor; namely, in the clearness with which he has represented the diplomatic relation of the various powers to FREDERICK II.; even though, upon examination, we cannot discover him to have made use of the latest information on the subject: we mean that which is to be found in the fragment of MITCHELL'S Memoirs on the Outbreak of the War, in SCHMIDT'S *Zeitschrift für Geschicht-wissenschaft*. He has, too, employed the information brought to use by STUHR in the best manner for a work of this popular nature (which rarely need enter into the intricate details of controversy), simply applying it where necessary, and thus casting a better light than has hitherto been thrown upon this period of the war; without, however, at any time losing himself and his readers in the voluminous particulars which many authors might have followed. We allude, especially, to the great want of unity among the allies, and the unceasing efforts of the French delegates, of MONTAZET, MONTALEMBERT, MESNAGER, and others, to maintain it, such as it was; also the internal divisions between the French general and his court, and the differences between the Austrian and Russian generals, by means of which ,after the battle of Kunersdorf, a powerful action against FREDERICK was rendered utterly

* Translated from the "*Blätter für Literarische Unterhalten.*"

useless. How extremely advantageous disunion of this kind, or the perplexing and contradictory commands of Vienna, must often have proved to FREDERICK, in many a case of extreme distress, is every where evident, yet without in the least disturbing our estimation of his powers or his fame; for the greatest of generals is always willing to allow that his deepest plans have found their most fortunate allies in the ill-fortune or improvidence of his enemy. Political reflections are but thinly scattered through the work, in our opinion much to the advantage of a strictly popular history; such as there are, as the political position of FREDERICK and his opponents, are skilfully and accurately detailed.

Impartiality is a striking feature of the whole. The author is, as we before remarked, a sincere admirer of the Great FREDERICK and the deeds of his warriors, but he is fully open to the many faults of his system of military tactics; as, for instance, the operations at Kollin, Hochkirch, and Kunersdorf, and he is likewise the advocate of the brave BEVERN against the unjust treatment of FREDERICK. Neither in any way does he dim the glory of Austrian bravery. To General DANN he accords the admiration his penetration, his great experience, and immovable self-possession must always excite: while General LOUDON is represented such as his remarkable talents and powers as a commander in the field have ever merited. The acount of the army itself is thrown off with the vivid colours of an ARCHENHOLZ; in particular the unwillingness of the Wirtembergers to raise their arms against the Prussians. In reference to this fact, the feeling of which was fully shared by the Pfälzer, Zweibrücker, and other troops, the Stuhr papers contain much valuable information, which might well have been interwoven into a popular work. Herr JOHN, however, has represented the matter on its real footing without losing himself in that hollow declamation by which KOPPEN, a few years since, so much disgusted the genuine admirers of FREDERICK. We will, in evidence, produce a short passage. It speaks of their political condition in the winter of 1761:—

> The higher the balance rose in favour of Frederick, so much the louder were single voices raised, so much the more general became the conviction that with the fall of Prussia a deep and incurable wound would be inflicted on the German nation at large. The fiery spirit, which, since the battle of Molnitz, like an electric spark, had kindled in the heads and hearts of the Prussians, and led them on to follow joyfully the sun-flight of the Royal arms—this spirit threatened once more to expire under the ruins of the falling monarchy. The thought alone was dispiriting. While thus the mass of the German people, even those who followed the banners of the enemies of Frederick, unanimously regarded the fall of the King with that reverential awe—that silent grief—which we all feel at the disappearance of the great, the more educated and far-seeing measured, with gloomy hearts, the coming future, whose foundation seemed to be based on the tombstone of the Prussian monarchy."

We have also a careful yet concise investigation into the condition of the French army—its internal disorder and want of organization; but of this, and the disinclination of the people themselves to the war, we have many interesting examples in STUHR.

The regard we entertain for our author, and the expectation we indulge of shortly welcoming a second edition of his labours, induces us to add a few remarks. Herr JOHN thus has, indeed, furnished us with several interesting anecdotes of the personal life of the king, both in field and in camp; but, in our opinion it needed many more of these characteristic traits, well-known anecdotes, and authenticated sayings of FREDERICK, such as have maintained the memory of "old Fritz" alive in the hearts of the people until our times, to render his work complete. Among these we would class the occurrences both before and after the battle of Leuthen—the conference with GELLERT at Leipzig, in the winter of 1760—several little traits of the king's intercourse with his soldiers, such, for instance, as NICOLAI has collected in his *Anecdotes of King Frederick II. of Prussia*—and lastly, the occurrences at Berlin during its possession by the Russians and Austrians, in 1760. If, also, the sacrifice of the Frenchman, ASSAS, is not omitted and the meditated treachery of the Baron WARKOTSCH is so fully described, then surely such a man as NETTELBECK deserves the warmest praise, instead of being passed over in utter silence; likewise the noble conduct of FRAU v. TRESKOW, so fully detailed in PREUSS, and that of GOTZKOWSKI in Berlin, who, for the great services performed for his country, was treated by the king with the same neglect that he has met at the hands of Herr JOHN, although the materials for lengthened accounts of him were to be found in PREUSS. For in that work, although in its very nature compressed by the gathering together of innumerable notices, an amazing store of learning and instructive amusement is to be discovered. For instance, we are of opinion that the circumstance of FREDERICK restoring their honours to the regiment Anhalt-Bernberg, at Leignitz, would have been better detailed, had some use been made of the account given in PREUSS; which, at the same time reminds us of MARSINNA'S work, entitled *Regierungs geschichte Friedrich II.* which appeared in 1788-90, and by means of its various anecdotes forms an entertaining book for all the world. Neither should we have omitted many epigrammatic sayings of the king, also to be met with in PREUSS; such as his testimony to the honour of Lieutenant-Colonel LESTWITZ, after the battle of Torgau—"PRITTWITZ has saved me, but LESTWITZ has saved the state" (PREUSS' Jahrbücher für Wissenschaftlicher Kritik, 1842); and many others to be met with also in VARNHAGEN VON ENSE. Lastly, we must observe, we miss several of the most beautiful and powerful passages of his correspondence with his friend and sister, to whom he wrote in his deepest troubles and anxieties; to say nothing of his address to the Marquis D'ARGENS, 28th Oct. 1760, before the battle of Torgau, and his excellent letter to Prince HENRY, when the latter was desirous to lay down his command in the August of the same year. This became first known through the means of PREUSS, who, it may be observed, made an admirable selection from the superabundance of treasure offered him. Some of these letters would really have proved an addition to Herr JOHN'S work.

It is likewise deserving of praise that the author carries us at once, without long preface, or useless parley, into the very centre of the proceedings. We find also confirmation of the well-known tale, that the Queen of Poland was forcibly dragged from the spot where the archives were deposited, upon the entrance of the Prussians into Dresden. The latest information on this subject could however be obtained from the original papers of Major VON WANGENHEIM, which were also made known by PREUSS in his *Jahrbücher für Wissenschaftliche Kritik*, 1841. There, likewise, are to be found the communication by means of which the Court of Berlin acquired such accurate information concerning the designs of other courts against itself, all which is well worth perusal.

We have before remarked, that Herr JOHN clearly understands what the tone of a popular work should be; combined therewith, his language is fresh and flowing; the occasional leaning to the poetical will be pardoned in a young author, together with the one or two freedoms in which he has necessarily indulged. In conclusion, we may observe that, during the seven years' war, there was no Prussian grenadier regiment of WREDE (as the grenadiers were merely in battalions), that the commandant of Berlin, in October, 1757, was General ROCHON, not "ROCHAN;" and that, lastly, mention must be made of a little town of Korbach, not "Korbeck."

TO THE DARKLINGS.

[Translated from a German poem in a little anonymous collection entitled *Ronge-lieder*, that is to say, songs composed with reference to the Ronge movement. They are much in the style of Herwegh's productions, displaying fire and energy rather than poetical beauty, and it is perhaps from Herwegh they emanate. The German title to the following poem is "Die Finsterlinge."]

On the throne of sacred justice brutal might again to rear,
And to force the whole creation a vile slavish form to wear;
And the sky with clouds to cover, when the sun is glad and bright,
And to bury ev'ry nation in its old and deadly night;—

And the youthful Easter morning, in its majesty sublime,
With the impious blade to scratch out from the almanack of time;
In the very bud to stifle revelations as they rise,
Truth to overload with curses—honour to bestow on lies;—

And to shriek throughout creation, yelling "Backwards!"—word profane,*
And by form and rule to slaughter what the mind's exertions gain;

* Und das ungeheure "Rückwärts" hinzukrächzen durch die Welt.

And the hand on culture's dial to turn back, and check the tone
Of the silver bell of freedom, when it scarce has sounded One;—

And a code of laws to fashion, treating man but as a *thing*,
Which, as despots, they encompass with oppression's iron ring—
Yes, a code that makes the freeman a machine and nothing more,
And deprives the salt of savour, and forbids the mind to soar;—

'Tis for this the Jesuits labour—yes, 'tis this the darklings plan,
Who an impious game are playing with the holy mind of man.
But, ye brave and skilful miners, in your gloomy vaults beware,
Lest your own dread mines, exploding, hurl you thund'ring through the air. *Times.*

GERMAN LITERARY INTELLIGENCE.

(*From our Correspondent.*)

MUNICH.—Following the example of the etching club of London, several artists have here formed themselves into a small society, and of their works three numbers have already appeared. DYCK, EBERLE, GAIL, KLEIN, MORGENSTERN, NEUREUTHER, VOLTZ, ZIMMERMAN, and others, may be named as belonging to it. We may refer to some beautiful landscapes in the first number by WURTHLE and KIRCHNER; a fine cattle-piece by VOLTZ; a view of Padua by GAIL, in the second number; and an exquisite engraving from BREUNHAUSER, as among the best things that have yet appeared.

We must record the death of the talented architectural painter, HEINRICH SCHONFELD, at the age of 55 years. His sketches, which were remarkable for their beauty, consisted chiefly of views in the ancient German style, antique gates, market-places, &c. as those of Prague, Basel, Nurnberg, &c. We must mention the demise of another distinguished artist, DANHAUSER, of Vienna. He was born in that city in 1803, and member of a highly respectable family. At first, a pupil of PETER KRAFFTS, he devoted himself to historical painting, but after a short time discovered the bent of his genius to be in another direction. He died of a nervous fever in the flower of his age.

At Hague, died the Baron CALLOT D'ESCURY VON HEINEVORD, the distinguished author, known chiefly by his work on the arts and sciences of Holland.

The architect MANCH, professor at the Polytechnic Institution of Stuttgard, has been honoured by the King of Wirtemberg with the Order of the Wirtemberg Crown.

Professor OESTERLY, of Gottingen, has been called to Hanover as court painter, only on the condition that his lectures are continued annually at the University.

Among the artists lately honoured with the gold medal by LOUIS PHILIPPE, were the German artist RUDOLPH LEHMANN, and the Danish miniature painter, JOHANN MOLLER.

The artists TUGNES, HORACE VERNET, PAUL DELAROCHE, and ROBERT FLEURY, of Paris, have been nominated members of the academy in Amsterdam.

In order to accord a mark of especial favour to the author and artist D'AZELIO, his Majesty has commanded all succeeding numbers of the *Galleria Reale di Torino*, edited by him, to be printed in the Royal Albertus Academy of the Fine Arts.

HAVRE.—The society of the friends of art have here resolved this year to establish an exhibition of painting in the neighbourhood of the museum.

BERLIN.—The sittings of the Archæological Society have been described as extremely interesting in their nature. Some papers read by HERRN BOTHICKER and CURTIUS on Grecian art, and a detailed description of the Valley of the Eurotas, attracted much attention.

It is stated by the committee for the management of the WEBER monument, that the theatrical representations in Berlin, Dresden, Munich, and Nurnberg, have already collected so large a sum, that it has been resolved to erect a bronze statue of the distinguished musician.

At Genoa, the birthplace of COLUMBUS, a monument is about to be erected to his memory.

CHRISTIANA.—The monument, by desire of King CARL JOHANN, to be erected to Count VON WEDEL-ZARLSBERG has been completed. It consists of a colossal bust of the count in white marble (the work of JOHANN MIKKELSEN, a Swedish artist, now resident in Rome), which rests upon a lofty pillar of red granite, on which are inscribed the words—"The King of Sweden and Norway, CARL JOHANN, to his friend the Governor-General Count VON WEDEL-ZARLSBERG. MDCCCXLV." At Christiana, a society of the learned, artistic, and literary, has been formed for the preservation of the antiquities of Norway. Their aim is to travel through the country, and take drawings of all the most distinguished monuments of art; and the engravings, which will afterwards be published, are to be accompanied by short but accurate descriptions.

JOURNAL OF AMERICAN LITERATURE.

Longfellow's Poets and Poetry of Europe.

(*Continued from page* 468.)

ICELANDIC poetry has the same general characteristics as the Anglo-Saxon, being equally abrupt, obscure, and bold, though it has a wider compass, and displays more imaginative power. The Skalds or minstrels were numerous, forming a distinct profession, and their songs cheered the long winter evenings for the people, and added to the entertainment on great festive occasions. Two causes operated chiefly to nourish the taste for song, and to determine its character; the wild and striking mythology which constituted the Icelandic religion, and the impressive forms of external nature in that volcanic island of the Northern sea. That huge and restless Hecla, continually throwing flame through ice, and imparting a ruddy tinge to the night sky and to the vast plains of surrounding snow, was enough in itself to nourish a superstitious and fanciful spirit among the people. Familiar objects seemed wildly transformed and spectral, when viewed by that strange glare. The rude natives were awed by such fierce contrasts and marvellous sights; and the popular stories current among all barbarous races received in their case a deeper tone of solemnity, and took more powerful hold of the feelings. CARLYLE happily describes in a few words the ruling trait of their religious faith. "The primary characteristic of this old Northland mythology I find to be impersonation of the visible workings of Nature,—earnest, simple recognition of the workings of Physical Nature, as a thing wholly miraculous, stupendous, and divine. What we now lecture of, as Science, they wondered at, and fell down in awe before, as Religion."

HERBERT and W. TAYLOR have furnished most of the translations of Icelandic poetry that are included in this volume. Those executed by the former have some artistic finish, and are more attractive than the bald versions of the latter. We quote a few stanzas of a gentler strain, from HERBERT's translation of *The Dying Song of Asbiörn.*

Know, gentle mother, know,
Thou wilt not comb my flowing hair
When summer sweets return
In Denmark's valleys, Svanvbide fair!
O, whilom had I fondly vowed
To hie me to my native land!
Now must my panting side be torn
By my keen foe's relentless brand!

Not such those days of yore,
When blithe we quaffed the foaming ale;
Or urged across the waves
From Hordaland the flying sail;
Or gladly drank the sparkling mead,
While social mirth beguiled the hour.
Now, lonely in the narrow den,
I mourn the giant's savage power.

Not such those days of yore,
When forth we went in warlike show:
Storolf's all-glorious son
Stood foremost on the armed prow,
As, sailing fast to Oresound,
The long-keeled vessels cleft the wave.
Now, tolled into the fatal snare,
I mourn beneath the sorcerer's cave.

Not such those days of yore,
When conquest marked proud Ormur's way,
Stirring the storm of war,
To glut the greedy beasts of prey:
Beneath his thundering falchion's stroke
Flowed the deep waters red with gore,
And many a gallant warrior fell
To feed the wolves on Ifa's shore.

Not such those days of yore,
When, south on Elfa's rocky coast,
Warring with weapons keen,
I fiercely smote the adverse host:
Oft from the loudly sounding bow
Ormur's unerring arrows flew,
Deadly, whene'er his wrath pursued
The bold sea-rover's trusty crew.

The copious poetical literature of Denmark, extending from the ballads, which belong to the thirteenth century, to the highly finished productions of OEHLENSCHLAGER, the great Danish poet of the present day, has afforded an abundant

harvest to the translators, from whom Mr. LONGFELLOW has gathered rich and attractive material. The names cited are less familiar to common readers than those of the eminent German poets, and this portion of the volume consequently has an air of freshness, which enhances the intrinsic merit of the borrowed poems. The old Danish ballads, which embody many of the popular traditions of the North, have been translated by JAMIESON with great fidelity into Lowland Scotch; the affinity between the two languages being so great, that versions can be made from one into the other with much facility. Indeed, the most ancient form of the Scotch, into which the older ballads have been turned, is about as difficult to the ordinary English reader as the original Danish. Among the other poets of Denmark, of whom specimens are given, besides those who are our contemporaries, are TULLIN, EVALD, STORM, THAARUP, HEIBERG, and BAGGESEN. Of these, EVALD is one of the most remarkable, having been pronounced on good authority to be "one of the most perfect lyric poets the world has ever seen." He passed most of his life in obscurity, dying in 1781, at the age of thirty-eight, and the fame which should have cheered his manhood has since been heaped upon his tomb. LONGFELLOW'S spirited version of his *King Christian*, which has become the national song of his countrymen, may enable the reader to judge of the justness of the comparison that has been instituted between him and CAMPBELL.

King Christian stood by the lofty mast
In mist and smoke;
His sword was hammering so fast,
Through Gothic helm and brain it passed;
Then sank each hostile hulk and mast
In mist and smoke.
"Fly!" shouted they, "fly, he who can!
Who braves of Denmark's Christian
The stroke?"

Nils Juel gave heed to the tempest's roar;
Now is the hour!
He hoisted his blood-red flag once more,
And smote upon the foe full sore,
And shouted loud, through the tempest's roar,
"Now is the hour!"
"Fly!" shouted they, "for shelter fly!
Of Denmark's Juel who can defy
The power?"

North Sea! a glimpse of Wessel rent
Thy murky sky!
Then champions to thine arms were sent;
Terror and Death glared where he went;
From the waves was heard a wail that rent
Thy murky sky!
From Denmark thunders Tordenskiol';
Let each to Heaven commend his soul,
And fly!

Path of the Dane to fame and might!
Dark-rolling wave!
Receive thy friend, who, scorning flight,
Goes to meet danger with despite,
Proudly as thou the tempest's might,
Dark-rolling wave!
And, amid pleasures and alarms,
And war, and victory, be thine arms
My grave!

Extracts are given, perhaps in too great quantity, from English versions of the poems of OEHLENSCHLAGER, most of them being by Mr. GILLIES, a contributor to *Blackwood's Magazine*. Among them are specimens of his three dramas, *Aladdin*, *Hakon Jarl*, and *Correggio*, and several of his miscellaneous pieces. These appear very striking and beautiful, even under the disadvantages of a translation; but we doubt the propriety of allotting to them so much as thirty pages in this volume, which is more than is afterwards devoted to TEGNER, and more than to GOETHE and SCHILLER united. Professor FELTON has supplied a very biographical and critical notice of OEHLENSCHLAGER.

The poets of Sweden, with the exception of TEGNER, are hardly known even by name to the English reader. The editor regrets "that the extracts which follow are so few, and from so few authors; and in particular that I have been able to find no English translations from NICANDER, one of the most distinguished of the younger Swedish poets; nor from LING, one of the most voluminous." Neither do we find any specimens of FRANZEN, whose name, after that of TEGNER, is the most eminent on the list of the modern bards of Sweden. We find one of his love elegies translated in a number of the *Foreign Quarterly Review*; but the version is heavy and inelegant, and gives no adequate impression of his powers as a poet. Leopold, the leader of what is called the French school among his countrymen, and who, in the ardour of literary controversy, has been praised and blamed by them with equal extravagance, appears in this collection as the author of an ode, *On the Desire of Deathless Fame*, which evinces considerable vigour of thought and expression. We quote a small portion of it.

And thou, the insect of an hour,
O'er Time to triumph wouldst pretend;
With nerves of grass wouldst brave the power
Beneath which pyramids must bend!
A slave, by every thing controlled,
Thou canst not for an instant mould
Thine actions' course, thy destiny;
In want of all, of all the sport,
Thou, against all who need'st support,
Boastest o'er Death the mastery!
Recall'st, as they would prove thy right
To honours but to few assigned,
Our Wasa sovereign's annals bright,
The triumphs of a Newton's mind.
Whilst round the globe thy glances rove
On works and deeds that amply prove
Man's strength of intellect, they fall:
Their mysteries Time and Space unfold,
New worlds are added to the old,
Beauty and light adorning all.

Strange creature! go, fulfil thy fate,
Govern the earth, subdue the waves,
Measure the stars' paths, regulate
Time's clock, seek gold in Chile's graves,
Raise towns that lava-buried sleep,
Harvest the rocks, build on the deep,
Force Nature, journey in the sky,
Surpass in height each monument,
On mountains mountains pile,—content,
Beneath their mass then putrefy!

Yes, fruits there are that we enjoy,
Produce of by-gone centuries' toil;
The gifts remain, though Time destroy
The givers, long ago Death's spoil:
And whilst deluded crowds believe
Their guerdon they shall straight receive
In Admiration's empty cries,
Their whitening and forgotten bones
Repose, unconscious as the stones
Where burns the atoning sacrifice.

A view of the popular poetry of Sweden was given in the forty-second volume of this Journal, from which Mr. LONGFELLOW has taken versions of five of the most ancient ballads. Translations of six others are borrowed from one of our English contemporaries, which, though modernized considerably in their English garb, still preserve some striking features of the remote period to which they belong. By the study of these authentic relics of the olden times, TEGNER seems to have formed his taste and fashioned his style; from the Eddas or Sagas of the North, the true sources of information respecting the Scandinavian mythology, he has derived his materials. The antiquarian, the critic, and the philologist may track his steps in these curious researches; but the mere lover of poetry will be content with the honey and flowers that he has gathered in those old forests, and will prize them the more highly from the additions and embellishments which they have received in passing through his hands. We need not dwell here upon the merits of TEGNER, as the biographical notice of him, and the very full analysis of his great poem, *The Legend of Frithiof* here given as an introduction to the translated extracts from his works, were first published in our pages eight years ago. Mr. LONGFELLOW has inserted his own very beautiful versions of two cantos of *Frithiof*, and of *The Children of the Lord's Supper*. By way of foil, probably, to the merits of these, he has quoted five other cantos from the English translation of STRONG.

We have no room to expatiate upon the copious theme of German poetry, the translations from which into English, says the editor of this volume, "are so numerous, and extended through so many centuries, that they form in them-

selves almost a complete history." For the sake of convenience, he has divided this history chronologically into seven periods, and has arranged the selected translations into corresponding divisions. The first period extends from the earliest times to the beginning of the twelfth century. The metrical remains of these times are of no worth except as literary curiosities, and the three translated fragments which are here given are quite enough to satisfy common readers. The second period, comprising the twelfth and thirteenth centuries, is one of the most fertile and remarkable in the history of German literature, and we are very glad to see it here so fully illustrated. Besides the almost innumerable love-songs and poetic romances of the Minnesingers, this division includes the fine old epic of the *Nibelungenlied*, and the collection of heroic poems known as the *Heldenbuch*, or *The Book of Heroes*. By the aid of very full introductory notices, and copious extracts from the translations of TAYLOR and WEBER, the reader will gain as full an idea of this curious period as it is possible to obtain without a knowledge of the older forms of the German language. The third division, extending over the fourteenth and fifteenth centuries, is less interesting than its predecessor; the MASTERSINGERS flourished in those days—the quaint old rhyme-smiths, who made a trade of the poet's calling. The sixteenth century might properly be ranked under this head, instead of forming, as it here does, a separate period; for it was the golden age of the MASTERSINGERS. Old HANS SACHS, the poetic cobbler of Nuremberg, who wrote comedies and merry stories by the hundreds, and songs by the thousands, was the hero of this age, and the most renowned member of that curious fraternity. Translators have devoted little attention to these three centuries, and Mr. LONGFELLOW has made but a scanty collection wherewith to illustrate their history. One or two versions of his own, a very characteristic and faithful one of *The Battle of Murten*, by Professor FELTON, and a few more borrowed from this journal, are nearly all that deserve attention, These are enough, perhaps, considering the limits of the volume; but we are sorry to find no specimen of that merry old cobbler's poetry.

(To be continued.)

ART.

THE ORDERS OF THE ROYAL COMMISSION.—The results of the late exhibition, as regards the orders given to the competitors, do not seem to have been rightly understood. Mr. Dyce is to execute his cartoon of "The Baptism of Ethelbert" in fresco, in the centre compartment of the House of Lords, over the throne; the commissioners desire to see one fresco done, that they may rightly judge of the effect; but they have guaranteed to Messrs. Maclise, Horsley, and Cope that these gentlemen shall execute their several subjects (with such revisions as they may consider expedient), in the event of fresco painting being decided on, after the completion of the work by Mr. Dyce. It is also open to the two other artists—Mr. Redgrave and Mr. Thomas—to revise their designs; at least, it is so understood; for no other artists, treating the same subjects, have been preferred to them. With respect to the other works, Messrs. Horsley, Cope, Herbert, Severn, and Tenniel are commissioned to execute five frescoes in a hall where it is proposed to place statues of the poets, each artist being to select a subject to illustrate the poet who may be allotted to him. Six of the poets are Chaucer, Spenser, Shakspeare, Milton, Dryden, and Pope; there are to be two others, but they are not yet determined upon. The compartments in the Poets'-hall are 8 feet high by 5 feet 7 inches wide. Mr. Maclise was offered a compartment in the Poets'-hall, but he declined the commission, being desirous of completing his fresco in the House of Lords, for which he reserves himself. —*The Art-Union.*

PORTRAIT OF SIR THOMAS GRESHAM.—An interesting bequest has been recently made to the City Lecture-hall, all that now remains to us of the college founded by Sir Thomas Gresham. It is a full-length portrait, life-size, of the great English merchant, executed by a contemporary hand, and a fine specimen of the arts at that period. It represents Sir Thomas at the age of twenty-six, and is, therefore, the most juvenile portrait of him we possess. He is attired in a plain black doublet, hose, and gown, with a flat cap upon his head, and a small lace collar, all indicative of the unpretending British trader. In one corner of the picture are the letters "A. G." tied together by a knot, beneath which are the words "Love, serve, and obei," and under that "T. G." also tied by a knot; and upon the frame, which is of black wood, and of the same age as the picture, is the motto, "Dominus Mihi Adjutor, T. G." repeated on each side. The picture is painted on panel, and is altogether a good work of art and an interesting historic memento, most appropriately placed in the institution which owes its existence to one of the noblest of England's merchant-princes.—*Ibid.*

PAINTED CEILINGS OF THE BRITISH MUSEUM.—We rejoice to learn that those beautiful works of art, the painted ceilings of the old British Museum, have not been wholly destroyed, but that some of the more valuable specimens have been —as it were—snatched from the ruthless hands of the common purchasers of building materials by the more refined taste of a few of the workmen. We doubt not that these humble *virtuosi* will find an ample reward for their zealous exertions, by the disposal of the paintings thus preserved, solely through their discriminating taste. Thus, although the ancient mansion of Ralph, first Duke of Montagu, is now no more, a pleasing *memento* exists in some of the finest productions of those clever artists, Charles de la Fosse and James Rousseau; the former considered one of the best colourists of the French school, and the latter much estimated for his skill in perspective.

A grand banquet has been given at Brussels, by the artists and amateurs of Belgium, to the foreign artists of Europe, presided over by M. Van de Weyer, and attended by 180 guests. Among the artists whose names are mentioned as being present, we find the English ones of Mr. Roberts and Mr. Prout. The spirit of the occasion is best expressed in its two leading toasts. On the part of the entertainers,—"To the foreign artists, or rather to the artists our brothers, for the Arts have only one country, and their cultivators, of whatsoever land, are members of a single family. To the union of all artists!" On the part of the guests, —"To the Belgian artists and friends of Art, enlightened amateurs who have assembled this noble congress of the Arts!"

MUSIC.

Ah me! it is a changeful place! Canzonet. The Poetry by Miss ELIZABETH YOUATT. Music by J. O. ALLMAN. London: Lewis.

ANOTHER from the fertile pen of Mr. ALLMAN. We hope he will not write too much and too fast. He must beware lest he exhaust his original ideas. In music these cannot be so abundant that the composer can afford to launch them at the rate of a song per week. We see no symptom of decline in the canzonet before us, which is equal to many of Mr. ALLMAN's previous productions. But it is not sufficient for the young composer to equal the past; he must surpass it, or he will soon begin to go back.

Les Adieux des Amis. Romance for the Pianoforte. By CHARLES GOODBAN.

La Carlotta. Valse for the Pianoforte. By CHARLES GOODBAN. London: Coventry and Hollier.

Two pieces of pianoforte music, which certainly exhibit the hand of a master, both in melody and harmony. The romance is intended to try the skill of the performer, and is rather too much in the *shewing-off style* to satisfy the taste of those who think that simplicity is one mark of excellence in music, as in art and literature. Still it is an effective work, and will suit the taste of our drawing-rooms, where shew is preferred to substance. The waltz has less pretension than the romance, and is more pleasing. It catches the spirit of that dance, and will agreeably vary the music of the ball-room.

THE DRAMA AND PUBLIC AMUSEMENTS.

THE THEATRES.—The approach of winter has been heralded by an almost simultaneous opening of the theatres, all under the same managements as before, and most of them offering only a repetition of the attractions of the last season. Opera and ballet still hold exclusive possession of Drury-lane; the true English drama flourishes at Sadler's Wells, under the auspices of PHELPS and Mrs. WARNER. The Princess's offers some novelty, mingled with the best of its previous variety of pieces, and promises a plentiful store of good things to come. At the Adelphi melodrama and farce reign supreme; and Mr. and Mrs. KEELEY continue to attract pleased audiences to the Lyceum. There is nothing in the aspect of the drama at the beginning of the present season to encourage hope that the period of its depression has passed away. No change in the play-bills as yet indicates a change in the tide of public taste. Still we have so much

confidence in the indestructibility of whatever is genuine, and the ephemeral nature of the false and affected, that we shall never despair of seeing a sudden revival of the drama, and a return of something like the palmy days it once enjoyed. We must now, by way of introduction, briefly notice some of the theatres.

DRURY-LANE has opened with the *Enchantress*, Miss ROMER playing the part in which Madame THILLON enchanted the public. But the novelty was a ballet imported fresh from Paris, entitled *The Marble Maiden*. We take from the *Spectator* a clever description of this extravaganza. It is founded on the story of Pygmalion.

"The treatment that this classic legend has received at the hands of the French ballet-master is of a very extraordinary kind. The statue that is the object of its sculptor's passion is a Hebe with an hour-glass torso and pink extremities, wearing muslin petticoats, and a wreath of artificial flowers on natural hair—in short a goddess every way qualified for a place among Madame Tussaud's wax-work worthies. The genius of the antique, we suppose, to punish the sculptor's bad taste in making such a figure and his infatuation in idolizing the dressed doll, endows the painted image with life during the day; and the statue, after enjoying a day-rule of dancing and flirtation, is at night imprisoned in marble, and compelled to do penance on its pedestal. The ministers of this vengeance are two awful antique statues—classic in style, and of colossal proportions, though only canvass in substance—who look down with stern contempt upon the pigmy plaster figures that surround them; and, as antiques cannot condescend to move or speak, their pedestals become oracular, and utter in illuminated characters these dark sentences:—'The statue shall be animated during the day for thy destruction'; 'The statue shall be marble at night for thy safety.' The latter sentence seems superfluous; for if the *Marble Maiden* was to be flesh and blood only from sunrise to sunset, there needed no oracle to proclaim her transmutation to stone at night. The *Marble Maiden* turns out a very light character, as meretricious in conduct as in dress; she is an arrant coquette, and not content with turning her sculptor's brain, must needs elope with a young prince on the eve of marriage. This *faux pas* drives the poor sculptor frantic: finding the Hebe he chiselled has *chiselled* him, he retorts with his mallet, and deals her a blow that knocks her to 'immortal smash' in a literal sense; for, her head being struck off, she instantly becomes a 'good woman,' and is seen ascending to glory on a celestial sliding-scale."

The dancing is better than the design, and the scenery better than the dancing. DUMILATRE is the statue, and she comes to life very gracefully. The *pas de miroir* is also a pleasing performance. The piece is put upon the stage with great magnificence. The scenery, the dresses, and the decorations are all in the first style of theatrical art, and prove how well the manager has gauged the public taste, which certainly is better pleased with the sensual than the intellectual.

SADLER'S WELLS.—We visited this theatre on Tuesday, and with almost unmingled gratification. It was crowded in every part by an attentive and enjoying audience, who thoroughly appreciated the genius they beheld. The play was *Hamlet*, and the acting was such as can be witnessed nowhere beside in the metropolis. We had not before seen Mr. PHELPS in this character, but it has impressed us with a higher than even our before high opinion of his genius. It was a finished and masterly performance. In spite of some disadvantages of figure and age, his conception of the character was so true, his reading of the part so correct, that every such objection was lost in the genuineness of the acting. The play scene was magnificent—worthy of the elder KEAN, and was greeted by the house with several successive rounds of applause. Mrs. WARNER, as usual, well sustained the queen mother, and Mr. G. BENNETT, with his rounded declamation, made a very respectable king. The other characters, except *Laertes*, who was vile, were in good taste, and we must not omit specially to notice the best *Ghost* we have ever seen on the stage. Heartily do we recommend every lover of the English drama, every person who desires an intellectual treat, to pay a visit to Sadler's Wells. Once there, he will be sure to repeat the pleasure; and the admission is so cheap, only 2s. to the boxes, that one may afford a cab or bus to reach it. It should be known that, in spite of the low prices, the audience is extremely respectable, and it is one of the best conducted of the London theatres. Neither eye nor ear of the most modest is ever offended in it.

VAUXHALL GARDENS.—The season terminated on Wednesday, and we hear that upon the whole it has been singularly successful. The performances of the evening were attractive. Mr. GREEN ascended in his balloon, girt with fireworks of the most brilliant description which the skill of Mr. DARBY could produce. The feats of the CHIARINI family on the tight-rope were amusing, and M. KELLER and his *troupe plastique* appeared to give great delight to the audience, if we may judge from the exuberant applause they elicited. We hear that all of the artists who have so pleased the public during the present season are engaged for the next.

A letter written at Berlin on the 23rd September, in the Paris papers, reports the money-triumphs of the great Swiss songstress. "The engagement of Mademoiselle Jenny Lind at the Grand Opera of Berlin, which was to have expired on the 1st November, 1846, has just been cancelled, and another engagement, for three consecutive years, commencing on the 1st November next, has been substituted in its stead. The celebrated cantatrice will receive a salary of 25,000 thalers (95,000 francs) per annum, and 50 thalers (190 francs) on every representation; moreover, she is granted a leave of absence of two months a year, which the management is at liberty to redeem for the sum of 1,700 thalers (5,700 francs). Hitherto no dramatic artist had obtained in Germany such large emoluments."

THE COLOSSEUM.—This elegant establishment, notwithstanding the comparative emptiness of town at this period of the season, continues its attractiveness, and with the foreigners, a very considerable number of whom are at present in London, it ranks foremost in the list of lions. The works of art, the Alpine scenery, the mountain torrent, the Swiss cottage, the conservatory, and the fountains are all objects of curiosity and admiration. But the picture of London by night is the crowning feature of the exhibition. It is not easy to imagine by what means the effect is produced that strikes every spectator with astonishment. Looking from the gallery the sky appears to extend on every side, as far as the eye can see. Light clouds are spread over the face of heaven which are continually in motion, as if agitated by the light wind. Below, tinged with the silvery beams of the moon, there rise the two towers of St. Paul's in the exact proportions of reality, and further down the whole vast city—with its lines of streets, marked by the rows of gaslights—its shops gleaming with lustre—its proud river glittering in the moon's beams—its bridges with their lights—its churches—its public buildings—its shipping—its far-off hills—all spread before the spectator with so exact an appearance of truth—such marvellous resemblance of familiar objects that the mind and senses are almost painfully confused; knowledge of deception continually struggling with the impression produced on the eye by reality. There are other objects worthy of observation, but more particularly the stalactite caves, gleaming with prismatic hues, and appearing of endless dimensions, are hardly less perfect examples of ingenuity than the view we have noticed. This exhibition was visited on Saturday evening by Le Comte de Rambuteau, pair de France and préfet de la Seine. His admiration of the night picture he found difficulty to express, and suggested its removal to Paris, which he was convinced would realize a large fortune, and offered his services to promote this object. His Royal Highness Prince George of Cambridge, Lord Adolphus Fitzclarence, their Serene Highnesses the Prince and Princess of Oldenburg, and Prince and Princess Demidoff, with a numerous suite, visited the Colosseum last week.

ROYAL POLYTECHNIC INSTITUTION.—We have observed lately some specimens of the starch extracted from the diseased potato in the Museum of the above institution, and which, if properly understood, will be of great benefit to the poorer classes. We, therefore, beg to refer to the samples lately deposited in the Polytechnic Institution. It will be seen that a very wholesome and pleasant food may be prepared from potatoes in quite a diseased condition. We, therefore, quote the following account of the process adopted by a gentleman in Hitcham. He hired from two to four women out of the village daily to wash and grate, whilst he and a boy attended from time to time to the passing the pulp over the sieve and washing the flour as it was deposited. The quantity of refuse and decayed potatoes amounted to seven sacks, and from the very worst sample of ten bushels he obtained 47lbs., and from the better sample of eleven bushels, 75lbs. In all he had 122 lbs. of wholesome flour obtained at a cost of 17s. 6d. from potatoes which would either have been entirely lost or many of them merely given to the pigs. If a pretty general attention were paid to this rule, and to the extraction of flour, it cannot be doubted that much good would be the consequence. A very little practice will shew the most sceptical that the process is simple, and also remove the fear of its not repaying many for their trouble. He also observes that the women in his district earn at the distaff only two shillings weekly, but if employed in grating, an active woman could grate certainly a bushel daily, or more, and thus save at least seven or eight pounds of wholesome flour, worth to her more than a shilling, wherens she would consider herself paid for a day's employment if she received eightpence or tenpence. Little general good can be expected from a partial recourse to this mode of preserving the potato-flour; but if it shall only be pretty extensively adopted, surely it must tell upon the market. If a cheap machine could be invented for superseding the grating process it would be more likely to be adopted everywhere.

ROYAL ADELAIDE GALLERY.—In consequence of the increased number of schemes for railways to which the atmospheric principle is to be applied, we have again paid a visit to this gallery for the purpose of examining more minutely PILBROW'S patent, which is here shewn on a very large scale, and the system very clearly developed. There are, however, one or two trifling matters, which will require a little modification to make it complete, when we doubt not it can be very efficiently applied. Among the nobility and others who honoured the gallery this week we noticed the Marchioness of Wellesley and Countess of Westmeath, both of whom were induced to take a ride in the carriage, and appeared much pleased with so novel a mode of propulsion. The New Zealand Chief still contributes to the gratification of the visitors with his descriptions of the New Zealanders their manners and customs, and is at all time most willing to answer any particulars not clearly explained in his lectures. Mr. J. RUSSELL'S *Mrs. Caudle*, is a great source of amusement, as it appears to us to be the only way in which the *amiable* qualities of that lady can be given correctly. The concerts are admirably conducted, and the music well selected.

CORRESPONDENCE.

TO THE EDITOR OF THE CRITIC.

SIR,—Your correspondent, "A Student," inquires where Deleuze's *Instruction Pratique* can be procured. If he will favour me with a call, I can supply him with an English copy, and will ascertain whether Gauthier's *Exposé* can be obtained.

I am, Sir, yours, &c. E. WALLIS.

42, Skinner-street, Snow-hill, Oct. 7, 1845.

CRITIC OF TRADES, INVENTIONS, ETC.

[Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

NEW LUGGAGE VANS.—The Grand Junction Company have constructed several new luggage-vans longer and heavier than those hitherto used, and having boxes for the guards, who will be securely protected from the severity of the air. These vans will be a great protection from accident; and, should any occur, the passengers will be almost safe from any danger from the engine. They are now constructing some carriages with six wheels and brace-springs; which are to run more easily, and it is calculated will be safer than the four-wheeled carriages now in use.—*Liverpool Albion.*

DISINFECTION.—MM. Ledoyen and Raphanel have patented a disinfecting liquid, composed of 125 grammes of nitrate of lead to 1,000 grammes of water. It is said to be very efficacious; the nitrate is readily decomposed, and sulphuret, chloride, and sulphate of lead formed; the nitric acid going off as ammonia, or combining with the soda present.

RAILWAY TELEGRAPHS.—At a recent sitting of the French Academy of Sciences, M. Arago communicated to the academy, in the name of M. Breguet, one of the commissioners appointed by the government to report on the electric telegraph from Paris to Rouen, a note on a new mode of transmitting signals. With a pile of Bunsen of 13 element, says M. Arago, and in all weathers, it is possible to communicate between Paris and Rouen with a single wire, the two extremities of which are placed in a hole or well. No return wire is needed. We are quite sure that neither M. Arago nor M. Breguet would have made this communication to the academy if they had been aware that it has no novelty, neither would M. Breguet have taken credit to himself for a discovery which was long since made by another individual. What is here announced as new is only part of the telegraphic system of Mr. Bain, which is at work in Scotland, and is patented in France by the purchaser of the invention, Mr. Boggett, of London, who happens, we understand, to be at this moment in Paris, as also Mr. Bain, with a very important improvement in the insulation of the wires. Mr. Boggett's telegraph, which works with a single wire, was exhibited here long before the electric telegraph was established on the Paris and Rouen Railroad, and as the expense of putting it up is only one-fourth of that of the telegraph in question, some members of the Academy of Sciences, and other persons, who saw the model at work, were astonished that a trial on a large scale should not have been made of his plan. It has been stated lately in some of the journals that the government has at length resolved, on the ground of economy, to adopt Mr. Bain's system. We trust that if, as we have every reason to believe, the improvements announced by M. Arago really form part of Mr. Boggett's patent, no attempt will be made to deprive him of the fair commercial advantages attached to his patented right. Amongst the recent improvements made by Mr. Bain in his telegraph are a rapid mode of communication from station to station of a railroad, still with a single wire, by which means many accidents are to be prevented, and also a very simple mode of printing by electricity any government despatch. Mr. Wheatstone's apparatus for printing is highly ingenious, but it is complicated and tedious as compared with the new mode.—*Galignani.*

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

MESMERISM IN HYDROPHOBIA.

TO THE EDITOR OF THE CRITIC.

MR. EDITOR,—Every one is acquainted with the destructive nature of hydrophobia, and I believe that almost every well-informed medical man will allow his entire ignorance as to the manner in which this poison acts upon the system and produces its specific effects, as well as of any remedies capable of arresting its fatal progress.

Some weeks since it was suggested to me by a highly intelligent correspondent whether magnetism might not be usefully employed; and I observed with pleasure the report of a case (in the *Provincial Medical and Surgical Journal* of the 24th of September) of hydrophobia, by Dr. Aikenhead, of Manchester, in the progress of which this remedy had been tried. I think it will be interesting to your readers to be made acquainted with the results. These are given in the words of Mr. Gardom, the operator; but as the only point of difference noticed by Dr. Aikenhead is, that his notes say the skin was "*cold and clammy*" instead of "*cold and dry*," we may consider the doctor as vouching for the accuracy of the other statements.

The effects stated are—"The countenance changed from an expression of horror to that of calmness and placidity; the skin, from being cold and dry, to having become warm and perspirable, the pulse more expansive, the abdominal muscles from a state of rigidity to the opposite condition. He told us, on inquiry, that he felt tired; that he had been very sleepy; that he had experienced an inclination in his eyelids to close, particularly the eye nearest me, which, to use his own expression, 'felt as if they would go to, whether they would or not;' that he felt warmer in his head and all over his person; that his face felt larger; and 'look,' said he, raising himself up from his bed, lying down again, and repeating the motion, 'I could not have done this before.' He further said, 'This is the most comfortable half-hour I have yet passed; this is the best thing I have had yet.'"

The patient was again magnetised in the afternoon, and when the process was over, "he expressed himself as feeling better, and said, 'I think you will cure me among you;' that he felt warmer, and had had a disposition to sleep; that his face, as after the moving operation, felt swelled; that on my placing my hands over his abdomen and on his sides, in the situation of the diaphragm, he felt the former as if I had been nearer to the surface of the skin, and the latter as more binding of the ribs. I had made no pressure on the parts referred to, but simply placed my hands over them, and had my mind particularly directed so as to avoid it. The abdominal muscles had continued flaccid. At his own suggestion, he sat up in bed and lay down again twice without spasm. I asked him to do it a third time, which he did, but then said, 'There, that is enough; I could not have done that yesterday, if you would have given me Manchester.'"

I will not trespass longer upon your columns by continuing my quotations; first, because many of the details are too professional for general readers; and next, because I think enough has been produced to shew that at least magnetism excited a greater influence in soothing the patient than any other remedy. True, indeed, that the disease pursued its wonted course, and destroyed the patient; still, I conceive, the *fair* inference to be drawn from this relation is, that magnetism excited *some influence* over the malady; and if so, there may be some hope that if employed earlier, and still more energetically, it might exert a larger influ-

ence over the disease,—possibly might arrest its destructive progress. And if not, it is a matter of no small importance in a necessarily destructive disorder (at least in the present state of our knowledge), to possess a remedy capable of mitigating the horrors of the most agonizing suffering to which the human frame is liable; and if skill and science are baffled, it is no small boon to offer to the sufferer that which will contribute to his Euthanasia.

Now, Mr. Editor, I trust you will allow me one word on the subject of Dr. Aikenhead's reasoning on this case. After bearing ample testimony to the accuracy of Mr. Gardom's relation, he states, that the conclusion at "which he has arrived, is, first, that a tranquillising impression was made on the patient; but, secondly, that as it is unphilosophical to refer to mysterious and doubtful, what may be effected by known and certain causes, we shall not be justified in determining, that this tranquillisation was the result of mesmeric manipulations *quasi mesmeric*." These "known and certain causes" seem to have been the quietness enjoined in the house—the removal of a source of mental disturbance—the stimulus of hope and of encouragement—the attention being fixed upon the operator, and his mind being withdrawn from distracting thoughts on his melancholy state, "*while perfect bodily quietude would tend to relax all muscular rigidity:*" to which may be added the mysterious nature of the performance. And Dr. Aikenhead concludes that these causes are amply sufficient to produce the changes which Mr. Gardom has enumerated.

Now, supposing the remedy exhibited on this occasion, and under precisely the same circumstances, had been aconite or Indian hemp, or any other "mysterious and doubtful" remedy, of whose agency upon the system we know no more than we do of magnetism, is it to be believed that the medical persons so treating the disease would have attributed the relief to the "known and certain" mental agencies, rather than to the doubtful and mysterious medicinal remedies? Decidedly not; they would have attributed the relief to the medicine, and all the journals of the empire would have sounded the praises of the new remedy. Only let magnetism have fair play; let it be treated as other curative agents, and in a few years experience will decide upon its merits.

Dr. Aikenhead is evidently one who rises superior to vulgar prejudice, and avows his intention of giving a further trial to magnetism, should another similar case fall in his way; and has the good sense to add, that the *post mortem* examination "threw no light on the nature of this disease." We have the highest respect for these avowals, and we were only surprised to find that, in a mind apparently so candid, the relaxation of muscular rigidity should have been ascribed to the perfect bodily quietude, whereas no one who has watched this fearful malady, but must bear witness to the fact, that he could not, by *mental means* of any kind, keep the body quiet, or produce muscular relaxation.

On the whole this case must be considered as valuable, in shewing the power of magnetism over the nervous system.

I will not wind up this communication without a passing notice of a paper in this week's Journal—a paper of a very different order from that of Dr. Aikenhead's, and which neither requires nor deserves serious consideration. This letter, by Mr. Turner, of Tonbridge Wells, professes to be the relation of a case of tooth extraction, with "entire unconsciousness of pain, and that, too, without any magnetising process having been *consciously* gone through," and is brought forward for the purpose of shewing the invalidity and folly of the claims of magnetism. So far, however, from the history having this tendency, even so far from its being shaftless, a *telum imbelle sine ictu*, it is a "*telum imbelle*" *quoad* magnetism; but it is armed with a double shaft against its opponents. Mr. Turner may have his welcome choice upon which horn of the dilemma he prefers impaling himself, but either he has *unconsciously* magnetised his patient, and thus afforded the strongest possible evidence for the truth of magnetism, by producing its *accidental unimaginative* influence; or his patient had fallen naturally into that kind of hysterical or cataleptic state, which simulated the magnetic condition, and which is only one more proof of the truth of the magnetic doctrine that there is no single phenomenon to the production of which it lays claim, *which does not possess its prototype in Nature.* To Mr. Turner we say, "*Utum horum mavis accipe,*" and to him and to his Journalist friends we offer our best thanks for the publication of his case.

I am, Sir, yours, &c.

Farnham, Oct. 5, 1845. W. NEWNHAM.

TO THE EDITOR OF THE CRITIC.

SIR,—I beg to forward you for insertion in THE CRITIC the result of nine months' experience of Mesmerism as a curative agent. In consequence of my own profession occupying the chief part of my time, I have been enabled to devote not more than five or six hours a week to Mesmerism. In the accompanying list I have omitted many persons whom I have mesmerized for the sake of phrenological and other experiments, and also many cures which are of too trifling a nature to occupy any space in your paper.

I am, Sir, yours, &c.

S. D. SAUNDERS.

Ivy Cottage, Syncombe-hill, Bath.

NAME.	DISEASE.	Sittings.	EFFECT.	PREVIOUS TREATMENT.
Maryann Parsons, Coombe Down	Deaf for 18 years	10	Cured.	The usual methods.
Mrs. Parsons, Coombe Down	Rheumatism	1	Cured.	
Mr. Gibbs, Coombe Down	Rheumatism	1	Cured.	
Anne Vaughan, Bartlet, near Bath	Broken blood-vessel on chest	2	Cured.	Attended by medical men without effect.
Miss C——, Lodgings, Bath	Deaf for 20 years	12	No effect.	Ditto.
Mr. Rogers, Southgate, near Bath	Lumbago	1	Cured.	
Mr. B——, near Bath	Rheumatism for 20 years	6	Slight improvement.	Tried every remedy.
Mrs. B——, near Bath	Pain in head	2	Cured.	
John Brookes, Widcombe, Bath	Headache for many years	10	Cured.	Tried the usual remedies.
Maria Patfield, Holloway, Bath	Rattle and pain in head	4	Cured.	Ditto.
Charlotte Vyse, Daniel, near Bath	Deaf for 12 years	8	Improved.	Ditto.
Mrs. W——, Widcombe-crescent, Bath	Pain on chest	5	Cured.	Ditto.
Miss W——, ditto ditto	Disease of chest	5	Cured.	Usual remedies, and had been to Scotland for her health.
Anne ——, Sion Hill, Bath	Deaf	10	Greatly improved.	Tried usual remedies.
Charles Chiffinch, Coombe Down	Deaf for 15 years	16	Cured.	Ditto.
Master Price, New Inn, Warminster	Pain in side and back	1	Cured.	
Mrs. Dyke, Coombe Down	Deaf for many years	8	Slight improvement.	Tried usual remedies.
Letitia Ford, Coombe Down	Disease of chest	2	Increased the pain.	Ditto.
Mr. Harvey, Great Western Railway	Rheumatism	10	Cured.	Ditto.
Mrs. S——, Ivy Cottage, Bath	Pain in head for 6 or 7 years	4	Cured.	Tried the most eminent medical men of Bath and Bristol.
Mrs. Rogers, Southgate, near Bath	Epileptic fits	10	Improved.	Tried usual remedies.
Louisa Parsons, Coombe Down	Consumption, last stage	4	Cured.	Ditto.
Mr. Byfield, Coombe Down	Deaf	5	Slight improvement.	Ditto.
Sarah Ford, Coombe Down	Rheumatism	2	Increased the pain.	Ditto.
Sarah Dyke, Coombe Down	Pain in chest, and cough	2	Cured.	
Master M——, Widcombe-crescent	Nervous twitchings	20	Improved.	Tried usual remedies.
Mrs. Smith, Union-passage	Toothache	1	Cured.	Tried creozote, camphor, &c.
Miss Werret, Coombe Down	Diseased toe	18	Cured.	Previously attended by surgeons.
Mr. S——, Bath	Deaf	3	No effect.	Tried usual remedies.
Ann Walters, Broad-street	Fits	4	Greatly improved.	Ditto.
Miss S——, Myrtle Cottage	Indigestion	6	Cured.	Ditto.
Mrs. S——, Myrtle Cottage	Bilious headache	4	Cured.	Ditto.
Mr. H——, Cleveland-bridge	Deaf	6	Slight effect.	Ditto.
Mr. ——, Coombe Down (gardener)	Decline	12	Not susceptible.	
Miss R——, Coombe Down	Nervous headache for years	12	Nearly cured; left the neighbourhood	Tried many eminent medical men.
Miss J——, Widcombe-terrace	Sciatica, very severe indeed	16	Slight effect.	Tried eminent medical men.
Mrs. Harvey, Widcombe	Headache for many years	10	Cured.	Tried usual remedies.
Mr. J. H——, Southgate, near Bath	Toothache and faceache	1	Cured.	Ditto.

To Booksellers.—*A stamped copy of* The Critic *sent regularly to any Bookseller, for his own use, at the cost of stamp and paper only, on prepayment of* half a year's subscription, at least (4*s.* 4*d.*), *which may be transmitted in penny postage stamps.*

Booksellers *and Keepers of Circulating Libraries are requested to communicate to* The Critic *the results of their experience as to books and classes of books most in demand, and other similar information. Books wanted to purchase inserted in the weekly list without charge.*

BOOKSELLERS' CIRCULAR.

We commend to the attention of the Booksellers the announcement among our advertisements of a Company now in progress for the establishment of a great, honest, and able daily morning newspaper. The small amount of the shares, and the still smaller sum that will be called for, will enable the greater portion of the influential classes to take an interest in the work, and it is most desirable that the booksellers, beyond all others, should co-operate with it. May we ask those who approve the plan, for the respectability and responsibility of which we can give them the most positive assurances, to make it known to their friends, and procure as many shareholders as possible, forwarding the applications to the Publisher of The Critic, who will place them in the hands of the promoters.

Still is the publishing world wretchedly dull, but in the absence of good English books, we have procured a regular supply of excellent foreign literature, which we trust will prove as attractive, as it certainly is novel, a feature in English journalism. The Critic now regularly reviews the literatures of France, Germany, Italy, Spain, Portugal, and America, and from the two first countries it is in receipt of a weekly letter of intelligence. The cost of these arrangements is immense, and the present result is a considerable loss; but we rely upon the exertions of our friendly readers, and especially of our bookseller subscribers, to make known the original features of The Critic to their connections, and thus after a while, so to extend the circle of its subscribers, that it shall be attended with no other sacrifice than that of time and labour. More than this we do not care for. As we have stated before, The Critic is not established with any view to pecuniary profit, but solely with the hope of spreading loftier and holier principles than now prevail in literature, and securing the existence of that which has been considered an impossibility—a thoroughly independent Review.

LITERARY INTELLIGENCE.

The *Augsburg Gazette* states that the King of Prussia had commanded the houses of the two Reformers, Luther and Melancthon, to be purchased by the State, and converted into schools. He had likewise ordered the doors of Luther's dwelling, which the French had in a great measure destroyed, to be restored; they will be formed of metal, and richly embellished.

In Algeria, there has been discovered, at a distance of eight leagues from Guelma, a cavern, which is said to be very remarkable, both for its great dimensions and in an archæological point of view. Hollowed out of an immense calcareous rock, opening to the north by a circular entrance of seven or eight metres, it is penetrated by an inclined plane of not less than 1,000 or 1,200 metres in length. Stalactites of myriad forms depend from its roof and sides; and the ground is encumbered with huge blocks, in prodigious numbers, which have fallen from above. But the chief interest of this cave consists in the Latin inscriptions which cover its entrance, and belong to the earliest times of Christianity. The greater number are illegible; but one has the name of *Donatus*—and there are other names of unknown martyrs. Here, no doubt, the early African Christians sheltered themselves from persecution; and, till now, the cave has been kept sacred from intrusion, under the guard of the strange wild fantasies with which it has been peopled by the Arab imagination.—*Athenæum.*

Library of the Late Dr. Herschell.—This excellent library, consisting of upwards of 4,000 Hebrew volumes, among which there are many rare and valuable books and manuscripts, collected by our late chief rabbi, his father, and grandfather, has just been bought by the committee of the Hebrew College, for that establishment, for the very low sum of 300*l.* We hope this valuable library will soon be arranged and catalogued, so that students desirous of information may have no hindrance in gaining access to its treasures.—*Jewish Chronicle.*

REGISTER OF NEW PUBLICATIONS,

From Oct. 4 to Oct. 11.

NOTICE TO BOOKSELLERS.

A Register lies at The CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* The Critic, *and no charge will be made either for registration or for publication in* The Critic. *Particulars forwarded* by letter *will be duly inserted.*

GLEANINGS.

ORIGINAL AND SELECT.

Ecclesiastical Architecture.—In these days, when ecclesiastical architecture is so prominent a topic, the following delicious jumble from an Irish popular work, descriptive of St. Anne's Church, Belfast, will amuse the *conoscenti*:—"It has a body of brick, a tower of wood, and a cupola of copper, and possesses greatly more elegance than might be supposed possible from the composition of such unmanageable and heterogeneous materials. Its font is adorned with a handsome Doric portico and Attic balustrade; its tower is of two stages, and in the Ionic order; and its cupola has Corinthian ornaments, and is surmounted by a spiral termination."

There is, in the Basque Provinces a little village called Mendaro, which is renowned for its biscuits, its sole source of wealth. When the Queen of Spain passed through it, the ayuntamiento would present her Majesty with a sample of its industry; and the regidor of the place offered her an enormous biscuit of the shape of a crown, which he accompanied with the following brief speech—"This biscuit has been made for thee at Mendaro: nothing but biscuit is made at Mendaro: divide this one with thy mother." The Queen was greatly amused with this oration; but her hilarity increased when, at the church, she found that the regidor, orator, and sacristan were one and the same person.—*Madrid Herald.*

An extraordinary fasting-man has lately turned up in the county Monaghan, in the townland of Emy, near Emy mills. He is decidedly insane, but is said to have existed for thirty-six days without food of any sort.—*Morning Post.*

To Readers and Correspondents.

A. T.—*We think it unnecessary to notice these errata. They are unimportant and unavoidable.*

THE CRITIC,
And Journal of Literature.

SATURDAY, OCTOBER 18, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

JOURNAL OF ENGLISH LITERATURE.

PHILOSOPHY.

Woman in the Nineteenth Century. By MARGARET FULLER. London, 1845. Clarke.

IF woman have just reason to complain of her present position in society, she cannot, at least, be charged with lukewarmness in asserting her rights. In the present day, champion after champion arises, armed cap-a-pie for the encounter; and so crowded are the lists, so numerous the combatants, that the spectator knows not where to fix his wandering attention. At first glance he might imagine that the fair and gallantly arrayed company—and the good champions are well able to appreciate the advantage of a fair exterior—had entered into a solemn league and compact, like the Knights Hospitallers of old, duly estimating the necessity of unity to secure success in so great an undertaking. But a closer examination will make manifest that, among all this formidable array, no two warriors are to be found holding the same opinions; and that as the Hospitaller claimed no fellowship with his brother Templar, though engaged in the same cause, with no less disfavour does the lady advocate of her sex's rights view the labours of her fellow crusaders.

For example, the American champion, MARGARET FULLER, instead of joining the English phalanx commanded by Mrs. ELLIS, or the French women-at-arms of Madame NECKER, or any other amazonian troop, girds on her armour, and enters the lists alone, "sighing over" the humbler aspirations of her compeers, as displayed in their several 'scutcheons, bearing the respective mottoes of "Woman's Sphere," "Woman's Mission," "Woman's Destiny." And we feel assured that if the banner, with its degenerate inscription, "Woman and her Master," were presented to her, the floodgates of her wrath would indeed be opened, and the consequences we forbear to anticipate.

But setting aside the *badinage* which the warlike propensities of these lady scribblers have called forth from us, let us examine Miss FULLER'S pretensions to notice; and first of all it may be remarked, that she demands attention as an expositor of American feeling on the subject of the equality of the sexes, her essay having originally appeared in a periodical conducted by EMERSON. The book shews ability, and a certain quantum of reading is perhaps too prominently displayed. We find in it, however, only a confirmation of the old complaint, that the system which plunges the young American into the world at so early an age, with his education but half completed, produces the fruit that might have been expected; for the women having more time for study and literary pursuits than men, whose energies are early employed in money-getting, frequently obtain an intellectual superiority over their lords, and, feeling the advantage, are apt to presume upon it. This, in some measure, accounts for the fact, that in America woman struggles for a freedom of action which will find but few respondents in the boudoirs of Europe, if indeed she gain many partisans in her own country.

After what has been premised, it is hardly necessary to say that Miss FULLER'S sympathies are with Miss MARTINEAU, though in her estimate of female capabilities and rights she goes considerably beyond that lady. The authoress of *Woman in the Nineteenth Century* would "have every arbitrary barrier thrown down—every paid office laid open to woman as freely as to man." And in another place, to render her meaning perfectly clear, and not liable to misconstruction, she adds, "But if you ask me, what offices they may fill? I réply, any. I do not care what case you put; let them be sea-captains if you will. I do not doubt there are women well fitted for such an office, and, if so, I should be as glad to see them in it, as to welcome the maid of Saragossa, or the maid of Missolonghi, or the Saliote heroine, or EMILY PLATER."

Miss FULLER is inclined to consider the slavery abolition movement a sign of the times, and naively enough refers to a recent work on America, in which are three consecutive chapters thus entitled, "Republican Institutions," "American Slavery," "American Ladies."

The present position of Europe, with three female sovereigns, is not passed over without comment. We extract the passage.

> The names of nations are feminine; religion, virtue, and victory are feminine. To those who have a superstition, as to outward reigns, it is not without significance that the name of the queen of our mother-land should at this crisis be Victoria—Victoria the First. Perhaps to us it may be given to disclose the era thus outwardly presaged.
>
> Another Isabella, too, at this time ascends the throne. Might she open a new world to her sex! But, probably, these poor little women are, least of any, educated to serve as examples or inspirers of the rest. The Spanish queen is younger; we know of her, that she sprained her foot the other day, dancing in her private apartments; of Victoria, that she reads aloud, in a distinct voice and agreeable manner, her addresses to Parliament on certain solemn days, and, yearly, that she presents to the nation some new prop of royalty. These ladies have, very likely, been trained more completely to the puppet life than any other. The queens, who have been queens indeed, were trained by adverse circumstances to know the world around them, and their own powers.
>
> It is moving, while amusing, to read of the Scottish peasant measuring the print left by the Queen's foot as she walks, and priding himself on its beauty. It is so natural to wish to find what is fair and precious in high places—so astonishing to find the Bourbon a glutton, or the Guelph a dullard or a gossip.

The old dramatists who have striven to idealize woman, are of course frequently quoted, and, we may add, criticised. MASSINGER and FORD appear to be especial favourites. The *Penthea* and *Calanthe* of the latter poet are likely to be better appreciated by Miss FULLER than SHAKSPEARE'S gentler creations, *Cordelia* and *Imogen*. Indeed, the lady is heretic enough to own she considers MASSINGER and FORD to have "soared to a higher flight than SHAKSPEARE" in delineating "holy and heroic women." The fact is, that the Swan of Avon is not forgiven having made his PORTIA say to her liege lord

> I grant I am a woman; but, withal,
> A woman that lord Brutus took to wife.
> I grant I am but a woman; withal,
> A woman well reputed—Cato's daughter.
> Think you I am *no stronger than my sex*,
> Being so fathered and so husbanded?

Nor is the pleading of CASSIUS for the "rash humour that his mother gave him" forgotten. Even BEN JONSON'S fine lines, so admirably descriptive of what a perfect woman ought to be, honoured as they are with a prominent position in the title-page of Miss FULLER'S book—and again repeated in the body of the work—are not allowed their exalted situation without first undergoing the process of mutilation. It will be necessary to extract the lines, hackneyed as they are, to render our meaning plain.

> I meant the day-star should not brighter ride,
> Nor shed like influence from its lucent seat;
> I meant she should be courteous, facile, sweet,
> Free from that solemn vice of greatness—pride;
> I meant each softest virtue there should meet,
> Fit in that softer bosom to abide
> *Only a learned and a manly soul;*
> I purposed her, that should with even powers
> The rock, the spindle, and the shears control
> Of destiny, and spin her own free hours.

The line printed in italics Miss FULLER has written thus—

> Only a heavenward and instructed soul.

The poet's crime seems to have been to use the word "*manly*" when describing his ideal of woman. "Let it not be said, whereever there is energy or creative genius, she has a masculine mind."

Perhaps Miss FULLER'S views of the freedom she so ear-

nestly desires for her sex, are never more clearly developed than in her critical observations on the female characters in Goethe's *Wilhelm Meister*. At least, they will amuse the admirers of the German novelist.

As Wilhelm advances in the upward part, he becomes acquainted with better forms of woman by knowing how to seek, and how to prize them when found. For the weak and immature man will often admire a superior woman, but he will not be able to abide by a feeling which is too severe a tax on his habitual existence. But, with Wilhelm the gradation is natural, and expresses ascent in the scale of being. At first he finds charms in Mariana and Philina, very common forms of feminine character, not without redeeming traits, no less than charms, but without wisdom or purity. Soon he is attended by Mignon, the finest expression ever yet given to what I have called the lyrical element in woman. She is a child, but too full-grown for this man; he loses, but cannot follow her; yet is the association not without an enduring influence. Poesy has been domesticated in his life, and, though he strives to bind down her heavenward impulse, as art or apothegm, these are only the tents, beneath which he may sojourn for a while, but which may be easily struck, and carried on limitless wanderings.

Advancing into the region of thought, he encounters a wise philanthropy in Natalia (instructed, let us observe, by an *uncle*), practical judgment and the outward economy of life in Theresa, pure devotion in the Fair Saint.

Farther and last he comes to the house of Macaria, the soul of a star, *i.e.*—a pure and perfected intelligence embodied in feminine form, and the centre of a world whose members revolve harmoniously round her. She instructs him in the archives of a rich human history, and introduces him to the contemplation of the heavens.

From the hours passed by the side of Mariana to these with Macaria, is a wide distance for human feet to traverse. Nor has Wilhelm travelled so far, seen and suffered so much in vain. He now begins to study how he may aid the next generation; he sees objects in harmonious arrangement, and, from his observations, deduces precepts by which to guide his advances as a teacher and a master, "helpfull, comfortfull."

In all these expressions of woman, the aim of Goethe is satisfactory to me. He aims at a pure self-subsistence and free development of any powers with which they may be gifted by nature, as much for them as for men. They are units, addressed as souls. Accordingly, the meeting between man and woman, as represented by him, is equal and noble, and, if he does not depict marriage, he makes it possible.

In the Macaria, bound with the heavenly bodies in fixed revolutions, the centre of all relations, herself unrelated, he expresses the Minerva side of feminine nature. It was not by chance that Goethe gave her this name. Macaria, the daughter of Hercules, who offered herself as a victim for the good of her country, was canonized by the Greeks, and worshipped as the goddess of true felicity. Goethe has embodied this felicity as the serenity that arises from wisdom, a wisdom such as the Jewish wise men venerated, alike instructed in the designs of heaven, and the methods necessary to carry them into effect upon earth.

Mignon is the electrical, inspired, lyrical nature. And wherever it appears we echo in our aspirations that of the child—

> So let me seem until I be:—
> Take not the *white robe* away.
> * * * *
> Though I lived without care and toil,
> Yet felt I sharp pain enough;
> Make me again for ever young.

All these women, though we see them in relations, we can think of as insulated. They all are very individual, yet seem nowhere restrained. They satisfy for the present, yet arouse an infinite expectation.

The economist Theresa, the benevolent Natalia, the fair saint, have chosen a path, but their thoughts are not narrowed to it. The functions of life to them are not ends, but suggestions.

Thus to them all things are important, because none is necessary. Their different characters have fair play, and each is beautiful in its minute indications, for nothing is enforced or conventional, but every thing, however slight, grows from the essential life of the being.

Mignon and Theresa wear male attire when they like, and it is graceful for them to do so, while Macaria is confined to her arm-chair, behind the green curtain, and the fair saint could not bear a speck of dust on her robe.

All things are in their places in this little world, because all is natural and free, just as "there is room for every thing out of doors." Yet all is rounded in by natural harmony, which will always arise where truth and love are sought in the light of freedom.

Goethe's book bodes an era of freedom like its own, of "extraordinary generous seeking," and new revelations, *new* individualities, shall be developed in the actual world, which shall advance upon it as gently as the figures come out upon his canvass.

Unfortunately, this happy period, when young ladies are to wear male attire when it pleases them, and when "it is graceful for them to do so," is likely to be far distant. We subjoin the reasons, and may add that this time we heartily agree with our authoress:—

I now touch on my own place to-day, and, as I write, events are occurring that threaten the fair fabric approached by so long an avenue. Week before last, the Gentile was requested to aid the Jew to return to Palestine, for the Millenium, the reign of the son of Mary, was near. Just now, at high and solemn mass, thanks were returned to the Virgin for having delivered O'Connell from unjust imprisonment, in requital of his having consecrated to her the league formed in behalf of liberty at Tara's Hill. But last week brought news which threatens that a cause identical with the enfranchisement of Jews, Irish, women, aye, and of Americans in general, too, is in danger, for the choice of the people threatens to rivet the chains of slavery and the leprosy of sin permanently on this nation, through the annexation of Texas.

Ah! if this should take place, who will dare again to feel the throb of heavenly hope, as to the destiny of this country? The noble thought that gave unity to all our knowledge, harmony to all our designs; the thought that the progress of history had brought on the era, the tissue of prophecies pointed out the spot where humanity was, at last, to have a fair chance to know itself, and all men be born free and equal for the eagle's flight, flutters as if about to leave the breast, which, deprived of it, will have no more a nation, no more a home on earth.

Women of my country! Exaltados! if such there be! Women of England, old English nobleness, who understand the courage of Boadicea, the sacrifice of Godiva, the power of Queen Emma to tread the red-hot iron unharmed. Women, who share the nature of Mrs. Hutchinson, Lady Russell, and the mothers of our own Revolution, have you nothing to do with this? You see the men, how they are willing to sell, shamelessly, the happiness of countless generations of fellow-creatures, the honour of their country, and their immortal souls, for a money-market and political power. Do you not feel within you that which can reprove them, which can check, which can convince them? You would not speak in vain, whether each in her own home, or banded in unison.

Tell these men that you will not accept the glittering baubles, spacious dwellings, and plentiful service they mean to offer you through these means. Tell them that the heart of women demands nobleness and honour in men, and that, if they have not purity, have not mercy, they are no longer fathers, lovers, husbands, sons of yours.

BIOGRAPHY.

Holmes's Life of Mozart.

(*Continued from page 478.*)

The manhood of Mozart was as troublous as was his youth. The year 1779 beheld him cathedral organist at Salzburg, under the authority of the archbishop, who had been throughout "his evil genius."

It was expected of him that he should devote his time to the production of the very lightest music, for court amusement; and it was with difficulty he could snatch brief intervals for such master-works as *Zaïde* and *Idomeneo*, the latter written expressly at the command of the Elector of Bavaria for the carnival. This magnificent work was completed within a month, and so confident was the artist of his powers that, as he tells his father, he went to the rehearsal as much at his ease as if he had been invited to a feast. At Munich he received great attention; and this, contrasted with his scurvy treatment at Salzburg, made him doubly anxious to quit his present irksome service. Thus he writes to his father:—

How goes on the archbishop? Next Monday I shall have been absent from Salzburg six weeks, You know, my dear father, that it is only my love to you that keeps me at Salzburg—for, by Heaven! if it rested with me, I would have torn up my appointment and relinquished my situation before I came away. I assure you, upon my honour, that though I have no dislike to Salzburg itself—its prince and proud nobility become daily more and more insupportable to me; and I shall, therefore, look forward with pleasure to a letter which may inform me that my services are no longer required. The distinguished patronage I have here would well supply both my present and future wants,

to say nothing of what might accrue by deaths, for which nobody can wait—and yet these are no disadvantage to an unemployed man.

The 29th of January was appointed by the Elector for the public performance of this opera. Crowds had come from all the country round to witness its representation. It was entirely successful, and placed MOZART at once upon the very pinnacle of fame. He had just completed his 25th year.

He obtained successive leaves of absence from the archbishop until March, and then he was commanded to follow the petty court of Salzburg to Vienna, where he arrived about the middle of the month. What was the reception of the first composer of his age shall appear by an extract from one of his letters :—

Yesterday, the 16th, by nine o'clock in the morning, I reached this place, God be thanked, safely and well. I write this in Mesmer's garden in the Landstrasse. Now about the archbishop. I have a delightful apartment in the same house in which he dwells. Brunetti and Ceccarelli lodge in another house. *Che distinzione!* My neighbour, Herr von Kleinmayern, loads me with civilities, and is really a very charming person. Dinner was served at half-past eleven in the forenoon, which was for me unfortunately rather too early, and there sat down to it—the two valets in attendance, the controller, Herr Zetti, the confectioner, two cooks, Ceccarelli, Brunetti, and my *littleness*. The two valets sat at the head of the table, and I had the honour to be placed at least above the cooks. Now, methought, I am again at Salzburg. During dinner there was a great deal of coarse, silly joking; not with me, however, for I did not speak a word, unless absolutely obliged, and then it was always with the greatest seriousness. So when I had finished dinner, I went my way. There is no table in the evening, but each has three ducats—with which you know one may do a great deal! Our excellent archbishop glorifies himself with his people, receives their services, and pays them nothing in return.

But growing indignities from his reverend and royal master led to quarrels, and ultimately MOZART requested his dismissal.

My last letter will have informed you that I requested my dismissal from the service of the prince on the 9th of May, and at his own desire; for in the two audiences which I had previously had, he said to me, "Take yourself off, if you don't choose to remain in my service." What wonder then, if, after my enduring such appellations as *fellow*, *careless fellow*, and the like, and worse, he should be taken at his word in "Take yourself off."

On the day following, I gave Count Arco a petition to present to his highness, together with my travelling expenses, which consisted of fifteen florins forty kreutzers for the diligence, and two ducats for food, &c. He, however, would accept neither, and assured me that I could not resign without the consent of my father. "That is your duty," said he. I told him immediately that I knew my duty to my father as well as he, and that it would give me much concern to have to learn it at this time of day. "Well then," he replied, "if he is satisfied, you may request your dismissal;" but if not, "you may also request it." A pretty distinction! As for the edifying discourse that passed between the archbishop and me in three audiences, together with what this beautiful man of God has lately said to me anew, it had so powerful an effect upon my frame, that being at the opera in the evening, I was obliged to leave in the middle of the first act, and return home to lie down; for I was quite feverish, trembled in every limb, and rolled about the streets like a drunken man. The following day, which was yesterday, I was obliged to pass at home, and the entire forenoon in bed. Your supposition that I shall get into ill odour with the nobility and the emperor, is quite unfounded; for the archbishop is hated here, and, above all, by the emperor; and it is the very reason of his ill-humour that the emperor did not invite him to Luxemburg.

I will now just inform you what was the principal ground of offence. I knew not that I was a valet in attendance, and that ruined me. I ought to have lounged away a couple of hours every morning in the antechamber; indeed, I had often been told that I ought to show myself, but could never recollect that this was a part of my duty, and therefore contented myself with coming when the archbishop sent for me. As far as this, I have spoken as though we were in the presence of the archbishop; I now speak to you alone my dearest father. Of all the injustice that I have endured from the archbishop from the beginning of his reign till now, of his incessant insults, and of all the impertinence and the affronting speeches that he has uttered to my face, as well as of the incontrovertible right that I have to leave him,—nothing need be said here, for nothing can be said that can bring their truth into question.

Nowadays the only wonder is that he should have so long submitted to so much ill-treatment. In this respect, at least, has our generation wonderfully improved. Genius enjoys independence if it can boast no other heritage.

But his subsequent history shews that this condition of servitude to great men was not altogether a matter of choice. There was no public to which genius could appeal. Even MOZART, acknowledged by a musical people to be the first composer of his own if not of any age, found it difficult to earn a decent livelihood, and was subjected to struggles and privations beneath which his spirit ultimately sunk. The man who at this day would have secured an income equal to the revenue of a prince, only fifty years ago was scarcely able to maintain himself by incessant industry.

His life at Vienna was a busy one, and he basked in the favour of the emperor and nobility. But he had another and purer source of happiness. The family of the WEBERS, with whom he had contracted an intimacy at Mannheim, came to settle at Vienna. His attachment to CONSTANCE WEBER had grown into a passion, and he was anxious to make her his wife, and it was in her society that he passed all his leisure moments. Among his most respected friends was HAYDN, whose judgment he held in such esteem that he was accustomed to submit to him many of his compositions before he adventured the publication. HAYDN, on the other hand, profoundly enjoyed the wonderful beauty and perfection of MOZART'S pianoforte-playing.

On the 4th of August, 1782, MOZART was made happy in a union with his CONSTANCE. We must extract the joyous letter in which he gives an account of his marriage.

Vienne, ce 7 d'Août, 1782.

Mon très cher Père!—My dear Constance, now, thank God! my wife, was long ago informed by me of the whole state of my affairs, and of what I had to expect from you. Her friendship and love to me, however, were so great, that she joyfully and unhesitatingly confided her whole future life to my keeping, and joined her fate to mine. I kiss your hands, and thank you with all the tenderness that a son should feel towards a father, for the kind consent and the paternal blessing. My dear wife will write next post-day, to beg the blessing of her kind father-in-law, and the continuance of her beloved sister's friendship. No one was present at the ceremony except the mother and youngest sister, M. von Thorwart, M. Landrath von Zetto, and M. von Gilowsky.

When we were joined together, my wife began to weep and I too—and indeed they *all* wept, even the priests themselves, at witnessing our emotion. Our whole marriage feast consisted in a supper given by the Baroness von Waldstetten; which was, in fact, rather princely than baronial. During supper I was surprised by a concert from sixteen wind instruments, who played my own compositions. My dear Constance now looks forward with pleasure to a visit to Salzburg, and I am sure that, when you see her, you will congratulate me on my happiness, if you are of my opinion that a virtuous well-disposed wife is a treasure to her husband.

This was the culminating point in his career. His happiness soon began to pass under a cloud. His wife was confined to her bed by a long and tedious sickness, and as a family was growing up around him, his pecuniary affairs became embarrassed, and stinted means added to his annoyances.

It was probably in reference to these embarrassments that the Emperor Joseph one day said to Mozart, "Why did you not marry a rich wife?" To which the composer, with that dignity and self-reliance which characterize all his answers to the great, immediately replied, "Sire, I trust that my genius will always enable me to support the woman I love!"

Yet amidst his trouble did he pour forth his immortal melodies in boundless profusion, revolutionizing the musical taste of Europe, and almost teaching a new art.

We cannot attempt to follow the biographer in his record of the productions of MOZART'S genius during this the busiest period of his life. We must be content to take only a few of those anecdotes which best illustrate the character and habits of the man.

In the month of February, 1784, Mozart commenced a catalogue of his productions from that time onward, and suffered no distraction of his affairs to interfere with his regularity in keeping it. As soon as he had finished a composition, he entered a few bars of its theme in a book, together with the date of its completion; and thus, in simply assisting his own memory to recognise the numerous offspring of his brain, left a document to

posterity which is invaluable, as it affords a complete history of his genius throughout its most brilliant years.

Very pleasing is this picture of his private life :—

Allusion has been already made to some pecuniary embarrassment of Mozart, previous to his visit to Salzburg. This accident, unfortunately so frequent with him, was not the result of poverty so much as of an ill-regulated household economy, and, at that time, of inexperience. To live in a house in which it is not known how the money goes, has been at once the happiness and the misfortune of men of genius in all ages. But let us observe the strong, though most unwelcome effort, that this great man made to live with the reputation of a good citizen :—

"At the time that he commenced this catalogue," says André, "he also commenced keeping a regular account of his receipts and expenses. His receipts, among which are comprised the produce of his concerts, of his instructions in distinguished families, and of the sale of some few of his works, were put down by him on an oblong piece of paper, commencing in March, 1784, and extending to February of the year following. From that date, the account was handed over to his wife, who did not continue it long. The expenses were written in a little quarto book, which had before been appropriated to his studies in the English language, and which contains several letters translated by him into English."

The trifling disbursements which the composer thought fit to enter in his account, during this paroxysm of domestic prudence, may create a smile; while, at the same time, his purchases show the simplicity and elegance of his taste. On the first of May he buys some flowers, which cost a kreutzer; this, though somewhat less than a farthing, forms an item in the musician's ledger. On the 27th, there appears to have been a more expensive purchase, in the shape of a bird—a starling, for which thirty-four kreutzers were paid. The tune which the starling had been taught to sing was so curious, that there is little doubt it occasioned the composer many a hearty laugh. Immediately under the entry of his purchase, he has written its song, with the remark, *Das war schon!* How pretty!

These are the traits of an amiable and affectionate nature, but they have peculiar grace in connection with the great musician. His fondness for animals, but especially for birds, was a part of that original refinement—that feeling for the beauty of natural objects, which neither the artificial life of the theatre, nor the influence of an absorbing profession were able to weaken, much less extinguish. It was his practice every summer to hire a little house and garden in the suburbs of Vienna. Here he enjoyed the air with his wife and friends, and often pursued his work in an arbour in the midst of their conversation. When the starling before mentioned, which became a great favourite, died, he buried it in his garden with due honours, and raised a monument and inscription to its memory.

It was at Vienna that MOZART adopted HUMMEL into his family, and took great pains to instruct him, the boy being then only seven years old. The master did not live to enjoy the fame of his pupil. Indeed, he appears always to have felt a great interest in those intrusted to his teaching.

There was no end to the exertions which he made to advance those pupils who interested his friendship in their behalf. Whatever they wanted he wrote for them. The Abbé Stadler, the intimate friend and discerning admirer of the master, placed his niece under the care of Mozart, for instruction on the pianoforte and in the science of harmony. For her sake he commenced theorist, and actually wrote a treatise on thorough bass, which has been published, but is little known. The Abbé Stadler (whom the writer of these pages had the pleasure to meet at Vienna, in 1827) seemed to cherish his personal recollections of the man even more warmly than those of the artist.

Another of his professional friends at Vienna was STORACE, at this time but two-and-twenty, and MOZART seven years older. Their tastes were similar, and their temperaments alike. Both had a passion for arithmetic.

It is related of Storace, that when a boy, studying music under his father, he received a bravura song of Bastardella's to copy. He was so astonished that fifty guineas should be paid for *singing a song*, that he counted the notes in it, and calculated the amount of each note at 4*s.* 10*d.* He valued one of the divisions running up and down at 18*l.* 11*s.*

The winter of 1786, was celebrated for a series of concerts given by MOZART, and which first introduced to the world a name that has since attained to a reputation second only to his own.

It was at this time that Beethoven, then a youth just entering on his musical career, came on a visit to Vienna, where a few years after Mozart's death he finally settled. He was introduced to the composer, and became for a short time his pupil. Seyfried, who has recorded some particulars of the interview, remembers that Mozart gave Beethoven a subject to extemporize upon, and while he was working it, said to some persons who were standing near him in an adjoining apartment, "Listen to that young man; he will some day make a noise in the world."

Strange to say his exquisite opera *Le Nozze di Figaro* proved almost a failure at Vienna. But desirous of giving it another chance, he set out for Prague, of the musical enthusiasm of whose people he had heard much. The result was in every respect gratifying to him. This was the reception of himself and of his opera :—

On the same evening that he alighted at the castle of his noble entertainer, his opera of *Figaro* was given at the theatre, and Mozart found himself for the first time in the midst of that Bohemian audience of whose enthusiasm and taste he had heard so much. The news of his presence in the theatre quickly ran through the parterre, and the overture was no sooner ended than the whole audience rose and gave him a general acclamation of welcome, amidst deafening salvos of applause.

The success of *Le Nozze di Figaro*, so unsatisfactory at Vienna, was unexampled at Prague, where it amounted to absolute intoxication and frenzy. Having run through the whole previous winter without interruption, and rescued the treasury of the theatre from ruinous embarrassments, the opera was arranged in every possible form: for the pianoforte, for wind-instruments (garden music), as violin quintets for the chamber, and German dances. In short, the melodies of *Figaro* re-echoed in every street and every garden; nay, even the blind harper himself, at the door of the beer-house, was obliged to strike up *Non più andrai* if he wished to gain an audience or earn a kreutzer. Such was the effect of the popular parts of the opera on the public at large; its more refined beauties exercised an equal influence on musicians. The director of the orchestra, Strobach, under whose superintendence *Figaro* was executed at Prague, often declared the excitement and emotion of the band in accompanying this work to have been such, that there was not a man among them, himself included, who, when the performance was finished, would not have cheerfully recommenced and played the whole through again.

A few days afterwards he gave a concert remarkable for this, that every piece of music was his own composition, and it was concluded with an improvisation on the pianoforte. "Having preluded and played a fantasia, MOZART rose; but the stormy and outrageous applause of his Bohemian audience was not to be appeased, and he sat down again."

His second fantasia, which was of an entirely different character, met with the same success; the applause was without end, and long after he had retired to the withdrawing-room he heard the people in the theatre *thundering* for his reappearance. Inwardly delighted, he presented himself for the third time. Just as he was about to begin, when every noise was hushed, and the stillness of death reigned throughout the theatre, a voice in the pit cried "*From Figaro.*" He took the hint, and ended this triumphant display of skill by extemporising a dozen of the most interesting and scientific variations upon the air *Non più andrai*. It is needless to mention the uproar that followed. The concert was altogether found so delightful, that a second upon the same plan soon followed. A sonnet was written in his honour, and his performances brought him one thousand florins. Wherever he appeared in public it was to meet testimonies of esteem and affection. His emotion at the reception of *Figaro* in Prague was so great that he could not help saying to the manager, Bondini, "As the Bohemians understand me so well, I must write an opera on purpose for them." Bondini took him at his word, and entered with him, on the spot, into a contract to furnish his theatre with an opera for the ensuing winter. Thus was laid the foundation of *Il Don Giovanni*.

(*To be continued.*)

Lives of King Alfred, Sir Thomas More, and John Evelyn.
London: Burns.

MR. BURNS is varying the subjects of his delightful *Fireside Library* by the introduction of Biography; and, in the volume upon our table, three subjects have been selected, each of which will yield to the youthful reader both pleasure and profit. These lives are written in an agreeable, unpretending style, admirably adapted for narrative; the golden mean between verbosity and meagreness has been achieved, and the more telling incidents are preserved without dwindling to

trivialities; in the memoir of John Evelyn, the author has introduced many of the most curious passages from the Diary published some years since, and which add vastly to the attractions of the narrative. Nor does he fail to point the moral when occasion offers. This is just the book for school-reading.

FICTION.

Rody the Rover; or, the Ribbonman. By WILLIAM CARLETON, author of "Traits and Stories of the Irish Peasantry," "Valentine M'Clutchy," &c. Dublin, 1845. Duffy.

The object of *Rody the Rover* is thus stated in the preface: "to show Irishmen, through the medium of fictitious characters—if, indeed, they can be called so—what description of persons they are in general, who introduce secret and illegal combinations among them. I think I can appeal with confidence to the people of any one district in which the curse of Ribbonism exists, whether—if they can trace its origin at all—they will not find that it has been first introduced by some strange vagabond of whom they knew nothing, who had the art to insinuate himself into their confidence, in order to leave the blighting principles of Ribbonism behind him." Such an object cannot be too much commended, and if Mr. CARLETON should succeed in deterring any number of his countrymen from resorting to these illegal combinations, for purposes which neither religion, morality, nor law can sanction, he will have accomplished that for which statesmen have tried in vain. Whether a fiction will have more weight than fact with a people so imaginative as the Irish, is a question which we cannot look upon as quite decided by any analogy drawn from our own countrymen. The attempt, at least, is a noble one, and entitled to all honour.

And as a fiction *Rody the Rover* is admirably adapted for its design. The story is sufficiently exciting to secure the attention of the dullest reader; and it is so true to nature, it so well paints the realities amid which the lower classes of Irishmen exist, that they cannot fail to feel its application to themselves, and to understand, if they do not choose to profit, by the moral it reads to them.

The scene of the tale is laid in a village which, from the lowest condition of Irish indigence, had been raised to something like comfort and prosperity by the demand for labour consequent upon the opening of a mine. But the march of improvement is stopped by the appearance among the people of Rody the Rover, a very paragon of accomplished villany, who worms himself into their confidence by his good looks and smooth tongue. He is commissioned, as it appears, by one Mr. Sharpe, a magistrate of the Orange school, who seeks to produce a disturbance that he may have the credit of suppressing it. In pursuance of his diabolical design, Rody insinuates himself into the confidence of the family of the M'Mahons, and into the affections of the daughter Alice, and availing himself of the opportunities thus afforded to him, he proceeds systematically to effect their ruin. He obtains possession of Alice by a false marriage—he induces her brother to become a Ribbonman, and to promote a disturbance in which the manager of the mine is killed; the murder is charged upon the young man, who is hung, and the village is again reduced to its original condition of destitution and wretchedness.

Thus is vice made victorious, and for so violating the ordinary practice of story-tellers, Mr. CARLETON puts in this defence: "With respect to the *dénouement*, with which, perhaps, many may feel disposed to quarrel, I must say, with great respect, that the doctrine of poetical justice, as it is termed, is not always the doctrine of real life, and that so long as we have many instances of successful villany before our eyes, an author ought not to be censured for allowing virtue to suffer, or villany occasionally to triumph in his pages—as it often does in the world around him."

It is true that in the world villany has not unfrequently apparent success—its object is gained—it thrives in wealth; but this is only a partial view of its results. To ascertain its real condition, it would be necessary to penetrate into the secret chambers of the heart, and read the story written there. Is it happier as well as richer?—for unless it brings more happiness, no object attained is really a triumph. We believe that in no case is prosperous vice unpunished, and if the conscience could be exposed to the gaze of the world the retribution would be recognised. Now the *dénouement* which Mr. CARLETON justifies is faulty in this, that it presents only a partial view. It leaves vice, in seeming triumph, possessing the object for which it had striven so unscrupulously; but it does not go on to shew the inward pangs which deprive that triumph of all its worth, and make the condition of the virtue it has wronged a paradise by comparison. This moral, at least, should never be omitted by the novelist; for without it his tale is not true to nature, and he has not merely lost a golden opportunity for inculcating a great moral lesson, but there is danger lest he do positive harm by the encouragement thus indirectly given to the adoption of dishonest means for the procurement of desired ends.

With this protest we can heartily commend *Rody the Rover* to the perusal of our readers. It forms one of Mr. DUFFY'S interesting and very cheap series produced under the title of *The Library of Ireland*; and as it may be purchased for a shilling, it will be fitter to buy than borrow. We take one passage to exhibit the style of the composition. Here is a picture of

AN IRISH VILLAGE.

The village of Ballybracken was, some thirty years ago, as favourable a specimen of filth, neglect, and ignorance, as any satirist upon our national habits could wish to point out. It consisted of about two-score houses, or rather huts, in some parts huddled together in twos and threes; and in others, scattered about without order or forethought; exactly as if they had been sown by broadcast. Street or pavement of any kind there was none, unless a stripe of rutted mud in winter, with here and there a stepping-stone, could be called such; whilst in summer, nearly one-half of what the inhabitants swallowed was the aforesaid mud, being now only the same curse disguised in the shape of dust. Every cabin in it, however, could boast, without a single exception, of having before its door that fragrant nosegay, the dunghill, appropriately set in its pool of green stagnant water. This little circumstance was, however, by no means looked upon by the people as a nuisance. We cannot certainly quarrel with our humble countrymen for collecting a dung-heap near their houses; the only point of difference between us is *its position*. So long as potatoes are their sole support, we know that to deprive them of the manure on which they plant them, would be literally to take away from them the stalk of life. What we should wish them to do, therefore, is to avoid making the dunghills so many playgrounds for their children; or collecting them in such a position as to render it impossible to enter the house, without inhaling the fetid and unwholesome stench which is perpetually exhaling from them.

Seriously, such a picture of misery as the village of Ballybracken then was, could scarcely be seen. Some of the houses were thatched with heath, others with rushes, and many of them had no other covering than scraws; that is, the green sward cut into equal stripes, and laid over the roof. Inside, a stool or two; a large pot and a small one, with a couple of wooden or earthen vessels, on a single shelf; a mended chair, perhaps; an old creel for fetching turf; a dusty salt-bag hanging up in the chimney, and a *scrahag* or *lusset*, on which to empty out the potatoes when boiled, constituted their principal furniture. Their fire, which in general consisted of brushwood, or *brusna*, as it is termed, was lit only at mealtimes to boil their potatoes; but an abiding fire remaining in the hearth for the day, was a comfort they seldom knew. A hole in the roof served for a chimney; but when the fire was lit, a thick atmosphere of smoke oozed through the whole roof, about which it wreathed itself so closely that the said roof was often invisible. This state of things was very manifest on the inmates, every one of them was so thoroughly spotted over with soot-drops, both in dress and complexion, that it was disgusting to look at them; and when heavy rain came, I can compare the torrents which streamed from the miserable roof, to nothing but an overgrown shower-bath of ink. In truth it was truly pitiable to see the tattered mother, or some of her naked children, emptying out before the door the water that thus descended, lest it might inundate the floor, or collect in that corner of the cabin which they shook out their beds of straw. But in fact the squalid misery and frightful destitution of such scenes have been so often described, that it is now only necessary to assure the reader that the villagers of Ballybracken were not a whit behind the worst of them in poverty, filth, and, what is the most painful of all, an unconsciousness of that filth, and a lazy, ignorant contentment under their poverty.

The land about it was cold, mountainous, and of course barren, with scarcely a patch from which could be extorted any thing at all like a crop. About two or three miles below them lay a rich and fertile country thickly inhabited, and whose population were by no means wanting in most of the comforts, and some of the rustic luxuries, of life.

Ballybracken, however, was indeed in a sad state. The poor people were so far sunk in the scale of human comfort, as to be almost incapable of properly understanding the extent of their own privations. There was no school near them to which they could send their children, and of course the latter had little else to do than run about half-wild, half-naked, and half-fed; idle, lazy, and mischievous; scolding, quarrelling, and fighting among themselves, and making reprisals on each other in revenge, or in evil of some description. Flesh meat they never tasted under their own roofs, unless at Christmas or Easter, when they contrived to purchase a few pounds of fresh pork, which they boiled and enjoyed as a luxury.

The Lady of Milan; or, Fidelity unto Death. Edited by Mrs. THOMPSON, Author of "Widows and Widowers," &c. In 3 vols. London, 1845. Bentley.

THE trick of editing ought to be exposed and condemned. So it would be if reviewers were honest, and dared to utter the truth; but, unfortunately, they speak not as they feel, but as they must.

Of late a fashion has crept into our literature of *editing* the works of obscure writers. Probably our readers may not be aware of the true meaning of this process, and therefore we will explain it to them, in order to put them upon their guard against an imposition which will burden their libraries with costly lumber, and which only needs to be known to be avoided.

The trick of editing, then, is thus contrived. A stupid book is written by some obscure person; no bookseller will buy it, because it wants the worth that would command a sale on its intrinsic merits, or the name, which is often a substitute for merit. Hereupon either the witless author, or the publisher, or both, make application to some other author, who has achieved a reputation, and whose name has a selling value in the market. For a *consideration*, the said author is prevailed upon to patronize the worthless production by *editing* it; in plain terms, he sells the use of his name on the title-page of a book that would not sell without it. But of what use is this name? will the reader ask. Why, this it is. The great majority of readers, and library-keepers, look to the name in the advertisements and on the title-page, and upon the faith of that name they order, without distinctly observing that the book in question is not *written*, but only *edited*, by the name that has attracted them, and it is not until the volumes are obtained, and the leaves cut, that they discover the mistake.

Now such a system is nothing less than a fraud upon the book-buying and book-reading public, and ought to be exposed whenever it is attempted to be practised. The meaning of it cannot be mistaken, for what "editing" can a novel require? If it be a good one, the *editor's* help is not needed; if it be so bad as to require such assistance, it is unfitted for publication. Besides, even if an editor did lick it into shape, why should that editor's name be paraded in the advertisements, and the name of the writer concealed? The fact, indeed, is too plain to call for argument—the intent cannot be mistaken—it is an attempt to impose upon those whose orders for books are governed by the names of the writers, and THE CRITIC will never see such an attempt made without indignantly protesting against it as disgraceful to the author who so sells his name, and an unworthy expedient of the publisher who so uses it.

The Lady of Milan is one of these *make-believe* novels. Mrs. THOMPSON is *not* the author; she has only put her name as editor in the author's place. She ought to have a very large price for lending her sanction to a work which her judgment must have told her, if she had read half-a-dozen pages, to be wanting in all that gives interest and worth to the historical romance. It is a clumsy, ill-constructed story, without animation, without character, without a spark of verity. The writer has no other qualification for his task than industrious reading up of the history, and manners, and costumes of the times he describes; but he cannot endow them with life, nor summon them upon the stage to play their parts again. It is a dull, sorry, worthless performance, and does not deserve the attention of any library.

Liesli, a Swiss Tale, from the German. Heinrich and Blanca, or the Three Brothers. London: Burns.

THIS is another of the translations from the rich stores of German fiction which Mr. BURNS is introducing to the English reader in his *Fireside Library*. The two tales in the elegant little volume before us are pregnant with interest, and will delight many a family circle during the ensuing winter evenings.

POETRY.

The Ocean Flower: a Poem. Preceded by an Historical and Descriptive Account of the Island of Madeira. By T. M. HUGHES, Author of "Revelations of Spain." London: Longman and Co.

IT is not necessary that we should review the two portions of this work individually. Were we to do so, it may appear to the reader as two distinct works, when in reality it is not so; the former, or prose part of the volume, being to a great degree explanatory notes of the poem which follows. On the importance of the subject-matter, both of the prose and verse, it is necessary to give Mr. HUGHES's observations.

The importance of the discovery of Madeira can scarcely be overrated. It was the first of those great expeditions for the acquisition of new regions, which so influenced the diffusion of new and liberal ideas, and contributing to establish freedom both in thought and action, powerfully swayed the destinies of mankind. The Conquistadores with all their faults were amongst the most useful pioneers of modern civilization; and from the very nature of their avocations upon entering new regions, and the inevitable development of their self-dependent energies, they exercised and enjoyed so much solid liberty that it was impossible afterwards to wrest it from their grasp. The acquisition of Madeira was a great step to the discovery of the American continent, and to the foundation of the greatest democratic republic of ancient or modern times. It assisted in demolishing the stern fortress of Feudalism, and was concurrent with the revival of letters in the wonderful fifteenth century, with the silent contests of the Lollards for religious freedom which in England preceded the Reformation, and with the last struggles of the great barons against the advancing tide of popular liberty.

Taking into account the fiction—for assuredly it is so—of the discovery of Madeira hy ROBERT A MACHIN and ANNA D'ARFET, there appears to be a fine field for the exercise of poetic talent, and we shall see how far Mr. HUGHES has availed himself of the machinery already prepared to his hands. The discovery of such a fertile country as Madeira, unassisted by a beautiful fiction, is a poetic fact. It is because of the conflicting opinions concerning this discovery—BARROS on the one hand, and a host of historians on the other—that the subject recommends itself to the poet. A poet, by the license of his art, may take a fact from science or from history, and by moulding it into a poetic truth, thereby make it a scientific or an historical falsehood. But it is better for the poet, when a question is unsettled, like that of the discovery of Madeira, because he can then venture his opinion against the opinions of other men, and however romantic and fanciful it may be—fancy and romance being the handmaidens of poetry—the most deliberate proser cannot enter his protest against it. The luxuriance and natural beauty of the island of Madeira are thus described in a MS. by Dr. JOAO PEDRO DE FREITAS.

"The island of Madeira at the period of its discovery, presented a most lovely picture of nature. A vegetation truly astonishing covered it with indigenous and infructiferous plants, for the most part unknown in Europe, and raised to a prodigious height the ancient and majestic cedar, the laurel, til, vinhatico, azevinho, aderno, teixo, pao branco, and dragon-tree, intermingled with those beautiful shrubs, the folhado, faya, urze, myrtle, and uveira, and forming thus one continuous and impenetrable ferest. The thicket was carpeted by innumerable and diversified plants, some odoriferous, and others likewise flowering, the arbutus mingling with the herbarea, the feto, the musgo, and the agarico, in the midst of which rose the silva, the era, the corriola, the alegra-campo, and other evergreens and creeping plants, which wove their festoons from branch to branch, and gave new shade to a lovely land all clothed with vegetation, new force to innumerable springs of pure and salubrious water.

"There was no quadruped whatever on the island, and scarcely an amphibious animal. But over these silent solitudes soared various birds of prey, and ten different sorts of singing birds warbled their sweet notes. Various species of aquatic fowls

had their nests in the huge volcanic rocks which line the shore, and nature shewed her affluence in the variety of the insect tribes."

Nearly all the shrubs enumerated above are exquisitely odoriferous, as is likewise the gigantic til—the true king of the forest. The faya, urze, aroma, and folhado are amongst the most deliciously fragrant and flowering of the diversity of indigenous plants.

As the fruit of this description by the doctor, we have many choice lines by the poet. We select a short ballad,

THE GIANT TIL.

Of forest trees there's none, there's none
Can match the mighty Til;
Like rubies that sparkle in the Sun,
His leaves the horizon fill.
His girth it is a giant's,
And his shade a host might hide;
A forest is he,
That single tree,
So stately and so wide!

When Zargo lighted on our isle
A monster-Til he found,
Whose branches measured—nay, do not smile—
A thousand paces round!
Cold-blooded northern sceptics,
Behold what our Sun can do;
Of stalwart men
Hand-linked were ten
To embrace that Til too few!

'Twas in the Cadéa Velh' he stood
Till Spain usurped the crown,
When Philip for his Armada-wood
The noble tree cut down.
Its beauteous veins dark-polished
Shone in many a gay saloon;
But a storm arose,
And his English foes
That Armada finished soon

Of forest trees there's none, there's none
Can match the mighty Til;
Like rubies that sparkle in the Sun,
His leaves the horizon fill.
His girth it is a giant's,
And his shade a host might hide;
A forest is he,
That single tree,
So stately and so wide!

The history which Mr. HUGHES has made the subject of his poem extends from the middle of the thirteenth to the end of the fifteenth century. This certainly was a most glorious time. It began with the conquest of Algarve and the expulsion of the Moors, and ended with those great discoveries which were commenced by Don HENRY, and which were completed in the annexation of India and Brazil.

CAMOENS has narrated some of the leading incidents of the period, such as the murder of INEZ DE CASTRO, and other points well known by the readers of history. But, however, this did not shut Mr. HUGHES from the field. CAMOENS being the only poet of Portugal known to the rest of Europe, the subject was still fresh for the pen of Mr. HUGHES; and we think that the latter poet has not extracted the entire pith of the question. It may be an advantage to the reader to combine the useful with the ornamental in this notice, and therefore we have selected what appears to us highly instructive.

HISTORY OF SUGAR CULTIVATION.

The history of the sugar cultivation of Madeira is very interesting. I translate the following account from De Freitas's MS.

"The first sugar-mill was constructed by Diogo Vas de Teive in 1452, in pursuance of a contract formed with Don Henry, and so great was the augmentation of its growth, that in the year 1500 there were more than 120 of these *engenhos*, and the quinto of sugar (the proportion which went to the Crown) amounted to 30,000 arrobas (or a million of lbs. English). Portugal, Spain, and Italy were the principal importers of this sugar in muscovado, in refined loaves, in molasses, treacle, and various conserves.

"During the Spanish usurpation, that nation struggling with Holland, at enmity with England, weighing on Italy whose states she disturbed, and fomenting internal discords in France, kept away the merchant-ships of those several countries from the ports of Portugal. The policy of the Philips, and their unjust and violent government, fell with a fearfully oppressive weight on the island, and we saw our greatest article of export, sugar, dwindle almost to nothing from the year 1600, through the abundance which began to be produced at different points in America."

He adds the popular belief that a worm had destroyed the cane; but the ravages of this worm are not confined to Madeira. These historical details suggested to me the ballad of "The Sugar-loaves." It is a remarkoble fact that the sugar-cane was first conveyed from Madeira to Brazil and the West Indies.

CHARACTER OF THE MADEIRESE.

The standard of religion is unhappily low. The native clergy are unergetic, supine, and perfunctory in the discharge of their duties. The efforts at proselytism recently made by Dr. Kalley have been defeated by the stringent interference of the Government, but were of great use in applying a stimulus to the lethargic zeal of the clergy. The present Bishop of Madeira is a pious and active ecclesiastic, who has availed himself of the temporary religious ferment to incite his clergy to regular habits of useful preaching and catechetical instruction, as well as to inculcate a more rigid observance of the Sabbath. But I fear that the laziness induced by the climate and by habit amongst all but the labouring classes, may make these fitful efforts at amendment lapse ere long into the accustomed somnolency. The precepts of abstinence and fasting are treated by all classes of society in the towns with indifference. The country people are a hard-working and excellent race, whose poverty unhappily debars them entirely from the use of flesh meat.

The defects of character are for the most part negative; and crimes of violence are therefore little practised. Assassination is almost wholly unknown, and burglary and robbery are rarely heard of. But petty theft is rather general, and there are few honest servants on the island. All classes are polite, almost to a fault. The native shopkeepers and tradesmen will sometimes exact considerably more from an Englishman than they are satisfied with from one of their own countrymen; but the majority are above this meanness, and I have found the English shopkeepers honest, and for the most part reasonable in their charges.

The only passable hotel is the English Hotel, where the charges are moderate, but the accommodations very limited. The prices asked for furnished houses are sometimes unreasonable, as are likewise the charges of the boarding-house keepers, both rents and provisions being in fact immoderately low. The lb. of beef or mutton is only 2½d., loaf-sugar 6d., coffee 10d., fish and vegetables cheap and abundant, and the average rent of a good house with quinta annexed about 20*l*. per annum. Yet for such a house and quinta, furnished, it is customary to demand for the four or five winter months that invalids commonly stay from 70*l*. to 100*l*.; and the usual charge of the boarding-houses is 50 dollars or 10 guineas per month—the prices of Brighton, where provisions and rents are three times dearer. They are beginning, however, to come down in their charges. It is an indispensable protection to make a preliminary stipulation as to price with tradesmen in most instances, and never to advance the entire of your rent beforehand, thus taking security for the supply of all domestic necessaries.

THE VINTAGE.

The vintage takes place in the month of September. The grapes are usually first trodden underfoot in a trough; they are then placed in the press, and the juice which is extracted is put into casks the same day to ferment. The more active period of the fermentation usually lasts about five weeks. All but the very choicest wines are then fined with gypsum (*gesso*), and a few gallons of the best brandy are added to each pipe, for the purpose of preserving and qualifying the wine by incorporation with it in the process of time.

The vines are grown for the most part in the valleys, and upon the slopes of the lower hills. The superiority of the south-side growth to that of the northern parts of the island is most considerable. The vines are trained upon terraces and corridors, or over trellises of cane, placed horizontally about four feet from the ground, and are set in trenches of great depth. They are manured by planting beans and lupines amongst them, by which the ground is made doubly serviceable. One-seventh of the entire vine-crop is devoured by rats and lizards, which swarm at the vintage season. These destructive little anima's are said to have sufficient taste to prefer the finest grape. The vintage commences in the valleys, and is then carried up the Serra; and the rats and lizards faithfully follow its progress.

This description of the vintage is followed by some verses not unworthy a place in our columns.

THE VINTAGE.

Pile up the bursting glory of the Vine,
The golden clusters in the cesto pile;
Strip pendent pride from many a trellis fine,
And bid the wine-press teem o'er all the Isle.

Ye jocund lasses, pluck with might and main;
Your ruby lips make rubier with the grape;
Disclose white teeth with laughter's joyous strain,
And brown-necked beauties 'neath the purple cape.

Ye lads, whose hardy limbs no covering cramps,
From sinewy knee adown to buskin white,
The cesto ply with zeal no toiling damps,
And snatch the glances sly which youth delight.

O'er the dark tresses of these Southern climes,
Change *carapuças** with the maids ye love;
Nor will the Padre frown if ev'n at times
Ye steal a kiss where cluster grapes above.

Pile up the bursting glory of the Vine!
The golden clusters in the cesto pile;
Strip pendent pride from many a trellis fine,
And bid the wine-press teem o'er all the Isle.

The historical account of the forests which were set on fire by ZARCO, and which are said to have burned seven years, is thrown into fine verse by Mr. HUGHES. There is nothing in *The Ocean Flower* equal in powerful description, and we regret that the lines are too many for extract, but we make amends by quoting a lively set of stanzas, called

THE BEAUTIFUL NUN.

Saint Clair hath many daughters
Fair and gentle, wed on high,
And penitential waters
Stream from many a lustrous eye;
But all in southern splendour
Stare from orbs as black as coal,
Save one whose blue eyes tender
Melt while piercing to the soul!

Her auburn hair descending,
Did the convent's rule allow,
With snowy shoulders blending,
Might make hermits mourn her vow!
Such radiant play of feature,
Such a smile was never seen;
A scandalous procedure
'Twas to shut up Clementine!

Oh, where in all the Island
May another blonde be found,
In glen, or plain, or highland,
On or under all its ground?
Make Clementine a Sister!
Hide that sunny face from man!
Would the Abbess, when she kiss'd her,
Had been cloistered in Japan!

Yet Clementina 's steadfast,
Be't devotion, be it pride;
And when she might have sped fast
To the world, she "No" replied.
In scorn or depth of feeling,
Though a smile her red lip wear,
To man's deceitful dealing
She prefers the cold Saint Clair!

It will be seen by our extracts that Mr. HUGHES has availed himself of the natural beauties of Madeira, as well as of some of its most poetically historic revelations, to produce *The Ocean Flower*. What Mr. HUGHES finds poetical, he has more skill to leave more poetical, than he has the ability to invest what is sensibly barren with the radiancy of imagination. He is not omnipotent to create like SHELLEY, and by the aid of fancy walk with his feet among the flowers of earth and his head among the stars of heaven. He cannot, Prospero-like (or Shakespeare-like, for the magicians are synonymous), summon spirits from the impalpable air. "Not a jot, not a jot." But what of this. It is not so much for us to say what an author cannot perform, as to shew what he *has performed*. We must take the bantling of a man's brain exactly as we find it, though it have all the deformity of a Quilp, or the spirituality of an Ariel. Therefore we say that Mr. HUGHES has not failed in his undertaking. In as far as he has succeeded, he is as much indebted to such poetic facts as a rich vegetation and a fanciful history, simply because he is more of a builder to construct than an architect to conceive. Mr. HUGHES's volume, *The Ocean Flower, and a Descriptive Account of Madeira*, is a very readable work.

* The cap worn by the peasantry of both sexes.

MISCELLANEOUS.

The London Medical Directory, 1845. London, 1845. Mitchell.

THE value of this Directory will be best estimated by a statement of the extent and variety of the information it affords. It contains, in alphabetical order, the name of every medical man in London, together with his address, official appointments, honorary distinctions, and literary productions, and it is very neatly printed and got up.

The Words of a Believer. By the ABBE DE LA MENNAIS. Translated from the French, by EDWARD SMITH POTTER, A.B. London, 1845. Aylott and Jones.

THE famous work of the ABBE DE LA MENNAIS has not proved so formidable as the alarmists feared; it is innocent of a single revolution, and not so much as one republic can be traced to its influence. Its popularity has endured, because it contains many truths mingled with its visionary abstractions, and there is something in the style that attracts and rivets the attention. It is, in short, a production of genius, and, as such, has escaped the fate that usually attends political pamphlets. Whether Mr. POTTER'S translation will repay the cost of publication is problematical; but he has executed it with spirit and fidelity, and those who desire to make acquaintance with one of the most popular books of our age, could not better do so than by means of this edition.

JOURNAL OF FRENCH LITERATURE.

A Corsican Family. By ALEXANDRE DUMAS. 1 Vol.

THE present work is calculated to puzzle a reviewer. It is an incident of travel; but where the fact ends, and the fiction commences, it is by no means easy to decide. That both one and the other have contributed to its contents is evident enough; but they are so skilfully interwoven, that their identity cannot clearly be defined. Like WORDSWORTH'S Swans, they

Swim double, swan and shadow.

Following up the late revelations contained in a Paris letter of THE CRITIC, we should feel inclined to attribute the *Corsican Family* to M. ALEXANDRE DUMAS, *fils;* for in one part of the work the author talks of having been only thirty-six years in 1841; and with all our respect and faith in the probable precocity of the offspring of so clever a person as the "original" DUMAS, we cannot suppose it possible that a man of that age could possess a son, who not only wrote, but wrote so well as to be able to enact the double to his father, and to become the heir to his talent as fully as to his name. *Au reste*, it is sufficiently plain that *the* M. DUMAS, *père ou fils*, who produced the book in question, clearly intended that the reader should identify him with his narrative, for he makes more than one allusion in its pages to his former literary productions; and mentions, with very pardonable pride, the sensation produced by his signature at a public ceremony.

So much for the nature of the work, and its probable authorship. The curtain rises in Corsica and falls in Paris. We can scarcely do better than begin with the beginning; for, as comparatively little is known of the former country in England, and as the opening pages of the book give an admirable *aperçu* of the still primitive and marked character of the inhabitants, they cannot fail to be read with interest.

TRAVELLING IN CORSICA.

Nothing is more picturesque or more convenient than travelling in Corsica. You embark at Toulon; in twenty hours you are at Ajaccio, or in twenty-four hours at Bastia. There you buy or you hire a horse; if you hire it, it costs you five francs a day; if you buy it, a hundred and fifty francs ready money. And let no one laugh at the smallness of the price; this horse, hired or bought, does, like the famous steed of the Gascon who leaped from the Pont Neuf into the Seine, things which could not be accomplished by either *Prospero* or *Nautilus*, those heroes of the races of Chantilly and the Champs-de-Mars.

It passes by roads, where Balmah himself would have applied a drag, and over bridges, where Auriol would ask for a balance-pole. As to the traveller, he need only shut his eyes, and leave the animal to itself; the danger is no business of his.

Without calculating that with this horse, which can make its way everywhere, you may travel fifteen leagues day after day, without its requiring either food or watch. From time to time, when you halt to visit an old castle built by some great noble, the hero and chief of a feudal tradition, or to sketch an old tower raised by the Genevese, the horse tears up a tuft of weeds, barks a tree, or licks a rock covered with moss, and all is done.

As to your night's lodging, it is still more simple: the traveller arrives in a village, traverses the principal street throughout its whole length, selects the house which suits him, and knocks at the door. An instant afterwards the master or the mistress appears upon the threshold, invites the stranger to alight, offers him a share of their supper, their own bed, if they possess but one; and the next day, in following him to the threshold of the dwelling, thank him for the preference which he has given them.

Of any remuneration whatever, it is perfectly understood that mention must not be made; the master would consider as an insult the slightest allusion to such a subject. If you are waited upon by a young girl, you may offer her a silk handkerchief, with which she will compose a picturesque head-dress when she goes to the fête at Calvi, or at Corte. If it is a man-servant, he will readily accept a knife-poniard, with which, if he meets him, he may kill his enemy.

You must also ascertain one thing, which is, that the domestics, as it sometimes happens, are not related to the master; who, being less favoured by fortune than himself, exchange their services against their nourishment and two or three piasters a month.

And let it not be thought that these masters, who are served by their nephews and cousins to the fourth or twentieth degree, are the worse waited upon on that account. No, by no means. Corsica is a French district, but Corsica is far from being France.

As to thieves, you never hear of any; of banditti in abundance, yes; but you must not confound one with the other. Go without fear to Ajaccio or to Bastia, with a purse of gold suspended to your saddle-bow, and you will have traversed the whole island without having incurred one shadow of danger; but do not go from Oceana to Levaco, if you have an enemy who has declared feud (*vendetta*) against you; for I would not answer for you in that six-mile journey. * * * I had come from Elba, I had disembarked at Bastia, and I had purchased a horse at the price already named. I had visited Corte and Ajaccio, and I was, for the moment, travelling over the province of Sartena. On a particular day I was going from Sartena to Sullacaro. The day's work was short, ten leagues, perhaps, on account of the cross-roads, and of a ramification of the principal chain of heights which form the spine of the island, and which it was necessary to cross; and on this account I had taken a guide, in order that I might not lose myself by the way. Towards five o'clock we reached the summit of the hill, which commands both Olmeto and Sullacaro. There we halted for an instant.

"Where does your lordship wish to lodge?" asked the guide.

I cast my eyes on the village, of which I could see into the streets, and which seemed to be almost deserted; a few women only appeared at rare intervals, but even they walked hastily, and looked cautiously about them.

As, by virtue of the established rules of hospitality I have already named, I had my choice of the hundred or hundred and twenty houses which composed the village, I looked out for the dwelling which seemed to hold forth the best promise of comfort; and I decided upon a square house, built like a fortress, with *mâchecoulis* in front of the windows and above the door. It was the first time that I had ever seen these domestic fortifications; but I must add also, that the province of Sartena is the classic ground of the *vendetta*.

"Ah, good," said the guide, following with his eyes the direction of my hand; "we are going to pay a visit to Madame Savilia de Franchi. Well, well, your lordship has not made a bad choice, and it is easy to see that you are not wanting in experience."

Do not let me forget to remark, that in the eighty-sixth district of France, Italian is constantly spoken. * * * Ten minutes afterwards we entered the village; and then I remarked a circumstance which I could not distinguish from the mountain. This was, that every house was fortified like that of Madame Savilia; not with *mâchecoulis*, the poverty of their inhabitants denying them, without doubt, this expensive description of defence, but simply and solely with thick shrubs, covering the lower divisions of the windows, in which were cut openings large enough to admit a rifle-barrel. Other windows were similarly protected by red bricks. I asked my guide what these loop-holes were called, and he told me *arrow-holes;* an answer which proved that the Corsican *vendetti* were of more ancient origin than fire-arms. As we gradually advanced up the streets, the village assumed a still deeper character of solitude and melancholy. Several houses appeared to have sustained a siege, and were riddled with balls.

From time to time we saw through the loopholes the flash of a curious eye as it watched us pass, but it was impossible to distinguish whether it belonged to a man or to a woman. We reached the house which I had pointed out to my guide, and which was, in fact, the largest in the village. One thing, however, struck me, which was, that although fortified in appearance, it was not so in reality; that is to say, that its windows had neither a screen of shrubs, nor bricks, nor arrow-holes, but simple panes of glass, protected, during the night, by wooden shutters. It is true that these shutters preserved certain traces which an observant eye at once detected to be those of bullets; but these marks were old, and had evidently existed for the last ten years.

The welcome which the traveller receives is at once dignified and cordial; and he is not less surprised than delighted to find in the room appropriated to his use a good selection of French classics, and amid some lighter works his own *Impressions de Voyage*. The apartment belongs to a son of Madame de Franchi, then at Paris, studying for the bar, who has made of France his country of adoption; his twin-brother, who is Corsican in every habit and feeling, is from home on the arrival of the stranger, but immediately on his return hastens to add his welcome to that of his mother.

A CORSICAN GENTLEMAN.

He was, as my guide had told me, a youth of twenty, or one-and-twenty, with black hair and eyes, a complexion darkened by the sun, and rather short than tall, but admirably proportioned.

In his haste to welcome me, he had come up stairs as he was; that is to say, in his riding-dress, which was composed of a surtout of green cloth, to which a shot-belt, which encircled his waist, gave a certain military air; of pantaloons of grey cloth, seated with russian leather, and boots and spurs. A foragecap, like those worn by our African chasseurs, completed his costume. From one side of his shot-belt hung a whip, and from the other a gourd, while in his hand he carried an English rifle. Despite the youth of my host, whose upper lip was scarcely shaded by a slight mostache, there was in all his person an air of independence and resolution which struck me. It was easy to see in him a man brought up for the struggle of life; accustomed to exist in the midst of danger without fearing, but also without despising it; grave, because he is solitary; calm, because he is strong.

At a single glance he had seen every thing, my dressing-case, my arms, the coat that I had taken off, and that which I wore; his eye was rapid and sure like that of every man whose life sometimes depends upon his quickness of vision.

The traveller had visited Sartena, principally in the hope of witnessing a *vendetta*, but he was destined to become the spectator of a very different scene. The families of Orlandi and Colonna had been at feud for the last ten years. The original cause of quarrel had been the refusal of a female Colonna to restore a hen which had strayed from the yard of the Orlandini. The Orlandini went and reclaimed their fowl, but the Colonna persisted that she was their own property, upon which the Orlandini threatened that they would summon the Colonni before the judge, and compel them to take their oaths to the fact. On hearing this, the aged woman who grasped the fowl, wrung its neck, and threw it into the face of her neighbour, exclaiming, "Well, if it is yours, eat it." Immediately an Orlandini stooped, picked up the hen by its feet, and was about to strike with it the person who had flung it at his sister, when, as he raised his arm, a Colonna, who, unfortunately, was standing by, leaning upon his loaded rifle, fired at him, and he fell fatally wounded. From the commencement of the feud, nine persons had already fallen its victims; and, at the request of his brother, the young De Franchi had, at length, with great difficulty, succeeded in effecting a reconciliation. For the last three years neither party had crossed the threshold of his house. They had lived as they could in the woods, lying constantly in wait for each other, and sleeping in ditches or trees, with their rifles in their hands. The day had at length come when their reconciliation was to be made at once legal and public; the description is animated and novel.

THE MEETING.

From the summit of the eight steps by which you reached the door of Madame de Franchi's house, you commanded the whole of the square.

This square, in contrast to what it had been on the previous evening, was covered with people; all the crowd, however, was

composed of women, and children under twelve years of age; not a man was visible.

On the upper step of the church stood a man who wore about his waist a tricoloured scarf; it was the mayor.

Under the portico another, dressed in black, was seated before a table; a paper, written all over, lay near him; he was the notary, and the written paper was the act of reconciliation.

I took my place on one side the table with the sponsors of Orlandini (a concession made to oblige De Franchi), and on the other were the sponsors of Colonna; behind the notary sat Lucien, who appeared for both parties. In the distance, in the choir of the church, might be seen the priests, ready to say the mass.

The clock struck ten.

At the same moment a shiver ran through the crowd, and every eye turned towards one or other of the extremities of the street, if that may be called a street which consisted of an unequal space left by the caprice of about fifty houses built according to the fancy of their several proprietors.

Immediately afterwards, Orlandini appeared from the side of the mountain, and Colonna from the side of the river. Each was followed by his partisans; but, according to the arrangement agreed on, neither party was armed: they looked, in all save physiognomy, like worthy churchwardens following a procession.

The two chiefs of the several factions were markedly dissimilar in physical attributes. Orlandini was tall, dark, slight, and active. Colonna was of long stature, thick-set, and vigorous; his beard and hair were red, and both were short and curly. Each carried in his hand a branch of olive, a symbol of the peace they were about to ratify, and which was a poetical invention of the mayor.

Colonna, moreover, held by the legs a white hen, destined to replace and to repay the fowl which, ten years before, had given birth to the quarrel. It was alive. This point had been long discussed, and had wellnigh put an end to the reconciliation; Colonna considering it as a double humiliation to restore the hen living which his aunt had thrown dead into the face of Orlandini's cousin. However, by power of logic, Lucien de Franchi had induced Colonna to give the hen, as, by the same strength, he had prevailed on Orlandini to receive it.

At the moment when the two enemies appeared, the bells, which had been silent for a time, rang out vigorously. On catching sight of each other, Orlandini and Colonna alike started with instinctive repulsion, but they nevertheless moved forward. Precisely in front of the church door they stopped, within four paces of each other. If, only three days before, these two men had met within a hundred yards, one or the other would have been left dead where he fell.

For the space of five minutes there was a dead silence, not only between the two groups, but throughout the whole crowd, which augured nothing peaceful, despite the conciliatory nature of the ceremony; upon which the mayor spoke.

"Well," said he, "you know, Colonna, that it is you who are to commence the business."

Colonna made a powerful effort, and uttered a few words in Corsican *patois*. I thought I could understand that he expressed his regret at having been for ten years in *vendetta* with his good neighbour, Orlandini, and that he offered him, in reparation, the fowl that he carried.

Orlandini waited until the last sentence of his adversary was fairly pronounced, and then answered by some more Corsican words, which contained a promise, on his part, to remember nothing save the formal reconciliation now taking place under the auspices of the mayor, the arbitration of M. Lucien, and the compiling of the notary.

Then both were once more silent.

"Well, gentlemen," resumed the mayor, "it was arranged, I believe, that you were to shake hands."

By an instinctive movement the two enemies put their hands behind them. The mayor descended the flight of steps at the top of which he had been standing; and passing behind Colonna, drew his hand forward, then went and possessed himself in the same way of that of Orlandini; and ultimately, after using some violence, which he affected to conceal beneath a smile, he succeeded in joining them together. The notary profited by that moment, and rose to read his act, while the mayor kept a tight grasp upon the hands, which at first did all they could to escape his hold, but ultimately remained resignedly clasped in each other.

I remarked with admiration, that, by an excess of prudence, the notary had not touched, even by a word, upon the fowl which placed Colonna in so bad a position before Orlandini. In consequence of this omission the brow of Colonna cleared, and the countenance of Orlandini darkened. The latter looked at the hen which he carried in his hand, like a man who visibly felt a temptation to fling it into the face of his adversary; but a look from Lucian de Franchi checked the evil impulse as it rose.

The mayor saw that there was no time to lose; he ascended the steps backwards, still holding the two hands together, and without removing his eyes for an instant from the contracting parties. Then, in order to prevent a new debate, which was certain to take place at the moment of signing the act, as each of the men would infallibly consider it as a concession to affix his name first to the document, the functionary took the pen, signed the paper, and, converting the shame into honour, passed the pen to Orlandini, who took it, wrote his name, and handed it to Lucien, who, making use of the same peaceful subterfuge, gave it in his turn, to Colonna, who made his cross.

At the same moment the ecclesiastical chants rang out, as the TE DEUM is chanted after a victory.

We then all signed in our turn, without distinction of rank or title, as the nobility of France had signed a hundred and twenty-three years before, the protestation against the Duke du Maine.

After this the two heroes of the day entered the church, and knelt down on each side of the choir, each in the place which had been assigned to him.

I remarked that from that moment Lucien was perfectly tranquil; all was over; the reconciliation was sworn, not only before men, but also before GOD. The rest of the sacred service passed over without any incident worthy of mention.

The mass over, Orlandini and Colonna left the church with the same ceremony that they had entered it. At the door, by the request of the mayor, they again touched hands; and then each took, with his train of friends and relatives, the road to his own house, across whose threshold neither had passed for the last three years.

Towards evening our traveller leaves Sullacaro.

A GODSON.

All was tolerably quiet in the village, although I could still remark that species of agitation which always succeeds great events; and I proceeded, glancing, as I passed before them, at all the doors, expecting to see my godson, Orlandini, come forth, who, sooth to say, owed me his thanks, which he had not yet paid. I, however, left the last house in Sullacaro behind me, and found myself in the open country, without having seen any one who resembled him. I thought that he had forgotten all about me, and I must confess that among the serious preoccupations which must beset him upon such a day, I sincerely pardoned his forgetfulness; when suddenly, on arriving at the point of Bicchisano, I saw a man issue from the underwood, and place himself in the middle of the road, whom I at once recognised as he whom, in my French impatience and habit of Parisian observances, I had already taxed with ingratitude. I remarked that he had already found time to resume his ordinary costume, to don his shot-belt, in which he carried the indispensable pistol, and that he was armed with his rifle.

When I was within twenty paces of him he took off his hat; while, on my side, I gave my horse the spur, that I might not make him wait.

"Sir," he said, "I could not let you leave Sullacaro, without thanking you for the honour which you have been kind enough to confer upon a poor peasant like me, by acting as his witness; and, as down below there I had neither my heart at ease nor my tongue at liberty, I come here to await you."

"I thank you," I replied; but you should not have inconvenienced yourself on my account; and all the honour has been for me."

"Besides," continued the bandit, "what is to be done, Sir? One cannot rid one's self in an instant of the habit of four years. The mountain air is terrible; when you have once breathed it, you are stifled elsewhere. Just now, in those miserable houses, I thought every moment that the roof would fall upon my head."

"But," said I, "you will surely now resume your usual habits. You have a house, I am told, a field, and a vineyard."

"Yes, without doubt; but my sister takes care of my house, and the Lucquois were there to cultivate my field, and to gather my grapes. We Corsicans do not work."

"What do you do then?"

"We overlook the labourers, or we take our guns, and we shoot."

"Well, my dear M. Orlandini," said I, extending my hand, "good sport to you; but remember that my honour as well as your own is pledged that you will henceforth fire only upon fawns, wild-boars, pheasants, and partridges, and never upon Marco-Vicenzio Colonna, nor any individual of his family."

"Ah, Excellency!" replied my godson, with an expression of face which I had never before remarked, save among the Norman litigants, "the hen that he gave me was very thin!"

And, without adding another word, he flung himself once more among the underwood, and disappeared.

We have just received Madame SAND's new and very clever tale of *Isidora*, at which we dare not, however, do more than glance. In point of talent, it is a great advance upon her more recent works; but it is not, in so far as regards the fable,

capable of analysis in the CRITIC. Where the sympathies of the reader are carried away by vice, and libertinism is anatomised and laid bare, it will not suffice that the work be clever, to enlist our suffrages. We have said all that we deem it expedient to say on *Isidora*, which, however, we are bound to add, has met with much favour in France, both with critics and public.

LITERARY GOSSIP IN PARIS.

(*From our Correspondent.*)

The elections at the *Académie Française* have terminated in the appointment of M. LEBRUN as its director, and M. TISSOT as its chancellor, for the ensuing term.

Madame HELENA GAUSSIN, who, some time ago, made a successful *début* at the *Comédie Française* in the leading tragic characters, and who only lost her *vogue* on the opposition of Mdlle. RACHEL, when, rather than assume a secondary *rôle* on the same stage, she found herself compelled to leave Paris, after having for a considerable period acted with success at Brussels, where she contracted a marriage with M. PATEY, and subsequently made a tour of the provinces, where she appeared successively in the characters of *Athalia*, *Lucrèce*, and *Jeanne-la-Folle*, has ultimately returned to the capital, and endeavoured to procure a new engagement at the *Théâtre Français*, upon the strength of the numerous and influential suffrages which she had secured. She had, however, only resided a few days in Paris, when, on the accusation of two landlords of furnished apartments from Troyes and Auxene, she was arrested on suspicion of having carried off several articles of plate from their respective establishments. At Auxerre, Madame HELENA GAUSSIN had already been tried upon this charge, and acquitted; but at Troyes, where she was once more brought before the correctional tribunal, she was condemned to twelve months' imprisonment, as guilty of having stolen five pieces of plate, the property of M. BONNARD, the proprietor of the Leopard Hotel, at Auxerre. A second charge, preferred by M. ARNOULT, proprietor of the Commercial Hotel, at Troyes, accused her of the fraudulent subtraction of eleven pieces of plate, upon which occasion she declined to offer any defence. She was consequently condemned a second time to fifteen months' imprisonment, into which, however, the first sentence was to merge. All the missing plate was found in her possession, for which, on the 17th of September last, when she appealed to the Royal Court of Paris against the verdicts of the provincial tribunals, she accounted by saying that the amount of her luggage and stage wardrobe was so great (amounting to eleven cases), that, in the confusion of packing, the plate which was scattered about the apartment had been accidentally confused with her property; that, on her return to Paris, she had perceived that such was the case, and that she had resolved on restoring it to its owners; but that, when she was visited by the police commission who made the search, she became so much alarmed that, for fear of awakening suspicion, she had not ventured to tell the truth; the result of the search being the discovery of the missing articles. Evidence as to previous character was put in, but, as a matter of course, the court confirmed the finding and sentence of the criminal tribunal of Troyes.

The green-rooms here are, however, busy with another less disgraceful, but scarcely less disagreeable subject. The fair and graceful PLESSIS, say those who profess to be well informed of her movements, after bestowing her hand upon the happy M. ARNOULD at Brussels, started, under his protection, for St. Petersburg. What visions of the future did not the married lovers call up upon their road; what anticipations of triumph on the one hand, and sympathizing participation on the other! At length the land of promise was attained—not flowing with "milk and honey," but with felicitations and roubles. They had reached the frontier. On their arrival, the authorities demanded the reason of their advent. Madame ARNOULD exhibited her engagement, signed and sealed by GUEDONOFF, by authority of the emperor, and her passport. All was correct, and the lady was told that she was at liberty to proceed. Then came the gentleman's turn—"Who are you, Sir?" "I am the husband of Madame, and here is my own passport, signed by the Russian ambassador in London." Alas! these claims did not suffice; on the contrary, orders had been received from St. Petersburg to forbid the further progress of the bridegroom. In vain did the *mariés* expostulate, the sturdy official remained firm, upon which the bride declared her intention of returning with her husband; this, however, was equally forbidden; she had put her foot upon Russian ground under a ten years' engagement, and from that moment she became imperial property until the completion of her contract. The result was a hurried and agonized parting between the bewildered couple; after which the lady was handed into a carriage, which started at a gallop towards the capital; and the gentleman was conducted, under an escort, beyond the frontier, with a hint of the possibility of his extending his discoveries to Siberia should he again attempt to enter the imperial dominions. It is said that certain liberal opinions put forth by M. ARNOULD in his works have procured for him the somewhat painful distinction of this ill-timed excommunication. Well may he say, with an old writ, upon an occasion even less trying than his own,—

> My fate than Adam's is still more unkind;
> *His* Eve went with him, while *mine* stays behind!

An affecting incident took place a few days ago on the Pont St. Michel. An old man, evidently in a state of great poverty, walked up to a woman keeping a stall there, and offered for sale a volume entitled *Histoire de l'Astronomie de tous les Peuples*, the work which, in 1784, had opened the Academy to the celebrated BAILLY. The price which he demanded for it was ten sous. The woman, struck with his haggard appearance, gave him a franc for his treasure, with part of which he immediately purchased some bread, which he commenced eating on the quay. One of the canons of Notre Dame, who had been a spectator of the whole proceeding, approached the stall, and, on examining the book, was surprised to find written upon the fly-leaf, in the autograph of the owner, the following sentences:—"My young friend, my sentence has just been pronounced, and to-morrow, at this time, I shall have ceased to live. One of my greatest griefs is that of leaving you unprotected, for I promised your father that I would watch over you. GOD does not permit me to redeem my word. Accept this volume as a proof of my regard, and keep it as a remembrance of me.—BAILLY." The canon purchased the book for two francs of the kindhearted saleswoman, and then joined the old man, who was still devouring his loaf. He confided to his new acquaintance that, after the death of his father, he had been the adopted son of BAILLY, who, the day previous to his decease, had sent him the book in question. The old man stated that he had been for many years engaged as a schoolmaster, but that, from long-continued illness, he had gradually been reduced to want. His heaven-sent friend, the canon, has since obtained for him an admission into the hospital of Larochefoucauld.

JOURNAL OF ITALIAN LITERATURE.

Nicolò dei Lapi; ovvero, i Palleschi e i Piagnoni, di Massimo d'Azzeglio.

IN our last number we left Lisa dei Lapi driven from her father's house, and Bindo her brother but just escaped from death by reason of his attempt to avenge her wrongs. We must now return to Fanfulla, who, having again become a man-at-arms, is leading his followers about Florence, setting guards here and there, and entering with new spirit into the life he had so long forsaken. Crouched against a wall, he sees, in the cold and rainy night, what he takes at first to be a bundle of clothes, but which, on closer examination, appears to be the unhappy Lisa. Ignorant, however, of her condition, and knowing only her misery, the good ex-monk takes her and her child under his care, and acts the part of a father to her; and, in order at once to dissipate ill-natured conjectures, we may as well state that the worthy man was now in his fifty-fourth year. She, suffers much privation, even though Fanfulla sells his horse and armour to support her, and becomes a mere foot-soldier, an awful descent in those days.

At length she is taken with so earnest a longing to see her unworthy husband, as she supposes him, that she persuades Fanfulla, sorely against his will, to escort her to the camp. The Spanish and German soldiery of that century were not particularly civilized, and we need not say how many insults Lisa had to undergo, nor how many real perils she, her child, and her conductor passed through. Stopped at one time by several Spanish soldiers, who began by threatening the life of the child, on account of its crying, and would probably have done more than they promised, the ready wit of Fanfulla saved the party.

A CAMP SCENE.

If Fanfulla had been alone, he would have known very well what to do; he would have flung himself upon those who stood in his way, with his sword in his right and his dagger in his left hand, and then—good-by till I see you again—then, in a few moments, he would have been out of danger, or out of this world. But here he had to temporise and act politely. Speaking a few words to Lisa, that she should quiet her child as much as she could, and recommend herself to God, Fanfulla turned to the first Spaniard, and said, "Stay one moment, Senor Caballero, we are poor gitanos, who have come to the camp to make merry with you gentlemen. We are poor—that is, now; but we were

rich a few minutes ago. We had a purse with a hundred florins, but some German soldiers just by here have taken it away from us; they almost broke my shoulders with their halberds, and this poor woman and her child, too, did not escape. Ah! there—there—there they are among those trees" (it was too dark to see more than that there were trees). "I see them running away even now, and—oh, catch them! and as for the purse, give us what you like out of it. The Spanish soldiers, noticing the poor gipsy attire of Fanfulla and the woman, and touching the lute suspended round her neck, gave credence to their story; he, meantime, pretending violent rage, remained urging them to follow the marauders, and from time to time still declaring that he saw them. "He who took my purse was a little, thin man, with a pike and no arquebuse; there were only five or six of them." He had taken care to point out a direction different from that in which he intended to go himself, and, as soon as he saw that his bait had taken, he considered himself safe. It is true that they could not see any thing in the shape of a man where he pointed; but they thought that, perhaps, gipsies had better eyes than other persons; or, perhaps, that, like cats, they could see in the dark. Besides, they were really as much enraged as Fanfulla pretended to be; the rivalry between the Spanish and German troops made them jealous of their privileges, and that the Germans should plunder passengers within a stone's-throw of their tents was not to be endured. As soon as they were fairly gone, Fanfulla drew a long breath, and saying, "A good chase to you, young gentlemen," added to Lisa, "Now, my lady, let us be gone from hence before they return."

They arrived without further interruption at Guicciardini, where the Prince and his immediate attendants were; but how different from the quiet and peaceful aspect which now it presents! The soil muddy and marshy, beaten up to a paste by the feet of men and horses; the houses full of soldiers; the walls defaced and smoky; the church reduced to a tavern; the square filled with booths, kept by sutlers selling bread, wine, onions, and who had with singular judgment set up their shops before the gibbet, the sight of which might serve as a sort of *memoria technica* for those who had forgotten to pay.

While Fanfulla was preparing an oration for Troilo, a whispering was going on among the people, who had become suddenly very quiet; and, turning his eyes to the spot where military justice was done, he saw a man mount the ladder and prepare the cord for an execution. Going nearer, through curiosity, he saw, a little way from the executioner, the person destined for punishment; it was a woman, with her hands tied behind her, and who, kneeling at the feet of a Capuchin, was confessing. Fanfulla wondered that they should hang a woman; but his wonder was increased when, sticking out from under her gown, he saw the scabbard of a sword. While he was about to make inquiries, a corporal came up and made them in his hearing.

"What is this woman to be hanged for?"

"Say rather this young man," replied the party questioned. "It is a strange affair. I was not present, but Fruga, who was, says that he is a Florentine, and that he knows all about him."

We need not pursue this description; the reader will easily perceive who the disguised youth was, and how he was saved from so imminent a danger. Lisa soon found Troilo, who affected great joy at seeing her, and accepted the credit of saving Bindo from death. But Baccio Valori was not yet quite certain of Troilo's obedience, and he therefore visited him at his quarters, and told him, in the hearing of Lisa, who was in an adjoining chamber, that the Prince would not confirm Bindo's pardon, and that he must die. He then contrives a plan of escape, and thus furnishes Troilo with a double title to Nicolo's favour. As the pretended rescue was a pretended danger, Troilo found himself hampered with the proffered aid of Fanfulla, who declared himself one of "the Thirteen." It was easy to perceive that no cheat would suffice for him, and hence it became necessary to organize a pretended resistance strong enough to deceive Fanfulla. From this difficulty they were saved by a somewhat characteristic contrivance of the Count di San Secondo, who, hearing all the plan, said that the only objection was they had given Lisa to understand that two guards were to be killed; and that if one at least were not put to death, so that there might be some talk about it in the camp, any runaway captive who got to Florence might be the means of defeating the plot, by shewing some of its fallacies. For this, however, he provided a remedy.

A SUBSTITUTE FOR A VICTIM.

"There is a very dear friend of Anguillotti di Pisa, among my troops," said the Count, "and who advised him to run away from me. Anguillotti knows very well that I shall have my revenge on his friend, as well as on him; though the gentleman himself is not in the secret of my good intentions. He shall be promoted to be guard on this night; and, to make it more palatable, I will tell him that the prisoner is a person of consequence; and then you can leave Fanfulla to deal with him in earnest, and take care that you engage the other man yourself, and don't hurt him. As for Anguillotti's friend, a day or two sooner or later will not matter to him."

"Exactly so, my lord Count; and as you intend to have the man put to death on other grounds, it will certainly give a better colour to our doings."

This matter being thus amicably settled, Troilo took leave, saying, "Have you any commands for Florence? Now that I am to be a silk mercer, if you want velvets or brocades you will give me the preference; I shall be able to tell you soon at how much a yard."

"Adieu, madcap; but stop. If in any kind of stuff—I don't care what—you can send me the head of Anguillotti, I will liberally reward the bearer. However, if you see him, tell him to keep out of my way."

Their plan, so virtuously concocted, could not fail to succeed. Fanfulla, as might have been expected, clove the unfortunate friend of Anguillotti from the crown to the chine, and the four, *i.e.* Troilo, Fanfulla, Lisa, and the infant Arriguccio, arrived safe in Florence. When there, Nicolo, though not without some misgiving, agreed to pardon Lisa and Troilo, and to receive them into his house; and a plan of communication having been arranged by means of Benedetto dei Nobili, the friend of Malatesta, with the prince's camp, all seemed to go on according to the wishes of the Palleschi. In a night attack made on the city, Troilo greatly distinguished himself, and indeed had those who felt his blows known from whom they came, they would have complained that he acted the part of a Piagnone a little too naturally. But while the sons of Nicolo, Averardo, Vieri, Bindo, Nicolo himself, Lamberto, and Laudomia, were thus persuaded of Troilo's sincerity, there was one person who was by no means equally satisfied. Maurice, the Swiss soldier, who waited on Lamberto, and who on this occasion proved a better physiognomist than the others, refused to give any credence to the professions of Troilo, and ultimately he had his own opinions amply justified. Meantime Lamberto had turned once more his thoughts towards Laudomia, and Nicolo had accepted him as a son-in-law, when Troilo, who, tired of Lisa, had begun to entertain designs on her sister, found his intentions thus thwarted. The wedding-day was fixed, and a curious list is given of the requisites for a bride of that time, place, and station, which, had we space, we would present to the reader. Troilo, however, did not resign his intended mistress merely because she loved another and was about to marry him. He went to Malatesta, and obtained that Lamberto should be sent away from Florence, with a detachment of troops to act against the PRINCE of ORANGE in the field. This order arrives immediately after the marriage ceremony, and Lamberto has to take leave of his bride, and to place himself in his new and somewhat disagreeable post. But while obtaining this order, an adventure occurred to Troilo, which merits notice. It was needful for him to find out his friend Benedetto, and accordingly attiring himself as a monk, he betakes himself to the oratory at San Gallo, where he recognises him, and having given him to understand that his aid was required, he retires to wait the conclusion of the service.

CHURCH DISCIPLINE.

Troilo, pretending to pray, kneeled down on the stones with his head between his hands, and in this position meditated on his projected wickedness. Thus passed two hours, which from the cold, and his uncomfortable position, seemed to him at least four. At last the candles at the altar went out one by one. Lifting up his eyes, and beholding the last flame disappear, he would have remained in darkness, had it not been for a light which feebly radiated from behind the altar. He then pursued a ghostlike figure gliding along the walls, and giving into the hands of each monk something which he could not distinguish, until, finding the figure making an offer to him, he took it, and perceived that it was a scourge! His first impulse was to fling it into the face of the brother who brought it, but Fra Benedetto was by his side, and whispered, "Do as I do." This was in fact to remove his upper garments, and, with arms and shoulders bare, to discipline himself, he meantime, and all the other monks, reciting the *Miserere*. It may be conceived that in all this there was more cry than mischief; still it was a joke not at all to Troilo's fancy, and he took good care to bestow more blows on

his neighbour than on himself, giving Benedetto practical knowledge of how different a thing a flogging is when inflicted by one's self and when inflicted by another. After four hours thus agreeably spent, our two friends saw with joy the monks file off two and two; and, as soon as the church was empty, they made their way to the palace of Malatesta.

The proceedings of both parties were now approaching a crisis; within the city discord was beginning to prevail; without, the hopes of the besiegers grew daily more faint, till the people doubting when too late the treachery of Malatesta, he and the heads of the civil authority were at last at open war. This state of things could hardly last long. Lamberto, who had been present at the defeat of the popular party at Gavinana, came just in time to see the city given up to the Medici, to take his bride and to depart with Nicolo and his family to seek some other home; but this retreat was not destined to be executed as it was planned. Troilo was on their heels and the whole party was made captive. Among those who on this occasion followed Troilo, was the unhappy Selvaggia, and she now rejoiced at having in her power one who, as she thought, had despised and insulted her. At the Castle del Murlo, where they rested, she ordered Lambertino to be confined alone; and Troilo, whose character on the way had been disclosed fully to Nicolo, gave the same directions with respect to Laudomia. Nicolo and his sons had been sent under a strong guard to Florence; and now the denouement of the story approaches. Selvaggia goes to the dungeon of Lamberto, reproaches him with his cruelty, and taking a dagger, when he supposes that she is about to assassinate him—cuts his bands and sets him at liberty. This she declares is the only revenge the Jewish courtezan can take, and she sets at liberty also Fanfulla and Maurice, and informs him of Troilo's designs on Laudomia. A few minutes bring them all into the apartment of this latter, whom they find standing at an open window and prepared to throw herself out if no other escape from Troilo offers itself. To bind the wretch hand and foot is but the work of a moment, and the portion of the original party thus liberated set out on their way. When they have been gone an hour or two Selvaggia recollects that Troilo's servant was near and might liberate his master and cause immediate pursuit. They therefore despatch Fanfulla and Maurice to prevent, if not too late, such an accident. They find Michel, Troilo's servant absent, Troilo still bound and nobody stirring. Maurice takes his own way, and puts Troilo down a deep well where he miserably perishes, and with Fanfulla then rejoins his master. The next chapter brings us back to Florence, takes us to the prison of the Bargello, and to the execution of the aged Nicolo, who when offered an opportunity of escape refuses it. In conclusion we may just observe that in most modern Italian books there is a fervid spirit of patriotism, which bids fair for the regeneration of the people; there is a love of the beautiful and the true which proves to us that the land of DANTE and ALFIERI is not yet enslaved in mind, and which induces a hope that we shall still see the country to which Western Europe owes her civilization "great, glorious and free."

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

Guide to the Town and Neighbourhood of Abergavenny. By JOHN WHITE. Abergavenny, 1845. Morgan.

ALL works designed to aid the tourist must be right welcome in this age of locomotion; and a guide to the antiquities and beauties of Abergavenny and its neighbourhood will not be the least acceptable addition to the traveller's portmanteau. Mr. WHITE has performed his task with diligence, and without the extravagance of affected enthusiasm which so often exposes the local historian to the ridicule of his readers. He is content simply to narrate the history of the town and castle, to describe their antiquities, to record the remarkable men associated with the locality, and then he proceeds in plain but graphic style to portray the scenic charms of the neighbourhood. We can recommend this volume to the visitor as an indispensable pocket companion.

MEMORANDA OF A CONTINENTAL TOUR,

Personal, Pictorial, and Political.

WE present another chapter from the MS. from which we have before taken some passages:—

CHAP. XVI.

THE FALLS OF THE AAR—MEYRINGEN—FALLS OF REICHENBACH—GLACIER OF ROSENLAU—THE SCHEIDECK—THE WETTERHORN—GRINDELWALD.

It was a glorious sunrise that we greeted as we defiled round the bold rocks between which the yellow waters of the Aar rushed with deafening din. I had dismissed my horse on the previous evening, resolved to complete this Alpine tour on foot, and, having tried both, I would earnestly recommend any reader who may travel thither to adopt the independence and health-inspiring exercise of a pedestrian journey. Only thus can the glories and delights of mountain wanderings be thoroughly understood and enjoyed. Nor is it at all wearisome, as we dwellers in the plains might have supposed; on the contrary, there is no day's walk sufficiently tedious to produce fatigue, although the distance traversed generally ranges from twenty-five to thirty miles, one-half of which is usually an ascent. The day was cloudless, and the sun blazed upon us with scorching heat that turned the hands and face to a nut-brown hue, and even peeled the skin from those who had not taken the precaution to wear the broad-brimmed straw hats of the country.

After a descent of an hour through this wild and barren region, repeatedly crossing the river on narrow bridges of a single arch, without wall or rail, and barely of sufficient width for a horse's tread, and traversing a path carved in the side of the rock, so slippery that it was difficult to keep a footing, so narrow that the knee touched the crags as the rider went by, and so precipitous that a stone dropped from the ledge would have fallen into the centre of the river that rolled and foamed many a fathom below, we entered upon a small valley, or rather basin, formed by the receding mountains, where the ground was literally smoothed and polished for the breadth of a quarter of a mile by the avalanches that fall there in the winter. It was not till this was far behind that we beheld the first traces of vegetation. Some lichens, then tufts of lank grass, then a few rhododendrons, then the bright green leaves of the whortleberry presented themselves to our delighted eyes. After awhile a few weather-beaten, hoary, mis-shapen firs appeared; gradually these became more and more abundant, until we found ourselves in a forest, traversing a shady path by the river bank, and treading upon luxuriant turf, and flowers, and strawberries.

Emerging from this pleasant wilderness, we saw before us, embosomed in a little area that had been cleared amid the trees, a neat chalet, with cows feeding in a small meadow behind it, and here we halted for rest and refreshment.

The master of the house was a jovial-looking old fellow, hale and hearty, whose hospitality was unbounded. What huge pitchers of milk, what mighty loaves of home-baked bread, what mountains of fresh butter, what basins of honey he piled upon the long table of ancient pine. But a savoury steam assailed our nostrils, guided by which the more adventurous of us made our way into the milk-house, where a huge crock of potatoes, dressed to the precise point that makes them morsels for an epicure, gladdened our hungry glances. Our host evidently understood the language of our eyes, for he forthwith loaded a dish with the delicious vegetable and handed it to us, and then another, and then another, and we all agreed that never before had we tasted potatoes in perfection.

Thus refreshed, we set forth to view the wonder of the place, of whose presence we had been reminded by the roar that had been in our ears ever since our arrival at the chalet. A path through a sort of inclosed garden or orchard attached to the house abruptly conducted us to a fissure in the mountain side, and, stepping upon a narrow bridge that spanned the gulf and looking down, we beheld the grandest river-scene in Switzerland.

Down a gloomy gorge, the bottom of which we could with difficulty discover, the Aar fell in a huge mass of foam over a height of more than a hundred feet, and a smaller stream meeting it at the side, precipitated itself into the same abyss, their waters mingling in their descent.

The little, narrow, trembling bridge suspended over the gulf, the blackness of gloom below, the din of the shattered waters, the thick spray that ascended and wrapped the spectator as in a cloud, were sufficient to disturb the firmest nerves. But there again was the iris, arching the abyss with the hues of heaven, brighter and gaudier than the brightest rainbow I had ever beheld. The contrast was startling, and we lingered for nearly an hour upon the spot, loath to quit a scene to us so strangely beautiful.

Resuming our travel, we crossed unsteady bridges and trod rough paths, keeping still by the banks of the river, until a short but steep ascent, carved in the hill side, conducted into a

picturesque spot, whence we could see the whole windings of the valley on either side of us, and a new range of mountain tops in the direction of our journey. Thence we descended into a fertile plain, covered with ripe crops of wheat, and hemp, and pease, and Indian corn, and studded with trees of walnut, apple, pear, and cherry, bending beneath their loads of fruit. The afternoon was sultry; the peasants were busily labouring in the fields—some were making hay. The hills on either side of us rose to an enormous height, but clothed to their very summits with verdure; the air was alive with the humming of bees and the chirping of grasshoppers; innumerable chalets were scattered over the valleys, from every one of which troops of children ran out to beg as we passed; the clover perfumed the little breezes that wandered about scarcely bending the ripe grass; it was a scene of rural tranquillity that surprised us the more by contrast with the desolate regions in which for so many hours we had been moving. Having passed this sweet spot, we were again conducted through a perilous ledge and across a gallery of rock literally suspended over a fearful precipice, and then down again into another valley on the opposite side, as fertile as that we had lately quitted, and thence for some miles by the river bank, with the snowy tops of an Alpine chain soaring at our sides; and then, after one more steep but short hill, we beheld the vale of Meyringen lying at our feet, as lovely a picture of luxuriant verdure and exuberant fertility as is to be found upon the face of this lovely world of ours.

What valleys can compare with those of this mountain land? Where is such a green, so gay and bright to behold, as that which clothes the trees and meadows now spread before us far as the eye can strain, and glowing in the bloom of a summer evening sky? It is a very Paradise! And that peaceful village, surrounded with its forests of fruit-trees, above which the smoke hangs as if loath to disturb the clearness of the pure atmosphere! Is it not enchanting?

A short walk carried us to the village, and our cavalcade attracted crowds of idlers. We had despatched a messenger on the previous day to secure beds at the hotel, and with this precaution we leisurely surveyed the groups that surrounded us. A familiar voice above saluted me with a friendly greeting. I looked up; it was the good rector, my fellow-traveller of the Rhine. In this remote valley we had met again, by one of those strange coincidences that so often occur to travellers. There was mutual pleasure in the meeting, and as we sat in the open air in the balcony of the hotel sipping our coffee on that delicious evening, we were amused with a narrative of our mutual adventures since we parted at Strasburg. It was not till the sun had been long set, and the stars were bright in the sky, that we quitted the cool wind that came floating down from the mountain snows that, full in our view, were yet glowing in the reflected hues of the heaven.

Soon after sunrise we resumed our journey. In the light of the early morning, with patches of mist gathered over it, and the dews glittering in the sunshine, the vale of Meyringen presented that striking combination of beauties which has obtained for it the reputation of being the most picturesque of the valleys of Switzerland. Bounded on both sides by ranges of mountains, that rose like huge fortifications, but thickly wooded from the foot to the summit, above whose dark green brows peeped the sunny tops of distant Alpine peaks, dazzling the gaze with their brilliancy of white, the plain, though in parts exuberantly fertile, presented the strange appearance of huge seams of torn and perfectly barren land running right across the vale, and evidently the scene of some terrible catastrophe. Our conjecture was correct. It was the work of a mountain torrent that carried death and desolation into the plain. "There is the author of the mischief." "I see nothing," was my answer to the guide, who kept his finger still extended towards the rocks behind us. But, following his directions, I discovered at last a small cleft in the steep, in which a little white streak was suspended like a thread. He informed me that this was the Alpbach, now a mere brook; that in the spring, when swollen by the melting snows, it bears down with it torrents of mud, which it spreads over the plain, destroying all vegetation, and leaving for years the desert we beheld to mark the track of its flood. So soft is the soil through which this stream flows upon the height, that the water becomes completely mingled with it until it descends—a literal mudfall, upon which rocks float like corks. Frequently its path is impeded by an accumulation of trees, earth, and stones; these bay back the heavy mass of weed which gathers and grows into a lake, until its might becomes irresistible, and then it bursts its barriers, carrying all before it, and sweeping like a deluge into the plain. Some idea may be formed of the giant power of this strange flood, when it is stated that, in the year 1762, in the course of a single hour, it buried a considerable portion of the village to the depth of twenty feet. The church was filled with it to the height of eighteen feet, and this is still shewn by the black line painted along its wall.

We turned aside from our path to visit the Falls of the Reichenbach. Crossing a meadow we were received by a very pretty girl, in a very small chalet, from the window of which there is a fine view of the Falls. It is remarkable for the height of its descent, and the quantity of water being too small to preserve its massiveness, it is broken by the resistance of the air into thin sheets of a fan-like shape, and of a rich cream-like hue, resembling drapery of lace when stirred by a gentle wind. It was simply beautiful, and in its character altogether different from the Falls of the Aar, which had yesterday awed us by their sublimity.

Quitting this attractive spot, we commenced the steepest and most wearisome ascent we had yet scaled, our way lying, for an hour at the least, through a dense forest of firs, the ground being little better than a bog, that yielded to every footstep, doubling the toil of the traveller. It was not until after repeated exhortations that I consented to accept the aid of one of the horses, but not in the usual fashion, by bestriding his back, but by grasping his tail, and thus permitting myself to be half-pulled up the steep. Before we had gained the summit the trees had disappeared, and we travelled through low bushes and whortleberries. After awhile even these disappeared, and we passed over a table-land of barren rocks, between which lay small transparent lakes, and then we descended by a rude path, between grey granites, to a little chalet, where we rested for refreshment. The view of the valley we had passed, from the summit we had quitted, was magnificent from its extent and the picturesque array of the mountains. Another difficult, though not dangerous path, conducted us to the Vale of Reichenbach, where we rested again, and after awhile set off to scale the Glacier of Rosenlau. Crossing a wood of firs, and scrambling over roots and trunks of fallen trees, we emerged from the shadow of the pines abruptly upon the margin of the sea of ice, which rests almost upon their roots. This glacier is famous for its extreme purity and the deep azure of its fissures. The ice is clear as crystal and slippery as glass. We could climb it only by cutting steps with a hatchet, and thus we were enabled to make our way into a huge cavern melted in the solid mass, deeply, richly azure, and which reminded me of the magic creations of the *Arabian Nights*. One expected to see a fairy hovering in the blue distance. Under our feet there was the roar and rushing of a torrent, and looking into the frequent clefts we could see far down the foam of rapid waters, the gatherings from the glacier, which fell into a fissure of the rock, and there was lost to the sight, although we could hear it roaring in its passage for some distance below. Returning we crossed a little bridge that spanned a rent in the cliff into which we had not looked on our ascent. But now a man was standing there, who invited us to witness a strange effect. Lifting a huge stone, he hurled it into the abyss, the bottom of which we could not find with our eyes. It bounded from side to side, from crag to crag, for a long time, conveying an impressive notion of the enormous depth it had descended, and the sound sent up by its fall was like subterraneous thunder, until it ceased with a mighty splash of the water in which it had found rest at last.

Another tedious ascent over an undulating country brought us to the top of the Scheideck, and here at a solitary chalet we rested again. While partaking the scanty refreshment the house afforded, three daughters of the host, somewhat prettier than Swiss girls are usually seen, asked permission to entertain us with some national music. It was readily given, and they delighted us for an hour with the "Ranz des Vaches," and a multitude of the best mountain melodies, and we all agreed that never had we heard music so touching. It was unexpected, and that enhanced its charms; but the wild scenery by which we were surrounded, in accord with the character of the music itself, the intrinsic beauty of the songs, the unison of the voices of the sisters, so went to the imaginations of our party, that many of the ladies were melted to tears, and I had some difficulty in restraining the emotions produced by the associations that thronged upon me thick and fast, while listening to their mountain melodies.

It was not long after leaving this place that we found ourselves at the foot of the Wetterhorn, or Peak of Tempests; a mountain unique in its form, which is as if a mighty cone had been rent asunder from its peak to its base, the one half removed, the other left standing, a perpetual monument of the convulsions that at some past time have deformed the surface of this fair earth. As our eyes wandered up the huge wall of grey granite, until it seemed to lose its solid form in the distance, we were again reminded of the deceptions to which the unpractised vision is subjected in these regions. It seemed as if the mountain was within a stone's throw of us, but we were assured by our guide that it would be the walk of a good mile to touch the base. While we were gazing and wondering at the Alpine giant, and surveying the glacier at its foot streaming down into the green valley that lay sleeping so peacefully within the snowy ramparts that guarded it on either side, the guides gathered in a group, and unexpectedly began the "Ranz des Vaches," which, though they had met accidentally, they sung with a correctness of harmony that early training in part singing could alone have enabled

them to accomplish. The song was not only beautiful in itself, but it was seized by the remarkable echo that dwells in the Wetterhorn, and returned in a tone so soft and sweet that it was difficult not to believe that the strain had been taken up by a band of spirits wandering among the crags, by whom it was sent back refined almost into the aerial music of heaven.

The descent was an easy one, over velvet-like turf, and then through meadows of the greenest grass, ripe for the scythe, the air being burdened with the scents of clover and field-flowers, and merry with the voices of grasshoppers and bees. The hay-makers were at work in many places, singing their country songs as they plied their tasks. It was yet early in the afternoon, and we turned out of our way to obtain a near view of the glacier, and to hear the multitudinous echoes that astonish the traveller who stands in the hot sun beholding the huge sea of ice. A small English party were seated there, discussing a liberal basket of sandwiches and wine—just such a group as might be seen enjoying a picnic in the rustic places of our own land. While we were chattering with them, the peasant who makes it his summer business to display to travellers the wonders of the place, discharged a small gun. The sound rolled from crag to crag, from rock to rock, from mountain to mountain, repeated now loud, now softly, now like thunder, now in a whisper, more times than I could count, and then slowly died away far down the valley. I had not formed the slightest notion of the real power of echo, and it astonished me more than any wonder of that wondrous region.

Another hour's stiff walk through the luxuriant valley brought us to the village of Grindelwald, and our resting-place for the night. While waiting for the *table d'hôte*, which throughout Switzerland is appointed at a late hour for the convenience of travellers after the completion of their day's march, we strolled into the garden of the hotel to view the bold scenery of the place. Immediately before us rose the mountain range with bold ascent, three gigantic peaks arresting the eye by the peculiarity of their forms, and between them two huge glaciers descended from their summits into the valley, glistening in the evening sun, and shining out more conspicuously on account of the black forest of firs with which they are fringed, and into the very bosom of which they have been thrust forward by the mighty mass of ice above. These glaciers are branches of the huge ice-field that extends over the entire summit of the Bernese Alps, covering an area of many hundred square miles, and streaming through every fissure far below the region of perpetual snow, where a considerable portion of their substance is melted by the summer's suns, but as surely replaced by the avalanches of the winter.

We sat by the open window viewing the magnificent prospect until it was lost in darkness. But we were speedily recalled by the muttering of distant thunder, and frequent lightnings flashing up from behind the rock walls that buried their heads in the sky before us. The storm rapidly approached, and soon the lightning filled the whole heaven, coming from every quarter at once, at each moment revealing the entire range of mountains for an instant distinctly as at mid-day, and then as instantly plunging the mighty scene into profoundest darkness. The thunder leaping among the cliffs, and echoed by the crags, seemed to be unceasing, and then the rain fell in torrents, and amid this conflict of the elements we went to our beds, much fearing lest the weather, hitherto so favourable, should be changed by the storm, and we should be subjected to the disappointment which so commonly attends Alpine travel, and be compelled either to submit to spend some days of idleness at the hotel, or to walk through mists and rains, all prospects veiled from our view, and danger encompassing our path.

MELROSE ABBEY.—DISGRACEFUL PRACTICES OF TOURISTS.—The mischievous propensities which individuals often manifest on their being permitted to visit public buildings, works of art, and other objects of interest, have often been alluded to as a subject of just reproach to the public of this country. It is indeed melancholy to think that, notwithstanding reiterated complaints and warnings against these practices, there should still be people who are insensible to the disgrace they incur in destroying such objects, whether out of pure mischief, or from the equally reprehensible desire of appropriating fragments as relics. The liberty of access to the monuments of antiquity which adorn the country, is a privilege which must be highly prized by every individual of any degree of taste and information; and the culpability of those who abuse it in the manner referred to is greatly enhanced by the consideration that, independent of the actual damage done, they inflict a grievous injury upon the public at large, who are necessarily visited with the consequences of such misconduct in being excluded from the precincts of these structures. A very striking proof of the prevalence of these shameful practices, and of the consequences to which they lead, appears in an advertisement in a daily paper, announcing that, in consequence of the chipping and defacing which the beautiful carved stonework of Melrose Abbey has undergone, that edifice will henceforth be shut up from the public. We understand that his grace the Duke of Buccleuch has of late years been at great expense and trouble to preserve this venerable structure, perhaps one of the richest monuments of antiquity of which our island can boast, and now rendered interesting to the whole world from its association with the imperishable name of Sir Walter Scott. It can scarcely, under the circumstances, be wondered at, that the noble proprietor should adopt this step for the preservation of the abbey—a step which we know his grace deeply regrets, but to which he has been impelled by these frequent depredations, and by feeling, as he ought to feel, not only a *personal*, but a national responsibility in the custody of this so valuable a relic of Scotland's history.—*Edinburgh Courant.*

BOULOGNE HOTELS.

TO THE EDITOR OF THE TIMES.

SIR,—Talk no more of English hotels, whether of Folkstone or Dover, Birmingham or Bath; let them hide their diminished heads, and in their charges take a lesson from their more extortionate brethren in Boulogne. Here is a specimen:—

A gentleman and his wife arrived late in the evening at the Hotel du Nord. They were lodged for the night in a small room on the third story (*troisième étage*—exclusive of the ground-floor); here they had dinner and tea; they left the following morning at seven o'clock, after having had one cup of coffee for the gentleman, and one cup of tea for the lady, with one small roll (*un petit pain à trois sous*) between them. Their two trunks were also taken up to their said room, and brought down again to the door of the hotel. Here is the bill:—

HOTEL DU NORD, A BOULOGNE.

	Francs.
Diner	8
1 bouteille de Bourgogne	2
Thé	3
2 bougies	2
Appartement	9
Thé (matin)	2
Café	3
	29
Porteur	3
	32 francs;

exclusive of the usual gratuities to servants. The two *bougies* were no more than two ends of tallow candles, in tin frames, placed in the passage for any one going up to bed.

Let the hotel-keepers of England beat this if they can.

I am, Sir, your obedient servant, VIATOR.

ART.

LORD BYRON'S STATUE.—Thorwaldsen's beautiful work has arrived at Trinity, and will be put up in the college library very shortly.

EQUESTRIAN STATUE OF THE QUEEN.—Mr. James Wyatt, the sculptor, of Dudley-grove, Harrow-road, has just completed in plaster an equestrian statue of her Majesty, which, considering the difficulties of the undertaking, appears to be a work of considerable excellence. Female statues on horseback are necessarily comparatively few, and we hardly know why, in this instance, that form of representation has been selected, unless it be that her Majesty is known to be peculiarly fond of riding. One objection must usually belong to such subjects, viz. that they can hardly be exhibited in such a dress as becomes the situation. In Mr. James Wyatt's figure her Majesty has a crown on her head, and wears the collar and George on her bare neck, while her shoulders are also uncovered. At the same time the inconsistency of putting her in a riding-habit was not to be avoided, so that one part of the royal person is strangely habited compared with the other. She sits her horse uncommonly well, a merit that could scarcely be avoided, if the sculptor copied from nature. One of our greatest poets tell us that—

> Chiefly skill to ride seems a science,
> Proper to gentle blood, &c.

and Sir Philip Sidney bears the same testimony. As far as the Queen is concerned, she sets an admirable example in this respect to all her subjects of rank and fortune. The horse upon which she is mounted is a noble animal, fully caparisoned, and not so large as to make her Majesty's figure appear too small. We do not quite approve of the posture of the off-leg before; it seems intended that the animal should be pawing the earth impatiently, but the action looks a little cramped and constrained. We may be wrong in this opinion, and certainly it is about the only point, excepting such as are inevitable, on which we have any complaint to make.—*Chronicle.*

ELY CATHEDRAL.—Among the many improvements in progress in the Cathedral of Ely, a magnificent painted window has just been presented to it by the Rev. Edward Bowyer Sparke, one of the canons of the church. It occupies the south-east angle of the lantern, and is of noble dimensions, being forty feet in height; it is designed to commemorate the foundress of the church, St. Etheldreda, by representations of her marriage and of her consecration as abbess; whilst the four great lights of the window contain, under gorgeous canopies, the figures of Etheldreda, as queen, her father, Anna, King of the East Angles, her first husband, Tonbert, King of the Giroii, and her second husband, Egfrid, King of Northumberland; in the second row she appears as Lady Abbess of Ely, with Wilfrid, Archbishop of York, by whom she was consecrated, and her successors in the government of the monastery, Jenborga, and Ermenilda. The artist, Mr. William Wailes, of Newcastle, has completed this great and beautiful work in little more than three months, at a cost of 600*l*. The same liberal benefactor proposes to present another painted window, by the same artist, to the south transept, and the church is likewise indebted to him for originating, by a noble gift, the restoration of the south-west transept, which has added so greatly to the beauty of the cathedral. The design for the eight great windows at the east end of the choir, for filling which with painted glass the late Bishop Sparke left 1,500*l*. is nearly completed. Mr. A. B. Hope has undertaken to restore one of the pinnacles of the east end of the church, and Lady Mildred Hope to restore the beautiful cross in the eastern gable, and the crocketing which leads up to it; and also Mr. H. R. Evans, who has been so long and so honourably connected with the chapter as steward of the manors, &c. has undertaken to defray the expense of opening and restoring the great lantern of the western tower, which is now concealed by a plaster vault to the floor of the bell-chamber, and of thus bringing into view the most beautiful system of Norman arcading which is to be found in any cathedral in this kingdom.—*Bury paper.*

GERMAN INTELLIGENCE ON ART.

(*From our Correspondent.*)

At Ingoldstadt the foundation-stone of the new Protestant church has been laid.

KISSENGEN.—The Protestant church at this place is being built after the plan of Herr VON GARTNER, the portico in the Pisan style.

BERLIN.—A picture by the celebrated battle-painter RECHLIN, now in the cabinet of HERN SACHSE, is said to be very fine. It represents the important moment of the battle of Leipsig, with the regiment of Douan Cossacks, led on by their gallant commander, Count ORLOW-DENISOW, with his sword raised on high, mounted on a white steed. To the left, on a hillock, in the background, is the village of Gossa; the foreground is occupied by the regiment of French cuirassiers on whom the Cossacks are falling. Quite in the background, the Emperor ALEXANDER, with his suite, may be perceived on a rising ground. The tone and method of treatment remind us forcibly of the modern French school, and particularly of HORACE VERNET, though without indicating any slavish imitation; and notwithstanding the confused masses, the whole is clearly and distinctly defined. The picture is in the possession of the Orlow family. Here also, in the Luderitz Gallery, a new picture from the pencil of the talented landscape-painter EICHHORN, is on inspection. It is a scene from classic Greece, from Peloponnesus, taken in the northern Arcadia, in the neigbourhood of the modern Kalabrita. In the distance is the mountain Velia; in the centre lies a green and fruitful valley; in the foreground, and towards the left, are the ruins of an old Grecian cyclopian building; and at the right stand two lofty palms. The colouring is brilliant, yet subdued, the whole forming an excellent specimen of the artist's peculiar talents.

The Belgian artist VANDEN-BOSCHE is at present at Paris, employed upon a copy of the portrait of NAPOLEON, in the Invalides, taken by INGRES, in the year 1806. The copy is destined for the philanthropic society of the Waffenbrüder, in Ghent, who served under the French colours.

MUNICH.—In the bronze foundries here great activity is prevailing. Commissions follow one another on all sides. We have before referred to the casting of the colossal head of the Bavaria, which is capable of containing twenty-seven persons; the upper part of the body is now in the course of formation. Among other objects now casting, we may name the iron gates for the new building for exhibitions of art and industry; also the statue of KREITMAYER, after the model of SCHWAUDTHALER; likewise the colossal bust of JEAN PAUL, from the model of the same artist. For Stuttgardt the allegorical figures for the royal monument, after the designs of WAGNER, are in the course of formation; and the first, which represents the order of knighthood, is already completed. For Bohemia, the statue of JEAN ZYISKA, after SCHWAUDTHALER, is being cast. SCHWAUDTHALER was also the designer of the allegorical figures, now casting for Vienna, of the rivers of Austria, the Danube, the Elbe, the Weichsel, and Po; they are destined, in conjunction with an allegorical colossal figure of Austria, to adorn a well in the imperial city. For Sweden, the statue of King CARL JOHANN, after the model of SCHWAUDTHALER, is in preparation; for England, that of the deceased HUSKISSON; and for Switzerland, that of the Duke VON ZAHRINGEN, after the model of a Swiss sculptor.

VIENNA.—Two medals have been stamped by BOHM, one small, the other large, in commemoration of the fiftieth year of the palatinate of the Archduke JOSEPH.

THE DRAMA AND PUBLIC AMUSEMENTS.

PRINCESS'S THEATRE.—Since the palmiest days of KEAN, there was never such a rush at the pit, box, and gallery doors of any theatre, as was witnessed on Monday evening at the Princess's. Long before seven o'clock, there was not one square foot of standing room unoccupied in the whole space before the curtain, and well nigh as many went away unsuccessful, as, after a severe struggle, obtained admission. The occasion was indeed a great one: the reappearance of MACREADY, after an absence of three years from that English stage, on which, of the few actors it possesses entitled to the name of tragedian, he is unquestionably and preeminently the chief. The enthusiasm which thus once more hails his return, renders still more inexplicable his protracted withdrawal from the arena in which he never fails to achieve such triumphs. That it is not the fault of the public, would seem tolerably clear from the ardour with which it thus seizes upon any opportunity presented to it of seeing Mr. MACREADY. Is it the fault of Mr. MACREADY? If so, he is alike unjust to himself and to the country. At all events, it is not the fault of Mr. MADDOX, who with an energy which does him the highest honour—for he already filled his theatre—has, after some considerable negotiation, and doubtless at a very heavy outlay, secured our chiefest tragedian's services for a limited period. The play selected for Mr. MACREADY'S first appearance here was *Hamlet*, that most inimitable of all SHAKSPEARE'S productions, the first for perfect dramatic truth, and unlooked for development of sentiment and character. Mr. MACREADY'S masterly impersonation of the Prince of Denmark is so well known as to need no commendation from us; we will content ourselves therefore with saying that the lapse of time—it seems long, though but three years—has worked no change for the worse in Mr. MACREADY; he is as admirable in the part as ever, as full of fire and energy. He was on the whole tolerably supported. Mrs. TERNAN (Miss JARMAN that was), a lady of great ability, played the *Queen*, and Miss E. STANLEY was an interesting *Ophelia;* Mr. COOPER was the *Ghost*, and every one must desire to see the ghost of Mr. COOPER; Mr. C. FISHER presented us with a sufficient *Horatio;* the two *Gravediggers* were done excellently well by OXBERRY and COMPTON, who, when the occasion arrives, will make a capital *Dogberry* and *Verges;* Mr. GRANBY'S *Polonius* was a carefully studied piece of acting. Mr. RYDER enacted the usurping majesty of Denmark. The *getting up* of the tragedy reflects much credit upon Mr. MADDOX. There is an entirely new scene representing the ramparts of Elsineur by moonlight, painted by Mr. BEVERLEY with much skill and effect. *King Lear* was the tragedy selected for Wednesday evening's performance; it attracted a large attendance, and went off with great eclat. Mr. MACREADY'S nights are Monday, Wednesday, and Friday, and we would advise our readers "to make early application," or they will find the places "all allotted." On the alternate nights too there is no ordinary attraction; WALLACK and Mrs. STIRLING are far from despicable alternatives, and we are to have Mr. C. MATHEWS and Madame VESTRIS shortly. Two amusing farces have been added to the repertory of this theatre: *Advice to Husbands*, in which Mrs. STIRLING is especially good, and *The Man without a Head*, the oblivious hero whereof is impersonated, with great humour and a happy appreciation of the point, by Mr. COMPTON. *Mr. Oblivious Top* should not be missed by the lovers of genuine comic acting.

OLYMPIC THEATRE.—We have not as yet had an opportunity of visiting this little theatre, where, we understand, under the management of Miss Kate Howard, there is every prospect of a return to those Elysian evenings which so distinguished it when under the direction of Madame Vestris. The burletta entitled *The Boyhood of Bacchus* is, we hear, an approach of no inconsiderable nearness to the old mythological sports and revels of this once gay, sprightly, and well appointed theatre—once more about, we hope, for the sake of all parties, to be as gay and sprightly, and as well appointed as ever. The piece in question is by an experienced hand in these things, and the paro-

dies are well timed and amusing. We will make a point of looking in, and reporting upon the progress of things here.

New Strand Theatre.—M. Philippe has taken this theatre, and is presenting the public with ever new combinations of the impossible. He is unquestionably the great master in his particular line of excellences, and his deceptions are managed with a grace and ease of manipulation truly "pretty to observe." We shall next week give an account of his new wonderful wonder of wonders.

The Alethorama.—An exhibition was opened to private view on Thursday evening, at the Princess's Concert-rooms, Castle-street, Oxford-street, called the Alethorama, or Animated Illusions. It is a most extraordinary and ingenious application of mechanism. On a small raised stage, with appropriate scenery, representations of various models of life are given; the sun and moon rise and set; the seas, now calm and now wildly tossed by tempests; and the figures, whether of men, beasts, or birds, are all in motion. Horses and waggons traverse the roads, cattle graze in the fields, and huntsmen roam through the woods, while skiffs, steamboats, and vessels of every kind are seen passing to and fro upon the waters. In fact, there is the same difference between the Alethorama and other picturesque exhibitions that there is between a well-acted play and a cold narration; while the one describes, the other actually presents the scene in life and motion to the eyes of the spectator. A great variety of scenes are thus represented, everything in them being extremely well managed, the movements of all the figures being graceful and natural, and no jerks (such as might be expected in automatons made to move with springs) are ever perceptible. One of the scenes represented last evening was the *Maas* at Rotterdam. In one part the country-people are seen going to market with provisions; in another, a party of seamen put ashore their captain, who, as it begins to rain hard, is seen to open his umbrella as he goes off. The fishermen, too, follow their occupation upon the water; they cast their nets, then take a dram to recruit themselves, and again pull up the nets, in which the fish may be plainly seen struggling. A sailor attempts to take them out, he is awkward, and they all escape from him into the water; while yet further to add to the general life and movement, swans, swimmers, &c. appear in different quarters. The other representations are quite as varied, and many, from having more figures in them, are more ingenious in their mechanism. Something similar to the present exhibition is now used at the Diorama, though not on so extensive a scale. This exhibition will prove a valuable addition to the arts, as well as afford pleasure to the lovers of sights.—*Chronicle.*

Royal Polytechnic Institution.—We had the gratification of a lecture on the music of Spain by Don Jose de Ciebra, at the above Institution on Tuesday last. The lecturer commenced by alluding to the state of the art at the earliest period, which he illustrated by numerous airs of that as well as of more modern times. The music from the Moors he treated at considerable length, and then commented on the style of different Andalusian authors, both in solos and duets. The guitar is not generally understood, and consequently not appreciated; but the music of this instrument, when in the hands of such a master as Don Ciebra is truly most delightful, his touch and execution being beyond praise. The airs which seemed most to please the audience were *Los toros del Puerto, El Contrabandista*—a duet from the opera of *Robert le Diable*—by Don Jose de Ciebra and Don R. de Ciebra. The fantasia of *We Lived and Loved together* was a most brilliant effusion. We doubt not that this course of lectures will prove of considerable utility to the public, and at the same time diffuse a taste for this pleasing instrument. The directors deserve great praise for the very spirited way in which they cater for the public amusement.

ORIGINAL CONTRIBUTIONS.

ON MY DYING SISTER'S BUST.

Fair image, such an angel face is thine
As men might worship in a darker age,
Deeming thee, more than e'en thou art, Divine;
Yet thou must share man's sin-bought heritage;—
Most like, that saddened brow—that mournful face,
To Her in whom the Incarnate Son abode,
To Her, the purest of our fallen race;
Happiest of mothers—mother of her God!—
And thou wilt join the company of them,
For whom, whene'er their virgin life is o'er,
There is laid up in heaven a diadem,
Brighter than e'er an earthly monarch wore.

Herbert.

CRITIC OF TRADES, INVENTIONS, ETC.

[Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of The Critic will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

Novel Printing Machine.—A printing machine of a novel construction has lately been invented by Mr. George Schnebly, an engineer. It is called the Victoria Platen Printing Machine. By the old hand-machines a great deal of labour is required, two men being generally employed to turn the wheel, and two boys, one to lay on the sheets of paper, and the other to take them off. In this invention, the labour of one man is amply sufficient to work the machine, and but one boy is required to lay the paper on, which is then carried under the platen by grippers, and discharged by the aid of a few tapes, with the greatest precision, on an adjoining table. The novelty of the invention consists in having but one large wheel and two cog wheels, one larger than the other. In the larger of these there is an eccentric groove, in which two shafts work, one on each side; the larger of these shafts forces up the platen, and the smaller carries the paper under the platen, and discharges and adjusts it. When the larger of these shafts is moving the smaller one stops, and when the smaller one is moving the larger stops, and *vice versâ*. There is also another contrivance attached to the smaller shaft, by which the type is better and more equally inked. The machine is very simple in its construction, and consequently not expensive; it is worked with facility by one man; but steam power may very easily be applied to it. It is capable at present of printing between six and eight hundred impressions an hour; a contrivance, though not calculated to compete with steam printing-presses, which may be found useful in small establishments, it being a great improvement on the old press.

Curious Invention.—From Hanover we hear of a practical discovery of a kind so curious as to require some further explanation before we can quite understand it; and we are rather suspicious, inasmuch as we have, or fancy we have, some recollection of a somewhat similar story making the round of the continental papers several years ago. It is given, however, in this instance, with an imposing detail and the guarantee of names—if there be no borrowing of these for the occasion. The report is, that two young men, one a Swede and the other a Norman,—taking the hint from that sort of footgear of fir-planks called *skies*, by means of which, in those northern countries, the inhabitants pass through valleys and ravines filled with snow, without sinking—have been exhibiting in that capital the exploit of walking on the water by means of *skies*—made, however, for the latter purpose, with iron plates hollow within. Backwards and forwards, much at their ease, according to the report, did the exhibitors walk and run—going through the military exercise with knapsacks at their backs—and finally drawing a boat containing eight persons—all without wetting their shoes. The Minister at War, it is said, put a portion of the garrison of Hanover under the training of these gentlemen, for the purpose of learning what might prove so useful a military manœuvre; and as MM. Kjellberg and Balcken propose carrying their invention into other countries, our readers will probably suspend their opinion till they have a nearer view of this novel meeting of *sky* and water.—*Athenæum.*

To Readers and Correspondents.

To Booksellers.—*A stamped copy of* The Critic *sent regularly to any Bookseller, for his own use, at the cost of stamp and paper only, on prepayment of* half a year's subscription, at least (*4s. 4d.*), *which may be transmitted in penny postage stamps.*

Booksellers *and Keepers of Circulating Libraries are requested to communicate to* The Critic *the results of their experience as to books and classes of books most in demand, and other similar information. Books wanted to purchase inserted in the weekly list without charge.*

BOOKSELLERS' CIRCULAR.

MR. O. RICHARDS AND THE LAW TIMES.

An incident has just occurred which has occasioned a great deal of interest in the publishing world, as being characterized by some remarkable features.

Last week, Mr. Owen Richards, the bookseller, and proprietor of a recent quarterly periodical called the *Law Review*,

moved for and obtained an injunction against certain numbers of the *Law Times*, for having extracted articles from his *Review* without permission.

The *Law Times* of Saturday last has put forth a minute statement of the circumstances under which these extracts were made, and which gives to the proceeding of Mr. RICHARDS a character of extreme harshness, and exhibits such an entire violation of the courteous and tradesman-like dealing usually observed between persons holding a respectable station in society, that the only excuse which can be offered is the hope that, when he delivered his instructions to his solicitor, he was labouring under grievous error as to the facts of the case.

The following appear to be the facts:—

From the first publication of his magazine, Mr. RICHARDS has been in the habit of regularly transmitting it to the editor of the *Law Times* for review, with his compliments. Each number had accordingly received a long and a kindly notice in the *Law Times*, accompanied, as is the universal practice of reviews, with extracts, the best article being of course selected as the most favourable specimen of the work.

Besides these reviews, with their illustrative extracts, an article was taken from one of the numbers, and duly acknowledged with the usual heading "(*From the Law Review*)."

During the absence of the editor three weeks since, a memoir of Sir WILLIAM FOLLETT was extracted from the *Law Review*, and, by an accident of the printer, the acknowledgment of the source was omitted.

Upon this Mr. RICHARDS, without notice, without explanation asked, applied for and obtained an injunction.

The reader will of course presume that there were other circumstances in this extraordinary proceeding which do not appear—that the parties were rivals, or on unfriendly terms, or that the *Law Times* had borne itself on some occasion in a hostile spirit towards Mr. RICHARDS.

But the very reverse of this was the fact. Up to the moment of this harsh step being taken, the *Law Times* had been performing an unvaried series of kindnesses towards Mr. RICHARDS: it had reviewed all the books published by him with particular attention, giving to them a prominent place, and the value of such notices in the leading journal of the Profession will be readily estimated by our readers of the trade. The best proof of this is the fact stated by the *Law Times* that the very number of Mr. RICHARDS's magazine which was the subject of the complaint, contained no less than ten extracts from the *Law Times*, laudatory of books of which Mr. RICHARDS was the publisher.

Under almost any conceivable circumstances such a step taken against a friend from whom a long series of kindnesses and courtesies had been received, is probably without precedent in the annals of publishers or the records of the law.

But the circumstances of the present case present themselves in an aspect peculiarly harsh and ungenerous.

It will not, of course, be contended for a moment that Mr. RICHARDS had not full right to object to the extraction of articles from his magazine. But he never communicated to the Editor any such objection, never wrote to him or called upon him with such a request;—on the contrary, although extracts were made with each notice, he continued to send the work for review, with his compliments, thereby giving a tacit approval of the manner in which the Editor had dealt with the preceding numbers. Had he objected to the extracts he would not, or should not, have continued to send the successive numbers for review,—at least, unaccompanied with a request that similar extracts might not be continued.

Not only was no complaint made to the Editor of the extraction of these articles, but there was an indirect approval. On one occasion a paper was divided. On the appearance of the second portion of it, the name of the *Law Review* was omitted at its heading. Mr. RICHARDS spoke to one of the clerks of the *Law Times* Office about this omission and requested that it might be supplied, but he made not the slightest objection to the publication of the article itself. The omission was supplied accordingly, as he had requested, and not another word was said about it by Mr. RICHARDS.

But this is not all. Not only was no objection made to the Editor by Mr. RICHARDS as to the extraction of papers from his periodical, but no notice was given of legal proceedings contemplated. The wholesome practice of society and of the legal profession—save with the most worthless of the one and the vilest pettifoggers of the other, is to give due notice of legal proceedings intended to be taken for any injury, real or supposed, in order that the offending party may have an opportunity of offering an explanation, or tendering amends without incurring the harshness and expenses of the law—save in the last resort, should these be refused.

This rule of courtesy and straightforward dealing between man and man was, it seems, utterly disregarded by Mr. RICHARDS. Not the very slightest intimation was given to the *Law Times*, either by himself or by his attorney, that he felt aggrieved, and would apply to the law if redress were refused. No threat was first forwarded by him, no letter was written by his attorney, but without notice of any kind counsel was despatched to the Isle of Wight to move for an injunction—not against a rival—not against an enemy—not against one who had injured him—but against a friend—against a journal that had rendered him many important services!

A word of complaint from Mr. RICHARDS, *at any time*, addressed to the Editor, the slightest objection stated to extracts being made from his work, would have received immediate attention and strict acquiescence. In the absence of such it was not unreasonable to suppose that Mr. RICHARDS was pleased at every notice taken of it, at every extract made; such being usually deemed by the proprietors of new undertakings the greatest service that can be done to them, as being the best means of introducing their merits to the public.

The astonishment of the Editor of the *Law Times* may therefore be imagined, when he received notice of an injunction for that which he conceived and had intended to be the performance to Mr. RICHARDS of an important service, and an act of neighbourly kindness and attention.

Such is the history of this curious affair. The motives of Mr. RICHARDS have been made the subject of much speculation. It is supposed by some that the contrivance was resorted to as a sort of advertisement puff for his magazine. But this conjecture we at once reject; for we cannot believe that any man would seek to procure a trifling benefit to himself by inflicting heavy costs upon his neighbour, and that neighbour one who had done him friendly offices. The only explanation we can offer is that which, for the respectability of the trade and for the honour of human nature, we hope it will prove by the issue; namely, that Mr. RICHARDS was acting under the impulse of momentary anger, produced by erroneous impressions of circumstances which, now they are explained, he will see did not justify the extreme measures he has adopted; and if he thus feels, he can have no hesitation how he ought to act.

We shall not fail to report the issue of this strange occurrence.

LITERARY INTELLIGENCE.

WHY THE ANCIENTS HAD NO PRINTED BOOKS.—What was the reason that the Greeks and Romans had not the advantage of printed books? The answer will be, from 99 persons in 100, Because the mystery of printing was not then discovered. But this is altogether a mistake. The secret of printing must have been discovered many thousands of times before it was used, or *could* be used. The inventive powers of man are divine; and also his stupidity is divine—as Cowper so playfully illustrates in the slow development of the *sofa* through successive generations of immortal dulness. It took centuries of blockheads to raise a joint stool into a chair; and it required something like a miracle of genius, in the estimate of elder generations, to reveal the possibility of lengthening a chair into a *chaise longue*, or a sofa. Yes, these were inventions that cost mighty throes of intellectual power. But still, as respects printing, admirable as is the stupidity of man, it was really not quite equal to the task of evading an object which stared him in the face with so broad a gaze. It did not require an Athenian intellect to read the main secret of printing in the many scores of processes which the ordinary uses of life were daily repeating. To say nothing of analogous artifices amongst various mechanic artisans, all that is essential in printing must have been known to every nation that struck coins and medals. Not, therefore, any want of a printing art—that is, of an art for multiplying impressions—but the want of a cheap material for receiving such impressions, was the obstacle to an introduction of printed books even as early as Pisistratus. The ancients did apply printing to records of silver and gold; to marble and many other substances cheaper than gold and silver, they did not, since each monument required a separate effort of inscription. Simply this defect it was of a cheap material for

receiving impresses, which froze in its very fountains the early resources of printing. Some twenty years ago, this view of the case was luminously expounded by Dr. Whately, the present archbishop of Dublin, and with the merit, I believe, of having first suggested it. Since then, this theory has received indirect confirmation.—*Blackwood's Magazine.*

Apart from railroads and their consideration, you will be glad to hear in Cambridge, and not less so to hear it first through your columns, that Alfred Tennyson, an old Cantab, the author of *Locksley Hall, The Lotos Eaters, Ulysses, The May Queen,* and some other beautiful poems, which stamp him one of the first poets of the age, has just received a pension of 200*l.* per annum from her Majesty. Sir R. Peel did the thing very delicately through Mr. Hallam, the historian.—*London Correspondent of the Cambridge Independent.*

A Precious Volume.—A curious circumstance occurred last week at the sale of books of the late Dean of Lincoln, at Sedgebrook Rectory, near Grantham. Amongst the persons attracted by the advertisement of the sale was Mr. John Deighton, the eminent bookseller of Cambridge. He was looking over the lots shortly before the auction commenced, when, on taking up a copy of Donne's *Death, Judgment, Heaven, and Hell,* he thought the volume felt very ponderous; and, on examining it, he discovered that in the bookbinder's "fly-leaf," at the beginning, several coins were sewed. He called the attention of the auctioneer (Mr. Wood) to the circumstance; and it was speedily ascertained that a manuscript letter was fastened to the leaf, and that seven guineas and two half-guineas, of the reign of Charles II., were strongly sewed within it, like so many buttons. The coins were bright and fresh; and, though many of the books in the library were sadly damaged by damp and neglect, this volume and its contents had escaped injury from the lapse of 160 years. The letter had no signature, but from its style seemed to be the writing of a father to his son at one of the universities. The lot, made interesting by this circumstance, was withdrawn from the auction.—*Stamford Mercury.*

REGISTER OF NEW PUBLICATIONS,

From Oct. 11 *to Oct.* 18.

NOTICE TO BOOKSELLERS.

A Register lies at The CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* The Critic, *and no charge will be made either for registration or for publication in* The Critic. *Particulars forwarded* by letter *will be duly inserted.*

LIST OF NEW BOOKS.

Attractive Man (The), a Novel, by Mrs. Trollope, 3 vols. post 8vo. 1*l.* 11s. 6d. bds.—Acton's (W.) Complete Practical Treatise on the Venereal Disease, col. plates, 1*l.* 1s. cl.

Ballard and Garrod's (Drs.) Elements of Materia Medica, 8vo. 12s. cl.

Cobbin's (Rev. S.) Bible Reader's Hand-book, royal 32mo. 2s. 6d. cl.—Crane's Introduction to the French Language, Part I. 12mo. 3s. swd.

First Steps to Anatomy, by Professor Drummond, with illustrative plates, 12mo. 5s. cl.—Forbes's Hindustani Manual, 18mo. 7s. 6d. cl.

Henry's (J.) The Eneis, Books I. and II. in English Blank Iambics, 8vo. 4s. 6d. cl.—Henderson's (Professor) Inquiry into the Practice of Homœopathy, 8vo. 6s. cl.

Lectures on Rhetoric and Belles Lettres, by Hugh Blair, new edition, with Introductory Essay, by Rev. T. Dale, post 8vo. 10s. cl.—Levesque's (John) Art of Brewing and Fermenting, and making Malt, 3rd edit. 8vo. 1*l.* 1s. cl.—Little Princes, by Mrs. Slater, 2nd edit. pictures by Calcott and Horsley, square, tinted, 4s. 6d. cl.—Life and Services of General Lord Harris, G.C.B. by the Right Hon. S. R. Lushington, 2nd edit. fcp. 8vo. 6s. 6d. cl.—London Journal (The), Vol. I. 4to. 3s. 6d. cl.

Markham's France, new edit. 12mo. 7s. 6d. cl.—Murray's Colonial Library, Vol. X. "The French in Algiers," crown 8vo. 6s. cl.

Orion's British Weather Almanac for 1846, 12mo. 6d. swd.

Stephens; Petraea and the Holy Land, 2 vols.

Bingham's Works, fol. 1726. Vol. II.

GLEANINGS.

ORIGINAL AND SELECT.

Oak Timber in the Cree.—Some time ago an interesting account appeared in the *Courier,* of a quantity of oak timber having been raised from the bed of the Cree, and worked up into furniture. The quantity of wood raised is immense; and it is supposed that the whole Moss of Cree could afford a similar supply, were the expense of raising it from such a depth not too great to discourage excavations. The wood is raised in winter, when the floods lay bare the buried trunks; and by so doing, the navigation of the river has been very much improved, as the snags removed were very dangerous for vessels. Great quantities have been exported to Liverpool, where the demand for oak furniture is very great, and one extensive house is entirely employed in fabricating the Cree timber into every description of "plenishing." In fact, a Liverpool merchant may now walk on Cree pavement, or have its ships moored to its granite blocks, and dine off a Cree oak table on beef or mutton fed on the Cree Moss. Mr. Young's premises in Newton-Stuart are well worthy of a visit: sideboards, book and clock cases, &c. finely carved and worked up in the ancient style, suited to the appearance of the oak timber, are to be seen in great variety. One kind of the wood is exceedingly dark, almost black, the other of a beautiful light brown; and the former colour invariably occurs where the wood is raised near the moss, the latter where it is got beside the sea. One piece of timber is shewn in which there is a distinct mark of cutting by a sharp instrument. This, too, is in the inside of the tree, and had been completely covered up with future growth. The edges of the cutting are as distinct as if it had been made yesterday. We hope this curious piece of wood will find its way to some museum.

In excavating for the foundations of the first house to be erected on the new line of road in this city near the Unitarian Chapel, the workmen bared part of a Roman tesselated pavement. The portion bared was between seven and eight feet square, but the pavement is evidently of much larger extent, and most probably runs up to the High-street, as there are evidences of its continuation in that direction. The tesseræ are composed of small square white stones and small squares of brick, not larger than an inch, and some not more than half that size. The mosiac work was not nearly so large as that of the tesselated pavement discovered in the cloister quadrangle of the cathedral, which itself is far inferior to others found in the neighbourhood. However, as a relic of the Roman occupation of Lincoln, it possessed considerable interest, and was well worthy of preservation; it has, however, been taken up and removed, and in so disorderly a manner as probably to defy the replacing of it on another site. It is conjectured that the pavement formed the floor of the courtyard of a suburban villa of the Roman city, as Lindum within the walls extended no farther down than in a line with the existing Guildhall. The northern portion of the pavement was quite plain, and this tesselated part had evidently originally been the centre. The southern portion formed a tesselated border of about four feet broad: it consisted of a principal square of about two feet in diameter, surrounded with red lines two inches broad, and having a square of eight inches in the middle: two red lines connected the squares together, and two others gave them a broad red border: there were also diagonal red lines touching the corner of each square and making a large triangle, and the filling in represented alternate white and red right-angled triangles. The surface of the pavement was slightly inclined southward. The depth at which it was discovered is about three feet below the present surface of the High-street, and it was laid upon a bed of concrete.—*Lincoln Mercury.*

Relics.—The *Journal des Débats,* speaking of the purchase some time since made by Prince Albert of the coat worn by Nelson when he received his death-wound at the battle of Trafalgar, for presentation to Greenwich Hospital, takes occasion to bring together a number of examples in illustration of the large sums paid under the relic-and-rarity mania, particularly by the rich enthusiasts of our own island—more especially, it seems, subject to that species of influenza. Some of the cases reported will require testimonials, not likely to be forthcoming, ere they will be inclined to admit these among the statistics of the passion. The ivory chair which Gustavus Vasa received from the town of Lubeck was sold, the *Journal des Débats* says, in 1823, for the sum of 58,000 florins—not far short of 6,000*l.*! This is a startling anecdote to begin with, but such a one was absolutely necessary to prepare the mind for the reception of the following:—The coat worn by Charles the Twelfth, of Sweden, at the battle of Pultawa—preserved by Colonel Rosen, who followed the adventurous monarch to Bender—was sold, in 1825, at Edinburgh, for the sum of 22,000*l.* sterling! This anecdote, the French paper itself thinks, should have confirmation. It makes the rest, however, easy of acceptance, though there are some even of these which might be a little difficult of digestion by a faculty less powerfully stimulated. M. A. Lenoir, the

founder of the French Museum, relates that, during the transport of the remains of Abelard and Héloise to the Petits Augustins, an Englishman offered him 100,000 francs (4,000*l.*) for one of the teeth of Heloise! At that quotation of the price of bone, Lord Shaftesbury had a great bargain of the tooth of Sir Isaac Newton, for which he paid only 730*l.* in 1816! For want of an Englishman at Stockholm, in 1820, the head of Descartes (teeth and all) was absolutely *given away*, as the phrase is, at Dr. Sourmon's cabinet, for 99 francs. The following cases fall within the more mild and familiar examples of this affection, though it will be seen that the English examples continue to be far more striking than the foreign pronunciations: — Voltaire's cane was sold, in Paris, for 500 francs (20*l.*); Rousseau's waistcoat for 949 francs, and his copper watch for 500; Kant's wig, in spite of all the promise contained in the apophthegm which suggests the seat of a doctor's wisdom, brought only 200 francs; whereas, the wig of Sterne fetched, in London, 200 guineas (5,250 francs). Luckily, the inference against the philosophers, as to the relative value (according to collectors' measure) of the good things severally covered by the two latter articles, is escaped, by virtue of the differences in the development of this passion established in the previous cases. The hat worn by Napoleon at Eylau was, in 1835, carried off by M. Lacroix, from thirty-two competitors, for the sum of 1,920 francs (about 77*l.*); while Sir Francis Burdett paid 500*l.* for the two pens used in the signature of the treaty of Amiens.

SOLEMN BAPTISM OF 130 CONVERTED JEWS.—The city of Saratoff, on the Volga, recently was the scene of a spectacle which for magnificence could scarcely be equalled by the cities of western Europe. One hundred and thirty Jews, recently enrolled in the army, having expressed a desire to embrace the Greek Catholic faith, the 4th of June (O.S.) was appointed for their reception into the bosom of the church. On that day, early in the morning, the Liturgy was said in the Cerkish (cathedral of Saratoff), the neophytes, as not being yet baptised, and therefore unworthy to enter the holy place, standing outside the door which faces the west. After the service the whole congregation in procession, with banner and music, followed by the Israelites, two and two, proceeded to the banks of the Volga, where they were baptized in the usual form, after which they joined the congregation, and returned hand in hand to the cathedral, which, as now forming part of the Christian community, they entered, and the whole concluded with an impressive discourse by the priest. The whole place on the banks of the Volga was crowded with people of all nations and religions—Catholics, Lutherans, Mohammedans, and Pagans—who viewed this novel spectacle in amazement.—*Bremen Gazette.*

ADVERTISEMENTS.

On Saturday, Nov. 1845, will be published, Part I. price 8½d. and No. I. price 1½d. of

SHARPE'S LONDON MAGAZINE: a Journal of Entertainment and Instruction for general reading.

London: T. B. Sharpe, 15, Skinner-street, Snow-hill; and sold by every bookseller in town and country.

The Magazine will be printed in large octavo, sixteen pages, double columns, in a new and elegant type, with wood engravings.

ROWLAND'S ODONTO, OR PEARL DENTIFRICE.

A fragrant white powder, prepared from oriental herbs of inestimable virtue for preserving and beautifying the Teeth and strengthening the Gums. It eradicates tartar from the teeth, and thus lends a salutary growth and freshness to the gums. It removes from the surface of the teeth the spots of incipient decay, polishes and preserves the enamel, imparting the most pure and pearl-like whiteness; while, from its salubrious and disinfecting qualities, it gives sweetness and perfume to the breath. Being an anti-scorbutic, the gums also share in its corrective powers; scurvy is eradicated from them, and a healthy action and redness are induced, so that the teeth (if loose) are thus rendered firm in their sockets. As the most efficient and fragrant aromatic Tooth Powder ever known, Rowland's Odonto has for a long series of years occupied a distinguished place at the toilets of the Sovereigns and the Nobility throughout Europe, while the general demand for it at once announces the favour in which it is universally held.

Price 2s. 9d. per Box.

CAUTION.—To protect the public from fraud, the Hon. Commissioners of Stamps have directed the proprietors' name and address to be engraved on the government stamp, thus:—

A. ROWLAND & SON, 20, HATTON GARDEN,

Which is affixed on each box.

Sold by the Proprietors, and by Chemists and Perfumers.

*** All other Odontos are fraudulent imitations.

NEW POEM.

Published this Day, fcp. 8vo. 5s. cloth,

STELLA: A POEM OF THE DAY. &c. &c.

London: Longman, Brown, Green, and Longmans.

GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY, 14, Waterloo-place, Pall-mall, London.

THE CHISHOLM, Chairman.

WILLIAM MORLEY, Esq. Deputy-Chairman.

GREAT ADVANTAGES OFFERED TO POLICY HOLDERS BY THIS INSTITUTION.

A large and immediate accession of Assurances by the transfer of the Policies of the "Achilles British and Foreign Life Assurance Society."

PROFITS.—The whole of the Profits divided annually among the members, after the payment of five annual premiums.

An ample guaranteed capital, in addition to the fund continually accumulating from premiums, fully sufficient to afford complete security.

CREDIT.—Credit given to members for half the amount of the first five annual premiums, without security.

Credit allowed to members for the whole of the first five annual premiums, on satisfactory security being given for their payment.

Transfers of Policies effected and registered (without charge).

LOANS.—Loans granted upon approved security.

Claims on Policies not subject to be litigated or disputed, except with the sanction, in each case, of a General Meeting of the Members. Loans granted upon approved security.

An extremely low rate of premium, without participation in the profits, but with the option, at any time within five years, of paying the difference between the reduced rates and the mutual assurance rates; and thus becoming members of the society, and entitled to a full participation in the profits.

Extract from the Reduced Scale of Rates, for an Assurance of 100*l.* for one year, seven years, and the whole term of Life.

Age.	Annual Premium.		
	One Year.	Seven Years.	Whole Life.

Full particulars are detailed in the prospectus.

A. R. IRVINE, Managing Director.

A Liberal Commission allowed to Solicitors and Agents.

COMPOSITIONS FOR WRITING WITH STEEL PENS.

STEPHENS'S WRITING FLUIDS.—These Compositions, which have so remarkably extended the use of the STEEL PEN, are brought to very great perfection, being more easy to write with, more durable, and in every respect preferable to the ordinary ink. In warm climates they become essential. They consist of—

A BLUE FLUID, changing to an intense black colour.

PATENT UNCHANGEABLE BLUE FLUID, retaining a deep blue colour.

A SUPERIOR BLACK INK, of the common character, but more fluid.

A SUPERIOR CARMINE RED, for contrast writing, adapted for artists and those who use water-colours.

A CARBONACEOUS RECORD INK, unchangeable by any chemical agent.

A MECHANICAL RULING and PAPER ARCHITECTURAL DRAWING INK. Superior to the best Indian Ink for the above purposes, and has the advantage of being ready for immediate use. It rules without breaking, and follows the brush or ruling-pen with the greatest facility.

Bottles at 3d. each, convenient for writing from, are prepared, which will enable those who may wish to try either of these articles to do so at a small expense.

Also, a new kind of MARKING-INK for Linen, and INK HOLDERS adapted for preserving Ink from evaporation and dust.

Prepared by HENRY STEPHENS, the inventor, 54, Stamford-street, Blackfriars-road, London, and sold wholesale and retail by booksellers and stationers, in bottles at 3d., 6d., 1s., and 3s. each.

CAUTION.—These unchangeable BLUE FLUIDS are Patent Articles. The public are, therefore, cautioned against imitations, which are infringements, to sell or use which is illegal.

A verdict of 2,000 dollars, liable to be increased to 6,000 dollars, having been obtained against parties who have been convicted of selling imitations of this article, in violation of the patent right of the inventor, in the United States of America, and several notices having been repeatedly issued to caution persons against infringing those rights in this country, by making or selling this Article, the Proprietor issues this as a final notice, which, if disregarded, he will be compelled to institute proceedings at law against all who may be committing these illegal acts.

HENRY STEPHENS, 54, Stamford-street, Blackfriars-road, London.

STEPHENS'S SELECT STEEL PENS.

The utmost possible care having been bestowed upon the manufacture of these articles, so as to procure the highest finish, they can be confidently recommended both for flexibility and durability.

Schoolmasters and the Trade supplied on liberal terms.

THE CRITIC,

And Journal of Literature.

SATURDAY, OCTOBER 25, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

THE MORNING MAIL.

THIS work is proceeding with the care and caution demanded by its importance. Nothing in it will be done hastily; each step will be assured before another is taken. The opinion of the public is asked before expenses are incurred.

But seven days have elapsed at this present writing since the issuing of the prospectus. Spite of novelty, which always makes prudent persons pause and ponder before they adventure upon it, the applications for shares are already very numerous, and every post adds largely to the file. This is a good omen, and proves that the proposition is deemed to be a promising one. Indeed, there cannot be a question that, if it can be accomplished, it is sure to be very profitable to the shareholders.

Let us review the facts upon which the hopes of success are founded. Although the population of the country has nearly doubled, readers have multiplied tenfold, and the day mails and railroads have substituted morning for evening papers among provincial readers, there has been no increase in the number of the morning newspapers for the last twenty years. The supply has fallen far short of the demand; and, as a substitute, the clumsy expedient of supplements has been resorted to by the few existing journals. The advertisements in the *Times* are now too numerous to be read; their very multitude makes them useless; and if they continue to increase as they have done, in two or three years more they will grow beyond their present unreasonable extent, and a morning newspaper will be a wilderness of advertisements, instead of a vehicle of news.

There is, therefore, scope and verge enough for an additional morning paper. It has been long wanted, and there is but one reason why it has not been supplied; namely, that the capital required for its establishment, on the extended scale that only could command success, was far beyond the reach of any private purse.

We are quite aware of the principle of trade, that a business cannot be conducted so profitably by a company as by an individual. But this rule is limited to concerns in which the capital required is such as an individual can command. All enterprises demanding very great capital can be undertaken only upon the joint-stock principle, and one of those enterprises is the establishment of a daily paper upon a scale that will place it in fair competition with its rivals.

The question has been asked whether, if the capital be subscribed, the materials can be procured for working it?

Of this there is no doubt. Wherever it is rewarded talent will be found. There is an abundance of ability seeking for employment.

Again, inquiries have been made as to the mode of management. The answer is shortly this. Precisely like a joint-stock bank. The directors will be elected by the shareholders; in them will be vested the entire control of the financial and commercial departments of the company. To the editor will be confided absolute and uncontrolled authority in his department. He may be dismissed by the directors, if they deem him to be injuring the interests of the journal; but so long as he is editor, none will be permitted to interfere with him.

Such a newspaper as that proposed must be looked at by shareholders and directors as a commercial enterprise. It is not proposed to be established for any political or sectarian purposes, but simply as a profitable investment for money.

This view of it will divest the matter of much difficulty that surrounds it in some minds, and we hope the explanations we have given above will clear up such other doubts as correspondents have suggested.

Inquiries have been made as to the promoters, managers, &c., of the proposition.

Let us at once state, that in this early stage it would be unwise to appoint a Directory. The wider the choice the better, and premature engagements would deprive the enterprise of many good men who will come in as it is made known and its substantial character becomes better appreciated the more it is examined. We might have filled the prospectus with names of a Provisional Committee before it was issued; but we deemed it the most prudent course first to submit the plan to the public, to invite opinion, and see what promise of success there was, as shewn by applications for shares. With these in our hand we may apply with confidence in the best quarters for countenance and co-operation. In this early stage, the proposition must rest upon its own merits, and for its respectability of origin upon the character of the CRITIC, whence it emanates, and which pledges itself to the *bona fides* of the scheme, and assures its readers that it shall be conducted with fairness, and that it shall be well done or not at all.

And it is therefore that we ask those who approve and purpose to take shares, to send their applications at once to the CRITIC office, that we may be enabled to ascertain as speedily as possible the prospects of success, distinctly pledging ourselves that they shall incur no liability of any kind, unless the Company be formed, and that it shall be permitted to them at any moment before the allotment of shares, should they disapprove of any proceeding, to withdraw their application.

We prefer the plain and straightforward course of resting the proposition in the first instance on its own merits, with only the guarantee of the CRITIC as to its perfect respectability, to the delusive practice now so prevalent, of prefacing it by a number of names unknown, with intent to impose upon the unwary.

It is on the good faith of the CRITIC, as the parent of the plan, that the public is asked to support it; and early applications for shares, by those who desire to promote it, are therefore requested.

JOURNAL OF ENGLISH LITERATURE.

BIOGRAPHY.

Holmes's Life of Mozart.

(*Continued from p.* 496.)

MOZART'S triumphs were clouded by the loss of his father, to whom he was warmly attached, and who died on the 28th of May, 1787, at Salzburg, in his 68th year.

Soon after this affliction he again visited Prague, for the purpose of bringing out his *Don Giovanni*. The history of this famous opera is too interesting to all who have enjoyed it to be omitted.

The time passed in festivities of various kinds, and the composition of the overture to *Don Giovanni* was entirely neglected until the night of the 3rd of November, 1787. This was the eve of his great triumph. A large party was assembled at Dussek's and Mozart was enjoying himself with them, apparently thoughtless of the overture. As usual overflowing with ideas, he had that day been at work for his hostess, Madame Dussek, and had produced for her the exquisitely scientific scena, "Bella mia fiamma," a composition by which her style and attainments as a singer are effectually characterized. His friends, however, became uneasy, and one of them said to him, "Mozart, the first performance of *Don Giovanni* is to-morrow, and you have not

yet written the overture." He appeared to consider a while, and about midnight retired to his apartment, desiring his wife to make him some punch, and to stay with him to keep him awake. The overture was ready by the morning, but the copyists were less diligent or less successful with their work. The opera should have commenced at seven in the evening, but there was no overture, and the crowded theatre was kept waiting until a quarter-to eight, when the parts were hastily brought into the orchestra, covered with sand, and with them entered Mozart to take his place as conductor. His appearance was greeted by the general applause of the theatre, and the unrehearsed overture was then commenced. During its performance the audience gave many signs of repressed pleasure, which at length broke out into a loud exclamation. When the curtain rose, and the first scene of the opera was going forward, Mozart said to some of the musicians near him, "The overture went off very well on the whole, although a good many notes certainly fell under the desks." He was well acquainted with the talent of the orchestra of Prague; and it is not unlikely that this most unusual exhibition of an overture played without rehearsal, was a designed compliment to it.

For this composition he received only one hundred ducats!

The Emperor, JOSEPH, fearing to lose him, gave him the appointment of chamber composer to the court, a sinecure of the value only of 800 florins per annum, and which induced him to accompany one of his receipts with this stinging note:—"Too much for what I do—too little for what I could do."

During the next two years his difficulties increased and his profits were very far below his merits. Mr. HOLMES introduces here a picture of the two great symphonists while in the process of gestation.

Mozart when he washed his hands in the morning could never remain quiet, but traversed his chamber, knocking one heel against the other, immersed in thought. At table he would fasten the corners of his napkin, and, while drawing it backwards and forwards on his mouth, make grimaces, apparently "lost in meditation." Beethoven, in a fit of abstraction, would pour several jugs of water on his hands, "humming and roaring." After wetting his clothes through, he would pace up and down the room with a vacant expression of countenance, and eyes frightfully distended. Schlictegroll has observed, that Mozart's physiognomy was remarkable for its extreme mobility. The expression changed every moment. His body also was in perpetual motion; he was either playing with his hands, or beating the ground with his foot.

His disappointments produced in his excitable temperament almost a disgust for life; and, like many in the same circumstances, he sought relief from thought in indulgences he had not ventured upon before.

He became wild in the pursuit of pleasure; whatever changed the scene was delightful to him, and the more extravagant the better. His associates, and the frequent guests at his table, were recommended by their animal spirits and capacity as boon companions. They were stage-players and orchestral musicians, low and unprincipled persons, whose acquaintance injured him still more in reputation than in purse. Two of these men, Schickaneder, the director of a theatre (for whom Mozart wrote the *Zauberflöte*), and Stadler, a clarionet-player, are known to have behaved with gross dishonesty towards the composer; and yet he forgave them, and continued their benefactor. The society of Schickaneder, a man of grotesque humour, often in difficulties, but of inexhaustible cheerfulness and good-fellowship, had attractions for Mozart, and led him into some excesses that contributed to the disorder of his health, as he was obliged to retrieve at night the hours lost in the day. A long-continued irregularity of income, also, disposed him to make the most of any favourable moment; and when a few rouleaus of gold brought the means of enjoyment, the Champagne and Tokay began to flow. This course is unhappily no novelty in the shifting life of genius, overworked and ill-rewarded, and seeking to throw off its cares in the pursuits and excitements of vulgar existence. It is necessary to know the composer as a man of pleasure, in order to understand certain allusions in the correspondence of his last years, when his affairs were in the most embarrassed condition, and his absence from Vienna frequently caused by the pressure of creditors. He appears at this time to have experienced moments of poignant self-reproach. His love of dancing, masquerades, masked balls, &c. was so great, that he did not willingly forego an opportunity of joining any one of those assemblies, whether public or private. He dressed handsomely, and wished to make a favourable impression in society independently of his music. He was sensitive with regard to his figure, and was annoyed when he heard that the Prussian ambassador had said to some one, "You must not estimate the genius of Mozart by the insignificance of his exterior." The extremity of his animal spirits may occasion surprise. He composed pantomimes and ballets, and danced in them himself, and at the carnival balls sometimes assumed a character. He was actually incomparable in *Arlequin* and *Pierrot*. The public masquerades at Vienna, during the carnival, were supported with all the vivacity of Italy; the emperor occasionally mingled in them, and his example was generally followed. We are not, therefore, to measure these enjoyments by our colder northern notions.

In April, 1789, MOZART left Vienna on a tour through North Germany, and had no cause to complain of his reception. The King of Prussia offered him a pension of three thousand dollars a year, if he would quit Vienna and take up his abode at Berlin. But MOZART refused the offer, although so advantageous. "Can I leave my good emperor?" he said with emotion; and he returned to Vienna on the 4th of June.

But there ill-luck continued to attend him. His friend, the emperor, died; his debts continued to increase until his embarrassments were hopeless. He experienced hours of deep dejection, and his health was visibly declining. He was advised to visit Mannheim, but the change did not benefit him much. He returned to be subjected to the unprincipled fleecings of a fellow named STADLER, with whom he had made acquaintance. But his easy nature was one of the main causes of his difficulties.

His well-known disinterestedness was particularly abused by music-sellers and managers of theatres. The greater part of his compositions for the piano brought him not a single penny—being written chiefly to oblige acquaintances desirous of possessing some piece in his handwriting for their private use. Hence may be discovered the reason for the inferiority of some of his *solo* pieces for the piano; as he was obliged to conform in them to the taste, proficiency, &c. of the persons for whom they were written. The music-sellers found means to possess themselves of copies of these productions, and published them without hesitation. Artaria, of Vienna, was a great offender in this way. A lady one day called on the composer: "Artaria has again been publishing some variations of yours for the piano—do you know any thing about it?" she inquired. "No." "Will you not remonstrate with him?" "Oh, no—what is the good of talking?—the man 's a wretch;" returned Mozart. "But this is not a mere money matter—it is one in which your fame is concerned." "Well—whoever forms his judgment of me from such trifles must be a wretch too—let us say no more about it." In the abrupt exclamation *der lump!* (the wretch!) his resentment of very grave injuries frequently evaporated.

During this, the last year of his life, his exertions were more wonderful, his genius was more prolific than ever. At this period, amid symptoms of a general breaking up of the constitution, he produced his *Zauberflöte*. As if conscious that his time was short, he wrote day and night, and frequently swooned over the work. And now occurred the memorable incident that has given a sort of superstitious celebrity to his *Requiem*. We take the story as told by Mr. HOLMES.

Early in August the composer was one day surprised by the entrance of a stranger, who brought him a letter without any signature, the purport of which was to inquire whether he would undertake the composition of a requiem, by what time he could be ready with it, and his price. The unknown expressed himself on this occasion in a manner as flattering as it was mysterious. Mozart, who was never accustomed to engage in any undertaking without consulting his wife, related to her the singular proposition made to him; adding, that he should much like to try his hand in a work of that character, as the elevated and the pathetic in church music was his favourite style. She advised him to accept the engagement; and he accordingly wrote an answer, stating his terms for the composition, excusing himself from naming the precise time of its completion, but desiring to know where it should be sent when finished. In a few days the messenger returned, paid twenty-five ducats, half the price required, in advance, and informed the composer that as his demand was so moderate he might expect a considerable present on completing the score. He was to follow the bent of his own genius in the work, but to give himself no trouble to discover who employed him, as it would be in vain. On the departure of the stranger he fell into a profound reverie; then, suddenly calling for pen, ink, and paper, began to write. He had not proceeded far, before his further progress was interrupted by the commission to compose the opera for the coronation of the Emperor Leopold, at Prague. The subject proposed by the council of the Bohemian nobility was *La Clemenza di Tito*. The whole idea of this opera seems to have been unreasonably deferred, and the work was now to be completed on an emergency. About the 18th of August he set off for Prague,

accompanied by his wife, and his pupil Sussmayer; he commenced the composition in his travelling carriage, and finished it at Prague in eighteen days. He carried with him at this time a number of little slips of ruled paper, on which he noted various subjects to be afterwards amplified. Such was the nature of his travelling labours now, from the great diversion of his thoughts, unusually necessary as an aid to memory. The unaccompanied recitative, that is to say, the dialogue merely accompanied by a pianoforte, was wholly committed to Sussmayer.

Just as Mozart and his wife were entering their travelling carriage for Prague, the stranger who had brought the commission for the requiem suddenly reappeared. "How will the requiem proceed now?" he inquired. Mozart excused himself on account of the necessity of the journey, and the impossibility of giving intelligence of it to his anonymous employer; but expressed his determination to make the work his first care on his return. This assurance gave satisfaction, and they separated.

This incident had a fatal effect on his diseased imagination. He believed that he had been poisoned, and he brooded over the *Requiem* in silence and ddjection.

One fine day in the autumn his wife drove with him to the Prater. As soon as they had reached a solitary spot, and were seated together, Mozart began to speak of death, and said that he was writing this *Requiem* for himself. She tried to talk him out of these gloomy fancies, but in vain, and his eyes filled with tears as he answered her, "No, no, I am but too well convinced that I cannot last long. I have certainly been poisoned. I cannot rid myself of this idea."

But his maladies still increased, and with them the thought of the *Requiem* returned. It lay constantly on his bed; he could talk of nothing else, and "one of his last efforts was an attempt to explain to SUSSMAYER an effect of the drums in the *Requiem;* he was observed in doing this to blow out his cheeks, and express his meaning by a noise intelligible to the musician."

His last moments exhibit the ruling passion.

He desired the score of the *Requiem* to be brought, and it was sung by his visiters round his bed;—himself taking the alto part. Schack sang the soprano, Hofer, his brother-in-law, the tenor, and Gorl the bass. They had proceeded as far as the first bars of the *Lacrymosa*, when Mozart was seized with a violent fit of weeping, and the score was put aside. Throughout this day he was possessed with a strong presentiment of the near approach of death, and now gave himself up, relinquishing every hope that he had hitherto occasionally cherished.

His sister-in-law narrates the closing scene.

How shocked was I, when my sister, usually so calm and self-possessed, met me at the door, and in a half-distracted manner said, "God be thanked that you are here! Since you left he has been so ill that I never expected him to outlive this day. Should he be so again he will die to-night. Go to him, and see how he is." As I approached his bed he called to me—"It is well that you are here: you must stay to-night and see me die." I tried, as far as I was able, to banish this impression, but he replied, 'The taste of death is already on my tongue—*I taste death;* and who will be near to support my Constance if you go away?" I returned to my mother for a few moments to give her intelligence, for she was anxiously waiting, as she might else have supposed the fatal event already over; and then hurried back to my disconsolate sister. Sussmayer was standing by the bedside, and on the counterpane lay the *Requiem* concerning which Mozart was still speaking and giving directions. He now called his wife, and made her promise to keep his death secret for a time from every one but Albrechtsberger, that he might thus have an advantage over other candidates for the vacant office of kapellmeister to St. Stephen's. His desire in this respect was gratified, for Albrechtsberger received the appointment. As he looked over the pages of the *Requiem* for the last time, he said, with tears in his eyes, "Did I not tell you that I was writing this for myself?"

On the arrival of the physician, Dr. Closset, cold applications were ordered to his burning head, a process endured by the patient with extreme shuddering, and which brought on the delirium from which he never recovered. He remained in this state for two hours, and at midnight expired.

MOZART left two children, boys, one of whom is a merchant at Milan; the other followed the profession of his father, and died, a short time since, at Lemberg. His widow, after many years of sorrowing, married M. VON NISSEN, aulic counsellor to the King of Denmark, and died in 1830.

Of the great composer, Mr. HUGHES presents the following portrait:—

Mozart, though born of beautiful parents, possessed beauty himself as a child only; in his later years he retained nothing of his early look but its pleasing expression. His features were marked, and had a strong individuality of character that rendered them as impossible to be mistaken as those of Socrates, or Frederick the Great. The outward man of the composer presented no index to his genius. His eyes, which were rather large and prominent, had more of a languid than a brilliant and animated character; the eyebrows were well arched, and the eyelashes long and handsome. His sight was on all occasions sharp and strong, notwithstanding his frequent and laborious application in the night. There was wandering and abstraction in his eye except when seated at the piano, when the whole expression and character of the face seemed altered. His unsteady gaze became then earnest and concentrated, and every muscle of his countenance betrayed the influence of those feelings on himself which she was seeking to awaken in others.

His head was comparatively too large for his body; but the body itself, and the hands and feet, were formed in exact proportion, of which he was rather vain. The easy, natural, and elegant movement of his small hands on the piano, rendered it interesting to overlook him when playing; while the power which he occasionally exhibited raised astonishment. His nose, which had been handsome, became so prominent a feature in the last years of his life, from the emaciation of his countenance, that a scribbler in one of the journals of the day, the *Morgenblatte* of Vienna, honoured him with the epithet "enormous-nosed."

Mr. HOLMES has added to the worth and attractions of his memoir by the introduction of many passages from the music of MOZART, and an appendix presents some curious specimens of his compositions when only six years old. Altogether, this is one of the most delightful of modern contributions to the biographical library, and should be ordered in every book-club.

VOYAGES AND TRAVELS.

Revelations in Spain in 1845. By an ENGLISH RESIDENT. In 2 vols. London, 1845. Colburn.

ALTHOUGH the author's name does not appear upon the title-page, it is proclaimed in another work which has appeared almost simultaneously, to wit, *The Ocean Flower*. From this we learn that to Mr. P. M. HUGHES we are indebted for the agreeable volumes before us, which, if not very profound in fact, possess the merit of not pretending to be so, and amply accomplish all that was contemplated by the writer—a lively readable description of Spain, as it is, or rather as it appears; for below the surface of things Mr. HUGHES prudently refrains from attempting to dive. He seems to have been located in Spain, for a time, on a mission which was not improbably that of correspondent of a daily paper, and indeed some of the materials strike us as those which we had somewhere seen before.

Be this as it may, a great portion of the contents of these volumes will be new to their readers, and they cannot fail to interest, partly from the nature of the subject, which is not so hackneyed as those of the generality of travels, and partly from the manner of the composition. Mr. HUGHES wields the pen of a practised writer, and his narrative moves on with fluency and ease; he is skilled in the reporter's art of making the most of his themes by giving prominence to minutiæ; his treatment of them is always lively and graphic; a vein of good-humour and *bonhomme* is apparent everywhere, and a natural shrewdness of observation and sound common sense frequently enable him to hit off a truth which might have escaped the philosopher. His obvious faults are the unavoidable consequences of these characteristics. He passes hasty and superficial opinions on men and things, with the confidence of one accustomed to newspaper writing, where a certain dogmatism is demanded, and decision, even though with risk of error, is an indispensable qualification in the contributor. In short, his excellences and his defects are those of the reporter; both the result of his routine duties: he is required to make something readable out of his materials, be they good or bad, and hence, when they fail to supply a sufficiency of attractions, he is compelled to call in the aid of his ingenuity to dress up an article to supply the cravings of a host of readers after news of some sort.

The work is divided into chapters, the first score or so of which are devoted to the history of the last struggle in Spain, and the men connected with it. The rest are thrown together without much regard to arrangement, and range over a vast

variety of topics concerning the country, its people, their manners, customs, institutions, social character, political position and prospects. From a work so miscellaneous in its contents, it will be impossible to do more than make a few desultory extracts to exhibit its manner, and we will endeavour to select such as are likely to prove in themselves interesting or informing to our readers.

THE CLIMATE OF SPAIN.

In this delicious climate vegetation is never suspended, except by the excessive heats of summer. The genuine spring is usually about Christmas, and the choicest fruit is in bloom when the ground of England is locked up with frost; when vegetation is hoar-nipped, and the snow is heaped on every bough and twig. It is in winter here that the climate is truly lovely, and in summer and autumn only that one might sigh to be elsewhere. From November to May it is Heaven or an Elysium. In winter the only drawbacks are the excessive rains; but the alternative of shower and sunbeam is even then extremely frequent, and whenever it occurs, delightful. The sunbeams sparkle out like molten brilliants, with a lustre that happily does not smite, and madden, and pierce the brain (as too often in the depth of summer), and the light, "through purest crystal gleaming," is mild, ethereal, and benignant. Inconvenient as are at times these terrible showers, pouring on, on like a deluge for days and without intermission, no milder treatment would soften and prepare the ground, break up the indurated soil of summer, and fit it for the reception of seed. But there are always brilliant intervals of sunshine; and it was in Andalucia that the ancients placed the Elysian Fields.

A SPANISH LETTER.

The polite conclusion of a Spanish letter is an odd-looking heap of initials preceding the signature of your name. The initials are for the most part these: "S. S. S. Q. S. M. B." (*Su seguro servidor que sus manos besa*—"Your sure servant who kisses your hands.") This led once to a ludicrous mistake. A raw *attaché* to the British legation, having received a letter with this cabalistic termination, and pervaded by a tone of *badinage*, from a much more able diplomatic acquaintance, called on a friend to consult him as to whether he should not send a message to the writer of the letter for a supposed insult conveyed stenographically by the initials recorded above, which he supposed to represent these words: "*Simpleton, Sumph, you're a Quizzical Servant of Sa Majesté Britannique!*"

Mr. HUGHES gives some curious instances of the unsettled character of

THE LANGUAGE OF SPAIN.

The glorious bombast of Spaniards in a rage is matchless all over the world. I once heard a brace of espadachins, or bullies, retort these compliments: "*Belitre!*" said one, "I'd catch you in my teeth, and fling you so high that there would be an eclipse of the sun!" "*Bribon!*" said the other, "I'd seize you by the leg, and hurl you up so far that you would not come down till the middle of a new century!" When I visited the Lonja at Seville, and passed through the celebrated gallery, containing, in cases of glass and mahogany, the immense series of official documents relating to the Indies, from the days of Columbus and of Cortes downwards, I was no little surprised to see on these sacred archives the most striking evidence of the unsettled state of a language as glorious as the deeds which it commemorates. The word "register" was spelt, on papers lying cheek by jowl, in three different ways,—"registro," "rejistro," and "rexistro!" The Spanish Academy undertook to systematize their orthography in the commencement of the present century, and laid it down as an unalterable rule, for instance, that *Alexandre* should be written *Alejandre; Don Quixote, Don Quijote; anarchia, anarquia*, &c. Now you cannot put language thus in a Procrustean bed, and make us depart from the cherished memories of our youth. The result is, that at the end of forty years every one spells pretty much after his own fashion, using his *g*'s, his *j*'s, and his *x*'s indiscriminately, and the name even of the national wine may be met in the varieties of *Jerez*, *Xerez*, and *Gerez*. The confusion in the spelling and pronouncing of the *b* and the *v* is equally unfortunate. "Wine" is almost as often spelt "*bino*" as "*vino;*" and I have seen the word "bile" printed in a medical lecture "*vilis*," instead of "*bilis*;" which, considering the meaning of the Latin words respectively, produced rather a ludicrous effect. But the inaccuracy is indeed universal, and (for one comical instance) I have scarcely ever seen the common Latin phrase, "*in flagranti*," printed otherwise than "in fragranti." Think of a murderer caught "in fragranti."

The revelations of the intrigues and rivalries that have complicated the modern politics of Spain, until they have become entirely unintelligible to strangers acquainted only with results, are among the most valuable and curious portions of Mr. HUGHES's volumes. Here is a story of the two ministers, OLÓZAGA and NAVAREZ, which in this century would have been deemed impossible; but it is too minutely told to be altogether a fiction.

On the following day, while Olózaga was engaged in the Secretaria de Estado upon the difficult task of forming an administration, he was surprised by the receipt of a hurried message from the palace, and, having repaired thither without delay, his surprise was increased on being told by the Queen that "he must form his ministry without delay, for if not, there was another who would do it for him." Olózaga did not resign in disgust, for he took pity on his Sovereign, and his indignation at the back-stairs influence sustained him through the miserable conflict. He instantly formed his cabinet, and the second day of its existence received for himself and his colleagues, from the Queen's mouth, an invitation to the royal table.

On the appointed day, the new ministers repaired to the palace, and were told at the door that there was no dinner for them! Olózaga, in nowise disconcerted, declared that they did not come to eat, but to have the honour of paying their respects to her Majesty; and pushed into the interior of the palace.

This glorious impertinence of Olózaga drove the Camarilla to despair. The Marquesa de Santa Cruz,—for she it was who came with that smoothly-told but rudest of fibs, and whom Olózaga merely indicated to the Congress, subsequently, as one who is *muy de cerca* to the Queen ("who has the honour to serve very close to her Majesty's person),—bit her lip, and had nothing to answer. The resources even of that cleverest of intriguing women were exhausted: no further obstacle could be improvized. The horrid man would take no rebuff, nor refusal. To be sure, it was deucedly unexpected. Think of a person thus grossly insulted, invited to a grand dinner at the palace, and told on his arrival, with a contemptuous sneer, that there was no dinner for him, having face and firmness enough to reply, with the most exquisitely cutting politeness, "My colleagues and I have not come, Marquesa, to eat at the Queen's or any other table. We assure your Excellency that eating is not our object. We come desirous to enjoy the honour of her Majesty's invitation, by seating ourselves at her royal table. Her Majesty will dine, and we will look on." The Marquesa had thought to *jouer* Olózaga, but she herself was *jouée*. She strove to humiliate him, but was herself humbled, and detected in a very base untruth; for, contrary to her distinct declaration, Olózaga and his colleagues found a sumptuous banquet prepared! Any other man, taken aback by the Marquesa's cool statement, would have said, "No matter; some other day we will enjoy the honour." But Olózaga walked in, and partook of "a most abundant dinner."

A chapter is devoted to a subject in which the readers of THE CRITIC will hereafter be regularly initiated—as we have made arrangements for a supply of notices of it similar to those we now receive from France, Germany, and Italy. A fit introduction to such a series will be Mr. HUGHES' sketch of

SPANISH LITERATURE.

Besides the indispensable supply of professional works on law, medicine, and surgery, the chief issues are translations from the French, and the works of Sue, Scribe, Dumas, Dudevant, Balzac, and Kock are published in a cheap and popular form. The singular absence of literary activity is strikingly illustrated by the fact that the "Society of Friends of the Country," in so considerable and prosperous a place as Xerez de la Frontera, having, in May, 1843, advertised handsome premiums for the best Manual of Physical Science, adapted to the use of the primary schools, as well as for the best Manual of Natural History, no attempt whatever was sent in with reference to the first subject, and only two in reference to the second, both of which were so bad that the Society could not conscientiously adjudicate a reward to either candidate. Such was the result, after six months' interval. The mind of Spain is, however, not wholly inactive, but its activity passes into channels which enfeeble instead of invigorating its energies. Almost every thing in prose or poetry assumes a political shape, and is imbued with violent political passion. Espartero is abused, Diego Léon exalted, in stilted prose and rhyme; the "siege of Seville" is celebrated in a hundred different forms, and even the inglorious field of Torrejon de Ardoz, where the warriors of Spain flung down their muskets on the miserable 22nd July, 1843, finds infatuated bards to praise it. Serial publication is naturally resorted to in Spain, as a means of cheapening, or apparently cheapening, works which in the lump would be by no means so readily purchased. The principle is analogous to that which makes indirect taxation popular. In a country where money is scarce, small outlays at intervals are preferred. The works thus published are of a very miscellaneous character, and when original seldom aspire to a high order of literature. The romance and drama are almost invariably translated from the French; but Scott is

likewise much in vogue. Scarcely any other English writer is known. The serial publications chiefly met are as follows: — *The Church and State*, a religious and political review. This is of moderate price and slight pretensions — the fact being, that all the available talent is absorbed into the daily political journals. It is, however, of some authority and extensive circulation, one-third of its space being devoted to ecclesiastical affairs, one-third to politics, and the remaining third to general news. It appears every month. The *Reparado*, a periodical of a nearly similar character. The *Voz de la Religion*, whose objects are evident from the name, a cheap register of events, interesting to Catholic devotees in every quarter of the globe. The *Fray Gerundio*, *Tarantula*, and *Dominie Lucas*, small, but pungent satirical journals, intensely and exclusively political, and sometimes replete with admirable stinging wit. The "Preacher's *Prontuario*, or Heads of Sermons (in curious juxtaposition with the preceding, for the use of ecclesiastics who desire to improvise, or prefer composing their own discourses." This work is divided into twelve monthly issues, of forty pages each, for transmission by post to country subscribers. *Annals of Jurisprudence and Legislation*, a professional work, published periodically, for the use of the Spanish bar and the law students of the several universities. This work is *utriusque juris*, giving more prominence to the law than the canon, and contains a useful record of the various orders and circulars of the Minister of Grace and Justice, together with an analysis of the current legislation of the Cortes. It is a publication of respectable merit. The *Risa* and the *Carcajada* (the Laughter and the Horselaugh), collections of the jokes of Spain and all other nations—indiscriminate Joe Millers—published fortnightly, and highly popular; for the Spaniard, of all men, perhaps, most dearly loves his laugh. The *Portable Encyclopædia*, abridged from the French, &c. &c. Amongst the popular works in progress there is a serial publication entitled *Celebrated Personages of the Nineteenth Century*. The selection of celebrities is not a little curious. The following is the order of publication: — Louis-Philippe, Charles X. of France, Queen Cristina (Dona Cristina de Borbon), the Duke of Wellington, and Abd-el-Kader. Select works of Walter Scott, and one or two likewise of Bulwer, are translated; but the marvels of hydropathy, and the astounding pretensions of Vincent Priessnitz, find still readier circulation and currency. The *Panorama* is a work imitated from our penny journals, in which the illustrative woodcuts are bad copies, and demonstrate great backwardness in the arts. The letter-press, too, is not so correct as it should be; and though I am far more disposed to encourage than to depress, I cannot exactly approve of such slovenliness as "Loock Lowond" instead of Loch Lomond, and Nottinghamshire in the impenetrable disguise of "Nitingamhive," —almost equalling Theodore Hook's "épécana" for Hyde Park Corner. The puffing system flourishes here upon a ridiculously inflated scale. Thus I have seen a "Prodigy of the Press! a continuous library of works literary and pleasing, historical, instructive, and pious (spectacles for all ages), at a real (2½d.) the volume! A volume every day!! For all tastes, ages, and conditions;" which prodigy was unhappily strangled in the womb; an "Omnibus," which rolled over the length and breadth of Spain for some months, and really made great progress while in motion, its career being arrested by pure mismanagement; a "Literary Miracle, or Wonder of the Art Typographical; being the publication of a volume every day, consisting of one hundred pages in 16mo. at the incredible price of a real the volume, with a handsome coloured and bordered cover." This twopenny-halfpenny marvel became wheezy on the second day and expired on the third. These speculations are unfortunately crude and puerile, figuring at a great rate on paper, but defective in a somewhat important point, seeing that they are absolutely impracticable. The projectors aim at the realization of vast plans of civilization, and forget the stubborn and nearly insuperable material obstacles in their path. They aim at a revolution in the press, but a revolution, like all others here, to be effected by violent means; and nothing either solid or substantial, nothing but disgust and disappointment, can be the result. Political passions are a stumbling-block to progress, and no reading is relished but the party papers. Joint stock reading societies upon an enormous scale have been projected, and national libraries guaranteeing 15 per cent. interest to the shareholders; but these were mere bubbles. * * * The cross of the order of Carlos III. was lately given to Don Tomas Rodriguez Rubi, author of a comedy called "The Wheel of Fortune;" and, according to the official announcement in the *Gazette*, conceded "in consideration of his literary merits." In England you must either cut throats dexterously or be a dexterous diplomatic cheat, to secure the chance of such decorations. Yet they do not make poets in Spain. The literature of France is considerably more popular in the peninsula than that of England. Political troubles, and temporary emigration, have made Spaniards more familiar with England of late years; but the genius and habits of the Frenchman approximate more closely to those of the Spaniard—France sets the fashion, and is more admired and studied, in spite of the invasion and its attendant horrors. The drama is borrowed from the romantic drama of France; yet one evening in the Balon Theatre of Cadiz, I was present when the performances consisted of *Lord Merville* and *The Two Robinsons*,—obscure pieces from the British repertory, done both in manner and language into Spanish. It is singular that Spain, with its literary apathy, should possess what is nearly without parallel in Europe—a novelist of ducal rank. The Duke de Rivas has assiduously wrought in the copious stores of Spanish history, and constructed some remarkable romances, which, if they are without European fame, are by no means destitute of merit; recording now the sublime virtues of Don Juan de Padilla, and now the sentence of infamy pronounced by the mouth of the town-crier through the streets of Valladolid, upon the unfortunate Alvaro de Luna. I am happy to record that some isolated but creditable efforts have been made of late, in the revival and intelligent editing of the early Spanish literature, as well as in archæological research and topographical description—studies of surpassing interest in a country like Spain, and in which an infinity remains to be done. The most attractive of these which have appeared are topographies of Iliberia, or the ancient Granada, and of the Vascongadas, or Basque provinces. These pioneers of civilization, if they ply the hammer lustily, will at last awaken an echo in the minds of their countrymen. The Spaniard is with difficulty brought to read. He will smoke and lounge, and chat, and gape, and joke, and stroll through square, church, and *café*, to the crack of doom; but he won't read more than the newspaper of his own way of thinking. He is too lazy or careless to peruse an additional paper, and thus by a comparison of conflicting statements elicit truth, and discern perhaps, at last, in what leading-strings he is held, and by what falsehoods he is daily deluded. He is helpless because he will not help himself—at the mercy of a confederation of journalists, who, aware of his apathy, know that there is no invention of theirs he is not *gobemouch* enough to swallow. Nay, they are even forced to exaggerate, and at times falsify and concoct, if they would keep up their influence with their party, and please their readers. A tame, truth-telling, and colourless journal would soon be flung aside for a more highly-seasoned commodity. Reflect for a moment how the journalist's leading article enters the minds of those for whom he writes. A score of persons are seated round a table in a *café*, or under a thick vine-trellis, or in the centre of a wide patio, beneath its canvas shade, and the clearest-tongued youth and best reader of the party is chosen to declaim the article as a violent speaker might deliver his harangue in the Cortes, or a passionate preacher his sermon, with cross in hand during Holy Week. This is one way of appealing to the reason.

By way of variety, take his

PORTRAIT OF QUEEN ISABELLA.

The appearance of Queen Isabel Maria to the eye of a stranger is that of a precocious but somewhat careworn and sickly girl—exceedingly pale, and with nothing either expressive or interesting in her countenance. * * * If you look more closely you will see a shade pass now and then over her brow and features, indicative of waywardness of disposition, and of a character somewhat spoiled by destiny; and you will not be far mistaken if you draw this conclusion. * * * Queen Isabel is said to be of a rather wilful nature, subject to pettish fits; at times not a little obstinate, and deficient in intelligence as well as in temper. These qualities are inherited in part from both father and mother. If she has thrown her whole soul into her Camarilla, it was likewise a maternal failing, for Mendizabel in his official interviews with Queen Christina, had frequently to lock out the listening Camarilla; the very charge laid at Olozaga's door. * * * Queen Isabel has been very imperfectly and irregularly educated. That she should be little enlightened is not surprising; that she should be deficient in ordinary knowledge is a mere corollary of herinadequate tutoring. She was not altogether three months in the hands of Olozaga, whose instruction was confined to her political education; and under the guidance of Arguelles, to whom she was previously intrusted, she was rather indocile and refractory. About the court they say that she is capricious, wilful, *disimulada;* and fibbing, an ordinary characteristic of her age in young girls, is alleged to be very much the contrary of being disdained by her.

A summary of the fates of the successive rulers of this wretched land will convey a better notion of its actual condition than the most elaborate description:—

The Conde de Espagna was a wholesale murderer, and was slain by his own people; Moreno, the political butcher of Malaga, was himself assassinated in the end; Quesada, the trampler of the Madrid populace beneath his horse's hoofs, was torn by that populace asunder, and his mutilated fingers stirred a convivial bowl for the Nacionales who slew him; the Governor of Cadiz,

in 1830, was assassinated for his severities, in the street; Elio, Captain-General of Valencia, was the executioner of his political adversaries, and perished on the scaffold. The contemporary annals of Portugal furnish similar instances; for within ten years Gomez Freire, an unpopular minister, was shot down in the streets of Lisbon, and Telles Jordao, the inhuman persecutor of the Constitutionalist prisoners in the Tower of St. Julian, was torn in pieces and as frightfully mutilated as Queseda was in Madrid. This is the true mirror for ministers in the Peninsula—the awful lesson which "must give them pause" in the midst of their riot of power and barbarous instincts. "*No hay boda sin tornaboda,*" says a significant Spanish proverb—"There is no wedding but there is a day after it!"

And with this we close a work which can be commended to the book-club and the *larger* libraries, as these specimens will prove.

FICTION.

Rural Records; or, Glimpses of Village Life. By JAMES SMITH. London, 1845. Longman and Co.

Rural Records forcibly remind us of Miss MITFORD's *Our Village*, and to the inspiration of this latter it is probable that the former is indebted for its existence. Mr. SMITH has indeed very successfully seized the manner, and, something more than this, the spirit, of his predecessor; and his *Rural Records* form no unworthy companion or *addendum* to *Our Village*. The descriptions of rustic places and persons are truthful, as if they were sketched from nature and were not compositions of the study. The style is suited to the subject, simple, unpretending, flowing smoothly upon the tongue, and needing no effort on the listener's part to understand. Occasionally there is mingled with the graphic portraiture and gleams of poetry that distinguish Miss MITFORD a spice of the quaintness and quiet humour of CHARLES LAMB.

From the many that present themselves we take, as a favourable specimen of the contents,

A LEGEND OF THE CHURCH.

Dear to the antiquary and the artist is our old grey parish-church, with its encircling lime-trees, and the green ivy garment duskily investing its aged walls, and the fair carved-work of tower and porch, buttress and niche, turret and niche, corbel and coigne. And if dear in its outward aspect to the antiquary's eye, be sure his love for "hoary eld" shall find substantial *pabulum* within; for there survive entire in rare and perfect preservation the architectural fittings and appointments which the munificence of its gentle founder originally lavished on its picturesque interior. The oaken altar-screen still retains its lace-like tracery, its shadowless and saintly effigies, its gilded and pictorial decorations. Ranges of open benches fill the central aisle, their standards carved in curious guise crested by *fleur-de-lys*, with godly Latin mottoes graven in church text underneath. A rudely-sculptured font, besprent with uncouth bas-reliefs, yet occupies its ancient standing at the entrance of the church. Within the worn and hollow-sounding pavement, the embedded monumental brasses, with their Norman-French inscriptions rest undisturbed, partially defaced but not illegible; while desk and pulpit, the table at the altar and the rails contiguous, appear the rude and primitive manipulations of an Anglo-Norman artificer.

Dedicated to St. Mary and St. Margaret, tradition has deduced the origin of our parish-church from the piety and wealth of two fair sisters, similarly named. Out of the scattered fragments referring to their history, thus orally preserved—the fireside gossip of aged grandames as they gather round the winter hearth, we have essayed to weave as clear and continuous a narrative as the imperfect and disconnected character of the materials will admit of.

In the early portion of those turbulent and stirring times when Stephen sat upon the English throne, the broad lands and swelling coffers of Sir Geoffrey Wyander, lord of the manor of——(failing male issue), devolved upon two maiden sisters, Mary and Margaret. As both were young, and both of unimpeachable descent—the true Norman blood mantling in every vein—the heiresses early became objects of absorbing interest in the eyes of such of the surrounding knights, thanes, and aldermen, as could advance pretensions to as clear a shield and pure a lineage as themselves.

Educated within a convent's walls, the sisters' limited experience and unripe notions of the world would have inadequately fitted them for the duties entailed upon them by their new position, were it not that nature had beneficently gifted the elder with a certain strength and self-reliance of character, imperfectly developed in the cloister, but daily expanding and maturing in a broader sphere, in proportion as circumstances seemed to call it into action, and demand its vigorous exercise.

The younger was a graceful, gentle girl, gifted with a rare beauty, and with a disposition as femininely soft and placid as the mild and dove-like eyes, through which her soul looked out upon a world but newly revealed to her enfranchised gaze. There was a loftiness and majesty in the beauty of the elder that exacted homage; while the countenance of the gentle Margaret, beaming with happy light, involuntarily won esteem.

How was it that thus differing—thus unlike in mind and feature—the high-souled Mary and the shrinking, soft-eyed Margaret should, almost simultaneously, have set their hearts upon one object? Was it that under the handsome exterior of her soldier-cousin, Erfurth Holditch, the elder sister recognised a spirit kindred to her own? And was it that the pliant mind of Margaret, putting forth a host of tendrils—impulses, affections, sympathies—craving some object for support—something to cling to and weave themselves around, encircling what they garlanded; was it that, in the hardier name of the soldier, these budding tendrils found, as it were, a massive trunk, wooing their embrace and strengthening their growth? Was it that the elder loved him for the perils he had undergone, the exciting scenes in which he had conspicuously borne a brave man's part, and for the spirit of daring and adventure by which he had been influenced in his busy brief career? And was it that the accents of a voice naturally winning, and modulated with the nicest skill, trilling sweet lays acquired from Provençal *makers* and *minnesingers*, found, through the willing ear of Margaret Wyander, a facile entrance to her heart? We only know that so it was—that continued intercourse confirmed and ripened love,—that Mary's ears were seldomer regaled with tales of war and chivalry, while the songs of Provence were carolled with a frequency and fervour most grateful, it would seem, to the happy hopeful Margaret; and that, in short, the soldier and his soft-eyed cousin plighted their troth, and then irrevocably sealed it by a secret union. By whom, or when, or where the ceremonial was performed it boots not to record, if even record could be had. Haste and secrecy could be purchased then as now; and Erfurth and his bride were on the wing, hours ere their lengthened absence had been noted by the elder sister as an unwonted circumstance.

How fierce and violent a storm of passion then swelled within the disappointed sister's breast, how from her heart she cursed them bitterly, bridegroom and bride—how vowed an immitigable hatred to them both—how every soft and womanly feeling seemed utterly extinct; how, in their stead, arose an intense, consuming thirst to be avenged; how, in fact, her whole nature seemed changed, and how she moodily immured herself within her chamber day after day, week after week, brooding upon the scornful slight which had been put upon her love, and upon the cunning (as she deemed it) of the sister who had supplanted her, it were a charity to the infirmities of our common nature to touch upon but lightly, and so pass on to after incidents.

A year had scarcely run its course before the civil war broke out between the unpopular possessor of the throne and his fair relative and competitor. Margaret's husband was among the first to fling himself within the ranks of those who upheld Stephen. Alas! he was among the first to fall a victim to that sanguinary strife, slain in a mere chance skirmish which his own precipitate and desperate zeal had unhappily provoked.

Poor Margaret—the plaything of that fickle ingrate, Fortune, might well be overwhelmed by such a fearful and unlooked-for casualty. Reason itself gave way a while; and during the time that strong delirium held her faculties enthralled, her husband's kinsmen mercifully consigned the gashed and ghastly corpse to its last home, that the widow's eye might never look with agony upon the livid and distorted features of the slaughtered soldier.

When the elder sister heard of this sudden sharp calamity, her heart melted within her. In the presence of death, anger, and hate, and jealousy, and wounded love, and baffled hope stood solemnly rebuked. The cause of their disunion no longer found a place within her memory; but a more unclouded past—childhood and girlhood—the recollections of an era teeming with thoughts and images of love and tenderness—of a time when they two nestled their soft cheeks upon the same pillow, wove the same woof, shared the same rambles, loved the same pet fawn, cherished the same dear rose-tree, wept and laughed, grew pale or crimson, sad or merry, as the same feelings swayed the hearts of both—came thronging on her mind. And as the past brought with it such gentle humanizing influences, why should they not renew it in the future? They had too long been widely and unwisely severed; henceforth, they would have, as they had had of yore, but one home and one heart.

Borne down,—indeed, still almost distraught with grief, the younger yet could find a solace and a mitigation of her sorrow in her reunion with her elder sister. And when the latter fell upon the widow's bosom, and brokenly sobbed out her sorrow for the past, her grief for this last heavy stroke of evil fortune, and spoke of hope of better days, when suffering should be softened down by time, and submission soothe regret, her dark eyes kindled through her tears, and a faint smile, like a ray of fleet-

ing sunshine gilding the blackness of the storm, played momentarily upon her compressed and pallid lips.

So the old house received them once again, linked together by a closer tie, wiser and sadder both; the joyousness of youth displaced by thoughts of a graver, if not gloomier, texture, as though a few short months had done the work of years, and prematurely stamped the feelings of a later epoch upon their youthful minds. Perhaps the solitude in which they lived, disposing them to ponder on the pre-existence and the after-destination of the soul, or perhaps the subtle converse of a priestly adviser, anxious to aggrandize the church of which he was a member; or perhaps that natural revulsion of the mind from matters of momentary to matters of imperishable importance, which results from worldly disappointment and domestic calamities, influenced them in coming to the determination which they did. Tradition does, indeed, hint vaguely at visionary influences, but it is too apocryphal to be relied on; and this alone *is* certain, that the sisters mutually resolved to found a church, and dedicate it to the service of the Almighty, in token of their reconciliation; purposing, likewise, to endow it at their decease with the wealth of which they were possessed.

At that time, the whole surrounding country, or, at least, the upland portion of it, was little better than a leafy wilderness, intersected by numerous bridle-ways, with here and there a broader track, offering a passage for the slow and cumbrous wains of those rude days. At scattered intervals, large clearances had been made; and out of the old primeval trees, and with the aid of clay extracted from the soil, and rushes gathered from the margin of the river, groups of cottages were framed, windowless, and chimneyless—a miserable shelter for the miserable serfs who tenanted them. A franklin's more commodious abode, a smithy, and perhaps a huckster's store were the only tenements that varied the otherwise uniform aspect of these primitive hamlets. Wherever the ground swelled into anything like a reasonable eminence, the stronghold of a thane might be observed perched on its summit, while the circumjacent hollow would exhibit its irregularly-clustered hovels, overlooked by the more massive and enduring residence of the rural magnate. Such churches, too, as then existed, were mostly built upon a rising ground, and seemed to serve as landmarks in that wild, untravelled breadth of marsh and forest-land. It may be readily conceived, therefore, that at such a time, and in such a region, the rumour of the meditated erection in the first instance, and afterwards the commencement, continued progress, and completion of the sacred structure, were regarded as the gradual devolution of an event peculiarly, nay, almost marvellously important.

It was an event, moreover, that was regarded with the utmost satisfaction by the Romish Church, upon whose dignitaries in due time devolved the task of formally consecrating the edifice to the sacred object for which it was intended, and who determined to lavish on the ceremonial all those adventitious aids by which the Church of Rome imparted a character of such imposing grandeur to every rite and ceremonial to which she lent her countenance, or in which she bore a part. And hence the consecration of this edifice, followed, or rather accompanied (as the churchmen suggested it should be), by a solemn presentation of the sisters at the altar, in token of compunction for dissensions past, and thankfulness for love restored, was marked by features of such rare magnificence, by such impressive pomp and such processional display, and witnessed by such a multitude of wondering spectators, gathered from far and near, that both the solemnity itself, and its strange issue, lived in the memories of succeeding generations for centuries afterwards.

On that solemnity we need not tarry to comment—our legend has reference to its issue only. As the sisters knelt before the altar, thus, by a formal act, to ratify their reconciliation in the sight of God and man, and the venerable bishop bent down to give his benediction on them both, a burst of dazzling sunshine on a sudden filled the edifice with golden light; a rosy cloud, fragrant and warm, unseen before, floated along the vaulted roof, and from its invisible heart swelled out a gush of music, faint and low, as though it were the distant echo of some dulcet sound, rather than the melodious sound itself; pinions rustled and fluttered, and angel voices (they could have been no other) seemed presently to mingle with the music's swell; and then, again, sunk gradually away as the flutter of the wings subsided, and the sunshine waned, and the rosy cloud waxed dim, and the soft music died upon the ear.

There was a hush—a silence that was almost audible, a deep, dead calm, reigning for a space in every portion of the holy pile. Most of the congregation lay prostrate on the pavement, the sisters knelt upon the altar-steps, with bowed heads and clasped hands, the old ecclesiastic stood alone erect, and folding his hands upon his breast, with eyes uplifted and serene, at length emphatically said, "THY will be done!" A thousand voices, as by one impulse, blending into one deep chorus, made response, "Amen, Amen!"

And then the old man, gently touching the kneeling sisters, bade them rise; but neither speech nor motion answered him, for still they knelt, with heads bowed low, and fingers intertwined, with mute lips and eyelids drooping heavily. Again, and yet again, he would have raised them from their kneeling posture; but there was neither word nor sign; and then awe fell upon the hearts of all present, for they knew that Death was there! The spirits of the sisters, forgiving and forgiven, had passed away unseen, and angel-voices, and solemn symphonies, had heralded them to Heaven!

POETRY.

German Anthology. A Series of Translations from the most popular of the German Poets. By JAMES CLARENCE MANGAN. 2 vols. post 8vo. Dublin, Curry and Co.

THESE translations, which now appear in two volumes, have been collected by the translator from the pages of the *Dublin University Magazine*, and have met with the most favourable reception, as a truthful and elegant application of one language to another. We welcome this last act of Mr. MANGAN as a means of more generally unlocking the rich stores of German literature. *German Anthology* will make its way into many libraries where the *Dublin University Magazine* was not fortunate enough to find a shelf. German literature is as full of golden fruit as were the gardens of the Hesperides, and we are ever ready to welcome the literary Hercules who conquers the difficulties of the language, and bears away a portion of the prize for the readers of other countries.

What a string of names have we here! What a galaxy,—differing, it is true, as star differs from star in glory, but of which to be the least is to be great!

SCHILLER, GOETHE, HERDER, UHLAND, BUERGER! Like new lights, with an unquenchable love for old glorious nature, those favoured men arose. With their coming, the literature of Germany opened its dreamy and half-shut eyes to see what gifted spirits had now dared to shake it from its lethargy. At last it found a tongue, like the tongue of an angel, and acknowledged the supremacy of the new-comers. Happy and imperishable time for Germany! "Press but ever onward," said GOETHE, "youthful German people, and weary not in your progress in the way ye have entered upon! Give yourself up to no mannerism,—to no one-sidedness of any kind, under what name soever it finds its way among you. Know that whatever severs us from nature is false. The path of nature is that in which you must tread, if you would meet BACON, HOMER, and SHAKSPEARE." In the volumes before us, the pre-eminence of place is given to SCHILLER and GOETHE. Each name stands at the beginning of a volume. Nor is this only the pre-eminence of place; we at once award them, as *poets*, the highest position. What they were, apart from poetry, it is not now our province to consider. Neither have we to do with the greater works of the German poets. The translations under review are mostly short songs or ballads. Our readers are aware of the powerful effect such men as SCHILLER and GOETHE had upon the ballad poetry of Germany. Under them it did not grow by spare degrees into beauty and form, but it leaped at once into a new and glorified life. Genius has an attribute of God, and it cannot work by that slow process of human ingenuity which a shipwright or a watchmaker uses, but what it touches instantly becomes fashioned and instinct with life. We shall, in the first place, present our readers with a ballad from SCHILLER, rather long, but very beautiful, and we cannot do better than hold a long acquaintance with beauty:—

THE DIVER.

A BALLAD.

"Baron or vassal, is any so bold
As to plunge in yon gulf and follow
Through chamber and cave this beaker of gold
Which already the waters whirlingly swallow?
Who retrieves the prize from the horrid abyss
Shall keep it: the gold and the glory be his!"

So spake the king, and incontinent flung
From the cliff that, gigantic and steep,
High over Charybdis's whirlpool hung,
A glittering wine-cup down in the deep;
And again he asked, "Is there one so brave
As to plunge for the gold in the dangerous wave?"

And the knights and the knaves all answerless hear
The challenging words of the speaker;
And some glance downwards with looks of fear,
And none are ambitious of winning the beaker.

And a third time the king his question urges—
"Dares none, then, breast the menacing surges?"

But the silence lasts unbroken and long;
When a page, fair-featured and soft,
Steps forth from the shuddering vassal-throng,
And his mantle and girdle already are doffed,
And the groups of nobles and damosels nigh
Envisage the youth with a wondering eye.

He dreadlessly moves to the gaunt crag's brow,
And measures the drear depth under;
But the waters Charybdis had swallowed she now
Regurgigates bellowing back in thunder;
And the foam, with a stunning and horrible sound,
Breaks its hoar way through the waves around.

And it seethes and roars, it welters and boils,
As when water is showered upon fire;
And skyward the spray agonizingly toils,
And flood over flood sweeps higher and higher,
Upheaving, downrolling, tumultuously,
As though the abyss would bring forth a young sea.

But the terrible turmoil at last is over;
And down through the whirlpool's well
A yawning blackness ye may discover,
Profound as the passage to central Hell;
And the waves, under many a struggle and spasm,
Are sucked in afresh by the gorge of the chasm.

And now, ere the din rethunders, the youth
Invokes the Great Name of God;
And blended shrieks of horror and ruth
Burst forth as he plunges headlong unawed;
And down he descends through the watery bed,
And the waves boom over his sinking head.

But though for a while they have ceased their swell,
They roar in the hollows beneath,
And from mouth to mouth goes round the farewell—
"Brave-spirited youth, good night in death!"
And louder and louder the roarings grow,
While with trembling all eyes are directed below.

Now wert thou even, O monarch! to fling
Thy crown in the angry abyss,
And exclaim, "Who recovers the crown shall be king!"
The guerdon were powerless to tempt me, I wiss;
For what in Charybdis's cavern's dwells
No chronicle penned of mortal tells.

Full many a vessel beyond repeal
Lies low in that gulf to-day,
And the shattered masts and the drifting keel
Alone tell the tale of the swooper's prey.
But hark! with a noise like the howling of storms,
Again the wild water the surface deforms!

And it hisses and rages, it welters and boils,
As when water is spurted on fire,
And skyward the spray agonizingly toils,
And wave over wave beats higher and higher,
While the foam, with a stunning and horrible sound,
Breaks its white way through the waters around.

When lo! ere as yet the billowy war
Loud raging beneath is o'er,
An arm and a neck are distinguished afar,
And a swimmer is seen to make for the shore,
And hardily buffeting surge and breaker,
He springs upon land with the golden beaker.

And lengthened and deep is the breath he draws
As he hails the bright face of the sun;
And a murmur goes round of delight and applause—
He lives!—he is safe!—he has conquered and won!
He has mastered Charybdis's perilous wave!
He has rescued his life and his prize from the grave!

Now, bearing the booty triumphantly,
At the foot of the throne he falls,
And he proffers his trophy on bended knee;
And the king to his beautiful daughter calls,
Who fills with red wine the golden cup,
While the gallant stripling again stands up.

"All hail to the king! Rejoice, ye who breathe
Wheresoever Earth's gales are driven!
For ghastly and drear is the region beneath;
And let Man beware how he tempts high Heaven!
Let him never essay to uncurtain to light
What Destiny shrouds in horror and night!

"The maelstrom dragged me down in its course;
When, forth from the cleft of a rock,
A torrent outrushed with tremendous force,
And met me anew with deadening shock;
And I felt my brain swim and my senses reel
As the double-flood whirled me round like a wheel.

"But the God I had cried to answered me
When my destiny darkliest frowned,
And He shewed me a reef of rocks in the sea,
Whereunto I clung, and there I found
On a coral jag the goblet of gold,
Which else to the lowermost crypt had rolled.

"And the gloom through measureless toises under
Was all as a purple haze;
And though sound was none in these realms of wonder,
I shuddered when under my shrinking gaze
That wilderness lay developed where wander
The dragon, and dog-fish, and sea-salamander.

"And I saw the huge kraken and magnified snake
And the thornback and ravening shark
Their way through the dismal waters take,
While the hammer-fish wallowed below in the dark,
And the river-horse rose from his lair beneath,
And grinned through the grate of his spiky teeth.

"And there I hung, aghast and dismayed,
Among skeleton larvæ, the only
Soul conscious of life—despairing of aid
In that vastness untrodden and lonely.
Not a human voice—not an earthly sound—
But silence, and water, and monsters around.

"Soon one of those monsters approached me, and plied
His hundred feelers to drag
Me down through the darkness; when, springing aside,
I abandoned my hold of the coral crag,
And the malestrom grasped me with arms of strength,
And upwhirled and upbore me to day-light at length."

Then spake to the Page the marvelling King,
"The golden cup is thine own,
But—I promise thee further this jewelled ring
That beams with a priceless hyacinth stone,
Shouldst thou dive once more and discover for me
The mysteries shrined in the cells of the sea."—

Now the King's fair daughter was touched and grieved,
And she fell at her father's feet—
"Oh, father, enough what the youth has achieved!
Expose not his life anew, I entreat!
If this your heart's longing you cannot well tame,
There are surely knights here who will rival his fame."—

But the King hurled downwards the golden cup,
And he spake as it sank in the wave,
"Now, shouldst thou a second time bring it me up,
As my knight, and the bravest of all my brave,
Thou shalt sit at my nuptial banquet, and she
Who pleads for thee thus thy wedded shall be!"—

Then the blood to the youth's hot temple rushes,
And his eyes on the maiden are cast,
And he sees her at first overspread with blushes,
And then growing pale and sinking aghast,
So, vowing to win so glorious a crown,
For life or for death he again plunges down.

The far-sounding din returns amain,
And the foam is alive as before,
And all eyes are bent downward. In vain, in vain—
The billows indeed re-dash and re-roar.
But while ages shall roll and those billows shall thunder,
That youth shall sleep under!

And we give, as an accompaniment to SCHILLER, one of GOETHE'S ballads:—

THE FISHERMAN.

The waters rush, the waters roll; a fisherman sits angling by;
He gazes o'er their glancing flood with sleepy brow and listless eye;
And while he looks, and while he lolls, the flood is moved as by a storm,
And slowly from its heaving depths ascends a humid woman's form.

She sings, she speaks,—"Why lure, why wile, with human craft and human snare,
My little ones, my helpless brood, to perish in this fiery air?
Ah! couldst thou guess the dreamy bliss we feel below the purple sea,
Thou wouldst forsake the earth and all, to dwell beneath with them and me.

"The moon, the sun, their travel done, come down to sleep in
Ocean's caves;
They reascend their glorious thrones, with doubled beauty from
the waves.
Ah! sure the blue ethereal dew, the shining heaven these waters
shew,
Nay, even thine own reflected face must draw thee, win thee
down below."

The waters rush, the waters roll; about his naked feet they
move;
An aching longing fills his soul, as when we look on her we
love.
She sings to him, she speaks to him: alas! he feels that all is
o'er,
She drags him down; his senses swim; the fisherman is seen
no more!

(To be continued.)

Luther for the People, being the Fourth Edition of Montgomery's Poem, Luther. London, 1845. Simpkin and Co.

"FOURTH edition" on this title-page is a libel on the poetical taste of "the people" to whom it is addressed. *Luther* is, in truth, not a poem at all, but a series of rhapsodical sermons, in which the most vulgar cant of the conventicle is mingled with the inflated eloquence of the penny-a-liner. To all accustomed to good poetry this "skimble-skamble stuff" will be insufferable; and we hope that the attempt to thrust it into circulation will prove that the taste of "the people" is better than they who seek to cater for it imagine.

POLITICS AND POLITICAL ECONOMY.

Credit the Life of Commerce: being a defence of the British Merchant against the unjust and demoralizing tendency of the recent alterations in the Laws of Debtor and Creditor, with an outline of remedial measures. By J. H. ELLIOTT, London, 1845. Madden and Malcolm.

MR. ELLIOTT is not a lawyer, but a merchant, and he has taken up the very important subject of the Law of Debtor and Creditor, as it is and as it ought to be, with the purpose of informing the public, who have hitherto heard only what the lawyers have to say, how the same topic is viewed by those whom the law mainly concerns. Mr. ELLIOTT has in this volume advocated the cause of the creditor, nor is such championship uncalled-for; hitherto the sympathies of the press, and, through its instrumentality, of the public, have been engaged entirely on the part of the debtor, until the very sense of right and wrong became confused, and the roguish debtor was converted into an object of persecution, and the unfortunate creditor condemned as a ruthless persecutor.

It would be somewhat out of the proper province of THE CRITIC to follow Mr. ELLIOTT through his lucid and able arguments, strengthened as they are by facts that have fallen within his own experience. The train of his reasoning runs somewhat thus: Property invested in the form of debt is as much entitled to the protection of the law as any other property. In this country credit is unavoidable; it is a parcel of our commercial system, if not its very soul. If credit be necessary, the creditor is entitled to claim the aid of the law to protect the property which he is thus obliged to commit to the honesty of others. Bad insolvency laws must produce one of two effects; either they must permit the honest creditor to be robbed of his property, or they must destroy the credit which is the lifeblood of commerce. Insolvency is the result either of misfortune, or of folly or wickedness. According to its origin so must it be treated. Misfortune is entitled to protection, but folly and fraud should be subjected to punishment. The author suggests how this may be done, and he examines and refutes many of the favourite fallacies that are current upon this subject; such as the "mind-who-you-trust" fallacy; the "good-character" fallacy; the "poverty-is-no-crime" fallacy; and he demolishes them with the practical good sense of the man of business who looks at facts as they are seen in the world, and not at the figments of a sentimental brain. He examines the reports of the commissioners, argues for the maintenance of a limited power of arrest, lays down the principles of remedial measures and of procedure in insolvency, and he closes with an interesting sketch of the laws and customs of ancient nations respecting insolvents, and of the laws of Holland and France on the same matter.

Mr. ELLIOTT writes in a vigorous and racy style, as befits the merchant; but with indications of powers that might lift him to a high place in literature. There is much learning and thought in this book, and it will aid in the advancement of that codification of the Law of Debtor and Creditor which is demanded by the necessities of the times and the tinkerings and patchings that law has lately undergone, until the most experienced practitioner is puzzled to know what it is or where to find it.

From the concluding chapter we take this useful sketch of

THE LAWS OF THE GREEKS RESPECTING INSOLVENTS.

I have been favoured with the following valuable notice of the laws of ancient Athens by a distinguished Greek scholar, with whose labours it is to be hoped our literature will be soon enriched.

At Athens, prior to Solon and his legislation (about 594 B. C.), the law was extremely severe against debtors. The adjudged insolvent debtor, if he had pledged his person to the creditor as security, became, together with all his family, the slave of his creditor, and might be sold into foreign parts to pay the debt. The operation of this law was so terrible and caused so much suffering, as completely to subvert the peace of society. Many citizens had actually been sold into slavery under it, and many more were in danger of being so. The great mass of debtors were at that time poor (the natural tendency of such a law was to introduce a class of loans, lent for the purpose of ultimately getting possession of a man's person), and at last the feeling of mutiny and discontent became so widely diffused among them, that the government became unworkable. The aristocracy, who then had entire possession of the government, were obliged to invoke the intervention of a man generally esteemed, like Solon, and to acquiesce in all the changes which he proposed. He cancelled all the existing contracts which had been borrowed upon the security of the body (this is the Greek expression), and also all contracts which had been borrowed upon the security of land; for it seems that the great mass of debtors at that time consisted of little proprietors and cultivators, who put in pawn, in order to get money, both their persons and their little plot of land. For all this class of contracts Solon passed what one may call a relief-law, and he forbade for the future any borrowing of money on security of the person, and all sale of the insolvent debtor into slavery.

So the law stood throughout all the history of Athens after the time of Solon. A creditor had no remedy whatever against the person of his debtor, but only against the property. When the term of payment arrived, he summoned the debtor, proved the debt, and got what we should call a judgment, under which he seized such property of the debtor as he could lay hold of, and sold it to pay himself, but he had no right to touch the debtor's person. It does not appear, as far as one can ascertain, that any provision was made for a collective administration, in the event of the debtor's property being insufficient to meet all claims; each creditor seems to have been left to his own individual proceeding—at least, this is the best that we can make out.

In general, the evidence goes to prove that loans of money were made upon some security, either upon land or upon the deposit of some moveable of value, or upon the guarantee of a boudsman. In case of a debtor owing money to the public treasury, and being behind time in payment, he was deprived of his political franchise until it was paid.

It is certain that never, after the time of Solon, did any public discontent, or great mass of complaint and suffering, arise out of the law of debtor and creditor. It seems to have worked with satisfaction to the people, and loans of money, upon landed and other security, were current and secure during the time of the orators. There were wealthy bankers who held considerable sums of money on deposit, and were much trusted.

What to an Englishman will appear more remarkable is, that there was never any legal restriction upon the rate of interest; as far as one can judge from the facts known, it seems to have run from about ten to fifteen per cent., of course sometimes considerably higher, especially on nautical risks. There was one curious exceptional case, in which the creditor always retained the old power over the person of his debtor, the case in which the debt arose from money advanced to redeem the debtor out of captivity. If the debtor did not repay this, he became the slave of his creditor.

Respecting the laws of debtor and creditor in other cities of Greece, besides Athens, what we know is really next to nothing; but we know enough to shew us, that the working of the law was on the whole satisfactory to the people. The idea either of a relief law or of a violent interference with landed property was utterly abhorrent to the feelings of the democracy, and was even

formally denounced in the annual oath taken by the popular jurors.

This presents a marked contrast with Rome, where the law of debtor and creditor occasioned endless contention and interference with contracts, as well as successive forcible reductions in the rate of interest.

MISCELLANEOUS.

A Book for a Rainy Day; or, Recollections of the Events of the last Sixty-six Years. By JOHN THOMAS SMITH, late Keeper of the Prints in the British Museum, and author of "Nollekens and his Times." Pp. 306. Bentley.

HEARTY welcome to thee, patriarch of the SMITHS! Most amiable, honest, and gossiping of JOHN SMITHS, we greet thee well! Pleasant are our recollections of thee, for it was in boyhood's most book-devouring age that we were introduced to thee as the Biographer of NOLLEKENS, and in that character didst thou take to our partial imaginations the shape of the most charming old gossip that ever was; an industrious collector and retailer of anecdote, and master of the manner of telling a story, which is far more effective than its substance. Of all living men was JOHN T. SMITH the very man to indite *a Book for a Rainy Day*: a book to be taken up at an idle moment, and put down again whenever the thoughts are wanted elsewhere, without the vexation of breaking the thread of a story.

This volume is, in fact, a gathering together of the reminiscences of the author's life, already prolonged to eighty years. It will be readily assumed that so extended an existence has not been enjoyed by a man of naturally acute observation, without yielding a huge amount of entertaining anecdote. This has been thrown together by Mr. SMITH with little regard for arrangement. The work professes to be a sort of autobiography, or rather, we should say, the order of time has not been lost sight of, but caprice seems to have regulated the space to be allotted to various periods. Large intervals occur of which nothing is recorded: some stages of his life are treated with obvious disproportion to others, whether from whim, or really from the memory retaining them more vividly, or from lack of events worth recording, Mr. SMITH does not inform us. We note this as a feature of the work, and not by way of complaint or objection. In a collection of miscellanies such as this, the value of the material supplied is not lessened by the absence of that which might have been added. The reader must be thankful for what he receives, and so he will admit when he has read the few specimens we can glean from a publication that would yield half-a-dozen entire CRITICS of attractive and interesting reading.

Mr. SMITH tells us that he was born in a hackney-coach on the 23rd of June, 1766, and then he proceeds to some descriptions of his infancy, and the manners and people of that period, as narrated to him in after life by his parents. One of these is an

ANECDOTE OF A GOOSE.

I have heard my mother relate, that when at Greenwich this year for the benefit of her health, an aged pie and cheesecake woman lived there, who was accompanied through the town by a goose, who regularly stopped at her customer's door, and commenced a loud cackling; but that whenever the words "not to-day" were uttered, off it waddled to the next house, and so on till the business of the day was ended. My mother also remarked, that when ladies walked out they carried nosegays in their hands, and wore three immense lace ruffle cuffs on each elbow.

His descriptions of old London are very ample, and not the least amusing of his reminiscences. We take a few of them.

LONDON IN 1773.

As few persons possess so retentive a memory as myself, I make no doubt that many will be pleased with my recollections of the state of Tottenham-court-road at this time.

The ground behind the north-west end of Russell-street was occupied by a farm, belonging to two old maiden sisters of the name of Capper. They wore riding-habits and men's hats; one rode an old grey mare, and it was her spiteful delight to ride with a large pair of shears after boys who were flying their kites, purposely to cut their strings; the other sister's business was to seize the clothes of the lads who trespassed on their premises to bathe. From Capper's farm were several straggling houses; but the principal part of the ground to the King's Head, at the end of the road, was unbuilt upon. The Old King's Head forms a side object in Hogarth's beautiful and celebrated picture of "The March to Finchley," which may be seen with other fine specimens of art in the Foundling Hospital, for the charitable donation of one shilling.

I shall now recommence on the left-hand side of the road, noticing that on the front of the first house, No. 1, in Oxford-street, near the second-floor windows, is the following inscription cut in stone, "Oxford-street, 1725." Hanway-street, better known by the vulgar people under the name of "Hanover-yard," was at this time the resort of the highest fashion for mercery and other articles of dress. The public-house, the sign of the "Blue Posts," at the corner of Hanway-street, in Tottenham-court-road, was once kept by a man of the name of Sturges, deep in the knowledge of chess, upon which game he published a little work. From the Blue Posts the houses were irregularly built to a large space called Gresse's Gardens; thence to Windmill-street, strongly recommended by physicians for the salubrity of the air. The premises occupied by the French charity children were held by the founders of the Middlesex Hospital, which were established in 1735, where the patients remained until the present building was erected in Charles-street. Colvill-court, parallel with Windmill-street, northward, was built in 1766; and Goodge-street, further on, was, I conjecture, erected much about the same time. Mr. Whitfield's chapel was built in 1754, upon the site of an immense pond, called "the Little Sea." Beyond the chapel the four dwellings, then called "Paradise-row," almost terminated the houses on that side. A turn-stile opened into Crab-tree Fields. They extended to the Adam and Eve public-house, the original appearance of which Hogarth has also introduced into his picture of "The March to Finchley."

The whole of the ground north from Capper's farm, at the back of the British Museum, so often mentioned as being frequented by duellists, was in irregular patches, many fields with turn-stiles. The pipes of the New River Company were propped up in several parts to the height of six and eight feet; so that persons walked under them to gather water-cresses, which grew in great abundance and perfection, or to visit "The Brothers' Steps," well known to the Londoners.

Notwithstanding Tottenham-court-road was so infested by the lowest order, who kept what they called a "Gooseberry Fair," it was famous at certain times of the year, particularly in summer, for its booths of regular theatrical performers, who deserted the empty benches of Drury-lane Theatre, under the mismanagement of Mr. Fleetwood, and condescended to admit the audience at sixpence each. Mr. Yates, and several other eminent performers, had their names painted on their booths.

SMITH appears to have been a great print-collector, and he has vigorously and minutely sketched some of the most regular attendants at the print-sales about the year 1783.

GOUGH, THE EDITOR OF "CAMDEN'S BRITANNIA."

Mr. Gough, the editor of *Camden's Britannia*, was a constant frequenter of his book-sales. This antiquary was about the same height as the auctioneer, but in wig very different, as he wore, when I knew him, a short shining curled one. His coat was of "formal cut," but he had no round belly; and his waistcoat and smallclothes were from the small piece. He was mostly in boots, and carried a swish-whip when he walked. His temper I know was not good, and he seldom forgave those persons who dared to bid stoutly against him for a lot at an auction. His eyes, which were small, and of the pinky-winky sort, fully announced the fretful being. As for his judgment in works of art, if he had any, it availed him little, being as much satisfied with the dry and monotonous manner of Old Basire, as our late President West was with the beautiful style of Woollett and Hall. Dr. Lort, the constant correspondent of Old Cole, a man of his own stamp, broad and bony, in height nearly six feet, of manners equally morose, and in every respect just as forbidding. His wig was a large *busby*, and usually of a brown appearance, for want of a dust of powder. He was chaplain to the Duke of Devonshire; and as he wore thick worsted stockings, and walked anyhow through the mud, considered himself in no way obliged to give the street-sweepers a farthing. He had some wit, however, but it was often displayed in a cowardly manner, being mostly directed towards his little opponent, Dr. Gossett, who was unfortunately much afflicted by deformity, and of a temper easily roused by too frequent a repetition of threepenny biddings at Patterson's.

RAWLE AND HENDERSON.

Mr. Rawle, an accoutrement-maker, then living in the Strand, was a visitor: he was the friend of Captain Grose, and the executor of Thomas Worledge, the etcher. In his early days he had collected many curious and valuable articles. His cabinets contained numerous interesting portraits in miniature of Elizabethan characters. He was a professed commonwealth-man, and possessed many of the protector's—or, according to some

writers, the usurper's—letters. He also prided himself upon having the leathern doublet, sword, and hat, in which Oliver dissolved the parliament, and shewed a helmet that he could incontrovertibly prove had belonged to him. He likewise frequently expatiated for a considerable time upon a magnificent wig, which he said had been worn by that merry monarch, King Chhrles the Second.

Henderson, the player, who was also a collector of Hogarth's works, seldom made his appearance on these boards, John Ireland being his deputy-manager. I must not omit to mention another singular but most honourable character, of the name of Hayward, nicknamed "Old Iron Wig." His dress was precise, and manner of walking rather stiff. He was an extensive purchaser of every kind of article in art, particularly Rowlandson's drawings; for this purpose he employed the merry and friendly Mr. Seguier, the picture-dealer, a schoolfellow of my father's, to bid for him. I shall now close this list by observing, that my early friend and fellow-pupil, Rowlandson, who has frequently made drawings of Hutchins and his print auctions, has produced a most spirited etching, in which not only many of the above-described characters are introduced, but also most of the print-sellers of the day. There is another, though it must be owned very indifferent, plate, containing what the publisher called "Portraits of Printsellers," from a monotonous drawing by the late Silvester Harding, whose manner of delineation made persons appear to be all of one family, particularly his sleepy-eyed and gaudily-coloured drawings of ladies.

May-day has been stripped of her splendour and merry-makings since our author's childhood; as witness his picture of

MAY IN 1771.

The gaiety during the merry month of May was to me most delightful: my feet, though I knew nothing of the positions, kept pace with those of the blooming milkmaids, who danced round their garlands of massive plate, hired from the silversmiths to the amount of several hundreds of pounds, for the purpose of placing round an obelisk, covered with silk fixed upon a chairman's horse. The most showy flowers of the season were arranged so as to fill up the openings between the dishes, plates, butter-boats, cream-jugs, and tankards. This obelisk was carried by two chairmen in gold-laced hats; six or more handsome milkmaids in pink and blue gowns, drawn through the pocket-holes, for they had one on either side; yellow or scarlet petticoats, neatly quilted, high-heeled shoes, mob-caps, with lappets of lace resting on their shoulders; nosegays in their bosoms, and flat Woffington hats, covered with ribands of every colour. But what crowned the whole of the display was a magnificent silver tea-urn which surmounted the obelisk, the stand of which was profusely decorated with scarlet tulips. A smart, slender fellow of a fiddler, commonly wearing a sky-blue coat, with his hat profusely covered with ribands, attended; and the master of the group was accompanied by a constable to protect the plate from too close a pressure of the crowd, when the maids danced before the doors of his customers.

(To be continued.)

Notes on the Rise, Progress, and Prospects of the Schism from the Church of Rome, called the German-Catholic Church, instituted by Johannes Ronge and I. Czerski, in October, 1844, *on occasion of the Pilgrimage to the Holy Coat at Treves.* By SAMUEL LAING, Esq. Author of "A Residence in Norway," &c. Longman and Co.

THE progress of the new reformation that is proceeding with such rapid strides in Germany, is now attracting the attention of Europe; it is a prominent theme in our newspapers; its prospects are canvassed in all companies, and opinions, governed by the prejudices or desires of the judges, without much reference to the facts, of which, indeed, very little is known, are freely hazarded by those whom acquaintance with the country is most limited. At such a moment, a volume from the pen of a traveller whose reputation has been long established for accuracy of observation, large range of thought, and intimate knowledge of the countries he has explored, will be welcome to his countrymen, even though his conclusions may somewhat differ from those which their hopes, rather than their information, have prompted.

As our readers are aware, the immediate cause of the movement was the melancholy exhibition of fraud on the one part and folly on the other by the priests and the deluded people, during the recent pilgrimages to the Holy Coat at Treves. Disgusted with a scene calculated only to degrade Germany in the eyes of Europe, a large party of the more intelligent Roman Catholics, headed by a priest named RONGE, have protested against this, as well as some other superstitions of Rome, and the flame thus kindled has spread with rapidity; although it is Mr. LAING'S opinion that it will ultimately fail to produce any great change in the religion of the people. This he attributes to the constitutional phlegm of the German character, which disinclines them to great enterprises demanding incessant activity and continued energy. He asserts, moreover, that the people, although well-educated, that is, well-instructed in reading, writing, and the elements of knowledge, are not taught self-reliance; that they are grossly superstitious; prostrated under the influence of a mind-debasing priestcraft; and that the better classes are too much linked with the government to do or countenance any thing that has a tendency to disturb the existing order of things.

Having thus minutely surveyed the rise and progress of this religious movement, Mr. LAING, according to his wont, endeavours to apply the lessons he gathers from it to a practical purpose. The feuds that have arisen in the heart of Romanism on the continent lead him to consider its condition in Ireland, and the conclusion at which he arrives is, that it would be unwise to endow the Roman Catholic priesthood in that country.

The entire essay is closely reasoned, and undoubtedly contains a great deal of truth. Mr. LAING is always a bold and original thinker, and therefore always interesting and instructive, not merely by that which he imparts, but by that which he suggests. His volume is small, but it contains more matter for reflection than a dozen ordinary books; it is, indeed, for the study, not for the sofa, and as such it is better fitted for the book-club than the circulating library. His comments upon the intellectual and educational condition of Germany are peculiarly valuable an account of his intimate acquaintance with the country and the people. The essay is too closely reasoned to permit of many extracts suited for our space; the reader must be content with two or three, which will show the style of the author, and tempt him to turn to the pages for the full enjoyment of that, of which but a slight taste can be offered to him here.

His views of German Education are novel.

A great part of the education in Germany, and almost all mind, is directed to æsthetic objects,—to the cultivation of the fine arts—to taste and production in poetry, dramatic works, romance, and other imaginative or speculative literature—to music, theatrical representation, painting, architecture, and all that comes under the name of the æsthetic—all the intellectual objects that embellish civilized life, or add to its enjoyments. Valuable as the æsthetic is, when it is a flower growing spontaneously out of a high state of civilization, it is but a poor crop to cultivate instead of more essential things. We do not care to see a bed of tulips where the wheat and potato crops have evidently been robbed of manure and neglected in order to raise them. The æsthetic is not the moral, nor the religious, nor, in many of its objects, such as music, painting, architecture, the intellectual, in a people or in an individual, and it may be cultivated at the expense of higher objects and principles. This is particularly true with regard to education in Germany. The public mind, debarred from free action in public interests or private affairs, naturally occupies itself in those secondary pursuits which alone are open to it, and the autocratic governments in their educational systems favour the cultivation and diffusion of taste in the fine arts—of the development of the æsthetic among the multitude—as a means of keeping them contented and happy. It is the old Roman policy of providing games and bread for the people, to keep them quiet under the misrule of the emperors. The preponderance of the æsthetic in the education, literature, and daily life of the German people, has not worked favourably on the present generation. It has diffused a weakness and frivolity of character, a turn for ease and present enjoyment, and a disregard for, or ignorance of, higher objects than it presents to the mind.

Superficial travellers are wont to imagine that there is a more happy mingling of classes in Germany than in England; but, according to Mr. LAING, the rich and the poor, or rather the noble and the ignoble, are yet more completely severed there than here.

The occupations and amusements of the upper classes in Germany being much more sedentary and refined than with us, consisting much more in music, reading, theatrical entertainment, conversation, visiting, and social enjoyment, and much less in hunting, shooting, riding, racing, boating, and all the active rough sports and tastes which occupy our young men of the higher classes, and bring them into daily familiar intercourse

with the lower, as assistants and partakers in their common pursuit, keep those classes in Germany much more apart from, and ignorant of, each other than they are in England. The son of a nobleman or country gentleman of the largest fortune and highest family in England is intellectually, and in his tastes and habitual enjoyments not very different, or rather is very much the same, as the son of a farmer or of a man of the lower class. The difference is more in the means and scale of enjoyment than in the tastes of the two persons at the extreme ends of our social body. They have many objects, pursuits, feelings, occupations, sports in common, and bringing them together. These are, perhaps, low in taste, and denote a low standard of intellectual development among our higher classes; but they bring the lower up to that standard, establish a wholesome intercourse and exchange of ideas between them—for the lowest can understand and talk of horses, dogs, guns, or yachts, as well as the highest—and denote a higher social state of the whole, than if the upper class were so far refined and educated beyond the mass of the people below, as to be, as in Germany, a froth without spirit or flavour, swimming on the surface, and altogether different in substance from the good liquor at the bottom.

The social state of Germany is similar to that of British India. The upper enlightened class, consisting of civil and military functionaries, lawyers, judges, and officers connected with the administration of law and collection of revenue, bankers, merchants, and professional men, is different in language, habits, ideas, and feelings, from the Hindoo people whom it governs; is little acquainted with them—does not mix with them—has little knowledge of them but what circumstances may force upon its notice, yet governs them tolerably well, and the great mass of the inert Indian population below it is submissive, and contented with the state of pupillage in which they exist.

And here are further proofs of the same backward state of civilization. The still lingering spirit of feudalism is manifest in all these minutiæ of etiquette between the different ranks.

The want of a common feeling and common interests and objects is best illustrated by the effects it has produced in the German language. The usages, or idiomatic expressions of the language of a people, display, perhaps, better than any other indication, the social relations of the different classes in a country. In English and French the same form of language is used in addressing all, from the sovereign to the meanest beggar. All are addressed equally by the personal pronoun *you*, or *vous*. In French, the singular number of the pronoun is used from fondness or familiarity—*tu*, and, although rarely, it is sometimes used to inferiors. The usage of the English language admits of no such difference of expression, no such inferiority between the classes of society, or between man and man, as entitles the highest to address the lowest in any other terms than are used in communication between equals. The German language has no less than four very distinct modes and gradations of expressing the different relative social positions of the person addressed. *Sie*, the third personal pronoun in the plural number, is the equivalent to *you* or *vous*, the plural of the second personal pronoun used in English or French, and is used in the same way between equals. *Du* is also equivalent to the French *tu*, in expressing not only affection between the persons speaking, but also, when applied to an inferior, in expressing the inferiority of the person spoken to, as when an officer speaks to a private soldier. The use of *du* in speaking to the privates in the Prussian Landwehr by their officers, is at present highly resented, and a subject of great dispute, it being considered degrading, because the ranks of the Landwehr are filled by gentlemen often superior to their officers in birth, education, and fortune, and who think themselves therefore entitled to be addressed by their officers with *sie*, not *du*. But German has two forms of speech more in addressing inferiors, and marking the difference of social station between the speaker and the person he is speaking to. The third person singular *er*, is used instead of *sie*, by a person of the higher class addressing an inferior. It is an usage of language, not the pride or arrogance of the individual; and is formed from the state of society. The person of the upper class addresses the person of the lower with *er*, the master his menial, the noble or man of rank the non-noble or inferior. A still more contemptuous form of expression for indicating the distance between the talker and the person addressed, in social station, is *man*, viz. *one*, used instead of *er* or *sie*. The inferior is not addressed in the personal pronoun when speaking to him, but as a thing having no personal station or existence—*man*. The noble addresses his labourer or menial with *man;* his bailiff, tenant, tradesman, with *er;* his equal with *sie;* but it would be a gross insult if he were to use *er* to an equal, or to a person claiming to be above the lower or middle classes, and still more if he were to address such a person with *man;* yet he applies these forms to persons of the lower and middle classes, by the usage of the language, without perhaps any personal pride or arrogance in the speaker. This form of language may be thought a matter very unimportant in itself—a mere grammatical difference from the English or French; but language is the expression of mind, of the public mind, and it indicates more truly than any other expression of it, the manners and state of society, the civilization and independence, and the social spirit of a people. These forms of expression mark a distance, a non-intercourse, a want of mutual communication and feeling, and of interchange of ideas, and sympathies, and knowledge of each other, between the classes using them. They indicate the state of society in Germany—the relations between its classes.

After all, the people of England are much better and happier, and more advanced in civilization than they are willing to believe. Very little acquaintance with other nations serves to shew the traveller, who at home was most discontented with the state of things, that, in all essential particulars, England is very far in advance of any other country, and one advantage at least will flow from the great increase of intercourse—it will serve to make Englishmen set a higher value than they have been wont to do on the political and religious freedom, the industrious spirit, the general wealth, and the consequent prosperity with which Providence has been pleased to endow them beyond any of their neighbours: blessings which nevertheless indicate that a mission is theirs, for the due performance of which a strict account will be demanded of them.

JOURNAL OF GERMAN LITERATURE.

Karl von Holtei and the German Theatre. (*Vierzig Jahren, von* KARL VON HOLTEI. Dritter und Vierter Band.) Berlin.

IN our former notice of the first two volumes of these memoirs, we endeavoured to make known the characteristic worth and instructiveness of these confessions, and the remarkable candour with which they have been written. HOLTEI possesses in an eminent degree that love of truth, which, as a natural gift, manifests itself instinctively, and is the only means of securing to autobiographical notices a position with works didactive and useful; he possesses this quality, we say, in an unusual degree, and against it no one can have any thing to say so long as it evidences itself in the form of self-abnegation, if not of modesty. HOLTEI writes the severest, the bitterest truths of himself; and at the same time there lies at their very foundation the feeling that he is not a man of insignificance; on the contrary, that he has played a part of some influence in his little world, and that, therefore, his very faults and weaknesses must be interesting to the public. HOLTEI may, in fact, be said to belong to a class of genial-hearted men—men who, in these days, involve somewhat of the artist-temperament, who, armed with great facilities and capabilities, are martyred by a restless poetic hunger, and a feverish creative oppression, of warm, but most unequal feelings, of flexible, but hardly of energetic talents, amiably yielding, but romantically unstable in character; men who are every where at home, but nowhere thoroughly so, whose works bear *occasional* traces of genius, but *universal* traces of dilettantism, who, wherever they appear, are welcomed as enlivening and brilliant, and yet content no one lastingly; and finally, whose most truly poetical production is to be found in life itself. They may be called happy when an early death carries them off in the midst of their youthful dreams and illusions; if they survive these, they may be said to have survived themselves. Many then become wearied, if not lost, among the most pitiable relations of the world; others, the nobler class, natures armed, like HOLTEI, with knowledge of themselves and of mankind, and with due powers of reflection, may, through a course of honour and uprightness, at last gain some peace, may build themselves some little resting-place, from the ruins of their past life, and write down the experiences and troubles of their days for the warning and instruction of their fellow men.

As regards other persons, HOLTEI's boundless and expansive candour may be subject to some qualifications, and here and there he has brought upon himself severe censure. If HOLTEI may say in his exculpation, and with seeming justice, that he has not spared himself, and how then should it be expected that he should spare others, it would still have been better had he occasionally regarded the follies, faults, and failings of those with whom he stood either in close or distant,

friendly or unfriendly, relations, as graves over which the grass must be suffered to grow, even if he would not plant flowers upon them, as he does on the grave of his first and fondly-cherished wife.

A second objection, which has been raised against these confessions—namely, that the author was by no means a character of that importance which would justify burdening the public with such voluminous memoirs—seems to us utterly untenable. In confessions of this nature, it is less the question whether the writer were a man of great genius or amazing influence, or held a high position in the world, than whether his life and conduct represent the life and conduct of other men,—whether in his struggles he came in conflict with persons of interest, from whom much may be learned,—whether, in one word, he has furnished a worthy contribution to the history of mankind and the world at large. This end has well been accomplished by the memoirs of KARL VON HOLTEI. If, on the one hand, the combined spirit of the present time easily leads to an over-estimation of the individual (which, however, at no period signified less to the body at large); on the other, it is hardly possible to estimate it too highly, in so far as the genuine man is manifested, and mirrors in his fate a small section of the fate of human nature. The plain and simple individual learns, in fact, much more for application to his own condition from the memoirs of the equally simple scholar, artisan, or humble artist, than from all the confessions of a French general or statesman, of a diplomatist, or a duchess. It is only necessary that the scholar, the artisan, or the artist should set to work as KARL VON HOLTEI has done—that is to say, not accord to himself and his circumstances too bold a relief, and perhaps, using the same self-denial and open-heartedness as regards himself, manifesting a little more caution and delicacy as concerns others. Of such confessions we cannot have too many, and to them we may well ascribe the power, in consequence of their truth and nature, of limiting in some degree the rank superfluity which at present marks the character of our lighter literature. It has often and justly been remarked, that mankind are visibly losing their belief in beauty and art, while they turn more and more exclusively to the actual, the useful, and the practically needful.

What penetrating glances HOLTEI leads us to give into the errors, the aimlessness, the faults of every kind, of the German system of education, we have before endeavoured to explain in our notes upon his former volumes, from the philologists, who, secure in the arms of custom, found their highest object in the exercise or acquirement of a Ciceronian style, while they regarded the extinguishing of all self-dignity, of all genuine German thought and feeling, with unconsciousness or indifference, down to every other branch of mechanical or scientific instruction.

But upon all matters the sound and simple understanding will look with an eye widely different from that of the linguist, who only regards CICERO and PLAUTUS, from the jurist who only thinks of the Roman law, or from the theologist who founds his support in some antique dogmatism,—or, Heaven knows what. Certainly reference will be made to the great men and thinkers whom we have had in consequence, or *we* should say, in spite of, the old method; but these men were never really and truly men of the school-form; they were all and every where noble exceptions, and have nothing to do in the consideration of the universal evils brought about by the old system. We have not yet tried earnestly and seriously to ascertain what would be the effects of a system more answering to our present necessities.

But our present business is with Herr VON HOLTEI, and his *Vierzig Jahren*. We here accompany him, riper in years, though not yet fully ripe in character, through the thick and thin of theatrical miseries, through the storms and thistles of literary life. Scarcely, however, do we meet with periods so momentous as those concerning his education at home and at school. Still, for those who need them, warning and instruction can abundantly be found. We may learn that one, not willingly and naturally a student, had better be away from the university than in it; we may learn how wearisome and full of rocks and stumblingblocks of all kinds a theatrical career really is. At the university of Breslau, HOLTEI attached himself to the Burschenschaft for the same reasons he had gone to the university; namely, that in both cases he hardly knew what he should do. He represents the "Deutschen Jünglinge," as right-minded, uncorrupted, and powerful by nature, as well meaning, and in their reorganization of the former Burschenschaft, doing all for the best; but he blames them for being too wise, too cautious,—at least, as representing themselves as such, and making professions of rectitude and propriety which are quite beyond the power of youth to carry out. On the other hand, he excuses the student-roughness of those times with the oft-repeated phrase, that youth must wear itself out. In the midst of many follies and abuses of the old Burschenschaften, the heart was always sound, the enthusiasm, though hyper-poetical, was pure and generous, the intentions noble and disinterested, and, without doubt, something lasting and beneficial would have developed itself from all this had time only been allowed it, to wear off the superfluities with which it was encrusted. But, like many other things in Germany, it was only endured to be forbidden.

Like all others who attend the university without well knowing their own inclinations, much less their object, HOLTEI listened to all, one thing after another; lectures on old German art and literature, on logic, on the history of literature, on modern history, on astronomy, on the Nibelungen, on Plautus, "and much else," as he observes, "of all which I know nothing now."

Strange it is, that notwithstanding the many disadvantages attendant on inadequate professors, bad delivery, and so forth, the most incomplete university course is not without important fruits even on the character and life of the wildest and most careful student.

Above every thing is HOLTEI's estimation of the Norwegian Steffens, and his lectures; exciting, and wonderful in their influence on the young mind, philosophical and poetical, almost to enchantment, really pourings from the heart, who, without being German, was one of the few German orators he ever heard. Of him HOLTEI says,—

> My eyes hung on his lips, and I drank in, with pious veneration, almost with intoxicated pleasure, the stream of his powerful eloquence. Immovable like a figure of stone, while within burned a raging fire, I claimed the hard-won seat upon the second form, exactly opposite to him; and many a time I remained sitting, fixed in a sort of dream, while the others, after he had left the room, were long ago dispersed.

We have here a pleasing sonnet indited at this period by HOLTEI to STEFFENS. We can bear personal testimony to HOLTEI's words concerning the wonderful effect of STEFFENS'S heartfelt and energetic delivery upon the minds of the young. Never was there a teacher of the university who could, like STEFFENS, work upon the sympathies of his hearers, moving them even to tears, and enchanting back the youth to the condition of first childhood. With him, too, we were in no clear lighted hall, where the lamp of intelligence shines all around, and suffers no shadow to remain; with him, we were as if in an old chamber, while the light of the moon shone through narrow windows, spreading a dubious and romantic gleam around, by which, indeed, we might well recognise familiar objects, but in giant forms, and uncertain mysterious outline.

With one bound we find ourselves upon the Breslau Theatre. KARL VON HOLTEI made his first appearance as *Mortimer*. The description of his feelings during the representation is masterly and interesting. He says,—

> Upon my own performance I can say nothing. As much of it as I can remember, it was that of a stiff, inflexible beginner, who first raised the right hand, then the left; first advanced one step, then went back another; and with unformed, uncultivated organ, repeated his well-learnt part, perhaps not without fire, but certainly without any mind. I was in a condition of most perfect sober calmness. Every trace of anxiety disappeared the moment I began to speak. I listened closely to myself. My voice sounded hollow and monotonous. My legs were in my way; my arms hung down like useless logs. As long as I had to speak I remained quite self-possessed. But when Maria began, and I had to listen, I was utterly lost. The attentive stillness of the house, filled as it was, was horrible to me. It worked narcotically upon me. Every minute, every half-minute I felt exactly as one does before falling into a deep sleep; and I should, probably—strange as it may sound—have fallen to sleep on the stage, had not the cue every now and then roused me up.

Through the energy of KARL SCHALL, with about three hundred university friends, he was dismissed with great applause. He continues,—

And, nevertheless, I was condemned. I felt it in my own heart. I was no tragedian. My part was done. Mortimer stabbed himself, undressed himself, and Holtei left the house while the last acts pursued their weary way. I went at once to my foster-mother.

(*To be continued.*)

JOURNAL OF AMERICAN LITERATURE.

Longfellow's Poets and Poetry of Europe.

(*Continued from page* 488.)

The fifth division, including the seventeenth century, is but a barren period in the annals of German poetry, the names of Ayrer, Opitz, and a few other minor poets alone occupying the page which they hardly illumine. The long religious war interrupted the pursuits of literature, and foreign influence debased the language and corrupted the tastes of the people. The only illustrations, now before us, of the poetic spirit of this age are two of Mr. Longfellow's own versions from Simon Dach, and a few grotesque verses by that eccentric preacher, Abraham a Sancta Clara. But the sixth period, extending from 1700 to 1770, is far more promising, and affords an abundant harvest of Specimens. Here, says the editor, "we at length begin to emerge from the Black Forest of German literature, 'whence issuing, we again behold the stars.'" Of the many illustrious names belonging to this epoch, those best known to the English reader are Gessner, Klopstock, and Lessing. The second of these, though his reputation was once world-wide, is now, if we may credit his countryman, Menzel, rather respected for his patriotism and devotional spirit, than admired for his enthusiasm and genius. Weary of the flippancy and frivolities of the French school among his countrymen, he went to the literature of England for his models, and formed his taste by the study of Milton and Young. Yet he was not a mere imitator of the English; "On the contrary," says Menzel, "his merit in regard to German poetry is as peculiar as it is great." But our readers will remember the sarcasm of Coleridge, who, when told that he was the German Milton, muttered between his teeth, "A very *German* Milton, indeed!" Versions of four or five of his shorter poems in this volume give a pleasing, but not an impressive, idea of his abilities. The remaining translations here given from the bards of this period do not contain much that is worthy of notice.

The only remaining division, extending from the year 1770 to the present day, is the boast of German letters; for very early in this period many bright stars rose in quick succession above the literary horizon, and passed the meridian in a magnificent cluster. The debt which the preceding age had incurred to England was repaid with interest, for much of the English poetry of our own day bears decisive tokens of the study of German models. The effects of this study are sometimes visible in direct imitation, as in many of the poems of Coleridge and Shelley; but more frequently in the prevailing sentiment, and the general colouring imparted to the thought. Much, indeed, of the mere talent of versifying, which exists among us, is directly expended upon translations from the German. In this volume, nearly a hundred pages, closely printed in double columns, are occupied with versions from the poets of this period alone; and the quantity might with ease have been increased tenfold. Trained in such exercises, it is not surprising that the more original efforts subsequently made by these translators should still bear a deep impress derived from their German studies.

In this way, as well as from the commanding influence of Wordsworth, would we explain some of the strange mutations which English poetry has undergone since the opening of the present century. It has ceased to be narrative, epic, vigorous, clear, or equable; it has become philosophic, elaborate, mystical, meditative, and tender. Much of it has lost the dew of the morning, the sparkle and freshness of the early part of the day. Like a landscape seen by moonlight, it abounds with indistinct outlines and shadowy forms, with figures fantastically blended together, and colours faintly seen and melting into each other in the distance. It embraces a wider range of subjects, but goes farther to search for them, and treats them, when found, with minute particularity or convulsive effort. It is impatient of rule, studious of novelty, confused in its combinations, and often harsh and rugged in its utterance; but its lawlessness and its ruggedness are systematic and intentional, and its novelties are diligently sought for, and then patiently distributed into curious groups, just as the man of science arranges minerals in a cabinet. True, the practical element in the English character, and the utilitarian taste of the times, still offer some opposition to these foreign influences, or at least direct the choice of topics in the treatment of which these influences are conspicuous. Often, the work is not so much poetry, as it is rhymed oratory or versified philosophy—science in metre, and sentiment and philanthropy drilled to "move harmonious numbers." Our age is learned, ingenious, and imitative; and our poetry consequently lacks spontaneity, simplicity, and raciness. It is made ancillary to many purposes—a sort of maid of all work, instead of being mistress of the house. It lectures upon science, preaches about various religious systems, and declaims against the Corn-laws. But on whatever task engaged, in sentiment, tone, and imagery—in choice of metre, arrangement of topics, and the inwrought colouring of style—it still shews that it has recently been a wanderer in many lands, but especially among the remains of the Middle Ages in Germany. It often wears a garb of foreign and fantastic cut, and its coat is one of many colours.

But we are forgetting that our present theme is not English but German poetry, and in excuse for the digresssion have only to plead the fact, that the contents of this volume certainly indicate an intimate relationship between the two. We have no time to track the editor over the vast field of German song, which lies between our own times and the middle of the last century, nor is it necessary. To those who are acquainted with the language, the theme appears somewhat hackneyed; to those not so fortunate, the tasteful introductory notices here given will supply the needed information in a form as succinct as is consistent with the object in view. For persons of the latter class, this portion of the volume will be one of the most attractive of all.

Here (says the editor) are the dwellings of Goethe, and Schillèr, and Lessing; there the farms of Voss, and Herder, and Jean Paul; and yonder the grave-yard, with Matthisson making an elegy, and other sentimental poets leaning with their elbows on the tombstones. And then we have the old and melancholy tale—the struggle against poverty, the suffering sorrowful life, the early, mournful death—still another confirmation of the fact that men of genius too often resemble the fabled son of Ocean and Earth, who by day was wafted through the air to distribute corn over the world, but at night was laid on burning coals to render him immortal.

One important portion of German poetry still remains to be noticed—the great mass of popular songs, of uncertain date, and by unknown authors. The ancient German ballads are certainly inferior, as a whole, to the English, Danish, Swedish, and Spanish; but the German popular songs, blooming like wild-flowers over the broad field of literature from the fifteenth century to the present time, surpass in beauty, variety, and quantity those of any other country. Among their thousand sweet and mingled odours, criticism often finds itself at fault, as the hunter's hounds on Mount Hymettus were thrown off their scent by the fragrance of its infinite wild-flowers. They exhibit the more humble forms of human life, as seen in streets, workshops, garrisons, mines, fields, and cottages; and give expression to the feelings of hope, joy, longing, and despair, from thousands of hearts which have no other records than these.

It is a point of some interest to remark, that a large portion of the translations here given, as specimens of the German poets of this period, are by American hands. As a sample of the criticisms which are embodied in the introductory notices, we will quote a part of Professor Longfellow's remarks on the writings of Heinrich Heine.

The style of Heine is remarkable for vigour, wit, and brilliancy; but is wanting in taste and refinement. To the recklessness of Byron he adds the sentimentality of Sterne. The *Reisebilder* is a kind of *Don Juan* in prose, with passages from the *Sentimental Journey*. He is always in extremes, either of praise or censure; setting at naught the decencies of life, and treating the most sacred things with frivolity. Throughout his writings are seen traces of a morbid, ill-regulated mind; of deep feeling, disappointment, and suffering. His sympathies seem to have died within him, like Ugolino's children in the tower of Famine. With all his various powers, he wants the one great power,—the power of truth. He wants, too, that ennobling principle of all human endeavours, the aspiration "after an ideal standard, that is higher than himself."

In the highest degree reprehensible, too, is the fierce, implacable hatred with which Heine pursues his foes. No man should write of another as he permits himself to write at times. In speaking of Schlegel as he does in his *German Literature*, he is utterly without apology. And yet to such remorseless invectives, to such witty sarcasms, he is indebted in a great degree for his popularity. It was not till after it had bitten the heel of Hercules, that the Crab was placed among the constellations.

The minor poems of Heine, like most of his prose-writings, are but a portrait of himself. The same melancholy tone, the same endless sigh, pervades them. Though they possess a high lyric merit, they are for the most part fragmentary;—expressions of some momentary state of feeling,—sudden ejaculations of pain or pleasure, of restlessness, impatience, regret, longing, love. They profess to be songs, and as songs must they be judged. Then these imperfect expressions of feeling,—these mere suggestions of thought,—this "luminous mist," that half reveals, half hides the sense,—this selection of topics from scenes of every-day life,—and, in fine, this prevailing tone of sadness, will not seem affected, misplaced, or exaggerated. At the same time it must be confessed, that, in these songs, the lofty aim is wanting; we listen in vain for the spirit-stirring note,—for the word of power,—for those ancestral melodies, which amid the uproar of the world, breathe into our ears for evermore the voices of consolation, encouragement, and warning.

The following very graceful translation, by a writer in the *Edinburgh Review*, gives a good idea of Heine's minor poems.

THE TEAR.

The latest light of evening
Upon the waters shone,
And still we sat in the lonely hut,
In silence and alone.

The sea-fog grew, the screaming mew
Rose on the water's swell,
And silently in her gentle eye
Gathered the tears and fell.

I saw them stand on the lily hand,
Upon my knee I sank,
And, kneeling there, from her fingers fair
The precious dew I drank.

And sense and power, since that sad hour,
In longing waste away;
Ah me! I fear, in each witching tear
Some subtle poison lay.

We have room but for one more specimen of German poetry, and it shall be this very striking version from Count Stolberg by Mr. W. W. Story.

THE STREAM OF THE ROCK.

Unperishing youth!
Thou leapest from forth
The cleft of the rock.
No mortal eye saw
The mighty one's cradle;
No ear ever heard
The lofty one's lisp in the murmuring spring.

How beautiful art thou,
In silvery locks!
How terrible art thou,
When the cliffs are resounding in thunder around!
Thee feareth the fir-tree:
Thou crushest the fir-tree,
From its root to its crown.
The cliffs flee before thee:
The cliffs thou engraspest,
And hurlest them, scornful, like pebbles adown.
The sun weaves around thee
The beams of its splendour;
It painteth with hues of the heavenly iris
The uprolling clouds of the silvery spray.

Why speedest thou downward
Toward the green sea?
Is it not well by the nearer heaven?
Not well by the sounding cliff?
Not well by the o'erhanging forest of oaks?
O, hasten not so
Toward the green sea!
Youth, O, now thou art strong, like a god,—
Free, like a god!

Beneath thee is smiling the peacefullest stillness,
The tremulous swell of the slumberous sea,
Now silvered o'er by the swimming moonshine,
Now golden and red in the light of the west!

Youth, O, what is this silken quiet,
What is the smile of the friendly moonlight,
The purple and gold of the evening sun,
To him whom the feeling of bondage oppresses?
Now streamest thou wild,
As thy heart may prompt!
But below, oft ruleth the fickle tempest,
Oft the stillness of death, in the subject sea!

O, hasten not so
Toward the green sea!
Youth, O, now thou art strong, like a god,—
Free, like a god!

We have no very poetical associations connected with Holland and the Low Dutch language. The words call to mind a flat, uninteresting country, and a people much addicted to traffic, gin, and tobacco. But they have had poets, those web-footed Dutchmen, and have them still, in goodly numbers—poets who have sung of themes as lofty, and in strains, we are bound to believe, as musical, as if they had inhabited a mountainous region, and had been nurtured by all imaginative and stirring influences. Dr. Bowring, a remarkable linguist and most successful rhythmical translator, assures us that it is so, and has given evidence of his assertion in a respectable volume, which bears the happily selected and euphonious title of *Batavian Anthology*. From this book, and from an article or two in the *Westminster* and *Foreign Quarterly Reviews*, which very probably came from the same hand that wrote the *Anthology*, Mr. Longfellow has culled all the specimens, which are here given, of Low Dutch poetry. Certainly, the fraternity of bards in Holland is under great obligations to Dr. Bowring for introducing them to the great people who speak the English tongue. If he had not fished them up, most of their works, so far as the English reader is concerned, might as well have been drowned in the Zuyder Zee. The specimens collected do not impress us very favourably. Those from the poets of our own times are the best; though of one of these, Kinker, the frank admission is made by his admiring critic, that "his verses are frequently unintelligible, though they leave the impression that, if we could but understand them, they would be very fine." The reason assigned for this obscurity is quite a sufficient one, as it appears that Kinker was deeply bitten by the rage for Kantian metaphysics.

More accomplished, and better known out of his own country, as it seems that Mr. Southey has somewhere spoken of him, is Bilderdijk, who wrote and quarrelled incessantly during nearly the whole of a long life, which ended in 1831. Yet most of our readers will be disposed to echo the question with which Southey begins to speak of him, "And who is Bilderdijk?" The author of *Thalaba* coolly replies, that it would not be necessary to ask, if it had not been for the confusion of languages which took place at the building of Babel. The published works of Bilderdijk fill over one hundred octavos, "and there are more behind in manuscript." A Dutch critic remarks of him, that he "excels in every species of poetry, tragedy alone excepted; in this he has been able to equal neither the ancients, nor the French triumvirate, nor Shakspeare, nor Schiller, nor Vondel;" a qualification which we can admit to be well founded, though we are not familiar with the Low Dutch tragedies of Vondel.

(*To be continued.*)

ART.

The New Houses of Parliament.—An immense quantity of the magnificent slate from the quarries on the estate of the Knight of Kerry, Valentia Island, has been ordered for the new houses of Parliament. It has been also ordered in large quantities for public buildings in France and other parts of the continent. So beautifully veined and variegated is it, and so susceptible of a high polish, that it is capable of being wrought into elegant tables and other domestic articles. It is only a few years since that this quarry was discovered.—*Limerick Reporter.*

Maclise's Cartoon: the Spirit of Chivalry.—The committee of the Art-Union of London have shown their taste and good judgment by determining to engrave this fine work for their subscribers.—*The Builder.*

Polite History.—Last spring something was very much the matter with the Commissioners on the Fine Arts, for they seem to have laboured under a woolgathering of their wits. From their records it might be inferred that they had not read

English history, except perhaps in some child's version which describes all the kings as patterns of virtue, and all anti-Royalist patriots as monsters of vice; yet the commission includes four historians—Mr. H. Hallam, Lord John Russell, Lord Mahon, and Mr. Macaulay. Or it might be inferred that they do not know who were the great men of the country, if they were not themselves the great men of their own day. Amongst their tasks was the preparation of a list of names of "distinguished" men to whom statues might be erected. They present too lists, one of names to which they agreed unanimously, another of names to which they did not agree unanimously. These lists are curious, especially in the comparison with each other. They do not include the names of the sovereigns; which, from William I. downwards, with a few of the Saxon kings, are disposed of elsewhere. The first point of curiosity is to see what they have done with Cromwell; he is not included among the sovereigns, though Prince Albert is! He is set down among the "distinguished" persons—in the doubtful list. The commissioners all agreed in having a statue of the Venerable Bede, of Lord Howe, and of Addison; but, it appears from this, they are not quite certain that Cromwell was sufficiently "distinguished!" That is an historical fact not present to their minds. Cromwell, indeed, happened really to be one of our sovereigns—being placed *sovra* the British people; but the commissioners cannot boast of their historical knowledge: they imagine that Prince Albert has been one of the sovereigns, and they do not know that Cromwell was. They might be asked why, for the sake of consistency, if they included Prince Albert, they did not also include Prince George of Denmark, Anne's husband, honest "*Est-il possible?*" as his father-in-law nicknamed him, from his perpetual exclamation at each new defection? Many other anomalies in the lists will amuse the curious reader who thinks it worth while to speculate on motives and reasons almost inscrutable. Next to Cromwell is placed Monk, for what kind of distinction is not evident; he was one of the most distinguished trimmers on record: but if Monk, who fought for commonwealth and monarchy, be among the generals, why not put Waller, who praised Protector and King, among the poets? He was at least as great a trimmer as Monk, at least as great a poet as Cowper. In the domain of fiction and poetry the commission indulged in some excessive freaks; they were unanimous as to the eminence of Cowper, doubtful about Pope, confident of the merits of Richardson, sceptical about Fielding, unhesitating as to Addison, dubious as to Burns. What were they at? What was their test of admissibility? Was it political orthodoxy? Did they remember of Pope, that he sneered at "low ambition and the pride of kings?" And why admit republican Milton? Was it respectability? Did they recollect that Richardson had called Fielding's characters "low;" that Burns had declared that "Church and State might go to" &c., while he went to "his Anna?" We suspect that personal respectability had great sway with the commissioners, although they must have been thinking of something else when they excluded Cromwell, and did not exclude Henry VIII., Charles II., George IV., and other incorrigible scapegraces. Some sense of respectability, perhaps, made them omit from the category of literature Daniel Defoe, author of that book in the English language which is the most universally read; some sense of orthodoxy when they excluded from history Edward Gibbon. The commissioners seem to have thought that they were not only to sit in judgment on the personal characters of all the unconscious candidates for their suffrages, but also that they were bound to approve of all that the deceased gentlemen had done—to agree in all that they had written—before allowing their claims to admission. If so, to use a Yankeeism, they must have endorsed some strange deeds and doctrines,—Coke's truckling severity, Henry VIII.'s murderous inst, Milton's views on polygamy. At all events, some paltry fear or incapacity has prevented their going straight to their task, and without doubt or equivocation placing the great historical names of the country in front. What with its narrow niches forbidding any but stiff feudal figures, and its faltering index of names, the Parliament Palace will not supply the place of a British Valhalla. That is a structure reserved for a more intelligent age. —*Spectator.*

MUSIC.

New Publications.

When will Summer come again? Cavatina by C. E. Horn. The words by H. C. Dakeyne, Esq. London, published by the proprietor, 103, Great Russell-street, Bloomsbury.

Cordially do we welcome a new song from the rich treasury of Mr. Horn. *When will Summer come again?* is an original and elegant composition. The music sympathizes throughout with the words, and is of itself so pure and expressive, that it would not be heard to disadvantage from the most unaccomplished vocalist; indeed, the more simply it is sung the better, for it is without ornament; and the addition of embellishments would not only alter the character of the song, but destroy the pleasure of the hearer, by diverting his mind from the melody to the singer.

The following words by Mr. Dakeyne are admirably adapted for musical acompaniment.

How the bitter whirlwind roars,
With the snow storm in its train!
Fast the fleecy deluge pours;
When will summer come again?

When will harvest's golden brow,
O'er the valley and the plain,
All its glorious lustre throw?
When will summer come again?

Now the woods are stripped and bare;
Bare the valley and the plain;
Bleached the hills that were so fair;
Will they ere look green again?

Oh for wandering in the woods,
Oh for sunshine on the main!—
Limpid billows,—sparkling floods!
When will summer again?

Earth is like an aged man,
White his locks with winter's stain;
And the stars are pale and wan:
When will summer come again?

Oh for lonely glade and bower,
Oh for pleasure's smiling train,—
Bud and blossom, fruit and flower!
When will summer come again?

Ice'd in armour is the stream,
Glitt'ring like a silver vein;
Half congealed, the solar beam
Strives to pierce the clouds in vain.

When will balmy breezes blow,—
Songsters warble many a strain?
When will little wild flowers grow?
When will summer come again?

We have no doubt the song before us will at once become popular; and we heartily wish it as long a life as most of Mr. Horn's compositions are enjoying. All of our young lady readers should hasten to add it to their portfolios; and sure we are that they will heartily thank us for the recommendation.

Society of British Musicians.—The first meeting of this society for the winter season took place at Erat's Rooms, on Monday night, and there was a good attendance of visitors. The scheme consisted of Beethoven's pianoforte trio in C minor, in which Miss Barker, a *débutante*, displayed considerable cleverness as a pianiste, and a meritorious quintet by H. Westrop; and a violin quartet by Macfarren (admirably played by Willy, Watson, Hill, and Hancock). Mrs. Seguin sang a song by Edward Loder, and Miss Duval one by Molique. A promising specimen of Howard Glover's forthcoming opera was also given by Mrs. A. Newton.

THE DRAMA AND PUBLIC AMUSEMENTS.

Princess's Theatre.—Mr. Macready has been achieving enormous triumphs at this theatre. His *Lear* and his *Hamlet* have attracted houses full to overflowing; each night the enthusiasm seems, if possible, increased. We are heartily glad it is so, for the sake of all parties. The theatre, on the alternate nights, is of course less crowded than on the Macready evenings, but still well attended. The vaudevilles here are exceedingly good. We spoke last week of *A Man without a Head* and *Advice to Husbands* as very entertaining; another amusing farce was produced this day, entitled *Jack o' Both Sides*, an adaptation from the French. *Mr. Jack Tweedle* is a gentleman of two attachments: he loves *Mary Lathern* for her fortune of twenty bran new houses—*Mary Anne Simpkins* for her good heart and pretty person. The unconscious rivals are next-door neighbours—the one inhabiting, in full property, No. 1, of Lathern-row; the other lodging at No. 2: the one a daughter of the eminent builder, the other a milliner. When the curtain draws up we are introduced to a double scene; one-half the stage being *Miss Lathern's* boudoir, the other half *Mary Anne's* parlour and

kitchen and all. Both fair ones are anxiously awaiting the arrival of dear *Jack*, but the milliner's anxiety is the greatest, for she really loves the fascinating *Tweedle*; whereas *Mary Lathern* secretly inclines to a sentimental cousin, *Henry Timkins*. there is great fun with *Tweedle's* running backwards and forwards between *Mary* and *Mary Anne*, and his anxiety lest his faithlessness should be discovered by either or both. Escaping from *Mary*, he finds *Mary Anne*, it being her birthday, has, by the aid of two friends, prepared a sumptuous entertainment of beefsteak-pie and sausages, and apple-pudding, and pancakes, the pancake manufacture being assigned to him. Meanwhile the deserted *Mary*, receives a visit from her adoring *Henry*, and accompanies on the piano his performance of a love-lorn ditty, to which the merry party in next room append a boisterous and most unsentimental chorus; *Mary* plays a polka; it is drowned by faithless *Jack* with *Mary Anne* and her other two guests. By and by, a ludicrous incident reveals the both-sidedness of *Jack*, and, driven into a corner, he rejects *Mary* for *Mary Anne*, and *Mary*, never better pleased, is permitted by *papa* to accept dear *Henry*. Miss EMMA STANLEY acted the charming milliner to the life; with all due consideration for the fair impersonatrix of *Miss Mary Lathern*, we entirely concurred with *Jack* in his election of *Miss Mary Anne Simpkins*. OXBERRY was *Jack Tweedle*, and a very capital *Jack Tweedle* he made.

THE COLOSSEUM.—Beyond all compare, this is the most magnificent of the London sights. It is thoroughly and substantially good—not mere pasteboard and paint. The building is one of the finest in England; the saloon of art is a very model of good taste, and the sculptures with which it is adorned make it the most valuable exhibition of English art. The Panoramas of London by day and by night are both astonishing productions of labour and skill. The night view is the most interesting and effective, for it is the most real. Besides these, there is the Stalactite Cavern, an exact model of the extraordinary one in Austria; and the Swiss Cottages, as of old, and elegant refreshment-rooms, and all beside that can contribute to the convenience and enjoyment of the visitor; and it is not surprising that, being such, it should be the favourite resort of the aristocracy, who seem to have exempted this from their wonted avoidance of sights. Here they are to be seen in crowds every evening.

THE DIORAMA.—Among the sights of the metropolis which should never be omitted by the visitor is the Diorama, an exhibition of surpassing beauty, and the triumph of scenic art. The two subjects now exhibited are the Notre Dame of Paris, as seen at evening and by starlight, and Heidelberg in winter and in summer. It would be impossible by words to convey the slightest idea of the effects produced by the management of light. The changes are imperceptible, but perfect; and it is with the utmost difficulty the stranger can persuade himself that he is not looking at the very places, so real and natural are the effects. As there will be new pictures shortly, no time should be lost in viewing these.

ROYAL POLYTECHNIC INSTITUTION.—There are many things a man may attempt, but none more difficult than to combat old prejudices; these are so rooted in the mind, that much time and patience is required to eradicate them. As a proof of the above, we beg to call the attention of our readers to a lecture delivered by Dr. BACHHOFFNER, at the above scientific institution, on Atmospheric Electricity, and on the Utility of Lightning Conductors. The learned doctor's language was expressed with so much truth and earnestness, that we were highly pleased to see how admirably he argued all the points; and his audience, as far as we observed, seemed perfectly convinced of the learned lecturer's statement that steel is not an *attractor* of the electric fluid, and that the so-called thunderbolt has no tangible existence. The lecture was illustrated by several very striking experiments, and we would strongly recommend those of our readers who may suffer from timidity during a thunder-storm to go and hear Doctor BACHHOFFNER'S very interesting lecture.

ORIGINAL CONTRIBUTIONS.

FAITH AND DEATH.

One day young Faith saw old grim Death
  A knocking at a poor man's door;
  And Death looked very wrath and sore,
For he had knocked there many a day,
In hope to carry off his prey,
  But 'gainst him still the door was shut;
    And holding every man his vassal,
  Although he hungered in a hut,
    Or feasted in a castle,
  He grew impatient at the door,
    And knocked the more.

Faith watched awhile the gaunt old king,
And fearing not his dart or sting,
(For what had a spirit like Faith to dread?)
  Approached him and thus mildly said:—
"Pray grant that poor man longer lease;
  Thump not so loudly at his door;
Thou answerest 'No;' then for *his* peace
    I'll just walk in before."

Then Faith a wooden latch pulled up,
  And entered. By a bed
A daughter's skinny hand did prop
  A dying father's head.
And be it for Gentile or for Jew,
  For Christian or for Turk,
A beautiful prop is a daughter's hand
  For such afflicting work.

And Faith he wept (but hid his tears)
To see a girl so young in years
But old with griefs that pressed on her,
  A father's *only* comforter.

The sick man saw him, and out shrieked,
  "O grant a little breath!
Begone, thou thing of fleshless bones,
  I know thee, thou art Death!"
Then Faith with his young seraph face,
  (Tears drowned not now his eye)
Lent o'er the bed, and softly said,
  "Old man, why fear to die?"
But the old man quailed, and shut his eyes,
  And muttered no reply.

Then Faith with his white fingers raised
The fallen lids, and stiff and glazed
    The dry eyes rolled beneath.
"I am not Death," he spoke, "but Faith!
  Look on me! See the sunbeams now
That through the broken windows pour,
    Gilding this rotten floor,
  And even dropping on thy brow.
And like this sun, the light of God
    Will all encompass thee;
Thy daughter's hand still prop thy head,
    But lean thy *soul* on me."

Now Death, impatient at the door,
Rapped loud, and louder than before.
But such the wonders Faith had wrought
  Upon the sick man's thought,
That when grim Death at last stalked in,
Looking so cold, and white and thin,
The old man's dim eyes flashed with light
  As if an angel met his sight.

Bridgwater. E. H. BURRINGTON.

CRITIC OF TRADES, INVENTIONS, ETC.

[Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

NEW STEREOTYPING PROCESS.—We had the satisfaction of seeing, on Saturday last, in the office of Mr. Hugh Wilson, lithographer and engraver, Trongate, a new patent process of stereotyping, which, for simplicity, and, above all, the celerity of its execution, bids fair, at no distant date, to number the present system with the things that were. The old process, which was undoubtedly one of the greatest improvements ever grafted on the art of typography, consists, as our readers may be aware, in taking impressions from forms or pages of moveable type, by means of stucco, which, when dried and prepared, formed the matrices for stereotype plates. The process, however, is a tedious one, requiring careful picking, planing, oiling, and preparing. In the new mode the process is completed as it were in a handclap. In taking the impression stucco is entirely dispensed with, and, instead of it, a piece of damped prepared card-board is placed over the surface of the page of moveable type, and an impression beat out of the type into the card by repeated strokes of a hard brush—a part of the operation which, according to the size of the page, occupies from a minute to a minute and a half. This card, which now answers the purpose of a matrix, is dried and inserted in an iron frame with a moveable top or surface,

constituting a mould, which has been previously heated to an equable temperature. The lid is then brought down, the mould shifted by a hinge from the horizontal to the perpendicular, and the liquid metal poured into the matrix by a small orifice which has been left, and in a minute the stereotype plate is pronounced complete. At least the only preparation for the press which it requires is the trimming of the superfluous edges, which is done by a circular saw with great celerity. The back of the plate is as smooth as the slab of metal from which it received its impression, and thus the planing process in stereotyping is now done away. The young French workman, whom we observed conducting the process at Mr. Wilson's, informed us that the whole operation, from beginning to end, was conducted in less than an hour, while the ordinary periods of taking stereotype casts is, we believe, from ten to twelve hours, liable to the breaking, splitting, or warping of the stucco matrices—risks which are unknown in the new card process. During the half-hour that we remained, the operative "beat in" impressions from a card of steamboat advertisements, and also a page from the *Missionary Intelligencer*—types which had been borrowed from a printing-office at random—and produced plates from them as distinct and clear as any we have ever seen to issue from a stereotyping establishment. We may add, that many impressions—so many, indeed, as a dozen—may be taken from the same card; and the process is one of such perfect cleanliness, that a man might almost work at it in a parlour in his dress coat. We hail the new mode with satisfaction, as one which will materially aid and abet in the cheapening and extension of knowledge.—*Glasgow Herald.*

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

CONVERSATIONS ON MESMERISM.

A WORD with you. Assuming that your desire is to ascertain the very truth—that you will seek it honestly and fairly, and frankly own it when found—we ask you to listen to a few observations, and if you deem them to be erroneous, to shew us where the fallacy lies.

You are hostile to Mesmerism, affirming it to be altogether or in great part a trick—a fraud.

This assertion you are bound to prove, as you will readily allow.

You proceed thus to do so. You discover some instances of trickery and fraud, and you conclude that all cases are so.

But is this a fair or a philosophical conclusion? Because some cases of madness are found to be assumed, should we therefore be justified in asserting that all madness was a fraud, and every madman a trickster?

This fallacy failing, another is resorted to. They say, the proof lies not upon us, but upon you, who affirm the existence of Human Magnetism.

We admit this; and we adduce cases, not few and far between, but by hundreds and thousands. We say, "Behold the phenomena to which that name has been given. Here is our proof—our witnesses are your own eyes and ears."

But unhappily this proof, the non-production of which would have been held to be decisive against our assertions, is denied and derided. That selfsame proof upon which all human knowledge is based—the proof that daily satisfies where life or fortune are at stake—is coolly set aside by the opponents of Mesmerism, when the question is not one of crime or contract, but as to the existence of a fact in nature.

"Believe what you see," used to be the rule. Now we are asked "Not to believe what we see."

But it would not do to deny the appearance, and so refuge is taken in a denial of its reality.

The patient is playing a trick—there is collusion with the operator—it is a piece of clever acting—the part has been learned by rote—the sleep is no sleep—pain is felt, though not shewn—that seeming influence of the will is only the communication of a sign.

Nothing is so easy as to charge a fraud, and in this case it becomes almost impossible to rebut the charge. "How can I be sure that you are not in collusion with that boy?" is a question which admits of but one reply: "Only as you feel assurance of other facts of daily occurrence, an ingredient of which is faith in the honour and honesty of your friend."

There is nothing like bringing an argument home to a man by a personal application of it. We put a similar case.

Suppose the objector be a medical man, and witnessing the phenomena of Mesmerism elicited by some friend of equal social rank with himself, and whose honour he had no cause to doubt. Suppose, too, that the Mesmerist was master of that good temper which it is so difficult to preserve when dealt with so unfairly. The following might be their colloquy:

Mesmerist. Now you have seen these phenomena, what do you think of them?

Surgeon. They are very extraordinary and curious, if true; but how do I know that the boy was not acting.

Mesmerist. Because there was no prearrangement. Yourself suggested the trials to be made. He could not have anticipated and prepared himself for your suggestions.

Surgeon. But you may have instructed him in a language of signs by which you communicate to him what you desire him to do.

Mesmerist. That would be to participate in a fraud, and I am sure you would not charge me with that.

Surgeon. Oh! certainly not. But you are yourself deluded. The patient is putting a trick upon you.

Mesmerist. Excuse me, I cannot suffer you thus to escape from the fair conclusion. Either you deny the fact you have witnessed, or you charge me with participating in a trick to produce it. According to your own admission these facts are realities or they are the result of collusion. Unless the patient was previously trained to understand my signs it is physically impossible that he could have obeyed the directions yourself communicated to me.

Surgeon. But for facts so curious and out of ordinary experience, nothing less than demonstrative proof will suffice. Can you explain the facts you shew?

Mesmerist. Can you explain how sensation is conveyed from the nerve to the brain, how food is assimilated to blood, how this or that medicine produces its effects? Can you explain the *modus operandi* of one-fiftieth part of the animal functions? Yet do you not deny the facts of sensation and digestion and healing, because you are unable to say *how* they are effected. You simply see the fact, and you believe it because you see it. Why should you demand for the phenomena of Mesmerism other proof than that which satisfies you in every other branch of physiology?

Surgeon. But the facts of Mesmerism are so wonderful that nothing less than absolute proof will justify their acceptance.

Mesmerist. I do not know what you mean by absolute and demonstrative proof. In all physiology we have no other evidence than the fact as seen and felt. We have precisely the same foundation, neither more nor less, for Mesmerism. It is a visible, palpable fact, not some deduction from an argument or a fine-spun hypothesis. We say only—If you do thus and thus certain results will follow, which we have named Mesmerism. Surely nothing can be more simple than such an issue. The rational mode of testing the assertion is to make trial of the means and see if they conduct to the end. The rationale of it is not now the question, that is a matter for deliberation and inquiry. The first point we have to determine is the plain fact—Do such phenomena exist? How they exist will be a second step, better postponed till the first is assured. And now I turn upon you again. "There it is; behold the fact before you; you say you do not suspect me of collusion; yet without collusion you will admit such feats of acting to be impracticable."

Surgeon. Still I have only your assurance for it that the boy is not shamming sleep and playing a part. You will admit that he might be taught to do all I have seen him do.

Mesmerist. I grant such training of an apt scholar to be possible; but to perform it the patient would require the genius of a KEAN. Waiving, however, all question of possibilities, I bring you at once to an issue. There he is; you see his condition; it differs from any other with which you were previously acquainted: you acquit me of collusion; that

condition is what we call Mesmerism. Now, what say you to it?

Surgeon. Still, that the boy may be shamming all this.

Mesmerist. But his is not a solitary case. The same phenomena are shewn among persons of all ages and both sexes; in every rank and station. Either all these are shamming,—the virtuous, the honourable, the pious, have suddenly turned impostors,—or their induced condition is a fact in nature.

Surgeon. You do not shake my position. There is no proof that all are not shamming.

Mesmerist. Permit me to meet you with a case somewhat parallel, and, in sport, to turn your weapon against yourself, that you may feel how unfair a one it is.

Surgeon. Willingly. I promise to keep my temper as well as you have done.

Mesmerist. Pray do you believe in insanity?

Surgeon. To be sure I do. Who can doubt its existence?

Mesmerist. That do I. Nay, I deny it as flatly as you deny Mesmerism.

Surgeon. Have you never seen a madman?

Mesmerist. I have seen the people you shewed to me as being mad; but I deny the fact.

Surgeon. Were not their actions and speeches wild and irrational? Did they appear in the natural condition of ordinary men?

Mesmerist. Certainly not; they were very odd indeed. But you can't explain madness; and till you can do that, you know you have no right to expect persons to believe it.

Surgeon. Not even if they see it?

Mesmerist. There may be collusion with the exhibitor. They may have been taught to play a part. You do not mean to say that a man may not be taught to imitate madness, and if this *may be* done, how can I be assured that it *is* not done?

Surgeon. Your assurance must be the character of the doctor. Is he such a one as would shrink from practising a fraud?

Mesmerist. Still there is a resource for me. I affirm that your patients are shamming; they are not mad but only pretending madness; they are consummate tricksters, admirable actors, no more. Unless you can prove them to be otherwise, you have not proved the existence of insanity as a fact in nature.

Surgeon. I appeal to the number, to the variety of age, sex, station of the patients, as proof that they are not all impostors. If they be, the world can boast of greater actors than it is aware of.

Mesmerist. So I have brought you to the same point as you had driven me to, and I now call upon you either to abandon belief in insanity, or accept the existence of Mesmerism, seeing that both stand or fall on precisely the same basis, and that the evidence for the one is no whit stronger than that for the other.

Surgeon. Your argument is staggering, and you have, I admit, put your case fairly. I must think of it.

Mesmerist. We can afford to be generous in such a cause. I will not ask you to believe upon the faith of any thing you have seen done by me, although nineteen-twentieths of all human knowledge is received on evidence far less satisfactory. I ask you only to make trial for yourself, and judge by the result of your own experience. This is the only test that can be perfectly satisfactory to the sceptic. Go to your home, make trial of it in your family among your friends. Take village clowns, if you please, by whom mesmerism and phrenology were never heard of; magnetize them; try with them the experiments you have seen me try to-day. You will be assured thus that there is neither training nor collusion. If, after multiplied trials, you produce none of the effects expected, you will be justified in questioning the reality of Mesmerism. But if, as certainly they will, they appear under your hands, you will no longer be enabled to resist conviction. If you have honest intentions, and sincere love for truth, and desire for the progress of science, this you will do. If you decline this test, it will prove that your opposition is not founded in good faith.

Surgeon. We will talk again on this topic. Meanwhile, I must review your arguments at leisure; they seem substantial.

To Booksellers.—*A stamped copy of* The Critic *sent regularly to any Bookseller, for his own use, at the cost of stamp and paper only, on prepayment of* half a year's subscription, at least (4*s.* 4*d.*), *which may be transmitted in penny postage stamps.*

Booksellers *and Keepers of Circulating Libraries are requested to communicate to* The Critic *the results of their experience as to books and classes of books most in demand, and other similar information. Books wanted to purchase inserted in the weekly list without charge.*

BOOKSELLERS' CIRCULAR.

In reply to inquiries from many of the booksellers, we beg to say that we hope each of those who are subscribers to The Critic will so far feel an interest in the great projected enterprise of the *Morning Mail* as to use personal exertions not only to make it known among his connections, but to explain the design, and give assurance of its good faith and respectability as proceeding from a quarter so well known to them as we trust by this time is The Critic. To this end let each deem himself an agent to receive applications for shares, and forward them to us. For answer to many queries they have put, we refer them to the article upon the subject which appears in another page, and that will assure them of its substantial nature, and of the prudence that will preside over the conduct of the enterprise. If any desire prospectuses for distribution they shall have them if they will inform us how they may be transmitted without cost. The period proposed for bringing out the *Morning Mail* is the opening of the next session of Parliament, which will allow of ample time for getting it up with the care and completeness essential to success.

One encouragement we have which carries some weight. It is admitted on all hands, without a dissentient, that there is not merely an opening but a demand for such a journal, and that if it *can* be got up properly, it is sure to succeed. Let the shares be subscribed, and it shall soon be shewn that the thing *can* be done.

LITERARY INTELLIGENCE.

EUGENE SUE AND THE MANCHESTER ATHENÆUM.

(From the *Manchester Guardian.*)

It will be in the recollection of our readers that we announced, some time ago, that this distinguished French writer had been invited by the directors of the Athenæum to be present at the forthcoming *soirée*, to which invitation the following interesting reply has been received by the honorary secretary:—

"Aux Bordes, le 7 Octobre.

"Monsieur,—J'ai reçu avec la plus profonde et la plus respectueuse reconnoissance, l'invitation que vous m'avez fait l'honneur de m'adresser, au nom de messieurs les directeurs de l'Athenæum de Manchester.

"Malheuerusement une maladie nerveuse, que l'on attribue à unexcès de travail, et qui exige des soins incessants, en raison des vives douleurs qu'elle me cause encore, m'empêche, à mon bien vif regret, de pouvoir me rendre en Angleterre afin d'assister à la Séance Annuelle de l'Athenæum.

"Veuillez monsieur, être mon interprète auprès de messieurs les directeurs de l'Athenæum, et leur dire combien je suis touche, pénétré, de la flatteuse distinction qu'ils daignent m'accorder, car c'eut été pour moi une faveur, aussi grande qu'inespérée, que de m'asseoir à côté d'écrivains aussi éminens que Messieurs Dickens, Talfourd, Disraeli, Jerrold, Smythe, &c.; sachant toute-foi, monsieur, que je n'aurais dû cet honneur qu'aux vives sympathies inspirées par les idées sociales qui me sont communes (et j'en suis doublement fier) avec ces hautes célébrités littéraires, quant à mes œuvres, elles sont trop imparfaites pour mériter une pareille récompense.

"Ayez encore la bonté, monsieur, de dire à messieurs les directeurs de l'Athenæum, que je n'oublierai jamais cette preuve de leur bienveillante estime, et que je m'efforcerai toujour d'en rester digne.

"Agréez, monsieur, l'assurance de mes sentimens les plus distingués. "Eugene Sue.

"Monsieur Pierre Berlyn, Secrétaire Honoraire
de l'Athenæum de Manchester."

It is impossible to convey the spirit and elegance of this letter in a translation, but we annex one, as nearly literal as possible:—

"Sir,—I have received with the most profound and respectful gratitude the invitation which you have done me the honour to forward me, in the name of the directors of the Manchester Athenæum. Unfortunately, a nervous illness, which is attri-

buted to overwork, and which requires incessant care in consequence of the pain which it gives me, precludes me (to my keenest regret) from coming to England for the purpose of being present at the annual *soirée* of the Athenæum.

"Have the goodness, Sir, to be my interpreter with the directors of the Athenæum, and to assure them how I am touched and impressed with the flattering distinction which they have deigned to accord me, for it would have been to me an honour as great as it was unhoped for to have been associated with such eminent writers as Messrs. Dickens, Talfourd, Disraeli, Jerrold, Smythe, &c. knowing, at the same time, Sir, that I should only have owed this honour to the lively sympathies inspired by those ideas of social progress which I possess in common (and I am doubly proud of it) with these distinguished literary men; as to my works, they are too imperfect to merit such a recompense.

"Will you have the goodness, Sir, to assure the directors of the Athenæum that I shall never forget this proof of their friendly esteem, and that I shall always endeavour to remain worthy of it.

"Accept, Sir, the assurance of my most distinguished consideration. "EUGENE SUE."

M. Sue appears to have been highly gratified with this invitation, as will be seen by the following letter, addressed to the directors of the Athenæum, by Mr. Charles Dickens:—

"Devonshire-terrace, Oct. 17, 1845.

"DEAR SIRS,—M. Eugene Sue has begged me to write to you and acknowledge with many heartfelt thanks the receipt of your flattering invitation. He requests me to assure you of his high and unfeigned sense of the honour you have done him, and earnestly entreats me to add that he is gratified by your recognition of him, a French writer, in England—certainly beyond his power of expression in a foreign language, and to an extent not at all easy of expression in his own.

"His state of health, however, does not admit of his attending the *soirée* at Manchester. He has been very unwell, and is enjoined to seek repose, in pursuance of which advice he has already left Paris in search of temporary change and quiet.

"If I could convey to you an adequate idea of M. Eugene Sue's anxiety that I should do my very best to thank you on his behalf, and to find 'strong words' for that purpose, you would feel with me that your remembrance of him has met with a sincere and quick response.

"I have the honour to be, Gentlemen, your faithful servant,
"CHARLES DICKENS.

"To the Directors of the Athenæum, Manchester."

JACK SHEPPARD.—We find the following statement in a morning paper—which vouches for "the genuineness of the articles" mentioned in the narrative "being beyond the possibility of a doubt." For some time Mr. Smith, the proprietor of the Hope Tavern, in Blackmoor-street, Clare-market, has had in his possession the portraits, painted by Thornhill, of those great historical characters, Jack Sheppard and his mother, and sold them, a few days since, to Mr. Merivale, of Gray's-inn, for ninety-seven guineas. That the portrait of the illustrious highwayman should have passed from the keeping of the publican into that of the lawyer, might, perhaps, afford the material of a good-natured epigram to the dealers in such pleasantries; but we are grave chroniclers, and deal with facts. In removing the portrait of Jack's progenitor from its frame, there were found, below the moulding, seven guineas, together with a number of copper coins of the period. Put accidentally thus upon the scent of some of Jack's secrets, it was an easy inference that it might be worth while to make a careful examination of the other frame—which, besides, was of a suspicious thickness, and it yielded up its treasures accordingly. Between the moulding and lining were found a number of papers and documents relating to the rising in 1745, some extremely curious, and all bearing the post-mark of the time; besides furniture more characteristic, and which should have been left as appropriate frame-work to the portraiture of Jack. There were a portion of a note for 10*l.* and a check (not his own, we assume) for 17*l.* The paragraph should properly be headed, "Singular discovery of stolen property;"—but long since the thief has paid all his debts, and the owners have cancelled all their claims. It is Mr. Smith's intention that the British Museum shall be their representatives. Among the papers mentioned is a printed order for turning the Lincoln's Inn Theatre into a guard-house, and suspending a performance announced on that account. If this be a fair specimen of the "curious documents relating to the rising in 1745," the seven guineas, which, we presume will *not* go to the Museum, may be suspected to be the most valuable portion of the property.—*Athenæum.*

We understand that Mr. Alfred Tennyson, the poet, has been placed on the pension list by Sir Robert Peel for an annuity of 200*l.*

The Pope has thrown the library of printed books in the Vatican open to the public, and ordered the preparation of a catalogue for their use.

A subscription is in progress for the widow and young family of Mr. Augustin Wade, the late song-writer and composer, who died prematurely in very indigent circumstances. Many music-sellers and pianoforte-makers have offered to receive subscriptions.

REGISTER OF NEW PUBLICATIONS,
From Oct. 18 *to Oct.* 25.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded* by letter *will be duly inserted.*

LIST OF NEW BOOKS.

Alphabetical Index to the Subjects and Names of the Old and New Testament, 32mo. 1s. cl. 1s. 6d. roan.—Adcock's Engineers' Pocket-book, 1846, fc. 8vo. 6s. roan tuck.—Arnold's (Rev. T. K.) First German Book, 12mo. 5s. 6d. cl.—Ancient Domestic Architecture of England, by John Britton, and Rev. Charles Boutell, M.A. small 8vo. in case, 5s. cl.

Wilson's (E.) Practical Treatise on Healthy Skin, pt. 8vo. 10s. 6d. cl.—Williams's (S. H.) First Note of the Lyre, crown 8vo. 5s. cl.

Zoology of the English Poets, by Robert H. Newell, B.D. 12mo. 5s. 6d. cl.

BOOKS WANTED TO PURCHASE.

No charge is made for insertion in this list. Apply to the Publisher of THE CRITIC, stating prices.

The Lancet, for 21 Oct. 1843.
Gill's Commentary, complete, 2 copies.
Laman Blanchard's "Sonnets and other Poems." Published by Moxon.
Calder Campbell's "Palmer's last Lesson." Published 1838, by Houlston and Hughes, Strand.

To Readers and Correspondents.

E. M. R.'s "*Lines to a Swallow*" *are not original enough for publication.*

A STAMMERER.—*This infirmity has been cured by Mesmerism in many cases, some of which are recorded in Mr. Hall's excellent* "Experiences," *reviewed a fortnight since.*

RUFUS.—*The treatise on Arithmetic in the Library of Useful Knowledge. The prices of the books named are not known to us.*

A SUBSCRIBER's *verses do not suit us.*

The usual article on French Literature, which was in type, has been postponed for want of room.

THE CRITIC,
And Journal of Literature.

SATURDAY, NOVEMBER 1, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

THE PROJECTED MORNING NEWSPAPER.

IN spite of the disfavour which the madcap railway bubbles have brought upon all projects, however rational and promising, so much is the proposition for the establishment of THE MORNING MAIL approved by the public, that a very considerable number of applications for shares have been received during the week; and the applicants are all persons seeking investment—good substantial names, proving that the plan is looked upon as an enterprise that bids fair to be successful.

And it possesses this one great advantage above any of the railway schemes, that it can afford to wait. The railway projects require notices, and surveys, and deposits to large amounts, and all to be completed within a day now drawing nigh. Failing in either of these, the scheme itself must fail, or stand over for an indefinite period. Not so with the MORNING MAIL. It needs nothing of these preliminaries; it incurs a very trifling cost; it requires not to be completed within an appointed time. The shares may be taken up by degrees, after the panic that has now frighted many, even from wholesome enterprise, shall have given place to returning confidence; and, wearied of railway folly, other better investments will be sought. THE MORNING MAIL has but to abide its time. If those who feel an interest in it, and think well of the design, will but make it known to their friends, recommend it whenever an opportunity offers, and procure shares to be taken by those known to them as responsible parties, it will be accomplished more satisfactorily, if not more speedily, than by throwing away large sums in advertisements.

By thus proceeding with caution and deliberation, we believe we shall more consult the ultimate prosperity of the enterprise than by any hasty measures and extravagant expenditure. If it was a bubble scheme there would be a fear lest it should burst by too long keeping; but inasmuch as it will endure the most careful scrutiny, nothing will be lost by deliberate movements.

JOURNAL OF ENGLISH LITERATURE.

BIOGRAPHY.

The Dispatches and Letters of Vice-Admiral Lord Viscount Nelson; with Notes. By Sir NICHOLAS HARRIS NICOLAS, G.C.M.G. Vols. III. and IV. London, 1845. Colburn.

THREE volumes were the limits originally designed for this work, but so rich are the contributions that from all quarters have poured in upon the Editor during its progress that it has been enlarged to a fourth volume, and we may even hope for a fifth from the stores of collectors of curiosities, who cannot yet be prevailed upon to impart their treasures to the world.

Four years only of NELSON'S career are recorded in these two volumes, but they are the most stirring of his active life, when his hands and head were busiest, and his pen most diligent. Here, too, the character of the hero comes out more clearly upon the canvass, both in its lights and shadows. We see the original features as stamped by nature; but we see them, also, at times darkened by the shadows of a world where virtue is sorely tried, and on which he who would form a just judgment must take into account the temptations as well as the lapses of the fortunate.

In the year 1798 Nelson took the command of the *Vanguard*, and sailed for the Mediterranean, to keep watch upon the movements of the armament BUONAPARTE was preparing at Toulon. But the fleet had already quitted that port, and as it was conjectured for Egypt, whither the admiral forthwith sailed, with a reinforcement which had joined him: the result was the Battle of the Nile, the details of which must already be too familiar to our readers to permit us to linger over this portion of a work that contains so much beside of more novelty.

The news of the great victory was received at home with a perfect phrensy of joy, and there was no end to the honours and praises lavished upon the hero of the fight. A specimen of the intoxication of delight that had seized upon all classes, is this strange letter addressed to NELSON by the Countess SPENCER:—

Joy, joy, joy to you, brave, gallant, immortalized Nelson! May that great God, whose cause you so valiantly support, protect and bless you to the end of your brilliant career! Such a race surely never was run. My heart is absolutely bursting with different sensations of joy, of gratitude, of pride, of every emotion that ever warmed the bosom of a British woman, on hearing of her country's glory—and all produced by you, my dear, my good friend. And what shall I say to you for your attention to me, in your behaviour to Captain Capel? All, all I *can* say must fall short of my wishes, of my sentiments about you. This moment the guns are firing, illuminations are preparing, your gallant name is echoed from street to street, and every Briton feels his obligations to you weighing him down. But if these strangers feel in this manner about you, who can express what *we* of this house feel about you? What incalculable service have you been of to my dear Lord Spencer! How gratefully, as First Lord of the Admiralty, does he place on *your* brow these laurels so gloriously won! In a public, in a private view, what does he not feel at this illustrious achievement of yours, my dear Sir Horatio, and your gallant Squadron's! What a fair and splendid page have you and your heroic companions added to the records of his administration of the navy! And, as wife of this excellent man, what do *I* not feel for *you all*, as executors of *his* schemes and plans! But I am come to the end of my paper, luckily for you, or I should gallop on for ever at this rate. I am half mad, and I fear I have written a strange letter; but you'll excuse it. Almighty God protect you! Adieu! How anxious we shall be to hear of your health! Lady Nelson has had an express sent to her.

But amidst the compliments and congratulations poured upon him, there was one that would seem to have been almost premonitory of his early fate. The strangest present ever sent by one man to another was probably that of his friend Captain HALLOWELL—a coffin, entirely constructed from the timber of the mast of *L'Orient*. The following is Sir H. NICOLAS'S account of this singular offering:—

So careful was he that nothing whatever should be used in its construction that was not taken from it, that the staples were formed of the spikes drawn from the cheeks of the mast, which were driven into the edge of the coffin; and when the lid was put on, toggles were put into the staples to keep it down, so as to prevent the necessity of using nails or screws for that purpose. The nails in the coffin were likewise made from the spikes taken from the mast. A paper was pasted on the bottom, containing the following certificate:—"I do hereby certify that every part of this coffin is made of the wood and iron of *L'Orient*, most of which was picked up by his Majesty's ship, under my command, in the Bay of Aboukir. *Swiftsure*, May 23, 1799.—BEN. HALLOWELL." This singular present was accompanied by the following letter, which is taken from the *original*, in the Nelson Papers, a fact it is necessary to state, because both Charnock and Harrison, not contented with destroying its simplicity, altered the address to "Sir," and changed the date to "August, 1798," to make it appear that the coffin was sent immediately after the Battle of the Nile. Though printed correctly by Clarke and M'Arthur, Southey followed the copy given by Charnock and Harrison. It is greatly to be regretted that Nelson's reply has not been found:—

"The Right Hon. Lord Nelson, K.B.

"My Lord,—Herewith I send you a Coffin, made of part of *L'Orient's* mainmast, that when you are tired of this life you may be buried in one of your own trophies—but may that period be far distant, is the sincere wish of your obedient and much obliged servant, "BEN. HALLOWELL.

"*Swiftsure*, May 23rd, 1799."

The astonishment that prevailed among the crew of the *Vanguard*, Lord Nelson's flag-ship, when they were convinced it was a *coffin* which had been brought on board, will be long remembered by their officers. "We shall have hot work of it, indeed," said one of the seamen; "you see the admiral intends to fight till he is killed, and there he is to be buried." Lord Nelson highly appreciated the present, and for some time had it placed upright, with the lid on, against the bulk-head of his cabin, behind the chair on which he sat at dinner. At length, by the entreaties of an old servant, he was prevailed on to allow it to be carried below. When his lordship left the *Vanguard*, the coffin was removed into the *Foudroyant*, where it remained, for many days, on the gratings of the quarter-deck. While his officers were one day looking at it, he came out of the cabin: "You may look at it, gentlemen," said he, "as long as you please; but, depend on it, none of you shall have it." It is satisfactory to state that Nelson was actually buried in this coffin.

But the evil genius that had so often contrived to mar his influence at the Admiralty, and of which some instances were recorded in our notices of the former volumes, still contrived to poison against him the ear of royalty, and to deprive him of a portion of the honours to which he was entitled—measuring his services by those of others. Sir JOHN JERVIS had been created an Earl for the battle of St. Vincent, and Admiral DUNCAN a Viscount for Camperdown; but NELSON, for the Nile, which so far surpassed them in brilliancy and in importance, was promoted only to the dignity of a Baron. The announcement was thus made to him:

Admiralty, 7th October, 1798.

My dear Lord,—I have the greatest satisfaction in obeying his Majesty's commands, by acquainting you that his Majesty has been graciously pleased to testify his Royal approbation of your conduct in the signal and brilliant Victory you obtained over the French Fleet on the 1st of August, by conferring on you the dignity of a Baron of Great Britain, by the name, style, and title of Baron Nelson of the Nile, and of Burnham Thorpe, in the county of Norfolk. In congratulating your lordship on this high distinction, I have particular pleasure in remarking, that it is the highest honour that has ever been conferred on an officer of your standing in the Service, and who was not a Commander-in-Chief; and the addition to the title is meant more especially to mark the occasion on which it was granted, which, however, without any such precaution, is certainly of a nature never to be forgotten.

No wonder that Lord HOOD should comment on this palpable pretext after this fashion:

In my humble judgment, a more flimsy reason was never given. All remunerations should be proportionate to the service done to the public, let the officer who does it be first, second, or third in command. But, in fact, your lordship stood in the situation of Commander-in-Chief off the mouth of the Nile, and could not possibly receive any advice or assistance, at the distance of near a thousand leagues from Earl St. Vincent, and conquered from your own personal zeal, ability, and judgment. I do assure you, my dear and much-loved lord, I am not singular in the sentiments I have stated. They are in unison with the general voice of your grateful country.

While thus receiving honours and wealth, he was not forgetful of his friends. We find him continually putting in claims for promotions for deserving officers, and endeavouring to secure to every one his due share of the common glory. He divided among his family 2,000*l.* out of the East India Company's munificent grant, and settled 500*l.* a year upon his father out of the estate presented to him by the King of Naples. He was then commanded to the Bay of Naples, and he went reluctantly; and now began the unhappy portion of his life—the blot upon his fame dead, as it was the source of his great disquietude living. Here it was that his attachment for Lady HAMILTON commenced, and which ultimately separated both of them from society. How far the manners of the Court and people with whom he was abiding had produced this moral lapse is a question which future philosophers may discuss, but it is evident from the letters that the change was gradual, probably imperceptible to himself. The court of Naples, which at the beginning he had so hated and despised, he learned by degrees first to endure, then to like, as its habits fell in with his own impetuous passions. The fact appears to be that the King and Queen of Naples, the latter more especially, had seen his growing attachment to Lady HAMILTON, and had cleverly contrived to win him by shewing attention to and regard for her. Hence, such passages as these in his correspondence at this period. "She (the Queen) begs me not to quit Palermo; for that Sir WILLIAM and Lady HAMILTON, and myself are her only comforts."—"I could lay down my life for such good and gracious monarchs."—"I am here, nor will the King or Queen allow me to move."

The whole character of the man changed with this unfortunate passion. Like all minds conscious of guilt he was ill at ease, and his self-reproaches found vent in peevishness towards others, and sometimes in desponding language as respects himself. As for instance in the following:

Our great queen, who truly admires you, our dear, invaluable Lady Hamilton, our good Sir William, and give me leave to add myself to this excellent group, have but one opinion about you, viz. that you are everything which is great and good. Let me say so. * * * Let me thank you for your goodness to Capt. Nisbet. I wish he may deserve it: the thought half kills me. My dear lord, there is no true happiness in this life, and in my present state I could quit it with a smile. May God Almighty bless you with health, happiness, and long life, is the fervent prayer of your affectionate friend, NELSON.

Sir SIDNEY SMITH appears to have been the subject of much soreness for reasons not very intelligible. In various letters he expresses his feelings in no very mild tones.

If Sir Sidney was an object of anger, I would not serve unless he was taken away; but I despise such frippery and nonsense as he is composed of. * * * I shall, my lord, keep a sufficient force in the Levant for the service required of us, but not a ship for Capt. Smith's parade and nonsense—Commodore Smith—I beg his pardon, for he wears a broad pendant—has he any orders for this presumption over the heads of so many good and gallant officers with me? Whenever Sir Sidney Smith went on board the *Tigre* in state, as he calls it, the royal standard was hoisted at the mast-head, and twenty-one guns fired. The Turks, however, who love solid sense and not frippery, see into the knight, and wonder that some of Sir Sidney's superiors were not sent to Constantinople; but I have done with the knight.

Yet, while addressing such remarks as these to others, he could thus write to Sir SIDNEY himself:—

To Capt. Sir William Sidney Smith, H. M. Ship Tigre.
Palermo, 20th August, 1799.

My dear Sir,—I have received with the truest satisfaction all your very interesting letters to July 16th. The immense fatigue you have had in defending Acre against such a chosen army of French villains, headed by that arch-villain Bounaparte, has never been exceeded; and the bravery shewn by you and your brave companions is such as to merit every encomium which all the civilized world can bestow. As an individual, and as an admiral, will you accept of my feeble tribute of praise and admiration, and make them acceptable to all those under your command. * * * Be assured, my dear Sir Sidney, of my perfect esteem and regard, and do not let any one persuade you to the contrary. But my character is, that I will not suffer the smallest tittle of my command to be taken from me; but with pleasure I give way to my friends, among whom I beg you will allow me to consider you, and that I am, with the truest esteem and affection, your faithful humble servant, NELSON.

And about the same period we find these "bloody instructions"—sad—sad detractions from our notions of the British seaman, brave but humane.

Your news of the hanging of thirteen Jacobins gave us great pleasure; and the three priests, I hope, return in the *Aurora*, to dangle on the tree best adapted to their weight of sins.

(To be continued.)

VOYAGES AND TRAVELS.

Lusitanian Sketches of the Pen and Pencil. By W. H. G. KINGSTON, Esq. In two vols. Parker. 1845.

MR. KINGSTON is a cheerful, good-tempered, open-hearted, and open-handed gentleman, who goes about the world accommodating himself readily to all companies, making friends everywhere,—looking at the bright side of things, and the best features, mental and bodily, of persons; quick to observe whatever presents itself upon the surface of society, too easy or too indolent to dive below and search into causes. Such he is shewn to be, not only by the volumes before us, but by his novel of *The Prime Minister*, which we noticed in THE CRITIC some time since with little approbation, because it was evident that he had applied himself to novel writing, as being

the most popular form of composition and not as that to which his genius had prompted him.

In these *Lusitanian Sketches* he is seen to much greater advantage. Although there is an evident flimsiness about them, both in tone of thought and style of writing, yet are they just the sort of light, easy, lively reading, which pleases the many, who prefer a book which can keep them awake by its liveliness, and yet demands no toil of reflection or attention to be understood. It is a book which the listless may lounge over, lolling upon a sofa, during a wet day or a long evening, and which will just permit them to please themselves with the belief that they have not been wasting their time, without the fatigue of actual work. Hence will Mr. KINGSTON's Sketches certainly be popular, and the extracts we shall make will, we think, fully bear out the view we have taken of them.

Mr. KINGSTON's acquaintance with Portugal appears to date back for some years. These sketches, however, are of recent production, having been made since the autumn of 1843, when the tours began which furnished the materials for them. One of them was through Guimaraens and Salamonde, the route of the famous retreat of Marshal SOULT. A second took the direction of Coimbra, Busaco, and Almeida, crossing the frontier of Spain to Salamanca. A third was to the vine countries, of which a vivid description is given, and Mr. KINGSTON takes the opportunity to introduce some useful information as to port wine, and hints to buyers, that may be turned to profitable account.

An added value is given to these *Sketches* from the paucity of information relating to Portugal with which travellers have supplied us. It is rather strange that when tourists are looking out for some unworn tract whereon to exercise their limbs and pens, that Portugal should have been so long passed by, and that it should have been left to the sagacity of Mr. KINGSTON to bring home the first minute account of it which has been offered to the English readers for many years, during which its political and social condition have undergone so great a revolution. Certainly the subject would have admitted of a better book, but we are thankful for such as he has given us, and we must await the more solid information from some successor whose journal may be more substantial, but will scarcely be so pleasant and amusing.

Mr. KINGSTON introduces his notes with a dedication to the Earl of CARNARVON, which contains a deserved tribute to his lordship's merits, personal and literary. Having then briefly stated the direction of his various tours, he very frankly requests the reader to skip whatever may seem uninteresting. In like fashion we propose to ramble through his pages, and cull, by way of specimen, such passages as may strike our fancy.

At the cathedral at Guimaraens he gleans the following story of

THE TREASURES OF OUR LADY.

We wandered into the sacristy, but could find no one to shew us the treasures it contains. These treasures are called "The Treasures of Our Lady"—Os Thesouros de Nossa Senhora. A young lady of my acquaintance made an odd mistake on that subject when visiting Guimaraens some time ago—a very natural one, it must be confessed. On her first arrival, while dressing, the maid-servant at the hotel informed her that among the many wonderful things her native city contained were those in the cathedral, particularly "Os Thesouros de Nossa Senhora," which she understood—Our Lady's scissors. When, therefore, she with the rest of her party visited the sacristy, and several venerable priests, whose fair round bellies were with fat *caldo* lined, were standing round, and politely exhibiting the holy treasures of their shrine, she, after all had been shewn, with much hesitation, from considering that they might be unwilling to allow eyes profane to behold so valuable a relic, begged to see "the scissors of Nossa Senhora." "What does the lady want to see?" said one worthy priest, holding his sides, while his cheeks filled out, his lips curling, and a bright sparkle illuminating his eyes. "The scissors of Nossa Senhora!" said the young lady, quietly. "The scissors of Nossa Senhora! Ha! ha! ha! The scissors of Nossa Senhora! Ha! ha! ha!" repeated the priests in chorus; and never was such holy cacchination before heard. At length the first who recovered his breath and voice, with tears in his eyes, explained, amid numerous bursts of merriment, that however much they should value so inestimable a treasure, they did not possess it; that they had already exhibited "*os thesouros* de Nossa Senhora," but that for "suas *tesouras*," they unhappily possessed them not. "Ha! ha! ha!" and again they all laughed. Whoever visits the cathedral of Guimaraens, and wishes to hear a hearty laugh, let him ask to see the "scissors" of Nossa Senhora.

And here is a desciption of the town itself, a fair specimen of his graphic style:—

GUIMARAENS.

Few towns in Portugal are more beautifully situated, or surrounded by a more fertile and lovely country, than Guimaraens. In the orchards in the neighbourhood grow those delicious plums which, being dried, are packed in small round boxes by the nuns, and ornamented with silver and silk flowers. They are well known in England by the name of Guimaraens plums. I remarked particularly the great number of elegant crosses of every shape throughout the town, chiefly of stone, the stems of a light spiral form with merely a cross-piece at the top; also in every direction the numerous shrines, the architecture and ornaments of which were far from deserving of the same admiration. I understand that there are many other objects to be shewn in the town, which we did not see; particularly various relics of peculiar sanctity, not exhibited except to the devout eyes of true believers; but I trust on a second visit that I may be considered as such, and enjoy the inestimable satisfaction of viewing them, when I promise to give a full and exact description of their peculiar virtues. On leaving Guimaraens, we passed under a dark and venerable gateway of the ancient town, on which the hand of time had worked with slight effect; and we might have fancied ourselves a company of the knightly followers of the brave Alfonso Henrique, had we not been clothed in the effeminate habiliments of white jackets and straw hats, which I opine they did not wear. It were endless to describe the beautiful scenery we passed—on each side fertile valleys and laughing hills, rich orchards and luxuriant corn-fields, while every hedge was overhung by the slender tendrils of the vine loaded with its juicy fruit; so that, as we rode along, we might pick and eat to our heart's content. Such is the fertile province of the Minho—the bright gem of Lusitania's lovely land. There are, it is true, steep and rugged serras intervening—the bold outlines of the landscape: but far up their sides extend corn-fields or vineyards, and on their summits graze numerous flocks of sheep or goats. When the gradual extension of good roads enables the farmers to bring their produce at a less expense to market, not a spot of ground will remain unemployed; so that this province will become, for its size, one of the richest in the world, as it is now the richest in Portugal.

Again:—

LUSITANIAN LOVE-MAKING.

Among the peasantry love-making is a more refined affair than in England. A Lusitanian clown, when he meets his mistress respectfully takes off his hat, and stands leaning at some distance on his long stick, while she, on the other side of a gate, or with her basket resting on a wall, looks demurely on the ground, a smile playing on her lips, every now and then turning on her swain such sparkling glances from her bright eyes that it is no wonder his heart is inflamed—and I believe that very rarely is fickle or false. I have a very high opinion of the Portuguese peasantry, but particularly of the females, who are possessed of all the amiable qualities which adorn the sex throughout the world, with as large a share of beauty as generally falls to the lot of any.

He reached Guimaraens at night, and found it a scene of festivity which made rest impossible even for weary men. It was the vigil of the parent saint.

At the same time all the windows of the houses in the square were lighted up. Suddenly up went a rocket before our noses, and flames burst forth from the windows of the tower, while the whole platform on the summit appeared one mass of fire, among which dark figures could be seen moving about. Then rose up a flight of rockets, throwing their sparks in a fiery shower below. It was difficult to persuade oneself that the tower was not really in flames. As the rockets arose, so did the sound of some twenty large drums most unscientifically played, while the bell-ringers redoubled their efforts. "I hope this will not last all night," I exclaimed. "Depend upon it, it will: the people here are very pious." "By their works ye shall know them," said a friend. "By their fire-works, you mean," observed another. "Come, no joking on so serious a subject," I cried. "Oh dear! oh dear!" Bang, bang, bang! drum, drum, drum! whiz, whiz, whiz! What a hurly-burly! The city must be on fire. Oh! hang these sort of righteous people. Away flew the rockets, more sonorous rang the bells, louder beat the drums. "There is such a noise, I cannot see to eat," exclaimed O'Shaughnessy. Bang, drum, whiz! there will be no end of it. "Thank the saints, the bell-ringers' arms must get tired," observed some one. "Do not solace yourself with that idea, my friend," said another; "there are relays of bell-ringers and

drummers; for every man who pulls those bells, and beats those drums, gets a dispensation for so many sins." "Oh dreadful! then the rockets cannot last for ever, that's a comfort." All this time we were hallooing at the top of our voices. "Well, I shall try to sleep. A midshipman slept through the battle of Navarino; and I don't think this noise can be much louder," cried the most sleepy of the party, with a hopeless yawn. At that moment the dreadful assemblage of somnifugeous sounds increased tenfold, but great was our delight to find it was a last effort. Suddenly the fires ceased to burn, the drums to sound, the rockets to whiz; the lights in the windows disappeared, the people retired to their homes; and in ten minutes not a noise was heard but the cry of a roving cat, or the howl of a hungry dog.

Very animated is this picture of

BATHING IN THE DOURO.

It is an amusing sight, and enlivened withal, to look at the rows of white tents, the beautiful girls and their elegant dresses, the crowds of spectators, each sheltered by a bright-coloured umbrella, and some thirty or forty ladies and gentlemen, fat and thin, tall and short, old and young, in the water together, dipping and spluttering, shouting and shrieking, as the white-crested wave rolls towards them—some attempting to swim, others, fearful of being carried out to sea, clinging to their attendants' arms, and endeavouring to make their escape to *terra firma*. Here an old woman bearing aloft a little cherub, independent of any costume, to dip it a due number of times—there a bathing-girl encouraging a stout old gentleman to venture into the water, after he has received the first souse on the head from the contents of a basin, to prevent his feeling the effect of the shock to his feet. Sometimes three or four young ladies will go in together, or a gentleman may be seen leading gallantly some fair one of his acquaintance: but everything is conducted with the strictest propriety and decorum; so that, however extraordinary the style may appear at first to the stranger, he soon becomes accustomed to it.

The most amusing scenes have passed, never to recur, when the friars came down to bathe. Some years ago there was an enormously fat friar, who was ordered to take a certain number of baths at a certain hour in the morning, and it was the general amusement to go down and see him perform the ceremony. He had ten persons to attend him, six men who stood on the shore holding ropes attached to his waist (for he had, conscious of his own floating qualities, a most pious horror of being washed away), and four women who accompanied him into the water. When they got him there, with a proper solicitude for his health, they took good care to make him perform his ablutions abundantly. While the men slackened the rope, they used to dip him and duck him most unmercifully, pressing his head down with their hands, like the merry wives of Windsor packing Sir John Falstaff into the clothes-basket. He dared not resist, for fear they should leave him to his fate, and they would not let him out till he had taken the prescribed number of dips—he spluttering, and crying, and praying, and swearing all the time. Now and then, though seldom, the same scene is enacted with a stout artisan, or a country farmer.

According to Mr. KINGSTON Portugal is in course of rapid improvement. Her government is becoming more stable; manufactures and commerce are increasing; education is spreading among all classes; superstition is losing its hold upon the masses; the monks, by whom the country was overrun but a few years since, are now treated with disrespect and derision; even the Pope is unpopular, and the doctrines and discipline of the Roman Catholic Church are openly questioned.

One of the most novel and interesting chapters is that devoted to the "Traits and Traditions of Portugal," and from this we shall take more largely. Here is one:—

THE BRUXA.

The most terrific of all the supernatural beings in Portugal is the *bruxa* (pronounced *broocha*). She is somewhat in her propensities like the Eastern ghoul, or vampire, from whom, probably, she was derived. In the daytime she is like any other woman, performing the duties of her household in a most exemplary manner. She may be a daughter of honest, good parents; she may marry, and have children; she may even be considered amiable, and is often very beautiful, though there is a certain fierce expression in her eye, and an ominous wrinkle on her otherwise fair brow, which the sceptical would suppose proceeded from care or affliction. Nobody can tell who are bruxas and who are not. They never allow any mortal to discover it; and woe betide the wretch who shall attempt to pry into their secrets! They are a heaven-accursed sisterhood—their souls pledged to the prince of darkness by a compact renewed every night. Sometimes their daughters become bruxas, if they by chance escape their infanticidal and vampirish propensities, or else they keep up their numbers by inveigling some hapless maiden whose heart has been turned from the right path, and who has abandoned the holy religion of the church, to join their association. She knows not whither she is to be led, or what is to be her fate, till it is too late to retract—when the fatal compact is signed and sealed with her blood—then, miserable girl! her shrieks, her cries are of no avail. Repentance is impossible; even the saints themselves have no longer power or will to preserve her. From sunset to sunrise this demoniacal power possesses her; for during the day she returns to her family, no one suspecting the dreadful truth. When darkness has overspread the world, and the spirits of evil are let loose, the bruxas rise from their couches, leaving, if married, their mortal and unsuspecting husbands, and flying to the company of their diabolical paramours. They are then, as a punishment for their crime we may suppose, transformed into the shape of some noxious bird of night—owls or bats of gigantic size. Away they fly at a prodigious rate, far from their homes, over hill and dale, but especially across marshes, stagnant pools, and lakes—unwillingly they skim along the surface, gazing on their hideous forms reflected in the water, and perfectly conscious of their fate. They will sometimes on these nocturnal rambles, encounter some friend or relation proceeding in one direction, and either by allurements, such as practised by Ariel in Prospero's Island, or by force, will carry him to an opposite point, far away from the one he wished to reach; indeed, over strangers or any body they meet they have the same power, provided he is not under the especial protection of the saints. Many a poor wretch has thus been led across the country, over rough rocks, and through brambles and briers, which have scratched his face and torn his clothes, till, almost worn to death, wet, weary, and bloody, he has at length returned home—his wife cursing the hellish bruxas who have thus maltreated and led him astray. Truly the wine-shops have less to answer for than the bruxas; for surely he could not have scratched his face against the bush hung up near the door, or, when drunk, have tumbled into a ditch! Oh, no! the good man was never drunk in his life—he is rather pale now from very natural fear—the diabolical bruxas did it all! After these demon-excited occupations, they, in one or other of the hideous forms allotted to them, with vampirish hunger will fly back to their peaceful homes, where sleep in calm repose their innocent offspring, born of a mortal father. Yet feeling a human loathing for their terrific task, their accursed propensities overcome their maternal love, and seizing on their babes, their black wings fanning them to repose, they suck the life-blood from their veins—dreadful fate! conscious all the time that they are destroying the only ones they love on earth. When they have destroyed these, they enter the cottages of their neighbours and friends, depriving of life in the same way their sleeping infants; and often when a child is found dead, livid, and marked with punctures, the sage women whisper to each other with fear and trembling, "A bruxa has done this," casting eyes of dread suspicion at each other, for no one knows who the bruxa may be. As the first streaks of the grey dawn appear, the miserable females return to their mortal forms, awaiting the time when they must perform their dread orgies, never forgetful of their fate. I do not think that the most poetical imagination could paint a more dreadful lot than that of the hapless bruxa—a being devoutly believed in, and dreaded, in most parts of the country.

Travels in Luristan and Arabistan. By the Baron de BODE. In 2 vols. London, 1845. Madden and Co.

THESE travels have greatly disappointed us. There was a freshness and promise about the names of Luristan and Arabistan which occasioned an instant call for the paper-knife and a hasty cutting of the leaves. Places so unfamiliar must be replete with novelty for eyes wearied with falling continually upon the same names in books of travel, proving how gregarious an animal is man, and how he loves to follow in the track of others, rather than explore a new path for himself.

And where are these two strangely-sounding countries? asks the reader. In a word, then, they are two provinces of Persia, the one inhabited by the Lurs, and thence called Luristan, and the other by Chab Arabs, and from them termed Arabistan.

And who was the Baron who thus dared their exploration? An *attaché* of the Russian embassy in Persia; a restless, reckless, adventurous gentleman, who had been selected for the post he filled on account of these and other qualifications that peculiarly fitted him for duties that were as much those of observation as of representation. A visit to Persepolis had been long and anxiously desired by the Baron, when at length an opportunity offered of which he was only too glad to avail

himself. At the latter part of the year 1840 he was invited by the governor of Ispahan to join him in a tax-gathering tour through the provinces of Luristan and Arabistan; a proposal which was joyfully accepted. Under such auspices, and with such advantages, it was that the travels described in these volumes was undertaken.

The route traversed was this:—Starting from Teheran, the Baron proceeded to Ispahan, visited Persepolis, and thence to Shiraz. Then, turning to the west, he went to Kazerun, and along the mountain chain to Burujird. This district is not quite virgin to the tourist. A great portion of it had been previously explored by KINNEIR and Major RAWLINSON. But in justice to the Baron it should be stated that he lost no opportunity for diverging from their track, nor did he fail to collect much which they had overlooked.

The Baron writes English with ease and even with elegance, and there is a briskness of tone that carries the reader cheerily along from page to page. The style is that with which the reviews of foreign literature in THE CRITIC must have made its readers familiar—a certain egotism, not unpleasing, which leads the writer to mingle his individuality with his works, and thus to combine with description somewhat of personal interest. His fault is that he has too much expanded the work by mere words. His details are often so minute as to be tedious. Compressed into a single volume, as the whole might well have been, for the entire tour occupied only sixty-seven days, it would have been one of the most attractive productions of the season; but now it labours under the charge of leanness as a whole, though so pleasant and lively in parts.

Omitting the mass of learned notes about Persepolis and its ruins, and the elaborate essay or encyclopædical article on the two countries he visited, we shall confine the few extracts we can make to the more miscellaneous and readable of the contents. This is the

"ORIGIN OF THE HELEJ."

This tribe is of Turkish origin; at least Turkish is the language spoken by them. They have not the reputation of being very bright; and the Persians, who pride themselves on their ready wit, their polite and easy manners, tax the Helej with being very uncouth and heavy. The low estimate they form of their mental and social capabilities, is best exemplified by the short though significant sentence with which the name of Helej is associated. The Persians say in common parlance, *Har, Hirs, Helej*—meaning a donkey, a bear, and a Helej.

The meaning of *meum* and *tuum* is ill-defined at Luristan, as witness this trait of

A NOBLE THIEF.

On entering the country of the Mamaseni, I cautioned my servants to keep a sharp eye over our things, as the natives are known to be notorious thieves, when they cannot indulge in open plunder. I was fortunate enough not to lose one single article while travelling through this country; but I learned from a friend who visited the encampment of Chenoshejan a few months later, that the Mamaseni contrived to steal from under his pillow while he was asleep, his sword, which they drew cautiously out of the scabbard, leaving the latter behind.

Suspecting Jehangir Khan himself of the theft, yet admiring the clever way in which it had been committed, the European next morning handed over the scabbard to his host, observing that his newly-acquired sword probably required one. The Khan took it and thanked him.

As a specimen of the vivid painting of the Baron take a description of

MOUNTAIN TRAVEL.

On waking the next morning, we found that the rain had changed into snow, and it was doubted whether we could succeed that day in crossing the high chain. However, eight stout peasants were procured to lead the way, by treading the snow under foot, and thus opening a path for the horses, there being no road.

Fortunately for us, the weather cleared up as we were ascending the mountains; but the difficulties and the fatigues we had to encounter during our progress beggar all description. Notwithstanding the efforts of the men to prepare a beaten track, the snow was not sufficiently solid, and it was so deep that the horses were continually sinking up to their girths, still unable to arrive at any solid footing. There was no possibility of keeping one's saddle; so our party dismounted, each leading his horse; man and beast were continually stumbling, falling, sinking, and plunging, in order to extricate themselves from this abyss of snow.

The country around presented one uniform white sheet, not spread over an even surface, but over one upon which the convulsions of nature had been most busy, and where they had left indelible traces of their passage. It was the lofty chain of Alvend. Mountains overhung mountains, behind which still higher mountains reared their heads, the whole group clad in the same silvery mantle.

It was a chilling sight to look at these regions of eternal snow and ice; and yet our party was far from feeling cold. The perspiration ran down our faces, while a column of steam rose from our panting horses, and the white foam from under the saddles shewed plainly how strenuous were their exertions.

But we must hasten to a conclusion, for other claims are crowding upon our space. It is a scene of peril and excitement that occurred while

EXPLORING THE TOMBS.

The descent was more difficult than the ascent had been. With my Persian servant we were lowered down in the same manner as we had been hoisted up, by means of a rope twisted round our bodies, with the end committed to the charge of the person who stood on the upper platform; but as no one could keep the rope for the kedkhuda who remained there the last, and there were no means of fastening it at the top, he was obliged to come down by himself, clinging in his descent to the vertical rock, which offered very few rough places on which he could lay hold with his hands or fix his feet. It was a nervous spectacle to look upon the man as it were hanging in the air full seventy feet from the ground, just touching the edge of the rock with his tiptoes, and cautiously examining and feeling every trifling projection of the mountain, to ascertain if it would afford any support to his weight. The muscles of his bare arms and legs were completely contracted from the exertion, and the least cramp would have brought him headlong down. We stood gazing from the lower platform, still at a considerable distance from the ground, in breathless anxiety, offering prayers for his safe descent. I reproached myself for having urged him to this rash enterprise, and if a fatal accident had befallen him it would have weighed heavily on my conscience through life. I should never have forgiven myself for having sacrificed a human being to the mere gratification of a vain curiosity after all. But God is ever watchful and merciful to his creatures. At length we had the satisfaction of seeing the daring climber join us in safety amid the loud *Mashallah* and *Barikallah* ("God be praised!" and "Bravo!") of the party, who had just before been ejaculating, *Yah Allah! Yah Ali!* ("God help! Ali help!")

FICTION.

The Attractive Man. By Mrs. TROLLOPE. In 3 vols. London, 1845. Colburn.

More than once we have had occasion to express our opinion of Mrs. TROLLOPE's merits and demerits. It is not necessary to repeat them now. Suffice it that here they are mingled with the usual profusion. There is the same hard, but faithful portraiture; the same coarseness and vulgarity of thought; the same power of description; the same unscrupulous employment of ridicule by misrepresentation; the same lax code of morals. Each of her former novels has been devoted to satirizing some class of the community—often with justice, sometimes unfairly, but always with severity. In *The Attractive Man* she has levelled her poisoned arrows against her own sex indiscriminately, for all the female characters she introduces are disagreeable, if not bad women. Theodore Vidal, "the attractive man," is the personage round whom they centre. He makes conquests wherever he moves, and the ladies are represented as running after him and almost making love to him. Foremost are the two heroines, Mary Clementson and Clara Maynard, to both of whom he engages himself, and marriage in each case is broken off by an accident, upon which the young ladies find consolation in other lovers, to whom they are ultimately united. But these are agreeable and interesting personages compared with the subordinate characters—Lucy Dalton, no better than she should be, and her drunken mamma; Lady Sarah Monkton, who *talks* love to all but her husband; and the Misses Jenkins, angling for a rich old fool, when they should be thinking of their graves.

Such is the staple of this novel, and inasmuch as it presents human nature only in its worst and most hateful aspect, it is a false picture. And yet so vigorously is it painted that we cannot help feeling a sort of pleasure in the performance while we loath the subject. There is reality in this sketch of Mary Clementson's

FIRST BALL.

It would have been impossible for any language in the world, though possessed in the greatest perfection—and Mary's vocabulary was by no means a poor one—but it would have been quite impossible for any language, or all languages mixed together, to have sufficed her to express all the variety of happy feelings which now beset her. She talked, it is true, all the time this scene lasted, as fast as it was well possible to speak; but she had recourse to pantomime unceasing, to assist her. One moment she was making grotesquely solemn curtseys of reception for all the company that were to come; then she was playing the violin with her father's riding-whip upon his boot-jack, and performing the choicest steps her dancing-master had taught her; then she flew to the glass, and first shaking all her redundant tresses over her bright face, she began to arrange them in braids and bows, as much like the wig of Mademoiselle Panache as possible; these, and a multitude of similar monkey-tricks, all performed at full speed, talking as fast as she could gabble the whole time, at length put her completely out of breath; and then, having sat panting upon a hat-box for two minutes and a half, she jumped up again, exclaiming, "Now then, papa, I must go and tell the old ladies all about it!" Neither Mrs. Morris nor Mademoiselle Panache, however, quite deserved the epithet of "old ladies;" Mrs. Morris, the elder of the two, having but just completed her forty-third year, and Mademoiselle Panache being two years younger. But the housemaids and the groom always called them "the old ladies;" and Mary, therefore, did so likewise. But it was done without the slightest intention of being disrespectful. She was, in fact, very fond of both her governesses; for they both treated her with unceasing indulgence, and moreover the French lady was always ready to waltz with her, and the English lady to play to her. Then the Frenchwoman was passionately fond of acting; and many a gay hour was passed between her pupil and herself in repeating together the scenes of all the most lively French comedies, in which there was nothing "*trop fort*" for "*la petite.*" Mrs. Morris had various agreeable talents also. She was an admirable and fearless horsewoman; and Mary, under her auspices, had enjoyed her favourite exercise in much greater perfection than she could have done without her. Moreover, Mrs. Morris was not only an excellent musician, but a charming singer; and as Mary's voice was as sweet and as clear as that of a lark, they beguiled many a long summer's day and winter's evening in singing duets together. In short, these ladies exerted themselves quite as much to amuse the young heiress as to instruct her, and decidedly the best part of her accomplishments were acquired in this manner. Her two governesses were also really very fond of her; and in truth she was such a sweet-tempered little creature, that it would not have been very easy to help it. Nevertheless, it must be confessed that their joy did not quite equal hers, when they learnt the news brought home by Mr. Clementson. Not, indeed, but that a little more variety in their lives would have been very agreeable to both of them; but the prospect of it came clouded with the probability that the very comfortable quarters and liberal salaries which they had enjoyed for the last ten years might probably melt away and vanish in the broad sunshine of fashion and gaiety which now at length seemed ready to burst in upon them. They looked into each other's faces and exchanged a sigh. "Are you not enchanted?" demanded Mary, looking first at one and then at the other. "Certainly, dearest!" replied Mrs. Morris, "it is enough to enchant any body to see you look so happy." "Mais oui, mignonne; le moyen de n'être pas enchanté quand vous êtes contente?" said Mademoiselle Panache. "Mais, hélas!" she added, "n'est-ce pas que nous allons vous quitter?" Mary's answer to this was a violent burst of tears—short, however, as it was violent; for she was both laughing and scolding the minute after—laughing at the idea of setting up for herself in the world, as she called it, and scolding them both for supposing she could be so very happy if she thought two of her best friends were going to leave her. "No, indeed," she added; "I shall tell papa that I intend to have you both living with me till the very day I am married; and then, I suppose, we must part for a little while, because people would laugh at me so if I insisted upon keeping my governesses after I was married; married women, you know, never do have governesses. But then I shall have you both back again the very moment I have got a little girl to teach. You are both of you such dear, kind, good souls, and both of you so very clever! Besides, you know, my dear darlings, that it is not at all likely that I should be married quite directly. Indeed, I mean to tell papa that I won't; I have thought a great deal about that already, I assure you, though I dare say that you neither of you gave me credit for having so much gravity and wisdom in my thoughts. But I have long had it in my head that this dear delightful time of being grown up must come some time or other, though I can't say I expected it would be so beautifully sudden.—Oh! bless you! you dear little birds!" she added, after the pause of a moment, and running to a balcony that had been fabricated for her particular satisfaction. "Don't they seem to be singing on purpose to wish me joy? And the flowers, too! Nobody will ever persuade me, Mrs. Morris, that there is not some sort of mysterious sensibility in flowers. I have observed a thousand times over, I have indeed, that they do smile and look bright and glad upon one at particularly happy moments; and quite early in the morning, for instance, when one goes out unexpectedly to talk to them a little. And then, don't they breathe upon you?—don't they? Deny it if you can! I know they have some sort of soul in them, and I never will marry any man who won't let me convince him of it." At the end of this long harangue, which had been uttered with wonderful rapidity, the young lady became suddenly silent.

We suppose that any novel by Mrs. TROLLOPE must be added to every large library. But we recommend that only one copy be kept of the *Attractive Man*. It is certain not to be so popular as many of her previous works.

Struggles for Fame. By ELIZA METEYARD. 3 vols. Newby. 1845.

WE are generally enabled to form a pretty correct notion of the worth, or rather the worthlessness, of a work, by the fact that it is *not* sent to us for review. THE CRITIC is now known to the publishers as the guide which it has pleased the greater portions of the circulating libraries and book clubs in the United Kingdom to adopt in the replenishing of their shelves; and, aware of its independence and plain-speaking, they cautiously avoid sending to it any work which they suspect to be of doubtful quality, trusting that by escaping a truthful review here, it may have some chance of an order from such as are to be caught by an advertisement alone, or by the puffs in some hireling journals. But in order that they shall not thus escape, and our readers be so misled, we have made arrangements for obtaining a sight of such as are thus withheld.

One of these is the novel before us, a mixture of absurdity and vulgarity unfit for any decent library, and altogether unbecoming the pen of a lady. Miss (or Mrs.) METEYARD possesses a certain amount of talent of a particular kind, but it is mingled with so much bad taste, and so deformed by an utter want of judgment, that it is worse than worthless. The lowest of low life, with its slang and wickedness, are attempted to be pictured; but inasmuch as the authoress writes from what she has read, and not from personal observation, even these want the charm of reality. They are at the best but bad copies.

The Master Passion, and other Tales and Sketches. By T. COLLEY GRATTAN, Esq. author of "Highways and Byways." In 3 vols. London, 1845. Colburn.

MR. GRATTAN reappears with the prestige of past triumphs. He excels in the construction of short tales of tragic interest, having great command of pathos, and very vivid powers of description. His talent is narrative rather than dramatic, hence he is incompetent to sustain a continuous interest through a regular novel, even if he possesses the power to weave an intricate plot. He has done wisely, therefore, in the present instance, to confine himself to short tales and sketches, of which upwards of twenty are contained in these volumes. Some are humorous, or, we should rather say, attempts at humour, for this is not Mr. GRATTAN'S forte. *The Master Passion*, which is the longest, is a powerful story of tragic interest, precisely adapted to his capacities, and therefore entirely successful. We think we have seen some of the others in the magazines; but, be that as it may, the volumes may be added to shelves that are not obliged to be very choice in their purchases.

POETRY.

Mangan's German Anthology.

(*Concluded from p.* 521.)

BOTH in GOETHE and SCHILLER, although operating in a very different and distinct manner, we find that poetry is not congenial to the elements of internal suffering, nor external strife. SCHILLER declared in his grievous moments that he would abandon poetry. Like a Prometheus, he struggled with

the chain that bound him, but found it too strong to be broken. GOETHE did not wish, nor endeavour, to leave poetry entirely; but from his peculiarity of mind, in which we are puzzled to decide whether or not the will was active or dormant, he quitted poetry when oppressed with troubles, and closetted himself with more harsh and rigorous science. SCHILLER differs more from GOETHE in his minor than in his major poems. GOETHE is often more sportive than SCHILLER; SCHILLER is generally dignified. In his small poems—if we may be allowed the term *small* in writing of such a man—he walks erect; he discourses and reasons. He writes to his friends of the men of "loftier powers" who have passed away, but spices it with the necessity of present action:—

"For us, for us the current moment rolls,
And we, we live, and have our claims."

Mark with what earnestness he speaks

THE WORDS OF REALITY.

I name you Three Words which ought to resound
In thunder from zone to zone;
But the world understands them not—they are found
In the depths of the heart alone.
That man must indeed be utterly base
In whose heart the Three Words no longer find place.

First,—MAN IS FREE, IS CREATED FREE,
Though born a manacled slave.
I abhor the abuses of liberty—
I hear how the populace rave—
But I never can dread, and I dare not disdain,
The slave who stands up and shivers his chain!

And,—VIRTUE IS NOT AN EMPTY NAME:—
'Tis the paction of Man with his soul,
That, though baulked of his worthiest earthly aim
He will still seek a heavenly goal;
For, that to which worldling natures are blind
Is a pillar of light for the childlike mind.

And,—A GOD, AN IMMUTABLE WILL, EXISTS,
However *Men* waver and yield:—
Beyond Space, beyond Time, and their dimming mists,
The Ancient of Days is revealed;
And while Time and the Universe haste to decay,
Their unchangeable Author is Lord for aye!

Then, treasure those Words. They ought to resound
In thunder from zone to zone;
But the world will not teach thee their force;—they are found
In the depths of the heart alone:
Thou never, O Man! canst be utterly base
While *those* Three Words in thy heart find place!

There is something noble in the course which SCHILLER and GOETHE pursued. Encased in the armour of a high purpose, both proceeded in spite of the tumult of critics and schools. Individuality was their law.

We do not see in the few translations from HERDER that marked difference which distinguished him from GOETHE; but we find in the more numerous translations from GOETHE, that which distinguished him from HERDER. HERDER was the creature of ideas. He reduced the palpable to the "infinitude of a great idea," while GOETHE transmuted ideas into forms. GOETHE always spoke with the tongue of nature. He was nature's partner, who helped to cultivate her flowers, and then sang of their beauty. Here is a fine idea which GOETHE has converted into a form:—

THE ROSE.

Once a boy beheld a bright
Rose in dingle growing;
Far, far off it pleased his sight;
Near he viewed it with delight;
Soft it seemed and glowing.
Lo! the rose, the rose so bright,
Rose so brightly blowing!

Spake the boy, "I'll pluck thee, grand
Rose all wildly blowing."
Spake the rose, "I'll wound thy hand,
Thus the scheme thy wit hath planned
Deftly overthrowing."
O! the rose, the rose so grand,
Rose so grandly glowing.

But the stripling plucked the red
Rose in glory growing,
And the thorn his flesh hath bled,
And the rose's pride is fled,
And her beauty's going.
Wo! the rose, the rose once red
Rose once redly glowing.

The translations from BUERGER are long, and we would not mar his sweet warbling ballads by any curtailment. BUERGER is one of our favourites, and we cannot dismiss him thus ungraciously; we *must* present something from his pen, which shall be some stanzas that have not been surpassed by CAMPBELL, or by any other writer on the same subject, for richness of colouring, or sweetness of tone.

HOPE.

Oh! maiden of heavenly birth,
Than rubies and gold more precious,
Who camest of old upon earth,
To solace the human species!
As fair as the morn that uncloses
Her gates in a region sunny,
Thou openest lips of roses,
And utterest words of honey.

When Innocence forth at the portals
Of Sorrow and Sin was driven,
For sake of afflicted mortals
Thou leftest thy home in Heaven,
To mitigate Anguish and Trouble,
The monstrous brood of Crime,
And restore us the prospects noble
That were lost in the olden time.

Tranquillity never-ending
And Happiness move in thy train:
Where Might is with Might contending,
And labour and tumult reign,
Thou succourest those that are toiling,
Ere yet all their force hath departed;
And pourest thy balsam of oil in
The wounds of the Broken-hearted.

Thou lendest new strength to the warrior
When battle is round him and peril;
Thou formest the husbandman's barrier
'Gainst Grief, when his fields are sterile;
From the sun and the bright Spring showers,
From the winds and the gentle dew,
Thou gatherest sweets for the flowers
And growth for the meads anew.

When armies of sorrows come swooping,
And Reason is captive to Sadness,
Thou raisest the soul that was drooping,
And givest it spirit and gladness;
The powers Despair had degraded
Thou snatchest from dreary decay,
And all that was shrunken and faded
Reblooms in the light of thy ray.

When the Sick on his couch lies faintest
Thou deadenest half of his dolours;
For still as he suffers thou paintest
The Future in rainbow colours.
By thee are his visions vermillioned;
Thou thronest his soul in a palace,
In which, under purple pavilioned,
He quaffs Immortality's chalice.

Down into the mine's black hollows,
Where the slave is dreeing his doom,
A ray from thy lamp ever follows
His footsteps throughout the gloom;
And the wretch condemned in the galleys
To swink at the ponderous oar,
Revived by thy whisperings, rallies,
And thinks on his labours no more.

O goddess! the gales of whose breath
Are the heralds of Life when we languish,
And who dashest the potion of Death
From the lips of the martyr to Anguish:
No earthly event is so tragic
But thou winnest good from it still,
And the lightning-like might of thy magic
Is conqueror over all ill!

We must necessarily pass in silence many of the poets before us, whose merits are considerable. Space will not admit of our reviewing them individually.

Mr. MANGAN'S two volumes will amply repay the purchaser, since he will be introduced to some of the writings—

not an extensive part, but choice—of such men as RUECKERT, KERNER, TIEK, UHLAND, &c. There is also in the volumes before us valuable material for a young poet. He will find nothing in them heavy and wearisome, but a graceful elasticity, over which the beautiful is the presiding spirit. And having said thus much, we must hold a moment's communion with UHLAND, and close our notice.

THE CASTLE OVER THE SEA.

"Sawest thou the castle that beetles over
The wine-dark sea?
The rosy sunset clouds do hover
Above it so goldenly!

"It hath a leaning as though it would bend to
The waves below;
It hath a longing as though to ascend to
The skies in their gorgeous glow."—

"—Well saw I the castle that beetles over
The wine-dark sea;
And a pall of watery clouds did cover
Its battlements gloomsomely."—

"—The winds and the moon-lit waves were singing
A choral song?
And the brilliant castle-hall was ringing
With melody all night long?"—

"—The winds and the moonless waves were sleeping
In stillness all;
But many voices of woe and weeping
Rose out from the castle-hall."—

"And sawest thou not step forth so lightly
The King and the Queen,
Their festal dresses bespangled brightly,
Their crowns of a dazzling sheen?

"And by their side a resplendent vision,
A virgin fair,
The glorious child of some clime elysian,
With starry gems in her hair?"—

"—Well saw I the twain by the wine-dark water
Walk slower and slower;
They were clad in weeds, and their virgin daughter
Was found at their side no more!"

MISCELLANEOUS.

Smith's Book for a Rainy Day.

(*Concluded from p.* 523.)

AMONG other singular employments SMITH was engaged by the Duke of ROXBURGH to take likenesses of notorious criminals. To obtain these frequently demanded all his address and courage, but he was as persevering as any of "our own reporters" of the present day. In this pursuit he witnessed

THE EXECUTION OF GOVERNOR WALL.

The late Duke of Roxburgh, whose wonderful library will ever be spoken of with the highest delight by bibliomaniacs, had an attachment to the portraits of malefactors as closely as Rowland Hill to his petted toad. I made many drawings of such characters for his grace during their trials or confinement; that which I made this year was of Governor Wall, whose trial produced much discussion. Having been deprived of admission at the Old Bailey on the day of his trial, I went to the duke, and he immediately wrote to a nobleman high in power, for an order to admit me to see the unfortunate criminal in the condemned cell, which application was firmly, and, in my humble opinion, very properly, refused. I walked home, where I found Isaac Solomon waiting to shew me some of his improved black-lead pencils. Isaac, upon hearing me relate to my family the disappointment I had experienced, assured me that he could procure me a sight of the governor, if I would only accompany him in the evening to Hatton-garden, and smoke a pipe with Dr. Ford, the ordinary of Newgate, with whom he said he was particularly intimate. Away we trudged; and upon entering the club-room of a public-house, we found the said doctor most pompously seated in a superb masonic chair under a stately crimson canopy placed between the windows. The room was clouded with smoke whiffed to the ceiling, which gave me a better idea of what I had heard of the Black-hole of Calcutta than any place I had seen. There were present at least a hundred associates of every denomination; of this number, my Jew, being a favoured man, was admitted to a whispering audience with the doctor, which soon produced my introduction to him. "Man's life is all a mist, and in the dark our fortunes meet us." Standing beneath a masonic lustre, the doctor immediately recognised me as a friend of John Ireland, but more particularly of his older crony Atkinson Bush; he requested me to take a pipe, to me a most detestable preliminary. He then whispered, "Meet me at the felon's door at the break of day." There I punctually applied; but, notwithstanding the order of the doctor, I found it absolutely necessary, to protect myself from an increasing mob, to shew the turnkey half-a-crown, who soon closed his hand and let me in. I was then introduced to a most diabolical-looking little wretch, denominated "the yeoman of the halter," Jack Ketch's head man. The doctor soon arrived in his canonicals, and with his head as stiffly erect as a sheriff's coachman when he is going to court, with an enormous nosegay under his chin, gravely uttered, "Come this way, Mr. Smith." As we crossed the press-yard a cock crew; and the solitary clanking of a restless chain was dreadfully horrible. The prisoners had not risen. Upon our entering a stone-cold room, a most sickly stench of green twigs, with which an old round-shouldered goggle-eyed man was endeavouring to kindle a fire, annoyed me almost as much as the canaster fumigation of the doctor's Hatton-garden friends. The prisoner entered. He was Death's counterfeit,—tall, shrivelled, and pale; and his soul shot so piercingly through the port-holes of his head that the first glance of him nearly petrified me. I said in my heart, putting my pencil in my pocket, God forbid that I should disturb thy last moments! His hands were clasped, and he was truly penitent. After the yeoman had requested him to stand up, "he pinioned him," as the Newgate phrase is, and tied the cord with so little feeling, that the governor, who had not given the wretch the accustomed fee, observed, you have tied me very tight;" upon which Dr. Ford ordered him to slacken the cord, which he did, but not without muttering. "Thank you, sir," said the governor to the doctor; "it is of little moment." He then observed to the attendant, who had brought in an immense iron shovel full of coals to throw on the fire, "Ay, in one hour that will be a blazing fire;" then, turning to the doctor, questioned him, "Do tell me, sir: I am informed I shall go down with great force; is it so?" After the construction and action of the machine had been explained, the doctor questioned the governor as to what kind of men he had at Goree. "Sir," he answered, "they sent me the very riff-raff." The poor soul then joined the doctor in prayer; and never did I witness more contrition at any condemned sermon than he then evinced. The sheriff arrived, attended by his officers, to receive the prisoner from the keeper. A new hat was then partly flattened on his head, for, owing to its being too small in the crown, it stood many inches too high behind. As we were crossing the press-yard, the dreadful execrations of some of the felons so shook his frame, that he observed, "the clock had struck;" and quickening his pace, he soon arrived at the room where the sheriff was to give a receipt for his body, according to the usual custom. Owing, however, to some informality in the wording of this receipt, he was not brought out so soon as the multitude expected; and it was this delay which occasioned a partial exultation from those who betted as to a reprieve, and not from any pleasure in seeing him executed. After the execution, as soon as I was permitted to leave the prison, I found the yeoman selling the rope with which the malefactor had been suspended at a shilling an inch.

In a later portion of his reminiscences, he relates many anecdotes, and presents some of the correspondence of the famous Mrs. ABINGTON, the actress. Here is a letter of hers, given to him by HARLEY:—

Mrs. Abington to Mrs. Jordan.

No. 19, Eton-street, Grosvenor-place, 6th January, 1807.

I beg leave, dear madam, to make my grateful acknowledgments for the favour of your kind remembrance. Your ticket [card?] with those of dear Miss Betsworth and the Miss Jordans was sent to my present habitation on New Year's-day.

I have not slept in London since I came from the Wealds of Kent; where I passed my summer upon a visit to Sir Walter and Lady Jane James, and their lovely family. It is near a grand scene of Gothic magnificence, called Bayhim Abbey, a seat of Lord Camden's, the brother of Lady Jane. In their peaceful retreat and accomplished society I have very much recovered my health and spirits; and hope to have the happiness of seeing you soon, as I am now looking for something to inhabit in London. In the mean time, if you, dear madam, or the Miss Jordans, will do me the honour of calling at my present abode, which is two rooms, where I keep my clothes and trumpery, I shall be much flattered; and beg you to accept the compliments of the season, and a sincere wish that you may see many, many returns, with every happiness you are so well entitled to expect. Adieu, my dearest madam. Be pleased to make my compliments to the ladies, and believe me your most obliged, &c.

F. ABINGTON.

Not unacceptable will be this

ESSAY ON WIGS.

The term *busby*, now sometimes used when a large bushy wig is spoken of, most probably originated from the wig denominated a buzz, frizzled and bushy. At all events, we are not satisfied that the term *busby* could have arisen, as many persons believe, from Doctor Busby, master of Westminster School, as all his portraits either represent him with a close cap, or with a cap and hat. During a most minute investigation of a regular series of English portraits, which I was led into by a friend, in order, if possible, to clear up this point, I was induced to look into the origin of wigs in England, and their various sorts and successions, by commencing at the time of William the Conqueror. In this search I was not able to find any representation of wigs earlier than those worn by King Charles the Second upon his restoration, in proof of which I refer the reader to Faithorne's numerous portraits of that monarch, and he will find that that sort of wig continued to be worn, with very little deviation, by succeeding kings till George the Second's time, with whom it ended. King George the Third commenced his reign with wearing his own hair dressed and powdered, in the style of Woollett's beautiful engraving of his Majesty, after a picture painted by Ramsey. It is worthy of observation, that in the reign of King Charles the Second the Lord Mayors of London followed his Majesty's example by wearing wigs precisely of the same make, and equal to those worn by the royal family, the highest courtiers, and persons of the first eminence in official capacities. Nay, indeed, Sir Edmundbury Godfrey, a wood and coal monger, wore wigs of this shape, perhaps because he was a justice of the peace within the king's court. The same kind of wig, equally deep, but with curls rather looser and more tastefully flowing, was also worn by the following high literary characters in the reigns of Charles the Second, James the Second, William the Third, and Queen Anne,—Waller, Dryden, Addison, Steele, Congreve, Vanbrugh, Butler, Rowe, Prior, Wycherly, &c. Of these, perhaps the two last mentioned were the most foppish in their wigs, particularly Wycherly, from whom the sets of large and beautifully engraven combs of the finest tortoise-shell are named. With these combs (which were carried in cases in their pockets), the wearers of wigs adjusted their curls, ruffled and entangled by the wind.* I have somewhere read, that Wycherly, who was esteemed one of the handsomest men of his day, was frequently seen standing in the pit of the theatre combing and adjusting the curls of his wig whilst in lolling conversations with the first ladies of fashion in the boxes. Most of Sir Godfrey Kneller's portraits were painted in this flowing wig, particularly that celebrated series entitled "Queen Anne's Admirals." The actors at this time wore immense wigs, particularly Bullock, Pinkethman, &c.; Cibber's was in moderation. It must here be observed, that I now allude to their private wigs—their stage wigs were, as they are now, purposely caricatured to please the galleries. I believe that the first wig worn by an English divine was that of John Wallis, engraved by Burgers, and published at Oxford in the year 1699; it was profusely curled, but not so deep over the shoulders as those of statesmen. There were many singular, and, indeed, learned characters whose wigs were peculiarly shaped—such, for instance, as that of Bubb Doddington, Lord Chesterfield, and the Duke of Newcastle. Mac Ardell's print of Lord Anson, after a picture by Sir Joshua Reynolds, was, I have every reason to think, the first of the shape erroneously called the busby. This sort Dr. Samuel Johnson, Armstrong, Hunter, the Rev. George Whitfield, Lord Monboddo, &c., wore in their latter years. The earliest engraved portraits of Dr. Johnson exhibit a wig with five rows of curls, commonly called "a story wig." Among the old dandies of this description of wig, we may class Mr. Saunders Welch, Mr. Nollekens's father-in-law—he had nine stories. So was that worn by Mr. Nathaniel Hillier, an extensive print-collector, as is represented in an engraved portrait of that gentleman. Dr. Goldsmith's wig was small and remarkably slovenly, as may be seen by Brotherton's etching. Sir Joshua's portrait of him is without a wig. Mr. Garrick's wigs (I mean his private ones) were three in number: the first is engraved by Wood, published in the year 1745; the second is by Sherwin, engraved for Tom Davis; the last is from a private plate by Mrs. Solly, after a drawing by Dance. I will leave off here with the wig, and give a few instances of the tails. These, perhaps, originated with the Chinese; but the first specimen of a tail, which I have hitherto been able to procure, to which a date can be given, is in Sherwin's print of Frederick, King of Prussia."

With two or three brief anecdotes we conclude. Of Mr. MITCHELL, the banker, he records a

CURIOUS ANTIPATHY.

He could sit in a room without experiencing the least emotion from a cat; but directly he perceived a kitten his flesh shook on his bones, like a snail in vinegar. I once relieved him from one of these paroxysms, by taking a kitten out of the room; on my return he thanked me, and declared his feelings to be insupportable upon such an occasion. Long subsequently I asked him whether he could in any way account for this agitation. He said he could not; adding, that he experienced no such sensations upon seeing a full-grown cat; but that a kitten, after he had looked at it for a minute or two, in his imagination grew to the size of an overpowering elephant.

NANCY DAWSON.

1767. Nancy Dawson, the famous hornpipe-dancer, died this year, May 27th, at Hampstead; she was buried behind the Foundling Hospital, in the ground belonging to St. George the Martyr, where there is a tombstone to her memory, simply stating, "Here lies Nancy Dawson." Every verse of a song in praise of her declares the poet to be dying for Nancy Dawson; and its tune, which many of my readers must recollect, is, in my opinion, as lively as that of "Sir Roger de Coverly." I have been informed, that Nancy, when a girl, set up the skittles at a tavern in High-street, Marylebone. Sir William Musgrove, in his *Adversaria* (No, 5719) in the British Museum, says that "Nancy Dawson was the wife of a publican, near Kelso, on the borders of Scotland."

ALDERMAN BOYDELL.

1818. It was the regular custom of Mr. Alderman Boydell, who was a very early riser, at five o'clock, to go immediately to the pump in Ironmonger-lane. There, after placing his wig upon the ball at the top of it, he used to sluice his head with its water. This well-known and highly respected character, who has done more for the British artists than all the print-publishers put together, was also one of the last men who wore a three-cornered hat. I recollect another character, a bricklayer, of the name of Pride, of Vine-street, Piccadilly, who wore the three-cornered hat commonly called "The Cumberland Cock."

MRS. GARRICK.

Mrs. Garrick being about to quit her seat, said she should be glad to see me at Hampton. "Madam," said I, "you are very good, but you would oblige me exceedingly by honouring me with your signature on this day." "What do you ask me for? I have not taken a pen in my hand for many months. Stay, let me compose myself; don't hurry me, and I will see what I can do. Would you like it written with my spectacles on, or without?" Preferring the latter, she wrote E. M. Garrick, but not without some exertion. "I suppose now, Sir, you wish to know my age? I was born at Vienna the 29th of February, 1724, though my coachman insists upon it that I am above 100. I was married at the parish of St. Giles, at eight o'clock in the morning, and immediately afterwards in the chapel of the Portuguese ambassador, in South Audley-street." A day or two after Mrs. Garrick's death, I went to the Adelphi, to know if a day had been fixed for the funeral. "No," replied George Harris, one of Mrs. Garrick's confidential servants; "but I will let you know when it is to take place. Would you like to see her—she is in her coffin?" "Yes, I should." Upon entering the back room on the first floor, in which Mrs. Garrick died, I found the deceased's two female servants standing by her remains. I made a drawing of her, and intended to have etched it. "Pray do tell me," looking at one of the maids, "why is the coffin covered with sheets?" "They are their wedding-sheets, in which both Mr. and Mrs. Garrick wished to have died." I was informed that one of these attentive women had incurred her mistress's displeasure by kindly pouring out a cup of tea, and handing it to her in her chair. "Put it down, you hussy; do you think I cannot help myself?" She took it herself, and, a short time after she had put it to her lips, died. This lady continued her practice of swearing now and then, particularly when any one attempted to impose upon her. A stone-mason brought in his bill with an overcharge of sixpence more than the sum agreed upon; on which occasion he endeavoured to appease her rage by thus addressing her: "My dear madam, do consider—" "My dear madam! what do you mean, you d—d fellow? Get out of the house immediately. My dear madam, indeed!"

Such agreeable gossip as this will be a welcome variety to the book-club.

* These combs are held as curiosities by many of our old families. The last I saw was in the possession of the friendly Doctor Meyrick, author of *The History of Armour*.

JOURNAL OF FRENCH LITERATURE.

Mademoiselle de la Seiglière. By JULES SANDEAU. 1845.

THIS work is worthy of M. SANDEAU'S reputation. The unities are carefully preserved, the characters skilfully individualized, and the truth to nature, as nature exists in France,

is perfect. There is also a soberness of style about this writer which is positively refreshing, when viewed in contrast with the "convulsionary" abruptness of some of his contemporaries, and a calm beauty in many of his sketches which brings the objects that he describes clearly before the eye. The book opens with one of these delicately touched paintings :—

POITIERS AND ITS ENVIRONS.

Should it ever chance that, in passing through Poitiers, one of those thousand little events of which human life is made up, should compel you to spend a whole day in the town, where I will suppose that you have neither relations, friends, nor business to occupy your time, you will be infallibly overtaken, at the end of a couple of hours, by that dull and profound *ennui* which envelops the province like an atmosphere, and which is breathed more particularly in the capital of Poitou. I know no other town throughout the kingdom, save Bourges, where this invisible fluid, a thousand times more fatal than the *mistral* or the sirocco, is so penetrating or subtle, or where it filters itself into all your being in a manner more sudden and more unforeseen. Moreover, at Bourges, you have, to counteract this plague, a pilgrimage to one of the finest cathedrals which art and Catholic faith have ever erected; there alone you may find food for at least a week's admiration, without mentioning the hotel of Jacques Cœur, another marvel, wherein you may, without interruption, meditate at your leisure upon the ingratitude of kings. In fine, all along the deserted streets, with their grass-grown pavements in front of the great hotels, flung back into the depths of their silent courts, *ennui* seems to assume a character of melancholy which is not without its charm. Bourges possesses the poetry of the cloister; Poitiers is a tomb. If then, despite the sincere wishes that I address to Heaven to preserve you from such a fate, some evil genius, some unlucky hazard, should detain you within those dreary walls, all that you have to do is to get beyond them as soon as possible. The open country is but a few steps off, and the environs, although not picturesque, have a fresh and smiling aspect. Walk to the banks of the Clain! The Clain is a small river, to which the Vienne cedes the honour of bathing the meadows of the chief place of the department, but the claim is not, on that account, either turbulent or overbearing. Equal in its humour, modest in its appearance, it is a well-conducted stream, which does not appear to be aware that it flows at the base of a royal court-house, a bishopric, and a prefecture. If you follow the path, towards the source of the river, after a walk of about six miles, you will come upon a valley formed by the circular recession of the two hills between which the Clain has worn its bed. Imagine two amphitheatres of verdure raised opposite each other, and separated by the stream which reflects them both; an old bridge, whose arches are draped with mosses and flexile water-plants, spans the two banks, and at this spot the Clain, widening with the hillocks which frame it in, forms a basin, whose pure waves are like a mirror, and which might be mistaken for one sheet of glittering crystal until it touches the banks where the surface is broken up, and the emancipated water flies off in a spray-like silver dust.

On your right, proudly seated upon the summit of the height, the chateau of La Seigliere, a real *bijou* of the *renaissance*, sees undulating at its feet the dense foliage of its park, while on your left, half hidden by a clump of oaks, the small castle of Vaubert seems to look with an humble and patient gaze upon the haughty attitude of its opulent neighbour. This little nook will please you; and if you have listened, before your visit there, to the drama which was enacted in the peaceful valley, perhaps you will feel, as you traverse it, something of the mysterious charm which is awakened in spots consecrated by history; perhaps you will seek, on the smooth turf, for traces long worn away; and moving slowly onward, buried in thought, you will evoke as you depart both shades and memories.

Independently of its own intrinsic beauty, this extract has served to bring us at once into the current of our story. The *fainéant* Marquis de la Seigliere for a time escapes the terrors of the revolution, but at length is in danger from its effects in his turn. Too indolent to support either his king or the directory, and averse to fighting, on the safe principle that *post cineres gloria sera venit*, he at length effects his escape with his beautiful young wife to Germany, taking with him the few valuables which they are enabled to secure. At that period the castle of Vaubert

Was a vast edifice, with towers and bastions, drawbridge and moat, battlements and platforms; a true fortress, which crushed by its massive importance the elegant and elaborate architecture of its slender and graceful neighbour. The domain by which it was surrounded, and which had constituted from time immemorial the barony of Vaubert, did not yield, either in extent or value, to the dependencies of La Seigliere. Those who spoke of La Seigliere and Vaubert spoke of the lords of that part of the country.

Overtaken, simultaneously with his neighbour, by the vengeance of the revolution, the Baron de Vaubert emigrated on the same day, and to the same spot; where, ultimately, the two families agreed to live under one roof, and to have all interests in common until brighter days should dawn. The baron, in addition to his wife, had also a son to share his exile, and a short time after their arrival in Germany the beautiful young Marquise de la Seigliere lost her life in giving birth to a daughter, who, as a natural consequence, was forthwith betrothed to the young de Vaubert by the two expatriated fathers. Meanwhile, the land-steward of the marquis, a hard-headed, persevering agriculturalist, contrives to amass a sufficient sum of money to enable him to become the proprietor of his late master's estate. First he purchases the chateau, then the park, and gradually field after field, and forest after forest, until the whole property is once more intact; when, satisfied that he has become as great a man as his late lord, he resolves to quit his farm, and to inhabit the chateau.

TAKING POSSESSION.

At length, when France had once more begun to breathe, and all was beginning to be calm, on a fine spring morning he put his wife and son into the wicker waggon which served him for a carriage, and then, seating himself upon one of the shafts, with the whip in one hand and the reins in the other, he started to take possession of the chateau which was the capital of his little kingdom.

This taking possession was less triumphant and less joyous than might be believed. In traversing the vast apartments, so hastily deserted by their rightful owners, and now so silent and so cheerless, under the gilded ceilings, on the polished floors, and among the sculptured panels which were still full of the memories of their exiled masters, Madame Stamply, who was simply an honest farmer's wife, became strangely agitated; and when she found herself standing before the portrait of the marchioness, which she recognised at once by its gentle expression and happy smile, the poor woman could contain herself no longer.

"Oh, John," she said, wiping her eyes, "do not let us stay here; our hearts will never be at ease. I am already ashamed of our good fortune when I think that *Madame la Marquise* is perhaps in want. Do you remember, Stamply, how fond she was of our cream? Poor dear soul! who can tell if she gets any so good now?"

"Bah! bah!" exclaimed Stamply; "cream is good everywhere."

"It is of no use that I tell myself;" pursued his wife; "that we have earned this fortune by our labour, still I feel something like remorse. Does it not seem to you that these portraits look down angrily upon us, and that they are about to speak? Let us go. This fine house was not built for us; we should never sleep here in peace; and, believe me, it is already enough for us to want for nothing, while a La Seigliere is in trouble. Come; let us go back to our farm. Your father died there, your son was born there, and there we have lived happily together. Let us live on so still; honest men will applaud us, the envious will respect us, and God, seeing that we enjoy our wealth modestly, will look upon us without anger, and will bless our fields and our boy."

Thus spoke the farmer's wife, for she was right-hearted, and although uneducated, possessed of good plain sense and healthy judgment. Seeing that her husband listened to her with a saddened air, and appeared about to yield, she renewed her entreaties; but Stamply soon conquered the emotion which he could not at first control. He had received some education, had adopted sundry of the new ideas, and although he still retained for the marquis, and still more for his wife, some remains of respect and gratitude, still by degrees, as he increased in wealth, the instincts of self-aggrandizement had gradually grown upon him, and had, latterly, absorbed all the faculties of his soul. Moreover, he had a son, and children are always a marvellous pretext for encouraging and legitimatising the egotism and avarice of families.

"All that is very well," he said in his turn; "but a house is made to live in, and I suppose that we did not buy this one for the accommodation of sheep and oxen. If our masters left the country, it was not our fault; it was not we who placed them beyond the pale of the law, and sequestrated their property. We did not come by this estate dishonestly, we owe it to the nation, and our own labour. There are no more masters; titles are abolished; all Frenchmen are free and equal; and I do not know why the Stamplys should not sleep as soundly here as the La Seiglieres."

"Hush! Stamply, hush!" exclaimed his wife; "respect the

unfortanate, and do not outrage the family which for untold years has supported you and yours."

Of course the words of the poor woman do not avail; and she ultimately becomes hypochondriacal, and dies miserably, under the impression that her husband has acquired the property by dishonest means. Her son, forsaking the college in which he was placed, enters the army, and accompanies Napoleon to Moscow, whence news arrive of his death. The neighbours, some envious, some disdainful, and all suspicious, shun the metamorphosed farmer, who has dared to play the nobleman in his master's halls; his hired lacqueys sneer at him to his face; he is unloved, lonely, and wretched.

Years have passed away, and the Baron de Vaubert, whose active spirit has ill brooked so long a period of mental and moral lethargy, resolves to return to France, and to endeavour to repossess himself of some portion of his forfeited estate. After immense exertion he succeeds in this attempt, and writes to desire that his wife will join him at Poitiers with his son, now eighteen years of age. Within the short period which elapses between the departure of his letter and the arrival of his family, the baron dies, without having had time to arrange his worldly affairs, and the haughty widow reaches the valley of the Clain only to find the castle in ruins, and her husband a corse, Reduced almost to beggary with her son, through whose means alone she can ever hope to redeem her fortunes, she ponders over his betrothal to Mademoiselle de la Seigliere, and determines, at whatever expense of principle, to effect, if human skill can suffice for such a purpose, the restoration of her property by the ex-steward. To this end, she introduces herself to the shunned and calumniated old man, who has now become bent and gray, and whose hope and ambition have long been buried in the grave of his boy. By a long tissue of artifice, falsehood, and hollow sophistry, she at length masters the mind of the old man, and induces him to recall the marquis from exile, to the repossession of his forfeited millions; retaining only for himself the position of a friend in the household, who has won his place at the hearth and in the heart of his master, by holding in trust, throughout a period of trial and danger, the property which must have been irrevocably lost, had it passed into other hands. He was not to breathe to the marquis one syllable of the fact that the earnings of a whole life had purchased the fair lands which he was about to yield up, for no better recompense than an approving word; he must tender all as a mere matter of course—nay, even urge the marquis to relieve him from so weighty a responsibility; because, explained the baroness, the delicacy of high birth was easily wounded; and that should the marquis harbour one suspicion that it was in reality a donation which his former dependent had proffered, there would be no hope of conquering his repugnance to return.

This last clause in the arrangement startles the wavering old man; but, spirit-broken as he had become, he is no match for the astute and manœuvring baroness. She reminds him of the general execration and abhorrence in which he is held; she recalls to his mind the dying conviction of his wife; she points to the early and obscure grave of his son,—and then she paints a glowing picture of his domestication in the family of the marquis—honoured, happy, and peaceful; the patriarch of the family, to whom they would owe their all, and whom they would feel that they could never sufficiently repay. He yields at last. The marquis and his daughter return to their gorgeous home.

Stamply received his lord at the gate of the park, and forthwith presented to him, instead of keys upon a silver salver, the act of donation, which was couched in the most touching terms; and in which the giver, with extreme delicacy, humbled himself before the receiver.

"My lord Marquis, you are at home," he said.

The harangue was short, and the marquis approved it highly. He put in his pocket the deed of transfer which made him once more master of all his domain, embraced Stamply, took his arm, and, followed by his daughter, who walked between Madame de Vaubert and her son, he entered the château as young in heart as he had left it, and without any more ceremony than if he had just returned from a walk.

From this moment, the interest of the tale increases; the finicking and frivolous marquis, who will not see that he is under more than a very slight obligation to the gratitude and principle of his benefactor, suffers himself to be governed in every thing by the domineering spirit of the grasping and intriguing baroness. For a while Stamply is the petted idol of the circle; he occupies the handsomest apartment in the château, and is placed on the marquis's right hand at table. His taste is consulted, his advice sought, and his opinions adopted; but as the old patrician associates of the family once more gather about them, the leather breeches and gaiters of the ex-steward, his coarse voice and vulgar notions, begin to disgust those whom he has served; they discover that the late hours congenial, and, indeed, necessary to the habits of the marquis, are injurious to the health of their dear friend; and, despite his assurances to the contrary, he is accommodated with a separate table. Then their eyes and ears are suddenly opened to the fact that the apartment first selected for him is too much exposed to the southern sun to be wholesome for a man of his years; and so extremely anxious does the baroness prove herself upon this particular point, that the poor victim of her avarice and falsehood is so often moved from room to room by her order, always under the pretext of care for his health, that he has no resting-place, until he is finally consigned to a paltry chamber above the offices. The eyes of the self-made beggar are at length unsealed. In a short time the inhabitants of the chateau appear to have altogether forgotten his existence; and when they occasionally meet him during his wanderings in the grounds, they exchange with him a brief good-morrow, and pass on. Yet is not the old man utterly destitute. The young and fair, and meek-hearted Helen de la Seigliere, to whom the whirl of dissipation and frivolity, of which the chateau is the centre, is painful and wearisome, attaches herself to the old steward, although unconscious that he has done more than an act of justice in restoring the domains of her father; she spends hours with him in his squalid room, listening to his tales of the personal beauty and military prowess of his son; and, finally, upon his death-bed, he bequeaths to the fair girl, whom he has made a wealthy heiress, the eloquent letters addressed to him by the young soldier during the commencement of his campaigns.

A SURPRISE.

In the recess of an open window, opposite to a pretty stand of old Sevres porcelain, covered with cut crystal, gold plate, and the remains of an epicurean breakfast, M. de la Seigliere, reclining rather than sitting in a folding-chair, with a spring seat, was enjoying, in his morning dress, that state of well-being and beatitude which are derivable from inveterate egotism, robust health, ample fortune, good-temper, and easy digestion. He had awoke in excellent humour, and had never felt more satisfied with himself. Enveloped in a flowered silk dressing-gown, his chin freshly shaved, his mouth smiling, his linen dazzlingly white, his leg slender, his calf well rounded, his hand white, dimpled, half-hidden under a ruffle of Valenciennes lace, and playing with a snuff-box, enriched with the portrait of a woman, which did not appear to have been that of the marchioness, exhaling at every movement the soft odours of violet and marechal powder, he sat there, thinking of nothing, but breathing with delight the balmy odour of his woods, whose summits the finger of autumn had begun to rust, and following with a half-unconscious eye the return of his stud in their stable coverings, as his grooms were leading them homeward from their morning exercise, when he perceived, crossing the bridge which spanned the Clain, Madame de Vaubert, who was evidently on her way to the chateau. He rose, stretched out his right leg, examined himself from head to foot, beat off, with the ends of his fingers, some grains of snuff which were scattered on his shirt-frill of English point, and then, leaning over the balcony, he awaited the advent of his visitor. An individual of the least observation would have remarked in the early apparition of the baroness, as well as in her neglect of personal appearance, the certain indication of a heart violently agitated; but the marquis made no discovery of the sort. When she entered, he gallantly kissed her hand, without even remarking the paleness which overspread her countenance.

"Baroness," he said, "you are each day younger and more charming. If you continue to progress thus, in a few months you will scarce be twenty years of age."

"Marquis," retorted Madame de Vaubert, drily, "that is not now the question. Let us speak seriously; the subject is worthy of the effort. Marquis, all is lost! All, I tell you; the thunder has burst above our heads."

"Thunder!" exclaimed the marquis, looking out upon a sky, sparkling with azure and beaming with light.

"Yes," said Madame de Vaubert; "imagine that the thunder, issuing from that cloudless sky, is reducing your chateau to cinders, burning your farms, and consuming your harvests at

your feet; you will imagine nothing so improbable as the blow which has just been struck. After having escaped the tempest, you are about to founder in port."

M. de la Seigliere grew pale. Both sat down.

"Do you believe in ghosts?" asked the baroness, coldly.

"What, madam?"

"Because, if you do not, you are in error," pursued Madame de Vaubert; "young Stamply, the Bernard about whom his father so often fatigued our ears, the dead and buried hero, who for the last six years has been stretched beneath the ice of Russia——"

"Well!" said M. de la Seigliere.

"Well!" echoed the baroness; "he was seen yesterday in the neighbourhood—seen in flesh and blood; seen, mind, fairly seen, and spoken to, and it is really he himself, it is Bernard, Bernard Stamply, the son of your old steward; he exists; he lives; the fellow is not dead!"

"What is that to me?" said the marquis, with perfect indifference, and the tone and manner of one at once surprised and delighted that, when he anticipated the fall of an avalanche upon his head, he is only conscious of having his nose tickled by a feather from the wing of a tomtit.

"How! What is it to you?" cried Madame de Vaubert; "Young Stamply is not dead; he has returned to the neighbourhood; he has been recognised, and you ask me what is that to you?"

"Certainly I do," replied M. de la Seigliere, with innocent astonishment; "if the lad has reasons for clinging to life, all the better for him that he is not now under ground. I should like to see him. Why has he not been here?"

"Be patient," said the baroness; "he will not fail to come."

"Let him come!" exclaimed the marquis; "we will receive him; we will make him welcome; if he requires help, we will assist him to carve out his fortune; I have not forgotten the delicacy of his father's proceedings. Old Stamply did his duty; I will do mine in my turn. It is only just that the lad should derive some benefit from the fortune which his father husbanded for me. I am not an ingrate. It shall not be said that a La Seigliere left in poverty the son of a faithful servant. Let Bernard be brought to me; if he is afraid, let him be assured of my protection; he shall have whatever he may ask."

"And if he asks for all?" said the baroness.

At these words M. de la Seigliere shuddered, and turned towards her with a look of alarm.

"Have you read a book called *The Code?*" tranquilly inquired Madame de Vaubert.

"Never," answered the marquis, proudly.

"I did so this morning, in your interest. Like you, I was ignorant yesterday of its contents; for your sake I have played the attorney's clerk. It is a book drily written, much esteemed by those whose interests it advocates, but little valued by those with whom it interferes. I doubt, for example, that you would be much delighted with the chapter on 'Donations between the Living.' Read it, nevertheless, I recommend it to your attention."

"Madame la Baronne," said M. de la Seigliere, rising, with a slight gesture of impatience, "will you tell me what all this means?"

"My lord Marquis," replied Madame de Vaubert, rising in her turn with the gravity of a judge, "it means that all gratuitous donations are revoked by law when a legitimate child exists, even should it be posthumous; it means that John Stamply, during his son's life, could only dispose in your favour of one-half of his property, and that, having ceded the whole in the hypothesis of his son's death, his intentions are void. It means, in short, that you are no longer under your own roof—that Bernard can compel you to restore his titles, and that, armed with legal authority, this lad whose fortunes you just now talked of furthering, can, when he pleases, make you disgorge your wealth, and bow you politely to the door. Do you now understand?"

M. de la Seiglière was thunderstruck; but, such was his adorable ignorance of the affairs of this life, that he soon passed from astonishment and stupor to exasperation and defiance.

"Much I care for your Code, and your donations between the living!" he exclaimed, with the petulance of a spoiled child; "what do I understand about such things? What is it all to me? What I do know is, that I am in my own house. Besides, what do you call a donation? What was stolen from me has been restored; the property that I had been deprived of is again mine by restitution, and do you call that a donation? The word is well chosen! As though a La Seiglière would receive a gift! The thing is ridiculous. As though the La Seiglière had ever received a gift from any man on earth! What! *ventre-saint-gris!* I am at home, happy and peaceful; and because a vagabond who was thought to be dead presumes to be alive, am I to give up to him the fortune of which his worthy father had robbed me? The Code has so decided! Why, those who compiled it must have been cannibals; and it is called a Civil Code, I believe! What arrant impertinence! The code of an usurper, perpetuating rapine and robbery from father to son: in one word, the Code of Napoleon! I recognise in this the finger of M. de Buonaparte. He was thinking of his wolf's cub: it was the manœuvre of a fond parent and a far-sighted wolf."

He talked for a long time in the same loose and incoherent style, walking to and fro, stamping upon the floor, draping about him in a tragi-comic manner the skirts of his dressing-gown, and repeating continually, in a stifled voice struggling with rage, "A donation! a donation!"

Madame de Vaubert had great trouble in pacifying him, and in making him understand all that had taken place more than a quarter of a century before, and what was still passing. Hitherto she had respected his illusions, but now the gravity of his position did not admit of further mystification. She therefore abruptly tore the bandage from his eyes; and vainly did the poor marquis writhe and struggle, and, like a blind man suddenly restored to sight who shrinks at the light, close his heavy lids. Madame de Vaubert conquered, and, forcing him to look steadily at the truth, inundated him on all sides with a flood of light. On witnessing the astonishment of M. de la Seiglière, as he listened to the impartial summary of the history of recent events, a spectator might have mistaken him for a man who had fallen asleep on the banks of the Clain, and had awakened in China, in the midst of a group of bouzes, wearing himself the disguise of a mandarin.

Horrorstricken on discovering that he had for years been a pensioner on the bounty of his ex-steward, the marquis, after a few violent struggles between his pride and his love of ease, becomes perfectly ductile in the hands of the subtle baroness, and reluctantly allows her to endeavour to cajole the son as she had already cajoled the father. All their efforts would, however, have proved abortive had not Mdlle. de la Seigliere accidentally entered the room before the departure of young Stamply, who lost no time in arriving at the chateau, vehemently asserting his rights. For a time the young dragon had yielded to the flattering welcome, and suffered his vanity to be fed by the high-bred attentions which were extended to him. He had even complied with the repeated request of the baroness that he would relate to them the details of his campaign in Russia, and his subsequent imprisonment in Siberia; but still they could not turn him from his purpose, nor induce him to become a guest at the chateau, until the apparition of the beautiful Helen made him forgetful of all save herself.

With another excellent scene between the marquis and his familiar spirit, Madame de Vaubert, we shall conclude our notice of this very clever work.

A PAGE FROM THE WORLD'S VOLUME.

Left alone by the fireside, the baroness and the marquis glanced at each other. "Well, marquis," said the baroness at last, "is not this young Bernard charming? The father smelt of the stable, and the son is redolent of the guardhouse."

"The wretch!" exclaimed the marquis, arrived at the last pitch of exasperation, "I thought he would never have done with his battle of Moscow. The battle of Moscow, forsooth! A fine affair, truly! What was it? Who knows any thing about it? Who talks of it? I never was in battle; but if I ever should be—by the sword of my ancestors! my lady baroness, I would wear another pair of sleeves. Every soul among the enemy should fall. I would not even suffer one invalid to escape. The battle of Moscow, indeed! And this nobody to give himself the airs of a Cæsar and an Alexander! Pretty heroes these! And these are the skirmishes about which M. de Buonaparte has made so much noise, and that the enemies of the monarchy have extolled so highly! After all they prove to have been merely wholesome and healthy exercises. The slain picked themselves up again, and the living were all the better for their exertions. *Vive Dieu!* when we nobles make war it is differently managed. When a patrician falls, he never rises again. But, were one merely a clown, a serf, a Stamply, having once been killed in the service of France, one ought, at least, not to come back to tell the tale one's self. If he had possessed a pennyworth of pride, this profligate would have blushed to find himself alive, and would have flung himself head foremost into the river."

"What, would you have such people possess no dignity?" said Madame de Vaubert, with a smile.

"Let him live then, if he will, but let him hide himself," cried the marquis * * * * But here he comes to talk of his country, and his liberty, and his paternal roof—big words which they all lavish to justify their excesses, and to conceal their misconduct."

"His country, his liberty, and his paternal roof, and all these enhanced in value by a million of inheritance, you must nevertheless admit," said Madame de Vaubert, "are sufficient

to induce a man to forsake the enamelled shores of the Don, and the companionship of Bas-Kirs."

"A million of inheritance!" echoed the marquis; "and where the devil is he to seek it?"

"In your pocket," replied the baroness, discouraged by being obliged continually to bring him back to the fact of his actual position.

"Ah, indeed!" cried M. de la Seigliere; "he is then really dangerous, this Bernard!"

"There is nothing to alarm you at present. Bernard is caged; the lion is muzzled; you grasp your prey."

"Pretty prey, truly! Tell me, for Heaven's sake, what it is you wish me to do."

"Time will teach you. This morning it was necessary to instal the enemy in the citadel; that is done. It will soon be necessary to expel him; that shall be done also. * * * On that subject you must allow me to compliment you. You displayed the *sang froid* of a hero, the wit of a demon, and the grace of an angel. Indeed, marquis, you must pardon me the expression, you were adorable."

"It is certain," said the marquis, crossing his legs, and playing with the laced frill of his shirt; "it is certain that the fellow saw me all fire."

"Ah! marquis, how well you managed him! Of a gauntlet of iron you made a glove of Swedish leather. I knew that you were brave and bold, but I must own that I was far from suspecting you of so much diplomacy. It is indeed great to possess at once the strength of the oak and the elasticity of the reed. Marquis de la Seiglière, the Prince of Benevento, usurped your place at the congress of Vienna.

"Do you think so, baroness?" asked the marquis, stroking his chin.

"By one touch you would have bent the bow of Nimrod," smiled Madame de Vaubert; "you could tame tigers, and teach panthers to eat from your hand."

"What would you have?" asked M. de la Seiglière disdainfully; "it is the history of all that sort of persons; at a distance they talk only of devouring you; but, if we condescend to smile upon them they crawl at our feet. Nevertheless, baroness, I shall not forget that I am not yet at an age to enact the part of Don Diego; and if this fellow were a gentleman, I would even now put in practice the lessons of Saint George.

"Marquis," haughtily replied Madame de Vaubert; "if this fellow were a gentleman, and you were Don Diego, you would not have to seek far for Rodriguez."

And here we conclude, simply informing such of our readers as may have become interested in the story, that the beautiful and amiable heroine marries neither the foppish son of Madame de Vaubert, nor the high-hearted orphan of the ex-steward; and that, despite this fact, she lives and dies the heiress of the proud domains of La Seigliere.

JOURNAL OF GERMAN LITERATURE.

Karl von Holtei, and the German Theatre.

(*Continued from p.* 526.)

And, nevertheless, Holtei had the boldness to make one more effort in Dresden, where he appeared in the part of *Juraints*, in Korner's *Zring*. He was hissed off. His feelings, the following day, were wretched indeed. He says, "In every greeting I saw scorn and contempt, in every word I heard a jest against me; when I saw two heads talking earnestly together, I was sure that *Juraints* was the subject of their whispers." So selfish are we all, even in the deepest moments of despair and humiliation, that we refer all things to ourselves as the central of attraction, to the rest of existence. Tieck, only, spoke comfort to him; of him Holtei says,—

Tieck's encouraging smile played around my sorrow like a small blue flame around the spot where a treasure is concealed.

We have here an interesting account of Tieck, as reader of Shakspeare, and a comparison between him and Karl Schall:

His fine, noble countenance, intellectual eyes, and powerful golden voice, commanded my whole soul. I felt no doubt of the master-power which all the world acknowledged in him, but, whether I would or no, I was compelled to think of Schall, Schall, with his copper nose, and his rhinoceros face. I hardly dared confess to myself that I held him for a greater artist than Tieck; that Schall, free from all mannerism, made much deeper effect, and, without that perfect harmony, the result of extreme cultivation, without that flexibility of form, in Tieck the result of daily and constant exercise, was far richer in genuine traits of talent, and in the momentary impulses of genius.

Again, in another passage, referring to Schall:

His lisping tongue was loosened, a pure strong voice emanated from the uneasy mass of flesh and blood, the copper, Bardolf face seemed suddenly bright and clear, while the small eyes glanced with brilliancy and fire.

Holtei's own reading of the Shakspearian *Coriolanus*, a performance which excited much enthusiasm in Vienna, he described, modestly enough, as a feeble echo of Schall's masterpiece.

Failing thus, as tragedian in Breslau, Holtei united himself with his friend Julius Roham, celebrated for his *Lieder*, and with him set out on a tour, ostensibly for the purpose of giving songs and declamations; a plan which met with some little success. After some time, circumstances separated them: Holtei joined a party of strolling players, giving occasional public readings; for instance, one at Quedlinburg, where he only disposed of one ticket; so that his audience was formed of those to whom he had given free admittance. But he had within him a spring of inexhaustible buoyancy, and youthful elasticity, of which he says,—

Men blame light-heartedness. The light-heartedness of the old or middle-aged becomes a sin, but the light-heartedness of the young has in it something great and noble. It is the conquest of nature over circumstances, the triumph of truth over hypocrisy and imposition.

With the death of his foster-mother and Holtei's marriage with Luise Rogee the third volume closes.

The fourth contains much gossip and detail with reference to the theatrical condition of Berlin, together with much which cannot now be interesting to the public of 1845. At the time the Konigsstadte Theatre was established, the theatrical world of Berlin presented an array which it has not equalled since; the school of Iffland had been deservedly trampled underfoot; classical pieces were then admirably performed. Devrient, the Wolffs, Madame Stich, Lemm, Beschort, Wauer, Kruger, Rebenstein, and others, formed a company which has not since been excelled. In those days the theatre was visited as a temple devoted to art; people spoke with a certain feeling of awe of the performance of one of Shakspeare's tragedies, wherein Devrient would be found to harrow up one's inward soul, or of a classic representation of Goethe's *Iambics* by Stich, Lemm, and Wolff. One must have lived through some period of this brilliant era to comprehend that the stage really exercised another influence beyond that of mere entertainment and diversion.

So long as Holtei's first wife was a member of the royal company, nothing else theatrical was to be mentioned to him. To such a degree was this party feeling carried, that he himself styles it "extravagant folly." Holtei, of an enthusiastic nature, the absolute slave of the circumstances in which he chanced to be placed, was now a disciple of Schiller, now of Goethe, now of Shakspeare, now of Tieck, all in rapid succession. After the death of his wife, we see him suddenly appointed as secretary, poet, and registrar at the very theatre he so recently detested and abused. He is eager to shield himself, on this occasion, from all imputations of mercenary motives, but of this we will say nothing; we have in Germany witnessed more remarkable secessions than that from one theatre to another. From this time Holtei can "never think too highly" of the new establishment. But to us this trait of his mind has nothing in it surprising; it has its foundation in his inmost character.

Here, however, Holtei would have been quite in his true position; here fortune, against whom he incessantly complained, would have come to his aid, had he only been able to make better use of his time, and provide the theatre with *vaudevilles* and *liederspielen*, a class of compositions for which he was peculiarly qualified. But his dramatic contributions were limited to a few prologues, opera texts, and so forth; the well-known *Kalkbrenner*, and the little piece so popular in its songs, *Der alte Feldherr*. The latter gained him the little satisfaction of his being styled by the immortal Tzschoppe, "a restless hair-brain," spite of this title the *Alte Feldherr* contains songs which were, and have been ever since, in the mouths and hearts of all men. Fortune is often strange in

her dispensations. HOLTEI is perhaps as immortal as GOETHE, although the HOLTEI immortality only rests upon two simple songs. These songs will live and be sung when probably the name of HOLTEI is lost to the world; and most likely, of the many poets and authors trumpeted in our journals, as much will not remain many years hence.

At this period, indeed, HOLTEI was so taken up with engagements of various kinds, that his labours in behalf of the stage were neither very numerous nor very important. He says,—

Every one regretted that I did not better employ my time in producing novelties for the theatre which were then much needed, and at the same time every one endeavoured, all in his power, to divorce me from my proper pursuits, and involve me in the whirl and dissipation of society. My life became daily and daily one of mere externals—and yet I did nothing to avert the evil.

HOLTEI shared this disadvantage with many other poets and authors of distinction, who, as petted toys, or, on account of their genuine talent, are willingly received in society, and easily led aside into its turmoil and distractions. No one can replace to them the loss of their time, the destruction of their productive powers; people generally regard poetry and writing of all kinds as a mere pastime, or at the very utmost, as a labour which can be begun and continued like a young girl's knitting, laid aside any moment, or taken up at any other opportunity. In repentance and lamentation over this wasted period of his life, HOLTEI spends many pages of his memoirs.

Another cause of his uneasy and dissatisfied feelings he honestly confesses:—

The hardest thing that can happen to a man of mind and cultivation, is, in my opinion, the little estimation in which he is held when he is nothing more, and can be nothing more, than the husband of his wife. It is bad enough when she supports him on her property, but a hundred times worse when he lives on the harvest of her talents. To be the husband of an actress, singer, or dancer, and nothing more,—in comparison a street organ-player is worthy of envy.

The last part of the fourth volume is chiefly occupied with Paris, whither HOLTEI paid a visit of some length, and in particular with the Parisian theatres, to which he gave his most earnest attention. On this occasion he expresses himself thus:

A theatre of any degree of rank, *must* retain the power of punishing every neglect or indifference of the actors immediately and unappealably. In France, the most admired and favoured actor is hissed off, if he misses his part twice. But our Germans! In Paris it does not depend upon the caprice of the manager, or the humour of a little clique in the pit, as to the destiny of a piece; the poet insists upon his three representations, and the public have time and opportunity to confirm or reverse its judgment. The actor must listen to the poet, and woe to him who refuses. What a trouble and anxiety with us, before any thing, even our best works, can be produced; what with hindrances of all kinds, opposition in every quarter, passing through the census, and so on. No, whoever wishes to find pleasure in the theatre must go to Paris.

All this is neither very brilliant nor very admirably expressed, but it has the higher merit of being true. Our real concern may be with HOLTEI and his relation to the theatre, nevertheless we may observe that many of the tales of scandal which HOLTEI, in spite of his high esteem for KARL SCHALL, makes no scruple in relating, had much better been covered with the mantle of Christian love. On the other side it is difficult to comprehend how KARL SCHALL, merely in his capacity of reader, should be brought so much forward. In the memory of his friend his name may be "dear and cherished," but to literature and mankind in general, it matters but little whether KARL SCHALL existed or not. We must class him among those whom the history of literature would only think of with unwillingness. Certainly the accounts of his theatrical and reviewing life are interesting in one point of view—namely, as proving to what a degree of degradation the relation between the drama and the critics may be brought.

Passing through Weimar HOLTEI visited the aged GOETHE, and seems to have felt no little awe in this, his first interview, with the king of German poets. HOLTEI had heard much of the repelling coldness with which GOETHE received so many of his passing visitors, changing pert, arrogant, and unceasing chatterers into embarrassed clowns, with their simple yes and no; he knew too, that GOETHE had other and better things to do, than to open himself to every one who accidentally approached him; so he was hardly surprised to find the poet distant and chilling to him, as long as HOLTEI endeavoured to make a favourable impression upon him; but when at last a turn in the conversation enabled him to recover perfect ease, and display the amiable *naïveté* of his character, then GOETHE became easy to him also; and was invited to dinner. Afterwards HOLTEI visited him in his little garden-house, in the park, where his reception was even more genial and friendly. GOETHE said here, "We have spent many happy years here, and now that we are drawing near the end, may the serpent fix his teeth in the tail, that it may end as it has begun."

To secure HOLTEI some friendly attention, let us quote a few remarks on SCHILLER, whose antagonist HOLTEI had once been:—

In the first years of youth, when mind and heart celebrate their spring, and the freshness of all things comes upon the life, now first awakening to consciousness, then it is that we really drink in the words of Schiller, and swear by his name. Then comes the earnest time of life, the youth ripens into man, and he feels proud in the thought that he has turned from the delights of his young days to other things; and among them he turns away, too, from his Schiller. He says he has grown out of him; and, by way of criticism, utters something about his "poetry of reflection," about its "philosophical and ideal tendency," about its "subjectivity;" and thus he *un-Schillerises* himself. On he goes, bravely and boldly, ungrateful to the friend of his youth, whom he fancies he needs no more. But life is not what he imagined. Vain and hollow, "flat and unprofitable" appear to him all the world's efforts. Long-forgotten dreams rise up before him, the longing after lost happiness becomes now a necessity. A glance is cast behind,—and see, there stands his Schiller, whom he thought to need no more; there he stands with his sweet-smelling roses, his blooming myrtle-wreaths, his fresh green bower. It is he, the unchanged, the healing singer; and in humility the grey head is bowed down, that he may bless the brow, as he did thirty years since.

We see, from this autobiography, that HOLTEI remained throughout his life what his temperament, education, and circumstances compelled him to be, and would lead us to suppose. There is, we imagine, no man, hardly, who does not ascribe all his good-fortune to his own powers; at the same time, there is hardly any man who does not impute all his ill-success to the bad influence of others, or to the effects of circumstances, so that LEOPOLD SCHEFER's remark remains true, that each man's life is spent *for* him quite as much as he lives it *himself*.

H. MARGGRAFF.

JOURNAL OF SPANISH LITERATURE.

Isabella Reina de Granada. Novela Historica, per Don FRANCISCO MARTINEZ DE LA ROSA.

AMIDST the translations from the French, translations from the English, and translations from the German, which, few and far between, form the Spanish literature, it is pleasant to find a genuine Spanish work; one too, which, with somewhat of the lightness of the modern novel, blends a large portion of the ancient Castilian dignity: the name of MARTINEZ DE LA ROSA will attract some readers, the merits of the work ought to secure many. The tale is concerning Dona Isabella de Solis, who, by a singular chain of events, became queen of Granada; and we are introduced to her in the castle of her father, the Comendador de Solis, at Martos. Here, like a flower closed up in a secret garden, she grew and flourished; nor did it appear that she desired to make herself popular among the youths and maidens of Castile. Self-willed and proud, she had but one companion, an old Moorish woman, who had recovered her from a lingering disease, of which no one could tell the cause, but which all the people about her father's residence attributed to magic. And as thus they found out to their satisfaction a cause for the evil, so to magic, likewise, they attributed the recovery, and looked upon the old Moorish woman (whom in conformity with the polite customs of the time they called *La Perra—"female dog!"*) with horror and detestation. In the heart, however, of Isabella, the old woman had no rival; and soon she so far possessed herself of the will of the young lady, that she turned and governed her as she wished. One of her objects seemed to be to make the Castilian

damsel discontented with her own country, and to excite in her a great admiration for Granada, and in this she succeeded.

Isabella, though but fifteen years of age, had been long betrothed to Don Pedro Venegas, son of the Count of San Lucar; and the period was now approaching when the marriage should take place. The festivities and rejoicings on so auspicious an occasion somewhat remind us of a royal procession of Elizabeth; but, like that, they came at last to an end, and the bride and bridegroom stand before the altar.

A BRIDAL INTERRUPTED.

And now, kneeling breathless and trembling, she listened to the sacred words which were to unite them for ever; when suddenly was heard so fierce a clamour, that the priest suspended his voice, and all stood as if rooted to the spot. At first they thought it some quarrel among the people at the castle, overcome with wine and excitement; but an instant after was heard the cry of "fire!" which struck terror into their minds; and as the tumult approached, they distinguished the clashing of arms, the swift running of fugitives, and the groans of men wounded and dying. Isabella fell senseless in the arms of the bridegroom; the friends and vassals who surrounded them fled in dismay; the comendador rushed forwards, like a thunderbolt, to find out for himself the cause of the misfortune; but scarcely had he reached the door of the chapel, when he was driven back by a crowd running there as to the last place of refuge. He cried out, but no one replied; he asked a thousand questions, but no one answered; only was there heard sobs, shrieks, and lamentations as of those whose death was nigh. The cause of the calamity was soon discovered; the Moors of the frontier, availing themselves of the night, and trusting to the carelessness which peace had inspired in the Christians, and also reckoning on the intoxication and slumber of some, and the occupation of others, had made a sudden and successful attack, poured their bands into the castle, and given it up at once to fire and sword. The unhappy Christians, scarcely crediting their own senses, supposed at first the strange warriors were friends in disguise—(no uncommon jest in Spanish festivities at that time)—had offered no resistance, and passed at once from their rejoicings to death. Neither age nor sex were respected—the priest at the altar—the mother with her infant. Here was the prey—there the destroyer. The fury of the infidels increased at the sight of the consecrated things; and there, with his sword in his hand, leaning against a pillar, pale and with his eyes closed, was the comendador,—none knew whether living or dead; but the touch of a Moorish scimitar brought him to the ground, and it then appeared that he had received a hundred wounds. Before the altar, sustaining his bride, and making with his body a shield for her, stood the young Venegas. He had no arms, nor hoped for human succour; but after what he had already seen, he no longer wished for life.

From this scene of terror and desolation Isabella and her Moorish attendant, whom we must henceforth call Arlaja, escaped, and were taken into the kingdom of Granada. And here it will be necessary to regard the relative conditions of that kingdom and Castile. The former had been for some time tributary to the latter; but Castile, vexed by internal dissensions,—at war with France on one side and Portugal on the other,—impoverished and overtaxed, was obviously unable to support a war with her southern neighbour, and Abu Hassan, the then sovereign of Granada, replied to the ambassadors of Ferdinand, who came to demand the yearly tribute, "that the sovereigns of Granada who had paid that tribute were dead, and that the mint of the city no longer furnished silver and gold for sequins and dinars, but iron for lances and scimitars." Under these circumstances it appeared unlikely that peace could long be profound. The character of Abu Hassan, however, was weak and unwarlike; he had commenced his reign with great expectations, he had given promise of high qualities, but he had long been a slave to pleasure and averse from state business. In order to stimulate him, the King of Fez sent many ambassadors, representing how necessary it was that the Moorish dominion in Spain should be preserved, and urging Abu Hassan to more active exertions. All these endeavours failed; Abu Hassan received with courtesy the ambassadors, but continued his inactive life. The last of these envoys, Aben Farruch by name, was a Moor of great skill and sagacity, and his intention was by no means to content himself with delivering to the King of Granada the advice of his royal brother, but to compel him, if possible, to a war with Castile. Hence he was the instigator of the sacking of the Castle of Martos; he it was who carried it into execution, and carried away Isabella and Arlaja into Granada. Not long after their arrival in that country, Aben Farruch and Arlaja, now become his ally, determined to present Isabella to Abu Hassan, at once because they thought her worthy of such distinction as because they wished to conciliate the king. Struck with her marvellous beauty, Abu Hassan tried all means to obtain her love, nor was he without success. The heart of Isabella was his own, but her Castilian pride prevented her from becoming the mistress even of a king. About this time, however, a circumstance occurred which changed not the domestic circumstances only of Abu Hassan, but also his political relations—the beautiful Spanish captive was seized upon, together with her attendant, in a garden which the king had given her, and carried away.

MOORISH BANDITTI.

In a few minutes Isabella heard a light sound in a neighbouring underwood; she turned her head in alarm, and in a low voice aroused her companion, who at once arose; but it was too late for flight; six or seven men, covered with green boughs, seized upon them without speaking a single word, cast thick veils over their faces to prevent their crying out, and, dragging them along the ground, brought them to the mouth of a cave carefully concealed by bushes. Here they entered, and descended so far that Arlaja thought it was their intention to bury their miserable victims in the heart of the earth. She noted also—for Isabella had fainted—that the path was too narrow to admit more than two persons to walk abreast, and with such perpetual turnings and windings that it was impossible to say in what direction it led. All she knew certainly was, by the cold and heavy impression made upon her by the air, that it was a place where the rays of the sun never penetrated. Several hours they waited here, and when Isabella recovered her senses she was compelled, by every species of insult, to move forward; nay, to so great an extent did her conductors carry their cruelties, that they pricked her with their daggers to accelerate her steps.

After some time the light of day burst upon them, and an ancient and venerable man meeting them at the termination of the cavern, his appearance had so powerful an effect upon their conductors that they took flight, and left Isabella and Arlaja with the old man. The wounds of the former were now examined, and Arlaja, finding from the colour of the edges that they had been inflicted with poisoned weapons, sucked the venom from the wounds, and bathed them with the juice of heath.

It was not till two days had elapsed that Abu Hassan discovered Isabella, and at once attributed her abduction to the machinations of Aixa, his queen; nor was he wrong in thus deciding. Rage mastered his mind; and calling together a counsel of the Abencerrages, his favourite tribe, long consultations were held whether Aixa should be put to death; but Abu Hassan determined at last to spare her life, but to repudiate her, and to banish her from Granada. This sentence is conveyed to her by the vizier, Aben Hamet, and the queen haughtily replies, "I accepted, without vain-glory, the hand of Abu Hassan—I relinquish it without regret." But while she thus speaks she has organized the germs of an insurrection, the object of which is the dethronement of Abu Hassan and the placing on the throne his and her son, Abdelehi, more commonly known by the name of Boabdil. As soon as this divorce is arranged, the king determines to offer his hand and crown to his Christian captive, and she for his sake gives up her religion and becomes Queen of Granada. In the mean time Aben Farruch takes great pains to rekindle war; and, urged by him, and stimulated by the returning prosperity of the kingdom, the king attacks Zahara, a town in Andalusia, and carries it by storm. But the boldness of this attack, foreign as it was to the indolent character of the king, induced a vehement feeling throughout Christian Spain; and the first return on the side of the Castilians was the successful siege of Alhama, a blow to the Moorish power that occasioned the greatest terror in Granada. Many ballads are still extant on the subject, the most celebrated of which is translated by Lord Byron:—

Passavease el rey Moro, &c.

While the war raged, and while Abu Hassan was with his army before Alhama, besieging there the Marquis of Cadiz, Aixa seized the opportunity, excited the Zegris to revolt, and placed her son Boabdil on the throne. While Aben Hamet supposed that this insurrection would go on in the usual way, the insurgents resolved to carry their point by a *coup-de-main*, and to begin by setting Aixa and her son at liberty, and establishing them in the palace of the Alhambra.

A MIDNIGHT ESCAPE.

The night was already far advanced, the air neither clear nor dark, but the moon obscured by clouds, when from a window of the palace of Darlaroca, where Aixa was confined, together with Boabdil, a ladder, made of sashes and veils and scarfs, was flung down the precipice, and made fast to a tree below and to the pillar of the projecting window above. The tree below grew in a narrow and precipitous path, hanging over and projecting beyond which was the wall of the palace out of which jutted the window in question, one of those which in Moorish buildings are called *aximez*; beneath was a descent, steep and rocky, of several hundred feet.

By this frail and narrow bridge, which trembled at every movement, in darkness and surrounded by dangers, a woman had to descend—but that woman was Aixa. One thought only made her heart beat quicker than usual, and that was that her son, the one object of her love and care, had to tread the same path; and it was no small proof of the authority and dominion which she exercised over the timid youth, that she had induced him to make the attempt, and to go down first; for Aixa suspected that if he remained in the palace to follow her footsteps the peril would keep him back, and he would, by his irresolution, disappoint hopes so high and well founded. And, indeed, Boabdil was, with one foot on the ladder, on the point of renouncing the enterprise, when his mother gave him her hand, and said to him, in a voice vibrating between tenderness and severity, "Tremble not, my son; it is a crown that awaits you below!" The prince was silent, holding his breath, at the peril before him, yet he feared still more the anger of Aixa if he drew back or vacillated; and he descended—down and down, till some of the Zegris receiving him in their arms, he gave a scream of terror at finding himself surrounded by strangers armed and ferocious. This was the only signal that Aixa could have that her son had safely descended, and in that moment all her self-possession returned to her. For a moment, indeed, when swinging over the abyss, she thought of her danger, but it was only as it reflected upon her son; and when she rejoined him on the platform below, she spake but few words, but they were decisive —"To the Alhambra!"

The amiable but pusillanimous Boabdil was now compelled to take the field against his father; but in an attack of the Castilians he was taken prisoner, and thus his rebellion was stopped.

In the mean time Isabella, who had now received the name of Zorayda, was walking in the gardens of the Alcazar, at Malaga, in the cool of the evening, when a man leaped down from a tree near the wall, and stood before her. Her consternation may be well conceived when she sees that the intruder was no other than Don Pedro de Venegas, to whom she had been united in the chapel of her father's castle. He claims her as his own; but she has changed her name, renounced her faith, and yielded her heart to her Moorish lord.

And now we have the history of Don Pedro, who had been wounded in the assault at Martos, and, it was supposed, killed; but the strength of his constitution and his youth were in his favour, and he speedily recovered. He, however, had been taken over to Africa, and there received into a Moorish family of rank, who treated him with the greatest kindness. He found there an aged Moor, Al Amin, who, inquiring his name, and hearing that it was Venegas, told him that several of his family were settled at Granada, especially the sons of his uncle; and further, that this uncle, who had embraced the faith of Mohammed, had been his (Al Amin's) dearest friend. He informed him also that they had married into the royal house, and were among the principal persons at the court of Abu Hassan. Then he alluded to the still higher fortune of of a Christian lady who had been made captive, and now, by the glorious name of Zorayda, sat on the throne of Granada. A few inquiries convince Don Pedro that this queen was his own wife, and he determines to recover her or to perish in the attempt. How fruitless it was we have seen; and from that time we hear no more of Don Pedro; the king supposed that the man who had intruded into the gardens was an emissary of Aixa, and redoubled his tenderness to Zorayda. While these things take place at Malaga, the brother of Abu Hassan, commonly called El Zagal, but whose real name was Abdelehi, defeated the armies of the Christians with great slaughter, and the narrative concludes with the restoration of Abu Hassan to the throne, and the re-establishment of Zorayda in the Alhambra.

JOURNAL OF AMERICAN LITERATURE.

Longfellow's Poets and Poetry of Europe.

(*Concluded from page* 527.)

Mr. Longfellow has divided his view of French poetry, very nearly as he has done the German, into six periods, and arranged the translated specimens into corresponding divisions. They would fall more naturally, perhaps, under three heads,—the first embracing the earlier poems, and coming down to the middle of the seventeenth century, the second extending to the reign of Louis XIV. and the third comprising what has been written since the earlier part of the eighteenth century. This arrangement would have shewn, at least, in what unequal measure the treasures of French poetry have been made available for the English reader. That which belongs to the second of our periods, the most brilliant of the three, the courtly and magnificent age of the Great Monarch, seems either not to have attracted the notice of English translators, or to have defied their skill. French poetry of the classical school, indeed, is not well suited to our Anglo-Saxon tastes, and can with difficulty be rendered into our language without the loss of its most striking characteristics. Polished to the last degree of nicety, and often dependent for its principal charm on the most subtile idioms and the most delicate shades of expression, most of it is as untranslatable into English verse as the Odes of Horace. The editor, as we have said, has given us little from this period except a scene or two from some rather flat adaptations of the works of its great dramatists to the English stage.

But from the earliest of our three periods, Mr. Taylor, Miss Costello, and Mr. Longfellow have furnished an abundance of versions, most of them being very tasteful and rhythmical. The songs of the Jongleurs, the Trouvères, and the Troubadours come under this head. The vocation of all three differed not much from that of the Minnesingers of Germany, for the burden of their songs "was love, still love." The Jongleurs were simply wandering minstrels, who sang what they wrote, while the Trouvères composed, but did not sing; these two classes belonged to the North of France, while the strains of the Troubadours, softer and more voluptuous, came from the sweet South. As a specimen of their lays, and of the graceful versions of Miss Costello, we will extract two of the specimens, leaving it for our readers to ascertain whether Tom Moore has stolen from the Troubadours, or whether the fair translator has borrowed from the Irish bard the softness and melody of her versification.

Who has not looked upon her brow
  Has never dreamed of perfect bliss;
But once to see her is to know
  What beauty, what perfection, is.
Her charms are of the growth of heaven,
  She decks the night with hues of day:
Blest are the eyes to which 'tis given
  On her to gaze the soul away!

No, never since the fatal time
When the world fell for woman's crime,
  Has Heaven in tender mercy sent—
All preordaining, all foreseeing—
  A breath of purity that lent
Existence to so fair a being!
Whatever earth can boast of rare,
  Of precious, and of good,—
Gaze on her form 'tis mingled there,
  With added grace endued.

Why, why is she so much above
  All others whom I might behold,—
Whom I, unblamed, might dare to love,
  To whom my sorrows might be told?
O, when I see her, passing fair,
I feel how vain is all my care:
I feel she all transcends my praise,
I feel she must contemn my lays:
I feel, alas! no claim have I
To gain that bright divinity!
Were she less lovely, less divine,
Less passion and despair were mine!

The French poets of the present century appear to considerable advantage in this volume; and yet, they hardly have their due. But very few of their effusions have been skilfully

married to English verse, though they are more translatable than the works of their immediate predecessors, the classical school. There is a very good introductory notice of CHATEAUBRIAND; but the two translated scraps of his verses give no idea of his poetic talent. Five or six of BERANGER'S inimitable lyrics have been capitally rendered in some of the English magazines, and Mr. LONGFELLOW has done well in transferring the versions to his volume. A few translations from VICTOR HUGO, executed with great spirit and elegance, have been borrowed from our contemporary, the *Democratic Review*. The specimens given of the poetry of Madame TASTU and of AUGUSTE BARBIER are enough to make one wish for more from the same source.

From the well-trodden field of Italian poetry the editor's gleanings have been considerable, and they form one of the most attractive portions of the volume. The chronological arrangement is into four periods,—the first including the poets of the thirteenth and fourteenth centuries, the second extending over the fifteenth, the third over the sixteenth, century, while the fourth reaches from the year 1600 to the present day. Of these, the first and third are evidently the most interesting; the former comprising the immortal names of the *trecentisti*, of DANTE, PETRARCH, and BOCCACCIO, and the latter shining with the hardly less splendid fame of ARIOSTO, MICHEL ANGELO, and TASSO. English translators have been as fond of trying their skill upon the great Italian poets, as they have been fearful of the French; and Mr. LONGFELLOW has consequently had more scope than usual for exercising his taste in making selections. He has generally shown nice discernment and true appreciation of the relative merits of different translators. He has passed over, for the most part, the watery transfusions of HOOLE, and has gleaned from the ephemeral pages of the minor periodicals many scraps of translation, executed with great spirit, fidelity, and grace, which might otherwise have floated down to oblivion. We are not so well satisfied to find no specimen of CARY'S translation of DANTE, which, though it is unrhymed, and is in ordinary blank verse, instead of the metre of the original, is still executed with so much vigour, precision, and beauty, as well to deserve the reputation it has long enjoyed, of being a classic in this department of English literature. The gem, as it seems to us, of the specimens here brought together of versions from DANTE is the following exquisite translation from the twenty-third book of the *Paradise*, by Mr. F. C. GRAY. We quote it the more readily, as in Mr. LONGFELLOW'S volume it appears, we believe, for the first time in print, and as it fully exemplifies our ideal of the manner in which such work should be performed,—not slavishly literal, but preserving all the spirit and general meaning of the original, which it fully rivals in grace and elegance. It is a perfect little poem, made so thoroughly English, as, for the eye unacquainted with the Italian, to retain no trace of its foreign origin. Mark the manner in which the interlocking rhyme and measure sustain the prolonged sense, and bear out the elaborate and beautiful comparisons in their full meaning and harmony.

BEATRICE.

Like as the bird, who on her nest all night
Had rested, darkling, with her tender brood,
'Mid the loved foliage, longing now for light,
To gaze on their dear looks and bring them food,—
Sweet task, whose pleasures all its toil repay,—
Anticipates the dawn, and, through the wood
Ascending, perches on the topmost spray,
There, all impatience, watching to descry
The first faint glimmer of approaching day:
Thus did my lady, toward the southern sky,
Erect and motionless, her visage turn;
The mute suspense that filled her wistful eye
Made me like one who waits a friend's return,
Lives on this hope, and will no other own.
Soon did my eye a rising light discern;
High up the heavens its kindling splendours shone,
And Beatrice exclaimed, "See, they appear,
The Lord's triumphal hosts! For this alone
These spheres have rolled and reaped their harvest here!"
Her face seemed all on fire, and in her eye
Danced joy unspeakable to mortal ear.
As when full-orbed Diana smiles on high,
While the eternal nymphs her form surround,
And, scattering beauty through the cloudless sky,
Float on the bosom of the blue profound:
O'er thousands of bright flowers was seen to blaze
One sun transcendent, from whom all around,
As from our sun the planets, drew their rays;
He through these living lights poured such a tide
Of glory, as o'erpowered my feeble gaze.
"O Beatrice, my sweet, my precious guide!"

The introductory notice of Dante, we believe, was written by Mr. LONGFELLOW himself, and we quote from it the following beautiful and just explanation of the general idea on which the poet's great work depends.

We are to consider the Divine Poem as the mirror of the age in which its author lived; or rather, perhaps, as a mirror of Italy in that age. The principal historic events and personages, the character and learning of the time, are faithfully imaged and reproduced therein. Most of the events described had just transpired; most of the persons were just dead; the memory of both was still warm in the minds of men. The poet did not merely imagine, as a possibility; but felt, as a reality. He was wandering about homeless as he composed; almost borrowing the ink he wrote with. They who had wronged him still lived to wrong him further. No wonder, then, that in his troubled, burning soul arose great thoughts and awful, like Farinata, from his burning sepulchre. When he approached a city's gates, he could not but be reminded that into the gates of Florence he could go no more. When he beheld the towers of feudal castles cresting the distant hills, he felt how arrogant are the strong, how much abused the weak. Every brook and river reminded him of the Arno, and the brooklets that descend from Casentino. Every voice he heard told him, by its strange accent, that he was an exile; and every home he saw said to him, in its sympathies even, "Thou art homeless!" All these things found expression in his poem; and much of the beautiful description of landscape, and of the morning and the evening, bears the freshness of that impression which is made on the mind of a foot-traveller, who sits under the trees at noon, and leaves or enters towns when the morning or evening bells are ringing, and he has only to hear "how many a tale their music tells."

Dante, in his Latin treatise "De Monarchiâ," says, that man is a kind of middle term between the corruptible and the incorruptible, and, being thus twofold in his nature, is destined to a twofold end; "namely, to happiness in this life, which consists in the practice of virtue, and is figured forth in the Terrestrial Paradise; and eternal beatitude, which consists in the fruition of the divine presence; to which we cannot arrive by any virtue of our own, unless aided by divine light; and this is the Celestial Paradise." This idea forms the thread of the "Commedia."

Midway in life the poet finds himself lost in the gloomy forest of worldly cares, beset by Pride, Avarice, and Sensual Pleasure. Moral Philosophy, embodied in the form of Virgil, leads him forth through the hell of worldly sin and passion and suffering, through the purgatory of repentant feelings, to the quiet repose of earthly happiness. Farther than this mere philosophy cannot go. Here Divine Wisdom, or Theology, in the form of Beatrice, receives the pilgrim, and, ascending from planet to planet, brings him to the throne of God.

Upon this slender, golden thread hangs this universe of a poem; in which things visible and invisible have their appointed place, and the spheres and populous stars revolve harmonious about their centre.

TASSO fares well in this volume. A well-written sketch of his life, and a discriminating criticism on his poetry, are followed by extracts from very good translations of his works. The specimens of the "Jerusalem Delivered," with excellent taste, are taken from the version by FAIRFAX, one of the oldest, but certainly the best, of the numerous translations of this immortal poem. Most of his sonnets which are quoted are in the English dress given to them by Mr. R. H. WILDE, whose two volumes of *Conjectures and Researches* respecting TASSO are a most honourable monument to the taste, scholarship, and critical acumen of the writer. Of the crowd of Italian poets who have flourished during the past two centuries, as full notices and specimens are given as will be desired by the ordinary reader.

It only remains for us to notice the collections made to illustrate the history of poetry in Spain and Portugal. Three periods are established in the annals of the former,—the first reaching from 1150 to 1500, the second including the sixteenth and seventeenth centuries, and the third coming down to the present day. The comparative barrenness of the latter division reminds one of the mournful decline in the condition and prospects of noble and romantic Spain. Ten pages suffice for notices and specimens of the Spanish poets, who have flourished during the last century and a half, while more than five times that number give but an insufficient idea of the

rich harvest of poetry, in that storied and picturesque land, during the two preceding centuries. This second period is adorned with the great names of CERVANTES, LOPE DE VEGA, and CALDERON, of GARCILASO DE LA VEGA, PONCE DE LEON, and ERCILLA, and a crowd of minor bards, almost any of which outshines the brightest of those belonging to a later day. The high spirit for which the people were always remarkable was nurtured by their rich and chivalric life, by their widely-spread renown in war, and by their marvellous and successful adventures on the ocean and in the newly discovered world. National pride and magnanimity of feeling could not but flourish under such influences as these; the serious and religious element, always predominant in the Spanish character, coloured and modified the effects produced by external circumstances, and the spirit of honour, loyalty, and faith imbued all their imaginative literature. Lyric poetry and the drama, the poetry of passionate love or equally passionate devotion, were the particular forms and modes of verse in which their fervid life and excited imaginations were most readily and frequently embodied. There was, perhaps, a tendency to exaggeration in their poetry, flowing from the strong excitement of their minds; but this was kept down in all their works of the highest class, through the innate gravity and dignity which were manifest in their noble bearing. True pride preserves from bombast, and concentrated passion rarely falls into mere rant. Even the mysticism, to which the rapturous devotional feeling of some of their poets was prone, was checked and overborne by the mandates of a severe taste, and carefully nurtured judgment.

The editor was fortunate in being able to select versions of Spanish poetry from the works of a multitude of excellent translators. BOWRING, WIFFIN, ROSCOE, Lord HOLLAND, SHELLEY, and BRYANT are among those to whom he is indebted, and he has, as it were, repaid the loan with a few of his own musical and faithful renderings into English. We have already exhausted our space for quotation, but must find room for the following morsel of exquisite versification by our own BRYANT, taken from the anonymous poetry of the earliest period. We know nothing of the source whence it was drawn, but it is one of those cases in which it will appear a mere impertinence to ask whether the version be faithful to the original. The translator who has succeeded so perfectly has made the English verses in every sense his own.

THE SIESTA.

Airs! that wander and murmur round,
  Bearing delight where'er ye blow,—
Make in the elms a lulling sound,
  While my lady sleeps in the shade below.

Lighten and lengthen her noonday rest,
  Till the heat of the noonday sun is o'er:
Sweet be her slumbers,—though in my breast
  The pain she has waked may slumber no more!
Breathing soft from the blue profound,
  Bearing delight where'er ye blow,
Make in the elms a lulling sound,
  While my lady sleeps in the shade below.

Airs! that over the bending boughs,
  And under the shadows of the leaves,
Murmur soft, like my timid vows,
  Or the secret sighs my bosom heaves,—
Gently sweeping the grassy ground,
  Bearing delight where'er ye blow,
Make in the elms a lulling sound,
  While my lady sleeps in the shade below.

We would willingly dwell upon the beautiful ballads, which are the most precious part of the early poetry of Spain, and which appear in this volume in very pleasing, but very paraphrastic, versions into English. But we must pass on, to speak very briefly of the specimens of Portuguese poetry. The editor has here adopted the same division into historic periods as in the case of Spain; the materials from which he has drawn were copious, for besides many of the translators already mentioned, STRANGFORD, ADAMSON, and Mrs. HEMANS, have made numerous and valuable contributions for a Portuguese anthology. As for the originals, one name is written so high above all the others, that the foreign readers attention is fastened almost exclusively upon it. Neither the first nor the third period in the literary annals of Portugal seem very rich, if we look at the quality of the wares, rather than their quantity; and the second appears engrossed, as it were, with the single fame of CAMOENS, the writer of the national epic, who, in his lifetime, was steeped in poverty to the lips, and died in an hospital. As usual in such cases, a splendid monument was erected to him fifteen years after his death, when his name had become honourable to his country, though his country could no longer be of service to him. The *Lusiad* is the heroic poem of Portugal's heroic age; it celebrates one of those grand feats of maritime adventure, which form epochs in the history of the world. VASCO DE GAMA'S great discovery of a passage round the Cape of Good Hope seems hardly to afford sufficient material for an epic; but CAMOENS himself had followed in this distinguished captain's track, and the story of his own adventures and sufferings in the East Indies might have furnished out a poem of equal or greater length. The merit of the work is probably to be ascribed in a considerable measure to his personal adventures; if he had seen and suffered less, he might have written less forcibly. Misery is the most effectual, as it has been the most common, stimulant of genius. The defects of the poem are nearly as conspicuous as its beauties; overwrought description, an ill-constructed story, and incongruous machinery are great drawbacks from the pleasure given by an epic. These faults, unluckily, are not likely to be lessened in a translation, and CAMOENS certainly is under no great obligations to Mr. MICKLE, who has done the *Lusiad* into English. A better idea of the poetic genius of the Portuguese bard will be gained from some very pleasing versions of his minor poems.

We have endeavoured to give the reader some idea of the very varied and interesting contents of Mr. LONGFELLOW'S volume; but the sketch has necessarily been an exceedingly meagre one. The book abounds with material for the gratification of a cultivated taste, and for the instruction of every mind of a generous and inquiring nature. But it does not admit of abridgment, and the nearest approach to a summary account of it would be to copy its table of contents. It suggests many themes for criticism and reflection, which we have reluctantly passed over, and now leave for the unbiassed consideration of those who may be able to dwell long and studiously upon its attractive pages.

ART.

STATUE OF HER MAJESTY AT THE ROYAL EXCHANGE.—The colossal statue of her Majesty, which has lately been placed in the centre of the Royal Exchange, was yesterday divested of its coverings. The statue is executed by Lough, the eminent sculptor, and is formed out of one solid block of white marble, upwards of nine feet in height. At three o'clock the members of the Gresham Committee walked from Mercer's-hall to the Royal Exchange, and witnessed the removal of the holland wrappers that had before hidden the statue from public view. When the cloths were taken down, loud and continued cheers resounded from those who had assembled. There was no formal ceremony, and the whole proceedings did not occupy a quarter of an hour. The front of the statue faces the great western entrance, and it is generally considered an excellent colossal representation of her Majesty in person. Yesterday was the anniversary of the opening of the Royal Exchange by her Majesty in person.

Thorwaldsen's Statue of Byron arrived at Trinity College, Cambridge, last week. Since that time preparations have been going on with considerable activity in the noble library of the college for the reception of the work therein, and we believe that it will be placed upon its pedestal in the early part of next week. —*Camb. Chronicle.*

THE DRAMA AND PUBLIC AMUSEMENTS.

PRINCESS'S THEATRE.—We attended here on Tuesday for the purpose, as we anticipated, of witnessing the new ballet of *Le Diable à Quatre*, with ADOLPHE ADAM'S music, but the indisposition of Miss BALLIN, occasioned by fatigue at its rehearsals, had necessitated the postponement of the new piece. We were, however, highly gratified by seeing Mrs. STIRLING'S performance of *Beatrice*, in *Much Ado about Nothing*. This, in our opinion, is a true thing; proving incontestably that, excellent as Mrs. STIRLING is in other parts, Shakspearian comedy is her real province. We have seen many eminent actresses of late

years in the character, but by none has its full spirit been so thoroughly appreciated. FANNY KEMBLE was a very admirable *Beatrice*, but Mrs. STIRLING is *the Beatrice* of SHAKSPEARE.

FRENCH PLAYS.—The following is the programme of the arrangements for the ensuing season of French plays. The season will commence on Monday, November 3, with Monsieur LAFONT, Mons. CARTIGNY, Mademoiselle MARTELLEUR (of the Theatre Français,) and Mademoiselle EUGENIE ST. MARC, of the Vaudeville, during whose engagements at the commencement of the season will be produced the favourite plays of *La Partie de Chasse de Henri Quatre, Leonide, La Somnambule, Roquefinette, Père et Fils, La Mère au Bal, André, Serment de Collège.* At the end of December, Madame ALBERT, whose appearance last year was prevented by a domestic calamity, will appear in *La Femme Jalouse, Madame Gregoire, Marie Mignot, Une Femme à Quarante Ans, La Lectrice, Caleb, Un Secret, Un Duel sous Richelieu.* Previously to Madame ALBERT's departure, Monsieur LAPERRIERE (of the Theatre du Vaudeville) will make his first appearance in this country, and will perform with Madame ALBERT in several pieces, in addition to *Un Premier Amour, Elle est Folle, Le Débutant, L'Image, Phillippe, Un Secret.* Early in February, Monsieur FELIX (of the Theatre du Vaudeville) will make his first appearance in this country, together with Madame DOCHE, during whose engagement will be produced *Jeanne et Jeanneton, Mémoires du Diable, L'Image, Satan, Les hors Loges, La Jolie Fille du Faubourg, La Polka en Province.* Early in April, Mademoiselle ROSE CHERI (of the Gymnase) will make her first appearance in this country, and will perform in the several new plays—*Le Changement de Main, Marquise de Rantzan, Madame de Cerigny, Les Deux Sœurs, Rebecca.* After whom Mademoiselle DEJAZET will appear for a limited number of representation. During her stay she will play once only each of her most popular characters, besides the new comedies of *Un Conte de Fée* and *La Gardeinde de Dusons.* At the end of Mademoiselle DEJAZET's engagement Mademoiselle PLESSY will appear, together with M. LAFONT, in some of the finest comedies of the French stage. Mr. MITCHELL has also succeeded in engaging Mademoiselle RACHEL for a few performances, to be selected from *Le Cid, Phædre, Tancrede, Polyenese, Jeanne d'Arc* by SOUMET, and the new tragedy of *Virginie* by LATOUR.

SURREY THEATRE.—A well-constructed version of the story which, dramatized under the title of *The Merchant's Daughter*, attracted such full houses to the Adelphi, is performing a similar service for this theatre. We looked in the other evening to report upon *The Rover's Secret*, for so the play is here designated, but found the task a needless one. There was a full and apparently well gratified audience.

AMATEUR THEATRICALS.—The town was curiously amused a few weeks ago, with the rumour of a private performance of Ben Jonson's *Every Man in his Humour*, which took place at the little theatre belonging to Miss KELLY, in Dean-street, Soho; and highly eulogistic whispers were circulated concerning the apt ability of "BOZ," the accomplished JOHN FOSTER, and the numerous wits connected with *Punch*, who sustained the leading characters. The audience consisted of the most distinguished literary men and critics of the day; and their testimony to the merits of "the players"—evidenced in their consummate tact and perfect knowledge of stage business—seems to be warm and universal. Stimulated by the success of the experiment, a second performance is talked of; and we have not only some reason for knowing that it will take place on Saturday the 15th of November, but that his Royal Highness Prince ALBERT will honour it with his presence. The "company" in the former instance included the names of CHARLES DICKENS, DOUGLAS JERROLD, JOHN FOSTER, MARK LEMON, DUDLEY COSTELLO, LEECH, FRANK STONE, and others of kindred repute: and we presume there will be no alteration in the arrangements when the ghost of "rare Ben" summons them together again.

ROYAL POLYTECHNIC INSTITUTION.—Among the inventions deposited in the above institution we observe Mr. Bencraft's patent hames for the prevention of galled shoulders. All those who are acquainted with the formation of a horse's shoulder well know that the trace attached to the hames has been made to bear upon the most objectionable part; viz. in front of the joint which connects the leg to the shoulder-blade, thereby imposing upon it continuous pressure and friction, and at the same time greatly impeding the action of the fore limbs. It is evident that in the horse the shoulder and that portion of the front of the spine which forms the withers should be the point of draft; but it is equally clear, both with reference to the economy of draft and the ease and freedom of the progression of the animal, that in the application of draft, the motion of the shoulder-joint should be as little interfered with as possible; and the inventor confidently asserts that by repeated trials of his patent hames it will be found that they generally diffuse the draft over the inner surface or bearing of the collar, giving it a tendency upwards; and thus, by relieving the shoulder-joint from pressure and setting at liberty the main muscles by which the movements of the fore limbs are effected, the progressive power of the horse is greatly increased, and his freedom and lightness of action materially improved; and he is thereby effectually protected from the continuous suffering consequent on galled shoulders. The general appearance, and the benefits both to man and horse, will be duly appreciated by the humane public.

ADELAIDE GALLERY.—M. KELLER (whose troop of gymnasts attracted so much attention at Vauxhall) has been engaged to exhibit his *tableaux vivans* at this gallery. His group for the most part are embodiments of the action, and, as far as may be, of the costume, of the most celebrated European pictures. The attitudes are of course greatly varied, and picturesque in an eminent degree. The effect of this *tableaux* is equally impressive and agreeable. Among the other attractions, Mr. RUSSELL's Lectures on Character, PILBROW's Atmospheric Railway, and the singing of Miss RUSSELL, maintain their popularity.

NECROLOGY.

MRS. ELIZABETH FRY.

THIS distinguished individual expired at Ramsgate, on Sunday, the 12th inst. after a long and protracted illness, which she bore throughout with great fortitude and resignation. The subject of this brief memoir was the daughter of the late Mr. John Gurney, of Earlham-hall, Norfolk, and sister to Mr. Samuel Gurney, of Upton-hall, in this county, banker. But few of her own sex stand so pre-eminent for their works of philanthropy and for alleviating the sufferings and promoting the happiness of their fellow-creatures as Mrs. Elizabeth Fry. At the early age of eighteen, by permission of her father, she converted an apartment in Earlham-hall into a school-room, where she daily gave twenty-four poor children elementary instruction in reading, writing, and arithmetic. In the year 1800 she married Mr. Joseph Fry (who still survives), a member of the Society of Friends, who materially aided her praiseworthy exertions by appropriating a large sum annually to her use, by which Mrs. Fry was enabled to extend the sphere of her usefulness. In the year 1816 Mrs. Fry succeeded in establishing a ladies' committee for the reformation of the interior of Newgate, and in this laudable undertaking she met with the cordial co-operation of the sheriffs of London and the governor of the prison. Not more than a year had elapsed before the beneficial effects of Mrs. Fry's committee were exhibited. The prison, which was previously a scene of riot, licentiousness, and filth, was exchanged for order, sobriety, and comparative neatness, in the chambers as well as in the persons of the female prisoners. Prior to the latter date, the female inmates were left without any employment—an evil which the discriminating powers of the subject of this memoir soon discovered, and instantly set about to remove it by the establishment of a manufactory for the women's tried side, as well as a school for children, which were daily superintended by the ladies of the committee. No sooner were the benefits of the manufactory known, than the women on the untried side petitioned the ladies' committee for a similar provision, which was granted, and we may observe the moral results surpassed the most sanguine anticipations of its promoters. We find the grand jury of the City of London, in their report dated the 21st February, 1818, expressing themselves in reference to Mrs. Fry's exertions as under:—"They cannot," they say, "conclude their report without expressing in an especial manner the peculiar gratification they experience in observing the important service rendered by Mrs. Fry and her friends, and the habits of religion, order, industry, and cleanliness which her humane, benevolent, and praiseworthy exertions have introduced among the female prisoners; and that if the principles which govern her regulations were adopted towards the males, as well as the females, it would be the means of converting a prison into a school of reform; and instead of sending criminals back into the world hardened in vice and depravity, they would be restored to it repentant, and probably become useful members of society." Similar sentiments were expressed by the London Grand Jury in a letter to Mrs. Fry, enclosing a donation in aid of her laudable design. The subject of this memoir not only elicited the encomiums of the English press, but her name was associated with every philanthropic object in most of the continental nations of Europe. In the slave-trade question her exertions were surpassed only by a few of the opposite sex. Such was her humane and benevolent disposition, that her sympathy extended to the whole human family, without reference to country, clime, or religion. She was looked upon as a physician to body and soul; she fed and comforted the poor, supplied them with clothes, and did every thing that would administer to their well-being, and promote their happiness. In the neighbourhood where she resided (Upton, in this county), her benevolence is too well known to need comment. Her readiness to hear the cause of the distressed and destitute, and alleviate their sufferings, won for her the respect of all classes, and raised for her a name which reflects

credit on her sex as well as on the Society of Friends, of which she was so distinguished a membdr. The funeral of Mrs. Fry took place on Saturday, the 18th inst. when her remains were interred in the Friends burial-ground at Barking.—*Chelmsford Chronicle.*

MR. BASEVI, THE ARCHITECT.

It gives us great pain to have to record the death of Geo. Basevi, esq. the eminent architect, which happened on Thursday morning, at Ely, under the following circumstances:—It appears that the Dean of Ely (Dr. Peacock) and one of the minor canons of the cathedral, were inspecting the restorations now being made in the interior of the great western tower, attended by Mr. Basevi, when the last-named ill-fated gentleman, in stepping back the better to make an observation, fell through an opening of the floor of the bell-chamber into the story next below, a distance of about forty feet, and was killed on the spot. The body was removed to the Deanery, where an inquest was held in the course of the day before Wm. Marshall, esq. one of the coroners of the Isle of Ely, and a jury composed of many of the principal gentry of the city and neighbourhood, who, after diligent investigation, returned a verdict of "Accidental death."

JAMES MILLINGEN, ESQ.

(*From the Literary Gazette.*)

This gentleman, whose return to England has been for some months anxiously looked for by his friends, died suddenly on the 1st instant at Florence. He had long been suffering from illness and infirmity; but had only a few days before applied in person for his passport to come home. Mr. Millingen was the eldest son of Mr. M. Millingen, formerly of Queen-square, Westminster. It was in that neighbourhood that the celebrated Dr. Cratcherode, his father's friend, observed the youth's early disposition to pursue archæologic studies, and he encouraged its growth by frequent gifts of duplicate coins, &c. He was at that time at Westminster School, and a most distinguished scholar under Dr. Wingfield, who was his private tutor; and was on the eve of repairing to one of our universities when his father unfortunately took his family to France, where he lost all his property during the revolution.

He had thus from early life distinguished himself amongst archæologists, and those who cultivated a taste for classic art, as one of the most accomplished of his class; he was a good practical scholar, and particularly well versed in those branches of Greek literature and history which bore on that subject. He had much critical acumen; and in judgment of the genuineness and origin of works of art, whether medals, sculpture in bronze or in marble, ancient vases or bas-reliefs in terra cotta, gold ornaments, or other precious remains of the taste and ingenuity of the ancients, he had long been almost without a rival; and there were few antiquaries in Germany, Italy or France, none, we may almost say, in this country, who did not bow to his opinion on such matters, or very unwillingly dissent from it. Mr. Millingen contributed also largely to the literature of the fine arts. He published a folio volume on the fictile vases formerly in the possession of Caroline Murat, Queen of Naples; another on those of Sir John Coghill; a very valuable volume in quarto, on unedited antiquities of various kinds; besides several short, but most valuable treatises on Greek coins, principally those of Magna Græcia, and on the Roman As; also on the introduction of the arts into Italy by the Greek colonies in Etruria.

As a collector of objects of fine art, Mr. M. was also very happy and judicious; whatever he possessed, or parted with, was sure to be a gem of its kind. He continued this pursuit quite to the last year of his life; and he had only recently forwarded the fruits of his late researches in Italy to the trustees of the British Museum, by whom they will probably be purchased as valuable accessions to our great national collection. Mr. Millingen enjoyed a pension of 100*l.* a year from this government, as a person devoted to literary pursuits; and was an honorary member of the Royal Society of Literature, of which he had formerly been elected a Royal Associate, and to which he contributed some excellent papers [see *Literary Gazette* reports]. He was, moreover, a Foreign Associate of the French Institute, and member of most of the learned academies of Europe.

Mr. M. has left two sons; one of them, Dr. Julius M. who accompanied Lord Byron in Greece, and is now physician to the Sultan, at Constantinople. The other is on the retired list of the medical department of the East India Company; in which service another of his sons, Captain M. died at Madras. Mr. Millingen was brother to Dr. Millingen, a medical officer in the army, who served in all the Peninsular campaigns, and was principal surgeon of our cavalry at Waterloo. Dr. M. was also for some time the resident physician of the Hanwell Lunatic Asylum; and is very popularly known as the author of *The Curiosities of Medical Experience, Aphorisms in Insanity,* and other publications.

NOTICE.

With the present number of THE CRITIC *is circulated, in the form of a Supplement, a Prospectus of the* METROPOLITAN SEWAGE MANURE COMPANY, *which we commend to the attentive perusal of our readers. To the Prospectus is appended a collection of the authorities upon which the calculations of the Company are based. Having personally watched the progress of this enterprise from its inception, now nearly two years since, we are enabled to give to our readers the most positive assurance that it is a substantial and* bonâ fide *scheme, and that the estimates have been framed with so much precaution that reliance may be placed upon the results, which shew a profit of at least 15 per cent. after supplying the manure to the market gardener and farmer at a price not exceeding sixpence per ton. As the subject is one of great public and scientific interest, we shall return to it.*

It should be added, that this Supplement is not intended for binding with the volume, and therefore is not paged.

BOOKSELLERS' CIRCULAR.

THE panic in the speculating world has affected all regular and honest callings, and the book trade shares the depression. Very few works of interest have been published of late, and still less are promised. We have endeavoured to relieve this dulness of the season with ample notices of the literary doings of our Continental neighbours, and it will be seen that to-day we add the first of a series of reviews of the current literature of Spain, to those of France, Germany, Italy, and America. This is quite a new feature in such a periodical, and may we ask the Booksellers to make a point of directing to it the notice of their customers. This added cost can only be met by increased circulation, and for that we must rely upon the personal recommendations and exertions of those who approve of THE CRITIC.

LITERARY INTELLIGENCE.

THE LATE MRS. JAMES GRAY, THE POETESS.—It appears from a letter in the *Witness,* Edinburgh paper, from Mr. William Anderson, author of *Landscape Lyrics,* that the late Mrs. James Gray, authoress of *Poems from the Antique,* better known as Miss M. A. Browne, was *not* a sister of Mrs. Hemans, as is commonly supposed. The maiden name, Browne, of these gifted ladies, and the sisterly similarity that is evinced in their genius and style of poetry, no doubt led to the mistake. Mr. Anderson's authority for the statement is a letter from Mrs. Gray herself, a short time previous to her lamented death.

The work entitled *Vestiges of Creation,* which has excited so much attention, and which has been attributed to so many different authors, we have good reason to believe is the production of Sir Richard R. Vyvyan, M.P. for Helston. We hear that the hon. bart. is preparing for the press another philosophical work entitled *The Harmony of the Visible Creation,* which, we believe, will command equal attention in the scientific world.—*Falmouth Packet.*

Count Cassini, the last of the name, a member of the Academy of Sciences, formerly Director of the Royal Observatory of Paris, Chevalier of the Order of St. Louis, and of the Legion of Honour, died, on the 18th inst. at his chateau of Thury-sous-Clermont (Oise), aged 90.

A correspondent at Naples writes on the 9th:—"In the morning of Thursday last (2nd inst.) the Scientific Congress, with its president, the Minister of State, Sant Angelo, went to Pompeii, where excavations were made under the direction of M. Carlo Bomicci, chief conservator of the antiquities of the kingdom. In a street near the temple of Augustus, were found two shops filled with iron and brass kitchen utensils, apparently set out for sale. Opposite these shops was uncovered a magazine containing blocks of indigenous and African marble, and five statues of white marble, one of which is a faun, and another of a woman clothed in drapery, which the antiquarians present believed to represent the goddess of Envy. At one end of the Via Fortuna a house was cleared, on the ground-floor of which was the furniture of a counting-house, or office, in which were some silver coins of Vespasian and Galba, and some marble weights. All the heights around Pompeii were covered with people, and most of the streets and squares so filled that the old Roman city seemed to have recovered its quondam population in full life and vigour."

A newspaper was published for the first time at St. Helena in June last.

THE CRITIC,
And Journal of Literature.

SATURDAY, NOVEMBER 8, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

THE MORNING MAIL.

IN spite of the flatness of the market, every post brings applications for shares, proving that this great enterprise is not taken up, like the railways, with a view to dealing in scrip, but as a *bonâ fide* investment, which the applicants believe to be a profitable one.

The nature of this project is so peculiar,—the shares so small—the deposit so trifling—the circumstances under which it is brought before the public, as guaranteed by a journal already established, and therefore more responsible than any Committee,—that it has been resolved to adopt a plan which has been recommended by many of those who take an interest in the enterprise. It is this:—

The getting-up of the Company is necessarily attended with some expenses. It must be advertised, and prospectuses must be printed and circulated. It is proposed that the cost of this shall be thus provided for, and so the work proceed vigorously.

As the deposit is only *one shilling* a share, it is presumed that no person feeling an interest in the enterprise, and desirous of its success, will hesitate to make the advance of this deposit immediately, accompanying his application with a post-office order or postage stamps (according to the amount or as most convenient), for the deposit of one shilling per share.

The money so received will be thus accounted for:—

THE CRITIC will publish from time to time an account of the deposits so received, and of the items of expenditure, so that the Shareholders may always know precisely how it is applied.

Should not the plan be ultimately proceeded with, the balance (if any) shall be returned to the Shareholders in rateable proportion.

By this arrangement the necessary fund for carrying out the plan will be procured; the utmost the Shareholders can risk will be the sum of *one shilling* for each share—a sum very trifling for so great an end; if it should fail, the loss will be no consideration; if it succeeds, the gain will be immense.

THE CRITIC pledges itself to a strict account of the deposits so paid.

Shareholders, therefore, are requested to transmit with their applications for shares the deposit of one shilling per share, which may be done, if under 10s., in penny postage stamps, and, if above that sum, by post-office order.

JOURNAL OF ENGLISH LITERATURE.

HISTORY.

The Life of Lorenzo de Medici, called the Magnificent. By WILLIAM ROSCOE. *With a Memoir of the Author.* London, 1845. Bogue.

OF all the publishing enterprises of our time this is the boldest and the most promising. Mr. BOGUE has designed, under the title of a "European Library," a complete collection of standard works, in all branches of literature, English and Foreign; uniformly printed, in an elegant form, a handsome type, and at a price which will bring them within the reach of large classes of the community to whom they must have been unattainable hitherto.

The excellence of this scheme lies in the resolution to limit the series to reprints of standard works, without alteration or abbreviation. It has been too much the fashion of late years to send forth in cheap forms crude compilations, manufactured with haste and carelessness, to meet the demands of the market, and these have been imposed upon credulous buyers as original works of worth. The standard productions of genius of all ages and countries have been, indeed, reprinted at various times, and in various forms, and at various prices, some cheaply, others in costly shape, but this is, we believe, the first systematic endeavour to supply the public with a complete and uniform collection, comprising all the works a moderate library ought to contain, uniform in size and appearance, and at a price which can only be maintained by an enormous sale; but of that we should think there can be no doubt, if the volume before us be a fair specimen of the series.

It was with excellent judgment that *Roscoe's Life of Lorenzo de Medici* was chosen for the opening of the series. It is unquestionably one of our standard histories. Few books have enjoyed more wide-spread popularity, and few have better deserved their fame. It is a very model of historical biography, copious without descending to frivolous minutiæ, philosophical without dogmatism, comprehensive without losing sight of the principal subject of the discourse. The style of the composition is peculiarly graceful and graphic, and many have been attracted by it to the study of history, whom severer works have deterred by their stiff and formal strain. It is a work which every person would have desired to place upon his bookshelf, but hitherto its cost has forbidden its possession to all save the wealthy. Now it is brought within the means of the humblest book-buyer, and it will be found in every household.

The series of which this is the beginning is, we understand, to be edited by Mr. WILLIAM HAZLITT, whose learning has presided over the production of this volume. It could not have been confided to better hands, and with such an editor and such a publisher, the country may anticipate a work which will be among the most valuable and remarkable productions of our enterprising age.

BIOGRAPHY.

The Life and Correspondence of Major-General Sir Isaac Brock, K.B. By T. B. TUPPER, Esq. London, 1845. Simpkin and Marshall.

ALTHOUGH bearing the name of London publishers this little volume was printed in Guernsey, of which island the subject of the memoir was a native; and it fills a vacant space in our biographical literature. Sir ISAAC BROCK occupied a conspicuous position during the American war, commanding the British army in Canada, and filling the office of Provisional Lieutenant-Governor. His vigour and energy, both in the field and in the council, would have produced a very different turn of affairs and saved the honour of Great Britain, but for the indecision and timidity of the Governor-General, who refused to sanction his bold and active policy.

That such was the fact has been ever since more than suspected, but it is placed beyond doubt by the correspondence contained in the volume, which everywhere breathes the language of a noble mind, where intelligence to discern the right is united with firmness to pursue it. The style is plain, manly, almost dignified, without any attempt at eloquence, and such as belongs to the ideal of a British officer.

In his government of Upper Canada BROCK was distinguished for his stern impartiality; in a position where it is most difficult, he kept himself aloof from faction, and by his firmness, mingled with mildness, in the administration of the law, he restored harmony where distraction had before prevailed and united the entire colony as one man against the common enemy. Even the Indians were gladly submissive to his rule and obedient to his orders, more from respect and regard than from fear.

Over the minds of the Indians Sir Isaac Brock gained an ascendancy altogether unexampled, and this he judiciously exercised for purposes conducive equally to the cause of humanity and the interests of his country. He led them to throw aside the scalping-knife, and taught them to feel pleasure and pride in

extending compassion to a vanquished enemy. In return they revered him as their common father, and while under his command were guilty of no excesses. These untutored people, the children of the forest, are ever apt to value personal much more than mental qualities, but the union of both in their leader was happily calculated to impress their haughty and masculine minds with respect and admiration; and the speech delivered by the celebrated Tecumseh, after the capture of Detroit, is illustrative of the sentiments with which the prowess of a British soldier could inspire these warlike tribes. "I have heard," said the chief, "much of your fame, and am happy again to shake by the hand a brave brother warrior. The Americans endeavour to give us a mean opinion of British generals, but we have been the witnesses of your valour. Your bold and sudden movements frightened the enemy, and you compelled them to surrender to half their own force."

His splendid victory at Detroit is often alluded to in his letters. He was charged by the envious with rashness for the attempt. But he asserts that desperate circumstances require desperate remedies; confidence in the general had departed, and despondency prevailed everywhere. Something was necessary to be done. The jealous said that it was a wanton risk, and its success a piece of good fortune, but Brock denies this. "In justice to my own discernment, I must say it proceeded from a cool calculation of the *pours* and *contres*."

But be this as it may, the consequences were most important. Mr. Tupper observes of them,—

The surrender of Detroit was so unexpected, that it produced an almost electrical effect throughout the Canadas; it was the first enterprise in which the militia had been engaged, and its success not only imparted confidence to that body, but it inspired the timid, fixed the wavering, and awed the disaffected. Major-General Brock from this moment became the idol of the great mass of those whom he governed; and when he returned to York, whither he arrived on the 27th of August, he was received amidst the heartfelt acclamations of a grateful people. They remembered that in the short space of nineteen days he had not only met the legislature and settled the public business of the province under the most trying circumstances that a commander could encounter; but, with means incredibly limited, he had gone nearly 300 miles in pursuit of an invading enemy of almost double his own force, and compelled him to surrender, thus extending the British dominion without bloodshed over an extent of country almost equal to Upper Canada.

It deserves to be recorded as an instance of good fortune, unprecedented perhaps in military annals, and especially in a country where the advantages and facilities of escape were so great, that from the 6th of August, the day on which Major-General Brock left York for Detroit, to the time immediately preceding the battle of Queenstown, the force under his personal command suffered no diminution in its numbers, either by desertion, natural death, or the sword. This comprehended a period of nearly ten weeks, during which an army was captured and a journey of several hundred miles by land and water accomplished with extreme rapidity. The swiftness of his movements was indeed most remarkable. He appears to have been everywhere. To-day at York, engaged in his civil and military duties; to-morrow at Fort George, superintending the defence of the Niagara frontier, or at Kingston reviewing and animating the militia. To-day at Fort George watching the enemy, the next at York dissolving the legislature, and a fortnight after on his return from the capture of Detroit.

Nor was his country unmindful of his services. Unhappily his life was not spared sufficiently long to permit of his personally enjoying the honours that were preparing for him. He fell gloriously at Queenstown, fighting for his country, on the 13th of Oct. 1812. The inhabitants of the province erected a monument to his memory near the spot, and which records that he died "revered and lamented by the people whom he governed, and deplored by the Sovereign to whose service his life had been devoted." The Parliament of the province addressed the throne requesting a grant for his brothers, and used this language of eulogy:

He had endeared himself to us by his able, virtuous, and impartial administration of the civil government, and by the zeal, military talents, and bravery, which marked his conduct in the field.

To his energy, his promptitude, and his decision, do we feel ourselves in a great degree indebted for having at this moment the happiness of enjoying the privileges of his Majesty's subjects. His disinterested and manly conduct aroused the spirit of the country, and called it forth for self-defence against a most insidious foe.

The British Parliament also voted a public monument to be erected in St. Paul's, where it may be seen in the north transept.

It is related by Hewison, in his account of Canada, that the memory of Brock is still held there in reverence.

He was more popular and more beloved by them than any man they ever had amongst them, and with reason; for he possessed in an eminent degree those talents which shine alike in the Cabinet and in the field. His manners and disposition were so conciliating as to gain the affections of all whom he commanded, while his innate nobleness and dignity of mind secured for him a respect almost amounting to veneration. He is now styled "The Hero of Upper Canada;" and, had he lived, there is no doubt but the war had terminated very differently from what it did. The Canadian farmers are not over-burdened with sensibility, yet I have seen several of them shed tears when a eulogium was pronounced upon the immortal and generous-minded deliverer of their country."

And by Christie, in his *Historical Memoirs*, his character has thus been sketched:—

He was one of those extraordinary men who seem born to influence mankind, and mark the age in which they live. Conscious of the ascendancy of his genius over those who surrounded him, he blended the mildest manners with the severity and discipline of a camp; and though his deportment was somewhat grave and imposing, the noble frankness of his character imparted at once confidence and respect to those who had occasion to approach his person. As a soldier he was brave to a fault, and not less judicious than decisive in his measures. The energy of his character was strongly expressed in his countenance, and in the robust and manly symmetry of his frame. As a civil governor he was firm, prudent, and equitable. Whether we view him as a man, a statesman, or a soldier, he equally deserves the esteem and respect of his contemporaries and of posterity. The Indians who flocked to his standard were attached to him with almost enthusiastic affection, and even the enemy expressed an involuntary regret at his untimely fall. His prodigality of life bereft the country of his services at the early age of forty-two years. The remains of this gallant officer were, during the funeral service, honoured with a discharge of minute guns from the American as well as the British batteries, and with those of his faithful aide-de-camp, Lieutenant-Colonel M'Donnell, were interred in the same grave at Fort George, on the 16th of October, amidst the tears of an affectionate soldiery and a grateful people, who will cherish his memory with veneration, and hand to their posterity the imperishable name of Brock.

And, with these few extracts, we commend this acceptable addition to our military biography, to the notice of our readers.

Sir Harris Nicolas's Life of Lord Nelson.

(*Concluded from p.* 534.)

From the third volume we take a few curious anecdotes collected by a Miss Knight, a friend of Lady Hamilton, who kept a journal for many years, and which is now in the possession of Lady Egerton. In that are preserved the following:—

He says, that when he was seventeen years of age, he won 300*l.* at a gaming-table; but he was so shocked at reflecting that, had he lost them, he should not have known how to pay them, that from that time to this he has never played again.

When Admiral Nelson's arm was cut off, the surgeon asked if he should not embalm it, to send it to England to be buried; but he said, "Throw it into the hammock, with the brave fellow that was killed beside me,"—a common seaman.

As we were going in the admiral's barge, the other day, looking at the ships and talking of the victory, Sir William Hamilton could not be pacified for the French calling it a drawn battle. "Nay, it was a drawn battle," said the admiral; "for they drew the blanks, and we the prizes."

The queen has desired to have a portrait of the admiral. Little Prince Leopold says, he will get a copy, and stand continually opposite to it, saying, "Dear Nelson, teach me to become like you."

The fourth volume extends from September 1799, to December 1801, and concludes the residence of Nelson in the Mediterranean, until his retirement and return to England, which he had scarcely reached when he was called upon to join the expedition against Copenhagen, under Sir Hyde Parker. On the return of the latter he took the command of the Baltic fleet, but was now obliged by bad health to resign it. But his country could not for long dispense with his ser-

vices. Before he had enjoyed needful rest he was called upon to command the fleet that had been fitted out to defend the British shores from the threatened invasion of NAPOLEON. This service, however, was neither long nor difficult. Peace came, and NELSON returned once more to his country-seat, and there the close of the volume leaves him.

The contents of this volume, being for the most part materials contributed by persons whose interest in a national undertaking had been excited during its progress, are necessarily very miscellaneous, and so will be our extracts.

Here again we find the same complaints of the indifference and neglect with which his applications were received at the Admiralty, where it is evident he had no friends. Thus he writes

To Lady Collier.

[Autograph in the possession of Commodore Sir Francis Augustus Collier, K.C.H.]

Merton, October 24th, 1801.

Dear Madam,—If your son has served his time, I hope, if he is still in the Foudroyant, that he is promoted, as many will be made by the capture of the French ships at Alexandria. If he has not served, he stands no chance, for it cannot be done; and *if you will inquire of Lord St. Vincent or Sir Thomas Troubridge*, they will tell you that I cannot get a Lieutenant made. If he has served his time and quitted a flag-ship, he is wrong, unless with the approbation of Lord Keith. With every good wish for your son, I have the honour to be, Madam, your most obedient servant. NELSON AND BRONTE.

As a specimen of NELSON in his noblest, his natural mood, when his heart was unshadowed by the presence of bad passions and their fruits, read this letter:—

To Alexander John Ball, esq. Commissioner of his Majesty's Navy, Gibraltar.

[Autograph in the possession of Sir William Keith Ball, bart.]

St. George, Kioge Bay, June 4th, 1801.

My dear invaluable Friend,—Although I may not answer letters regularly, or perform many other little acts which the world deem as of the very utmost importance, and for the omission of which it is necessary to cut each other's throats; although I own I fail most miserably (towards my real friends in particular) in those things, yet believe me, Ball, my heart entertains the very warmest affection for you; and it has been no fault of mine, and not a little mortification, that you have not the red ribbon and other rewards that would have kept you afloat, and not to have made you a commissioner: but as, I trust, the war is at a close, you must, like Lord Hood, take your flag when it comes to you; for who is to command our fleets in a future war? for whatever peace we may make under the present Government of France cannot be lasting. I pity the poor Maltese; they have sustained an irreparable loss in your friendly counsel and an able director in their public concerns: you was truly their father, and, I agree with you, they may not like step-fathers: however, I hope that you will find as much pleasure in your new office as it is possible for it to afford, although I am sure it will not be equal to your merit. As I know you have always been kind to me, I know you will be sorry to hear that I have been even at Death's door, apparently in a consumption. I am now rallied a little; but the disorder is in itself so flattering that I know not whether I am really better, and no one will tell me; but all in the fleet are so truly kind to me, that I should be a wretch not to *cheer up*. Foley has put me under a regimen of milk, at four in the morning; Murray has given me lozenges; and all have proved their desire to keep my mind easy; for I hear of no complaints, or other wishes than to have me with them.

Very amusing is the perplexity of the seaman how he is to wear the honours that had been so thickly showered upon him.

To Sir Isaac Heard, Garter King of Arms.

[Autograph in the possession of James Pulman, esq. Richmond Herald.]

Palermo, 1st November, 1799.

My dear Sir,—I am not certain that I answered your kind congratulatory letter on my elevation to the peerage: if not, I beg your pardon, and probably deferred it at the moment in expectation of receiving the plan of the arms you sent to Lord Grenville, but which has never reached me. I should be much obliged to you for them; but now I suppose the ducal arms of Bronté must have a place. If his Majesty approves of my taking the title of Bronté, I must have your opinion how I am to sign my name. At present I describe myself "Lord Nelson, Duke of Bronté in Sicily." As the pelises given to me and Sir Sidney Smith are novel, I must beg you will turn in your mind how I am to wear it when I first go to the King; and as the aigrette is directed to be worn, where am I to put it? In my hat, having only one arm, is impossible, as I must have my hand at liberty; therefore, I think, on my outward garment. I shall have much pleasure in putting myself into your management, for, believe me, dear Sir, your most obliged servant,

BRONTE NELSON.

I have just received the Imperial Order of the Crescent from the Grand Signior,—a diamond star; in the centre, the crescent and a small star."

There is a fine bold English spirit in a letter addressed to a Government Board—such language must have sounded strangely to the ears of officials accustomed only to soft phrases and flatteries.

To the Commissioners for Victualling his Majesty's Navy.

[Letter-book.]

Palermo, 5th December, 1799.

Gentlemen,—Letters which had passed between Mr. Lock and myself, brought forward, yesterday, in the presence of Sir William Hamilton, a meeting between us; and as it turns out that false friends in this country, and nonsensical ones in England, have been the cause of Mr. Lock's highly improper conduct, and as any inquiry can only end in the ruin of Mr. Lock's character, I consent not to desire the inquiry demanded in my letter of the 14th November by Captain Hardy. It was justice to the public and a vindication of my own honour that I sought, and not ruin to a young man setting off in life with a family of children. This lesson will, I trust and believe, be of more use to Mr. Lock than the approbation of ignorant people. I do not mean to withdraw a syllable of my last letter to the Board, for they will see that I did not believe them capable of such conduct; only to that part which gives up the demand for inquiry. If there are those residing in Somerset-place who merit the full force of some of my words, let them have it. One of my greatest boasts is, that no man can ever say I have told a lie. With every sentiment of proper respect to the Board, I am, Gentlemen, your most obedient servant, BRONTE NELSON.

Among other valuable materials collected by Sir HARRIS NICOLAS are some autograph letters by other personages of note, contemporaries of NELSON. An interesting epistle by TROUBRIDGE will throw some light upon his character.

5th January, 1800.

I have this day saved 30,000 people from dying; but with this day my ability ceases. As the King of Naples, or rather the Queen and her party, are bent on starving us, I see no alternative but to leave these poor unhappy people to starve, without our being witnesses to their distress. I curse the day I ever served the King of Naples. I, who know your lordship so well, can pity the distress you must suffer. What must be our situation on the spot? If the Neapolitan government will not supply corn, I pray your lordship to recall us. We are of no use. The Maltese soldiers must call on the French in Valetta who have the *ability* to relieve them. The consequence will be, General Graham and his troops will be cut up to a man, if I do not withdraw them. I hourly expect him to apply to me for that purpose. All we brought, I shall leave—I mean the guns, &c. belonging to his Sicilian Majesty. I never expected to be treated in this manner by General Acton, who certainly influences the King's council. He complains he cannot get his orders put in force; how can he expect it, when he never punishes any of the traitors? On the contrary, is he not daily promoting the traitors we exposed to him? We have characters, my lord, to lose, these people have none. Do not suffer their infamous conduct to fall on us. Our country is just, but severe. I foresee we shall forfeit the little we have gained. Before supplies can possibly come, many thousands must perish, even if these supplies arrive in two days. The situation is worse than ever; there are not even locusts. Such is the fever of my brain this minute, that I *assure you, on my honour*, if the Palermo traitors were here, I would shoot them first, and then myself. Girgenti, I beg to inform you, is full of corn—the money is ready to pay for it—we do not ask it as a gift. The moment the *Transfer* arrives, I shall send her, with Italinsky, to Palermo, who, I suppose, will tell the Government the Russian troops cannot go to Malta to be starved, and I hope influence the generals to withdraw their men from the country. I know well how things will then go on. God bless your lordship is the prayer of the most unhappy being existing at present, your ever faithful and sincere, T. TROUBRIDGE. Oh! could you see the horrid distress I daily experience, something would be done. I wrote you long letters, *viâ* Messina, by the *Strombolo*, who is gone to seize corn, if any can be got hold of; money first to be offered. I have called on the governor of Girgenti to fulfil the treaty, and not shut their ports against us."—*Autograph* in the Nelson papers.

And here we will close this the most valuable of recent contributions to our national history, hoping that we may yet be

called upon to review another volume for which materials cannot be wanting; nor must we omit to express the highest admiration of the sound judgment, good taste, and careful industry which have distinguished the editor in the performance of the very responsible task he had undertaken.

VOYAGES AND TRAVELS.

A Pilgrim's Reliquary. By the Author of "Fragments of Italy and the Rhineland." London, 1845. Pickering.

If typographical beauty were a book's best recommendation, this would be the most popular of the season, for it is a very gem of the art, and honourable even to the Aldine press of Mr. Pickering. But the critic, if not the public, demands something more than the pleasure of the eye. The intellect—the taste—must be satisfied before he can pronounce a sentence of unqualified approval upon any volume submitted to his tribunal.

And so judging, we cannot say of *The Pilgrim's Reliquary* that its substance is as excellent as its form. Merits it has undoubtedly, but they are mingled with many faults; and travels may often be found in coarser and homelier costumes surpassing this superbly-dressed tour in attractiveness and information.

Mr. Thomas Henry White, for such is the author's name, appears to have taken a pretty extensive tour in the year 1844; keeping, however, to well-trodden tracks, where thousands of pilgrims from our shores are to be seen passing along during the months of summer. He went from Paris to Italy, south and north; thence to Switzerland, and through Germany to the Danube; thence to Munich and home by the Rhine. But this would be of little moment if he had possessed the faculty of keen observation, or the genius that takes original views of men and things. To such no path is so beaten, or so written about, that he will not find something new to cater for the entertainment of his readers. For it is not objects so much as the manner of viewing them that constitute the charm of a traveller's note-book. Only an architect cares for minute descriptions of buildings; nobody regards with approval an attempt to picture by words a magnificent or beautiful landscape, because words cannot convey the slightest idea of it. All that the reader can find amusement in is the impressions which these make upon the traveller's mind, the emotions they excite in him, the thoughts they suggest; for these by sympathy are reflected upon his own mind, and move him to fellow-feeling. The tourist who purposes publication should never forget that while inanimate objects interest only partially, man, be he the humblest and most despised of his race, excites the curiosity of all his fellow-men, and this interest is never exhausted, nor is that curiosity ever satisfied.

It is the fault of Mr. White, that his reliquary concerns itself too much about *things*, and too little about *persons*. He forgets that all the churches, and town-halls, and statues, and pictures, and antiquities, he describes so minutely, have been described by fifty travellers before him; and as they are unaltered, his painting wants the charm of novelty. Then he has fallen into the error of substituting repeated interjections of commonplace sentimentalisms expressive of raptures felt by every body for reflections which convey or suggest new trains of thought. Again, there is a great deal too much affectation of extensive reading. Quotations are thrust forward with a frequency that offends: his volume is almost a collection of fragments from the poets: some of them are sufficiently apt to the occasion, but others are manifestly dragged in head and shoulders, fit or unfit, either to fill out the page, to supply a vacancy in the mind of the author, or to give an aspect of extensive reading. An entire commonplace-book must have been cut to pieces to garnish this volume.

His style, however, is easy, flowing, and agreeable. Mr. White is a practised writer, and well acquainted with the tricks of his art. As a traveller, he seems to have preserved a commendable good-temper, and to have possessed the restless curiosity which never permits "a sight" to remain unvisited, whatever the fatigue of reaching it. Passages of interest and of beauty are to be found in these pages, and we proceed to extract some of the most striking, such as will present them in their best aspect. Here are his

MEDITATIONS IN POMPEII.

It is not Melancholy that affects you as you traverse the streets, and intrude into the houses, uninvited visitors, of Pompeii, for all is meretricious though elegant vanity, that glares at you upon every side; it is not Awe—for neither in their original proportions nor in the detail of the buildings is there any pretensions to grandeur in this city of Hercules; and as for Compassion, I felt no more than I should for the harlot, whose rouged complexion, tinselled jewels, and artificial flowers daylight has overtaken and exposed. Curiosity is your prevailing sensation, and that is just sufficiently gratified to be tantalized! Antique, without being venerable, Pompeii wears a most unhappy aspect, and Time has amply indemnified himself for the compulsory arrest of his ordinary process by maliciously revealing her original voluptuousness in painful contrast with her present decay. Wandering through streets little wider than the back lanes of our provincial towns, and roaming from house to house, whose mean dimensions are encumbered with mockeries of those majestic diameters which still survive in Athens and in Rome, the eye is at once invaded and offended by a wilderness of colours, which, even in the freshness of their early glow, and notwithstanding their graces of design, must always have been gaudy, but which now merit an epithet, which, from the respect due to misfortune, I forbear to fix upon them. Littleness and prettiness must always have been characteristics of Pompeii in her most palmy state; now the littleness remains, but as for the prettiness, alas! alas!—It is no great stretch to say that it seemed to me more like the model of a Greek town than the town itself. Villas, temples, theatre, forum, all elaborate of littleness, seem built to be beheld, but never to be inhabited.

Doubtless this city of the demigod suffers every disadvantage from the circumstances under which it meets the modern eye. The vaulted ceiling, the draperies in dusky luxuriance, which no longer mitigate the startling violence of those scarlets, and yellows, and greens, must once have enhanced their magnificence, and mellowed down the glare of those ornamental paintings which undoubtedly were solely intended for the soothing medium of such glimmering and subdued lights. They seem designed to receive a perpetual twilight, such as the brilliance and heat of a Neapolitan atmosphere made necessary for comfort, and thus would communicate a species of gorgeous gloom all the day long.

And if with venial partiality we compare these litte inconvenient edifices with the united grandeur, beauty, and comfort which distinguish the architecture and arrangements of modern habitations; still while beholding the exquisite loveliness of their pictorial designs, and their divine delineations of the human form,

"Gods that with heroes leave their starry bowers,"

we must admit that if in the one instance we have left them immeasurably behind, we have but imperfectly kept pace with them in the other.

And again:

ROME IN MAY.

Rome, 24th May, 1844.

Rome is remarkably melancholy in May. I need scarcely say that, to my fancy, it is a most pleasant, a most contemplative melancholy. That palsied city of age! that catacomb of renown! the memory of whose illustrious dead seems more vigorous than the bodily presence of her dead alive! In winter and spring the English impart a species of galvanic gaiety utterly alien from her monumental gloom. But in May the glorious old ghost flings away her gauds, wraps her solemn mantle around her, pulls down her cowl over her brow, and becomes once more the sublime phantom she really is. With the exception of an ostentatious parade of paltry equipages, tarnished liveries, and wretched horses on the Corso, and a frantic attempt at an opera, Rome in May is a picturesque receptacle for monks and goatherds, and nightingales and bells. Like some haunted place, it appears to be beloved and frequented only by the apparitions of an obsolete race. Yet many minds will find it infinitely more congenial thus, than amidst all the popular splendour of its Holy Week.

Her tranquillity, nay, her very desolation is enchanting. The summer's-day circuit of the Seven Hills seems all your own. You wander whither you will, meeting few, and disturbed by none. In short, the very antiquity of the place is one perpetual novelty, and its grave monotony a serene recreation. I write this in the Villa Borghese, beneath groves of acacias, redolent with odours, and booming with myriads of bees, the yellow hay in aromatic quiles, pitched like pavilions below the old red walls of Rome, and nightingales and blackbirds contending in gushes of ecstatic song! Coleridge must have been here when he wrote thus:

"'Tis the merry Nightingale
That crowds, and hurries, and precipitates,
With fast thick warble, his delicious notes,
As he were fearful that an April night

Would be too short for him to utter forth
His Lovechant, and disburthen his full soul
Of all its Music!

And I know a grove
Of large extent, hard by a castle huge,
Which the great Lord inhabits not; and so
This grove is wild with tangling underwood,
And the trim walks are broken up; and grass
Thin grass and kingcups grow within the paths.
But never elsewhere, in one place, I knew
So many Nightingales; and far and near,
In wood and Thicket, over the wide grove,
They answer and provoke each other's song,
With skirmish and capricious passagings."

The innate love of art among the Italians of all classes is equally noticed by Mr. WHITE.

May 31, 1844.

It is a charming thing to see the peasantry of Rome and its neighbourhood admitted as freely to these incomparable saloons of art, as the most distinguished among the aristocracy of genius, birth, or wealth.

There was a fine swarthy countryman, six feet high, with black curly hair, and that noble countenance so mournful in repose, but so brilliant when lighted up by emotion, and so peculiar to Italy, standing by me in front of the Laocöon; and I was amused, I may say instructed, by his minute inspection of every part of the group. It was the wondering attention of an intellect admiring, but not conscious of comprehending what it deeply felt. If not a genius himself, who knows how mysteriously he may kindle genius in his sons, as he recounts from time to time the wonders of art which he has seen in these saloons, in his own white cottage home, among the Sabine hills, as they repose beneath the deep shade of his walnut and fig trees amidst the airy glow of such a summer as this?

BELLS IN ITALY.

By the way, they are always ringing the bells in Italy. If you hear some old Campanile rolling out its chimes till its Romanesque masonry rocks again, demand the cause of this musical uproar, they will tell you the bells are ringing for rain. Wait a little month, you will hear the bells ringing again, for there has been too much rain. Anon, beneath the bluest of skies, and the brightest of sunshine, the belfry will again begin to rock, ringing out its thanksgiving for fair weather. There will be a thunderstorm perhaps in the night, and the storm clocks will reverberate the peal, for bell ringing you know is an antidote to thunder. And thus one peal deafens another, from the beginning of the year to the end.

We do not remember to have before seen a description of

THE OUBLIETTES.

I have frequently heard of Oubliettes, and seldom without a shudder at the ominous import of the term; but I never saw one of these formidable pits till to-day, and its brief chronicle is truly horrible. It is a broad square tower, standing in one of the courts of Chillon, and of very moderate height; on one side of which is an arched recess, where formerly stood the altar and image of the Blessed Virgin. The criminal (whose doom—sealed by personal enmity, or by that most inexorable of tyrants, State Policy—was concealed from his knowledge) was conducted to this tower by his guards, and directed to kneel before the altar, in order to return thanks for his deliverance. While the hapless wretch was in the rapture of adoration, the bolts of a huge trap-door beneath his knees were withdrawn, and he was precipitated into an abysm of three hundred feet; of course, either dashed to pieces by the fall, or left to writhe to death with his shattered members. Well has the bard of the village churchyard said,

"O! who to dumb forgetfulness a prey,
This pleasing anxious being e'er resigned,
Left the warm precincts of the cheerful day,
Nor cast one longing, ling'ring look behind."

But these doomed wretches had not a moment allowed to look back upon the bright sunshine they had just relinquished; nay, it was in the midst of their momentary expectation to revisit its beams that they were plucked from light and life for ever. In succeeding ages, a stair was considerately introduced, and the hellish pit divided into three floors, each provided with a sufficient lock and key, and each destined to be at once the death-chamber and grave of a man! The only difference was, that he was mercifully permitted to perish of mere hunger, instead of numbering the last hours of his agonized existence by the throbs of his lacerated limbs. A concealed current, communicating with the river, was employed to consign the mutilated and putrifying carcass to the fishes of the Rhone.

The tower at Frankfort, a curious edifice, not so famous as many objects of less intrinsic interest, produces the following

LEGEND.

The hero of this brief legend was a knightly chief of marauders, who, like Rob Roy of old, were most conscientiously of opinion

"That they should take who had the power,
And they might keep who can:"

they were, in fact, what the dear Fatherland in his homely phrase denominates Raubritters; but as the Franconian chief-magistrate did not happen to coincide in their sentiments, our friend, after seeing two of his followers led away half-naked to the Rod and the Wheel, and sensibly anticipating a similar disagreeable result to himself, began to feel his fortitude deserting him, at the precise moment when he had most need of it. The Raubritter was a gallant fellow to look at, and both by look and gesture had continued to menace the prince who had condemned him, even while they were stripping his shirt below his breast, and pulling off his cap from his bright Saxon hair; while the very executioners seemed to handle tenderly the muscular frame they were so soon to mangle and destroy. He now approached the old Roman gate-tower; and as he beheld through its arch the reeking quarters of his companions, exposed on the scaffold beyond its gloomy vista, his firmness gave way.

There have been, and always will be, brave men, who have dared the front of battle, with all its horrible contingencies of wounds, maiming, and death. The antagonistic energy which sets man against man, utterly obliterates every feeling but that of blind and deadly wrath—the masterful desire to die upon his foe. But it is a very different thing when a man has lain in a cold weltering dungeon, brooding in solitude

"On promised pangs to sentenced guilt foreshewn:"

a promise, alas! of which those iron walls guarantee the performance. When the high heart and the gallant blood is compelled to creep, inch by inch, to the goal of its career, and that goal shame and torment—the bared body first, and then the scourge, and the wheel, and the axe, to complete the solemn pomp of agony. This said pomp, however, the Raubritter was full fain to decline. He did not promise, like Johnnie Armstrong—

"Grant me my life, my liege, my king!
And a great gift I'll gie to thee;
Full four-and-twenty milk-white steids
Were a' foaled in a year to me.

I'll gie thee a' thae milk-white steids,
That prance and nicker at a speir,
And as muckle goude English gilt
As four o' their braid backs dow bear."

But he looked up to the central spire of the tower, whose summit, rising superior to the rest, waved its gonfannon to the gusts, and offered its glitter to the stormy sunlight, and promised (if they would give him a bow and arrow, and his life) to pierce its centre. They consented—he *did* pierce the centre, and his life was the prize of his skill.

The tomb of ALBERT DURER, at Nuremberg, was visited by Mr. WHITE. He remarks of it—

"EMIGRAVIT" is the beautiful word employed in his epitaph to denote his death. It answers literally to our "*Departed*," and is at once a sublime eulogium on the immortality of talent and a graceful metaphrasis, rivalling in delicacy the Greek "ΕΚΟΙΜΑΣΕ!"

The streets and fountains of this fine old city are warmly eulogised, but not more than they deserve, as all who have seen will admit; and we advise all who have not seen to take an early opportunity to pay them a visit.

Oh! that I could *paint*, or (still better) *pocket*, one of these extraordinary streets. Never surely did eye behold such a complete outlawry of architecture! Such a banditti of buildings! they barricade the highway, they occupy the bridges, they besiege the ramparts. They look as if their original designs had challenged each other to every possible violation of regularity and precedent; and as for their inhabitants, you would swear all idea of good neighbourhood among them was utterly out of the question, so haughtily does one house look *down*, so enviously another look *up*, to the next door. After gaping and admiring at one freak of masonic decoration after another, at last I fairly stood still and laughed at a group of six houses forming the curve of a street. Here, one huge broad gable, prodigal of ornament as any old maid, repudiates the adjoining oriels and dormers, w not to be left behind, jostles the weathercocks and gloriette the next into the background; while this in turn, flaring a with painted dome and gilded minaret, blockades with ign nious shadow the fourth, and so on, until, I fancy, with the it was "*mere oblivion*." *Væ victis!* was the word, and th

happy mass of barbaric sculptures, like some overdressed city madam repulsed from Willis's, had fairly slunk into a side street!

The fountains in Nuremberg are numerous, and among its many beauties most beautiful. The naked Triton, large as life, in the grove of the Maximilian Platz, would dignify the finest piazza in Rome. The Schöner Brunnen, in the market-place, to which Christianity, Hebraism, and Heathenry, have each contributed their champions, is an exquisite specimen of that spiral tabernacle-work, which embellished the twelfth century; while the Cinque Cento is excellently represented in that bronze group of the Seven Cardinal Virtues, &c. which flanks the western front of Saint Lorens. As for Labenwolf's Peasant with his two geese spouting water, from beneath his arms, it is of "*all hours*," a gem which it is scarcely a crime to covet for one's cabinet; and to secure which many an antiquary would hazard a limb.

Mr. WHITE, differing from WM. HOWITT and Mrs. SHELLEY, admires the Germans, and we agree with him. There is truth as well as lively writing in his sketch of the

CHARACTER OF THE GERMANS.

I love the Germans, they are a race worthy of their chivalrous, sublime, romantic, Fatherland. What though people *do* say that a German consists of three things, the pipe, the cloak, and the man? so much the better. The pipe is a genial comforter, the cloak a faithful guardian, and the man a hearty, kindly, goodly creature, deserving the best offices of both. Yes, I do love the German, he is so *genuine*. Courteous without fawning, homely but highminded, frank yet perfectly wellbred; the politeness of the German is less the politeness of the lip than of the heart. Equally remote from the punctilious accolade of the Italian, the complimentary paroxysms of the Parisian, and that savage shyness which distinguishes a portion of my beloved compatriots, the address of a German to a stranger makes you feel at once that he would do something for you if he could, instead of implying what he *could* do for you if he *would*. Indeed, to meet a trueborn Britton abroad and remark his moody reserve, his barbaric recoil from casual intercourse, you might either imagine him a newly-caught aboriginal from the Druid forests of Mona, or some spell-bound individual, who, although like the ancient mariner, he may

"Pass like night from land to land;"—

certainly

"has *not strange power of speech!*"

For my own part, I deem it no breach of charity to affirm, of shy and silent men in *general*, that they are the vainest creatures under the sun. In nine cases out of ten, your shy man has set up a graven image in his own heart, and trembles to open the shrine, lest it should not receive the same homage from others which he so obsequiously offers himself. He resembles the schoolboy with his single piece of money, of whose value he is so sensitive, that he hesitates to lay it out, lest its return should not be commensurate with its imaginary worth. He occupies his place in society much in the same way as the dark veiled skeleton of the Egyptian banquet, with this difference, however, that he appropriates his full share of those viands and wines, which of course the ghostly lady left untasted; and while *her* presence conveyed a sublime and impressive moral, *his* generally inflicts an unnecessary nuisance. Meantime he looks on superciliously, while others, less penurious of language than himself, are contributing as they may to the treasury of conversation;—is only merit, that, although as little as possible resembling an echo, yet, like an echo, *he never contradicts you*. Nevertheless, were I to choose, I would rather hear the sociable cackling of the goose by his farmyard pond, than see the silent goggle of the owl upon his lonely barn-gable. But

"Oh, my Anthonio, I do know of those
That therefore only are reputed wise
For saying nothing; who, I'm very sure,
If they should speak, would almost damn those ears,
Which, hearing them, would call their brothers fools."
Merchant of Venice.

To Mr. WHITE'S Tour are appended some extremely interesting extracts from the unpublished travels of an English ecclesiastic, written sixty years ago. These we purpose to make the subject of another notice next week.

FICTION.

Githa of the Forest. By the Author of "Lord Dacre of Gilsland," &c. In 3 vols. London, 1845. Churton.

THE range of the Historical Novel has been almost restricted to the Conquest. We remember but one that has ventured into a remoter period, Mr. ATHERSTONE'S *Sea-kings in England;* but the success of that was not such as to encourage other adventurers in the same field. That was a romance of extraordinary merit, full of interest, beautifully written, containing descriptions worthy of SCOTT; it was warmly praised by the press and honoured with an elaborate and flattering notice in the *Edinburgh Review*, and withal it was not a successful work; it never reached a second edition, and little more than repaid the expenses of publication.

There could be no hesitation in attributing this comparative failure to the remote period of our history selected for illustration by Mr. ATHERSTONE. With the times of the Anglo-Saxons, our generation has little sympathy; we look upon the northern mythology very much as upon that of Greece and Rome, as a sort of magnificent dream, apt enough for a poem, but not fitted for the historical romance, in which we expect to find the past revived, and the dead living and speaking again. When SCOTT summons RICHARD, and ELIZABETH, and JAMES upon his stage, he recals personages in whose existence we have entire faith; when he paints the splendid rites of Roman Catholicism, or the unceremonious mountain worship of the Covenanters, we recognise the revival of events which our minds have already embodied in idea, and which we have already placed in the category of unquestioned facts. But when the novelist retreats into the dim obscurity of an era that is almost mythologic, and brings palpably before us the Northmen, with their grand and gloomy religion; the Saxons in their early civilization,—an infant Hercules—manners and men altogether so differing from any with which we are familiar, and a state of society we are unable distinctly to comprehend, we feel very much as if, instead of an historical romance we were reading a prose epic: the mind is averse to the labour of distinguishing the real from the ideal; it yields to the belief that fancy is the presiding genius of the whole; it wearies of scenes and personages with which it has no sympathies, and the romance shares the fate of an epic poem of similar length: it is admired as the work of a brilliant imagination—a few passages are read with pleasure, but few labour through the whole; and, like the epic, it is laid aside before it is half read, with abundance of praise of the performance, but with confessed unwillingness to investigate all its beauties.

The same objection will, we suspect, be found to prevail against the popularity of *Githa of the Forest*. The scene is laid in the Anglo-Saxon period of our history, when the country was subjected to the incessant invasions of the Danes, and it changes alternately from England to Norway. The most prominent historical events portrayed are the massacre of the Croyland monks, and the victory achieved over the Danes at Reading. Githa's father has starved to death a wretched Dane, of whose person he had obtained possession by stratagem. For this he is pursued by the unceasing vengeance of the family of the murdered man. His daughter, Imma, obtains the post of serving maiden to Githa, and this position enables her to advance the common object. She conducts a Danish army to their retreat, and captures Githa and her wicked father, with Edmund, her lover. Out of these materials the necessary complications of difficulty and distress arise. But the authoress is not skilful in the weaving of a plot. She cannot dexterously take up the threads of her story, and conduct them naturally to the end. She resorts to extravagant contrivances in order to bring things about, and her improbabilities are often so monstrous as to be annoying. Her *forte* is description. In this she is graphic, forcible, and full of colour. In dialogue she is tame and undramatic. It is evident that she does not possess, or does not exercise, the actor's art of becoming for the moment the personage she is painting, and feeling and therefore speaking as he would have felt; yet without this no composition can be dramatic.

We have noticed this romance at such length because it is not one of the flimsy productions of the season, written as fast as the pen can fly over the paper, and intended only to be read and forgotten. *Githa of the Forest* is very much above the average of fictions, and the authoress has capacities for still greater things than she has yet achieved. It is in a friendly and encouraging spirit that we have freely pointed out her faults, in hope that she will endeavour to amend them by diligent study and the exercise of patience in writing; shunning the temptation to too hasty composition, and not forgetting

the art to blot. We can commend this romance to the libraries and to readers as better than most of those it is our wearisome task to examine. It will certainly reward perusal.

POETRY.

Jugurtha: a Poem. London: Painter.

Odes, by the author of "Jugartha." London: Painter.

THE only man who can rival the writer of the books before us is the author of the *Wars of Jehovah in Heaven, Earth, and Hell*. *Jugurtha* is an historic poem, but, wanting the spirit of poetry, it would be more profitable for a reader who required information to turn at once to the pages of the historian. It is superlatively prosy. We feel our inability to review the *Odes*. They have overshot the mark of criticism, and, like *Macbeth's* ambition, fallen "on the other side." These *Odes* are as unintelligible to us as the jargon of an Ojibbeway. We confess that we have spent a few idle moments in the vain hope of discovering what the author meant by some of his lines; we have endeavoured to soar with him, but, like Icarus, the wax of our wings melted, and we have tumbled down headlong, leaving our companion enthroned in the clouds of his own mysteries. But our readers may be more fortunate, and, even as the Philistines discovered Samson's riddle, they may be gifted enough to solve what we cannot. We put them on the trial:—

> Distinct are the degrees of Thought;
> To entertain, and contemplate high truths,
> Far humbler mental effort is, than taking stand
> On such free intuition thence to launch the bright wing'd spirit fraught
> With hope's ecstatic throb up o'er
> Heaven's hallowed palaces on high:
> What if of Reason both be born, both equally are not her proud appliance.

There is an unconquerable destiny hurrying on our author. He is compelled to attempt what before was unattempted. Greatness is *thrust* upon him by mischievous fate, and therefore we do not so much wonder at his spurning from his presence the simple natural language in which such a poor beggarly poet as GOLDSMITH wrote.

> Yet, O my soul,
> Why dost thou pant for rapid wings,
> Along the sky,
> The covert groves
> Adown the undulating corn,
> Proud o'er the *nitrevested* hills,
> Or on the surface of the sounding sea,
> *Vagariful* to roam?

We seriously denounce the whole class of poetry—no, not poetry, but versification—of which the *Odes* before us form a part. We would that we could find some "senna or some purgative drug" to cleanse the world of letters of inflated phrases and pompous words, so that we could return once more to the unmixed and musical purity of our language.

Does our author think that his odes are an exhibition of his active imagination? Does he think that those who cannot understand his enigmas will rather believe in their own deficiency than question *his* superior invention? We trust he is not so deluded. Poetry is a language that all can understand. It is the only universal tongue, while the odes under notice are only the language of *one* man—the author. Imagination invents, but it invents by rule. It has its limits and its distances. SHAKESPEARE'S imagination went only as far as it could pull up the public to it. When imagination exceeds this point, it becomes a freak of madness, and a rational public have nothing in common with it. Our author should remember that Parnassus is not fabled to be very *high*—but only *steep*; but we fear that, like the celebrated Dutchman, he has taken such a lofty leap that he will never reach the earth again.

Westminster Abbey and other Poems. By OWEN HOWELL. London: Clark and Co.

THIS small book is useful as well as ornamental. The writer has preceded his poem by some historical remarks on Westminster Abbey, and some wood engravings of the most celebrated tombs. Mr. HOWELL seems to require nothing more from his readers than that they should take his small book into the Abbey of which it treats, and there read. Mr. HOWELL knows the importance of time and place; and we venture to say that if a man were to read the poem before us among tombs, where time and change shew how busy they have been, he would form a high, if not an exaggerated opinion, of its merits.

It is from this cause that criticism is often false, condemning with too severe a censure, or praising with too liberal a praise. When there is a sympathy in feeling between the author and the reader, the latter stands in too close connection with the former to be a nice critic, and when there is an entire want of sympathy, then he is too far removed to be a correct reviewer.

Romeo looks only like a madman to him who is incompetent to love, simply because "all things in season seasoned are."

But, read without the saddening influences of tombs and epitaphs, the poem of *Westminster Abbey* is much beyond the common rate of poems. Mr. HOWELL is a graceful writer. He writes with a flowing pen; and it is much in his praise to say, that although the argument of his poem is hackneyed, yet he has kept the *poetry* of it entire, which is a long way towards success.

With the exception of "Melancholy," the other poems in the book are very inferior to *Westminster Abbey*. They rather speak of an inexperienced writer than of one who has cultivated his taste.

EDUCATION.

Eclogæ Lucretianæ; or Select Passages from the "De Rerum Natura" of Titus Lucretius Carus, with English Notes. By ROBERT GIBSON, B. A. London: Fellowes.

THE object of this little volume is to make the beauties of Lucretius better known to youthful students, by means of well-selected extracts from the more striking portions of his poems and explanatory notes. Mr. GIBSON has displayed taste in the one, and learning in the other.

PERIODICALS AND SERIALS.

ANOTHER heap of these having accumulated, we proceed to clear the table with a short notice of each.

Douglas Jerrold's Shilling Magazine for November contains the usual variety of fiction, essay, and poetry, all directed to a wholesome, because practical, moral purpose. "The History of St. Giles and St. James," by Mr. JERROLD, is continued, and the interest deepens with every page. The "Essay on the decline of the Drama" is full of home-truths, but we fear that they will be preached in vain. It is an attractive feature of this periodical that the articles are generally short and pithily written, so that the reader never yawns over the pages. The "Egotism of the Aristocracy" is another happy hit at a prevailing folly, but we must remark that it is to be charged to the account of the tuft-hunting of the people, rather than upon the vanity of the titled and wealthy.

The Local Historian's Table-Book, Part LVIII. edited by M. A. RICHARDSON, is a continuation of a valuable local periodical already noticed. This number contains the diary of interesting events in the counties to which it belongs, viz. Northumberland and Durham, and a further collection of "Traditions and Legendary Poems." It must be an invaluable addition to the topographical library, and to the inhabitants of the two counties indispensable.

The Journal of the British Archæological Association, established 1843. No. III. This quarterly magazine is the production of the society whose name it bears, and contains the best of the papers read at its meetings, illustrated with numerous engravings. The contents of this part are very rich in curious information. Mr. HAIGH has discoursed learnedly on some monumental stones discovered at Hartlepool; the editor, Mr. WRIGHT has indited "A Word on Mediæval Bridge-builders." Mr. SMITH'S essay on "Pilgrim Signs and Leaden Tokens," is curious; and the Rev. B. POST'S "Treatise on the Coins of Cunobeline and the Ancient Britons" is a very treasure of antiquarian lore. A collection of intelligence relating to archæology is appended, and to those

who are fond of such research this periodical cannot but be right welcome.

Dolman's Magazine for November has more variety than any of its predecessors, and the subjects treated are of greater interest. "Mary Queen of Scots and Lord Brougham" is a slashing article, written with much ability. "The Irish Hornpipe" is a most amusing tale, told with great spirit.

The Dublin University Magazine for November opens with an article, which will be read with great interest just now, on the German Catholic Church, and which contains the most succinct account we have yet seen of the new reformation. Of fictions the number contains but two—a continuation of the novel of "The Whychcots," and "A Night with Mephistophiles;" the latter very cleverly written. "Black-letter Recreations" is a collection of spirited commentaries on a variety of subjects, political and social; and No. 5 of "Italian Poets" treats of ARIOSTO, and presents us with some excellent translations of his best passages. The political article turns of course on the present state of Irish politics, and is entitled "The Duties of Irish Protestants—Peel and the Standard."

George Cruikshank's Table-Book for November is signalized, like its predecessor, by a caricature, full of talent, satirizing some folly of the day; the subject of the present one being "John Bull in a Quandary, or the anticipated Effects of the Railway Calls." The multitude of figures introduced, each having a meaning of its own, and full of character and expression, will amaze the reader, who needs to dwell upon it for some time to discover its many merits. Some clever woodcuts are scattered about the pages, whose literature is of a superior kind to any we have yet seen in this periodical.

Dr. Thomas Young's Lectures on Natural Philosophy. Part IX.—This completes the volume and the work, which we have noticed so often before that nothing remains to be said of it, save that it is the best of its class, and is extremely well got up. This part contains the preface, index, &c. and the remainder of the plates.

The O'Donoghue: a Tale of Ireland, fifty Years ago. By HARRY LORREQUER.—This double number completes a novel which is one of the best that has proceeded from the pen of this lively and amusing writer. It contains four engravings full of spirit and expression, and of themselves worth the cost of the number.

Mores Catholici (No. XII.) still proceeds with unabated learning and research, and full of passages of fine poetry and composition of the purest English. To the Roman Catholics it must be a right welcome publication.

The Irish Monthly Magazine for November is a new periodical evidently under able management, for the articles are judiciously selected, and the writing is of a class very superior to that usually found in young magazines. The contents consist of essays, tales, poetry, and reviews of books, with some excellent translations. "The Threefold Prediction" is a narrative of singular power, and Mr. MANGAN'S "Loose Leaves from an Odd Volume," will reward perusal. From a collection of "Gleanings from Goethe," we take a few of the most memorable passages.

Shakspeare.—It is dangerous for growing talents to read Shakspeare; he compels them to reproduce him, and they imagine they produce themselves.

The very best of Shakspeare's dramas are here and there wanting in facility; they are something more than they should be, and for this very reason indicate the great poet.

Disputed Authorships.—Among the many strange absurdities of the schools none appears to me so ridiculous as the controversy respecting the genuineness of old writings—of old works. Which is it then, the author or the work that we admire or censure? Is it the author only we always have before us;—why should the name trouble us when we expound a work of genius?

Who will assert that we have Virgil or Homer before us while we read the words that are ascribed to either? We have the writer before us—what more then do we need? In truth, I think, that the scholars who go so laboriously to work in this unessential matter are not much wiser than a certain very beautiful lady who once asked me with the sweetest possible smile—"Who then was the author of Shakspeare's Plays?"

Art and Science.—Art and Science are words that are frequently employed, and the difference of which is seldom accurately understood; the one is often used for the other.

The definitions, too, that are given of them do not please me. I have found Science somewhere compared with Wit—Art with Humour. In this comparison I find more of imagination than of philosophy; it gives indeed an idea of the difference of both, but not of the properties of either.

I think one might call Science, the knowledge of the universal—abstract knowledge. Art, on the other hand, would be the application of Science. Science would be Reason, and Art its mechanical exercise; whence it might also be called practical science. Thus, in fine, Science would be the theorem, Art the problem.

Perhaps an objection may be made that poetry is deemed Art, and yet that it is not mechanical. But I deny that it is an art; neither is it a science. Art and Science are acquired by thinking; poetry is not, for it is inspiration: it was conceived in the soul at the very moment it became active. It ought neither to be called Art nor Science, but Genius.

There is no *patriotic* art, and no *patriotic* science; both belong, as does every supreme good, to the whole world, and can only be advanced by the free, universal, reciprocal operation of all contemporaries, with a steady regard to what remains to us of the past, and what we know of it.

Literature.—Literature is the fragment of fragments; the least of what has been said and done was written; of what has been written, but the smallest portion has remained.

Superstition.—Superstition is the poetry of life, therefore it is no injury to the poet to be superstitious.

In all times it has been only individuals who have wrought for the good of science, and knowledge, and truth—not the Age. The Age it was that poisoned Socrates; the Age that burned the Hussites, and in this respect all Ages have been alike.

The Colliseum by moonlight.—Of the beauty of a walk through Rome beneath the light of the full moon no one that has not seen it can form any idea. The individual is swallowed up in the great masses of light and shadow, and only the greatest and most universal pictures are presented to the eye. For the last three days we have had the brightest and most splendid nights, and we have enjoyed them well, and to perfection. An especially beautiful sight is presented by the Colliseum. It is closed at night; a hermit dwells in it in a little chapel, and the beggars nestle in the sunken vaults. On the level ground they had lighted a fire; a gentle current of air wafted the smoke first towards the arena, so that the lower part of the ruins was covered, and the immense walls loomed darkly above it. We stood at the iron bars and beheld the phenomenon, while the moon stood high and bright. By little and little the smoke penetrated through the partitions, gaps, and openings, and the moon lighted it like a mist; it was a delicious sight. Thus lighted up should be seen the capitol, the fore-court of St. Peter's, and other great streets and squares. Thus, sun and moon, as well as the human mind, have here quite a different business from what they have in other places—here, where masses of monstrous size, and yet of elegant forms, ever meet their glance.

Simmonds's Colonial Magazine and Foreign Miscellany for November has a great deal more attraction for the general reader than might be anticipated from its title. There is a variety of original literature relating to the colonies, but instructive as well as entertaining to us at home: such, for instance, as Mr. LEIGH'S Australian tale, entitled "The Emigrant;" Mr. ELLERMAN'S "Reminiscences of the Island of Cuba;" Dr. M'HENRY'S "Account of the Liberated African Establishment at St. Helena." Besides these there is a mass of colonial intelligence, useful not to the colonists alone, but to all who have or feel an interest in their welfare.

The Balloon.—This is the fourth number of a periodical devoted to aerostation. It contains a great deal of curious information on the subject.

Sharpe's London Magazine is a new weekly periodical of the size and price of *Chambers's Edinburgh Journal*, but with the additional attractions of woodcuts, very well executed. The original articles are very respectably written, and the selected literature is arranged with judgment and good taste.

The Railway Review is one of the many new periodicals called forth by the railway mania. Its purpose seems to be to collect, arrange, and digest the railway intelligence of the month, and thus to present it in a more accessible form than it is found in the newspapers.

The Pictorial Penny Shakspere (Part II.) *and the Pictorial Balladist* (Part II.) are two cheap issues of works universally attractive. They are neatly printed, illustrated by very respectable woodcuts; and the ballads are selected with discretion. In cheapness these publications have no rival.

The Oxford and Cambridge Review, for November.—"The Religious Movement in Germany" is the first topic handled in this number of a review, which was said to have been established to represent the Puseyite party; but certainly the

article exhibits its bias moderately, and rather concealed than avowed; as witness the summing up of this essay:—

Ardently, then, as we desire the reformation of the Roman Catholic Church in Germany, and hopefully as we received the first intelligence of a reaction against the spirit of ultra-popery that produced the exhibition at Trèves, yet it is not from efforts such as Ronge's that we can expect any good to follow, except perhaps *indirectly*. As the mighty movement of the sixteenth century awoke a reforming spirit in the Roman Catholic Church itself, and produced that correction of the most flagrant abuses which was one great consequence of the labours of the unfortunate Synod of Trent, so this new schism may lead possibly to similar results, by drawing attention to the special grounds of complaint, and leading to a removal of them. It is thus that good may be brought out of evil, and the way paved for that ultimate reunion of Christendom for which so many hearts now long, so many voices daily pray. Self-purification is the one thing needed; and that is needed, not by one branch only, but more or less by all. Let each reform its own abuses, amend its own errors, repent of its own sins; and then it will be given to each to see more and more the good that is in the remainder; till at length all will be drawn together by the strong cords of love, and general intercommunion will be re-established. Sects and schisms would not long resist a united Church Catholic; and so Christendom would be at one again.

CHAPMAN'S *Homer* is next examined with the minute eye of a first class man skilled in verbal criticism—more learned than useful. A review of VON DRUMANN'S *History of Rome* follows. The troubles in Switzerland are treated of in the fourth article. The *Memoirs of Lord Lyttelton*, DRUMMOND'S *Principles of Revealed Religion*, and WARREN'S *Introduction to Law Studies*, are the remaining themes. There is much good writing in this *Review*; evidently it is supported by able pens, and it is worthy of its name. From the last article, which is entitled "The Career of the Bar, its Hopes, its Character, its Training," we take a passage full of wholesome truths.

This is one of the reasons why success at college is so often followed by failure at the Bar. The kind of talent necessary for the former is very different, it is true, from that which is required at the latter; the one is more imaginative, the other more intellectual. Still the main difference is this; at college, talent is only necessary; at the Bar, determination is essential. Then the obstacles to be surmounted in the one are essentially different from those to be met with in the other. At college, a reading man has his own world in his own imagination, he has the books before him, and every help to study around him. He is disturbed by no care, he is engrossed by his only occupation. A mind of no unusual strength, but of a calm disposition, and of delicate and tasteful predilections, may, in such circumstances, eminently succeed. If he be not a very hard reader, his course his slightly different, but his state of mind is much the same. His only distractions are bright delusions of champagne suppers and morning *chassés*, his most extensive view of human evils ranges no further than jyps and proctors, he has an unbounded faith in the inexhaustibility of tradesmen's stores, and of his father's means; he has no want that, with a little ingenuity, he cannot supply, no wish that he will not indulge, and his experience of earthly cares does not go beyond a morning headache, or some other unpleasant but curable mishap. Transferred to London and the study of the law, he soon feels the change of his position. At first the delusions of college life still haunt him. He continues for some time to encourage his precocious prejudices, he still considers college excesses as the height of fashion, and talks of his college friends as of European notorieties. But this does not last long. He begins to find that London duns are neither so silent nor so confiding as his former acquaintances, and that the non-payment of debts is looked upon with less sympathy in London than at college. Not having been a hard reader, he is now irremediably bored even with his hour's newspaper reading in the chambers of his conveyancer. He had never any great vocation for the bar, and he gets tired of it; a lively imagination had won him, with little trouble, a kind of a distinction at college, but his imagination flags over a lease and release, or a covenant to stand seised; his friends had inveigled him into keeping terms, because he was clever, and his mother thought he was sure to be Lord Chancellor, he wrote such pretty verses! He is the first to discover their mistake.

If he was a reading man, at college he was probably distinguished by his exquisite taste and his singular application. It may be that he has not a particle of that energy and hardness of character, which, if not natural, must be acquired in order to support the buffets of the law; it is possible that he is devoid of that fire and activity indispensable for a Nisi Prius advocate.

Rodwell's Memoirs of an Umbrella, Part IV.—This completes the work, which is amusing, and remarkable for a profusion of clever and spirited woodcuts.

Knight's Political Dictionary.—Part IX. extends from the words "Law, Criminal," to "Libel." It is a work of great utility, and will be a valuable acquisition to the library of reference.

The Connoisseur for November contains a portrait of NICHOLAS POUSSIN, some original music and essays, and intelligence on art.

The Philathenic Magazine for November is one of those periodicals whose vitality is a problem we cannot solve. It is of average merit, but contains no original features. Who buys, who reads them?

MISCELLANEOUS.

The Zoology of the English Poets corrected by the Writings of Modern Naturalists. By R. H. NEWELL, B.D. London, 1845. Longman and Co.

THE design of this volume is not original. We remember a Zoology of the Bible, and of Shakspeare. But it is one that bears extension, for we can never have too much of natural history in any shape, and above all where it is mingled with poetry, to which it is so nearly allied. Mr. NEWELL has selected eight beasts, thirteen birds, seven reptiles, and nine insects, and collected what poets have sung and naturalists said about them. It is impossible to make this the subject of criticism—the design speaks for itself. We merely offer two or three specimens of the execution. It will be seen that Mr. NEWELL has introduced some original anecdotes and observations. Such is this of

THE FIELDFARE.

The fieldfare is a well-known migratory thrush, that comes to us from the north, and is one of the latest, if not the last, species that makes its annual and regular winter visit to Great Britain and the north of Ireland. It seldom appears much before the beginning of November, depending on the temperature of the season, and frequently later than that; arriving here in large flocks in search of food, and, if the weather continue open and mild, spreading themselves over pasture-lands, to look for worms, slugs, the larvæ of insects, and other soft-bodied animals of that sort; but on the occurrence of snow or frost they betake themselves to the hedges, and feed greedily on haws and various other berries. Mr. C. Hewitson, in a recent visit to Norway, made the following interesting observations on the nesting habits of the fieldfare:—After a long ramble through some very thick woods, our attention was attracted by the harsh cries of several birds, which we at first supposed must be shrikes, but which afterwards proved to be fieldfares, anxiously watching over their newly-established dwellings. We were soon delighted by the discovery of several of their nests, and even surprised to find them (so contrary to the habits of other species of *turdus* with which we are acquainted) breeding in society. Their nests were at various heights from the ground, from four feet to thirty or forty feet, or upwards, mixed with old ones of the preceding year: they were, for the most part, placed against the trunk of the spruce-fir; some were, however, at a considerable distance from it, upon the upper surface, and toward the smaller end of the thicker branches; they resembled most nearly those of the ring-ouzel: the outside is composed of sticks and coarse grass and weeds, gathered wet, matted together with a small quantity of clay, and lined with a thick bed of fine dry grass: none of them yet contained more than three eggs, although we afterwards found that five was more commonly the number than four; and that even six was very frequent: they are very similar to those of the blackbird, and even more so to the ring-ouzel. The fieldfare is the most abundant bird in Norway, and is generally diffused over that part which we visited; building, as already noticed, in society, two hundred nests or more being frequently seen within a very small space. Mr. Gisborne's winter sketch of these birds is pleasing and correct:—

> Lo! on yon branch, whose naked spray o'ertops
> The oak's still clustering shade, the fieldfares sit
> Torpid and motionless, yet peering round,
> Suspicious of deceit. At our approach
> They mount, and loudly chattering from on high,
> Bid the wild woods of human guile beware.
> *Walks in a Forest: Winter*, 3.

Of the cry of the bittern it is remarked,—

The cry which the bird emits in the mornings and evenings of February and March was formerly supposed to be produced

by the bird inserting its bill into a reed, and then blowing through it.

> Then to the water's brink she laid her head,
> And as a bittern bumps within a reed,
> To thee, O lake! she said, I tell—
> DRYDEN. *Wife of Bath*, l. 195.

Chaucer, in his corresponding line, seems to follow another explanation which has been given, that the bittern thrusts its bill into mud or water, and, after retaining the air awhile, suddenly expels it.

> And as a bittore bumbleth in the mire.

Thomson has adopted this explanation:

> As yet the trembling year is unconfirmed,
> And winter oft at eve resumes the breeze,
> Chills the pale morn, and bids his driving sleets
> Deform the day delightless; so that scarce
> The bittern knows his time, with bill ingulfed,
> To shake the sounding marsh.—*Spring*, l. 18.

The sound is now more rationally believed to be the call of love, uttered in that season by the male, in order to invite the female to him.

And this is noticed:—

THE BEE'S FLIGHT.

Mr. Rogers, in his elegant poem, supposes the bee to be conducted to the hive by retracing the scents of the various flowers which it had visited.

> Hark! the bee winds her small but sullen horn,
> Blithe to salute the sunny smile of morn;
> O'er thymy downs she bends her busy course,
> And many a stream allures her to its source.
> 'Tis morn, 'tis night; that eye, so finely wrought,
> Beyond the reach of sense, the soar of thought,
> Now vainly asks the scenes she left behind,
> Its orb so full, its vision so confined!
> Who guides the patient pilgrim to her cell?
> Who bids her soul with conscious triumph swell?
> With conscious truth retrace the mazy clue
> Of varied scents, that charm'd her as she flew?
> Hail, memory, hail! thy universal reign
> Guards the least link of being's glorious chain.
> *Pleasures of Memory*, Pt. 1.

This idea, however, is more poetical than accurate, bees flying straight to their hives from great distances. The poet might have employed with as much effect the real fact of bees distinguishing their own hive out of numbers near them when conducted to the spot by instinct. This recognition of home seems clearly the result of memory. A more intimate acquaintance with the natural history of this insect, which modern discoveries have so much enlarged, would supply the poet with many interesting facts less trite and common than those usually adduced, and equally adapted to his purpose. The bee is, of all the social insects, the one whose instinct is most perfect, the only one whose habits are not carnivorous, and whose existence is one of the blessings of nature. The others are born for destruction; *she*, on the contrary, appears to have been made to secure the fecundation of vegetables, by transporting from one to another the pollen of their flowers, which the winds alone could not as certainly have propagated. Our domestic bee can live in every climate; it can brave the wintry breath of Siberia, and the heats of the torrid zone.

But enough of this sort of small talk: it indicates sufficiently the character of the volume.

JOURNAL OF FRENCH LITERATURE.

LITERARY GOSSIP IN PARIS.

(*From our Correspondent.*)

WE are sadly barren of lettered chat just now. All the world is "talking Algiers." Here is what I have been able to collect.

A week ago a rumour was rife in Paris that M. SCRIBE, following in the steps of his literary contemporary, M. VICTOR HUGO, had committed a grievous sin *contra bonos mores* with the wife of an artist. The scandal, diversely dished up, with an affectation of mystery as regarded the individuals concerned, perfectly and carefully diaphanous, after having run the gauntlet of the press, was thoroughly and provokingly contradicted by the immediate appearance of the eminent dramatist in the capital, where, accompanied by his "heart-broken and outraged wife," as the journalists had pathetically designated her, he shewed himself nightly at the different theatres; having, for that express purpose, left his villa at Montalais, where he was busily engaged upon the novel which is to occupy the *feuilleton* of the *Siècle* during the ensuing year. Much conversation has been caused in the *monde artiste* by an adventure which has just happened to M. DE LAMARTINE, perhaps the most exacting and the worst dressing man in France. M. DE LAMARTINE can write poetry, compile travels, make laws, enact the literary lion, in short, in every way, but he cannot dress himself like any body else. When, the other day, he was at Neris, a lady asked his permission to cut off a shred of his cloak, which he condescendingly permitted. The fair enthusiast reminds me of the man who, some years ago, carried off the hat of THOMAS MOORE from a party instead of his own, because he wanted it for *an autograph!*

But it is a *mot* of M. VILLEMAIN which has delighted the wits for the last week. An academician, who is also a peer of France, and a poet, has a brother, whose appearance is totally different from his own. The poet is tall and slight, while his kinsman, whose whole existence is one page of prose, has expanded into a fleshly luxuriance which causes him to be, in conjunction with M. MOREAU ROZIER, the terror of all the omnibus cads in Paris. A few days ago, this Gallic DANIEL LAMBERT, while lounging on the Quai Voltaire, met M. VILLEMAIN, the life-secretary of the Academy, whom he had not seen for a considerable time. "Really," said the Academician, "if you had not proclaimed your identity, I should never have recognised you. You must take care not to increase any more in bulk, or you will be arrested as a counterfeit LOUIS XVIII."

"I care very little about it," was the reply; "we each have our own fate in this world, as we have our peculiar faces; it is from that fact we derive our originality. As my brother is thin, it is my province to be fat."

"You are perfectly right," conceded VILLEMAIN, "and thus, if I understand you rightly, your brother has taken upon himself to demonstrate the degree to which the genius of man may be extended, while you, my good sir, exemplify to what point his skin may be stretched!"

JOURNAL OF GERMAN LITERATURE.

THE WORKS OF DICKENS.

[The following article is a translation of a German critique on the genius and works of DICKENS, which has excited great interest and been much applauded in Germany. As the opinions of foreign judges upon English authors cannot fail to be both instructive and attractive here, we hasten to present to our readers this singularly able and impartial criticism.]

THE romances and tales of the English have, through the truth of their representations and their freedom from false ideality, exercised great influence on the progress of cultivation in all Europe, particularly upon that of Germany. Even where the materials of their fictions happened to be unknown to the reader, and regarded and enjoyed only as works of phantasy, their style of execution has always been such as to render it comparatively easy to realize them, and enter into the full spirit in which they were written. They were also an example, to Germans especially, to return to the study of Nature and simplicity. To us, we imagine, it has been given to pluck the fruit that has ripened on English ground; for not one of their numerous admirable works of this class can properly be said to have attained any thing like perfection or true artistic development. "How little," says SOLGER, "is wanting in WALTER SCOTT, to make him a genuine poet; and yet that little is every thing."

It appears to us that CHARLES DICKENS has, in these last few years, acquired a popularity scarcely, if at all, inferior to that of the abovenamed writer. He may, in part, owe it to the incidental circumstance, that the relation in which he stands to the current thoughts of the present literature of the day is precisely similar to that taken by Sir WALTER, many years since. Ideas and fancies of the middle age occupied every brain; the middle ages themselves were ennobled and embodied into an idea; knights, monks, and ladies, became pure categories. Then, implanting into the garments of ages since, the hearts and souls of sound, hearty, and *daily-living* men, he led the wandering fancies of modern times, with gentle hand, to a natural and rational resting-place. Even so at the present moment, certain social points of view have claimed the attention of all mankind; the fate and condition of the working classes has suddenly called forth a degree of sympathy which reminds us of that roused ten years ago by the unemancipated women; questions which hitherto have held place among the pools and marshes of statesmanship and political economy, only noticed by the philosopher and politician, now originate in brains of romantic tendency a tumultuous and confused picture of circumstances, which, if they ever existed in more cases than one, would assuredly end the history of the world at once, in one universal crash.

Thus CHARLES DICKENS has chosen as the field of his representations the, so-called, lower spheres of life; he conceals not their misery, their moral degradation, nor even the bitterness of their condition—for how can this fail when the others are there?

—but he shows also the means of cure, borne by these evils, like all others, in themselves. If now the effect he produces be in some measure analogous to that of art, softening and healing in its influence, we should be in great error were we to suppose, that he produces this effect by any artistic means. On the contrary, he goes on his way in the most unartistic style possible.

The *Sketches*, with which he first appeared on the world, and to which we must again and again refer, as fundamentally important in the estimation of his whole character as an author, —these sketches were suffered to pass by, almost unheeded. He saw at once what was wanting in them, what had caused their failure; the public desired more connection, more dependence of one part on another, a history, in short. And for this he had to look about him and consider. *The Posthumous Papers of the Pickwick Club*, is a title which, while it left him free to turn and and wind about at pleasure, seemed, at the same time to promise a certain degree of unity.

But wide as the bounds were in which he was thus lightly limited, he found it utterly impossible to confine himself within them. He evidences the greatest uncertainty and doubt, as to what unity and simplicity consist in. At first he seeks it in the subject of a fantastic club, and in the parody of real life thus readily offered to him; but only seeks it here to leave it again; so that the whole becomes but one sketch, like the many pictures it is meant to hold together. Only quite at the end do we learn the dissolution of the Pickwick Club—"to hold up appearances," as he, in such cases, idiomatically and untranslatably expresses it; we learn then just about as much of the history of the club, as we do of a man's life when we see upon his tombstone the usual inscription, "He was born, he took a wife, and he died;" but the middle phrase left out, because he happened to die a bachelor. In the remainder of the course pursued by the Pickwickians, we find DICKENS hovering undecided between two very different fundamental ideas. No one performs a prominent part, but merry adventures of various kinds are attached to the names of the several clubists. Gradually, however, Pickwick assumes the rank of hero; and, by means of his assiduous amiability almost always in the wrong, gives the stamp of comic embarrassment to such events as occur. And now there arises the necessity of delivering the adventurous old gentleman easily and cleverly from his many vicissitudes. But to do this and provide against due dilemma, was too much for the writer to manage alone. So he calls to his aid Sam Weller, one with whom his pen is free and familiar; and thus behold him, on a sudden, following the place of Don Quixote, the enthusiastic insane wanderer, and the squire of strong household common sense. But the preference of the English romancers for this course of proceeding is proverbial. The romance of Cervantes is confessedly the ground-plan of *Tom Jones;* and in *Humphrey's Clock* DICKENS himself refers to it. But in the *Pickwick Papers* the depths of the plan have not been sounded as in *Tom Jones*. The journey there only forms the point of connection; and how on earth could one at home meet with such direct opportunities for so many amiable follies? But in Don Quixote, the adventurous wandering forms the greatest, or rather the whole, folly. This difference makes itself perceptible in a thousand ways, and with the journey itself there is no positive connection; the adventures to which they lead are only most superficially united, and might be lengthened out to eternity. Then the author seizes upon a very commonplace love-story, winds it together with his other materials, and makes Pickwick the go-between of the lovers, a *deus ex machina*. Like the club, so its celebrated founder requires at the last but little ceremony to be dismissed altogether.

It is not the question whether Dickens, in his following works, should or should not have been more provident and systematic; but when, from some passing necessity, he finds himself compelled to put an end to these episodes, does it not still more give them the appearance of aids to construction? His common expedient seems to be the fancy, in contradiction to the Aristotelian principle, that the artistic unity of a history does *not* consist in its revolving round one centre. SMOLLET certainly indulged the same notion. But his *Roderick Random* is a young naval surgeon, who drives himself through the world in regular seaman fashion. But such a central point would be too much for DICKENS.

A good old fellow like Herr Pickwick might certainly meet with a great deal, but assuredly not with every thing. Now, then, another individual must be selected, possibly an insignificant one, a kind of personified *tabula rasa*, as the means upon which other things are to be described. Such an one as Oliver Twist, a poor desolate orphan, who is thrown from hand to hand, falls under robbers and murderers, and, by means of a ring, drawn from the hand of his dying mother, discovers the family to which he belongs. Or such a pair as the orphans in *Nicholas Nickleby*. Or, what is better still, a poor idiot like Barnaby Rudge. And each and all of these, in order to multiply the surfaces for description which chance may offer, are instantly despatched on their several journeys. How is it that a man of such intellect condescends to such petty means, a satirist lay himself so open to others, that not even the blindest eye could fail to see through him and them! But so far from this, DICKENS never exerts himself to avoid the most worn-out, antiquated, and threadbare expedients. He debases himself, too (more remarkable after his jesting in *Pickwick* on this very prosaic system of the English romancers), to report closely the situation and condition of all his characters at the end of his tale. As if the individuals who make their appearance in the progress of a story were not simply what they do and say, and no more; and, when once this is done, were not *bound* to disappear and die away, like a tone which has formed part of a melody.

And not only this. In the "Old Curiosity Shop," a tale which, with its well-combined chief characters must be exempted from the above faults, we find the "single gentleman" relating to his travelling companion, that the old man whom they are in search of had a younger brother, who, as they both loved the same maiden, had left the country, and grown rich in America. The subject naturally becomes tedious to Mr. Garland; he remarks to him, that the rest he can easily imagine, he himself is the brother. At the end of the history Mr. Humphrey, who has read it from the clock to his friends, receives the reproaches of his companions that he has concealed from them the name of the "single gentleman." He replies, he had good reasons therefor, seeing that he was himself the single gentleman. So the only thing wanting then, is, that Mr. DICKENS, the editor of the whole, should confess to us that the man, who not only by means of the clock, but of the towers of St. Paul's, makes such deep and sage reflections, and has besides so many excellent notions: in one word, Mr. Humphreys happens to be himself.

We are aware that few, if any, will agree with us in thus accusing DICKENS of weakness in the conduct of a story. We may receive this severe reproof, when we venture on such an assertion: Know ye not (so it might run) that the artistic progress of a composition is quite another thing to the orderly and regular recital of a history? As among the painters, colour and drawing, though they form the groundwork of the whole, may yet be apparently debased, or perhaps neglected, for the sake of certain effects, so likewise may the poet replace the external consistency of circumstances by the contrast and harmony of the characters, and the reflex which they cast upon one another; and that, what the uneducated ear would merely discover to be a simple flowing melody is found to consist of a scientific and involved figure.

This remark, we must answer, contains in it much truth, and we will reflect upon it; but first we must observe, that it appears to us to depend wholly upon the *characters* whether the history is exceptionable or not, and for this reason, that the history or tale can never be more than an external addition, when it is not developed from the individuals themselves; not as if all should result from its well-known action, otherwise the poet resigns his prerogative of having a deeper insight into the causes and motives of human actions than the actor himself or the mere spectator; besides, an individual consists not only of this conscious self, but of the complex union of action and suffering; he is a relative central point of the world. In works of art, however, as much as life's progress as consists of suffering and accident must have the character of fate, a fate that by no possibility could be otherwise, and must, when the individual stands livingly before the mind of the poet, result from the very nature of his organization.

But with DICKENS nothing can be developed from the individuals, because they do not develop themselves. We have seen above how wearisomely, in *Master Humphrey's Clock*, he returns, from "The Old Curiosity Shop," in which he had unexpectedly involved himself, to his own original idea. But the want of flexibility, or rather dexterity, is the least fault in the identification of Master Humphrey with the "single gentleman;" the worst is, that thereby the groundwork of their individuality is quite lost sight of. Master Humphrey informs us, in the beginning of things, that he was born deformed, had always been solitary and retiring, and thus became a silent observer of the little world around him. He implies that he has never stirred from the side of his beloved clock, and that his life has been very similar to it in regular uniformity; and now he asserts his identity with a boisterous-brained fellow, who has been traversing foreign countries for the last quarter of a century, introduces himself to us as having forcibly hired a chamber for two years from absolutely repulsive people, brings them into the utmost consternation with the idea that he has slept with closed doors for six-and-twenty hours, and at last particularly distinguishes himself by his habit of ranting up and down for a considerable length of time together!

Great inconsistencies of this kind, similar blunders against the unity of character, we certainly do not meet with constantly. It would have been quite as consistent if Pickwick, at his resurrection in the abovenamed story, had been turned into a Frenchman. But where he is more careful, he still brings his materials merely into a *negative* unity. He does not start with a full con-

templation of a decided individuality. He commences for the most part in periodical numbers. Various characters arise. The tale progresses; but one cannot for ever produce new persons, so of course, as it happens further on, the adventures must be divided between such characters as there are. Consequently, we find circumstances applied to them which do not in the least *accord* with their *previous* characteristics; while the wonders among which they first appeared being still continued, an appearance is maintained of a well-supported unity. For instance, Richard Swiveller. At his first appearance he is described as a miserable *bel esprit;* but, thinks the author, as he has neither committed theft nor murder, he is not too bad to reform, and therewith he is raised to the condition of a necessary defender and protector of oppressed virtue.

Thus they are compelled to do and say things which please DICKENS more than themselves. Pickwick is in an error when he estimates his Sam Weller for an original; he is only a means of presenting original ideas; just as the tales which his master relates in his own history, and in *Master Humphrey's Clock*, might quite as well have come from any one else. Consequently, it cannot be helped but that DICKENS must of necessity fall into the grossest trivialities. Dennis, the hangman, who had always been remarkable for the *gusto* with which he exercised his calling, is himself condemned to death for participating in the "No Popery Rebellion." How does he die?—with the greatest cowardice.

This is assuredly an easy style of composition, adding one trait indiscriminately on to another. But DICKENS has the merit of discovering one, still more convenient; namely, that of seizing upon one feature, and never introducing another. It is related of SCHANDZ, that for five-and-twenty successive years, whenever the door of his room creaked, he made the determination to have the hinges oiled. Without doubt this may be a very characteristic trait, but still it is only one of the many which every individual offers to observation. If, now, DICKENS had come upon him, he would never have failed every time the sun rose, and the door creaked, supposing the tale ran on for five-and-twenty years, to make the old man repeat his good intention. Just think of Wardle's "Joe! damn that boy, he's gone to sleep again!" or old Willet, who dies with the well-known reflection on his son's lost arm on his lips. It is not necessary to remark that all this is any thing but delightful. DICKENS possesses, too, a wonderful capability of seizing upon the bubbles which rise on the surface of family life. But is it not quite enough to signify those moral depths? why must they be repeated to disgust, as though we were bodily present with these wearisome aunts and uncles, and compelled, as relations, to submit to their tedium?

In this way DICKENS fancies he is presenting us with living characters when they are but masks. But if he does not breathe into them the breath of life, we must say that he does something very analogous to it; that is to say, he repeats these characteristics with others, which by their conjunction preserve a sort of consistency. Thus he gives them, what we may call a general tone of character, but this only to some few of his chief persons. As a striking example of this we must once more name Pickwick, who in fact makes his appearance again in *Nicholas Nickleby*, under the form of the amiable brothers. In *Barnaby Rudge*, too, we have Mr. Chester, that frontispiece to Lord Chesterfield's Letters; and at last, the whole tribe of desperate villains who peer out here and there. Moreover DICKENS must have devoted himself seriously to study this side of life (which to the romance writer, who must seize upon inward progress, as much as upon external circumstances, is of the utmost importance), for his efforts in this branch are almost perfect.

But he must not rest satisfied with this; true and animated characters can never arise on a passive ground. The only means of representing them, then, is by internal description; and yet the true poet can, with one almost imperceptible touch, paint a whole character. Think of Werter's Charlotte. She lost her mother early, and must therefore devote herself to the education of her sisters and brothers. How well, then, we comprehend at once that, warmly engaged to Albert, she meets the passionate Werter from the first with the most perfect calmness. But DICKENS's characters stand before you in their rough outlines: there they are; *how* they became so no one can tell—scarcely even have we the addition of a few prefatory notes for the clear understanding of external circumstances. If, then, we find in DICKENS neither the characters nor the relation well managed, what further measure shall we apply to him? From whatever point of sight we may regard him, it is not probable that we shall discover any thing like artistic representation. We find in him, too, the remarkable quality of making his characters act with motives into which he cannot himself see clearly. Of this kind is the conduct of Nancy in *Oliver Twist*, in the conversation on the landing-place. She will not betray her companion in sin. Is it from affection to her after-murderer? This is not said. Or is it from a false feeling of right and wrong? This, also, combined with a certain romantic sentiment, which leads her to abide the consequences of her course of life and to await its punishment, appears to us to be the sad motive of her conduct. But this indecision and indetermination in the seizing of motives is to be found everywhere. Neither can each tale be said to preserve a distinctive groundwork of ideas; what is found in one is very likely to be met with in another. This fact justifies us in not having once attempted to go through them in due succession.

May these remarks satisfy those who have hitherto flattered themselves that their pleasure in DICKENS's works arose from a love of artistic beauty. We have still many more to make. The world is accustomed to regard DICKENS as an humourist, and to place him not only before all who, in the present day, have adopted that line of writing,—which, however, would not be granting much,—but by the side of the celebrated old wits of England.

(*To be continued.*)

JOURNAL OF ITALIAN LITERATURE.

La Spedizione di Carlo Odvardo Stuart, negli anni 1743-44-45-46, *descritta latinamente nel* 1751, dal Jesuita GIULIO CORDACA, e ora fatta Italiana da ANTONIO GUSSALI. Milano, 1845.

The Expedition of Charles Edward Stuart, in the years 1743-44-45-46, *written in Latin A.D.* 1751, by the Jesuit JULIO CORDACA, and now translated into Italian by ANTONIO GUSSALI. Milan, 1845.

THE work of the Jesuit CORDACA, so interesting to all readers of English history, has never, so far as we can learn, been translated into English; and though it has necessarily been referred to by all those who have treated on the events of that time, yet its merits, both of authenticity and of elegance, have not made it generally known to the English reader. We have before us a translation but recently given to the Italian public, and we shall therefore take this opportunity of offering to our readers some account of a book which ought to be well known to every student of our country's annals. It is perhaps, too, an advantage which ought to be highly estimated, that this work was written by a foreigner, and one who regarded the effects of Charles Edward's expedition not on the country of his ancestors only, but on the whole of Europe. It was an eventful time at which his daring and chivalrous expedition was made, for the continental states were disturbed by many internal causes. A foreigner by birth, and a man too of unpopular manners, sat on the throne of England; and there existed in the minds of many of the older nobility a vivid recollection of the graciousness of the Stuart kings. Many, as CORDACA observes, openly ridiculed their German king, and wanted rather a rival to him in whose favour they might rebel, than the will to raise a rebellion.

The great value, however, of the Jesuit's publication is, that it reveals to us what we can find in no other equally authentic source,—the youth, the education, the early military exploits of the prince, and the history of his departure from Rome to invade this country. After making all due allowance for the manifest partiality of CORDACA, it is clear that there must have been something extremely prepossessing and indeed fascinating in the manners, even from a child, of this unfortunate prince. Nor were his mental qualities less attractive than his external advantages.

Indeed it scarcely admits of a doubt that had he been permitted to sit on the throne of his forefathers he would have outshone all the rest of his race. Nor is it fair to take the spectacle of his degraded age as any specimen of what, under brighter auspices, he would have been. His early inclinations appear to have been all military, and, after many attempts to obtain his father's consent that he should acquire by practical service the requisite military experience, an opportunity occurred which he was permitted to embrace.

CHARLES EDWARD'S FIRST MILITARY SERVICE.

The war between the Spaniards and the Austrians in 1734 gave the young prince his first insight into the operations of war. The German fortune was declining, and nearly the whole of the realm was reduced under the power of Charles, prince of Spain. The advanced portions of the German troops were pursued by the Duke of Berwick—himself a prince, though illegitimate, of the house of Stuart—to Gaeta, and preparations were made by the Duke for investing them there. To the Duke's camp Charles Edward obtained his father's permission to repair.

There he gave himself up so entirely to every part of a soldier's duty that he won the affections of the whole army and set an example even to veteran officers. The Germans defended the fortress with great valour, and though assailed both by land and sea, maintained their spirits, and made frequent sallies on their assailants. The most dangerous situations and the most spirited assaults were ever the self-elected posts of the young prince; so much so, indeed, that the Duke of Berwick, to whose custody he had been committed by the King, could not avoid reproving him for his rashness, while at the same time he was astonished both by his skill and valour. When at last the Austrians were compelled to surrender, Edward was the first to enter the beleaguered fortress, and that not through the now open gates, but by the breach, and he mounted the walls by means of broken stones and shot-holes. Such was his first insight into military service, from whence it was easy to discern what he would become as a general, when he should no longer draw the sword as a learner, but to conquer and reign.

The peace which followed this exploit restored the prince to his family, and, in the peaceful life which with them he led at Rome, his mind was continually exercised on his own political prospects. He watched the aspect of events, traced out the intrigues of courts, and as troubles appeared which brought the prospect of a general war, so his hopes rose, and he held himself prepared to enter the lists for his father's crown. It is with the *immediate* preparations for this perilous enterprise, the negotiations at JAMES'S Court at Rome, the support given by the French king, and the manner in which JAMES was induced to allow his son's departure, that we are principally interested in this book; and accordingly we shall confine ourselves to that portion of it which treats of these preliminary measures, the rest being already known to most readers by means of other publications. The Cardinal PIERRE GUERRIN DE TENCIN had been just called to the councils of LOUIS XV. a circumstance highly favourable to the hopes of the House of STUART, for TENCIN, having obtained the purple through JAMES, felt himself under deep obligations to him, and was in all respects disposed to favour his claims. While at Rome he had cultivated the acquaintance of CHARLES EDWARD, and his nephew, the Chevalier TENCIN, had become one of the prince's most intimate friends, and now that the cardinal was recalled from the Court of Rome, where he had been ambassador, to aid the counsels of his sovereign, he not only cordially entered into the designs of the exiled family, but strove to procure for CHARLES EDWARD an invitation to France. It was evident that whatever was done in this way must be done privately, and that if the slightest clue was given, the whole design must become public and be speedily frustrated. Nor was it less important to seek a favourable opportunity. The wary eye of the cardinal soon perceived the proper juncture for interfering. A peace had been made between GEORGE II. and MARIA THERESA, and forces had been directed upon the Scheldt. New subsidies of troops were directed from England against Flanders, and the Dutch, hitherto neuter, now declared on the Austrian side. From this concatination of perils TENCIN thought that he perceived the means of rescuing France, and by the same operations, of reseating JAMES on the throne of his ancestors. CORDACA appears to think that the French minister was solely influenced in this conduct by private friendship, but the very statements which he himself makes with respect to the state of Europe shew that his measures were wisely taken, and that the welfare of his own country was in every respect consulted. TENCIN made a very strong statement to the French monarch of the advantages to be obtained by so powerful a diversion in England; and the result of his counsel was, that two gentlemen were despatched from the Court of Versailles on a secret mission to Rome. Both were Englishmen, and one was charged with an invitation from LOUIS, and furnished with credentials to JAMES. One was to accompany the young prince in his journey, and was supplied with English passports in case of stoppage. The mission was successful. An audience was obtained, and the ambassadors proceeded to fulfil their instructions by informing JAMES and his son that an armament was already prepared at Brest to make a descent, under the prince's command, upon Scotland, and that the Court of London was yet in complete ignorance of the projected attempt. All, therefore, that was necessary to ensure success was rapidity and secrecy, and that these two were inseparable. The good Jesuit gives us, at considerable length, the speeches made by JAMES and his counsellors on this occasion, and, as they are for the most part exactly reported (or are considered to have been so), we shall make a few extracts from these pages of royal eloquence:—

FIRST OPINIONS OF JAMES ON THE INTENDED EXPEDITION.

The magnitude of the enterprise moved the king, not so much for himself as for his sons; for he lamented that they who were born to reign should be left in a private station, and in exile. He replied, that for his own part his life was already on the decline, that he was averse from toil and discord, and that he willingly renounced the crown; the more, indeed, as in Rome nothing was wanting to him of the royal state save its cares and its dangers. In addition to this personal feeling, he feared the uncertainty of war, nor did he consider that so great an undertaking was yet mature. He desired, moreover, to have full and accurate accounts of the supplies promised; the quantity of provisions; the number of men; the amount of money. He felt that he was risking the life of his son, the sole delight and the only hope of the royal house. He observed that the very greatness of the promises made him hold back in something like suspicion for their sincerity, which he fully believed did not remove their difficulty of fulfilment. Princes, though friends, were often compelled to obey necessity rather than friendship. He went on to remark that an attempt which appeared so easy in a quiet conversation, would be found most difficult in execution; that the powers now so fiercely engaged in combat would, at some time, and perhaps soon, make peace, and who could foretel the conditions? Who could say that the king of France would be able to make those conditions himself, or even to secure honourable ones?

Much more to the same effect he said, and it may easily be imagined that the fervid and chivalrous mind of Charles Edward was not a little chafed by such pompous trivialities. It exhibits in a very strong light the intellectual as well as the moral weakness of James; that he considered the offers of Louis rather as requests for a favour than a proposition to place him on his father's throne. He was evidently blind to the marvellously favourable character of the times, and shews himself slothful and pusillanimous when he should have been active and daring. But that which was wanting in the Old Pretender was abundantly possessed by the younger. James saw that his unworthy love of ease struck the mind of his son with shame as well as sorrow, and accordingly he finished off his speech after another pattern. "For the rest," he continued, "this matter concerns the prince more than me, and he therefore is more qualified to reply. I have had in my time enough of vicissitude and intrigue, and now, borne down by years and labours, I ought to be thinking of a celestial kingdom rather than the fugitive honours of this world. He, on the other hand, is at the right age both for counsel and execution, let him do as he thinks best. I yield to him, nor let it ever be said that I basely refused the proffered assistance, and despised the advancement of my family. Having thus spoken, he intimated to the prince to express his opinion.

Although this oration needs, perhaps, no comment, yet it is not often that one so thoroughly characteristic is to be met with. Weakness, poorness of spirit, and ingratitude make up the staple of it: there is sufficient cunning to attempt a series of misrepresentation, and not skill enough to succeed; for in the first place JAMES had passed by no means a remarkably arduous life; he was not far advanced in age, for he had not yet attained his 58th year; he knew perfectly well the power of France, and he knew the character of LOUIS to be, with all its faults, generous, upright, and honourable. In fact the speech may be paraphrased thus: "I am unwilling to risk my ease and safety; I would rather play at being a king here, than fight for being a real king in England. However, if my son chooses to combat for me, he may; and I by no means intend to refuse what the King of France proposes, seeing that I am neither to be troubled nor endangered by it. At the same time I claim great sympathy for the vicarious peril in which in my son's person I am placed." CORDACA seems rather ashamed of JAMES throughout, though so good a son of the church can hardly be expected to be severe on so devout a king; it is, notwithstanding, to be observed, that he gives an abstract of what "his Majesty was graciously pleased to observe," while he adds the replies of the prince in his own words.

CHARLES EDWARD'S OPINIONS OF THE INVASION.

SIRE,—Were the subject of which we treat any other than your kingdom, your honour, and your glory, I should certainly think on the difficulty of the enterprise, nor perhaps would any argument induce me to leave your presence, where it is at once my duty and my pleasure to be; but when that is proposed to me, which you, both by precept and example have taught me to pre-

fer to all beside, even to life itself, I see no cause why we should delay this expedition. An undertaking you say of peril and fatigue; be it so—such alone are the paths by which we arrive at glory. The event of the war is uncertain; it is—but the honour is certain, the hope is immense; he who dares nothing can hope for nothing. Do not, however, suppose that rashness and courage have with me the same meaning, or that I am about blindly to peril even my own life. We are not yet talking of invading Scotland with arms in our hands, we are but discussing my removal to France; there, as from a nearer point, we shall consult about war, which I certainly shall not hazard, unless I judge the hopes greater than the danger. Having these views, there is no reason that you should fear for me; rather, indeed, that you should congratulate both me and yourself;—me, that I shall be able to leave a life of shameful sloth and show a bold face to fortune;—you, that your well-known virtues will have a second youth in the person of a son, not, I hope, degenerate." (Here the King, much affected covered his face with his hands, to hide the tears which began to flow.) "Ah!" continued Charles Edward—"Ah, Sire, I feel how grievous the parting from a son must be to a tender father; but in public and weighty matters the voice of private affection must not be heard—if in this our separation tears could be permitted, surely they might be allowed to me—who leave all I love, to go afar—perhaps to death;—but away with such thoughts as these, the call of glory must be obeyed, even though nature rebel."

The effect of this speech was satisfactory, the King gave way to his son's inclinations, and his departure for Paris was resolved on. But the putting the plan in practice was, as James had observed, a very different thing from its contemplation. By sea the English were everywhere masters; no ship could pass from the Roman states without their knowledge, and if the slightest hint had been given of the design they would have been additionally vigilant. The passage by sea was at once abandoned. By land again the difficulties were not much inferior, the plague, though it was in the depth of winter, had broken out in Sicily, and a "*cordon sanitaire*" was established round each of the Italian states. No person was allowed to enter any city, except after a strict examination; and in Genoa not until fifteen days of quarantine. The season was peculiarly unfavourable; floods of rain and drifts of snow had made many of the roads impassable, and the same weather still continued. All these were serious obstacles to an undertaking whose only hope of success lay in secrecy and rapidity. And even if the way had been easy from Rome to Paris, how could the prince's departure be kept a secret, to say nothing of the various ambassadors, all of whom kept a watchful eye upon the ex-royal family of England, some with one motive, some with another; the very populace were accustomed to pry minutely into the lives and actions of the great, and displayed very extraordinary talents for discovery. But the greatest danger arose from the domestics of the family; from whom it was necessary to conceal, not merely the occasion but the fact of the prince's absence, at least till such time as it would be too late to frustrate his plans. All these difficulties were, however, overcome, and he had been eleven days on his journey before any person, even in Rome, knew that he had left that city at all. The manner in which this secrecy was preserved is highlyinteresting. Of the twoEnglish travellers who acted as the ambassadors of Louis XV., one was sent back to Paris to announce to the King the speedy arrival of Charles Edward, and the other, carrying his wardrobe, went to Massa to make arrangements for his passage through the Genoese territories. The prince himself determined to travel on horseback as a courier, with no other companion than a single domestic; a man of tried integrity was selected for this office, but even he was not allowed to know the name of the person he was to accompany—he was only informed that it was a nobleman of King James's court, departing on a secret mission, and that by a given day he was to be prepared. The rest of the necessary arrangements were then made as follow. It was announced that a "*solemn hunting*" would take place at Cisterna, on the Appian way, on the 9th of January, 1744. The place thus selected was at the distance of about thirty miles from Rome, and by the abundance of wood and game peculiarly suitable for the occasion. Huntsmen and servants were sent thither with all the needful provisions and instruments; and as once a year, about this season, it was the custom for the Prince of Wales and the Duke of York to invite the Roman court to a hunting party, which usually lasted for fifteen days, no suspicion was entertained. The persons who alone knew of the intended plan were the royal family, and a Scotchman named Dunbar, a prudent, thoughtful, and faithful man. The leave-taking of the King with his son took place in the dead of night, and without exciting suspicion. At this interview, James gave the young chevalier a patent appointing him Prince Regent of Great Britain and Ireland, and furnished him with every requisite authority. At two o'clock the following morning Charles Edward arose, and ordered a carriage with three saddle horses, declaring that he would begin the hunting on that very day. Sheridan, his aide-de-camp, accompanied him, and Stafford, his grand equerry, preceded him by about half an hour, while the domestic who was appointed to attend him into France, followed on horseback, leading another horse. As soon as these arrived at St. John's-gate, they waited as they had been directed, the coming of the prince. When he arrived at the gate, as though moved to the thought by the sight of the horses, he declared he would ride, and accordingly he left the carriage, and mounted the led horse. As soon as he had done this, he cried aloud to Sheridan—"I will ride by Albane to Cisterna, and do you go by Marino, and let us see which will be first to arrive." These ways are very different, one being a post road, the other, that which Charles Edward selected, a by-road, and scarcely passable in winter. Sheridan pretended to dissuade him, but in vain, and the prince rode off followed by Stafford, the line of whose duty had been already prescribed. In order still further to blind the servants, and to prevent their looking after the prince and Stafford, Sheridan pretended to fall from the carriage as he got in, and to have hurt himself considerably. Meantime Charles Edward muffled up to the eyes to avoid recognition, galloped on till a favourable opportunity offered of turning, and then dismissing Stafford, he returned to St. John's gate, and from thence into the great Tuscan road. But another difficulty had been foreseen and provided for;—the Roman law very strictly forbade all who began a journey with their own horses, to continue it with post horses; and hence, after a ride of thirty-five miles, it became necessary to contrive some artifice to obtain a change. Leaving the direct road, the travellers turned aside to the villa Farnese, where there resided the Cardinal Trajan Acquaviva, the Spanish minister, and, turning from thence, the prince was of course taken for a servant of the cardinal's. He himself, made previously aware of the plot, had ordered a pair of horses to be ready, and thus the chevalier and his attendant continued their route. On the fifth day after leaving Rome they arrived at Genoa, not having changed their clothes, or taken any other nourishment than a few raw eggs, and a little wine. Here they engaged a boat to carry them along the coast, from Savona to Antibo, within the territories of France, but contrary winds detained them six days; and if, in the mean time, news of their departure from Rome had reached the English admiral, Matthews, their further progress would have been stopped, and their persons in danger. The prince, impatient of this imprisonment, took a boat at Finale, and caused himself to be rowed in the night past the English fleet anchored off Villa Franca. But as the morning broke the boat was seen, and another from an English ship despatched in pursuit of her. It became a neck-and-neck race, both arriving at Antibo at the same time; and though the English appear to have had no suspicion of who the travellers were, they determined, if not to take, at least to examine the boat. The prince and his servant demanded admission into the city—the English officer did the same, declaring that he was come for provisions, and, if they were not admitted, stipulating that the Finalese people should be refused also. The Governor of Antibo, in his ignorance of the true state of the case, refused *both parties*. There was now only one chance of safety. Charles Edward besought the governor to compel the English to depart *first*; and as soon as this was done, he took the governor aside, and revealed to him his name and condition. He was now courteously received, and found no further obstacles in his way to Paris. It appears that none, save the governor, were made acquainted with his rank at Antibo.

In the mean time affairs at Rome were admirably managed; the prince's companions arrived at Cisterna, and when they found that he came not, were much alarmed. It was not long before the Duke of York came with his retinue, and he expressed also the greatest concern; but their fears, real or pretended, were to a certain extent relieved by the appearance of Stafford, who informed them that at Albano the prince had had a fall from his horse, and had suffered a slight accident, which, though not dangerous, might become tedious if not immediately attended to. He had been taken to the Villa Albano, a place belonging to the family, and there he had a doctor and some of his own people with him; but that as he particularly wished the king to know nothing about it, be begged his brother neither to come nor send to him. He stated that in three days he hoped to be able to join his friends, and requested that the duke would cause the hunt to go on as though he were there. These commands were, after some feigned opposition on the part of Sheridan, complied with, and no one spoke of the prince's supposed accident. Stafford sent regular bulletins for three days to the duke and to those whom it was necessary to amuse. When the three days were expired an order came to remove the scene of the hunting to Fogliano, a place twelve miles distant from Cisterna, and that the prince would be there the next day. It is, however, needless to say that he came not; but the duke continued the hunting, and caused all letters and messages to be intercepted that were sent to Rome, destroying all those which contained any allusion to the prince's absence. This was the more easily done, as the country was wild and retired,

and no direct communication took place with the capital, save by means of fishermen's boats; and the fishermen were too much occupied in their daily business to hear of such an event, or to care for its importance if they did. Thus eleven days passed before it was known in Rome that Charles Edward was not with his family, and three days from that time he was with Louis XV. at Paris.

JOURNAL OF AMERICAN LITERATURE.

Big Abel and the Little Manhattan. By CORNELIUS MATHEWS. New York, 1845. Wiley and Putnam.

THIS fiction has fairly puzzled us. We cannot discern its meaning or discover its drift. Whether it be intended in soberness or satire, we are entirely ignorant. Story it has none; in its style it is an imitation of DICKENS, and like most imitations not the better for being made after a model. It contains some passages of powerful writing, especially in description, proving that the author has capacities which he might turn to better account, and which, as we read, only heighten our disappointment that so much ability should have been wasted on so trifling a theme—unless, indeed, it be, as we have some suspicion, a political allegory written with a party purpose, and therefore unintelligible to the uninitiated. In either case it is not likely to find favour with the English public.

ART.

THE COUNT DE SURVILLIERS' PICTURES.—The paintings and statuary of the late count were sold in September, at his residence, Bordintown, U.S., and the following are the prices obtained for the more important works:—Toilet of Venus, by Natoire, 325 dollars.—A Calm: Morning Scene, by Joseph Vernet, 950 d.—Two Lions and Faun, by Rubens, 7 ft. 8 in. long, by 4 ft. 7 in. high, 2,300 d.—Landscape, with Mountain Scenery, by S. Denis, 725 d.—Bay of Naples, by S. Denis, 1,000 d.—A Dutch Fair, by Francis Frank, 250 d.—The Entrance into the Ark, by Bassano, 225 d.—Herodias receiving the Head of John the Baptist, by Guercino, 400 d.—Scene near Naples, by Vernet, 550 d.—Hawk among Chickens, by Sneyders, 160 d.—Magdalen and two Cupids, by Vienne, 200 d.—The Lion caught in a Net, by Rubens, 1,800 d.—Visitation of St. Anna, by Sebastian del Piombo, 300 d.—Passage of the River Po by the French Army, by Boguet, 125 d.—Royal Stag Hunt, by Jacques Savery, 100 d.—Massanissa and Sophonisba, by Philip de Champagne, 200 d.—Christ breaking Bread with his two Disciples at Emmaus, by Gerardo Delle Notti, 171 d.—Marble Bust of Pauline, sister of Napoleon, Canova, 260 d.—Young Diana and Hound, by Bartoline, 380 d.—Antique Bronze Castings, Stork and Frog, from the Ruins of Pompeii, 130 d.—Antique Bronze Hawk and Animal, from the Ruins of Pompeii, 130 d.

MUSIC.

New Publications.

Vernal Influence. The Poetry from the "Songs of Spring," by Mrs. E. DARBY. Music by CHARLES OBERTHUR. London. Goodwin.

THERE is grace in this song. The music is buoyant as befits the sentiment, and there *is* music in the air. The composer has feeling and taste in him. Without any very striking merits, such as might claim the title of *genius*, this song is sufficiently above the average to justify its introduction to the family circle, where it is sure to please.

The Brabant Polka, for the Pianoforte. By CHARLES GOODBAN. London. Coventry and Hollier.

ENGLAND was once famous for her dance-music, but of late years she has lost her reputation for this. Our contre-danses contain some of the most lively, tuneful music in the world. With them the power of our composers seems to have departed, for in no other dance have they so well succeeded. In the Polka hitherto they have failed entirely: not one has caught the spirit of that cheerful dance. Mr. GOODBAN'S attempt is creditable to him, but he has not quite mastered the difficulty; his Polka is not *the* Polka; it is pleasant and lively and clever music, but it wants the undefinable something which gives that peculiar character to the Polka by which it is instantly recognised, if we hear but half a dozen notes. Mr. GOODBAN, however, is in the right road. Let him persevere, and ultimately he may succeed in triumphing over the difficulty which has hitherto perplexed greater men than himself.

Railroads now are all the Rage. A Song. By a Shareholder. London. Cramer and Co.

THE music of this song is a great deal better than the words, which are vile. The poetry would disgrace a child of seven years. Never was such trash set to music before. The author not only writes nonsense, but he does not know the ordinary principles of his art. His rhyme is as bad as his reason, and his metre is false to the rule of thumb. Such productions are a disgrace to the press.

Madame Anna Thillon is at present at Mons, in Belgium, where her performances are highly successful. Jules de Glimes, the talented conductor and professor of singing, will arrive in London this week, from Brussels. Signor Costa and Mr. Balfe have also arrived. There is a rumour that the former is engaged as perpetual director at the Philharmonic. Mayerbeer is on the point of leaving Paris, to fulfil his engagement at Berlin. He will consent, it is said, to the performance of his *Camp of Silesia*, at the Opera Comique, being much pleased with the tenor, M. Roger. Mr. Clement White, the vocalist and composer, has commenced the study of a series of Irish dramatic characters. He will open his campaign next week at the Theatre Royal, Northampton. The Society of British Musicians will probably give a series of six concerts at the Hanover Rooms, with a grand orchestra, in place of the usual second series of Chamber Concerts. The town of Liege has requested Madame Pleyel, the celebrated pianist, to perform at a concert for the benefit of its poor, which has been some time announced. The fair artist has, however, declined.—*Musical World.*

MILAN.—We some time ago quoted the enthusiastic eulogiums of the Marseilles press upon the brilliant *débuts* of Mlle. CATERINA HAYES, whose beauty and voice together seem to have turned the heads of half the gallant Marseillais. On the conclusion of her engagement there she was immediately secured by the director of La Scala for two years as prima donna, and is announced to open in the character of *Linda* early in November. This engagement of a young singer, so soon after her first *début*, and that singer a foreigner, is an event almost without parallel in the Scala, where vocalists often pay largely for liberty to appear and perform, instead of being paid.

COPENHAGEN.—The celebrated *cantatrice* Mlle. JENNY LIND arrived here on the 25th ult. and on the following day appeared at the National and Royal Theatre, in the character of *Donna Anna*, in MOZART'S opera of *Don Juan*. This siren of the north will, before her departure for her native city, Stockholm, where she has an engagement to appear for eight nights, play in the *Huguenots* of MEYERBEER, and the *Norma* of BELLINI. Her engagement at the Grand Opera at Berlin commences on the 1st November, where her first appearance will be in MEYERBEER'S opera of the *Camp in Silesia*.

BERLIN.—M. Flotow's opera of *Allessandro Stradella* has been very coldly received here; and but for the saving influence of some *morceaux* in the third act, would have been damned. M. Neilhardt, who, during the visit of the Empress of Russia to this capital, was the leader of the music at the chapel of the Dome during the ceremonies of the Greek church, has received from her Majesty a superb ring set in diamonds. The rehearsals of the opera of *L'Œdipe Roi*, of Sophocles, have been suspended; and M. Mendelssohn-Bartholdy, who had come here to direct the choruses, has returned to Leipsic. Madame Pauline Garcia, who is giving concerts in this city, has met with great success.

VIENNA.—The opera of *Hans-Heiling* will not, it is announced, be represented this year at the theatre of the Porte-de-Carinthie; the three pieces which are most relied on for the season are *Allessandro Stradella*, *Les Quatre Fils d'Aymon*, and an opera buffa by Nicolai, the name of which has not transpired.—*Galignani.*

THE DRAMA AND PUBLIC AMUSEMENTS.

FRENCH PLAYS, ST. JAMES'S THEATRE.—These charming entertainments were resumed on Monday, very greatly to our satisfaction. The event is peculiarly seasonable, now that the early setting in of winter puts us upon thoughts how best we may get rid of the dreary months before us; the French Plays are of themselves an antidote to November's fogs, to December's snows, to January's frosts, and conduct us pleasantly forward

through dismal February and cutting March into more genial times, and then make doubly pleasant the pleasant weather without. All thanks to Mr. MITCHELL for converting the stale jest "A Happy Christmas and Merry New Year" into a practical reality. The season opened with the most promising aspect; there was an audience such as one could never have expected to see assembled in London on the 3rd November,—dukes, marquises and marchionesses, lords and ladies, a *bonâ fide* audience, for the most part, and not a mere collection of the lessee's private acquaintance, got together to make up a show. And the edifice in which they found themselves has been made fit for the highest company in the world; during the recess, improvements and decorations have been effected which render the St. James's Theatre, we have no hesitation in saying, the most beautiful building of its class that we ever beheld, and we have seen a great many in different parts of Europe. The first thing that strikes you on entering the doors is, that the staircase hall is half as large again as it was last year; it is not so in reality, but the full effect is produced, and that goes nigh to answer the purpose; the only difference is in the arrangement of the lights, &c. On each side there is a range of handsome scagliola pillars, admirably proportioned, and with graceful capitals and pediments, supporting the roof; between these are figures supporting lamps, affording a brilliant illumination. The walls, &c. have been painted white, picked out with gold; the stairs new carpeted; and the result of all this is most striking. The corridors have been attended to with similar care, and with a similar result. On entering the boxes, the *coup d'œil* is effective in the very highest degree; there is every indication of immense outlay, but nothing gaudy, nothing tinselly, nothing merely made up of gold and silk, and so on. Gold and silk there are in abundance, but so chastely disposed, that while it fully pleases the eye, it does not offend our intellectual part. First let us speak of the new chandelier, a thoroughly elegant and costly-looking thing, worthy of all admiration in itself, but doubly so in contrast with the miserable, uncouth *papier mache* affair that preceded it; the mechanical arrangement of the new centre light, moreover, is very favourable to the audience, the illumination being modified in its individual intensity, though not in its general effect, by passing through an ample screen of glass, which envelopes it on every side, and which glitteringly displays all the colours of the rainbow. Around the chandelier is a circle of ornamental brass open-work, veiling apertures which have been made in the ceiling for the purposes of ventilation, beneficial even now, but most essential when hot June shall arrive. The royal box has been thoroughly redecorated and refurnished; the silk is richest tabaret, of crimson hue; the gold the finest, the paint the purest white; it is a *loge* right royal; and the boxes around are right noble, each rich in its silk, its gold, and its chaste dead-white. The stall seats have been all renewed, and in their costly array have a capital effect from above. Around the theatre has been throughout painted and gilded anew, and exquisite medallions at intervals around arrest the pleased eye. For matters behind the scenes, we last week mentioned in detail the arrangements which Mr. MITCHELL has entered into for carrying his season on triumphantly to its close. The entertainments on the opening night comprised *Une Partie de Chasse de Henri Quatre* and *La Somnambule*. In the first, a well-known and highly popular comedy, whose story is almost identical with that of *The Miller of Mansfield*, LAFONT gives us *le bon roi Henri* to the life. The jolly miller is represented by CARTIGNY, we need not say how perfectly; Madame CROSET is the miller's wife, and Mademoiselle HELOISE his daughter; the coziest of wives, the prettiest of daughters. *Lucas*, the fair *Catau's* rustic lover, was capitally impersonated. After the first piece, "God save the Queen" was sung, Miss HOBBS superintending the execution. *La Somnambule* is the original whence the various operas and ballets of that name have been, with more or less variation, adapted; it is, therefore, unnecessary to go into the plot. The heroine is represented by Mademoiselle ST. MARC, a lady new to this theatre, and who, we think, will prove a very useful accession. Her expression of non-expression, as she walks in her sleep, is exceedingly good.

PRINCESS'S THEATRE.—The new ballet here is worth anybody's money; the music is agreeable, and, let us not forget to say, well performed, and the dancing original and very entertaining. *Le Diable à Quatre*, we will venture to predict, will have a long run at the Princess's Theatre. The story, in its broad outline, is that of *The Devil to Pay*, a proud virago of a countess being made, by the so potent wand of a magician, to change places with the good-hearted, submissive wife of a basket-maker, none but the changelings themselves being conscious of the matter, out of which arises a good deal of fun; as, for instance, more particularly, the *Polka à pas de Baton*, which the transmuted countess dances with her imperative basketmaker husband, enforced thereto by the *argumentum baculinum*. Nothing can be better in the way of ballet action than the performance of Miss BALLIN and Mr. GILBERT in this piece; it was, of all the dancing we have seen, next to the best. The new dancer, Mademoiselle MELANIE DUVAL, is by no means equal to the lady we have just eulogized, but her Terpsichorean qualities are still very efficient; and another thing to be borne in mind is, that her part in the ballet is by no means so good as that of Miss BALLIN. There are several other new polkas and mazourkas introduced, two of them danced by Miss and Mr. MARSHALL, with their accustomed vivacity. There is one mazourka of sixteen, and another of sixty! The scenery and decorations are excellent. The transfer of the countess to the cottage, and of the peasant to the palace, in air-borne cars across the stage, was capitally managed.

SURREY THEATRE.—*El Hyder*, a great favourite of ours in our younger days, and toward which we retain a kindness still, is now being acted here, with an effective cast; *The Rover's Secret* forming the second piece. If here be not attractions, where shall they be found?

THE SANATORIUM.—The amateur performance, at Miss Kelly's theatre, of *Every Man in his Humour*, and *A Good Night's Rest*, by Mr. G. A. à Beckett, Mr. Dudley Costello, Mr. Charles Dickens and Brothers, Mr. Evans, Mr. Forster, Mr. Douglas Jerrold, Mr. Leech, Mr. Leigh, Mr. Mark Lemon, Mr. Mayhew, Mr. Stanfield, and Mr. Frank Stone, which so delighted an audience composed, perhaps, of a greater number of intellectual and accomplished persons than ever before assembled on a similar occasion, is to be repeated, with the additional assistance of Mr. George Cattermole, on the 15th instant, at the St. James's Theatre, in aid of the building fund of the Sanatorium—an institution in which the distinguished men engaged in the performance have always taken the deepest interest, both from a full conviction of the excellence of its principle, and because it is designed for large classes of persons in whose suffering they naturally feel a strong sympathy. Their purpose has been responded to in a spirit cordial, like their own, by all who are acquainted with the nature of the institution, and by none more ardently than its president, Prince Albert, who has expressed high gratification at the prospect of being president. The performance is to be strictly private, as on the former occasion, and the following ladies, noblemen, and gentlemen have already consented to form a special committee for issuing invitation cards: namely,—The Earl and Countess of Clarendon, the Duke of Devonshire, Count D'Orsay, Lady Duff Gordon, Lord and Lady Robert Grosvenor, the Marquis and Marchioness of Lansdowne, the Right Hon. S. Lushington, Viscount Morpeth, The Hon. Mrs. Norton, Lord and Lady Nugent, the Earl and Countess of Radnor, Lord and Lady Shelburne, Lord Dudley Stuart, Dr. Southwood Smith, &c. All acceptances are to be sent on or before Monday, the 10th of November, to Dr. Southwood Smith, 38, Finsbury-square, when a ticket of admission will be returned.

THE COLOSSEUM.—Indefatigable in his endeavours to make this the most magnificent public exhibition in Europe, the spirited proprietor has added new attractions, to a private view of which we were invited on Monday last. The conservatories, already described so far as words can paint a scene that must be witnessed to be appreciated, are now brilliantly illuminated, producing almost the effect of enchantment, and forcibly reminding the visitor of the gorgeous visions of the *Arabian Nights*. To the sculpture room, which for elegance and purity of design is without a rival in the world, and which really ought to be a national property, has been added an organ of great power and richness of tone, erected by Messrs. BEVINGTON; and with this, throughout the evening, a player of no ordinary skill gratifies the ears of the company with the music of the best masters, and the effect of which, as heard in almost every part of the building, is very fine. The grand picture of London by night has been further improved by the introduction of some natural effects of mist and cloud, making the illusion of the scene still more perfect; and at certain hours, by some ingenious contrivance, a thunderstorm passes along. We noticed two or three faults, which we name in hope that they may be amended. The rain was not well managed; the lightning was too local, and the clouds did not move regularly, but by jumps, all of which must have marred the effect. A little care would obviate these objections, and make the picture as perfect in execution as it is wonderful in its design. No comer from the country should fail to visit this truly magnificent exhibition, and the night view should be chosen as the most astonishing.

ROYAL POLYTECHNIC INSTITUTION.—Amongst the attractions at this Institution, is a lecture now daily delivered by Dr. RYAN on the all-engrossing subject of the potato disease, which has spread alarm through the greater portion of southern Europe, as well as America. To such an extent has this dreadful failure of that invaluable esculent progressed, that commissions have been considered necessary by the various governments to investigate the nature of the disease, and if possible apply a remedy, but as yet without producing any certain results or perfect knowledge of the nature of the disease, or any means of checking its

progress. If this scourge of the vegetable kingdom were confined to one portion of Europe, it would not be so difficult to account for. It might be said that a heavy wet soil or marshy land might have produced the gangrenous appearance presented by this disease; but we would ask how does it occur that potato crops, whether grown in light dry soils, marshy lands, or mountain lands, are all equally affected? We hear daily accounts from Ireland that in one portion of the country the disease is but trivial, and no fears were entertained for the potato crops. But a few days elapse, when the same writer informs us that to such an extent has the disease progressed, that almost a total failure must be the result, and a famine attend that portion of the British empire. We therefore consider that every suggestion to avert the dreadful calamity which must fall on the most industrious and deserving of our fellow-subjects should be attended to. The method proposed by Dr. Ryan, and his views of the cause of this disease, seem to be in accordance with that of the Commissioners appointed by the Government;—that as the principal cause of the disease has been from cold and moisture, the only remedy now to be applied, is immediately to extract the starch (or farinaceous portion) from the potato; this is easily accomplished by first removing the skin of the potato, and then grating it into a pulp, and by washing this well in water, by which the starch and fibrous portion of the root will be precipitated in the vessel, it is then to be strained through a sieve or fine cloth, by which means the fibrous portion will be removed, and the starch left in the vessel, and this will, if mixed with boiling water, immediately produce a highly nutritious and palatable diet, and although the potato may be partially diseased it will not affect the starch thus produced. We consider these lectures worthy of public attention.

NECROLOGY.

SIR MATTHEW TIERNEY, BART.

NEVER do we remember to have seen the inhabitants of Brighton plunged into a more profound and universal grief than when the melancholy intelligence was circulated through the town that this eminent physician, who had commanded the respect and affectionate attachment of all classes, not less by his great professional talents than by his private virtues and his general philanthropy, had been suddenly snatched away from his family and friends by an attack of epilepsy, early on the morning of Tuesday the 28th ult. To his more immediate connections, to the wide circle of his acquaintance, to the poor whom he was ever ready to assist, to the public charities of Brighton, most of which were deeply indebted to his munificent patronage, his loss is equally irreparable. If any thing can deepen the poignancy of the general regret at this sad bereavement, it is the reflection that the deceased had just made arrangements for the sale of his London house, intending to reside entirely at Brighton, so that our town would thus have exclusively enjoyed the benefits which his kindness, his hospitalities, and his generous charity invariably diffused around him. The deceased was physician in ordinary to George IV. whose personal friendship he had the honour to enjoy for a great number of years, and also to William IV. and the Royal household when in Brighton. He was born in November, 1776, and was consequently in his 69th year. In 1808 he married a daughter of the late Mr. Henry Jones, of Bloomsbury-square, by whom he had no issue. He was created a baronet in 1818, and obtained a second patent in 1834, with remainder to his brother, Mr. Edward Tierney, of Fitzwilliam-street, Dublin, a Crown solicitor for Ireland. The deceased was appointed a Knight Commander of the Royal Guelphic Order of Hanover on the 7th of May, 1831. It will excite little surprise that the late Sir Matthew should have obtained the unlimited confidence of George IV. when we record the following proof of professional skill and courage, to which that Sovereign was probably indebted for his life:—Before the funeral of George III. took place the Prince Regent was seized with a violent illness. Sir Matthew, who happened to have arrived in London from Brighton that evening, was immediately in attendance, and found, on being introduced into the apartment of his Royal patient that he differed in opinion with the other medical attendants as to the proper measures to be adopted. The conference was carried on in a whisper, and, after a slight discussion, Sir Matthew offered to take upon himself the entire responsibility of acting upon his own views, and directed his Royal Highness to be bled. He passed the whole night by the bedside of his Royal Highness, who kept hold of his hand; and the first words he uttered were, "Well, Tierney, you certainly have nerve!" It was then discovered that the Royal patient, unknown to his attendants, had been perfectly aware of their discussion.—*Brighton Gazette.*

MRS. MURRAY.

It will not seem inappropriate that the death of Mrs. Murray, the widow of the late John Murray, of Albemarle-street, should be recorded in the *Literary Gazette*. She died at Hampstead, after a very long illness, borne with Christian patience and piety. Mrs. Murray was not herself addicted to those pursuits of literature which should require of us a tribute to her memory; but there is hardly a living author of distinction,—and alas, there are too many within the last twenty years gathered to the grave,—who has not had cause to think of her with affectionate regard. All who have enjoyed the intellectual and convivial society so often assembled round Mr. Murray's hospitable board, where reigned indeed the feast of reason and the flow of soul, will agree with us in tracing much of the chiefest pleasures of these happy hours to the presiding influence of the gentle and kind-hearted lady whose death has now filled her numerous friends with sad regrets and her attached family with deep affliction. She was a model of wife and mother.—*Literary Gazette.*

DR. JAMES JOHNSTON,

The well-known writer upon medical subjects in a variety of popular forms, and also a gentleman who adorned general literature by his publications (often noticed in our pages), died last week at Brighton. He had extended his practice to that town, which may now, indeed, be called a suburb of London; and, in journeying to and fro, caught the illness which carried him to his grave. Dr. Johnston enjoyed considerable practice, was much esteemed in the profession, and in social life was a very intelligent and pleasant companion. He was sixty-six years of age.—*Literary Gazette.*

M. ETIENNE POULAIN,

One of the guardians of the *Bibliotheque Mazarine*, has just closed his modest and laborious career. The scholars and artists who visit, at the Mazarine Library, the Pelasgic Museum, know not, perhaps, that this collection of models and plans in relief, unique in the world, is the workmanship of a simple keeper of the library in which they are deposited; and that he it is who, single-handed, under the direction of the late M. Petit-Radel, and, with the aid of a few imperfect prints, succeeded, by long patience, in restoring, with an intelligence and skill quite remarkable, this series of the most ancient monuments of the architectural art.—*Journal des Débats.*

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

MR. SPENCER T. HALL has recently given Mesmeric experiments before several parties of high distinction. One of these, last week, included one of the Maids of Honour to the Queen, and other aristocratic personages, who expressed the deepest interest in the phenomena developed by Mr. Hall.

CRITIC OF TRADES, INVENTIONS, ETC.

[Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

THE METROPOLITAN SEWAGE MANURE COMPANY.

WITH THE CRITIC of Saturday last was transmitted to our readers a Prospectus of a company now being formed under the above title for the purpose of supplying the Sewage Water of London to the surrounding country.

The design is so novel, the results are so important, science is so deeply interested in the question, that the readers of THE CRITIC will doubtless be gratified to receive some further particulars of it, and which, we hope, will induce many to read

with attention that Prospectus and the valuable facts and evidence appended to it, and then to give it their aid.

We should state at the outset that it is no new scheme got up for the occasion. It has been in preparation for more than two years past. The outline of it was first submitted to the public by Mr. MARTIN, the distinguished artist, in a pamphlet published about eight years ago, and has since undergone great discussion and consideration, always with growing favour. About six years ago, a company was formed, under the highest auspices, for carrying out that plan, in combination with others for embanking and improving the Thames, and a bill passed through both Houses, with the unanimous approval of the Legislature, but was unfortunately stopped at the last stage by a disagreement among the Directors. Since that period, Mr. MARTIN has devoted to it a great deal of attention and many improvements had suggested themselves especially as to the mode of conveying the manure and throwing it upon the land. At the beginning of last year he invited some friends to inspect the plan: they were satisfied, not only of its practicability, but of the great profits that would accrue from it. They forthwith formed a committee;—practical men were invited to join it; Mr. SMITH, of Deanston, the most scientific agriculturist of the time, the great authority on all such matters, was consulted, and so satisfied was he of its value and certainty of success, that he joined the committee, and Mr. MYLNE, the well-known engineer of the New River Company, and Professor BRANDT, the famous chemist, added their valuable assistance, *con amore*. The most careful inquiries were instituted, first, as to the value of the sewage manure; secondly, as to the practicability of the plan for conveying to the surrounding country; thirdly, as to the cost of such conveyance, the price at which it could be sold, and the consequent profits to the company.

1st. Of the value of the material there appeared to be no doubt. The market-gardeners, farmers, and landowners in the neighbourhood of London were consulted, and they all agreed that if it could be conveyed to them at a moderate price, the benefits would be incalculable. The authorities and reports collected in the prospectus are conclusive upon this point.

2nd. The means of transit. This is precisely similar to those adopted by the water companies. If they can send water so many miles into every house in London at a trifling cost per gallon, by the like machinery can the sewage water be conveyed to the fields and gardens at a like trifling cost. Of this also, there is no doubt.

3rd. The cost of the conveyance. The same water companies prove by the experience of some half a century that the cost per gallon of sending water into every house in London is the merest trifle. Not so great will be the cost of sending back the sewage water into the country to fertilize the land, because there will be no houses to climb, and not so many pipes to lay.

4th. At what price can it be supplied, and in what quantity? The most careful and cautious estimates have been made, and taking a single district of *two sewers*, it is found that twenty square miles of country can be supplied with eighty tons per acre of this manure delivered upon the land at a charge not exceeding *sixpence per ton!*

The enormous advantage to the farmer and the gardener will be apparent from this—that the present cost of manure to them is from 8s. to 10s. per ton, and the cost of laying it on the land is upwards of 2s. per acre more, while the cost of spreading this will not exceed 6d. per acre.

But this is not all. It is the most fertilizing of the manures. The facts stated in the prospectus amply prove this, and to them we refer the reader.

5th. What, then, is to be the profit of the shareholders?

After adding largely to the estimates; allowing liberally for expenses; making every possible deduction that prudence and experience can suggest—selling it at from 4d. to 6d. per ton only—the profits of the shareholders cannot be less than from *fifteen to twenty per cent. per annum.*

What railway will ever yield such profits as this? What speculation is so certain of remuneration? Who would hazard his money in a bubble scheme when there is such a sound substantial investment offered as this, which can boast that it is not one of the floating schemes of the day, but an enterprise long projected, matured with care and forethought, sanctioned by the most prudent and experienced men in every department, and offered to the public, not for the purpose of gambling with the shares, but as a secure and profitable investment for those who desire to obtain a good interest for their money.

We shall return to this subject, but in the mean while we may state, that, in consequence of an interview with the Woods and Forests, it has been determined to limit the bill to be applied for next session to one district of the metropolis only, and therefore the capital has been reduced to 300,000*l.*, and the shares to 20*l.* each.

ELECTRICITY, MAGNETISM, AND LIGHT.

TO THE EDITOR OF THE TIMES.

SIR,—With great pleasure do I communicate to you, that in addition to other scientific discoveries of the highest order made during the last 40 years in the laboratory of the Royal Institution, which have greatly exalted the scientific glory of our country, and have entitled that institution to the gratitude of mankind, Mr. Faraday, its Fullerian Professor of Chemistry, yesterday announced to the members present, that, in the prosecution of his researches in electricity and magnetism, he had succeeded in obtaining *experimentally* what he had long sought for—namely, "the direct relation of electricity and magnetism to light."

The details of his experiments, which exhibit the magnetisation of light, the illumination of the lines of magnetic forces, and a *new* magnetic condition of matter, will be presented to the Royal Society immediately; but the public illustration of the several phenomena will be deferred till the approaching evening meetings of the members of the Royal Institution.

Knowing that you will be proud of first promulgating these important facts in the columns of the *Times*,

I remain, Sir, your obedient servant,

Observatory, Kensington, Tuesday, Nov. 4. J. SOUTH.

AIR CHURN.—The Bishop of Derry has invented an atmospheric churn. Instead of the present unscientific mode of making butter by churning, his lordship accomplishes this measure by the simpler manner of forcing a full current of atmospheric air through the cream, by means of an exceedingly well-devised forcing-pump. The air passes through a glass tube connected with the air-pump, descending nearly to the bottom of the churn. The churn is of tin, and it fits into another tin cylinder provided with a funnel and stop-cock, so as to heat the cream to the necessary temperature. The pump is worked by means of a winch, which is not so laborious as the usual churn. Independently of the happy application of science to this important department of domestic economy, in a practical point of view it is extremely valuable. The milk is not moved by a dasher, as in the common churn; but the oxygen of the atmosphere is brought into close contact with the cream, so as to effect a full combination of the butyraceous part, and to convert it all into butter. On one occasion the churning was carried on for the space of one hour and forty-five minutes, and eleven gallons of cream produced twenty-six pounds of butter.—*Globe.*

TO BOOKSELLERS.—*A stamped copy of* THE CRITIC *sent regularly to any Bookseller, for his own use, at the cost of stamp and paper only, on prepayment of* half a year's subscription, at least (4*s.* 4*d.*), *which may be transmitted in penny postage stamps.*

BOOKSELLERS *and Keepers of Circulating Libraries are requested to communicate to* THE CRITIC *the results of their experience as to books and classes of books most in demand, and other similar information. Books wanted to purchase inserted in the weekly list without charge.*

BOOKSELLERS' CIRCULAR.

IN reply to many applications from Booksellers for prospectuses of the MORNING MAIL, we beg to say that they will be ready in a day or two, and a quantity will be forwarded to each of those who have already given us directions how they may be sent. May we ask the others of our subscribers to do the like, and undertake to distribute and to procure shares to be taken? But their attention is directed to the arrangement which has been made for the immediate payment of the deposit of *one shilling per share*, which the Bookseller will be pleased to require with each application, and forward therewith, deducting 5 per cent. as his commission. For this purpose, every one of the 658 Booksellers subscrib-

ing to THE CRITIC may deem himself an agent for the MORNING MAIL.

The Publishing world is more dull than ever. Scarcely a work of promise is announced, and we hear that the prospects of the coming season are singularly gloomy.

We beg to renew the request preferred some time since, and partially answered, that the country Booksellers and Librarians would furnish THE CRITIC with their experiences of the kinds of works most in request. The information already collected upon this point has been found of great value, and makes us extremely desirous of more of the like, from similar practical sources.

It must have been observed that many catalogues of second-hand books have recently appeared among the advertisements in THE CRITIC. As the advertisers say that they have found the plan a very advantageous and cheap mode of circulating their lists in the best quarters, we have determined to insert such at the moderate charge of 1*l.* per column, being considerably less than the cost of printing an equal number, with the added advantage of a certain diffusion where they are most desired to be seen.

In this manner, a catalogue of considerable length might appear in portions of a column per week, as that of Mr. WILLIS is now doing.

LITERARY INTELLIGENCE.

THE AUTHORSHIP OF THE LETTERS OF JUNIUS.—The *Inverness Courier* says that Sir David Brewster, who is married to a daughter of the late Mr. James Macpherson, translator of *Ossian's Poems*, has discovered some letters among the papers of his father-in-law, which may lead to the discovery of a great secret—the authorship of "Junius." The person who, as Sir David thinks, may be identified as the author, is Lachlan Maclean, the son of an Irish Presbyterian clergyman, but descended from the ancient Scottish family of the M'Leans of Coll. He was bred to the study of medicine, but became a political writer and adventurer in London, and rose to some eminence. He was once an Under-Secretary of State, in which capacity he might have become acquainted with state secrets. Having been sent out to India by Government in 1776, he was shipwrecked and drowned on the passage—a circumstance that may account for the non-revealment of the secret as to the authorship of "Junius." His papers were all lost at the same time.

AUTOGRAPH OF GRAY'S ELEGY IN A COUNTRY CHURCHYARD.—A most precious article is about to be submitted to public sale. If one article more than another ever operated upon public curiosity, or had claims upon public attention, it is the possession of this precious manuscript, precious in every point of view. Its long claim to pre-eminent distinction, as a classic of unrivalled excellence in its way, the pomp and smoothness of its numbers, to say nothing of the elegant scription in which it is executed, must claim and extort all the applause which the most enthusiastic admirer of Gray must wish for. This precious original is to be sold, with many scraps of the same author, especially from Pliny the Elder, accompanied with pen and ink drawing of heads of birds, whole-length beetles, and other demonstrations of natural history, to which Gray was so much attached.—*Herald.*

The Queen has been pleased to bestow a pension of 200*l.* a year on Lady Shee, wife of Sir Martin Archer Shee, "in consideration of her husband's eminence as an artist, and of his services as President of the Royal Academy, during a period of fourteen years."

From the report read at the recent annual meeting of the Surtees Society, it appeared that the following volumes had been in the last year added to the publications of the society:—"The Rites and Monuments of the Cathedral Church of Durham;" "The Correspondence of Hutton, Archbishop of York;" "The Anglo-Saxon and Early English Psalter, Vol. I.;" and "The Bursar's Book of Expenses, before the Suppression of the Monastery of Durham." It was further stated that "The Legend of St. Godric, the Hermit-Saint of Finchale," written by Reginald, the monk of Durham, is in the press,—the transcript from the Bodleian manuscript and the collation of the Harleian manuscript having been completed,—and that it will be ready about the new year; that the volume of "Surveys of Durham, from the time of Henry II. to Elizabeth," was in progress; and that the second volume of the "Psalter," already mentioned, which MS. is glossed in the ancient dialect (as it is believed) of the Anglo-Saxon kingdom of Northumbria, is partly transcribed for the press. The society then proceeded to the other business of the meeting. The publication of a volume of the "Depositions of Witnesses in Causes in the Ecclesiastical Courts at Durham during the reign of Queen Elizabeth," was determined on. It was ordered that, if access can be obtained, another volume of the wills registered at York be printed, in continuation of the volume already published by the society. It was also resolved that the period embraced by the researches of the society should be extended from the Restoration (hitherto its modern limit), to one hundred years before the present time.

Mr. Hunt, who has so much distinguished himself in the Royal Cornwall Polytechnic Society, and is now curator of the Museum of Economic Geology in London, is announced in the *Falmouth Packet* as "preparing for the press a work on the Poetry of Science."

Mr. Richardson, already known as having undertaken an anti-slavery mission to Morocco, has, on a similar errand, penetrated the Great Desert as far as Ghadames, the grand commercial depot of Northern and Central Africa. His principal object is to collect statistics in relation to the slave-trade. In the face of many dangers, he has arrived safely at Ghadames.—*Globe.*

OPINION ON THE CRITIC.

TO THE EDITOR OF THE CRITIC.

SIR,—For several months past I have been a subscriber to your excellent paper, which I think very highly of indeed, as it gives a most judicious and unbiassed review of the various works which come under its notice. I strongly recommend it to all, as a guide and a reference, who would purchase good books, and especially for the information it affords on the progress of foreign literature, mesmerism, &c. in which it stands unrivalled.

I am, Sir, yours, &c.

Dunfermline, Oct. 27, 1845. JAS. BOUAR, Bookseller.

REGISTER OF NEW PUBLICATIONS,

From Nov. 1 to Nov. 8.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded* by letter *will be duly inserted.*

LIST OF NEW BOOKS.

Anderson's Mercantile Correspondent, 3rd edit. 12mo. 5s. cl.—Arrah Neil; or, the Times of Old, by G. P. R. James, 3 vols. post 8vo. 1*l.* 11s. 6d. bds.

Book of Common Prayer, with 1,000 Ornamental Borders, Initials, and Titles, in Colours and Gold, royal 8vo. 2*l.* 5s. cl. 3*l.* 3s. mor.—Bray's (Anna Eliza) Novels and Romances, Vol. VII. "Trelawney of Trelawney," fc. 8vo. 6s. cl.

Chart, Illustrating the Architecture of Westminster Abbey, drawn and lithographed, by F. Bedford, jun. in gilt case, with printed description, 7s. 6d. cl.—Cyril Thornton, a new edit. fc. 8vo. 4s. 6d. cl. 3s. 6d. swd.—Cruttwell's Housekeeper's Account Book for 1846, 4to. 2s. swd.

Dale's (Rev. T.) Sabbath Companion, Vol. I. 2nd edit. 12mo. 6s. 6d. cl.; ditto, Vol. II. 12mo. 6s. 6d. cl.—Dawn of Life, by a Clergyman, fc. 3s. 6d. cl.—Dunster Castle; an Historical Romance of the Great Rebellion, by T. S. Hewlett, M.A. 3 vols. post 8vo. 1*l.* 11s. 6d. bds.—Drawing-Room Almanac Illuminated, embossed on card, 1846, 1s.

Faber's Eight Dissertations on Prophecy, 2 vols. 8vo. 1*l.* 1s. cl.—Finden's Beauties of Moore, imp. 4to. 2*l.* 2s.; columbier, 3*l.* 3s. mor.

Gray's Country Solicitor's Practice, 4th edit. 12mo. 10s. cl.—Gray's Country Attorney's Practice, 6th edit. 12mo. 10s. cl.

Foster's Gospel Narrative, royal 8vo. 16s. bds.—Forget-me-Not, for 1846, fc. 8vo. 12s. bd.

Goodban's Music Cards, with Book of Directions, in box, 5s.—Grant's Chancery Practice, 2 vols. royal 12mo. 1*l.* 18s. bds.

Hall's Travelling Atlas, including all Railroads passed to the end of 1845, 8vo. 16s. roan tuck.—Hamilton's Housekeeping Book for any Year, post 8vo. 1s. 6d. cl. 1s. 8d.—Heath's Keepsake for 1846, edited by Lady Blessington, royal 8vo. 1*l.* 1s. silk; India proofs, 2*l.* 12s. 6d. mor.—Heath's Book of Beauty, for 1846, edited by Lady Blessington, royal 8vo. 1*l.* 1s. silk; India proofs, 2*l.* 12s. 6d. mor.—How's Illustrated Book of Song, Vol. I. demy fol. 1*l.* 1s. cl. gilt.

Imposter (The); or, Born without a Conscience, by the author of "Ann Coningsby," fc. 6s. cl.

Jack Hornet; or, the March of Intellect, by the author of "Adventures of an Irish Gent." 3 vols. post 8vo. 1*l.* 11s. 6d. bds.

Life of Joseph; being a Course of Lectures, by the Rev. E. Dalton, fc. 6s. cl.—Lepage's French School, Part I. "Echo de Paris," 9th ed. 12mo. 4s. cl.—Lectures on Natural Philosophy, by Dr. Young, new edition, with Reflections and Notes, by Prof. Kelland, 2 vols. 8vo. 1*l.* 4s. cl.—Lempriere's (Rev. F. D.) Lectures upon the Collects, First Series, 8vo. 12s. cl.—Lyrical Treasury, royal 32mo. 2s. 6d. cl.

Mason on Vestiges of Creation, post 8vo. 5s. cl.—Mayo's Lessons on the

Miracles of Our Blessed Lord, fc. 3s. 6d. cl.—Melaia, and other Poems, by E. Cook, 3rd edit. illustrated, post 8vo. 10s. 6d. cl. 15s. mor.—Musical Bijou for 1846, folio, 18s. bds.—Manual of Heraldry, with 400 cuts, fc. 8vo. 4s. cl.—Music Introduced in Macbeth (How's Illustrated Edition) demy fol. 4s. bds.

Oliver and Boyd's Threepenny Almanack for 1836, 3d.

Pickering's Statutes, 8 & 9 Vict. 1845, 8vo. 1*l.* 11s. 6d. bds.

Quested's Art of Land Surveying, 2nd edit. 12mo. 3s. cl.

Rectory of Valehead, by Rev. R. W. Evans, B.D. 13th edit. fc. 8vo. 6s. cl.

Statutes, 8 & 9 Vict. royal 8vo. 17s. 6d. bds. 4to. 2*l.* bds.

Thompson's (Mrs.) Memoirs of the Jacobites of 1715 and 1745, 2 vols. 8vo. 1*l.* 8s. cl.—Tuck's Railway Shareholder's Manual, 6th edit. 12mo. 6s. cl.

United States Exploring Expedition, abridged, 1 vol. 8vo. 10s. 6d. cl.

Virgilii Opera, cum Adnotationibus, edit. T. K. Arnold, A.M. Vol. II. "Æneidos," Libri I.—VI. 8vo. 12s. cl.

Wonder Seeker (The), by Miss M. F. Tytler, author of "Tales of Great and Brave," four illustrations, by Absalom, fc. 8vo. 4s. 6d. cl.—Wanderings of a Pen and Pencil, by Palmer and Crowquill, Part I. imp. 8vo. 2s. 6d. bd.—Wise Saws and Modern Instances: Tales by Thomas Cooper, the Chartist, 2 vols. post 8vo. 15s. cl.

GLEANINGS,

ORIGINAL AND SELECT.

THE SONG OF STEAM.

(From an American Paper.)

Harness me down with your iron bands;
Be sure of your curb and rein,
For I scorn the power of your puny hands
As the tempest scorns a chain.
How I laughed, as I lay concealed from sight
For many a countless hour,
At the childish boast of human might,
And the pride of human power.

When I saw an army upon the land,
A navy upon the seas,
Creeping along, a snail-like band,
Or waiting the wayward breeze;
When I marked the peasant faintly reel
With the toil which he faintly bore,
As he feebly turned at the tardy wheel,
Or tugged at the weary oar.

When I measured the panting coursers's speed,
The flight of the carrier dove,
As they bore the law a King decreed,
Or the lines of impatient love;
I could not but think how the world would feel,
As these were outstripped afar,
When I should be bound to the rushing keel,
Or chained to the flying car.

Ha! ha! ha! they found me at last;
They invited me forth at length,
And I rushed to my throne of thunder blast,
And laughed in my iron strength.
Oh! then ye saw a wondrous change
On the earth and ocean wide,
Where now my fiery armies range,
Nor wait for wind or tide.

Hurrah! hurrah! the waters o'er,
The mountains' steep decline;
Time—space—have yielded to my power—
The world! the world is mine;
The rivers the sun hath earliest blest,
Or those where his beams decline;
The giant streams of the queenly west,
Or the orient floods divine.

The ocean pales where'er I sweep,
To hear my strength rejoice,
And the monsters of the briny deep
Cower, trembling at my voice.
I carry the wealth and the lord of earth,
The thoughts of the god-like mind;
The wind lags after my flying forth,
The lightning is left behind.

In the darksome depths of the fathomless mine
My tireless arm doth play,
Where the rocks never saw the sun decline,
Or the dawn of the glorious day.
I bring earth's glittering jewels up
From the hidden cave below,
And I make the fountain granite cup
With a crystal gush overflow.

I blow the bellows, I forge the steel
In all the shops of trade;
I hammer the ore and turn the wheel
Where my arms of strength are made;
I manage the furnace, the mill, the mint,
I carry, I spin, I weave;
And all my doings I put into print
On every Saturday eve.

I've no muscle to weary, no breast to decay,
No bones to be "laid on the shelf,"
And soon I intend you may "go and play,"
While I manage the world by myself.
But harness me down with your iron bands,
Be sure of your curb and rein,
For I scorn the strength of your puny hands
As the tempest scorns a chain.

THE PLANET MARS.—We have lately had our attention invited to the singular appearance now worn by the planet Mars. Hitherto this planet has been distinguished by a fiery redness of colour, which, to use the language of Sir John Herschell, "indicates, no doubt, an ochrey tinge in the general soil, like what the red sandstone districts of the earth may possibly offer to the inhabitants of Mars." Such is, however, no longer the case, that planet having lost all appearance of redness and put on a brilliant white aspect, vying in apparent magnitude and brightness with the planet Jupiter itself. The only changes which have heretofore been noticed in Mars, are those the knowledge of which was derived from observations with the large reflecting telescopes of Herschell. These telescopes exhibit the appearance of brilliant white spots at the poles, which spots, from the circumstance of their always becoming visible in winter, and disappearing as the poles advanced towards their summer position, have reasonably enough been attributed to the presence of snow. The novel appearance now described to us, however, by the Hon. Company's astronomer, Mr. Taylor, is such as that the whole of the planet, with the exception of a moderately broad equatorial belt, assumes a decidedly white aspect, strongly contrasting with what he has ever before noticed. We look forward with great anxiety and interest to those observations on the above planet which may be expected to have been made, through the medium of the numerous and powerful telescopes now at work in Europe. Lord Rosse's magnificent telescope will likewise (we venture to hope) have been perfected, so as to allow of his bringing it to bear upon the celestial body apparently undergoing the remarkable change discerned by Mr. Taylor, and for the benefit of those who do not enjoy an opportunity of looking through any large and powerful instrument, we confidently trust that the labours of the artist and engraver will be put in requisition, with a view of making them acquainted with these wonders of the heavens. —*Madras Spectator.*

ARCHÆOLOGICAL RESEARCHES AT POMPEII.—A letter from Naples of the 9th ult. informs us that a few days before the Scientific Congress now assembled at Naples, led by their president, M. St. Angelo, repaired to Pompeii, where, in the presence of the society, investigations were instituted under the direction of M. Carlo Bonucci, Chief Conservator of the Antiquities of the kingdom. The operations were crowned with success. In a street in the vicinity of the Augustan temple they discovered two shops fitted with different kitchen utensils made of iron and bronze, which were in all probability exposed there for sale. Opposite these shops they discovered a magazine, containing blocks of native and African marble, and five statues of white marble of different sizes, including that of a faun, and another representing the skeleton of a woman enveloped in flowing drapery. In this last statue the learned archæologists present recognised the Goddess of Envy. At one of the extremities of the Rue de la Fortune they cleared their way to a house which contained on the ground floor a large saloon, filled with some various articles of office furniture, in one of which were found some silver coins of the reigns of Vespasian and Galba, and several marble weights. All the heights surrounding Pompeii and several of the streets and squares of that city were crowded with people, so that it seemed for a moment as if the ancient Roman city had recovered its inhabitants, its life, and its activity.—*Paris paper.*

GRASSHOPPERS AT SEA.—Captain Hager, of the bark *Marcella*, brought home a preserved grasshopper, of the size of a man's thumb, as a sample of an immense field through which he sailed for five days. He fell in with them off the Western Islands, and the presumption was that they were blown off from Africa. The water was heavily crusted with them, the grasshoppers filling the surface to the depth of some inches, and extending in the course of the bark for 400 miles.—*Hongkong Register.*

An extraordinary case of somnambulism occurred at Chatham Barracks on Sunday night. Peter Slight, a young Scotchman, rose from his bed, by some means got into a drain, passed through it for a distance of five hundred feet, emerged from it, and, coming in contact with a post, fell down in a fit, in which state he was discovered, quite naked, and was conveyed to the military hospital. This was the fourth time he had walked in his sleep.

THE CRITIC,

And Journal of Literature.

SATURDAY, NOVEMBER 15, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

THE MORNING MAIL.

THE plan proposed last week for meeting the unavoidable expenses of procuring the necessary support by requiring the immediate payment of the deposit of *one shilling* per share, as a fund for this purpose, has met with the cordial concurrence of those who take an interest in the enterprise, and several payments of such deposits have been received. Of these, and of the expenditure, accounts will be regularly published in THE CRITIC, so that the shareholders will be enabled to see that the fund is duly applied.

Next week the first account of receipts and expenditure will be published, and in the meanwhile we must request those who have already sent in applications for shares to forward the amount of the one shilling deposit thereon, or their applications will not avail.

In answer to many queries as to the probable period for the commencement of the work, we can only say that it will depend entirely upon the taking up of the shares. The existing panic of course operates much against any enterprise at this moment, for although occasioned by the railway mania, it has extended to other enterprises of more substantial character, and more promising.

The *Morning Mail*, however, being independent of surveyors and notices, and Gazettes, and standing orders, and the other troubles of railway companies, can bide its time, proceeding gradually, gathering strength by degrees, and growing in numbers from week to week, until the favour with which the proposition has been universally received shall have satisfied the prudent and sagacious that it is an enterprise sufficiently promising to justify the venture of a few shillings, in the first instance, in the endeavour to bring it to maturity, and of a few pounds afterwards for its establishment, assured that the profit of success will be so great that it is well worth the trifling hazard.

JOURNAL OF ENGLISH LITERATURE.

BIOGRAPHY.

Who was "Jack Wilson," the Singer of Shakespeare's Stage? By EDWARD F. RIMBAULT, LL.D., F.S.A. London, 1846. J. R. Smith.

WHO *was* JACK WILSON? will doubtless be echoed by not a few of our readers unversed in antiquarian lore. Where is his fame chronicled? Wherefore lives he still upon the roll? What is JACK WILSON to us of the nineteenth century more than P.P., clerk of our parish, or any other illustrious obscure? If you would be enlightened upon these points, listen, thou sneering sceptic!

It appears from the pamphlet before us that in the second volume of *The Shakespeare Society Papers*, Mr. COLLIER has an article on one "JACK WILSON," who was the performer of *Balthazar*, in *Much Ado about Nothing*, and, consequently, the singer of the song "Sigh no more, Ladies, sigh no more!" This important fact is ascertained by a stage direction in the folio of 1623, wherein the text hath it, "Enter Prince Leonato, Claudio, and *Jack Wilson*," the name of the actor being inserted instead of that of the character. The game thus started, Mr. COLLIER follows upon the scent at full cry, resolved to catch the said JACK, or his shadow, and trace his birth, parentage, and education. After hunting for a long time, he finds, or fancies, that the illustrious JACK "was not merely a singer, but a composer, and in all probability the composer of 'Sigh no more.'" He was certainly, quoth Mr. C. the composer of the song in *Measure for Measure*, "Take, O! take, those lips away," as is proved by some manuscript music, as old in some parts as the time of the civil wars, in which that song is found with WILSON's name at the end of it as the author of the music.

So far Mr. COLLIER. But to antiquarians, equally with other benefactors of mankind, it is not permitted by the envious to enjoy their hard-earned honours unquestioned. Up starts Mr. RIMBAULT to contest the palm, and to tear from Mr. COLLIER his darling "JACK." COLLIER, he exclaims, has adopted my hypothesis that WILSON "was the composer of much of the music of SHAKESPEARE's plays," but to him shall not belong the honour of proving my conjecture true. "Whether this can be established we shall see anon." No, Mr. COLLIER, the song in question was composed by a *John* WILSON, I admit, but said *John* (can he be identical with your *Jack?*) is "no less a personage than Doctor JOHN WILSON, Professor of Music in the University of Oxford, A.D. 1644." And thereupon Mr. RIMBAULT modestly says, "My hypothesis falls to the ground unless I can prove the identity of the JACK WILSON of SHAKESPEARE'S stage with the learned Oxford professor of half a century later."

Mr. R. forthwith sets on foot an inquiry into the history of Doctor *John* WILSON, tracing him from his birthplace at Faversham to his becoming a gentleman of the Chapel Royal, and Musician in Ordinary to CHARLES the First; and it is related that he played the lute so well that the king "generally leaned on his shoulder during his performance." In 1644 he was created Doctor of Music in the University of Oxford, where he took up his abode, and lived comfortably through the troubles of the civil wars, respected by all parties. At the Restoration he went to London, was appointed Chamber Musician to CHARLES the Second, and died at his house in Westminster in 1673, at the ripe age of 79.

This is all that is known of his biography, and from these scanty notes Mr. RIMBAULT labours to discover whether he was the composer of the music, or any portion of it, of SHAKESPEARE'S plays, or the JACK WILSON of Mr. COLLIER. The conclusions to which he comes are that as he could not have been the *original* composer of the song "Take, O! take, those lips away," it is still less probable that he could have composed the song in *Measure for Measure;*" but though not the *original* composer, it is certain that of one of them at least he was an *early* composer.

Wilson was the composer of four other Shakespearian lyrics, a fact unknown to Mr. Collier when he wrote the article in the *Shakespeare Papers:* "Where the bee sucks," "Full fathom five," "Lawn as white as driven snow," and "From the fair Lavinian shore." They are all printed in the author's *Cheerfull Ayres or Ballads*, Oxford, 1660. We have now evidence from this work, that Wilson was the *original* composer of the music to *one* of Shakespeare's plays. He says in his preface, "Some of these ayres were *originally* composed by those whose names are affixed to them, but are here placed as being *new set* by the author of the rest." The two songs, "Where the bee sucks," and "Full fathom five," have appended to them the name of "R. Johnson," who, upon this evidence, we may undoubtedly conclude was the *original* composer of the music in the play of the *Tempest*. The song, "Lawn as white as driven snow," from the *Winter's Tale*, has the name of "John Wilson" attached to it, from which it is equally certain that he was its *original* composer.

The other evidence collected by Mr. RIMBAULT to prove his position must be sought in his pamphlet. The conclusion at which he arrives is, that Mr. COLLIER has formed a right judgment, though upon wrong premises; and that the Doctor's settings of the Shakespearian Lyrics—his companionship with the great dramatic composers, the two LAWESES—his familiar appellation of "JACK WILSON," and, above all, the thirty-two years' gap in the early history of his life, are evidences that "JACK WILSON," the singer of SHAKESPEARE'S stage, and Doctor JOHN WILSON, the learned Professor of the University of Oxford, were one and the same person.

NEWSPAPER

VOYAGES AND TRAVELS.

Kingston's Lusitanian Sketches.

(*Concluded from page* 536.)

We concluded our last week's notice with the tradition of the "Bruxa." Another still more curious is that of

THE LOBISHOMES.

A destiny scarcely inferior in wretchedness to the bruxa's is that of the *lobishomes*, except that, as far as I can learn, it endures only for this life, and is owing to no fault on their part. They are born under an inauspicious star, and a sad necessity rules their fate. Every family is liable to this curse, from the highest to the lowest in the land; and though they themselves are conscious of it, they keep it a profound secret, as it is considered a great disgrace to be afflicted with it. It is common to both sexes among young people; those who suffer from it never attaining an advanced age. I have been unable to learn at what time of life it appears. If seven sons or seven daughters are born in one family, the seventh generally is subject to the demoniacal influence; at all events, one of the younger ones. The only preventive against this fate is by christening one of the seven Adam: should this be neglected, it is almost certain to visit the family. In the daytime they are free from the spell; but even then wear a peculiarly sad and pained expression of countenance. They mope by themselves, are taciturn and reserved; never enter society if they can avoid it, and then evidently are incapable of its enjoyment. The lower orders sit by themselves, without speaking, in a corner near the kitchen-fire—the expression of their countenances wild and forbidding, their hair and beard long and tangled, their garments disarranged and squalid. In travelling through the country such beings are frequently pointed out as lobishomes. As night draws on, these hapless beings rush from their abodes—the high-born damsel from her bower, the noble youth from his baronial hall, or the hard-featured peasant from his humble cot. No human power can restrain them—the demon has entered into them—they seek some solitary wild spot, untrod by the foot of man. There they leave their habiliments, and are immediately transformed into the appearance of horses, with long flowing manes and waving tails, fire darting from their nostrils, fury in their eyes; yet fear it is which urges them on. Away they fly, fleet as the wind, over rugged mountains and deep valleys, across streams and winter-torrents, through frost and snow, rain and the fierce lightning. Leagues are traversed in as many seconds—all other animals fly before them—they neigh in agony as they rush on, yet have no power to stop. On, on, on! their pulses beat quicker, their breath grows thick, but they cannot, they dare not, rest. They sweep round, forming a wide circuit some hundred leagues in extent, yet before the morning breaks they must return to the spot whence they set out; and there resuming their mortal forms, and donning their garments, they once more seek their homes, pale, fainting, and wretched. It is not surprising, after such a night's work, they should be averse to social intercourse. Often at midnight are the cottagers in remote districts startled from their slumbers by unearthly sounds, like the cry of a horse in agony; loud trampling is heard, and a noise as if a sudden blast passed by; and they exclaim, "It is some hapless lobishome; may the saints have mercy on him!" At times, also, as the shepherds are watching their flocks on the mountain's brow, they see a wild steed dash by, on the plain below, fleet as a fiery meteor, while the sheep and goats exhibit their consciousness of something supernatural, by scattering far and wide. Their faithful dogs, too, forget to obey their call; and it is with the utmost difficulty they contrive to reassemble their affrighted flocks. The lobishomes endure not this dreadful existence for more than seven years, if even so many. Death invariably putting an end to their sufferings at the termination of that period, frequently before. I have been informed of but one mode of escape from this doom, or, it may be said, of being freed from this extraordinary species of enchantment. While in full headlong career, they should be boldly encountered by some fearless person, who must wound them slightly in the chest, so that their blood shall flow. No sooner does the ruddy current reach the ground than they are instantly restored to their proper forms. The malign influence henceforth has no further power over them; nor do they ever resume the appearance of a horse; they then become like other mortals. All well-authenticated narrations speak of the horse as the only form they are thus compelled to assume, though some persons suppose, from the name given them, it is that of a wolf; but this I have ascertained to be a mistaken notion. It is to be hoped political economy and liberal institutions will completely banish this curse from the families of Lusitania to the far lands whence it came.

There is another equally singular.

There is an extraordinary belief very general among the common people, and one very difficult to eradicate, or indeed to disprove, that the souls of the dead enter into the bodies of living persons, ejecting the rightful owners for the time being, in order to perform some duty neglected during their proper lifetime. The only name I can learn from them is *almas d'outro mundo*—souls of the other world; and they are supposed to be peculiarly favoured in thus being permitted to escape many of the pains and penalties of purgatory. If a person dies owing another a sum of money, he will enter the body of some one, and make him both gain the amount and pay the debt; afterwards returning contentedly to the world of spirits, and leaving his deputy unconscious of what has occurred. The country-people will frequently point out a person and say, That is not such a man, it is only his body; the soul is that of ————, mentioning the name of some one who has been dead some weeks or months.

In spite of the staggering blows which superstition has received of late years, its influence must still be very great. As witness

PENANCE IN PORTUGAL.

The Portugese peasantry are still very much addicted to performing penances. As they are seldom very heavy, they find it an easy way of soothing their consciences. The most severe I have seen some poor women perform, such as crawling round a church many times on their bare knees: frequently they hang a bag of sand to their necks, to increase their toil, and let it run out as they proceed. This is done frequently under a pelting rain, the poor wretches literally tracing their progress with their blood. Sometimes these penances are inflicted by their confessors, for sins committed; at other times they are in fulfilment of vows made in consequence of recovery from sickness, or on account of finding any lost treasure. They are not in general, however, such sorrowful affairs. I have seen men with thick cloths tied round their knees; for though they had vowed to go round the church on their knees, they did not consider themselves obliged to spoil a new pair of trousers on the occasion; and as the handkerchief alone could not have preserved them, they were compelled to add pads also. They deserved as much credit as the pilgrims who boiled their peas which they put in their shoes. Young maidens frequently perform the same progress round the church, habited in thick cloth petticoats, and too often most irreverently laughing and joking all the time with attendant swains, who will on occasion most gallantly lift them over any very rough places. An old lady I formerly knew vowed to make a pilgrimage barefooted to a shrine at a considerable distance; but her friends persuading her it was more than she could perform in the way she first intended, she yet determined to keep her vow, so she ordered her sedan-chair, doffed her shoes and stockings, and was carried thither. Truly there appear to be many curious ways to heaven; and had I the creed of some persons, I might add, "few there be who find the right one;" but as I pity these poor people who are not taught better things, so, I believe, will their and my Maker. I do not give these accounts as amusing stories to be merely laughed at, but that the character of the people may be better understood. Theirs is not an earnest, deep character; they have faith in what we consider absurdities, and yet they laugh at them. On being asked if they really believe in the efficacy of such things, a shrug of the shoulders is the general answer. "We are told to believe in them, and why not?" is the utmost that can be extracted from them. One then finds the question put to oneself, and one is compelled either to say things which are considered little less than treason against the church, or to hold silence. Thus the uneducated, ignorant peasant gains the day with her "*Pois não?*" Why not? Nor is this species of penance exacted only of human beings. Frequently cattle, which have escaped a murrain that has destroyed their fellows, are led round some favourite shrine; horses, oxen, asses, and swine sometimes, shewing most irreverent unwillingness to fulfil their owners' vows by the performance of what they, more wise, must look upon as a useless ceremony. From days of yore, I fear pigs have had few religious tendencies—the exceptions, at all events, are rare. These exhibitions are by no means grateful to the ear. Grunting and squeaking they go round; sometimes, too, the hinder part foremost, when the penitential hog takes it into his head to turn back the way by which he came. Asses shew more respect to the sacred edifice, though they do sometimes bray rather loudly; but oxen appear the most piously inclined of any. While I am laughing, I am reminded of a story told by a friend of mine of two ladies who made a vow to walk to Matozinhos, a distance of four miles, without speaking. They tried it nine times, and were at last compelled to undergo a severe penance to exonerate them from what they found to be impossible of performance. Another favourite vow, made chiefly by farmers, is to present to their church their own weight in corn or wax; for weighing which a large pair of scales are suspended in the sacristy, or some room adjoining the church, into which the votary and his produce are placed. Should he desire to recover

it again, he may commute it with money—a very wise arrangement of the priests!"

Mr. KINGSTON continually asserts his preference for the Portuguese over the Spaniards. "I have," he says, "more confidence in their virtue and their valour." But he admits the superior cleanliness and domestic comfort of the latter. The humblest cottage in Spain ought to put them to shame. The Spaniards have a very good idea of what we call comfort and tidiness, the Portuguese peasant not the remotest approach to it. "The cottage of the former is built to keep out the heat of summer as well as the frosts of winter; that of the latter admits every icy blast, while the rays of the sun pierce through their thin roofs." And to this let us add a companion picture of domestic life.

It is a sight calculated to move all the tender sympathies of our nature, to behold the fond wife bending over the sleeping form of her beloved spouse, his head resting on her lap, as he is stretched out at his length before the door of their humble home, the abode of peace and contentment, if not of wealth and cleanliness. There he reposes, recruiting his weary limbs, after a day spent in toil to gain provision for his numerous offspring, who are seen running about, or rolling in the mud with a few civilized pigs, in the most primitive state of simplicity—careless of the dust, the sun, the dirt, or the fleas. They exhibit slight tendency to dandyism; for it cannot be said that they indulge even in an approach to superfluous clothing, being either entirely free from any covering but the bright blue balmy sky and a light coating of dirt, or else habited in little shirts reaching to about the middle. She, the partner of his joys and woes, is in the mean time employed in passing her fingers with eager zeal amid his crisply curled locks, giving constant notice of her activity by the sharp crack of her nails, as they encounter the noxious intruders. I fear the cottage-doors of our peasantry in England can rarely exhibit scenes of such domestic endearment! A stranger may be surprised that it has never occurred to them to wash their heads; but I feel assured that it would cost them much to abandon the gratification they experience from their long-established method of cleansing themselves.

As we have already intimated, a considerable section of the work is devoted to an account of the vintage, the wine, and the wine trade. The English love of Portugal wines is not of modern origin. So long ago as 1749 no less than 22,738 pipes of it were imported here. The present company was formed in 1756. The vintage and the wine-making are thus described:—

When once the vintage has commenced, time is invaluable. The vineyards are crowded with persons, some plucking the sound grapes and filling large hampers with them, others separating the rotten or dry bunches, while the Gallegos are employed in carrying the baskets down the steep sides of the hills on their backs. The presses are stone tanks, raised high from the floor, about two to three feet deep, and from twenty to thirty square. A boy stands in the centre, and rakes the grapes as they are thrown in, so as to form an even surface. When full, twenty or thirty men with bare feet and legs jump in, and to the sound of guitars, pipes, fiddles, drums, and of their own voices, continue dancing, or rather treading, for forty to fifty hours, with six hours intervening between every eighteen, till the juice is completely expressed and the skins perfectly bruised, so as to extract every particle of colour. It is found necessary to leave in the stalks, in order to impart that astringent quality so much admired in port wine, as well as to aid fermentation.

After the men are withdrawn, the juice, the husks, and stalks, are allowed to ferment together from two to six days; the husks and stalks then rise to the top, and form a complete cake. By this means the colour is still further extracted from the skin. It is a very critical time, much depending on the judgment and practice of the superintendent as to the right moment to draw off the liquor; for so active is the fermentation, that it may be, if allowed to remain too long in the press, completely spoiled. Nothing but long experience can enable a person to judge on this point, and many young merchants who have attempted to do so have had cause to repent their interference with the farmer's business.

The taste of the wine before drawn off into the *tonels* is sweet, nauseous, and sickening; and it is of a dark muddy colour; so that one can with difficulty believe it can ever become the bright, sparkling, and astringent fluid it appears in the course of two or three years.

The tonels or vats into which the wine is drawn are in a building on a lower spot than the one which contains the press, a channel leading from it to them. They contain frequently thirty pipes each.

The period when the wine is thus drawn off is the time when the rich and generous qualities of the grapes are to be retained, or lost never to be restored. From the rich nature of the Douro grape, the fermentation once begun will not stop of its own accord (even when the wine is drawn off from the husks and stalks), till it has caused it to become a bitter liquid, almost if not entirely undrinkable and useless, and finally vinegar. To retain, therefore, those much-prized qualities, it is absolutely necessary to add brandy at the very critical moment, so difficult to decide, before that stage which produces the bitterness commences. Brandy always has been and always must be added to the richer and finer wines, or from their very nature they overwork themselves, and, exhausting their own strength, are destroyed.

The grapes from which the rich luscious port wine is produced become, when hung up in the sun to dry, complete masses of sugar. This excessively saccharine matter, possessed only by those grapes growing in the positions most exposed to the sun's rays, gives that rich and fruity flavour of which the best port alone can boast. With the poorer and more watery grapes, the fermentation, not being so violent, will work itself out; and the little saccharine matter they contain completely disappearing, a dry light wine is the produce; which, though requiring brandy, requires less to preserve its good qualities, for the very reason that there are fewer good qualities to preserve. Such is the case with regard to the wines of Bordeaux. I do not mean to say that they do not possess good qualities, but that, being of a lighter nature than the best port, from the cooler climate or nature of the soil in which they are produced, the fermentation is not so violent, nor do they exhaust themselves from their own strength. No brandy is therefore requisite, and that delicious liquor claret is the produce; a successful imitation of which it has been vainly attempted to produce in Portugal.

In 1843 the produce was 72,462 pipes.

Of these, 18,002 pipes were approved for the English market, 15,714 were placed in the second quality list, 17,166 in the third and 21,580 were pronounced refuse, to be consumed only in the low taverns, or to be distilled into brandy. During the year 1843 only 21,244 pipes of port wine were shipped to England, a considerable deal of it probably of the fine vintage of 1840, which shews a great falling off from former years. Of the vintage 1844, 21,238 pipes were approved as of the first quality, and by an after division of them 14,000 only are permitted to be shipped for the English market, the produce being 66,566 pipes in all. During the year 25,493 pipes were exported to the United Kingdom. America takes some annually, some go to the continent, and a few hundreds have been sent to our Australian colonies, to our East-India possessions, and to China. Altogether the export for 1844 was only 8,453 pipes, exclusive of that to the United Kingdom. The system of approving wine sounds very well, and by it we may fancy in England that we should have all the good, and the rest of the world all the inferior, wine; but it is notorious, that though the best wine is generally approved, that very good wine is often pronounced unfit to be exported to Great Britain, and that yet much bad wine is sent to that country. The company, therefore, do not benefit the trade, though by imposing such restrictions they injure it, by keeping up the price of port wine, and allow in the mean time the taste for other wines to increase in England. The object for which this false scarcity is created, is to reduce the stocks of the native holders of wine in Villa Nova, whereby the price is for the time kept up, though ultimately they themselves will lose by the English refusing to drink their old worn-out wines.

The sale of the ports is thus conducted:

The company taste the wines in January; and, according as they think fit, issue tickets of approval or otherwise. The fair commences in the middle of February, previous to which the merchants hasten up to the wine-country, where they have establishments, and, accompanied by their head clerks, commissaries, and coopers, mounted on the backs of mules, and attended by a troop of servants on foot, they visit the different farms where the wine is kept. The wine is tasted from a silver saucer, with an elevation in the centre, which exhibits its colour; and as they taste, they make notes of the quality of each tonel in their books, which they compare on their return home. Sometimes the purchase is concluded on the spot, but generally the farmer proceeds to the merchants' houses to make his bargain. The purchase of wine requires all the judgment and knowledge of the merchant, his credit and profit depending on the work of a few days. It being concluded, he returns to Oporto. The wine is now drawn off into pipes, under the superintendence of a commissary, and is carried down over the most execrable roads to the river's side, in carts drawn by oxen. It is then embarked in large boats, carrying seventy pipes each, and brought to Villa Nova. Next it is stored in the merchants' vaults, or rather lodges, as they are called, they being entirely above ground. Here the wines are racked and lotted according to their respective qualities. The greatest care is now necessary in their treatment; they re-

quiring a little more delicate brandy. In about two years, or even in less, the fine wines of any superior vintage are considered in a fit state to ship to England. The older wines are kept from four to eight years in pipes before they are shipped, according to the quality required.

And we will conclude with Mr. KINGSTON's useful practical instructions

HOW TO CHOOSE GOOD PORT.

To select a pipe or a bin of wine is a matter of consideration, and every man ought to recollect two things—the state of the weather and the state of his own stomach. Let him choose a fine bright day, but not a cold one. He ought to have spent the previous evening quietly at home, and ought not to have drunk more than a pint of wine, or he will run a great risk of making a mistake. If he is heated, he will like a thin vapid wine; and if he comes from the cold air, he will prefer a highly brandied strong wine; neither of which will please him on the following day. This is a golden rule. Few persons can form an opinion of port wine by tasting it only once. After dinner, if you taste a dry old wine after sweets, or after drinking rich wine, the first will appear flavourless or casky. People often wrongly condemn fine old wine from not thinking of that fact. It must be remembered, in choosing wine from the cask, that it is seldom so soft, so bright, or so spirity as wine in bottle. There are many other descriptions of port of less value, but very good; some rather coarser and rougher, others thinner and less rich, varying much, according to their age; so that it is impossible to give any advice respecting them. There are also lighter clarety wines, which are very nice when drunk new in Portugal, but requiring brandy to keep in England, else that peculiar flavour disappears, and their best quality is lost. It is absurd, in my opinion, to attempt to make the wines of Portugal like those of Bordeaux. Those who can get claret will not drink thin port instead, and those who cannot afford to drink the former prefer a good stout stomachic wine, which goes the furthest. The commoner sorts, and most to be avoided, are thin stalky wines, with considerable colour and no softness, or very dark wines, of a vapid sweet taste, yet rough and strong; or very light-coloured, almost tawny, no body or spirit, and pretending to be very old, at a low price. Doubt these last always. They have less harm in them than have others; but they are best known by negatives, and will never improve; whereas the coarser wines may. These sort of wines are shipped frequently to the inferior class of wine merchants; and a person desirous of abusing port has only, in order that he may obtain credit, to take a sample of them, and exhibit it as the stuff the Oporto merchants ship. He is thus certain, moreover, to create a prejudice against port wine among persons ignorant of the existence of the inferior sorts above described.

And with these testimonials to justify our opinion, we commend *Lusitanian Sketches* to the book club and circulating library, as one of the most readable works the autumn has produced.

FICTION.

The Impostor; or, Born without a Conscience. By the Author of "Anti-Coningsby." Phrenologically illustrated. In three vols. London, 1845. Newby.

THE author of this novel can boast of entire originality both in its design and execution. How far it may be deemed a successful performance is very dubious, and it is still more questionable whether it is likely ever to become popular. Still some credit attaches to the very attempt to strike out a new path, and a lenient judgment may justly be claimed for him who has been courageous enough to dare the experiment.

The Impostor is intended to be a philosophical fiction, each of whose characters shall illustrate the doctrines of Phrenology: such they are phrenologically, and so ought they to act and speak. The idea is not a bad one, but it would demand the genius of a Shakspeare to carry it out. Our author has not succeeded in embodying his own conceptions, although he exhibits considerable talent in various directions; perhaps it is a task beyond any human capacity, because it would require the union of boundless knowledge with a brilliant imagination.

But the author has another object—to advance Mesmerism, which is made a prominent topic both of discussion and description throughout the three volumes. Now the author will admit that we should be as anxious as himself to promote the diffusion of facts, which we believe because we have personally proved them. But we cannot think the course he has adopted the best fitted for such an end. It is rarely that any science can be mingled with a fiction without injury, because the unthinking are apt to associate them in their minds thenceforth, and are perplexed between the false and the true—hesitating what is fact, what is fancy, and then, as the readiest mode of escaping the difficulty, they reject both.

This, however, is a matter more for his own consideration than for his reviewers, who are called upon to pass an opinion upon the result as a literary work, and not as respects its possible effect upon science or any of its branches.

Viewed as such, it must be admitted that *The Impostor* is not a successful novel. The philosophical design has overlaid the author's fancy, and there is a manifest want of coherency, the result of his endeavour to lose no occasion for promulgating his faith. Hence a constraint of manner. Then he is wanting in the constructive talent. He cannot weave a plot which shall be at once complicated and natural, imperceptibly involved, easily unravelled. But, on the other hand, he enjoys some qualifications that save his work from utter rejection. He has dramatic power, shewn in spirited dialogues, and wit, as exhibited in continual sparkling repartee, and a copious command of words wherein to express himself.

Occasionally, indeed, he indulges in commonplaces, almost in vulgarisms of expression, which he would do well to avoid in future, and which nothing can excuse but a suspicion we entertain that it is not from habit or want of education that they are employed, but from a preconcerted design to adopt a familiar style; and thus the not uncommon but unconscious lapse from familiarity into vulgarity.

There is another remarkable feature of this novel. Fancy portraits of the principal characters are presented, accompanied with a phrenological analysis; the purpose being, as we presume, to convey to the reader a distinct idea of the form of the head and expression of the features that would belong to persons of such a mental constitution as that described. But, however excellent the design, the execution does not successfully embody it. The "*heads*" are *too* fanciful, and the effect of thus portraying them is to destroy that which constitutes no small portion of the reader's pleasure—the creation of his own ideals, which will ever surpass aught that the painter's or the graver's art can embody.

To those who are already familiar with the facts of Phrenology and Mesmerism this novel may be amusing, as a curious endeavour to convey those facts through the medium of a fiction, but it will scarcely add to their store of information. They who are either ignorant or incredulous are not likely to be attracted by it to inquiry, for they will be more tempted than ever to set down the whole to the account of the fancy. The mere novel-reader will welcome it as a variety, if nothing more; for to him a new theme—a new style, is always attractive: and therefore the larger libraries may, with advantage, place *The Impostor* upon their shelves.

The Wandering Jew: a Tale of the Jesuits. Complete. By EUGENE SUE. Translated from the French, by D. M. AIRD. London, 1845. Bruce and Wyld.

THIS is a remarkable edition of a very remarkable work. The entire of a novel, that in the original occupies we know not how many volumes, presented, in a faithful and spirited translation, unabridged, for a couple of shillings! It forms one of the valuable series of fictions which has been published in *The Novel Newspaper*. The mere announcement of such a work at such a price is sufficient to ensure for it an enormous sale.

Jack Hornet; or, the March of Intellect. By Dr. MILLINGEN, Author of "Adventures of an Irish Gentleman," &c. 3 vols. London, 1845. Bentley.

THE material for this novel is of the most commonplace description. The widow and daughter of a wealthy citizen, panting for aristocratic connection, gather together a company of such dregs of aristocracy as are ever ready to gratify the vanity of the vulgar rich by eating their good dinners, borrowing their money, and marrying their daughters. The adventures of such a set, enlivened by the jokes of Laurence Hornet and the absurdities of Jack Hornet, the follies of their half-witted friend the Baronet, and some subordinate characters, drawn with a broad, coarse pencil, which, however, is not wanting in humour and vigour of expression, make up the

substance of the story. This novel cannot be recommended to any library that requires to select only the better class of fictions.

POETRY.

Stella: a Poem. London: Longman and Co.

The writer of *Stella* (a lady, who withholds her name) has followed the contemptible practice, so general of late, of condemning her own literary labours. She remarks of her writings, "I cannot allow them to pass from me to the public without offering some *excuse for the many errors which, on a careful perusal, I find I might and ought to have corrected.*" This admission is an insult, but we believe an *unintentional* one, offered to the intelligence of the public. A writer has no excuse for publishing faults "which might have been corrected." The author of *Stella*, as a maid or as a mother, may have had a press of domestic duties; it is possible that she had little or no time to revise her poetry; but this should have told her to hide her verses in her desk, and not, as *Richard* was sent, to have intruded them—

> Deformed, unfinished, sent before their time
> Into this breathing world, scarce half made up;
> And that so lamely.

There is this advantage in the confession which the author of *Stella* has made, that we are saved the schoolmaster's task. If she had not admitted her literary errors, we should probably have detected them, and gravely pointed them out to her, as the means of preventing her from falling into the same mistakes in future. It is useless to refer our author to what she already knows, and our remarks are now entirely for the benefit of the public.

Stella was commenced by a girl of eighteen and finished by the full-grown woman. If it be praise to say that the latter part of the poem is slightly better than the commencement of it, we are willing to give that praise; but the first canto is so defective, that the admission amounts to no praise at all. Our readers will not call us unjust when we give a verse as a proof from the first canto of *Stella*.

> The young boy glanced more proudly as his sire
> Spoke of his poverty; champing the bit
> Like a young horse the rider doth desire
> To render to the bridle every whit
> Obedient; a little lord still higher
> Thrown back his head: "Did she not think that it,"
> He asked his playmate young, "would nice to be,
> Him in some future day an earl to see?"

To say the least, this is not sense, and certainly any thing but *English*. Our author has introduced a new idiom into our language.

Had Byron never lived, we have every reason to think that *Stella* had never dragged "its slow length along." In the stanza of *Beppo* and *Don Juan*, *Stella* is a sort of history of woman's love. Its design was to shew the ignorant world how little such a history is understood. But the author does not carry out her design. What she has not the power to unveil, she has a novel way of dismissing as an impossibility.

> Such was my heroine.—Faintly may my pen
> Thus shadow forth the beauties of her form,
> But come I to that pure heart's depths, ah! *then*
> Stop I full short; description the most warm
> Would be but mockery of that girl's love, when
> Their parting woke to life its lasting storm;
> She loved as woman loves, but *once*, enough—
> That *how* to dream of *telling*—pshaw!—stuff!

We see nothing in *Stella* to induce us to hope in the final triumph of its author as a poet. There is not to be found the beautiful bud that promises the bursting of the rose. *Stella* is often harsh and unmusical in versification, and this, it is true, may be corrected; but nature has withheld from its author that high quality which awakens and governs the sensibilities of mankind. In many a mind poetry exists, but few indeed are gifted for its utterance.

Ballads, and other Metrical Tales. London: James Burns.

One of the most attractive volumes in *Burns's Fireside Library*. It contains a selection of the best English ballads, ancient and modern, from the works of Percy, Retson, Evans, Jamieson, Gay, Logan, Leyden, Cunningham, Scott, and Southey. Here we have the fine old rhymes of "Chevy Chace," "the Red Cross Knight," "the Children in the Wood," "Griselda," "Robin Hood," and such like relics of the days of "merrie England," associated with such productions of kindred spirits as Percy's "Friar of Orders Gray;" Cunningham's "Sir Roland Græme," and Southey's "Lord William." They are exquisitely printed, and illustrated with many engravings of extraordinary beauty, after original drawings by Corbould, Selous, Pickersgill, Scott, and others. This ought to fill a prominent place in every fireside library, for it is right welcome fireside reading.

EDUCATION.

The Wonder-Seeker; or, The History of Charles Douglas. By M. Fraser Tytler. London, 1845. Grant and Griffith.

This is one of the very extensive class of juvenile works of which *Sandford and Merton* and *Evenings at Home* were the progenitors. Under the guise of a narrative, and by help of the introduction of some half-dozen characters to excite a personal interest in the proceedings, a course of lectures is conveyed. But Mr. Tytler has the good sense to confine himself almost entirely to the relation of facts, which always interest, and to avoid sermonizing, which as certainly repels the youthful mind, generally a great deal less informed, but a great deal more pure and good, than that which would instruct him. Yet, neglectful of this, how often do we find the instructors of youth substituting preaching for teaching, and cramming with sentiment when they should be training to action.

Mr. Tytler has introduced his information in a very pleasing form, and he has chosen the most attractive subjects, chiefly natural history; but these he has mingled with short tales, anecdotes, and some wholesome reflections; in short, such a miscellany as a well-read man might produce in an after-dinner conversation with children from the stores of his memory. It is a volume to be heartily commended to parents and teachers.

Double Entry Elucidated: an improved Method of Teaching Book-keeping. By B. F. Foster. London, 1845. Souter and Law.

To all engaged in business of any kind, and who have not enjoyed the advantage of an education in a counting-house where the best methods are pursued, there could not be a more welcome visitor than one that would give them plain instructions, illustrated by examples, for keeping their books. Such an adviser is Mr. Foster.

It is true, as we have heard many allege, that every person can strike out a system for himself. But the chances are greatly against his hitting upon the best at the first trial; and yet, when once adopted, what so difficult to change? Hence the importance of early training to the most complete system that experience and ingenuity have devised. Mr. Foster has done good service by placing it in the power of all who desire to learn a system, to do so by the study of a volume of moderate size, and by practice according to instances by which he illustrates his theory.

He begins by an analysis of the ledger; explaining the various classes of entries, and how it is framed from the other books. Next he treats of the formation of these from preceding books, and so forth, until the elements of the ledger are exhibited and traced back to the transactions of each member of the establishment.

The system, though seemingly complicated, is in truth very simple; and, if it were to be universally adopted, would vastly facilitate commercial transactions. Mr. Foster deserves the thanks of the community for his valuable contribution to our works of instruction, and we can heartily commend his treatise to every school and counting-house in the land.

RELIGION.

The Second Advent of the Lord Jesus Christ a past Event. By Robert Townley, A.B. late Minister of St. Matthew's, Liverpool. London, 1845. Simpkin, Marshall, and Co.

Mr. Townley is a seceder from the Church of England. He

claims to have discovered a sound principle of Scripture interpretation; the foundation of which appears to be, that Scripture is its own interpreter. The doctrine to which his study of it has conducted him is, that "a past second advent is proved to a demonstration, and is unassailable." The purpose of his pamphlet is to exhibit the steps by which he has arrived at this startling conclusion; and we must refer to its pages those who may be interested to learn the method of the argument.

The Sacred Gift: a Series of Meditations upon Scripture Subjects, with twenty highly-finished engravings after celebrated paintings by the great masters. Second Series. By the Rev. CHARLES B. TAYLER, M.A. Author of "May you Like it," &c. London, 1845. Fisher, Son, and Co.

THE principal attraction of this magnificent annual is its engravings, which are noticed particularly under the appropriate department of art. Of the literature so much cannot be said. Mr. TAYLER has associated with each of the grand pictures selected for engraving some composition either in prose or in rhyme, suggested by the subject; wherein he has put forth, in the plain but forcible language for which he is famous, the sentiments that would naturally arise in the bosom of a person of religious temperament on the contemplation of such a theme. Occasionally the editor has varied his pages with contributions from other pens, among which we observe the names of the Reverends HUGH M'NEILE, CANON SLADE, RAIKES, R. W. EVANS, HUGH STOWELL, and J. BAYLEE. Extracts from a work of this class would be out of place in a periodical such as this. We can only recommend it to the notice of our readers as the work of the most permanent worth the season has produced.

MISCELLANEOUS.

The Keepsake for 1846. Edited by the Countess of BLESSINGTON. London: Longman and Co.

THE engravings, which are the principal attraction of this as of the other annuals, are noticed in the department of THE CRITIC devoted to art. In this place we purpose to review only the literary contents.

We have remarked in that notice the decline of the annuals from being collections of fugitive pieces by the best writers of the time, to be a sort of portfolio of engravings, into which are thrown also, by way of giving bulk, the album verses and prose effusions of the idle hours of the editor's friends. This was the necessary consequence of the public taste inclining to treat these books as drawing-room ornaments, to be looked at and not to be read; and it is quite evident that such is the feeling entertained by most of the contributors, whose modest compositions find a place provided only that they are prefaced by a name that can boast a title or is known in fashionable circles.

The *Keepsake* for the coming year, almost the last survivor of a troop once numbering some twenty brilliant ephemerides, is an apt instance of the preceding remarks. It is a beautiful work of art, an inferior work of literature. Names, indeed, are not wanting in the list of contents, but the productions to which they are affixed are not worthy of those names. We see those of Mrs. ABDY, Lord JOHN MANNERS, W. S. LANDOR, B. D'ISRAELI, Mrs. S. C. HALL, A. A. WATTS, Miss A. J. SPARROW, Lady E. S. WORTLEY, Miss TOULMIN, H. BERNAL, R. M. MILNES, Mrs. TORRE HOLME, Mrs. C. B. WILSON, M. EUGENE SUE, ALBERT SMITH, BARRY CORNWALL, and Lord ROBERTSON. But the result of their united abilities is not such as to encourage the practice of attaching names to trifles. The contents, as usual, are composed of poetry, tales, and essays. The first is of average merit, such as is found in the generality of magazines; the second are rather sketches than stories, interest being sacrificed to brevity. The best of them are Mrs. ROMER'S "Capucin," Mrs. S. C. HALL'S "Restitution," and Mr. BERNAL'S "Ladies ought to be lenient." But such a work as this can only be exhibited by extracts, and we take a few of those which strike us as most original in thought or brilliant in composition. Take first a graphic sketch of a famous personage by another personage who has achieved some fame:—

SHOUBRA.

BY DISRAELI, ESQ. M.P.

Oriental palaces, except perhaps in the great Indian peninsula, do not realize the dreams and glittering visions of the Arabian Nights, or indeed the authentic histories written in the flush and fulness of the success of the children of the Desert, the Tartar and the Saracen. Commerce once followed in the train of the conquerors of Asia, and the vast buildings which they hastily threw up of slight and perishing materials, were filled, not only with the plunder of the East, but furnished with all the productions of art and curious luxury, which the adventurous spirit of man brought from every quarter of the globe to Samarcand and Bagdad. The site of these mighty capitals is almost erased from the map of the modern traveller; but tribute and traffic have also ceased to sustain even the dilapidated serail of the once omnipotent Stamboul, and, until very recently, all that remained of the splendour of the Caliphs of Egypt was the vast necropolis, which still contains their palatian sepulchres.

How the bold Roumelian peasant who in our days has placed himself on the ancient throne of the Pharaohs and the Ptolemies, as Napoleon on the seat of the Merovingian kings, usurping political power by military prowess; how he lodged and contented himself in the valley of the Nile; was not altogether an uninteresting speculation; and it was with no common curiosity that some fifteen years ago, before he had conquered Syria and scared Constantinople, I made one morning a visit to Shoubra, the palace of Mehemet Ali.

Nothing can be conceived more animated and picturesque than Cairo during the early morning or at night. It seems the most bustling and populous city in the world. The narrow streets, abounding with bazaars, present the appearance of a mob, through which troops of richly-dressed cavaliers force with difficulty their prancing way, arrested often in their course by the procession of a harem returning from the bath, the women enveloped in inscrutable black garments, and veils and masks of white linen, and borne along by the prettiest donkeys in the world. The attendant eunuchs beat back the multitude; even the swaggering horsemen, with their golden and scarlet jackets, rich shawls and scarfs, and shining arms, trampling on those around, succeed in drawing aside; but all efforts are vain, for at the turning of the street appears the first still solemn visage of a long string of tall camels bearing provisions to the citadel, a Nubian astride on the neck of the leader, and beating a wild drum, to apprize the people of his approach. The streets, too, in which these scenes occur are in themselves full of variety and architectural beauty. The houses are lofty and latticed, abounding in balconies; fountains are frequent and vast, and richly adorned as Gothic shrines; sometimes the fortified palace of one of the old Mamlouks, now inhabited by a pacha, still oftener the exquisite shape of an Arabian mosque. The temples of Stamboul cannot vie with the fanes of Cairo. Their delicate domes and airy cupolas, their lofty minarets covered with tracery, and the flowing fancy of their arabesques, recalled to me the glories of the Alhambra, and the fantastic grace of the Alcazars and shrines of Seville and Cordova.

At night the illuminated coffee-houses, the streaming population, each carrying a lantern, in an atmosphere warmer and softer than our conservatories, and all the innocent amusements of an out-door life—the Nubian song, the Arabian tale, the Syrian magic—afford a different, but not less delightful scene.

It was many hours before noon, however, that I made my first visit to Shoubra, the sky as cloudless as it remained during the whole six months I was in Egypt, during which time I have no recollection that we were favoured by a single drop of rain; and yet the ever living breeze on the great river, and the excellent irrigation of the earth, produce a freshness in the sky and soil, which are missed in other Levantine regions, where there is more variety of the seasons.

Shoubra is about four or five miles from the metropolis; it rises on the banks of the Nile, and the road to it from Cairo is a broad but shady avenue, formed of sycamores of a noble growth and colour; on one side delightful glimpses of the river, with its palmy banks and sparkling villages, and on the other, after a certain tract of vivid vegetation, the golden sands of the desert, and the shifting hillocks which it forms; or, perhaps the grey peaks of some chain of pyramids.

The palace of Shoubra is a pile of long low buildings looking to the river—moderate in its character, and modest in its appointments; but clean, orderly, and in a state of complete repair; and, if we may use such an epithet with reference to oriental life, comfortable. It possesses all the refined conveniences of European manners, of which the pacha at the time I am referring to, was extremely proud. Most of these had been the recent gift of the French government, and his highness occasionally amused his guests—some scheik from Arabia, or some emir from the Lebanon—by the exhibition of some scientific means of domestic accommodation, with which use has made us familiar, but which

I was assured had sensibly impressed the magnates of the desert and the mountain with the progress of modern civilization.

The gardens of Shoubra, however, are vast, fanciful, and kept in admirable order. They appeared to me in their character also entirely oriental. You enter them by long, low, winding walks of impenetrable shade; you emerge upon an open ground sparkling with roses, arranged in beds of artificial forms, and leading to gilded pavilions and painted kiosks. Arched walks of orange-trees, with the fruit and the flowers hanging over your head, lead again to fountains, or to some other garden-court, where myrtles border beds of tulips, and you wander on mosaic walks of polished pebbles. A vase flashes amid a group of dark cypresses, and you are invited to repose under a Syrian walnut-tree by a couch or a summer-house.

The most striking picture, however, of this charming retreat is a lake surrounded by light cloisters of white marble, and in its centre a fountain of crocodiles, carved in the same material. That material as well as the art, however, are European. It was Carrara that gave the pure and glittering blocks, and the Tuscan chisel called them into life. It is a pity that the honourable board of directors, in their recent offering of the silver fountain to the pacha, had not been aware of the precedent thus afforded by his highness's own creation for the introduction of living forms into moslem sculpture and carving. They might have varied their huge present with advantage. Indeed, with the crocodile and the palm-tree, surely something more beautiful and not less characteristic, than their metallic mausoleum, might easily have been devised.

This marble pavilion at Shoubra, indeed, with its graceful terraced peristyles, its chambers and divans, the bright waters beneath, with their painted boats, wherein the ladies of the harem chase the gleaming shoals of gold and silver fish, is a scene worthy of a sultan; but my attendant, a Greek employed in the garden, told me that I ought to view it on some high festival and crowded by the court in their rich costumes, to appreciate all its impressive beauty. This was a scene not reserved for me, yet my first visit to Shoubra closed with an incident not immemorable. I had quitted the marble pavilion and was about to visit the wilderness where roam, in apparent liberty, many rare animals, when I came, somewhat suddenly, on a small circular plot into which several walks emptied, cut through a thick hedge of myrtle. By a sun-dial stood a little man, robust, though aged, rather stout, and of a very cheerful countenance; his attire plain and simple, a pelisse of dark silk, and a turban white as his snowy beard; he was in merry conversation with his companion, who turned out to be his jester. In the back ground, against the myrtle wall, stood three or four courtiers in rich dresses—courtiers, for the little old man was their princely master—the great Pacha of Egypt.

One of the cleverest contributions is anonymous:—

GLOVERS AND ROVERS.

BY ONE WHO HAS KNOWN POETS.

All maidens brown or fair,
Lofty or lowly,
Blithesome as May-birds are,
Or melancholy:—
If round the youth you love
You would cast fetters;
Do not throw down the glove
To men of letters!

The best are very vain,
The worst, sad sinners;
Callous to women's pain,
Fond of their dinners;
With wrongs they will oppress,
With sharp tongues hurt you,
Distrust—disdain—distress—
And then—desert you!

Swifts your poor hearts will break,
Slow vitriol-droppers!
Newtons, your fingers take
For old pipe-stoppers.
Burnses may beat in flames,
Ev'n red-hot colonels;
And Sternes show up your names
In sickly journals!

Lo! there, the arch *grisette*
Sure of her capture!—
Why—Yorick's heart is set
On—his new chapter!
Reckless of ache or wound,
Ready to fly, as
Fast as can wheels go round,
To new Marias!

Yes—maidens fair or brown,
Lofty or lowly,
Light as the thistle-down,
As cypress holy—
When poets whisper near,
Go, join the dancers;
And turn a stony ear,
To all romancers.

Choose, ere he quits the port,
Some gallant sailor;
Lure from his Indian fort,
Its curried jailor:—
Priest—Lawyer—Medicine-man,—
All are our betters;
Catch whom ye will (and can),
Save Him of letters!—

There is good thought as well as good writing in the discourse

OF FAIRS, FAIRINGS, AND FAIRIES.

BY ALBERT SMITH, ESQ.

I tell of festivals, and fairs, and plays
Of merriment, and mirth, and bonfire blaze;
I tell of brooks and blossoms, birds and bowers,
Of April, May, of June and July flowers,—
I tell of groves, of twilights, and I sing
The court of Mab, and of the fairy king.

Quaint old Herrick! from whose pleasant synopsis the foregoing lines are taken, reading as though they were meant to be written upon green leaves, and sung only to the music of a glancing rill, tumbling, gurgling, and whirling down a hill-side over glittering pebbles, and through beds of sunny forget-me-nots; what a mercy it was, with his summery and country feelings, that he was born in those happy times when May was green and warm, and such things were as fairs and festivals; before daisies were driven, back and back, from their prairies like wild tribes, or trampled under foot by civilizing colonists; when all the practical use to which steam had been applied was, in removing the tight lids from the state-prison kettles of the middle ages!

How would his heart have broken gradually—(there were hearts, too, in his day; real home-made hearts, warranted sound, not very clever imitations—Birmingham hearts with sentiments of electrotyped brass, which the "frequent robberies" called into fashion in later times, like spurious plate)—how would it have gone piecemeal, one string after another, in the fashion of a harp in a hot room, if he could have witnessed the desecration of his groves by "junctions" and "extensions;" of his twilight by gas and camphine; of his real fairs by fancy ones; of his festivals and fairies, by what professional philanthropists call "an improved condition of the people," and country policemen.

We regret this state of things as deeply as he would have done, but our heart has not yet broken. It is encrusted with the barnacles of the world's rubs, as old submarine timber is coated and preserved by other *crustacea*. We cannot tell whether this may, or may not, be an advantage. We only know that so it is; but that, notwithstanding, we lament the gradual decay of all those pleasant things, which Herrick sang about, so rapidly hastening to the state of organic remains. Man has not yet been found in the form of a fossil; why not, we leave it to the geological disputants to determine; but we firmly believe that in a few ages the British Museum, should it be still existing, will be graced with fossil fairies and petrified May-poles.

Of those objects quoted at the head of our paper, the departure of the fairs and the fairies are most to be lamented. They went together, and within our recollection: we know not where to, but are comforted in a theory of astronomy—that the stars are suns to other solar systems; and that, if this be the case, perhaps one of these brighter orbs, where improvements have not arrived at the high-pressure pitch of our own globe, has offered them an asylum.

Not many years ago the village in which we lived—scarcely a score of miles from London, could boast both of fairies and rustic festivals. It was a quiet, sleepy-looking place, off the high-road; and when you ascended the hill near it, on a fine summer's afternoon, you saw its steeple peeping above the foliage in which the houses were embosomed, with the weathercock dozing and glittering in the warm sunlight; and all looking so tranquil that it required no small degree of harsh matter-of-fact persuading to make yourself believe the place was really inhabited by the bustling and industrious natives, who squabbled and wrangled as they carried on the trade in "malt, brooms, and poultry," for which the gazetteer told us the place was remarkable. There were long, long lanes, too, whose thoroughfare was the best compromise between turf and Macadam ever known, going away into the country, and arched over by bending trees, that in the absence of other excitement appeared to me bowing to one another all day long for amusement; and the limes that overhung the

pathway across the churchyard grew at one point so close to the chancel window, that they swept its casement as their morning shadows fell in quivering patches upon the old brasses and tablets of the interior; whilst without, the sunlight darted through their leaves to flicker on the green turf of the quiet graves below.

Beyond this was a wooded pasture where the fairies lived. Nobody we knew had actually ever seen them, although every body else knew somebody that had. But we were sure they were there, for the rings where they danced were very plainly seen; and in hot summers, when every thing else was parched up with the drought, these rings were always fresh and green, as though a circular spring of water ran beneath them. How the mushrooms grew on these rings, too! Tight button-like little fellows, lifting up their heads above the grass, no doubt on purpose for the fairies' own use, but whether as food, tables, or umbrellas, we never knew. It was something of a mystery where the tiny spirits went in the daytime: we opine that they never were caught in it, but followed the twilight round the earth, riding on its last shadows. A young lady who wrote poetry in our provincial paper, and was thought to be a little mad, said they lodged in the cowslips; but this was nonsense. The children could never have made chains with the petals if such had been the case.

It was on this spot, with its high wavy boundary of trees, that the fair was also held. And it *was* a fair—a downright earnest one, where you could buy a fiddle for sixpence, and not tender a five pound note for a *Louis quatorze* pen-wiper or a wire-gauze nothing, worked with floss-silk impossibilities, and get no change. There were shows too—wonderful shows; we have never seen any like them since; the exhibitions of London have, in fact, merely excited a feeling of contempt. Nothing of Landseer's ever came up to their canvass of the "lioness attacking the Exeter mail;" the surprise of the gentleman on the box in the fashionable coat—the terror of the respectable lady inside, the agony of the horses—it was grand! And how Maclise's greatest picture fell in our estimation when we thought of the vivid cartoon which showed "the Circassian negress with the silver hair!—the smallest man now travelling!!—the black wild Indian captured by the bravery of the British officer." All these marvels, together and alive, exhibiting to elegant company of all nations, in a beautiful room with crimson drapery for a ceiling! The Indian fed on raw meat, real raw meat from the butcher that supplied our own table, and he was a man above suspicion; indeed, he was twice overseer. The Ioways never did that. Certainly the interior of the caravan was not of the splendid description represented outside, but then a painter's license is very great, as the academy portraits, especially, yearly prove.

All day long the people from the neighbouring villages could be seen coming over the fields towards our fair, on every side; rosy-faced girls, in smart cotton prints that would have shamed your *mousselines de laines* into utter insignificance, as much as their cheeks would have outdone those of the metropolitan *belles* who wore them; smart young fellows, who looked like country editions of the choruses in "Somnambula" and the "Elisir d'Amore;" chubby children who had dreamt of trumpets, gingerbread, and halfpence at their actual disposal, for months previously. What a day it was for every body; and what a great one for the "Red Lion" public-house! Alas! the Red Lion public-house became an inn, then a tavern, and is now a railway hotel. But then it stood on the edge of the fair green, out of the dust and crowd, yet not too far removed but "the swarming sound of life" came pleasantly to its door, and here the visitors rested, and drank its famous ale—such ale, too! like liquid amber, through which the bubbles rose in myriads of tiny balloons, hastening to be drunk. The secret of brewing it has evidently been lost, with those of painting missals and making mummies.—And there was amusement, too, for those who rested here: the wandering curiosities strolled from the crowd to exhibit before its doors. Here the small boy, in ochre-coloured tights, which fitted indifferently, sang the song standing upon his head—here the Dutch girls carolled their *Lieber Augustin;* nobody knew where they came from, except from "abroad," and that was a locality somewhere in France, comprising India and everywhere else, in the judgment of the audience; certainly we preferred their singing to Heinefetter's or Loïve's; indeed we do not think the latter would ever have been so popular with the villagers as the broom girls. The only person who never thought much of them was the host's daughter; but this was because a gay fellow, who was much struck with them, was strongly suspected of being her "young man," and it required all his wit, and more than his usual fairing, to make all smooth again. And these fairings were very smart; they were of the same class as those objects of *virtu* which young English gentlemen of playful temperaments, and who are not proud, throw at with sticks at the races—pincushions, thimbles, and money-boxes. We never knew the swains buy "bunches of ribbons" in our time, and therefore look upon the vague "Johnny," of whose long stay at the fair a lyrical tradition is extant, to have been a fiction.

At night the revelry must have scared the fairies—what laughs and pretty screams, and "done thens," resounded on every side. Fancy fairs do not terminate so now-a-days; goodness—if they did, how popular they would become! There was always a game at "kiss in the ring" before dark. Imagine what "kiss in the ring" would be in the Regent's-park-gardens, and all the stall-keepers and patronesses joining in it!

But we have been idly gossiping of things long past, forgetting they have gone; our fair is as much an old extinct festival now, as setting the watch on St. John's eve, or meeting in Fenchurch-street to gather in the may; our fairies exist no longer, but, doubtless, like other broken-up families, have emigrated; where their green rings could be seen on the fair-green, there is now a railway embankment; the noble trees that surrounded it have fallen, and summer and winter, day and night, engines fly by, blazing, gasping, screaming, roaring, and exulting savagely in their own infernal powers; flinging their glowing cinders right and left to scorch the once velvet turf, and scaring the cattle into downright madness as the steam shoots out from their burnished valves, in passing what were formerly such quiet pastures. Mobs of strangers, too, overrun the village, who get a ride and rheumatism at a penny a mile in cheap excursion trains; and perking cottages, looking as if they had retired from London upon incomes, are springing up everywhere.

We know not if all this innovation be good—we cannot tell—it may be—at least, ingenious gentlemen, who can write large books, tell us that it is so, and we suppose they are right. But we would give a great deal to behold our old-fashioned rustic fair once more—not the suburban riots which now adopt the name. Sometimes we dream of one, and see the old amusements over again; but it is only to be awakened by the blowing of a battered horn, announcing the departure of a miserable omnibus, which half-a-dozen times a day carries unsympathizing strangers backwards and forwards, to and from the melancholy building, in form and proportions so like the Morgue at Paris which they call the "Station," and this, too, on the very spot where the fairies danced and the dear old festival was held!

With some lines by a genuine poet, although he has written many better things, we conclude:—

A WORD; WITH A NEW MORAL.

BY BARRY CORNWALL.

In a humble cottage,
In a lowly chair,
Sate a soft-eyed fairy,
Dreaming idly there.
Into her budding bosom
(O, the sweet rose blossom!)
Ran her serpent hair.

On the vacant ether
She for ever gazed—
Gazing, nothing seeing,
Like a thing amazed.
Toward the cloister hoary
(Such her doom and glory)
Are her fancies raised.

Ha! her vision kindles,
Now, what sees she rise?
What too dear magician
Intercepts the skies?
Heart, what were those flushes!
Cheeks, burn not in blushes!
Close, O close, sweet eyes!

Words are spoke—how gently!
Yet each sound is heard:
Coursers wait: she speedeth,
Like a loosened bird.
At the holy altar
(Sweet heart, do not falter)
She hath said "the word!"

That one word hath given
Beauty unto worth!
That one word hath yielded
To thy life new birth.
So, be happy, dearest!
Learn, if *still* thou fearest,
Thou to heaven art nearest
When thou lovest earth.

The other annuals must be taken in turn from week to week.

The Juvenile Scrap-book. By the Author of "The Women of England." London, 1846. Fisher and Co.

THE literary contents of this superb Christmas and New-Year's gift consist of instructive narratives, tales, and poetry, either written or selected by Mrs. ELLIS, whose name is a guarantee for excellence in substance, and attractiveness in form. A short biographical memoir of MEHEMET ALI is extremely interesting. "The Independent Bees" is a fable full of admirable wisdom. An article entitled "Rich and Poor" asserts some wholesome truths. Speaking of the benevolence of the poor, the writer contends that it prevails among them to a greater extent than among the rich.

One thing is very remarkable in their character. It is the extraordinary generosity of the poor in comparison with that of the rich—not of the poor who want bread, for it would ill deserve the name of generosity to give one day, knowing that they should have to beg the next; but such gifts as the widow's mite, cast into the treasury, do indeed deserve our admiration. Yes; the poor widow, with a child dependent on her labour, sometimes comes forward with her gift, and casts it in, perhaps, when no one sees her; and she does this out of pure benevolence, knowing that her name will not appear upon the printed lists of subscribers, and that her single mite will only be counted in as a penny or a shilling, amongst hundreds of pounds. Nor is this all: she gives her mite knowing, and perhaps her little boy knows too, that in consequence of giving it he will have to wait a whole week longer for his new pair of shoes, or that his mother will have to give up her ride in the passing coach, on a little journey they were about to have taken together; and that they must therefore walk, through the middle of the day, along the hot and dusty road.

Such items as these have to be taken into account in all the little givings of the poor; and yet they do give in a manner which swells the charitable funds of the country at large to an amazing extent, considering that nothing they do in this way can be done without the giving up of something pleasant or useful to themselves.

How different are the feelings with which the wealthy give! and how startled many a kind-hearted young lady would be, if told that because she had given a few shillings to some useful institution, she must walk five miles along the highway, or wait a whole week for the possession of a piece of music upon which her heart was set!

The tale which follows, and fills a considerable portion of the volume, is deeply interesting, and full of wholesome admonition to the young, always best taught by example. The ballad of "Maggie Mayflower," with which the work closes, is very cleverly written, and tells an amusing anecdote with great spirit. We should like to have transferred it to our columns, but its length forbids. How the hearts of all the juvenile people will leap when this charming annual is presented to them!

JOURNAL OF FRENCH LITERATURE.

Jenny, the Fair Débutante. By PAUL DE KOCK.

THERE is a great charm in the *nouvelettes*, or tale-telling of the popular French novelists. Their shorter narratives are always flung off with a freedom and vigour which at once betray the resolution of the writer to remain unfettered alike in space, style, and story; and to contract or expand his fable precisely as his fancy may direct. We have already introduced our readers to several admirable specimens of this order of composition, among which we would particularly point out the *Iron Ring* of the Vicomte d'ARLINCOURT, and the *Corsican Family* of M. DUMAS; while that which we propose to present to them as the subject of the present article will be found no less worthy of analysis.

The name of M. PAUL DE KOCK is almost *tabooed* in England; nor is it much to be wondered at; for although there scarcely exists a woman in Paris, whatever be her rank, who does not read his novels, there are very few who confess to it, save in the *grisette* world, which no one has so felicitously painted as himself. It is, however, a mistake to imagine that M. DE KOCK loses his power when he lays aside his coarseness; or that because he indulges at times in sweeping the kennel with his wings, he cannot also spread them pure and uncontaminated over the brighter and better objects of nature. The tale now before us will alone suffice to prove the fallacy of such a judgment. A witty French writer has said that the *soi disant bas bleus* of the *bourgeois* read the novels of Madame SAND as a study, and those of DE KOCK as an enjoyment; the satire is double-edged; but it is certain that did the clever author of *Jenny* always write as he has done in the story under notice, the most wholesome knowledge, as well as the most pure and unalloyed delight, would be gathered from his own pages.

The *Fair Débutante* is redolent of fresh, beautiful, healthy nature; and its writer has created an Arcadia even in Paris, by laying its leading scenes in the different metropolitan flower-markets; and by the conception of one of the most delightful specimens of single-hearted and right-minded humanity, which it has ever been our good fortune to encounter in the pages of romance. Here it is:—

A MODERN ANTIQUE.

It was on a Wednesday, and about a year ago: the market on the quay was gay and beautiful; shrubs, covered with bloom, fascinated the eye and charmed the scent. Groups of visitors were scattered over the market; some for the mere pleasure of the spectacle, and others to select plants,—a task by no means easy, where the taste was tempted on all sides.

In the midst of this crowd, pausing in front of the different stalls, was a little old man, attired in a suit which, in former times, might have been called black, but which appeared to have run the gauntlet of an entire generation. This little man, whose shrunk and withered frame seemed to be fully as much worn as his clothes, sported a wig, which probably had once been flaxen, but which was now foxy. By the process of long use, friction, and handling, it had become so much worn away at the edges, that it did not reach below his ears, thus failing to cover a portion of his grey hair, which harmonised but ill with the rest of his head-gear, and could not be concealed by a hat embrowned by age, and with brim so narrow, that an observer might fairly have questioned the possibility of his withdrawing it for the purpose of returning a salutation. Nevertheless, his attire, defective as it was, could not sadden his heart; for, beneath the threadbare coat and scanty wig, that little man appeared to be the happiest creature imaginable; his small grey eyes sparkled with vivacity; a smile played about his lips; and, as he walked along, he rubbed his hands joyously, like one who has just concluded a good bargain, or who is on the most pleasant terms with himself.

Such is the hero of the tale; and who does not at once feel an interest in the scratch wig and the seedy habiliments? There is no squalid poverty in the picture; no sullen want, half privation and half bitterness; no knavish adventurer, clad in the livery of unsuccessful cunning. On the contrary, you discover at the first glance that the ill-clad form is that of one who is a gentleman at heart; one of nature's own gentlemen, full of peace, and patience, and good will; and resolved not to live "out-at-elbows" with the world, because his well-worn garment may chance to need repair in that particular direction. By profession a writing-master, and by taste a poet, he is the author of thirty dramas, successively refused at every theatre in Paris, and the writer of odes, serenades, and ballads innumerable, which no journal will publish; but he is nevertheless as enthusiastic a minstrel as GENTIL BERNARD, or the inimitable BERANGER himself.

While he is cheapening a pot of violets, the only floral luxury in which his scanty means allow him to indulge, he is joined by a young girl intent upon making the same purchase; to whom, with true old world politeness, he cedes the coveted prize; insisting at the same time that, as the reward of his courtesy, she shall permit him to relieve her from the fatigue of carrying it home. Jenny, as guileless and as simple-hearted as himself, explains that she lives up six flights of stairs; but the old man scorns to display any dread of the exertion which such an ascent must naturally entail upon him, and heroically perseveres in his labour of gallantry.

What can be more freshly and unaffectedly told than the following?—

A YOUNG GIRL'S STORY.

The girl to whom he had shewn so much civility, was, at the utmost, twenty years of age. Her dress, although common in its material, was neat in its arrangement: a cotton gown hanging in full folds, a black apron, a handkerchief flung lightly over her shoulders, and a cap which, while it shaded her cheeks, left the back of her head uncovered, completed her costume. * *

The young girl opened a door and entered a small room, simply furnished, and in which it would have been difficult to detect one superfluous article, but where all was carefully arranged, and every thing well dusted and scrupulously clean.

The fair tenant of the chamber then hastened to relieve the

old man of his burthen, which he still carried on his arm; saying, as she moved forward a chair, "And now, Monsieur, I trust that you will share my humble meal. I only allowed you to confer the obligation of mounting so many stairs upon one who was a stranger to you, with this hope; and, surely, you will not say me nay. But first, as you must naturally desire to know something of your hostess, I will, in a few words, tell you all my history.

"My name is Jenny Desgrillon, and I am the daughter of honest shopkeeping parents, who brought me up as a print-colourer, a trade which I still follow. Three years ago I had the misfortune to become an orphan; and my father, in dying, placed me under the protection of one of his friends, M. Benoît, a grocer. This M. Benoît has a son, M. Fanfan, who is now paying his addresses to me, and wants to marry me; but for my own part, I confess that I have no love for M. Fanfan, and no anxiety to become the wife of a grocer; while, on the contrary, I have a decided predilection for the stage. Yes, Sir, I sigh to be an actress—to represent noble personages—to make my appearance in public—to be applauded by the world—to dress splendidly—to be now a princess, now a peasant; one day English, the next Polish—to hear a handsome cavalier vow that he adores me, and will sacrifice his life for me!—or a clever writer, putting my praises into verse, and swearing that I am divine, to the air of 'A kiss in the dark,' or the 'Apothecary's family.' Oh! that must indeed be happiness, of which I often dream, even while awake, as I am colouring Blue Beards and Tom Thumbs. But how can I ever hope to appear on the stage, when I know no one except the Benoîts, who are satisfied with going to see the giants and the wax-work. Ah! Sir; you will feel that I stand in need of advice and assistance; and your age and looks gave me courage, for an idea struck me that you might perhaps afford me help."

"*Mademoiselle*," said the old man, who had listened to the girl's harangue without interruption; "I feel honoured by your confidence; and as it ought to be reciprocal, I will now, in my turn tell you who I myself am. My name is Triptolemus Erasistratus Alexandrin; my grandfather was a schoolmaster, and my father an author. As for myself, I give lessons in writing and verse-making at twenty sous a quire. The terms are cheap enough, for mine is a very good hand; but the steel pens injure us sadly; every body professes to be able to write with them, although they have not an idea of the beauty of a hair-stroke or a bold line. Nevertheless, I should have contrived to gain a comfortable living, and not have been obliged to wear my clothes so close, had I not also, in the indulgence of an unlucky taste, neglected my pupils—that taste, Mademoiselle, was, like your own, dramatic."

Who cannot, after this revelation, imagine the blissful hours spent in that attic-chamber? Who cannot see the old man declaiming from one of his thirty rejected MSS. to the fair girl, who, seated at his feet, drinks in the dangerous and subtle poison? Who cannot fancy the moments in which, roused to enthusiasm by hope and instinct, the simple Jenny, starting to her feet, with hair unbound, and eyes beaming with proud excitement, endeavours to enact the heroine of the old man's drama? And so it comes to pass. The print-colourer becomes his pupil; her Wandering Jews and Cinderellas are left unpainted, while she studies attitudes, and practises tones. In the midst of these pursuits Alexandrin falls sick; he has never given his address to Jenny, and a month passed over without his having news of her progress. On his recovery he hastens to her lodging, but she inhabits it no longer, nor can he discover her new abode. The old man feels the deprivation keenly; she is the last love of a waning life. He has now nothing to cherish but his violets; and as those which he possesses have withered during his illness, he saunters sadly along the Boulevard St. Martin to the market of the Château d'Eau, to replace them by a new purchase. As he is about to do this, a lady, gaily dressed, stops to inquire the price of a moss-rose tree. It is Jenny; but no longer the Jenny of the little garret in the Rue de la Harpe. She recognises her tutor with gay delight; and purchases the rose-tree, of which, as before, he insists on becoming the bearer. But the worthy professor, as he follows the light steps of his companion, is thoroughly mystified; the fashionable bonnet, the silk dress, and the handsome shawl, bewilder his intellects. Their walk proves a short one, for Jenny stops before a neat house in the Boulevard, until he quite overtakes her, and then ushers him into a pretty apartment on the third floor. The tale of the young girl is soon told: she had procured an introduction to the manager of a minor theatre, who, on the strength of her pretty face and her enthusiasm for the art, had engaged her as his *prima donna*. Great is the old man's joy, but it is destined to be brief. The public, less indulgent than the director, condemn the raw and untaught actress; and, once more, she changes her dwelling, and Alexandrin loses sight of her again as thoroughly as before. In vain does he examine every play-bill upon which he can lay his hands; the name of Jenny Desgrillon is nowhere to be seen; and at length he decides that as she probably could not brook to accept an inferior engagement in the company to which she had originally belonged, she had passed into another under an assumed name. Six months roll on; and a fine day of summer sunshine tempts the solitary old man to stroll to the aristocratic flower-market of the Madelaine; not to make a purchase, for that he was too poor, but to look and to admire. As he is thus engaged, a lady alights from her chariot, and after glancing round her for a moment, stops beside the white camelia to which the old man is at the moment offering the tribute of his mute but heartfelt admiration. The voice in which its price is asked startles him—he ventures to look her in the face—he is not deceived—once more it is Jenny Desgrillon! He cannot withstand her beaming smile, nor resist her invitation for him to accompany her home, when she urges him to forgive her neglect, and to allow a renewal of their friendship; but we must not mar the next portion of the tale; and will consequently leave M. DE KOCK to tell it himself.

A REVELATION.

The chariot was close at hand. The lady sprang lightly in, but the old man hesitated. Jenny extended her hand, and he instinctively obeyed its impulsion, but he was unable to reconcile himself to the idea of rolling through the streets in a splendid carriage, as the *vis-à-vis* of a lady attired in feathers, silks, and cachemires.

They soon reached a handsome house in the Rue d'Antin, and the chariot rattled into the court-yard. The camelia was on this occasion carried by a footman, and the old man followed Jenny, who ushered him into a gorgeous apartment on the first-floor. Having traversed a richly-furnished saloon, they reached a boudoir hung with silk and fitted with cachemire. Jenny invited her tutor to take his place beside her on the divan; but, lost in admiration of all around him, he seated himself reluctantly upon its very edge, murmuring as he did so, "How magnificent! how superb!—To which theatre do you now belong, my dear Jenny?"

"I am called Jenny no longer. I am now known as Madame de St. Eugène. The name is better suited to me at present."

"Madame de St. Eugène! It is, indeed, more high-sounding."

"Added to which I am no longer on the stage. No longer attached to any theatre. I have abandoned a career in which, in order to ensure success, one is compelled to support a thousand annoyances, and a thousand vexations, and to be the victim of ill-natured criticisms, and petty rivalry. Do you remember, my dear Professor, the first representation of an unsuccessful play in which I performed?

"Yes, perfectly."

"Oh! I was then in despair! I do not know what I might have been driven to do; but just at the moment I received a visit from a gentleman, as unexceptionable as he was rich. He had seen me on the stage, where he thought me pretty; and so he laid his heart and his fortune, with a carriage and a cachemire, at my feet, on condition that I should no longer be an actress. I'faith, at such a time I had no inclination to refuse; for just then I detested the theatre as much as I admired cachemire shawls. I accepted his offers; and since that time I have resided here. I have attendants and a carriage at my disposal, and I have only to form a wish in order to see it gratified."

Alexandrin, whose features assumed a strange expression while he listened to his companion, shook his head, as he observed, "If you are happy, why are you so much altered? You no longer possess that bloom or that look of healthfulness which lighted up your pretty face when you lived on the sixth floor in the Rue de la Harpe. You are pale—your cheeks have lost their roundness, and the brightness of your eyes is gone. Forgive me, for I am only telling you what I feel."

"Oh, all that signifies nothing. I am so constantly at balls and parties, where I keep late hours, that I fatigue myself. But of what consequence can it be? It is the fashion to look pale; and I am told that it makes me handsomer."

"And what is the occupation of your husband—of M. de St. Eugène?" inquired Alexandrin, with emphasis; "shall I not be introduced to him?"

Jenny smiled, as she replied, "When M. de St. Eugène is here, I do not receive visitors; but he never comes before four o'clock. Therefore, my dear Alexandrin, let me see you in the mornings, at breakfast, and I will promise you the most delicate fare, for I remember that you are rather partial to dainties."

The old man rose, lifted his hat from the floor, and, bowing to the lady, said gravely, "Madame de St. Eugène, I have the honour to wish you good morning."

"Are you going to leave me so soon, my dear Professor?"

"Yes, Madame de St. Eugène; I have several lessons to give in writing. Ah, I should have done better had I never given any others."

"But, in that case, you will soon come again to see me? I pledge myself that you shall always find me at home, provided you are here before four o'clock."

"Enough, Madame de St. Eugène; I shall not fail to remember. Do not disturb yourself, I beg, Madame de St. Eugène." And as the old man hurriedly retreated from the splendid apartment occupied by the beautiful Jenny, he muttered to himself, "Oh no, this will not do for me. The young girl is now pursuing a career which I cannot approve; she has left the stage, for which I believe that she had a decided taste; and it turns out that her fancy was for feathered hats and cachemires. No, I shall not call upon her again; I will go no more to see her; I am fond of dainties, very likely—I do not deny it; but I will, nevertheless, commit no act of baseness. I must give up the acquaintance of Mademoiselle Jenny, now that she has become Madame de St. Eugène, and has a husband who is invisible, and whom she never sees before four o'clock."

The nature and simplicity of our extract are its best eulogium. The probity of the honest old man revolts at the heartless levity and unblushing vice of the young creature who had once been so dear to him. Once been! Alas for poor Triptolemus Erasistratus!—who, despite her folly and her fault, he still loves most tenderly. Still does he haunt the house he has resolved never again to enter; but at length, his affection proving stronger than his principle, he resolves to see her once more—only once—to warn and counsel her. When he arrives at the door, he sees a hearse standing before it, in which a coffin is about to be placed. He asks of the portress the name of the dead. It is Madame de St. Eugène, who has died from the effects of a cold, caught at a ball.

A FUNERAL.

The body was put into the hearse, and M. Alexandrin moved to the door, looking about him for those who were to accompany it; but there was not a mourner to be seen. No one followed the hearse of Jenny Desgrillon save that old man. He was the only one who wept for her whom many had admired. * * He attended Jenny to her last abode. A piece of ground had been purchased for her in the cemetery, and her tomb was surrounded by a low railing, within which a space had been reserved for planting flowers. The old man was there again on the morrow, carrying a small pot of violets, which he deposited on the young girl's grave.

"Poor Jenny!" he murmured, "this was the flower which commenced our friendship. Whenever I purchase one henceforward, it shall be to place it here."

Have we said one word too much in praise of this pure, and simple, and affecting tale?

We have received M. DUMAS'S last work, *La Reine Margot*, but we regret that we cannot do more than announce it in THE CRITIC. It is a very clever romance of the time of CHARLES IX. and includes, among its leading incidents, the sanguinary massacre of St. Bartholomew; but the plot is so linked together by crime and vice of the most undisguised and revolting nature, that it is one continual sin against propriety. *La Reine Margot*, who is no other than MARGUERITE of Navarre, plays a great *rôle* in the book, but one at once unworthy and unwomanly.

JOURNAL OF GERMAN LITERATURE.

GERMAN LITERARY INTELLIGENCE.

(*From our Correspondent.*)

MUNICH.—At Lengfeld the remains of a Roman colony have been lately discovered. Unfortunately the peasants have merely collected the coins, rings, and bronze ornaments, and destroyed the vessels of terracotta, so that the place is at present covered with fragments.

ROME.—The excavations lately commenced on the territory of the Prince of Canino, in the cemetery of the ancient Vulci, have brought to light a magnificent chariot of war. The wood-work which forms the skeleton, has naturally suffered from time, while the bronze-work, with which it is richly adorned, is in perfect preservation. Besides several vases, some mirrors have been discovered, both distinguished by their beauty and excellent condition. Among the vases, one closely resembles in form that in the possession of the King of Denmark. It is ornamented with black figures, finely drawn, representing the contest of Theseus with the Minotaurus.

VIENNA.—At the exhibition of works of industry in Vienna, 567 medals were distributed, 109 golden, 188 of silver, 270 of bronze, which, with the numerous marks of distinction, accorded a reward to about every seventeenth exhibitor. This city has, during the last few months, been a scene of more than usual gaiety. The presence of the Crown Prince of Wirtemberg was followed by the visit of the King and Queen of Saxony; then followed the Queen of Bavaria, then several members of the ducal family of Modena, the Duchess of Kent, and Prince Albert of Prussia. Gustav Schwab spent a short time lately here, too short a time for a first visit to the imperial city: his presence was no sooner known than he was found to be gone. Spindler has left the city, but to return again after a visit to Salzburg, Ischl, and the beautiful mountains of Gastein. We learn with great concern that the valuable Sclavian library of Ropitar is publicly announced for sale; thus the labours of a long life, devoted to books and knowledge, will be scattered almost to the four winds.

BADEN-BADEN.—The season here has been uncommonly brilliant; the promenades offering if possible more variety than usual to the eye. Diversions and amusements of all kinds are in the very nature of the place, so that little attention hardly is given to what elsewhere would be pronounced a great novelty. Among the various artists who have lately made this their sojourn, we may name the Indian singers, the sisters Birnou. If we mistake not, they were born in the neighbourhood of Calcutta, and, early left orphans, travelled to London under the care of a guardian. Compelled by circumstances to employ their talents professionally, they went to Paris, and there studied under the best masters, and this year created some sensation by their first appearance. The eldest is an excellent pianist, while the foreign little Consuelo, if she may be so called, sings like an eastern nightingale. She sings in admirable style; the school in which she has been taught has made her sound and brilliant. After some Italian airs, she sung a composition of Spohr; evidencing the variety of her powers and the excellence of her musical education.

The Senate of the University of Leipsic—in which town the philosopher Leibnitz was born, and in whose schools he received all his education—has determined upon celebrating the two hundredth anniversary of his birth, by a species of commemoration worthy of the name it seeks to honour. It proposes to found, on the occasion, an academy, at Leipsic, under the title of the Leibnitz Academy; to be divided into two sections—one for the teaching of the natural and mathematical sciences, and the other for the study of history and philosophy. The royal assent has been given to this new institution—nothing similar to which, it is said, exists in Saxony.—*Athenæum.*

PUBLICATIONS IN GERMANY.—The following statistical returns, published in the French papers, but the authority not named, shew the progress of publication in Germany during the last three centuries:—In the year 1589, the number of works published was 362; in 1617, 371; in 1717, 558; in 1789, 2,115; in 1831, 6,389; in 1840, 9,776; and in 1844, nearly 11,000.

From Berlin we hear that the poet Tieck has had a serious attack of apoplexy; which has had no lamentable consequence for the present, but, being his second in three months (and the poet being sixty-two years of age) has given great alarm to his many friends.—The censorship of the same strange city is distinguishing itself after the fashion of Rome. It has published an *Index* of its own; embracing a variety of works, German and foreign, which, according to the terms of the ordinance, neither in their original language, nor in any translation whatever, now or hereafter, are *ever* to be imported into Prussia, or have passage through its territory, on any pretext whatsoever!—*Athenæum.*

JOURNAL OF AMERICAN LITERATURE.

LITERARY GOSSIP IN AMERICA.

It may, perhaps, deserve mentioning, as characteristic of the times on which we have fallen, though no longer strikingly so, that among the literary ventures of our *neighbours* (as we may now call them, by patent of steam) across the Atlantic, we observe the announcement of a new journal, called *The American Woman*—edited, written, printed, and published, in Philadelphia, exclusively by, and for, women.

ART.

THE ANNUALS.

These publications, once as much literary as pictorial, have come, by degrees, to rest their claims to public patronage almost entirely upon their merits as works of art. There was policy in this. The annuals are not and cannot be made books for reading; they are in truth little more than collections of engravings, handsomely bound, for reclining upon drawing-room tables, where they serve the useful purpose of elegant ornaments, and excuses for occupation of hand and eye during the moments of stiffness or dulness that occur in an evening party. Whatever the original design of the annuals, such has been their destiny; and the proprietors have prudently adapted them to the needs of the public, and, paying little attention to literary worth, have devoted all their energies to the production of the highest excellence of the graver's skill, and thus they have succeeded in presenting a sort of yearly record of the progress of the pictorial art in England.

All the publications of this class belonging to the coming year, indeed, all which remain alive out of the multitudes that once crowded the critic's table at this season, are now before us. The result of inspection of their contents is not, we must confess, to convey a very flattering impression of the state and prospects of engraving in this country. Comparing the illustrations of these volumes with those of six years since, although we mark many differences, we are able to trace but few tokens of improvement. There is a more *finikin* style—that gives to the engraving, at the first glance, an aspect of more finish; but, on closer inspection and comparison with others of bolder handling, it will be discovered that this delicacy is deceptive, a mere trick of art. The effects produced by the genuine line engraving, bold and striking as they were, are not compensated by the minuteness of a style that preserves little more than the name. But we must not dwell too much upon general comments, for there is a long labour before us. Let us at once proceed to a specific notice of each of the new annuals, and we will take them in the order in which they have reached us.

The Keepsake contains thirteen engravings, of large size and great beauty, and upon the whole the subjects have been selected with more taste than usual, although there is still room for improvement in this particular. We believe, however, that it is a more difficult task than it is generally thought to be, to choose a picture for engraving, in consequence of the different aspect the same subject will present in colours and in plain white and black. As an instance of this, take D. Cox's charming *Fête Champêtre*, the original of which will be in the memory of many of our readers. Scarcely will they recognise it in the engraving, and this from no fault of the engraver, who has performed his task most ably, but because Cox's merit lies mainly in his *effects* of colour, which the graver cannot by any art convey. So it is with many others. Lucas's *Portrait of the Princess Royal*, which forms the frontispiece, is a sweet natural picture, the artist being content to make her a child, without attempting to ingraft the princess, and so to deform the nobility of nature. Another exquisite engraving is Wright's *Olympia;* a perfect gem, and as pretty a creature withal as eyes could desire to gaze at; a voluptuous as well as an intellectual beauty. Lake Price's *Cortile Salviati* presents some clever effects of light and shade, which make it a striking picture, and which shew extremely well in engraving. It is an instance of a happy choice, and might lead to a knowledge of the characteristics that adapt a picture for the graver. Frith's *Grisette*, is not one of his happiest productions; the incident the artist has illustrated is, we presume, that made immortal by Sterne, although the name has been changed. *Marie*, by Wood, is a figure in the attitude of grief, but with the frown of anger. It is, however, finely engraved. A work of laborious detail and finish is the splendid interior of the *Sala di Gran Senata at Venice*, by Lake Price, which has been engraved by Le Keux, with his usual painstaking accuracy. Corbould's *Ianthe* is just like all the other countless Corbouldes that have appeared in the annuals. Why he should be such a favourite with proprietors and editors we cannot understand, seeing that he is looked upon by the public as a stiff and unnatural mannerist. But it must be admitted that there is less fault to find with his other picture, entitled *The Bell*, in which terror is powerfully expressed upon the face of the girl who gazes at the mysterious monitor. The best in its execution, and the most interesting in its subject of the plates in this volume is Huskinson's *Rustic Fair*—a scene of animation in which the story is vividly told, and the engraver, Allen, has entirely succeeded in preserving even the expression of countenances. The last of the illustrations is *The Exchange*, by Egg; too formal to be quite to our taste, although it has some striking merits. The expression of both faces is masterly, but the subject is not a happy one.

Heath's Book of Beauty contains also thirteen engravings, all of which, save three, are portraits of living beauties; or rather, we should say, of ladies who think themselves such, for we must plead a want of taste to discover it in some of the faces presented to us in these pages. A fancy sketch of *The Bride*, by Frith, forms the frontispiece; and the self-satisfied smirk of one who has just signed a handsome settlement is cleverly expressed. Lady Katherine Jermyn is from the easel of Chalon, and her dress is superb. *Donna Inez* is a black-eyed importation from Spain, name unknown, sketched or imagined by Egg. *Mrs. Beresford Taylor* has a fine high intellectual forehead, and probably is pretty, only that most women appear so in miniature if a judicious artist has taken them, and doubtless Hayter has not spared flattery in this instance. *The Hon. Mrs.* ———, by Meadows, is excellent, both in design and execution. The pose of the figure is most happy. This *is* a handsome and a pleasing face, pity it should be anonymous. *The Misses MacLeod* are a pair of charming sisters, painted by Drummond, and obviously very good likenesses. The *Lady Henrietta* is another fair anonymous, the artist Wright. We are much pleased with *Lady Brooke*, it is a womanish face, with heart in the eyes, and amiability everywhere. Very different is the expression of *Mrs. Young*. From those keen black eyes there flashes out a fiery soul, and we would rather be the friend than the foe of such. It is not one of Sir W. Ross's happiest efforts. *Mrs. Arthur Lewis* is a fine face, but nothing more: there is mind in it, but no beauty; though preferable this to the loveliest countenance that ever looked inanity, it is not precisely the qualification for a *Book of Beauty*. Now *Miss Lucy B*——, another nameless young lady presented by Frith, *is* pretty and deserves her place, an approval we cannot conscientiously extend to her successor, styled simply "*A Portrait*," by Sir W. Ross; it is an exquisite engraving certainly, and for this, perhaps, it was chosen.

Fisher's Drawing-room Scrap-book is after all the most interesting of the annuals, because its engravings are more numerous and more various in their subjects It is splendidly bound in green and gold, and being of quarto size it fills an imposing space upon the table. This superb volume contains no less than thirty-six engravings, some portraits, some paintings by the old masters, some of foreign scenery, and all in the first style of art. In portrait we are presented with *Sir Edward Codrington*, *Burke*, *Lady A. Villiers*, *Lord Fordwick*, and *Viscount Torrington:* the latter, the famous picture by Reynolds. In scenery there is a fine view of *Bergen on the Rhine*, which all who have seen will recognise instantly; *Hardwick Hall*, a rich picture; the *Bay of Baiæ*, clear and sunshiny; the *Court of the Old Palace*, *Florence*, and the *Palace of the Luxemburg*, both fine architectural views; the *Burial-ground at Thyatira;* a *View at Simla;* the *State Room of the Seven Towers;* the *Villa Doria*, *Genoa*, a fine scene of sea and shore; the *City of Cologne*, truthful and effective; and the *Stillness of the Night*, one of the most perfect moonlight pictures we have ever beheld,—it makes one feel solemn to look at it. Of fancy subjects there are *Canute and his Courtiers*, a stiff work, not quite worthy of the good company it is in; *Coriolanus and his Mother*, a pleasing composition that tells its story with good taste. *Jephtha's Daughter*, by Melville, a work of no common talent; *The Voyage of the Bird*, a clever sea-piece; *King Charles and his Children*, by Woodforde, R.A. a picture of extraordinary merit, and to which the engraver has done full justice,—it is one of the best in the volume. The *Soothing of Saul* does not please us so much; it wants freedom. Among the illustrative engravings are some interesting ones exhibiting Chinese manners and customs; such as a *Chinese Marriage Procession*, *Chinese Cat Merchants*, and a *Chinese*

Sacrifice to the Harvest Moon. From the old masters are taken the magnificent *Arcadian Shades* of Rubens, which forms the frontispiece, and is of itself worth a large proportion of the cost of the entire volume,—an engraving of extraordinary finish, and yet of great boldness; and SALVATOR ROSA'S *Prodigal Son*, likewise very skilfully embodied by ROLL. *Morning Prayer* and *Evening Prayer*, by PRENTIS, are a pair of companion prints, of masterly execution, and to which ample justice has been done by the graver of HOLL. Altogether this is a remarkable specimen of English art.

The Sacred Gift is, to our taste, by far the most *valuable* of the new annuals, because its worth is enduring. It will not pass away with the season, like most of its contemporaries, but years hence it will be as attractive, as interesting as now. And the reason is, that it is a collection of engravings after celebrated paintings by the old masters, of which we are presented with no less than twenty. The frontispiece is P. VEIT'S *Behold the Place where they laid Him;* to which the engraver has applied himself with a full appreciation of the beauties of the original and the result is one of the most exquisite engravings we have seen for many a day. RAPHAEL'S sublime *Transfiguration* is the second subject, and it is handled by H. ROBINSON with truth and effect. ZUICHI'S *Joseph*, ROLL'S *Joseph presented to Pharaoh*, POUSSIN'S powerful picture of the *Brazen Serpent*, in which the story is told in a manner perfectly original; the *Holy Family* of the same great artist, a delicious work, at which one might gaze for hours without weariness; MUTIANO'S vigorous composition, *Christ washing the Disciples' Feet;* OVERBOCK'S *Widow of Nain*, which does not so much please us; CORREGIO'S famous *Ecce Homo*, now the gem of our National Gallery, admirably engraved by W. H. EGLETON; DIETRICHY'S *Tribute Money*, a bit of clever grouping; WEST'S best work, the *Simon Peter;* N. POUSSIN'S *Deluge*, that terrible landscape; *The Syrophenician Woman*, by DROUSIS; N. POUSSIN'S *Crucifixion*, which, next to RAPHAEL'S, has ever struck us as the most dramatic, and which EGLETON has engraved with his wonted correct eye, and vigorous hand; CARLO MARATTE'S *John the Baptist*, a group of listening faces, full of earnestness and expressive of intelligent attention; VANDYKE'S *Leper Cleansed*, in which the figures stand out in such bold relief; WEST'S *Belshazzar*, a work upon which the fame of the artist cannot be rested, for it is poor and tame; N. POUSSIN'S *Manna in the Wilderness*, whose genius has triumphed over the difficulties of its subject; REMBRANDT'S magnificent *Christ in the Tempest*, in the best manner of that great painter; and lastly, WEST'S *Shunamite's Son*, a sweet solemn composition, make up a list whose mere names are sufficient to attract every lover of high art, and to make *The Sacred Gift* the most welcome and worthy present of the season.

The Juvenile Scrap-book is a charming present for the young, such as, in our boy-days, would have been deemed a fit new year's gift for any peer of the realm. Here are sixteen engravings on various subjects, but all of a superior class to aught before contained in any juvenile work. The *Portrait of the Prince of Wales* will be right welcome to young England; eyes of boys and girls will roam delighted over the picture of *The Poor Man's Home*, the view of *Forthelstoke Priory*, the stirring scene of the *Young Champion*, where the quarrel about the doll is so well told by the artist that we might imagine the very words that fine boy is uttering, and the sobs of the fair girl who is leaning her head upon the chair. *The Poor Man's Home*, and *The Poor Man's Friend*, are a pair of companion pictures, fitted even for the full-grown annuals, and *Maggie Mayflower* is introduced to us amid one of H. MELVILLE'S most lovely landscapes. This is the very book for a Christmas gift or a school prize.

The literature of these annuals will be noticed in its proper place. Here we deal only with their Art, which, in truth, is their most important portion.

ROYAL INSTITUTE OF BRITISH ARCHITECTS.—The first meeting for the present session was held on the 3rd inst. at its rooms in Grosvenor-street, when, in the absence of Earl de Grey, the president, the chair was taken by W. Tite, esq. F.R.S. There was a numerous attendance of members, and several of the presents received since the last meeting were of considerable interest. Amongst these were the remainder of the drawings illustrative of the Alhambra, in Spain, from Mr. Owen Jones, a work which Professor Donaldson, who was present, described as being unexampled in the history of architecture, not only from the knowledge being obtained at vast expense and privations to the author, but being published by himself, and having given the impetus to a new order in this country. The donations from foreign societies were numerous, and there was an interesting recognition of the society from the Institute of Northern Antiquarians at Norway. The chairman, in a brief address on the present position and progress of the institute since its last meeting, congratulated the members on its increasing funds and prospects of utility. He next alluded, in very feeling terms, to the untimely death of Mr. Basevi, a very early member of the institute, and gave some interesting particulars of his biographical career, from which it appeared that he derived his education at Dr. Burney's school, and that prior to the erection of the Fitzwilliam Museum at Cambridge he had erected a church at Stockport and at Greenwich, while Belgrave-square was an equal instance of his talent. A paper by Mr. Trotman, on the economical application of pointed architecture to domestic purposes, concluded the business of the meeting.

MR. J. MINASI, THE ARTIST.—This gentleman, to whose very peculiar talent as an artist we have frequently borne testimony, is amongst the applicants for the relief afforded by the National Benevolent Institution to those whose age, decay, and narrow means compel them to solicit the support of the affluent and humane. He is now nearly seventy years of age, without any income or funds but such as depend on the precarious results of his profession. It is to be hoped he will not be without friends, at the approaching election, of those to whom the institution lends a helping hand. The King of the Belgians has sent him 150 proxies, and his interest is warmly advocated by many gentlemen of taste and many architects of high rank, who can best appreciate his merit as an honest man, and his claims as a fellow labourer in the fine arts. He was a pupil of the celebrated Bartolozzi, whose style is very perceptible in his labours.

The Royal Academicians have elected Mr. Alfred Elmore, Mr. Thomas Sidney Cooper, and Mr. William Powell Frith, associates of their body.

MUSIC.

SOCIETY OF BRITISH MUSICIANS.

THE third meeting of the 12th season of this society took place on Tuesday evening last. There was a copious attendance, occasioned, we would fain hope, by the increasing recognition of the merits and claims of this enterprising body. Upon former occasions we have urged upon the directors the necessity of inviting a patronage from *without*, in addition to collecting resources from within their own circle. Whether we may flatter ourselves that our suggestions have been in any degree attended to or not, a greater publicity has been decided upon by the society, and a series of concerts upon an extensive scale, at the Hanover-square Rooms, has been already advertised. This is as it should be. A Society of Musicians is fully as much entitled to an annual exposition as a Society of Painters. Our wish is, that it could challenge attention with as much facility and convenience.

In the programme of Monday evening were contained two compositions which might take place beside corresponding works of almost any living continental author. The one was a quartetto in F (played by THIRLWALL, PATEY, HILL, and LUCAS), composed by MACFARREN; the other a quartetto in A, by CAROLINE ORGER. In MACFARREN'S production there is, together with much that is crude and laborious, a masterly and comprehensive treatment which commanded the attention of the audience. In works of this kind, one has no right to dictate to the author the limits of duration within which he should confine himself; but at the same time, it cannot be denied that the effect of this elaborate composition would have been very much enhanced, as a public exhibition, if it had been less expanded in its treatment. There was a conspicuous air of disappointment in the audience, who had patiently endured the labyrinthian evolutions of a sound with which the quartet abounds, when the conclusion arrived, without a single strain to perpetuate the identity of the production in their minds. With all its high merits, we fear that this work is too metaphysical for public use, and for the great majority of amateurs. Miss ORGER'S pianoforte quartet, on the other hand, abounds in clear and intelligible phrases, vividly and agreeably expressed, and so forcible in their appeals to the sympathy of her hearers as to elicit the most rapturous applause at the termination of each movement. The

scherzo may take its place beside any existing movement of its kind. It was tumultuously demanded a second time. This work is a very remarkable instance of successful adventure into regions rarely trodden by the foot of female enterprise; in which to have failed would have brought no dishonour, while to succeed deserves the highest admiration. The accompaniments (for violin, viola, and violoncello) were so free and well-disposed, as to suggest a minute and practical acquaintance with the resources of each instrument. We hope that on any occasion of public display this charming production of the accomplished CAROLINE ORGER will hold a conspicuous position.

Of the vocal portion (the contribution of native composers) we cannot speak so favourably. Miss STEELE exerted herself in vain in an attempt to render captivating a song called *The Rose*, by H. B. RICHARDS; and Mr. LOCKEY had a like ungracious duty to discharge for a composition of W. H. KEARNS. In this latter *cantata* the composer has wasted no small power and patience upon the most stupid lines we ever encountered—out of the *Historic Fancies*, at least. Miss CUBITT gave with energy (approaching vulgarity) a setting (by H. GLOVER) of SHELLEY'S lament, *Swifter far than summer's flight*. Mr. DAVISON has already, and to greater advantage, united these lines to music. The performance included MENDELSSOHN'S favourite trio in D minor, splendidly played by DORELL (pianoforte), PATEY (violin), and LUCAS (violoncello); WEBER'S lovely quartetto, *Over the dark blue waters* (*Oberon*), nicely sung by Misses LOCKEY and CUBITT, and Messrs. LOCKEY and MACHIN; the latter gentleman (upon whose accession to the vocal force of the society we offer our congratulations) gave SPOHR'S beautiful polacca from *Jessonda* with great spirit and feeling. The performance of SPOHR'S nonetto was denied to the audience through the culpable negligence of the "contrabasso," against whom our wrath is not yet cool.

Mr. Moscheles, the distinguished pianist and composer, is expected daily in London from Carlsruhe, where he has been spending a few weeks with his family. A letter from abroad informs us that it is Miss Eliza Birch, and not her sister, the well known vocalist, who at present officiates as *prima donna* at the Scala in Milan. A correspondent at Stuttgard informs us that it is the intention of Molique, the great violinist and composer, to visit London next season. Miss Bassano is studying at Florence, where she is engaged for the approaching winter season, and will return to England in the spring. The next musical novelty, it is said, will be an opera by Mr. Benedict, on which that celebrated artist is at the present moment actively and exclusively employed. Camillo Sivori will remain here during the winter and the next season. Meanwhile he is engaged for the forthcoming Promenade Concerts by M. Jullien, who has returned to town after a brilliant provincial tour, which realized him no less a sum than 2,000*l.* net profit. Mr. Carte is giving a series of concerts in various parts of the provinces with great success. Concerts at Richmond, Blackheath, and Wandsworth have already taken place. Lancaster, Preston, Newcastle-upon-Tyne, and Durham have yet to come. A letter from Brussels informs us that it is more than probable that Madame Pleyel, the wonderful pianist, will pay London a professional visit next spring, previously to which she will proceed to Paris, where she will, doubtless, renew her triumphs of last winter.—*Musical World.*

The King of Prussia has conferred the royal order of the Red Eagle on Herr Schneider, the composer of the oratorio of "The Universal Judgment," and other sacred music.

PARIS.—M. Mathieu, a young tenor, who has gone through his studies at the Conservatoire with distinction, has just made a promising *début* at the Grand Opera, having selected the part of *Otello* for his first appearance. Without fulfilling all the conditions required by this arduous character, M. Mathieu fully merited the encouragement he received.

THE DRAMA AND PUBLIC AMUSEMENTS.

FRENCH PLAYS: ST. JAMES'S THEATRE.—No fewer than three new pieces were produced here on Monday last; *La Demoiselle Majeure*, *Les Deux Filles à Marier*, and *Le Capitaine Roquefinette*. The two first are amusing enough, but only the third is, we think, likely to become popular. *La Demoiselle Majeure* is, as the name imports, a lady who has arrived at very decided years of discretion, and is well disposed to exercise her rights of majority by accepting a husband. A difficulty, however, is in the way—no husband presents himself; a device peculiarly continental in its conception occurs to her; she pretends to have married her uncle, *M. Boisjolin* (a union, we may incidentally observe, permissible in France), in the full confidence that though as *demoiselle* she has achieved no lover, as *madame* she shall realize an admirer, and she trusts to fortune to convert the admirer into a real husband. And so it falls out: two adorers offer their *hommages*, one of whom she espouses. The part is well filled by Mademoiselle MARTELLEUR, and she is most pleasantly supported by M. NARCISSE, in the character of a prying busy-body, who insists upon everybody else adopting his views of their business. *Les Deux Filles à Marier*, has for its heroine ROSINE DE ROCHEVAL, whose great object it is to marry her elder sister to somebody or other, in order that she herself may be able to enter the state of matrimony, the mama having decidedly enacted that the eldest daughter shall go off first. The fair engineer effects her object by fascinating *M. Merivet*, a rich *propriétaire*, who comes to the house to buy a farm belonging to *Madame de Rocheval*, but is persuaded, instead, to take it as the *dot* of *Mademoiselle Athenais de Rocheval*. The siege of the at first resisting old bachelor is capital: Mademoiselle ST. MARC impersonated *Rosine*; M. CARTIGNY, the victim of her allurements. The third piece is *Le Capitaine Roquefinette*, a comedy in two acts, which has had a run of more than a hundred nights in Paris, and is likely to have great popularity here. It has been presented on the English stage,—at the Adelphi, under the title of *The Fortune of War*; it is the story of a harum-scarum adventurer, who, in one of his walks in search of a dinner, receives in his face a bouquet, thrown by a fair dame from a window, as he complacently imagines to him, but really destined for a cavalier, who precedes him a few paces, and who is the Duke D'ANJOU in disguise. Subsequently, the captain is fortunate enough to aid the young duke (or rather king, for he has been nominated to the throne of Spain, and is about to take his departure to assume it) in a duel he falls into, and in recompense receives a packet, appointing him *grand écuyer* to the King of Spain. He attributes his good fortune to the unknown fair one, and there is a good deal of amusing *qui pro quo* resulting from this misconception, which turns out a favourable one for the lady's real lover. Eventually the husband himself applies to the lucky adventurer, to get leave for him to accompany the king to Spain, the king and the lady nothing loath. The permission is at once acceded, and, "*Mon cher Baron*," says the captain to the baron, congratulatorily, "*votre affaire est faite!*" LAFONT plays *Le Capitaine Rouefinette*, in perfection, and he is most effectively supported.

THEATRE AT LISBON.—The superb new national theatre of Donna Maria Secunda, in the square of Dom Pedro or Rocio, was opened on the 29th ult. with a grand spectacle, to celebrate the birthday of the King Dom Fernando. The tickets were issued gratuitously from the Home-office, and the house was crowded with all the rank, wealth, and fashion of the Portuguese capital. The building, of a beautiful stone, is stated to be magnificent, in the Palladian style, and of the Ionic order; and occupying a whole side of the finest square in the city. There are two rows of seventeen windows each along the front, surmounted by *bassi relievi*, and semicircular windows. An elegant balustrade enables the company to be set down or taken up in bad weather without exposure to the wet. Altogether, the erection is spoken of as a *chef d'œuvre*, and the cost 50,000*l.*

THE BALL IN THE GUILDHALL, after Lord Mayor's day, which has been for some years past for the benefit of the Polish refugees, is this year to be for the Ward Schools of the city. Although we must have every sympathy with the Poles, yet the Ward Schools appear a more national appeal, and one we should more readily support. Independent, however, of the objects of the charity, the decorations of the hall and the brilliant gas illuminations, are well worth the encomiums passed upon them. The concert is under the direction of Mr. Benedict, and is, we understand, likely to be well attended.

A new comedy, by Mr. Richard Brinsley Knowles—a son, we suppose, of Sheridan Knowles—is promised at the Haymarket, after the engagement of Miss H. Faucit and Anderson terminates, which it was to do this week. They have been playing in the *Stranger* and *As You Like It*.

Mdlle. Taglioni has arrived in Paris on her way to Italy, after a farewell tour through various parts of England, Ireland, and Scotland, by which this celebrated *reine de la danse* is stated to have netted not less than 10,000*l.* Her lowest engagement, even at the smallest theatres, being 100 guineas a night!

ROYAL POLYTECHNIC INSTITUTION.—As the subject of electro culture is at this moment engrossing public attention, we have thought it would be interesting to our readers to give a short extract from a lecture recently delivered by Dr. Bachhoffner at the Royal Polytechnic Institution. The Doctor remarks that

it is a well known fact that in science, as in other things, we have for a time some hobby, which, as usual, we either ride to death, or throw on one side for its more favoured rival. One of those favoured creatures of science at this moment is electro-culture. No one who has studied the science of electricity can for a moment doubt that this agent in the hands of nature is in some measure concerned in almost every change that occurs either in organic, or inorganic matter; but whether this electricity is the cause or the effect of these changes is a point which, in our present state of knowledge, we cannot easily solve. In considering this important subject in its applications to agriculture, we must avoid the too ready condemnation of those experiments which have been performed, perhaps not in accordance with the detailed rules of established science, while we must at the same time fearfully exclaim against humbug and quackery, whether prompted by ignorance or cupidity. The early yet beautiful experiments of Mr. Williams, in his *Climate of Great Britain*, and the more recent experiments of Messrs. Pine and Weekes, &c. in reference to the influence of vegetable points on electrified surfaces, seem to admit of the inference which has been drawn, that there are the electrical organs of the plant. The action commonly resigned to these points is that of drawing the free electricity of the atmosphere to the plant, and thus adding of its conduction through the branches into the earth, during which it is supposed, in some way or other, to assist in promoting the electric vitality of vegetation. Although we are not disposed positively to contradict the above view, neither are we content to receive it as a fact, for the simple reason that it remains to be proved whether electricity is absolutely necessary to the growth and fructification of plants generally. However, for the sake of argument, we will admit the probability of the assumed action, and that the atmosphere is the grand store-room of the ethereal food. If so, we must admit also that as Nature is sometimes deficient in her supply of moisture to carry on the vegetable growth, so likewise there may exist a deficiency of electrical influence, or that she requires more of the maximum cultivation than her limited means can afford. To remedy this plans have been adopted, which may be divided into electrical atmospheric conductors and buried galvanic plates. The atmospheric conductors consist principally of wires extending into the atmosphere and terminating in the earth; so that the electricity may be collected and brought down to the roots of the plants. This mode of collecting electricity seems to derive its origin from the experiments of Mr. Cross, of Bloomfield. He certainly in this way collected the electric fluid for his laboratory; but the recent experiments of Mr. Weekes, and others, have abundantly proved that a blade of grass, as a collector of electricity, is infinitely superior to any metallic points; and as we know that the power of a plant is increased by its reduction in size, and as all vegetables are abundantly supplied with certain hair-like filaments, thorns, and points, may we not infer that nature has bountifully supplied the vegetable world with the means of collecting this ethereal food if such be required by them? Can, therefore, a wire mounted upon a pole, placed due north and south, or in any other fantastic way which the whim of the experimenter may suggest, do more than nature has from the commencement taken ample means to effect? Is this not rather like "painting the lily?" The experiments of Poullett tend to show that electricity is evolved during the growth of plants. If this be true, we may infer that the points of which we have spoken are intended to give out that electricity which is elicited during vegetable growth. At any rate we ought to establish one position or another before we proceed to apply such means as may, instead of assisting, actually thwart the effects of nature. The great facts which the agriculturist ought to prove are then the absolute necessity of electricity to vegetation, and secondly, its mode of action; and we would warn him especially not to be led away by unfair and illusive pseudo experiments, whose results are moulded to the wishes or intentions of the operator, and not based upon truth.

CORRESPONDENCE.

THE VALHALLAH FOR ENGLAND, AND THE MONUMENTS OF EDINBURGH.

TO THE EDITOR OF THE CRITIC.

SIR,—In a recent number of your Journal I noticed with considerable satisfaction, a proposal for the erection of a Valhallah, or Hall of Fame, for England. While I most heartily concur in the propriety of such an establishment, I do not approve of the means which your correspondent suggests for the accomplishment of this desirable object. We have been termed, by way of reproach, on account of our attention to business, a nation of shopkeepers; but, were we to adopt your correspondent's method of paying honour to the memory of the mighty dead, making it merely the cloak for a profitable speculation, we should, in my opinion, merit a much worse title than that of honest shopkeepers. With your permission, I shall, on a future occasion, lay before your readers a few suggestions which, if carried into effect, would, I think, enable us to attain the desired end, in a way alike honourable to all parties. My present object is to call your attention to the manner in which "The Modern Athens," sustains its claims to be considered a highly intellectual city, as exemplified in its treatment of the monuments of the illustrious dead committed to its charge.

Within a minute's walk of the post-office of Edinburgh stands a picturesque rocky eminence, namely the Calton Hill. On it are erected several public monuments, viz. to NELSON, BURNS, Professors STEWART and PLAYFAIR, besides an unfinished structure intended to commemorate those who fell in the last war. No situation could possibly be better for these memorials; it seems as if nature had expressly adapted it for such a purpose. Strangers naturally direct their steps to this point for the purpose of inspecting the monuments, and enjoying the very extended view of the surrounding country which it affords. On arriving at the stair leading up to the hill, the visitor will remark, amongst a multitude of other painted boards inviting him to visit observatories, groups of statuary, &c. two advertisements calling his attention to the monuments of NELSON and BURNS. The view from the tower of the former he is informed in set phrase, "is equal, if not superior, to the far-famed Bay of Naples," and the charge for admission is only threepence. BURNS's monument again boasts of having the full-length statue of the poet, by FLAXMAN, which may be seen for the trifling charge of twopence. This is carrying out your correspondent's idea as regards an admission charge, but on a somewhat different principle. He proposes honestly to expend his own money and derive an interest from it, while promoting a worthy object. We of "Modern Athens" are wiser in our generation, we get other people to advance the money for their erection, and then step in, and reap where we have not sown. The lower part of this monument to NELSON, as it is in bitter irony called, is occcupied by a confectioner, and fitted up into refreshment rooms, and for this I am told a rent of 90*l.* is paid. As I before mentioned, threepence is charged for admission to the top of the tower, which is also used as a steamboat signal station, so that with rents and tolls a very handsome revenue must be derived from this monument. I cannot state positively who pockets the proceeds of this transaction. It has been publicly stated, and remains as yet uncontradicted, that it is the Town Council of Edinburgh, but the statement is almost too monstrous for credibility. Be that as it may, it is indisputable that the disgraceful shabbiness of having collected money from all quarters of Scotland under the pretence of erecting a monument to the great NELSON, and then converting it into a shop and a show-house, attaches to some parties at Edinburgh who have the sanction of the corporation for their conduct. The finger of scorn ought to be pointed at them from every quarter, until they abandon their traffic, and allow the building to stand for what it was originally intended—and what it is still falsely represented to be—a memorial of the heroic deeds of our greatest admiral. There are some people, Mr. Editor, dead to every principle of patriotism when money is concerned, and I do not think that I display any want of Christian charity when I say that I fear such is the character of the parties who have usurped a property in this monument. I would suggest that a subscription be entered into in London for purchasing NELSON'S monument from the corporation of Edinburgh, or whoever else pretends to be proprietors of it, in order to rescue the memory of your gallant countryman from being mixed up with the sordid and selfish speculations of a greedy few. For my part, as matters are at present ordered, I blush when a stranger asks me the name of the erection.

As regards the monument of BURNS, I shall say but little. We starved him while alive, and it is quite in keeping that we should endeavour to make a profit of him when dead. As a nation we are justly proud of his fame, and what better way can there be of showing this than by making all visitors to his shrine pay a twopenny homage to his memory? The greater

part of the money for this monument was sent from India, and I can easily imagine the *satisfaction* with which the contributors will learn this characteristic proceeding of the Town Council of Edinburgh.

The Scott monument is, I fear, doomed to a like prostitution. Already, even in its unfinished state, a charge of one shilling is made for permission to enter its precincts. It is to be hoped, however, that the force of public opinion will prevent this fair bud of imposition from blossoming forth into a full-grown job. I am, yours respectfully,

Edinburgh, Nov. 8, 1845. W. H.

ORIGINAL CONTRIBUTIONS.

A LOVE SONG.

BY CALDER CAMPBELL.

With heart and eyes I love thee!
The first can still be true,
Though it before have counted o'er
(As other men's may do)—
The beads of love's long rosary,
With prayers, ever new.

And with the last their language
Though taken ne'er till now,
From other books than women's looks
Who kept no stricter vow
Than that which bindeth for a day,
And in a day may go!

The heart, with which I love thee,
Hath loved the light and vain;
And, wronged, betrayed, inconstant made,
By finding pleasure pain,
It wandered on—still meeting none
To make it fix again!

The eyes that gaze upon thee
With looks that are less fond
Than true and pure, have tracked the lure
That led all peace beyond:—
Too long they sent forth thoughts which kept
With saintly love no bond!

But heart and eyes now love thee,
Because in thine they see
That spirit's youth, which spring's from truth—
That child-like purity,
Which make me love as men could love
Were women all like thee!

LAY OF THE LOVER.

(*From the Spanish.*)

In climes far distant from Hispania's shore
I've wander'd, o'er the dark and stormy sea,
Where hoarsely sounds the wild waves' sullen roar,
Thinking, beloved! of nought save home and THEE!
When gazing on Sophia's gilded dome,
Rising to skyey height o'er Moslem tow'rs,
I've mused on THEE and our Castilian home,
Where we've beguiled so many sunny hours!
As silence rested on blue ocean, lit
By silv'ry gleams of palest moonlight, streaming
With rays of beauty thine own eyes emit,
But not like them with passion's rays outbeaming!
I've thought of THEE, loved Inèz!—of the joy—
The sparkling joyance of the by-gone hours,
When gilded life flow'd on without alloy,
Like sun-lit streams oft heard in Seville's bowers!

Dublin. HENRY GERALD.

NECROLOGY.

JAMES ANTHONY MOLTENO.

We have to record the death of another of the old printsellers,—one whose name is familiar to all who make Art either their amusement or their study,—Molteno, of Pall-mall. Himself in business nearly half a century, he was the son of a still more ancient member of the trade—old Molteno, who flourished in our boyhood. He came, with others of his calling, from the "Sweet South,"—chiefly from Coma and Milan. Among this company was the highly respected Paul Colnaghi, Molteno, Torre, Zanetti, Bolongaro, Salmoni, &c.,—men to whom much merit is due for introducing a love of Art into this country, when Englishmen neglected it for the pursuit of less refining modes of money-making. Fortunately for the credit of England a Boydell arose, and he has been followed by others, who have, by their spirit and enterprise, surpassed all the other publishers in Europe, and thus spread a love of Art where pictures never could have travelled.

Old Torre was the first large printseller in Pall-mall; he had the principal hand in the importation of the splendid collection of old engravings formed by the celebrated Mariette. These were separated,—Torre employing Paul Colnaghi and Molteno to dispose of them. After Torre retired he was succeeded by the partnership of Molteno and Colnaghi. They separated, after a short connection, Colnaghi to Cockspur-street, Molteno to the house in Pall-mall, where he died, and in which, after a short illness, his son also expired. He has left a family, but no son who is likely to succeed to the business.—*Art Union* for November.

PERSIUS.

Is another architect lately deceased. He died at Potsdam, some time about last June, shortly after his return from a visit to Italy. One of Schinkel'spupils, he was also, like him, gifted with no ordinary power of invention and imagination, which he was furnished with numerous, if not very important, opportunities of exercising in the various structures upon which the present King of Prussia has employed him, for the embellishment of Potsdam, its park, and environs. They consist chiefly of villas, temples, and other ornamental garden-buildings, of many of which the designs, at least the ideas for them, are said to have proceeded from the king himself, who possesses a considerable knowledge of architecture, as well as a taste for it. The buildings alluded to display almost every style, from that of the Gothic to that of the Italian Casino; and they have accordingly been compared to an architectural *muste-bach*, or collection of specimens and patterns; yet, if they prove serviceable as studies—and most of them do not affect to be themselves more than studies—they will have been serviceable. No doubt the architect himself considered them only *vorübengen*—preparatory exercises—till he should be called upon to put forth his strength upon some nobler occasion—as would, most probably, have been the case, had not death cut short his professional career at an early stage of it.—*Art Union* for November.

JUAN-MARIA DE MAURY-PLEVILLE.

The French papers mention the death, in that capital, of Juan-Maria de Maury-Pléville, a member of the Spanish Academy. The *Journal des Débats* gives a list of works, chiefly poetical, published or written by him, both in Spanish and French, with which latter language he had acquired a perfect familiarity. He has left behind him two unpublished poems—about to be included in a complete edition of his works, undertaken by a Spanish bookseller, and announced before the author's death; and an inquiry, of great interest, says the *Journal*, into the principles of versification in all languages—portions of which have obtained the high commendation of the Spanish Academy.

DR. ANTONINI.

The Paris papers report the death, at Algiers, at the age of fifty-five, of the Doctor Antonini; charged with the medical inspection of that French settlement—in which he has resided since the conquest. Dr. Antonini had collected an immense body of valuable particulars relative to the country; which he was preparing to arrange and classify, on his approaching return to France—when he fell a victim to his necessary exposure amid the intolerable heats of the summer months.—*Athenæum.*

CRITIC OF TRADES, INVENTIONS, ETC.

[Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

THE METROPOLITAN SEWAGE MANURE COMPANY.

Some further particulars of this important and interesting enterprise will doubtless be acceptable to our readers.

Perhaps the most convenient course will be, first to describe the nature and uses of the material to be supplied, then the

mode of supply, and then to meet some objections which have been raised by persons who have not investigated the subject.

The refuse of London is now poured into the Thames from a number of huge sewers, each of which by means of multiplied branches extends over a large district. The material conveyed by these sewers does not consist, as seems to be commonly imagined, of a sort of liquid mud, but the fluid as it falls into the river is but slightly discoloured, and contains a very small quantity indeed of solid matter. It is this fluid which the Company propose to transmit to the country.

It will doubtless be asked how a fluid carrying so small a portion of solid material can be a fertilizing manure. For a scientific explanation reference must be had to the works of LIEBIG and other agricultural chemists; suffice it that the fluid of the sewers carries in solution a very large quantity of those elements of fertilization to procure which we now despatch ships to the other side of the Atlantic, forgetting that we pour yearly into the Thames more than they can bring to us.

Nor is its value merely theoretical. Experience has proved it. Trial has been made at Edinburgh, and by the Duke of PORTLAND with the sewage of the town of Mansfield, and the astonishing results are described in the document issued by the Company, and forwarded to our readers a fortnight since. The result in every case has been to convert lands to an annual value of more pounds than they were worth of shillings before.

Indeed, there is no question in any quarter of the value of the material to the farmer and the gardener, provided it can be conveyed to them at a moderate price. But the difficulty hitherto has been how it may be conveyed cheaply. That difficulty has been entirely overcome by the plan so ingeniously and laboriously prepared by Mr. MARTIN. It is to the explanation of this plan, with a view to satisfying the reader that it is equally practicable, simple, and cheap, that we propose now to pass. But as it will necessarily occupy more space than we can give it this week, it will be better to present it entire in the next CRITIC.

But in the mean while we may state that the surveys are completed, the notices given, and all is ready for application to Parliament in the next session. The cordial support of the Government is secured, and it is received with special favour by the leading members of both branches of the Legislature. So important is the design deemed, both as respects the agriculture of the country, and the improvement of London by the diversion of the sewerage that now poisons the Thames, that every favour and encouragement will be given to the undertaking. The list of the committee will be the best proof that the men of science and practical experience as engineers, chemists, and agriculturists, approve the plan, and deem it certain to be successful. In order to carry it out, they have not hesitated to subscribe largely towards the preliminary expenses. The shares are being taken up, not by gamblers and speculators for a rise, but by the prudent, who seek an investment which, upon investigation, they believe will yield a better return than the best of the railways. And so we are ourselves convinced that it will; for we have watched it from its commencement until now, tested all the estimates, heard the opinions of the best judges, and we have not a doubt that in five years it will be paying to the shareholders a clear profit of *fifteen per cent. at the least;* and then the share of 20*l.* will be worth 60*l.*, and the fortunes of the holders trebled.

It may be as well to prevent any confusion that may arise in the public mind from the advertisement of another concern, calling itself the London Sewage Company, and professing the same objects. This history of this latter affair will best describe its character:—

One of the promoters of this latter was a friend of Mr. MARTIN. To him Mr. MARTIN exhibited his plans, and he joined in the endeavour, and commenced about two years since to carry it out by means of a company. A few weeks since this person made an exorbitant demand for his services as promoter, and being refused, he forthwith concocted the *opposition* advertised as the *London Sewage Company*. This origin will be sufficient to exclude it from parliamentary sanction and public favour. But a comparison of the names will at once assure the reader which is the real Simon Pure.

We shall resume this subject next week.

NEEDHAM'S SELF-PRIMING GUN.—When this invention was first introduced by Mr. Needham, of Piccadilly, it attracted considerable attention amongst military men and sportsmen, and was adapted by many of the latter class, though unfortunately it met, as is the case with most inventions in this country, little attention from the Government, beyond the barren approbation of certain military authorities. It has now stood the test of the experienced, and certainly to all persons to whom rapidity in the discharge of fire-arms, and security from accidents, are matters of consequence, it must be considered a very great improvement over the method generally in use, to place the cap upon the nipple of muskets, pistols, or fowlingpieces. The principle is very simple:—the caps are placed in a groove formed in the stock of the gun from the butt-end to the lock, and rolling up, on the muzzle being momentarily depressed, to the lock, one of them drops into a small recess immediately before a lever which is attached to the tumbler of the lock, and which, on the hammer being drawn back to cock the gun, passes it out into the nipple, removing at the same time the previously discharged cap. By this means the gun is constantly primed, and there is no danger from the cap being insecurely fitted on the nipple, from the fingers being cold or clumsy, or from the difficulty of priming on horseback from the impatience or motions of the animal.

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

MESMERISM IN INDIA.

A copy has been forwarded to us of the *Indian Journal of Medical and Physical Science*, containing an article on this subject, which appears to be attracting a great deal of attention in the East. The editor is, of course, an opponent, and, like others of his class, instead of making experiments, and so assuring himself, by personal investigation, that it is either true or false, he is content to look on while experiments are being tried by others, and grasping at such as fail or such as are impostures (and doubtless there are many such), and overlooking those wherein he can find no flaw, he collects the evidence on the one side, and omits that on the other, and then claims for himself a victory.

The subject of triumph over Mesmerism in the article before us is an exhibition of the effects of mesmerised water by a Dr. ESDAILE.

Dr. Esdaile (says the medical journalist) purposed to exhibit to us his latest great discovery in this occult science, the power of inducing the mesmeric phenomena by the agency of mesmerised water, which he described as most extraordinary.

The previous experiments having in a great measure convinced us that the actors were one and all impostors, and that the reputed phenomena could not bear the ordeal of a strict inquiry; in order to confirm or remove these impressions, we requested permission to try the effects of plain water upon the patients to be subjected to these experiments.

Two prisoners, who had been submitted successively on many previous occasions to this test, were brought and placed at our disposal; the one was an elderly, tall, powerful man, the other a young and short one; the former had acquired a character as one of the most notorious dacoits in the district, and had less of a stern than venerable appearance, from a long white beard; the other was a low caste Hindoo; we have applied unsuccessfully to the doctor for their names. They were desired to sit down in the verandah, and we retired into an inner apartment, when the doctor ordered all but ourselves to be excluded, and there lectured us on the tremendous power this discovery gave the Mesmerist over the rest of the community—so tremendous, indeed, that he considered it a duty he owed society not to communicate the process of endowing the most innocent of all beverages with this virtue, rendering it one of the most potent for nefarious purposes; and the same feeling induced him to beseech us not to publish the means of mesmerising water to the public; and we were besought even to exclude our professional brethren from the secret process he was about to divulge to us.

These injunctions to secrecy, and endeavours of the doctor to wrap the subject up in mystery, only tended to confirm our un-

belief, and made us more desirous of putting to an incontrovertible test the truth of this so-called science. We therefore begged the doctor, in lieu of conferring these miraculous powers upon us, to permit us to essay our own unaided efforts with unmesmerised water, to which he readily assented.

Two cups of plain water were but into Dr. Bedford's hands, who gave one to each of the prisoners, whom he undertook to watch, while we accompanied Dr. Esdaile into a long apartment, where there was a great number of prisoners assembled, for the purpose of selecting some untried subjects for his test. We had not been away above five minutes, when we returned and found the old man lying stretched on his back, with his eyes closed, and apparently unconscious, which Dr. Bedford intimated he had become in about three minutes from the time of drinking the water; the younger prisoner continued to sit looking at his more aged companion, seemingly uninfluenced by the draught of water he had taken. The carbonate of ammonia was applied to the nostrils of the elder prisoner; the exhibition of feeling its influence he successfully resisted for some time, though evidently not insensible to it; but at length he turned away his head from the bottle, though he continued apparently unconscious and cataleptic, retaining his arms raised and placed perpendicularly to his body for some time, but decidedly not so long as greatly to fatigue this old offender.

The second prisoner, to whom a cup of plain water had been given at the same time, on seeing the application of the carbonate of ammonia (probably mistaking the object intended) dropped off on a sudden into the same apparently unconscious state. This, however, only rendered him a fit subject for Dr. Brander's application, who gave him as strong a dose as he could, by retaining the bottle to his nose; when wishing to escape from its further infliction, though he would neither open his eyes nor return to consciousness, he fairly turned round, resting his nose on the ground so as effectually to prevent the application of the bottle to his nostrils; by this manœuvre, though he effectually escaped this test of his sensibility, he was subjected to another. He was tickled in the armpit, and, though he succeeded in concealing any indication of feeling by his features, he moved his elbow backwards and forwards as any one does who is susceptible of the influence of, and subjected to, titillation.

Dr. Esdaile then proposed to give us a third prisoner, who had not been so often brought under the influence of the mesmerised water. We gave him a cup of plain water, which he drank off; in five minutes he fell into what was pronounced the mesmeric sleep, in which state he was permitted to remain undisturbed, and continued so during the rest of the scene.

The whole three prisoners to whom plain water had been given, presented as perfect a cataleptic condition as any of those who had been previously treated by the prescribed and orthodox manipulations.

It is not at all improbable that the prisoner patients were impostors; but the result needs not a resort to so harsh an interpretation. All who have *tried* mesmeric experiments will admit that where a certain train of associations has once been produced in the patient's mind, there is an almost irresistible tendency to their reproduction by any thing that suggests the first link of the chain. Thus, the presentation of a cup of mesmerised water having once induced the mesmeric condition, the presentation of another cup of water, which the patient believes to be mesmerised, produces the same chain of associations and the same result. As to the effect of mesmerised water, as it is termed, from the investigations we have made, we are satisfied that it is altogether a delusion; that there is no change in the water, and that the effects are produced entirely through the imagination of the patient influenced by the will of the operator; and that, as with the experiments above narrated, a cup of any other water, or any other object, would produce the same result. We have seen and made many trials, and we suspect that no effect is ever produced by this or by any other operation without the consciousness of the patient that something was going to be done. It is true that it is often difficult distinctly to trace such consciousness; but when we take into account the exceeding sensitiveness of the mind—the amazing exaltation of the perceptive powers in the mesmeric state—we cannot recal an instance in which a consciousness of something intended to be done was not existing in the patient's mind; and it is the peculiarity of the condition to be irresistibly impelled to do what the mind is impressed with a belief that it is required to do.

This will explain not a few of those cases which are trumpeted as impostures, but which those who have had experience know to be genuine. But the subject is too interesting and important not to deserve further consideration.

Considerable discussion has taken place in Calcutta relative to the mesmeric experiments of Dr. Esdaile, of the Company's Service, who has applied Mesmerism on an extensive scale as a curative of disease, and performed many important surgical operations on patients under his charge, while reduced to unconsciousness by the mysterious process. The learned Doctor's work, entitled *Mesmeric Facts*, contains an overwhelming body of evidence as to the truth of the science, and will, we doubt not, receive the notice it deserves at the hands of parties interested in the subject.—*Bombay Monthly Times*.

To Booksellers.—A stamped copy of The Critic *sent regularly to any Bookseller, for his own use, at the cost of stamp and paper only, on prepayment of* half a year's subscription, at least (4*s.* 4*d.*), *which may be transmitted in penny postage stamps.*

Booksellers and Keepers of Circulating Libraries are requested to communicate to The Critic *the results of their experience as to books and classes of books most in demand, and other similar information. Books wanted to purchase inserted in the weekly list without charge.*

BOOKSELLERS' CIRCULAR.

A word to the Booksellers and Circulating Libraries, now amounting to many hundreds, who have honoured The Critic by adopting it as their guide in the selection of books for addition to their shelves, or recommendation to their customers.

It would be supposed that such a circulation as this would have ensured the advertisements of all the publishers, as being a medium peculiarly suited for their announcements, and offering advantages that no other periodical can boast. Upon inquiry why this result has not followed, we learn that the publishers in London do not credit the fact stated to them. Such a peculiar circulation as The Critic enjoys, in addition to its large circulation among the general public, is a novelty in the history of periodicals, and, never having witnessed such an achievement in the same time, they doubt the assertion. Now it is very desirable that some satisfactory proof of its strict verity should be supplied to them, and casting about how this may be best accomplished, the following have suggested themselves as the means in the adoption of which we must ask the aid of our subscribers.

First, we propose to issue a prospectus, containing a list of the booksellers and circulating libraries by whom The Critic is taken, and to this we are desirous of appending a collection of their "opinions of The Critic," similar to those which have from time to time appeared in its columns. We ask those who have not already sent such now to do so. Half-a-dozen lines will be sufficient for the purpose: from the bookseller, a short statement of the repute in which The Critic is held in his locality; from the circulating library-keeper, a certificate that it is indeed adopted by him as his guide in the selection of books for his shelves.

The necessary results of such a collection of testimonials to a fact which we know not how otherwise to prove to the sceptics of the Row, must be sufficiently obvious to our friends to induce those who really feel an interest in the progress of The Critic, to write and transmit half-a-dozen lines.

Other secondary helps we will take the liberty of suggesting hereafter. For the present, the request preferred above is so important that we hope it will be generally complied with in the course of the ensuing week.

LITERARY INTELLIGENCE.

Curious Gift to Robert Burns.—A highly respectable gentleman has handed us a curious relic of Robert Burns. It consists of a small round silver box, of about two inches in diameter, on the lid of which the following characters are inscribed around a representation of Charles I. on horseback, bearing a sword:—"Carolvs : D : Magn : Brit : Fran : et : Hib : Rex." Around the bottom of the box is inscribed:—"Exvrgat : Deus :

Dissipentvr : inimici." And in four lines across the centre is the following :—"X. Relig : Prot : Leg : Aug : Liber : Par. 1642." The box contains a silver coin about the weight of an ounce, which on each side bears inscriptions exactly similar to those on the box, with the exception that the date is 1643. Inside the lid of the box is the following inscription :—"From G. M'Iver to Robert Burns, for auld lang syne, 1791." The history of this curious relic has been traced back a considerable period, and probably some of our readers may be able to give us some information regarding the bestower of this gift. The box and coin together weigh 2 ounces 3 dwts., and the box itself seems to have been used as a coin.—*Glasgow Examiner.*

THORWALDSEN'S STATUE OF BYRON was placed in its permanent position in the library of Trinity College last week. The society has also been enriched by a statue of Bacon, by Weekes, presented by the Rev. Dr. Whewell. It is placed in the ante-chapel, near the screen, and almost under the bust of Wordsworth. The philosopher is represented reclining in his chair. On the pedestal is the following inscription :—

FRANCISCVS BACON
BARO DE VERVLAM STI. ALBANI VICECOMES
SEV NOTIORIBVS TITVLIS
SCIENTIARVM LVMEN FACVNDIÆ LEX
SIC SEDEBAT.
RVI POSTQVAM OMNIA NATVRALIS SAPIENTIÆ
ET CIVILIS ARCANA EVOLVISSET
NATVRÆ DECRETVM EXPLEVIT
COMPOSITA SOLVANTVR.
A.D. MDCXXVI.
ÆTAT LXVI.

—*Cambridge Chronicle.*

CITY OF LONDON SCHOOL.—Mr. David Salomons, late sheriff of London, and the first of the Jewish religion, has invested 1,666*l*, 13s. 4d. Three per Cent. Consols, in trustees, to found an exhibition of 50*l*. a year, during four years, at Oxford, Cambridge, London University, or King's College, for scholars wholly or in part educated at the City of London school. This is the thirteenth endowment of the same kind, since the school was established; and Mr. Wire intimated that another would very shortly make its appearance. The tolerant, liberal, and excellent system on which the establishment, consisting of nearly 500 scholars, is conducted, was warmly eulogised by individuals of every party and persuasion.

We believe we may state, with certainty, that Sir Robert Peel has bestowed the deanery of Westminster upon Dr. Buckland, the well-known professor of geology, and at present a canon of Christ Church, Oxford. The canonry will, in consequence of an arrangement under the ecclesiastical commission, devolve upon the archdeacon of the diocese.

JOURNALISM IN AUSTRIA.—The number of journals at present published in the Austrian States is 159, which, compared with the population, amounting to 31,500,000, give one journal for every 198,110 inhabitants. Of these journals, 40 are political, 12 commercial, and 107 literary and scientific. In Austria, properly so called, there are 29; in the Lombardo-Venetian kingdom, 43; in Hungary, 21; in Bohemia, 17; and in the rest of the Austrian States, 49. Of these journals, 76 are written in German, 53 in Italian, 15 in Sclavonian, 1 in French, and 14 in various other dialects.—*Galignani's Messenger.*

REGISTER OF NEW PUBLICATIONS,

From Nov. 8 to Nov. 15.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded* by letter *will be duly inserted.*

LIST OF NEW BOOKS.

Arabin; or, the Adventures of a Colonist, 12mo. 8s. cl.—Aldine Poets, Vols. XLVII. to LII. "Chaucer," with Life by Sir Harris Nicolas, 6 vols. 12m. 1*l*. 10s. cl.

Brock's Doctrines of the Church, fc. 8vo. 1s. 6d. cl.—Ball Room Preceptor and Polka Guide, 32mo. 1s. cl.—Bell's History of Gibraltar, fc. 8vo. 5s. cl.—Becker's German Grammar, 2nd edit. 12mo. 6s. cl.

Chambers's Educational Course, "School Atlas," 4to. 10s. 6d. cl.—Child's Illuminated Prayer Book, 9 plates, 3rd edit. fc. 8vo. 5s. cl.—Cicero de Natura Deorum, 12mo. 2s. cl.—Cicero (Dr. Franklin's Translation of) 12mo. 3s. cl.—Clement's Customs Guide for 1845 and 1846, post 8vo. 6s. cl.

Dick's Philosophy of Religion, 4th edit. 12mo. 8s. cl.—Drew's (Rev. G. S.) Eight Sermons, with an Appendix, 8vo. 6s. bds.—Doctrine of the Russian Church, translated by Rev. R. W. Blackmore, B.A. 8vo. 10s. 6d. cl.—Dante's Lyrical Poems, translated by Charles Lyell, M.A. fc. 8vo. 4s. 6d. cl.—Dick's (Dr.) Practical Astronomer, 100 engravings, 12mo. 10s. 6d. cl.
Ecclesiastical Almanac, 1846, 12mo. 1s. sd.

Glimpses of the Wonderful for 1846, 32 illustrations, square 16mo. 5s. cl.—Guicciardini's Maxims, translated by Emma Martin, square fc. 8vo. 7s. bds.—Guide to the Foreign and Colonial Posts, by F. Herbert, G.P.O. 8vo. 7s. 6d, cl.—Goldsmith's Poetical Works Illustrated, edited by Bolton Corney, esq. crown 8vo. 1*l*. 1s. cl. 1*l*. 16s. mor.

Hastings (Rev. J. H.) Parochial Sermons, from Advent to Trinity Sunday, 8vo. 12s. cloth.—Henry's Communicant's Companion, with Introductory Essay, by J. Brown, D.D. fc. 8vo. 2s. cl.—Home Amusements, by Peter Puzzlewell, esq. sq. 16mo. 2s. 6d. cl.

Illuminated Calendar for 1846, royal 8vo. 2*l*. 2s. bd.
Jesuits as they Were and Are, trans. from the German, by Joanna S. Carr, fc. 8vo. 3s. 6d. cl.

Keane's (David) Courts of Request, 3rd edit. 12mo. 4s. bds.—Key to Fraser's Walkinghame's Arithmetic, new edit. 12mo. 3s. cl.

Lockhart's Life of Scott, People's Edition, royal 8vo. 10s. cl. 9s. sd.—Loudon's (Mrs.) Light of Mental Science, 12mo. 3s. cl.

Malan's (Dr. Cæsar) Sketches for Youth, post 8vo. 4s. 6d. cl.—Meadows's (Kenny) Etchings to the Illustrated Shakspere, royal 8vo. 10s. 6d. cl.—Memoirs of an Umbrella, with portrait of Author, 4to. 7s. cl.

New, L. U. K. "The Musical Guide for Singing and the Pianoforte," 6d. sd.—Notes of the Wandering Jew, on the Jesuits and their Opponents, 18mo. 2s. cl.

Old Man's Rambles, 3rd edit. 18mo. 5s. cl.—Original Sketches in Poetry, by E. L. B. 12mo. 6s. cl.

Pinnock's Geography made Easy, the 16th edit. revised and brought to 1845, 18mo. 1s. 6d. cl.—Patterns of Inlaid Tiles from Churches in the Diocese of Oxford, by W. A. Church, 4to. 5s. sd.—Picciola; or, the Prison Flower, by H. B. Saintiné, imp. 32mo. 1s. 6d. sd. (Clarke.)—Practical Mechanic and Engineer's Magazine, vol. IV. 4to. 10s. 6d. cl.—Προγυμνασματα, by Rev. Henry Alford, 8vo. 6s. cl.

Railway Almanack and Directory for 1846, 8vo. 2s. 6d. cl.—Railway Shareholder's Pocket-book, 1846, 2s. 6d. roan tuck.—Random Rhymes, by Alpha, 12mo. 3s. cl.—Rodwell's Hand-books of Music, "The Flute and Cornet-à-Piston," 1s. each, sd.—Revealed Truth Vindicated, by James Apperly, royal 12mo. 5s. 6d. cl.

Stephen's (H. J.) New Commentary on the Laws of England, Vol. IV. 8vo. 1*l*. 2s. bds.—Student's Help, by M. Guido Sorelli, post 8vo. 5s. cl.—Story Book of the Seasons, "Summer," by Mrs. H. Myrtle, square, 3s. 6d. plain, 4s. 6d. col. cl.

Thoughts on the Lord's Prayer, by W. W. Bradshaw, D.C.L. 12mo. 2s. 6d. cl.

Veritable History of Mr. Batchelor Butterfly, by the author of Mr. Oldbuck, oblong, 5s. cl.

Windsor in the Olden Time, by John Houghton, new edit. 8vo. 6s. cl.—Waverley Novels, People's Edition, Vol. IV. royal 8vo. 10s. cl. 9s. sd.—Willie Fraser and other Tales, by Mrs. Lee, 6 illustrations, 18mo. 2s. 6d. cl.

Youth's Key to the Bible, by Rev. Thomas Simpson, 18mo. 2s. cl.

BOOKS WANTED TO PURCHASE.

No charge is made for insertion in this list. Apply to the Publisher of THE CRITIC, stating prices.

Hamilton's (William of Bangour) Poems on several occasions; with a short Memoir of the Author by David Rae Lord Eskgrove, with two portraits by Sir Robert Strange, in boards, 1 vol. 8vo. 1760. Price that will be given, 3s. 6d. to 5s.

Poems, Narrative and Lyrical, by William Motherwell, Glasgow, 1832. A large-paper copy, 4to. boards, 12s. to 15s.

The Works of Robert Ferguson, to which is prefixed a sketch of the Author's life, 1 vol. 8vo. boards. London, 1807, 4s. 6d. to 5s. 6d.

Vols. I. V. VI. and VIII. of Allan Cunningham's Burns, 8 vols. 1834, 1s. to 2s. 6d. per vol. boards.

The Chemist, first series, Jan. 1849.

GLEANINGS,

ORIGINAL AND SELECT.

THE ANTIQUARIAN DISCOVERY AT LEWES.

On the 4th instant, as the workmen were employed in excavating for the railway in the parish of Southover, amongst the ruins of the ancient priory of St. Pancras, they discovered in what may now without doubt be fixed on as the site of the chapter-house of this once magnificent monastery, a leaden cist or coffer containing bones, and which, on being carefully removed, was found to have the name of "Gundrada" inscribed on it; and shortly afterwards another similar cist was found, having the name of "Wilhelm" inscribed on it. Most fortunately there were parties at hand who prevented any damage being done to these interesting relics. The cists were lying about two feet and a half below the surface, in two square compartments, formed apparently by the foundation walls or underfloor of the chapter-house. They are about three feet in length, a foot wide, and ten inches deep, and in a good state of preservation, with the exception of the bottoms, which had mouldered away. As soon as the names had been deciphered, it was felt that a most important and interesting discovery had been made, and that the bones must be the remains of Gundreda, fifth daughter of William the Conqueror, and of William de Warren, her husband, who were, according to the best authorities, interred in the chapter-house of the priory. William de Warren, who is described as having descended from an ancient family in

Normandy, and having married Gundred, the fifth daughter of the Conqueror, accompanied his father-in-law in his victorious expedition to England, and was more richly rewarded than any other nobleman in the suite of the Conqueror. His possessions included the borough and rape of Lewes; he rebuilt and enlarged the castle, and about 1070, accompanied by his wife, made a pilgrimage to Rome, and on this journey determined to found a priory here of the Cluniac order. This was shortly afterwards commenced, and the splendid edifice of which we have now only the crumbling remains, was erected. In the year 1085, Gundred died in childbed at Castle Acre, in Norfolk, and her body was brought to Lewes and buried in the chapter-house, and, to quote from Horsfield's *History of Lewes*,—

"The sculptured slab of black marble which once covered her remains in the monastery was discovered in the year 1775 by Dr. Clarke of Buxted, in the Shirley chancel of Isfield church. It formed part of a burial monument of Mr. Edward Shirley, by whose father probably it was preserved at the demolition of the priory, and conveyed by his directions to Isfield. Dr. Clarke obtained permission of the representatives of the Shirley family to remove the stone from the chancel where it had been so long preserved. It was the intention to replace the stone over the spot where the body of Gundred had originally been deposited; but as the very site of the chapter-house could not with certainty be ascertained, the stone was placed in Southover church, that being the nearest ascertainable site of its original station."

William de Warren died on the 24th of June, 1088, and was, according to the register of Lewes Priory, also buried in the chapter-house. The magnificent priory was destroyed with the other monasteries by Henry VIII., and so complete was the destruction, that, as the Rev. Mr. Horsfield observed, "the very site of the chapter-house could not be ascertained." This point, however, the discovery of Tuesday will clear up.

The cists, with their contents, have been removed to the church of Southover, curiously enough, to the very spot where the stone above referred to is deposited. The bones have been arranged by a medical gentleman; and the public are allowed to inspect them under some very proper restrictions. Most fortunately a gentleman of Lewes made an agreement with the contractors of the railway company, that all relics, &c., that might be discovered should be given up to him, and we can assure our readers that in his hands the greatest care will be taken for the preservation and safe repose of these interesting remains; in fact, a project has been already started for the purpose, which we shall notice more fully next week. A skeleton has been discovered near the spot, most probably that of an ecclesiastic; the arms were crossed on the breast, and the body had been buried in its clothes, of which a portion of the cowl, shoes, &c., are in fine preservation. It was lying at full length, and had apparently been enclosed with stones. Other skeletons were late on Saturday afternoon being dug out, and as the works proceed further discoveries may be looked for.

Before we conclude we would say a word or two as to the size of the cists. It is obvious that the bodies were not originally buried in them; but the opinion is that the skeletons must have been exhumed after they had been in the ground some long period, and the bones carefully enclosed in these leaden coffers, and again let to repose until, after a lapse of centuries, disturbed by the pickaxe of the ruthless railway excavator.

We subjoin a report with which we have been favoured by a medical gentleman who examined the remains:—

Mr. Pickford, of Brighton, surgeon, and Mr. Murrell, another medical gentleman, being on the spot, examined the bones. They found that they were of a firm texture—indeed, hard, solid bones, and in a high state of preservation, especially those of Gundreda. Several of the bones of Earl de Warren were missing, but those of Gundreda were as nearly perfect as possible; and, judging from the length of them, the bodies must have been considerably above the middle stature. The details of the length of the bones upon which this is founded are—

Gundreda.—Femur, or thigh bone, 13½ inches; tibia, or leg bone, 15 inches; humerus, or upper arm bone, 12 inches; probable height, about 5 feet 8 inches.

William.—Femur, 19½ inches; tibia, 15½ inches; humerus, 12½ inches; circumference of the shaft of the femur at its middle, 4½ inches; probable height, about 6 feet 1 or two inches.

The following is the epitaph on the tomb in the vestry of St. John's Church, Southover, formerly covering the remains lately disinterred, as given, with a literal prose translation, in *Parry's Coast of Sussex*, 1833. (The diphthongs are omitted, as was frequent in old Latin):—

"Stirps, Gundreda ducum, decus evi, nobile germen,
Intulit ecclesiis Anglorum balsama morum.
Martha fuit miseris; fuit ex pietate Maria.
Pars obiit Marthe, superest pars magna Marie.
O! pie Pancrate, testis pietatis et equi,
Te fecit heredem; tu, clemens, suscepe matrem.
Sexta calendarum Iunii lux obvia carnis
Fregit alabastrum."

"Gundred of ducal race, the ornament of her age, a noble bud, brought into the churches of England the balsam of morals. She was a Martha to the wretched: she was, for piety, a Mary. The part of Martha has died; the superior part of Mary survives. O! holy Pancras, witness of her piety and righteousness, she made thee her heir; do thou, benign, receive a mother. The hostile dawn of the sixth kalend of June broke the alabaster of flesh."

There is some confusion in the epithets. Active charity, which is what is here meant, being "above all things," will never die.

It is to be hoped that, now these remains have been verified, they will be decently recommitted to the earth, and not placed before "plate glass!" as alluded to in the papers.

PARIS ACADEMY OF SCIENCES, Oct. 20.—M. Laignel directed attention to the result of his system of railroad curves, which he says had been found valuable on the railroad from Baltimore (U. S.) to the Ohio. M. Majendie, as one of the members of a commission lately appointed by the Minister of War to report on the phenomena of digestion in the horse, read a paper on the subject. A note from M. Guyot was read, on the goître. This gentleman attributes the disease to the short period during which the sun exercises its benign influence on the localities in which it is most observed. He does not appear to attach much importance to the opinion that it is produced by the drinking of the water from melted snow. As an argument in favour of his opinion, M. Guyot mentions the existence of numerous cases of goître in the city of Lyons. This, he says, arises from the fact of there being a mountain which runs from the north to the south, and deprives the city of the rays of the rising sun. M. Boussingault stated that he had seen a great number of cases of goître on the Andes, in localities fully exposed to the sun, and where the air is very dry.

PRUSSIAN HEROINE.—We find in the Prussian papers some particulars of interest, relating to a heroine of a remarkable description—Grace Darling enlarged into gigantic proportions—residing in the town of Pillau. This woman, Katherine Kleinfeldt, is the widow of a seaman, with whom, for upwards of twenty years, she made the long sea-voyages; and, since his death, she has devoted her life, for his memory's sake, to the noble and perilous task of carrying aid to the drowning. Whenever a storm arises, by day or night, Katherine Kleinfeldt embarks in her boat, and quits the harbour in search of shipwrecks. At the age of forty-seven she has already rescued upwards of three hundred individuals from certain death. The population of Pillau venerate her as something holy, and the seamen look upon her as their guardian angel. All heads are uncovered as she passes along the street. The Prussian and several other governments have sent her their medals of Civil Merit; and the municipality of Pillau has conferred on her the freedom of the town. Katherine is of athletic form and strength,—of masculine physiognomy, softened only by its look of gentleness and goodness,—and better furnished, in all save courage and humanity, for such wild scenes and high deeds as make their common fame, than the frail girl who has for years filled a grave far from the scene of her generous daring in the Fern Islands.

ASTOUNDING, IF TRUE.—Professor Bronson states that if a drop of human blood be subjected to examination by the hydrogen microscope, and magnified some 20,000,000 of times, all the species of animals now existing on the earth, or that have existed during the different stages of creation for thousands of years past, will there be discovered. In the blood of a healthy person all the animalculæ are quiet and peaceable; but in the blood of a diseased person they are furious, raging, and preying upon each other. That man contains within himself all the principles of the universe; also, that, if a dead cat be thrown into a pool of stagnant water, and allowed to dissolve there, a drop of water taken from any part of the pool, and as above, will show every species of animal of the cat kind that has ever existed on the earth, raging and destroying one another; the bodies of all the lower animals being thus made of animalculæ similar to themselves, and the body of man being compounded of all that is below in the scale of creation.—*Louisville Journal.*

ADVERTISEMENTS.

The following is the moderate scale of charges for Advertisements adopted by THE CRITIC:—

For 6 lines and under..... 5s.
For every three lines above ..... 1s.

The volumes of THE CRITIC *neatly half-bound, as completed, for 4s. 6d. each, if the numbers be forwarded to the office. The stamped edition may be sent by post with the ends open, and a letter of advice should contain directions how it is to be returned.*

A portfolio, on a novel and convenient plan, for preserving the numbers of the current volume of THE CRITIC *may be had at the office, or by order, of any bookseller in the country, price 4s. 6d.*

THE CRITIC *may also be had in monthly parts, sewed in a wrappers price 1s. 6d. each.*

THE CRITIC,
And Journal of Literature.

SATURDAY, NOVEMBER 22, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

THE MORNING MAIL.

THE Share List has of course been begun afresh, and only those registered who have transmitted the statutory deposit of *one shilling* per share towards preliminary expenses.

But already, as it will be seen, a great number of these have been transmitted.

As promised, when the plan was adopted, we now publish a statement of account, and shall continue to do so, from time to time, for the satisfaction of the Shareholders.

Considering the very depressed condition of the money market, and the reaction from excessive confidence to an equally irrational suspicion, the favour which the *Morning Mail* is finding is extraordinary, and shews the opinion entertained of it by the judicious. The state of the market will, however, make its completion a work of much longer time than it would have been in ordinary circumstances. But that is of little importance; a great enterprise like this could not well be carried out with haste.

THE PUBLISHER OF THE CRITIC
In Account with the *Morning Mail*.

RECEIPTS.

By deposit of 1s. per share on 224 shares subscribed	£11	4	0

PAYMENTS.

By seven advertisements in the daily papers, &c. at 6s.—2*l.* 2s.

Those who have sent applications, without the deposits, are requested to forward the latter immediately.

JOURNAL OF ENGLISH LITERATURE.

HISTORY.

The Fall of the Jesuits in the Eighteenth Century. By Count ALEXIS DE SAINT-PRIEST. 8vo. London, 1845. John Murray.

THIS volume forms one of Mr. MURRAY'S cheap series, "The Home and Colonial Library." From the cost and pains bestowed on advertising and otherwise announcing it, we were led to expect a book of unusual excellence, and our anticipations were the more lively, because there exists in our literature a remarkable deficiency of information on this important subject, which we hoped this book would satisfactorily have supplied. We were destined, however, to disappointment. If all that we required of the historian were impartiality, and a succinct and accurate statement of events, then should we have no occasion for complaint; but the perfection of history embraces other requirements, and among them one which this author has utterly failed to fulfil—a graphic and truthful portraiture of the scenes throughout the action, since it is chiefly by this that the memory apprehends and retains the lesson which it is the chief purpose of history to afford.

Living in a Protestant state, we have felt none of the inconveniences experienced in those countries where the Jesuitical Catholicism prevails. Indeed so exempt have we been from the evils it engenders that the simple history of the Order is popularly unknown amongst us; the term "Jesuitical," it is true, has found its way into our language to express that which is insidious, false, and crafty, but it is a word of foreign, not of home growth, the result of experiences which date their origin from other lands. As this ignorance is so apparent, we wonder that the necessity for prefacing his history of the Fall of the Jesuits with a condensed summary of the rise, progress, and dissemination of the order, did not occur to the writer, when from France he addressed himself to the English public. A complete history of this powerful and skilfully-organized body, from its foundation by IGNATIUS LOYOLA, to their suppression, in 1773, by Pope CLEMENT XIV. is still a desideratum, and would be an addition to our literature at once useful to the public, and, doubtless, profitable to whomsoever may undertake it.

That the Institution of the Jesuits has been useful as well as pernicious to society is undeniable. The unquenchable zeal and courage, the self-denial and noble disinterestedness of purpose, which distinguished its early missionaries, in carrying the message of salvation into the heart of the remotest heathen countries, do honour to humanity, and reflect eternal credit upon the Order. To no religious body are the *sciences* so deeply indebted as to this. Wherever they penetrated, they were active, observant, and inquiring; they have extended immensely our geographical and botanical knowledge, and our acquaintance with the history, customs, language, and peculiarities of the nations among whom they lived. In civilized countries their presence has been less fruitful of good. Attaching themselves to the nobles by uniting their interests together; subtle, intriguing, and fond of power, they have successively taken root in and been expelled from all the great continental states. Nor can we be surprised at this, when we learn, upon the testimony of our author (who is any thing but unfriendly to the society), that everywhere "the Jesuits were the intendants of the husbands, the instructors of the children, the directors of the wives; at every table, and in all the *conversazioni*, a Jesuit exercised a despotic authority." This was not for ever to be tolerated, and a private slight endured from the noble family of the TAVORAS by SEBASTIAN CARVALHO, afterwards Marquis de POMBAL and Prime Minister of Portugal, was the first overt cause of their overthrow. POMBAL hated thereafter the aristocracy, and consequently the Jesuits with whom they were leagued. His efforts were seconded in France by the Duke de CHOISEUL, then at the head of the French Government, and by CHARLES III. of Spain; both of whom were jealous of the influence and authority secretly exercised by the Society. With great difficulty, and only after menaces, these wrung from GANGANELLI (then holding the pontificate as CLEMENT XIV.), on the 21st of July, 1773, the famous brief "*Dominus ac Redemptor*," which dissolved the order; and it was not until 1814 that PIUS VII. relieved them from their degradation by revoking the brief of GANGANELLI and re-establishing the Society. Recent events in Switzerland, and the newspaper complaints in France, shew that the Order has profited little by its punishment—that it is still the same in spirit, though less obtrusive in form; and so probably will it be until the Catholic states shall a second time awake from their supineness, and, by an united effort, again shake off the powerful incubus which has crept upon them.

For his diligence in collecting material, and the pains he has taken in sifting the statements of Jesuit writers respecting the overthrow of their Society, opposing to them the testimony of state and authenticated documents, whereby the truth has been elicited, not a little praise is due to the author. But, on the other hand, we have seldom read a book in which the facts are thrown together in so bald and unpicturesque a manner as in this volume. The force and colouring of nature are wanting to give reality to the incidents as they pass before us, hence there is scarcely any thing for extract available. The following account of the death of GANGANELLI, it is presumed of poison, after dissolving the Society of Jesus, will, perhaps, be read with interest:—

Clement was astonished at the success of his boldness, which quite intoxicated him; his humour had never been more gay, and his health even regained its vigour. Whatever discontent they felt, the nobles and the sacred college itself remained silent spectators of the event. The Trasteverini, whose anger Ganganelli feared, hailed it with enthusiasm, and a timely reduction in the price of some provisions had prepared the way for this reception of the measure. The prompt restitution of Avignon by France, and of Benevento, by Naples, crowned the popularity of the pope. An attempt at revolt, fomented by the conquered party, miscarried, and the whole of Rome appeared to have

forgotten the brief *Dominus ac Redemptor*. Ganganelli was delighted; the slightest indications betrayed his joy, which, like his character, was *naïve* and infantine. One day, followed by the sacred college and all the Roman prelates, he went on horseback to the church of Minerva. Suddenly a heavy rain came on; *Porporati, Monsignori*, all vanished, and the light-horse themselves sought shelter: the pope, left alone, and laughing at the terrors of his escort, continued his way bravely through the storm. The people were delighted at this sight, and loud in their applause. These were not the feats of an invalid, and the bad health which the friends of the Jesuits represent Clement as suffering, was not at that time perceptible. Excepting a cutaneous eruption, which relieved more than it harmed him, Clement XIV. had never experienced any infirmity; and we may believe the Abbé Georgel, who tells us that Ganganelli's strong constitution seemed to promise him a long career. Nevertheless, in spite of appearances, secret rumours were afloat. At the very time that the pope was seen in the public ceremonies, streets, and churches, in short everywhere, in the enjoyment of health and strength, the rumour of his death was widely circulated: the pythoness of Valentano announced it with a characteristic obstinacy. These reports were premature; there was too much haste used in preparing the public mind for the event. All on a sudden, at the approach of the holy week in the year 1774, these rumours seemed to be realized. The pope was suddenly confined to his palace, and refused to grant any audience; even the diplomatic body could not obtain access to him. At length, on the 17th of August, the ministers of the great powers were admitted to his presence. The appearance of the pope struck them with surprise; a mere skeleton was before them. Clement marked their astonishment, and, guessing the cause, he declared that his health had never been better. The spectators welcomed this happy presage only from respect; they saw enough to convince them of the truth. From that day, the members of the diplomatic body intimated to their respective courts the prospect of an approaching conclave. How, it is natural to ask, had Clement passed in so short a time from strength to decrepitude—from life to death? After eight months of perfect health, the pope, on rising one day from table, felt an internal shock, followed by great cold. He became alarmed, but by degrees he recovered from his fright, and attributed the sudden sensation he had felt to indigestion. All at once his confidential attendants were struck by alarming symptoms: the voice of the pope, which had before been full and sonorous, was quite lost in a singular hoarseness; an inflammation in his throat compelled him to keep his mouth constantly open; vomitings, and feebleness in his limbs rendered it impossible for him to continue his usual long walks; which he always took without fatigue; and his sleep, which was until then habitually deep, was incessantly interrupted by sharp pains. At length he could no longer get any repose: an entire prostration of strength, the apparent forerunner of dissolution, succeeded suddenly to a degree of even youthful agility and vigour; and the melancholy conviction of an attempt on his life, which he had always feared, soon seized upon Clement, and rendered him strange even to his own eyes. His character changed as by magic; the equability of his temper gave way to caprice, his gentleness to passion, and his naturally easy confidence to continual distrust and suspicion. Poniards and poison were incessantly before his eyes. Sometimes, under the conviction that he had been poisoned, he increased his malady by inefficacious antidotes; at other moments, with the hope of escaping an evil which he imagined not accomplished, he would feed himself with heating dishes, ill-prepared by his own hands. His blood became corrupted; the close atmosphere of his apartments, which he would not quit, aggravated the effects of an unwholesome diet. In this disorder of his physical system his moral strength gave way in its turn: there remained no longer any trace of Ganganelli, and his reason even became disordered. He was haunted by phantoms in his sleep; in the silence of the night he started up continually, as dreams of horror excited his imagination, and prostrated himself before a little image of the Madonna, which he had unfastened from his breviary, and before which for forty years two wax tapers had been kept burning night and day. Prostrated thus, in the horrible conviction of his eternal damnation, he exclaimed, while his voice was choked with sobbing, "Mercy! mercy! I have been compelled. *Compulsus feci? compulsus feci.*" He did not, however, make any retraction in writing, as has been erroneously affirmed by a writer attached to the society.

At length, after upwards of six months of torture, Clement saw that his end was approaching. At this moment his reason resumed its sway,—his mind rose superior to his infirmities. In the clear possession of his intellect, and tasting the full cup of bitterness and suffering, he approached his end. He desired to speak; a monk whispered a few words in his ear; immediately the words died away upon his lips, and life departed from his body. This took place on September 22, 1774.

The news of the Pope's decease caused little sensation; and the Roman people heard it with indifference. His enemies gave an indecent and unblushing expression to their joy, conveyed in the most infamous satires, which they themselves carried from palace to palace. This conduct was calculated to give rise to strange conjectures, and suspicions were indeed soon excited. The sight of Ganganelli's dead body was quite sufficient to produce this effect; it did not even retain those lineaments which nature leaves to our remains at the moment when death seizes upon them. Several days previous to his death, his bones exfoliated and withered, to use the forcible expression of Caraccioli, like a tree, which, struck at its root, dies away and sheds its bark. The scientific men who were called in to embalm the body, found the features livid, the lips black, the abdomen inflated, the limbs emaciated and covered with violet spots. The size of the heart was much diminished, and all the muscles detached and decomposed in the spine. They filled the body with perfumes and aromatic substances, but nothing could dispel the mephitic exhalations. The entrails burst the vessel in which they were deposited; and when his pontifical robes were taken from his body, a great portion of the skin adhered to them. The hair of his head remained entire upon the velvet pillow upon which it rested, and with the slightest friction all his nails fell off. But enough of this hideous and sickening subject. The truth was too evident to admit of being overlooked from private considerations: no one doubted at the time that Ganganelli had met with a violent death. The physicians said little, but the funeral obsequies disclosed sufficient proof of the fact, and all Rome declared that Clement XIV. had perished by the *acqua tofana* of Peruggia.

As a simple, straightforward narrative of the causes which operated in bringing to pass the dissolution of the Order of Jesus we can commend this book, but for little more.

VOYAGES AND TRAVELS.

Adventures in the Pacific, with Observations on the Natural Productions, Manners, and Customs of the Natives of the various Islands; together with Remarks on Missionaries, British, and other Residents, &c. By JOHN COULTER, M.D. 8vo. pp. 290. Dublin, 1845. Curry and Co.

DR. COULTER sailed from London in 1832, as surgeon on board the *Stratford*, and passing round Cape Horn, touched and lay at anchor at many of the ports on the west coasts of both South and North America, stretching off westerly among the islands in the North and South Pacific, returning thence to the Polynesian group. At Tahiti the ship was fitted out for home; sailing to Eimeo, they took on board Mr. Armitage and his family, a missionary who had resided many years on the islands, and they arrived in London in 1836.

The volume before us is a selection of the most striking scenes and occurrences of this protracted voyage, written without the pretension to technical knowledge which too often obscures the works of scientific men. Dr. COULTER has addressed the public in the language of the people; the phraseology of common parlance has been substituted for the hard and unintelligible names of the botanist and the naturalist, and the result is a volume abounding in agreeable reading, yet without the sacrifice of a particle of information; knowledge is conveyed without the formulas of knowledge; a child might listen with delight to the narrative, and comprehend every sentence; and, but for the title-page, it would never have been suspected that an M.D. had penned pages of such pure English.

But this is not all of Dr. COULTER's merit. His descriptions of places and persons are full of colour, and drawn with a bold, effective touch. Moreover, he has an instinctive perception of what is likely to interest his readers, shunning the too common error of tourists, who are so apt to consider that matters which at the moment most affected themselves will be equally attractive in the telling, than which there cannot be a more false conclusion; for the small troubles of the traveller are as vexing as the greater ones, and a bad dinner, or none, will often ruffle the temper more than a serious difficulty or danger; but at the one the reader laughs, while he sympathizes with the other. A striking instance of this besetting sin of tourists is afforded in the *Vacation Rambles* of Mr. Serjeant TALFOURD.

Dr. COULTER's narrative is rather a selection from his adventures than a journal of them. He opens with a description

of the ship *Stratford*, and remarks upon the discomforts endured before the departure of a vessel from the constant coming and going of visitors. He cannot understand how any person can call the sea monotonous.

The sky is monotonous, and has not that constant variety, as in higher latitudes. It is generally a clear blue, getting a duskier hue as you go on, with an occasional light, small cloud; but the water affords charming variety—it becomes of a deep blue colour. You can look deep into it, and then you will perceive that it teems with life. You will see an occasional flying-fish endeavouring to escape from the dolphin; thousands of bonitos and albicon around, and accompanying the ship; whales of every kind blowing the water from their spout-holes, and ploughing along, occasionally breaching clear out of water, and exhibiting a sized fish that any Waltonian might well stare at!

Hundreds of miles from any land, you will often meet with a turtle floating on the water, and a few birds in the air flying round the ship, such as the Cape pigeon, a beautiful white bird, with a few black spots; the Tropic bird, about the pigeon size, of a pure white, with two long feathers in the tail, and a red bill. Sailors generally term this bird the "boatswain," as it sails over and around the ship, looking well at it, apparently to see if all is right and shipshape.

At the Cape de Verd Islands they had an interview with a great man.

The governor was, of course, a Portuguese officer. His costume consisted of an old faded military blue jacket, with old gold expaulettes, duck trousers, canvass shoes, but no stockings. In spite of this costume, his manners were gentlemanly. He received us kindly, and gave us a lunch of preserved meats, fruit, &c. His lady had neither shoe nor stocking on. His excellency was annoyed with toothach, and was delighted at my arrival. With an old instrument which he had, I took it out, to his great satisfaction, and the amusement of his children, which were not a few.

They landed on Juan Fernandez, famous as the island of Robinson Crusoe. Here is the picture of it:

After leaving the beach, you arrive at a large strip of level land, the remains of the houses, or rather huts, in a state of ruins, were scattered about on either side; also the remains of an old jail, or lock-up. On passing the huts this level land is found to extend to twenty or thirty acres. There were vast quantities of rose-bushes in full bloom, with immense beds of mint, so tall that you could hide in it without being discovered. The fragrance of this valley was enchanting to us. The small hills surrounding it, thickly covered with middling-sized timber in rich foliage, and a small rippling stream running through it, all added to its beauty. In strolling up the hills, we soon discovered that the smaller timber had a very loose hold in the earth, which was mostly red mould, as some of our men, in laying hold of them, to assist themselves up, came back accompanied by the tree

The entire island is a succession of small hills and valleys, each with its little stream; and those rivulets often uniting, came dashing over the cliffs with great force. On it we discovered some bullocks, goats, and dogs, all in good condition, but very wild, dashing through the thickets like deer when disturbed.

At Charles's Island we are favoured with the history of a modern Crusoe, who has given his name to a locality called "Pat's Landing." It is so extraordinary a tale of adventure that we must extract it entire, though somewhat long.

His history, as far as is known, was that of a very daring, reckless, and strange being. He belonged to several ships on the coast, and was in many of the revolutionary rows, so common in Chili, Peru, Colombia, &c. At last he formed one of the crew of a whale-ship which was cruising round those islands, the captain of her having a great deal of trouble with him, he having formed several plots to mutiny, and take the ship, there being no feeling of security as long as he was on board, he was landed on the southern extremity of Albemarl Island.

Here water being extremely scarce, he was nearly famishing, and would have died from the want of it, but that he squeezed the juice out of the prickly pear and cabbage-tree. This was a substitute, which saved his life. As to food, he had plenty of doves and terapin, or the land tortoise, which is excellent. After some months the captain of an American whale-ship humanely took him off, and landed him, at his own request, on Charles's Island, with which he was familiar, and which he knew possessed plenty of fine water from springs.

He was landed on the beach in question, from which there is a complete and naturally beautiful avenue up to the mountains; and nearly at the summit of one of them there is a spot of excellent land, of four or five acres in extent, nearly surrounded with high hills; in fact, there is only one pass into it. On this level he erected his house or hut, and had a great deal of it under cultivation; so much so that he had a quantity of vegetables, such as sweet potatoes, pumpkins, Indian corn, melons, with plenty of hogs and poultry; those he sold for years to the shipping. He also dug a well on his farm, and though in high land, at a moderate depth obtained a good supply of fine water.

I understood his chief dress consisted of a seal-skin cap over his red bushy hair, a red flannel shirt, and pair of flannel drawers, with seal-skin mocasins on his feet. He never went without his gun, particularly when he had those runaways with him; neither did he sleep two nights in the same place. He knew every cave and secret spot on the island, and occasionally used them for dormitories. Now, it is a strange circumstance, and yet a fact, that this man, whenever those runaway sailors resided on the island, would enforce subjection, and actually compelled them to work his farm for him. They were soon glad to separate from him by joining, on any terms, the first ship that came in.

He was often greatly blamed (though I believe unjustly), for inducing sailors to leave their ships, and in one case he suffered for it. An American whale-ship put in there, and two of the crew, who had been severely treated on board, took to the bush, and Pat was blamed for harbouring them. Captain Bunker, of Nantucket, who commanded the ship, invited him on board, and in ignorance of what had occurred, or the men leaving, he accepted the invitation.

As soon as he came on board, he was tied up and severely flogged, then handcuffed and landed on the beach to die or live as he might, with his hands fast, and no one to loose them. It was a murdering, brutal act of this ruffianly captain. The ship sailed the next day, and left him to his fate.

Pat, however, was not to die in this manner; for in this seal-skin cap, which was, fortunately for him, not removed from his head, he had two files, one of which, with both hands, he drove firmly into a tree; he then patiently and perseveringly commenced and continued the operation of filing through the handcuffs, until he freed himself. He then for ever vowed vengeance against the captain who treated him so, if ever he should be in his power.

He had an iron frame, a strong and well-cultivated mind. He had received a good education in his youth; this, to a character like him, made him doubly mischievous. A few months afterwards, as he was round at the other side of the island, after seal, in his boat, which he called the *Black Prince*, he fell in with an English whale-ship. From the crew he learned that he would soon have visitors, as two or three American ships were to call at the island. One of them was that on board of which he had been so barbarously treated. He had at this time four men with him.

On hearing this news, he pulled directly round to his landing-place. In a few days after, the expected ships arrived. He determined not to appear, but watch them well, and keep his men out of sight. The three captains, one of whom was Bunker, pulled on shore, and in a bottle, made fast to a pole on the beach, they found a note written by Pat, stating that, from the bad treatment he often received, he had left the island for ever, and that whoever would arrive first would find plenty of every thing in his garden. I may here remark that this method generally forms a South Sea post-office, where one ship leaves a memorandum for the next.

The skippers concluded that all was right, and that there was no one on the island; and after walking about a little, they agreed to come on shore the next day to have a pic nic dinner, and to send their men up and plunder the garden. Pat was concealed so near that he heard all, and made his arrangements accordingly. Next day they came on shore, and brought their cold meat and wines away up the valley to a pleasant green plot, where they had a view of the ships, but not of the landing-place they came to. They had four boats on shore, hauled well up on the beach. They enjoyed themselves for hours, when one went up to an eminence near, to have a look round. He no sooner got a view of the beach than he came back like a madman, and told them their boats were knocked about, and to come down at once.

Those tyrannical rascals were now complete cowards; they left all and ran as quick as they could down to the beach, where they found the four boats, oars, and all in pieces; also a large slip of paper, with "remember the handcuffs" on it; also, "Bunker, I'll have you yet." There was an instant signal made to the ships to send a boat; fortunately for them, it was instantly answered. They were scarcely seated and shoved off, when a bullet from a gun on shore whistled among them and through the boat. In another instant three shots were fired after them; but they were safe, and out of reach of the guns. Pat then showed himself on the beach, gun in hand, and waved his cap over his head in triumph. No one came on shore to pick up the fragments. Those ships got under weigh in the evening, and disappeared. So much for barbarity on one side, and revenge on the other.

This wild and strange man lived, I believe, about eighteen or twenty years on this island, but did not die here. He went in his open boat, "the Black Prince," more than once, in on the coast a distance of six hundred miles; but the water is always smooth here, so it is not to be wondered at.

The last time he went was to Guyaquil, and thinking he might as well have a queen for his beautiful island, of which he was the sole and daring monarch, after, I suppose, telling all manner of inducing stories, there was the wife of the Spaniard who agreed to accompany him. She was actually in the boat, and about to shove off, when the Spaniard jumped in to bring back his wife. A struggle ensued; "Pat" was stabbed to the heart, and fell dead in the bottom of his "Black Prince."

Such was the termination of the career of this extraordinary man. He is reported to have been always warm-hearted and kind to those who were at all friendly to him, but implacably revengeful to those who ill-used or insulted him.

The doctor remarks that there is a peculiarity of mind which induces men voluntarily to take up their abode on uninhabited islands. He says, "There is scarcelyan uninhabited island in those seas (the Pacific) on which there is a fertile spot of earth with a supply of fresh water, that has not its Robinson Crusoe on it."

The whalers are warmly recommended as most interesting ships for travellers who love adventure. Dr. COULTER relates his first capture of one of these monsters of the deep, but we must refer the reader to his pages for the stirring scene.

At Chatham Island the doctor undertook to make an excursion into the interior alone, and he notes a curious bit of natural history. The hawks were not afraid of him.

There were a great many splendid hawks hovering about; they were frequently some annoyance to me: when I killed either a goat or terapin for food, they would hover round, screaming and making all sorts of noise, and sometimes seemed to think that I actually came there to butcher for them, for they would light on the ground and hop around me, sometimes would even jump on the carcass, have the impudence to look me straight in the face, and grapple the meat in their claws, and pull for the half with me; matters between us went so far that I was obliged to provide myself with a long stick, and knock them down as they came too close. They were immense and powerful birds, more like eagles than hawks. I fired a few shots among them, but they paid no attention to it, did not seem to fear the gun or its effects, and tormented me as much as ever; so that at last I was obliged to compromise matters by killing something and leaving it with them; then when the chief body of them were engaged, I would start off and transact business for myself.

He should have shewn them his diploma. Here he had a narrow escape from a very unpleasant and unromantic death. In one of his angling excursions he slipped, and fell into deep water.

I could swim well, so there was no fear of drowning; but another danger, which I was well aware of, made me clamber up out of it as quick as possible; this was the vast number of ground sharks which inhabit the sea surrounding those islands, and come close in to the edge of the rocks and beach. As soon as I had taken off my clothes to dry them in the sun, I took a look into the spot where I had fallen in; then I perceived that I had a providential escape, as a whole shoal of them were moving about, I suppose attracted by my splashing in the water. If I had been five minutes longer in it, or encountered any difficulty in getting up on the rocks, I would have been devoured.

In another part of the island he came unexpectedly upon a spot whose history nobody knew.

When I was better than halfway down the weather side, at about four miles inland, I came suddenly on a space of ground, which was partially clear, and where a few trees lay, that had evidently a few years ago been cut down by some one. On further entering this space there were mustard pumpkins, melons, Indian corn, sweet potatoes, and tobacco, all growing indiscriminately, and in a very wild state—tall weeds, and suckers of young trees, starting up here and there from the roots of the old ones.

In looking about, I saw what was once a spade, but the blade of which now was only rust, and fell in pieces when I touched it with my foot. Near this, in a hollow, was a well with water enough, but overgrown, and covered with weeds. It was regularly built round with stone. I continued my search over this once well-cared plantation, until I came to the highest, or upper part of the clearing, which was walled along for several hundred yards by solid rock. Up near this, almost concealed by a clump of trees, and nearly overgrown with wild vine, I discovered a house, or rather hut, on a comfortable scale. There was no sound of human voice here—all was still.

I knew, from the indications about, that it was long since the place had been attended to. The network of vines round it was so thick and close, that I had to make an opening through it with my axe. On entering this wild barrier, I came at once on the house, which was built against the rock with a shed roof thatched—the sides and front merely posts of wood, interlaced by vine-branches, and covered over with mud. The whole was in a falling state; there was only a doorway into it, but no door.

I now with strange feelings entered the door; there was ample light through this ruin to see all. It was a melancholy sight and discovery to me. In the centre of the floor, near a rude table, lay the skeleton of a man, only partially concealed by what had once been a covering of skins; on my touching it, it fell in powder; the bones though in apposition, were separated by the slightest touch. On one side were an old boiling-pot and frying-pan, wood, axe, &c., all in rust, a tobacco-box, with a rudely manufactured pipe on the table, an old worn-out and rust-eaten carabine and cutlass in the corner; there was a shelf which had once served for a bed, with seal-skins on it. I searched minutely, but could not find either paper or any other thing that could give the least information as to the name, or who this unfortunate recluse was.

It was a dismal scene. I came out and gazed on this hut for some time; a thought struck me, and I proceeded to execute it. All was a ruin, and now falling; the only thing I could now do for this remnant of humanity was to bury it; the only way I could even do that, was to cover it with the ruins; a few blows of a heavy stone against the posts laid all prostrate, and shut out the sight for ever.

And who was he—that solitary man?—what a death was his!

The Marquesas introduce us to the habits and manners of the natives. Thus for their dwellings:—

The houses are generally placed close to trees, which afford an agreeable shade. You may term them a longitudinal section of a single house, with a shed roof, the back, or main wall, always close, the front one a mere partition, but low. The thatch consists of bread-fruit or cocoa-nut leaves, closely and thickly put on. The inside of the walls is generally covered with a close matting.

Two long sticks, or spars, run the whole length of the house, near the back wall, about six feet apart from each other—the intervening space covered deeply with either leaves or grass, and a fine mat over it. This is the bed for the whole household, and a very capacious one it is, considering their arrangements for lying on it. The head rests over one spar, the back of the neck supported by it; the feet or ankles are on the other. It is a curious sight to observe from under the mat fifteen or twenty heads—sometimes more, sometimes less—along one spar, and double the number of feet and legs, according to their length, clear of the mat, along the other. After all, it is not a disagreeable arrangement. The bed is certainly soft, except the pillow part of it.

They have their theatre and ballet, which are, after all, not so very inferior in the conception to ours.

The situation generally chosen for them is some level spot of either rock or earth in the neighbourhood of some of those romantic streams, and often near a waterfall, surrounded by trees of rich foliage, the adjoining hills forming a curtain of green round it. In the centre of this is an enclosed portion of ground, covered by a smooth and varied-coloured pavement. The dancers perform on this. The surrounding bank is covered with spectators and their refreshments. The usual music is a drum, beaten by the flat of the hand, singing, and clapping of hands, which last closely resembles an expression of feeling that takes place at some of the political meetings in Great Britain and Ireland, well known by the name of "Kentish Fire." The dancing of the natives being peculiar, and requiring peculiar time with the music, nothing else but some sound of this description would suit them.

The dancers on those occasions take great pains to decorate themselves, some of their skins being fairer than others, but all beautifully tatooed, are coated over with cocoa-nut oil, tinged yellow with turmeric, which grows in abundance on their lands; the hair is well oiled, and tied up with plenty of ornaments, such as feathers, &c., the head being encircled with a band made of cocoa-nut sinnet, having oval pieces of pearl shell attached all round it; in the ears are pieces of white down, or bone or shell earrings, well polished and carved, (by-the-by, I have often seen an English tobacco-pipe used as an ear ornament, with the shank of course down,) when the dancers enter the arena.

Their covering is only a small piece of native cloth, either

round the waist or over the shoulders; as the excitement of the dance increases, even this disappears, or is flung wildly to the winds, and then you see neither a black nor a white man, but (from the turmeric) a golden yellow one, perfectly naked, in all the wildness and frenzy of the heathen dance.

The doctor was, as we have seen, much given to exploration. In spite of warning he would wander inland here, and he paid dearly for his curiosity. He was first pressed into a fight on behalf of a chief with whom he chanced to fall in; he was compelled to attend a review and council of war clothed in the costume of the country: then nothing would do but he must be tatooed; and he was informed, that to submit to the operation was the only chance of saving his life. The single mitigation he could obtain was that his face and hands should be spared. His account of the operation is interesting.

They have only a few instruments in use. Those used for inserting the colouring matter into the skin are made of pieces of bone made flat, and serrated at one end, like either a comb or saw. The breadth of this end differs from the eighth of an inch to one inch, according to variety or minuteness of the work—some having only two teeth, some a dozen. The other end is brought to a blunt point, and inserted into a small cane about six or eight inches long, at right angles. The stick for beating this into the flesh is long or short, according to the fancy of the operator.

The piece of cane is held between the finger and thumb of the left hand. There is a roll of fine tappa round the three remaining fingers of the same hand, to wipe off the blood, in order to see if the impression is perfect. The marginal lines of any figure are first marked out with a very small stick, the remainder is executed without a guide. The hitting of the stick is so very rapid, that it resembles nothing that I know of more accurately than a trunk-maker driving in his nails.

This incessant hammering at the skin, or into it, with considerable violence, irritates the whole frame, and the constant wiping off the blood with the tappa is worse. However, as the work proceeds, the flesh swells up, which gradually benumbs the part during the continuance of the operation.

The colouring matter used is made in this way: Eight or ten nuts (commonly known as the candle-nut, from their emitting a bright flame, and being used by Marquesans as a substitute for candles) are strung on a piece of reed, which is stuck in the ground, the upper one being lighted. An inverted section of a cocoa-nut is suspended over it. This condenses the smoke, which is very black, and when mixed with a little water, forms the marking-ink in question. The swelling is very great, but subsides much in five or six days. Sometimes the person operated upon does not recover for weeks; and when the tatooing goes on anywhere in the neighbourhood of glands, often, in irritable constitutions, forms large tumours and abscesses. Often erysipelas is produced; but those are rare cases, all generally getting clear with the ordinary inflammation, which is only of eight or ten days' duration. * * * * I was four hours under the operator the first day, and three hours the second; which time sufficed to mark on my skin the delineations and characteristics of a chief. After all was over, the surface was rubbed with scented cocoa-nut oil, which cooled the inflammation much, and gave me great ease. Then, blowing conchs and firing muskets again, ended the ceremony. There were several women in the house all the time—wives and daughters of the chiefs—and they appeared to sympathize much with me; but they were not allowed to interfere, as I was a tabooed chief.

I was a little faintish after it, but on going out and sitting in the cool shade of a tree, all went off well.

Subsequently he was forced to take part in another great battle, in which his friends were victorious; and he witnessed the horrible feast on human flesh which followed the slaughter.

Near where they deposited the bodies, they now dug several large holes in the earth, and into them they cast a number of stones, so as to cover the bottom of the pit, over which there was a pile of wood set on fire. The knife generally in use at the Marquesas is a split flat piece of the large bamboo, the edge of which cuts as sharply as any of our instruments. With this they cut up the dead bodies of their enemies into convenient sizes, and rolled the pieces up in banana or plantain leaves. As soon as the stones were nearly redhot, the burning wood was removed and thrown aside. Those parcels of human flesh were then arranged on the hot stones, and a deep covering of grass strewed over. Then water was sprinkled over all, and as soon as the steam arose the whole was covered over deeply with earth, to remain until next day.

A great many ovens having now been set at work in this manner, the remainder of the day was spent in burying our friends, after the manner I have before stated. The Marquesas never eat their own party. I must throw a veil over the feast of the following day, as I had only one look at the beginning of it; and left the arena sick to loathing.

But we have been tempted beyond our limits. Here we close, confident that the preceding passages will prove that this volume contains enough of novelty to justify its introduction into the book-club and library.

Sixteen Years in the West Indies. By Lieutenant-Colonel Capadose. In 2 vols. London, 1845. Newby.

It appears that Lieutenant-Colonel Capadose has been for sixteen years resident in the West Indies. But during that long period he has not taken up his abode in one place; he has wandered about from island to island, and in his wanderings has noted whatever of interest fell under his observation. These notes he has strung together without much regard to order either of time or place, and with no attempt at the formality of a regular tour. He tells us that he did "not run through the islands in one of the royal mail packets, merely catching a passing glance of the beautiful objects which even such a visit would present;" but that he "travelled into the interior, climbing many of the mountains, exploring the valleys, lingering for months together among the people or in the towns."

With such advantages, and having a keen observant eye and a cool sound judgment to enable him to make the best of them, it may be supposed that Lieut.-Col. Capadose has produced a work which abounds in valuable information relative to our West India colonies, their present state and prospects.

The gallant author does not affect a mastery of the art of writing. He is content to tell his story in a plain, straightforward fashion, employing the language that first rises to his lips, and which is generally the most graphic, if not the most elegant. From volumes so stuffed with facts, the choice for extract is very large, and we find that the pencil as we went along had scored ten times more than our limited space will permit us to transfer. From these, therefore, we must again select such passages as convey the most novel or the most useful matter, leaving the rest to be gathered by our readers from the volumes, which will be an acquisition to the book-club.

It was shortly after his arrival that he visited

THE PITCH LAKE AT TRINIDAD.

It was sunset when we reached the lake and the air deliciously cool, thus enabling us to traverse its vast surface without difficulty, more particularly as planks were placed across the fissures or chasms, so accurately described by Dr. Nugent of Antigua, and inserted in the work of Mrs. Carmichael. To me the lake had the appearance of an immense level plain, with here and there thickets of shrubs, grass, and trees growing out of the bitumen, which was then of a very dark colour, and generally quite hard; some few places yielded to the impression of the foot, and were of the consistency of pitch.

The water flowing through the chasms was perfectly clear, but lukewarm, and of a disagreeable, acid taste. This warmth, no doubt, was owing to the heat of the sun, which, however, had no effect upon the solid part of the surface, which was quite dry, though the day had been one of the hottest ever known. Sir James Alexander, in his account of this extraordinary place, says, "The heat of the surface obliged me to dance up and down from the scorching of my feet, having taken off my shoes to wade through the broad chasms of water, across which, at that time, there were no planks." Probably Sir James visited it under midday heat, or that the effect of the sun is not always the same; certain it is, that this evening, the surface of the lake was quite cool though the sun was still above the horizon.

Our traveller regrets that Trinidad should not be cultivated by English peasantry. The African settlers appear to be living in luxury:—

A great improvement has taken place in the habits of these African settlers; they are becoming more industrious, more cleanly, and the rice and yams cultivated by them were this year of superior quality. Certainly they have every inducement to labour, possessing excellent lands, almost without limit, gratis, no house rent, no taxes, and their goods sent for them to a place of sale; as, at stated periods, goverament sends a vessel to transport their produce to the capital, where it finds a ready market.

Could such favours possibly be bestowed on the peasantry of the United Kingdom, they might, if wealth can give happiness, be considered really blessed; for an English peasantry could scarcely fail to acquire riches, if in possession of such lands as lie on the eastern side of Trinidad. Large tracts, yet unoccupied, are left, like flowers in the desert, to waste their sweetness unseen. On a previous visit to Manzanilla Point, in 1839, I had been much pleased with the mode of instruction at the Mico school, and now I lingered a day longer than I at first intended, that I might again see the method pursued by Mr. Semper, in his tuition.

He had at present only fourteen constant pupils, and these all very young; but they spoke good English, and appeared to have made surprising progress in reading, writing, &c. Their singing, with which Mr. Semper took much trouble, was excellent, and might put to shame some of the Hullah classes in England.

These were all the children of the African soldiers, who had been discharged from the 3rd West India Regiment, and were colonised in this spot, and truly thankful should they feel for such comforts as a little industry will enable them to enjoy, such a retreat from the labours of their military duty.

Many other pupils, including some adults, occasionally visit the school, but a residence at the extremity of the district precludes constant attendance. Sunday is a complete gathering day, when all assemble to hear prayers read, and join in thanksgiving to their Almighty Father. It is a beautiful sight, and often when surrounded by the pomp of the cathedral service of our Church, I turn in idea to the little congregation of the Mico school, and fancy I again hear the simple hymn of praise sung by those infantine voices.

We do not remember to have seen before a description of a very beautiful flower found in Trinidad.

In the gardens of San Joseph and its environs is seen in its greatest perfection *le papillon végétal*, which grows on a species of ivy entwined round a poplar or any other tall tree. This blossom is an exact representation of a living butterfly, but, unfortunately, there is no method of preserving it even for a time; no sooner is it gathered than it withers and falls to dust.

He visited a

MUD VOLCANO.

It opened at the opposite end on a small green plain, in the centre of which were six conical hillocks of moderate size, with a kind of clay-coloured water bubbling from the top of each, accompanied by a slight murmuring, or rather hissing sound. Around these miniature volcanoes the grass is covered with the clay-like mud flowing or rather ejected from them, and at a greater distance round lie stones, said to have been thrown up in eruptions such as occasionally happen, and one of which, the villagers related, was, a few years since, attended with a thundering noise that threw them into consternation. The late Mr. Joseph (the bard of Trinidad), in a work published after his death, describes an eruption which he witnessed in company with some friends; I saw nothing but what I have named; I felt no unusual warmth in the ground around, nor was the substance bubbling from the hillocks more than lukewarm. Having satisfied myself respecting this natural curiosity, I returned to the Mission, calling on my road at the estate Matilda.

Here also he found

OYSTERS GROWING ON TREES.

Next morning two officers of the garrison and myself started for a ride across the river Taruga, which intersects the road, to visit the Marabella estate, the proprietor of which, took us in a canoe, up a small river, the St. John's, to see the Mangrove trees, like those of Marouga, bending beneath the weight of oysters. In Mr. Hawkshaw's clever little work upon South America, he gives a long and interesting account of these singular "disputers of the territory of the ocean," but he did not see them covered with oysters. The trees on the banks of this little river, and the adjoining coast of the Gulf of Paria, are of a large size and of great number. We divested some of them of a few of their branches, to furnish us food for breakfast, at the Union estate, whither we bent our steps on disembarking from the canoe. These oysters were small, but superior in flavour to those *gathered* from the banks of the river Marouga, or found in those of Mitan and Nariva.

He was present on the memorable 1st of August, 1834, when freedom was proclaimed to the slaves.

The governor and council were all assembled to listen to a representation, or rather an interrogatory, of a number of negroes, regarding their supposed unlimited emancipation—these people appeared to be a deputation from a few French estates; and were for the most part very old men, old women, and children, the only young man among them was their spokesman, who was probably selected because he spoke the French language well—it was he who addressed the governor with the question whether the king had not granted them (that is, all slaves) unqualified liberty from that date? That they understood so, and yet their managers and overseers insisted on their working as usual that morning on the estates. I must here explain that French gentlemen, managers or overseers, accompanied these negroes to the government house. His Excellency the Governor, Sir George Hill, followed by the members of council, the judges and other official gentlemen, had repaired to the balcony of the council chamber, to inquire into the cause of such an assemblage as then filled the courtyard below the building. In answer to the above question, he mildly observed, that his majesty had indeed been most graciously pleased to grant them freedom, that they were consequently no longer slaves, but free British subjects from that day forth—yet, his majesty had decreed that they were still to reside on the estate and serve, under certain enactments for their benefit, as before, in capacity of apprentices during six years, after which they would, in 1840, be free to go wherever they pleased—scarcely had his excellency pronounced "six years," than the negroes, old women and men, vociferated "*Pas de six ans, point de six ans*," (not six years, no six years)—hardly would they allow his excellency to be heard in conclusion, so loud did they repeat "*pas de six ans*," &c. The governor, however, continued speaking to them, in their own language, with the greatest affability, and concluded by exhorting them to return quietly home, like good folks, and resume their avocations under employers who, doubtless, would treat them kindly, and that indeed the new laws ensured them good treatment; they nevertheless stood immovable, and would not retire; the governor then left the balcony, and lest he might not have been properly understood by the multitude below, he directed one of the secretaries, or government officers present, to take his place, and explain more fully what he had said, which was done, but with no better success, the same vociferations being repeated at the words "six years," "*Pas de six ans!*" &c.

The vegetation of Dominica is very fine:—

The mountain cabbage grows to a greater height in Barbadoes than in any of the colonies, but the ferns of Dominica may challenge the world: they are really large trees, and would astonish an Englishman who had only seen those upon the heaths in his own country; yet these ferns are as green and as delicate in appearance as the eye can rest on. The plantains, too, are beautiful, but the *bois immortel* is not to be compared to those of Trinidad. The Galba is here planted for shade, and is very beautiful, but the *bois immortel* recals the grandeur and fertile plantations of Las Cuevas, and La Reconnaissance, and I love to gaze on its graceful loveliness. The numerous springs and rivulets of Dominica, are no doubt the cause of the bright green appearance of the vegetation, and its luxuriance; but in the wet months they render the rambling amongst the vales damp and unwholesome.

At Barbadoes he visited the

BURNING SPRING.

This singular spring is situated in a ravine, almost concealed by large trees at the commencement of the wood, and at first sight appears only an ordinary pool of cold water; over which, when emptied with a calabash, a kind of reversed funnel is placed, and the under part closed, so as to exclude air; then a copper tube, the size of half a gun-barrel, which it resembles, is fixed on the funnel, and a lighted piece of straw applied to the top of the tube. This causes the gas to rise, and on some occasions to ignite; but now, when the light was applied, the gas rose slowly, first in smoke, and then followed by rather a faint though clear flame, over which we suspended a saucepan, containing cold water and two eggs. In about twenty-five minutes the eggs were quite hard. Mr. Morris assured me he had seen them boiled in one-third of that time, but the flame was weaker this morning than he had ever known it. The truth of this statement I can attest; for in the November previous I partook of some which were hard in ten minutes. This difference is occasioned by the weather. In the rainy season the blaze is always more vivid than during dry weather, as was fully proved to me on my first visit by the man who shews the spring.

After extinguishing the flame, and removing the apparatus, he simply touched the edge of the pool with a lighted straw, on which it instantly became encircled with a bright fire, and occasioned much trouble to extinguish. It had been raining heavily the whole of the previous day, which most likely produced the prompt ignition. The light is put out by means of large boughs, as it would continue to burn if not forcibly extinguished, and would be dangerous. When the apparatus is removed, the pool, which has commenced to refil by the water quite cold oozing from below, resumes its natural appearance.

In British Guiana there prevails that fearful malady the Elephantiasis, a description of which is given by our traveller, accompanied by an announcement that a cure for it had been found by a Dr. VRIES.

In this dreadful disease, Frambosia, the tubercles, when the malady has for some time proceeded, begin to crack, and at length to ulcerate. Ulcerations also appear in the throat and nose, sometimes destroying the palate and cartilaginous septum; the nose falls, and the breath becomes intolerably offensive. The thickened and tuberculated skin of the extremities become divided and ulcerates, or is corroded under dry, sordid scales, so that the fingers and toes gangrene and separate, joint after joint. Arctœs and the ancients in general consider this same disease a universal cancer of the body, and speak of it with terror.

According to some this disease is called the Arabian's Iuzam and Iuzamlyk, from an Arabic word which implies *erosion, truncasion, excision.* From Arabia, the term Iuzam has, no doubt, passed into India, as it is there the common name for the same disease.

Among the Cabernjals or Hindoo physicians, who also occasionally demonstrate it Fisadi Khûn from its being supposed to infect the entire mass of blood, but more generally Kora. One peculiarity of this infection, is the apathy with which it is endured. The mind becomes sluggish and slow in apprehension, no pain, and seldom more than a pleasing itching of the parts. When the saneous discharge comes on, the muscle, pale and flabby, is in its turn destroyed, and the joint perforated, as by an auger, the extremity droops, and at length falls a victim to this cruel, tardy, but certain poison. The wounds now heal, and other joints are attacked in succession, whilst every revolving year bears with it a trophy of this dilatory march of death. Even at this stage, death comes not to the relief, nor is desired by the infected patient, who, dying by inches, and a spectacle of horror to all who behold him, still fondly cherishes the spark of life remaining, eats voraciously all he can procure, and will often crawl about with little more than the trunk remaining, until old age comes on, and at last he is carried off by diarrhœa or dysentery, which the enfeebled constitution has no stamina to resist.

Surely all who read the above description, will join in praise to Mr. Vries for his attempt, and a wish that his skill may be rewarded.

How lovely must be

A RIDE IN TOBAGO.

During my ride this day I saw a silk mahot tree in full bearing, with seeds, or pods, like a hare's legs, with buds and straw-coloured blossoms, which contrasted beautifully with the large green leaves. This tree was nearly thirty feet high, a foot in diameter, and its bark a light grey colour. It always appears to me as if the bright and beautiful birds are attracted by the brilliant blossoms of the trees; see one of the *bois immortel* with its golden blossoms, and around it are a number of the little creatures fluttering as if they enjoyed its beauties. Once, riding between Providence and Franklyns, I saw an emerald hummingbird reposing on its nest at the end of a bamboo twig bending low down; I stopped and gazed at the beauteous little flutterer, which after a minute flew to a branch above; I took hold of the twig and looked into the nest, which contained two tiny eggs; it would have been profanation to have touched them, the pretty creature looked at us so confidingly.

In the midst of a rural and beautiful country, not far from Les Côteaux, is the highlands waterfall, rushing with velocity, over shelving rocks, from a height of eighty feet. The basin into which the water dashes is fifteen feet in circumference, and ten or twelve deep. The small fall is not more than ten feet. The rays of the sun reflecting through this falling sheet, which appears at least four feet broad, give it the semblance of a magnificent rainbow; nothing can be more beautiful, for though nature in all its sublimity is around you, it creates only feelings of pleasure. Midway up the rocks there is a level space overlooking the basin, where visitors can recline under the shade of the graceful trees, and enjoy the scene beneath and above them: and here again, 'midst the vivid yellow blossoms of the cogwood trees, are birds of all hues. I verily believe this is the prettiest spot in Tobago, unless it be a ride through Arnoes vale, where there are two trees more beautiful than all the others; perhaps, because seen nowhere else. Not very lofty, but with branches bending gracefully like those of the willow, these trees have blossoms in the form of a tulip, one white, one red, and about the size of a liqueur glass, the seeds are contained in pods hanging from the branches like French beans, whilst the leaves are green like the willow.

In this vale you see also the Spanish needle shrub, the large broad leaves of which, in skilful hands, make excellent razor-straps.

In an appendix, Lieut.-Colonel CAPADOSE informs us that emancipation has not produced the anticipated good effects, from the disinclination of the black population to even moderate labour. He is of opinion that European emigrant labourers would thrive in the West Indies, and that neither the climate nor the work is really injurious to health. The culture of sugar alone is noxious to the European. But these fertile islands produce a multitude of other sources of wealth which may be grown without danger to the constitution, as cocoa, coffee, arrowroot, aloes, tobacco, ginger, cotton, rice, yams, the bread-fruit, the sappodillo, &c.

To avoid the difficulties arising from aversion to labour, a new plan of cultivation has been introduced:—

Many of the proprietors of cocoa and coffee plantations at Trinidad have adopted a plan, which, under existing circumstances, may be considered very judicious; they agree with a class of peasants in that colony, called peons, to assist in, or undertake the culture of their lands, and gathering of their crops, for the half of their value, that is, half of the cocoa and coffee produced, or, when sold, half the amount. The possessors of those plantations cannot by such means realize fortunes; but they can maintain themselves and their families, by that easy mode of cultivation, free from care and anxiety.

The condition of the emancipated slaves is represented as happier than that of any peasantry in the world. Well may the labourers at home envy such a lot as this!

They never can experience distress from want of employment; they can always, when in health, earn more than sufficient for their maintenance, and in case of sickness or infirmity they are provided for by the charitable institutions; their necessities are infinitely fewer than those of corresponding classes in Europe; they require no heavy or expensive raiment; they need only as much firing as will serve to cook their meals, and *bois de chauffage*, or fuel wood, is easily procured almost everywhere, with the exception, perhaps, of Barbados, throughout the lands of the West Indies; in fine, if the labourers of that part of the world choose to be industrious, they could not only maintain, but enrich themselves.

FICTION.

The O'Donoghue; a Tale of Ireland fifty years ago. By CHARLES LEVER, Esq. Author of "Confessions of Harry Lorrequer," &c. 8vo. pp. 410. Dublin, 1845. Curry and Co.

THE readers of THE CRITIC have been repeatedly introduced to this novel during the progress of its publication in monthly parts. It is now before us in its completed form, and a few words on parting with so pleasant a companion will be excused, although at the risk of repetition.

The characteristics of Mr. LEVER'S compositions must be sufficiently familiar to all who indulge in the luxury of novels. More than once they have been reviewed in these columns. They may be summed up in few words. Merits—vivacity, humour, a happy knack of story-telling, which consists in seizing the most telling points of a tale, and throwing them out in broad relief; smart dialogue, and a dashing manner that forbids weariness. His defects are—inability to construct a consistent and complicated plot, which shall evolve itself naturally, and a want of substance in the material of which the work is made. Generally his novels are little more than collections of amusing anecdotes, very cleverly told, strung together by a clumsily contrived machinery, the rudeness of which we only excuse because we are conscious that the plot is the means and not the end, and therefore of secondary importance in the author's design.

The O'Donoghue presents less of these defects than any other of the novels from the same pen. The story is more elaborately constructed; it advances to its end by more gentle and natural steps; the chapters have reference one to another, and are links in the chain, instead of being isolated anecdotes, which may be omitted without much detriment to the main stream of the narrative. Some of the characters are new; the Irishman is not the same as we have seen figuring in all the preceding works of this author; without departing from the national type, he has here varied the individual specimen. Some of the pictures of scenery and of interiors are masterly; witness "The Black Valley," in the sixth chapter. The vein of humour that runs through the pages is as rich and apparently as inexhaustible as ever; the same energy is exhibited

in narrative and dialogue; the reader is carried along from page to page, from chapter to chapter, never for a moment relaxing into weariness; it is impossible to go to sleep over *The O'Donoghue*, and as impossible often to avoid a burst of pleasant laughter at the fun with which it overflows. Nor is there lack of more sober matter. Mr. LEVER has caught the infection of his compatriot novelists, and has availed himself of the favours of fiction to present his views also of the wrongs of his country and their remedies.

Compared with the mass of English novels, this importation from Ireland appears to great advantage. Our season, amid its multitude, produces few to rival it either in temporary interest or substantial worth. With the solitary exception of DICKENS, the *national* novel is extinct among us; the fictions of our time are not embodiments of the spirit and body of the time; they belong to no country, to no age; they are abstractions of humanity, and not transcripts of men. But Mr. LEVER'S novels are *Irish*; no other soil could have produced them; if not so faithfully as is found in the works of Mrs. HALL, CARLETON, and BANIM, still they do present the spirit and character of the people among whom the scene is laid. Mr. LEVER'S excellence, as our readers are aware, lies in the description of camps and battles, in which he is without a rival. With this exception, it is on Irish ground that he appears to greatest advantage, and he has most failed when he has departed from it. In *The O'Donoghue* we have him again on his native soil, with spirit and vigour unsubdued by age and toil, and his composition somewhat improved either from less haste or more practice. This handsome volume is lavishly adorned with illustrations from the pencil of H. BROWNE, which, strange to say, do not damage the story, by destroying our ideal of it. The artist appears to have caught the spirit of the author, and embodied his conceptions with surprising accuracy.

And such being our opinion of *The O'Donoghue*, of course we can conscientiously commend it to the book-club, as well as to the circulating library, and advise our readers to place it upon the list of books to be sent for.

Pomfret; or, Public Opinion and Private Judgment. By HENRY F. CHORLEY. In 3 vols. London, 1845. Colburn.

IT was with a feeling almost of anxiety that we plunged the paper-knife into these volumes. The author's previous publications in art, and biography, and poetry, had proved him a man of taste and of talent, but without pretension to the loftier powers that constitute genius. We were now to view him in a new character, venturing on a new and more difficult arena, of his fitness for which his past achievements yielded no evidence. Although it is the foolish fashion of our day for authors of every class—poets, historians, tourists, politicians—to turn novelists, and make themselves ridiculous by egregious failure, yet did we hope that Mr. H. F. CHORLEY had enough of native good sense, and of practical acquaintance with literature, not to adventure in the walk of fiction, unless well assured by self-investigation that he was called thereunto by the voice which seldom fails to invite to action where the capacity exists. But the perusal of a very few pages shewed that a disappointment was in store for us. Manifestly Mr. CHORLEY has not in him the genius of the novelist: this is not the natural direction of his faculties: it is plain that he has adopted the calling from no inward incitement, but from external stimulus,—the advice of his bookseller, or the calls of his pocket. In the first place he is entirely wanting in the dramatic power, without which a decent novel cannot be written: then the creative faculty is absent in him; he cannot conceive a definite original character, at once the representative of universal man, and an individual whose like there never was before, and will be never again. The groundwork of *Pomfret* is broad enough for a fine edifice, but he wants the artist's skill to construct it. Pomfret, the rector of Dimwood, is a seceder from the church: he has exercised his private judgment honestly, and he has to endure, therefore, the stings and contumely of public opinion. The sorrows that thence descend upon him and his family form the main stream of the narrative, into which, however, flow many tributaries, one being greater even than that which bears the fortunes of the hero and his daughter Grace, to wit, the History of the Opera Singer, Helena Porzheim. Upon this really clever creation, if creation it be, and not portraiture, Mr. CHORLEY has lavished all his skill and attention; in her and about her centres the interest of the story: she ought to have been made the heroine in name, being such in reality. It is the redeeming feature of *Pomfret*, and saves it from unqualified failure. For this it will deserve to be read, and it is on this account that we can advise the large libraries to add it to their shelves.

Arrah Neil; or, Times of Old. By G. P. R. JAMES, Esq. In 3 vols. London, 1845. Smith, Elder, and Co.

THIS romance has already been given to the world in the pages of the *Dublin University Magazine*. There we read it, and we must confess that a more dull and tedious fiction it was seldom our lot to nod over. Doubtless the historical features of the times of the civil wars are accurately enough presented in its pages, for Mr. JAMES studies costumes and customs with commendable diligence, and can boast of extensive knowledge of the *facts* preserved by the chroniclers. But it is manifest from these pages that he writes, or rather *speaks*, novels a great deal too fast. He is exhausting himself and wearing out his readers, who will not long be attracted by past reputation, when they find invention rusty, and prosy dialogues substituted for stirring incident. And what wonder! It is well known that Mr. JAMES does not write his romances, but dictates them to an amanuensis. It is even said that he thus dictates two at once! However this may be, the fertility of his literary workshop is beyond all legitimate process of manufacture. Whatever is gained in time is lost in power, is true of the mechanism of the mind as of that of the body. A man who speaks a romance extempore faster than a quick writer can set it down must talk a vast deal of dulness. Invention is not equally active at all times, and when it slumbers, the day's work must consist of words—words—words, unenlivened by aught of sparkling in substance or in form.

And so it is with *Arrah Neil*. It is meagre of incident, profuse of dialogue. It opens well, and presents a promise of entertainment; but, as the reader proceeds, the interest flags; the story drags slowly along—prosy conversations supply the place of action. As in all Mr. JAMES'S romances, there are some powerful descriptions, some stirring incidents, but these are so few and far between that they do not compensate for the dulness through which the reader must wade to reach them. We cannot recommend it to be placed upon the reader's list, nor would we advise any library to order it, unless, indeed, the name of the author is deemed a substitute for worth.

Select Popular Tales, from the German of Musæus. London: Burns.

TO Mr. BURNS the English reader is deeply indebted for introducing him to the treasures of fiction stored in the rich mines of German literature. One of the most valuable of the series are these *Tales of Musæus*, because they are the least familiar to our countrymen; indeed, we cannot at this moment recal any other translation. The editor has selected those only of the tales which seemed best fitted to please the taste of the public and he has performed an additional service by occasional condensation of too minute details where it could be effected without injury to the interest of the story. In this volume nine tales are presented, all of them founded on popular legends of Germany, which MUSÆUS has worked into elaborate fictions, full of poetry and wit. We recommend this charming volume, which is one of *The Fireside Library*, to every lover of fiction. The woodcuts with which it is illustrated are numerous and very clever.

A Complete Edition of the Wandering Jew. 12mo. pp. 310. London, 1845. Diprose.

WE have not leisure to make the comparison, but we can with difficulty believe that the complete romance of EUGENE SUE is comprised in this small volume, the type of which is not remarkably minute. Yet such we are assured is the fact, and if so, it is still a more astonishing enterprise than the one we noticed last week, for it is in form more convenient and readable. The printing is indeed excellent, and altogether the getting-up such as would become any library.

POETRY.

The Ballad Poetry of Ireland. Edited by CHARLES G. DUFFY. 4th edition. Dublin, 1845. Duffy.

THIS very interesting volume has been already reviewed at some length in the columns of THE CRITIC. We will therefore say only of this fourth edition, that it has received some corrections, and a few omissions and additions. It is a charming collection of true poetry, and honourable to the literature of the land from which it has come.

EDUCATION.

A Grammar of the Hebrew Language, with points; together with a short sketch of the Chaldee Grammar. By SELIG NEWMAN. London, 1845. Wertheim.

THE fact of a second edition is the best proof that this grammar has been found useful to the students of Hebrew.

POLITICS AND POLITICAL ECONOMY.

Capital Punishments unsanctioned by the Gospel, and unnecessary in a Christian State: a Letter to the Rev. Sir John Wood, Bart. By the Rev. HENRY CHRISTMAS, M.A. F.R.S. F.S.A. London, 1845. Smith, Elder, and Co.

IT is strange that in this age of enlightenment the solemn and earnest protest of a preacher of Christianity should be required against a practice manifestly so opposed to Christianity as capital punishment. Yet so it is. The melancholy fact must be admitted, that we have not yet emancipated ourselves from the lingering barbarisms of the past, and that custom has so hoodwinked us that we cannot see what to all unprejudiced readers must be apparent at a glance, the entire inconsistency of death punishment with the precepts of the Gospel. But not only is it, as Mr. CHRISTMAS has proved to a demonstration, inconsistent with Christianity, but it is equally opposed by reason and by experience; and yet it survives, though with such signs of decay that grown men may hope to live to witness its abolition. This end such eloquent and truthful writings as the pamphlet before us cannot but materially advance, and Mr. CHRISTMAS is entitled to the thanks of all lovers of religion and Christianity for his bold and brave appeals against a popular prejudice.

RELIGION.

Reasons for Attachment and Conformity to the Church of England. By the Rev. A. MEEK, A.M. Rector of St. Michael's, Sutton Bonnington, Notts. 3rd edition. London, 1845. Hatchard.

AN eloquent, energetic, and argumentative defence of the Established Church. After setting forth his reasons for attachment to her communion, the author proceeds successfully to answer divers popular objections to her doctrines, ritual, and discipline.

MISCELLANEOUS.

Knight's Weekly Volume for all Readers. Vols. LX. to LXXIII. London: Knight and Co.

ANOTHER pile of this valuable publication having accumulated upon our table we proceed to such a brief notice of the subjects of the volumes issued since our last comment upon the series, as our space will permit. *Spenser and his Poetry*, by Mr. G. L. CRAIK, occupy three volumes. It is a sort of running commentary upon the works of that great poet, adorned with copious extracts of the choicest passages, and thus admirably calculated to introduce the reader to a knowledge of works he is not likely to read in their perfect form. Mr. CRAIK is well accomplished for his task, both by research and good taste. Mr. DODD has added two more volumes on *British Manufactures*, describing in his very intelligible manner the manufactures of glass, carpets, floorcloth, pianofortes, watches and clocks, cabinet-work, bread, brewing, distilled spirits, vinegar, wine, sugar, tobacco, hats, leather, and gloves. Every young person should read this most instructive treatise. The author of that clever tale "The Camp of Refuge," has presented another, entitled "*A Legend of Reading Abbey*, equally illustrative of ancient manners and customs, and written with equal spirit and power. The third and fourth volumes of Lord BROUGHAM'S *Historical Sketches of Statesmen of the Time of George III.* is a contribution that will be heartily welcomed. Imagine such a work sold for four shillings!! Who would not possess it? Mr. CHARLES KNIGHT has himself supplied the contents of the 67th volume, which treats in a familiar and instructive manner of *Capital and Labour, including the Results of Machinery.* Mr. MARTIN has written *the History of the Horse*, which is profusely illustrated with engravings. The fourth volume of *The Cabinet Portrait Gallery of British Worthies* presents the lives of GRESHAM, BUCHANAN, SIDNEY, DRAKE, Lord BURGHLEY, and SPENSER, with engravings on steel. The two volumes last published are a reprint of the famous edition of *Paley's Natural Theology*, as edited by Lord BROUGHAM and Sir CHARLES BELL, and which will be one of the most popular of a series that ought to be found in every house, and placed in the hands of all young people.

JOURNAL OF GERMAN LITERATURE.

JOHN RONGE AND THE GERMAN CHRISTIAN CATHOLIC CHURCH.

Johannes Ronge's Leben und Wirken nebst den seine Degradation und Excommunication Veranlassen Aufsätzen "Rom und das Breslauer Domkapitel," &c. &c. 18mo. Jena, 1845. London: D. Nutt.

WE do not in the least overrate the present religious movement in Germany when we say it is equal in importance to the Reformation. If the abuses it seeks to remedy be not so great, they are of the same kind, and they are only not so great because their superstitious worship is not so universal. They are founded on the same doctrines, maintained by the same ordinances, rendered alluring by the same ceremonial, and supported for the most part by the same power as that against which LUTHER preached and Europe fought. They are sanctioned alike by Tradition and Time. They still come home to men's bosoms as an expression of religious faith; their forms yet alleviate and gladden most of the incidents of social life. And opposition against them has sprung from the same cause—the determination of the Roman Catholic hierarchy still to make religion the type not so much of spiritual truths as of prelatic power—the allowing of no communion with the Creator but through the Church, and the condemnation of all doctrines as false of which that Church is not the exponent. Nor is this all; forbidding intellectual teaching on one hand, Rome has still continued to encourage the lowest traditions as a medium of instruction on the other. To the uninstructed she has been no helper, and the educated she has sent empty away. If the present condition of the people of Europe were that of the middle ages, even then the recent indications of a certain party in the Church of Rome must have diminished her adherents. They have, however, occurred amid an inquiring quiet people, the descendants of the Reformers, still cherishing their spirit; a people apt to rush to extremes in religious inquiry, to doubt or explain away all tradition, and to treat the Christian religion as but another philosophic system. So long as the extravagances of the Jesuit party were limited to the mummeries at Treves, the educated middle classes of Germany therefore pitied the exhibition, and were silent; but when a priest of the Church writes against them as unscriptural, and is thereupon degraded and excommunicated; when the Church, moreover, is avowedly prepared to maintain them with power, and to exact adhesion, these assume then the importance of *doctrines* upon which it is incumbent for all men to decide—to uphold or to reject. Fortunately this has not been done in an irreligious spirit. The desire has not been to destroy religion, but to establish a purer form; not to compose a creed in conformity with the spirit of the age, but to proceed as their forefathers did, and to make in this respect the scriptures the oracles of God. It has been said, this movement is political, and that opportunity has been taken to use the misconduct of a refractory priest apparently for religious, but in truth for political purposes. The governments of Germany are therefore called upon to interfere for its suppression. Those who so clamour know very little about the matter. Hinder, delay,

obstruct, discredit they can; to prevent is not in their power. Austria is Catholic, and does not fear it; Prussia is Protestant and politic, and awaits its course; Saxony and Bavaria. *against it*—the power of the opinions of their kings; but *for it*—the opinions of their people. None of these have that bold faith in their own cause which would induce them to preach a crusade against the heretic RONGE. France and Belgium are indifferent. As for the Pope, we apprehend no danger from any war of decretals in which he may indulge. The present movement, therefore, is important, as being—nor can we more fully state it—"The abnegation by the educated classes of the North of Germany of the Religion of the Church of Rome." We recommend the above little work to our readers, as well as the "Life of JOHN CZERSKI," which accompanies it, and which we shall review in a future number; and now address their attention to the following details, premising that in the above remarks we have sought to write not with party spirit, but historically.

John Ronge was born on the 16th October, at Bischofswalde, a village included within the circle of Neisser, and the government district of Oppeln, near to Suaeten. He was the third son of a large family of thirteen children, of whom two died early. Between his sixth and twelfth year he was employed in tending the sheep belonging to his father, and acquired the first rudiments of education during the hours when he could be spared from these duties, or in winter in the village school attached to his birthplace. These were limited, even in the upper classes, to reading, writing, arithmetic, the repetition of the catechism, and portions of the bible, to which in the last year of his attendance were added a course of instruction in geography and Silesian history. From 1827 to 1836 he studied at the instigation of one of his former tutors at the Gymnasium of Neisse, and was considered there to be a youth of industrious, quiet habits, winning and retaining the good opinions of all. He evinced an ardent desire for the study of his own language, the literature and the history of his fatherland, and was particularly partial to that of Rotteck. His manner was reserved; he took no part in the ordinary amusements of his fellow-students, but sought rather the friendship of a few, with whom he lived in the free and open interchange of congenial feelings and ideas. He was distinguished even then by his ardent desire for the good of his fellow-men, and especially of the lower classes. A love of freedom and of independent action was also a marked characteristic, and his mind indicated much calm, resolute, bold, and active power. Selecting theology as his pursuit, he gave up to this the energy of his earnest, untiring nature, and his professors have recorded "that they had never before met with a youth so actuated with a spiritual desire to become acquainted with the holy truths of the Catholic religion." This testimony has been denied, but denied at a period when it was desirable to degrade him. He was even then averse to the form of instruction, and although advised by his friends not to enter the Church, as incompatible with his love of independent action, yet he felt he still possessed powers enough to meet the danger, and to labour with success. His father left his choice of a profession perfectly free, but he considering the claims of a large family, and the necessary restrictions these entailed (which he felt it incumbent upon him to lighten as far as was in his power), was the more inclined to enter upon duties that would ensure him immediately a sufficient maintenance. This was an external inducement natural and becoming, but to this were added the hope and the desire to find in his vocation that of the SPIRITUAL and the FUTURE LIFE, which should be the essential being of a Church, for which his soul sought, and through which he could work for the amelioration of the condition of his fellow-men. In December, 1839, he entered therefore the priests' seminary, but whether from the discordant action between his views of right, and that which he felt and saw around him, or aversion to the system there pursued, he left it with embittered feelings, and in 1841 was appointed chaplain of Grottkau, a small town about seven miles from Breslau. He entered upon his duties with zeal; his feeling perception of the sufferings of his poor parishioners, his labours for the education of their children, and his natural simple manners won him the love of all. But with the Church he had no unison, and for her ceremonial no sympathy. Yet we cannot but think that, however pure his love of good, however acute his sense of spiritual despotism, and however conscientious his opposition, his manner was then impatient, and indicated a mind aware of its powers, but dissatisfied with its sphere of action. Be this as it may, that despotism was the more hateful as he observed its effect upon the people, and witnessed its debasing results upon men of his own order. He wavered, but with him action and decision were identical, he resolved to declare himself against the Roman hierarchy, for its abuse of truth and ordinances subversive of a purely spiritual faith. The following were the reasons he assigned:—

1. Because the system of the Roman Catholic Church depressed his own moral condition, as man; and condemned him to an enervating slavery both of opinion and action.

2. Because he was thus hindered in the discharge of his duties as an instructor of the people.

3. Because he felt that the religion the Roman hierarchy calls Catholic, was not the purely true Catholic Faith; not fraught with spiritual good for the people; that its professors neither teach nor act upon the principles established and enforced by the Saviour of mankind, but have introduced ordinances and abuses, calculated to destroy the material and spiritual interests of the people and to establish and promote the power and the wealth of a privileged priesthood, with the Pope as their dominant head.

4. That the inevitable tendency of their ordinances is to disunite and depress the people.

One great medium towards the reform of the Roman Catholic Church Ronge felt might be found in the formation of assemblies of which the laity took part, annd resolved at once to publish his views upon this point, accompanied with a sketch of the principal abuses of the present system. This step appeared to him all the more necessary, in proportion as the power of the Jesuit party in Germany was more actively exerted, especially in Silesia, about the period of the resignation of Dr. Seltnitzky and the discharge of the episcopal functions by Dr. Ritter; for there, at that time, the Church was governed by the practices and principles of the middle ages. Nought was wanting but cloisters for monks and nuns, and the bishop's mitre for the *pro tem.* incumbent; but this was withheld, and finally, in December 1841, Dr. Knauer was elected bishop of this diocese. The Ultramontists and Jesuits now at once broke loose, the lower orders of this party laboured incessantly, restrained all freedom of opinion, and every indication of liberty of conscience, and commenced intrigues on all sides for the furtherance of their views. Dr. Knauer was represented at Rome as a man of no capacity; his consecration therefore was delayed for one entire year, during which the confusion and the agitation of the diocese increased. Excited by his fears of the darkness settling over the land, by the shameless intrigues for the bishop's mitre, and the open indifference of the priests to all observations in this respect, Ronge resolved at once publicly to confront and to force them either to retreat or plead. This he did in a *brochure* entitled "*Rome and the Cathedral Chapter of Breslaw*," signed "A Chaplain." In this paper he points out the cause of the suspension of the confirmation of Dr. Knauer, as emanating from the intrigues of an interested party,—its manifest injustice to him, and disrespect to the chapter; and reminds his readers, the Thirty Years' War, and the religious troubles of Germany were not caused solely by the preaching of Luther and Melancthon, but by the tyranny, the laxity, and religious abuses of the papal priesthood. Six weeks after its appearance, Dr. Ritter as the administrator-general of the diocese, addressed to him a letter, dated Dec. 20, 1842, requiring him to state, in compliance with his oath of obedience to the Church, whether he was the author of, or had merely transmitted the letter to the press? To which question Ronge refused to reply. Foiled in this respect, Ritter hoped to gain his point by immediately denouncing him; a proceeding he had been before tempted to adopt, upon remarking that his coat was shorter, and his whiskers larger than were becoming the truly faithful, in his eyes. He brought the case, therefore, before Dr. Kaspar Hottmann, the church administrator of the district. After some delay, and much excitement, a decree for his suspension was issued, upon the general charge of conduct tending to discredit his sacred functions. This decree he resisted, and sent in a defence accompanied with testimonials in his behalf from more than thirty-nine citizens and residents of Grottkau. In the mean time he refrained from all clerical duties, and resided with his friend the Count L. von Reichenbach, at Baltorf, near Neisse, who offered him his house as an asylum. Here, on the 18th Feb. he received a reply to his memorial, confirming his suspension, which a subsequent interview he had with Dr. Knauer, then installed as bishop of the diocese, left unaltered. Ronge thereupon proceeded to Laurahütte, near Beuthen, in Upper Silesia, where he undertook the education of the children of that district, and where he soon acquired the love and esteem of all among whom his avocations led him. But however his personal wrongs (or what he conceived such) might have actuated him, a then recent occurrence gave an immediate and important direction to his mind. Deploring the superstition of his countrymen, detesting the system from whence it arose, and the motives for its continuance,—employed as it has ever been as a means to maintain the political supremacy of the Roman Catholic priesthood,—he was still more excited by that which then occupied every man's attention—"the exhibition of the holy coat at Treves." Into the history of this fraud on the understanding and pockets of the people it is unnecessary to enter; he immediately wrote against it, armed with facts very damning and opinions very criminatory, directed against Bishop Arnoldi

of Treves, the author of the imposture, whom he reminded "that, even if the coat were, as he avowed it to be, that of the Saviour, it had been obtained from his murderers, and that the clergy of France had protested against his assertion that it was so, upon the plea that they themselves were the possessors of—the ORIGINAL!!" No sooner had this letter appeared than it was transmitted throughout Germany by the press, and over every district of France, by repeated translations. The effect was electric; it caused the strongest exertions in his behalf, and the bitterest opposition from the Church. Nor was the chapter of Breslau inactive. They cited Ronge before them; and upon his refusing to plead, or to yield to their ordinance, he was deposed and excommunicated. This precipitated events. Holding the faith of the Church, but opposed to what he believed to be its false teaching and superstitious customs for mere worldly purposes, he felt that whilst he could labour for religion, it could no longer be with those who had perverted religion to base uses. He was at this time joined by John Czerski, a Roman Catholic priest, who, like him, had been driven from the Church for similar opinions. It was resolved to found a religious society composed of such clergy and laity as unity of faith and love of a purer ceremonial might bring together, and success justified the effort; for bitter as the hatred of the clergy, even so ardent was the enthusiasm of the people. A movement somewhat similar to that which has recently been witnessed in Scotland took place; and on the 9th of March, 1845, the first meeting of the German Christian Catholic Church was held, and service performed, amid a congregation of 1,200 members, by Czerski, Kerber, and Ronge; the last of whom was unanimously elected, after a discourse by Dr. Steiner, as its pastor. Since then many others have been formed; and the recent tour of Ronge throughout Germany has been a triumphal procession, and the manner of his reception considered as the judgment of opinion upon the Church of Rome.

As our readers may desire to know somewhat of the personal appearance of RONGE, we add the following sketch. He is of the middle size, neither corpulent nor thin; rather round-shouldered, a defect which he apparently seeks to remedy by an erect carriage, which gives him a somewhat stiff and uneasy appearance. His features exhibit much openness of character, a natural lively disposition, occasionally overshadowed by deep thought, but always enlivened by his clear, deep-searching eyes. In general society he is diffident and reserved; but amid his friends animated and eloquent. His style of preaching is clear and logical, influencing the mind rather than the feeling; not fluent, unless when prepared, but always convincing. In private life he is unaffected, manly, and warm-hearted.

In a following number it is our intention to give some slight details upon the establishment of the German Apostolic Church, of which he is the founder, but which the length of our present article precludes.

JOURNAL OF ITALIAN LITERATURE.

Descrizione di Palermo nel Secolo Decimo, scritta nella lingua Araba, da EBN HAUCAL, ed ora fatta Italiana da MICHELE AMARI. Palermo. 1845.

Description of Palermo in the Tenth Century, written in Arabic by EBN HAUCAL, and now translated by MICHELE AMARI. Palermo. 1845.

MOHAMMEDAN Sicily has been the object of much research, since the study of history, assuming a new feature, has been directed towards the middle ages, there to seek for the elements which have civilized the present. No one doubts that the conquests, commerce, and literature of the Arabs exercised great influence upon Christian nations. But this influence has been studied to a greater extent in the crusades and in the navigation of the Mediterranean than in the establishment of the Moslem rule in Spain and Sicily; meanwhile Spain and Sicily, half European and half African, were also the first points of contact between the races of the south, regenerated and united by Islamism, and the new Christian society, which was slowly rising from the ruins of the Roman empire.

That which renders Mohammedan Sicily as important as Spain in the history of the middle ages, is the civilization of Italy in the thirteenth century, consequent upon the intercourse of continental Italy with the Moslem inhabitants of Sicily. We do not deny that other and perhaps greater causes contributed to these effects; but we can no longer be unmindful of the influence of Sicily. In addition to this, there was a difference between the condition of these two European countries when they were conquered by the Orientals. Spain, occupied by the Visigoths, already presented the characteristics of Romano-Germanic society at the period of the Mussulman conquest. Sicily, on the contrary, pillaged rather than conquered by the northern barbarians, was still Greek and Roman at the time of the invasion of the Saracens. The German element did not enter the country till after the Islamite, when a few of the Norman nobility, whom we may regard as having become French, founded a partly Christian and partly Mohammedan kingdom.

The mediæval antiquities of Sicily, long overlooked, are now beginning to receive the attention which they deserve, and the remarks on the statistics of Palermo made by EBN HAUCAL, an Arabic writer of some celebrity, have now been given to the world by M. AMARI.

EBN HAUCAL is one of the oldest Arabian travellers. In the year 331 of the Hegira (943 A.D.), while yet a youth, he set out from Bagdad, probably on commercial concerns. He traversed a great part of the Moslem states which existed in his time, taking care to make topographical, historical, and statistical notes from personal observation or the information which he received from persons better informed on such subjects than himself. After his return to Bagdad, and probably in the year 366 (976-7 A.D.), he arranged this mass of facts according to the geographical knowledge of his age, and formed a work to which the Orientalists of Europe have given the name of Cosmography.

The early history of Palermo we shall pass over, and the vicissitudes which it experienced under its first Mohammedan rulers. It will suffice to say that it was taken in the year of the Hegira 287, answering to that of our era 900 by ABU-EL ABBAS ABDALLAH, who, after a tyrannical government of thirteen years, was driven out by the populace, and the island rendered independent of Africa; but this independence lasted only five years, and in the year 918 Sicily was once more reduced under the yoke of the African Mehedi by ABU SAID MOUSA.

We find the capital occupied a third time, in 325 (937 A.D.), by the troops of EL-KAIRN BIAMR-ILLAH, Emir of Africa, under whom the indomitable spirit of the Sicilians had produced another revolution. AL-KAIRN essayed, as a last resource, to surround Palermo with fortifications; the Khalessah of Palermo, built or fortified by command of this prince, became a citadel into which the personal property of the nobility might be put to secure them in time of tumult. This did not prevent a fourth insurrection from breaking out about four years afterwards, over almost the whole country, and finally appearing in the capital in 335 (947-7 A.D.). Then the Emir of Africa, who had hardly appeased the quarrels existing in his own family, was obliged to yield to the Sicilians.

In truth the Arabo-Sicilians had only been weakened during these struggles by their own divisions. The principal cities of the Moslem, especially Palermo and Girgenti, had become rivals. It appears that a great influence was exercised in these cities by the higher classes, the sheiks, a title of the same origin as that of senator, and who possessed among the people the highest rank in society. This municipal aristocracy was powerful. At Palermo it was able to displace any governor not acceptable to it; the vacancies thus formed the government in Africa were in no haste to fill up. We find deputations of the sheiks of Palermo and Girgenti intriguing one against the other in the very presence of an African military commandant. We find the two cities making war; it will not therefore be too hazardous a conjecture to say that they possessed *de jure* or *de facto* an aristocratic municipality. But at last these two cities, these two bodies of nobility, came to a mutual understanding. It is to be remembered, to the honour of the Girgentines, that the construction of the citadel at Palermo caused them to revolt against the African government, and to reunite themselves with the capital. Thus, when the Sicilians became wise enough to sacrifice their party quarrels to the general interest, independence was gained, and ALMANCOUR, Emir of Africa, being persuaded that the government could no longer be retained, contented himself with the title of lord paramount. The cession which he made of the island in 335 to EL-HACANG-BEN-ALI-BENABI-HOCAIN-EL-KELBI, his general

and favourite, may be justly called feudal, if we understand this term as it was understood by the Eastern Christians. The seigniory of the island remained in the family of the KELBITES, and was not changed till a century afterwards, when the aristocracy having become territorial, divided the country and opened the way for the entrance of foreigners.

EBN HAUCAL visited Palermo some time after the concession of AL-MANCOUR under the reign of AHMED-ABOU-EL HACAN, successor to that HACAN of whom we have just spoken (343—359 of the Hegira, 954—970 A.D.), and in the first years of the reign of ABOUL-KASSEM, brother of AHMED (359—372, 970—982, A.D.). The effects of the political struggle of half a century were still visible. AHMED had rebuilt, as EBN HAUCAL informs us, the gates of the city, which had been broken down by ABOU SAID; his government, having become supreme, began to encourage industry and learning, to repair the arsenals and to provide better means for the administration of justice; but he took a great step in lowering the power of the aristocracy, at once the cause and fruit of the civil wars. It became isolated and shut up in its palaces and mosques, and appearing with a pride calculated only to disgust the Arab merchant from Bagdad. We do not repeat with him that the habit of eating onions was the cause of the brutishness which he observed among the people of the city, but we cannot hope for a better picture of the morality of this abandoned people, during a century under a foreign and hostile government, than these popular commotions present. The country, however, had its good side, on which EBN HAUCAL rather closes his eyes than otherwise. The 200 mosques, the ordinary rendezvous of the men of letters and learning, present no mean idea of the intellectual cultivation of the island. This ABOU MOHAMMED is an instance whom our traveller reproaches as, although already possessing a mosque of his own, having built another for his son, that the latter might teach jurisprudence therein. But assuredly this is not the worst use which the aristocracy could make of its riches, and the remark of EBN HAUCAL that Palermo had in proportion to its size a greater number of mosques than any other Mussulman city, with the exception perhaps of Cordova, exemplifies the magnificence and taste of this aristocracy, not less than its pride. Even the observations which the historian makes on the schoolmasters of the town, who followed this profession in order to escape from taking part in the holy war, proves that a military spirit animated the rest of the citizens. Finally EBN HAUCAL'S sketch, corrected by wholesome criticism, gives a lively picture of the moral and social state of Palermo, such as it would naturally be after such events, and is a document well worth the notice of the historian.

We must now, however, proceed to make some extracts from the work before us, and we shall commence by noticing the

MOSQUES.

There are in the city a considerable number of mosques, as well as in the *Khalessah*, and the quarter surrounding it, behind which rises a wall. These mosques, the greater part of which are frequented, and furnished with roofs, walls, and gates, are more than three hundred in number. They serve as the places of meeting for men learned in the sciences of the country, who assemble at these houses to communicate their thoughts and increase their knowledge.

We owe our best thanks to M. REINARD for the interpretation of this passage, which is very obscure, from the faults of the copyist or the careless style of EBN HAUCAL. The passage is very important, for this great number of mosques in Palermo is rather a proof of the cultivation than the bigotry of the inhabitants. It is known that the mosques are also the houses at which the Moslem *savans* meet. The number (300) which the author gives here does not contradict the subsequent statement which he makes that there were but 200. In the former place he speaks of the total number of mosques, of which the greater part were in good repair; in the latter, of the mosques which were regularly attended. In another place he says:—

This city was in ancient times given up to fire and sword, and its inhabitants have been the victims of several political catastrophes. This is well known at Palermo, and no one contests the fact. At the present time it has more than 200 mosques—a number which I have never seen or heard of in any city, with the exception perhaps of Cordova, and even there it is doubtful that there are so many. One day, as I was in the neighbourhood of Abou-Mohammed-eb-Cafor-el-Ouathaikî, the civilian's, house, I observed from his mosque, within the length of a bow-shot, ten other mosques ranged before me, facing each other, and having a street between them. I inquired the reason of so many mosques, and was told that such was the pride of the people, that each wished a mosque exclusively for his own use and that of his family and vassals, and that it was not uncommon for two brothers living next door to each other to build each a mosque for himself.

Amongst these ten one was that in which Abou-Mohammed-el-Cassi offered prayer; and on the same side, about twenty paces further on, was the mosque of his son, Abou-Mohammed, who built it that he might give lectures on jurisprudence therein; for every one wished to have it said, "That is the mosque of such a person, and his alone."

This son of Abou Mohammed had a very great opinion of himself, and exaggerated his talents very much. He was so presumptuous and so vain, that he appeared the father of his father, or as a man who had no father.

On the sea-side are several "rabats," occupied by bravoes, disaffected subjects, licentious men, spies out of employ, and corrupt young persons, who have learned to pass as devotees, and live in those places to obtain the charity of the pious, and to insult honest women. They are, for the most part, the offscouring of society, and abandoned to every vice. They only live in the rabats because they are without house or home, and are despised by everybody.

Rabats are convents or hospitals. In the frontier towns of the Moslem the rabats were barracks of the soldiery, or rather the gaming-houses of the undisciplined volunteer troops, of whom EBN HAUCAL draws so frightful a portrait. They lived a life of idleness, misery, and vice in the intervals of unemployment, in expectation of giving themselves up to still greater excesses in an enemy's country. At Palermo, the number of these irregular forces must have been considerable at the time of EBN HAUCAL'S visit, for then the holy war was in action under the new national government.

MARKETS AND POPULATION.

The largest markets, such as that of the oil-merchants, are found between Ibn-Saclab's mosque and the El-Jadid quarter. The money-changers and druggists have their stations outside the wall; the tailors, armourers, brass-workers, and corn-factors all live beyond the walls, and the other artificers are divided in the same manner, according to their different trades. Inside the town, the butchers occupy 150, or even more, shops, where they sell flesh. However, there are fewer butchers here than usual; this circumstance brings us to their number and importance. The size of the mosque shews us the profits of their industry. One day as this mosque was full of worshippers, I calculated that the crowd consisted of more than 7,000 persons, for more than six and and twenty ranks assisted at prayers, and each rank could not be composed of less than 200 individuals.

This numerical estimate on the consumption of one of the necessaries of life gives us data on which to determine pretty nearly the population of Palermo in the 10th century. We found our calculation on analogous statistical information relative to Palermo in the present day, in order to have at least an identity of climate and topographical position in the midst of the numerous variations which exist in the writings of the chroniclers of the time between the 10th and 13th centuries, in accounts of the customs, social life, religious practices, systems of taxation, &c. of the island.

There are at the present day within the bounds of the city of Palermo 101 butchers' shops for the sale of all kinds of meat, and nearly 50 tripemen. This is rather less than half the number spoken of by EBN HAUCAL. But we must not therefore conclude, following the same rule of proportion, that the population of Palermo in 350 was double that of the present age. We should perhaps considerably reduce it. The food of the people of the middle ages was less varied than that of our own, and the African Arabs, who composed the majority of the population of Palermo, most probably retained many of the customs of their wandering ancestors. It is true that EBN HAUCAL, was much astonished at the great consumption of onions in Palermo; but, notwithstanding this remark, we may still suppose that the consumption of flesh, measure for measure, was much more considerable at that time than the present. Apart from the difference of tastes and the observance of numerous fast-days, which is nearly general in Sicily, it must be remembered that this people, lively and ardent, but corrupted by the political and economical institutions, languish in misery on a soil the fertility of which is proverbial. In

general at Palermo the poorer classes eat flesh but twice a week; at other times they consider themselves happy if they have on their tables bread, wine, and a dish of cakes or vegetables, but the inhabitants of the flourishing Mohammedan capital of the tenth century did not fare so poorly. Finally, we must add that the system of slaughter-houses has much diminished the number of hands employed as butchers, and also, though to a less extent, that of the shops.

At all events, it would seem that if the present population be about 170,000, as may be seen by the statistical tables, we may calculate that the population of Palermo about the middle of the last century, without including the inhabitants of the villages was rather less than 300,000 souls. The extent of the present town, compared with what it was in the time of Ebn Haucal, will not contradict this conjecture. The town now occupies in the interior and on the north-west side an extent of land which in the tenth century consisted of canals and marshes; but there has been a decrease towards the south-east. Besides, the present town, in which many houses remain unoccupied for want of tenants, could contain a much more numerous population than these 170,000 inhabitants.

As to the number of persons employed as butchers, their families included, we may calculate them as three men to each butcher's shop, that is to say ..	303
The three-fourths of them being married, we must add for their families, at the rate of five individuals for each family	1,030
Employed in slaughter-houses	100
Their families	380
Tripemen	50
Their families	160
	2,023

This calculation shews a number rather less than the half of that which our traveller observed in the mosque of the butchers. However, the number which he gives is not incompatible with a number of shops double that of the present time. The institution of slaughter-houses, which rendered necessary a less number of shops, would, in a greater proportion, diminish the number of hands employed as butchers. Polygamy and the economy of the country account for the remainder. Polygamy, which we believe to be unfavourable to the progress of population in the course of several centuries, could not but augment the average number of individuals in a family of a recent and flourishing Moslem colony like Palermo in the tenth century.

Before proceeding further, we must warn the reader that up to this point we have taken nothing from the census of the population of Sicily under the Moslem, which appeared three or four years ago in the excellent journal of the *Statistics of Sicily*. This account, taken from the MSS. of the public library at Palermo, and published by a very distinguished political economist, is very much suspected to be a forgery, from its having belonged to the MSS. of the Abbé Vella, a Maltese, who, hardly understanding any of the rudiments of Arabic, amused himself, towards the end of the last century, in forging the whole official correspondence of the Emirs of Sicily. It is well known that he gained by this means a large pension, and that at last he was condemned for his impostures.

In conclusion, the facts which Ebn Haucal relates may serve as well to satisfy the curiosity of the antiquarian as the purposes of the historian. He gives very sure data on which to calculate the population of Palermo at the period in which he wrote; he apprises us of the existence of a Sclavonic quarter at Palermo, and consequently of the mixture of the Sclavonic race with the Arabian and African inhabitants of the city. He gives also many details on arts and manufactures. We owe him thanks for the precision with which he mentions the new prince of Sicily as sultan, and names as "walis" the ancient lieutenants or subalterns of the Emirs of Africa, thus throwing light on the judicial system of the country. The exactness with which the events which we have been able to verify are stated vouches for the truth of the others, and causes us to entertain a still more lively regret for the loss of that history which Ebn Haucal assures us, at the end of the chapter, he had previously composed or intended in after-years to write.

JOURNAL OF AMERICAN LITERATURE.

The Wigwam and the Cabin. By the Author of "The Yemassee," &c. First Series. New York and London, 1845. Wiley and Putnam.

A collection of tales of Indian life, originally written for the Annuals, and intended to illustrate the border history of the south. The subjects are the life of the planter, the squatter, the Indian, and the negro—the bold and hardy pioneer, and the vigorous yeoman. The author states that he has mostly drawn from living portraits and from actual circumstances and scenes within the memories of men. The tales, seven in number, are interesting in their incidents and written with a flowing pen, never at a loss for words, and seldom for ideas. Americanisms are frequent, but this is a fault almost unavoidable where a new people adopts an old language and ingrafts upon it some of its own peculiarities. The pictures of border life are very vividly drawn; there is flesh and blood in the personages who figure in them. A pressure of claims upon our space forbids illustrative extracts, but the reader who consults the volume will make himself acquainted with society in a strange phase, and will be pleased with the manner in which the author introduces him to it.

ART.

France Illustrated. Drawings by Thomas Allom, Esq. Descriptions by the Rev. G. N. Wright, M.A. Divisions II. and III. London, 1845. Fisher and Co.

We have not seen the first part of this very beautiful publication, but the two divisions on our table are enough to recommend it to every lover of the arts. Each contains twelve large engravings executed on steel, and presenting a series of views of city, landscape, cathedral, and palace, taken by the masterly hand and judicious eye of Allom, from the most celebrated and picturesque spots in France. Of the twenty-four engravings here collected, it is difficult to determine which most deserve commendation. We turn from some gorgeous and elaborate interior, as that of the *Throne-Room, Fontainbleau*, or the *Saloon of Louis XII.*, in the same palace, or the *Church of Saint Sernin, Toulouse*, to the view of *Avignon*, or of *Lyons*, or of the *Gothic Bridge of Eudes Tours*, and are perplexed which most to admire, all are so exquisitely drawn, so perfectly finished. It is the very work for the drawing-room table, for not only is it a splendid production of art, but depicting existing scenes and objects, it conveys useful knowledge to those who have not travelled—gratifying a wholesome curiosity—while to those who have beheld the originals they will prove still more pleasing by the recal of the beauties and sublimities upon which the eye had rested with such delight, and thus renewing the pleasures of the past.

Nor is the cheapness of the publication its least recommendation; for, strange to say, to that end there has been no sacrifice of labour or skill. The best artists have been employed, and they have done their work with a most commendable completeness. A remarkable specimen of this is *the Gallery of Henry II., Fontainbleau*, which must have been an enormous labour, the very pictures that decorate the walls being minutely copied and introduced into the engraving. And so with many others. The prose descriptions of the various localities depicted is from the ubiquitous pen of the Rev. G. N. Wright, and marked by his usual painstaking precision and plain intelligible composition, and he has further added to the value of the work by a short history of France, with which it is to be prefaced.

Altogether this is the most acceptable contribution, not to the drawing-room table merely, but permanently to the topographical library, which has been offered to the public for many a day, and only such a large sale as it deserves can remunerate the spirited proprietors.

Royal Institute of British Architects.—A meeting of more than ordinary interest, and greater attendance of members, was held on Monday evening, J. E. Kendall, esq. V. P. in the chair. The donations of books and drawings were numerous, and amongst them was a series of plans of the buildings executed by the Prussian government. In reference to the latter, Professor Donaldson stated that the council had awarded the medal of the Institute to the Chevalier Bert, who had long stood at the

head of the Direction of Architecture in Prussia, and who had not only introduced a new and most interesting taste, but had induced the Prussian government to publish a series of excerpta from the best masters for the use of the schools of artisans. Mr. Poynter read an account of the examination of seventeen portfolios of architectural drawings of Palladio, which are in the possession of the Duke of Devonshire, at Chiswick, and were collected by the great Earl of Burlington. Amongst various drawings, was one of the mausoleum of the Orleans family, at Dreux, a description of which was read by the Secretary. It contains thirty-six bodies of the royal family, and near it is erected a large wooden house, built in the extreme felicity of domestic architecture, according to the well-known simple taste of Louis Philippe, who visits it once a year. A letter was read from Mr. E. Hawkins, of the British Museum, stating the intention of the trustees to appropriate a room exclusively for a collection of British antiquities, and for which a valuable nucleus had already been obtained in a large donation from Lord Prudhoe.

FINE ARTS.—A private view of the copies executed by the students in the British Institution, Pall-mall, from the pictures by the old masters, left there for that purpose since the close of the last exhibition at this establishment, was opened yesterday morning. The pictures selected for this purpose were thirteen in number, viz. a Portrait of Francis George Hare, esq. by Sir J. Reynolds, of which a large number of copies were made, some of them evincing considerable talent; the fine Landscape, with Banditti, by Both; a Landscape, by Cuyp, with Cattle and Figures; Murillo's Assumption, from the collection of Lord Saye and Sele, the beauty of which attracted the imitative attempts of a very large portion of the students; a fine Landscape, with Figures and Cattle, by Berghem; the Milk Girl, by Maes; Christ Scourged, by Rembrandt; the Head, full of fine colour and life-like effect, by Spagnioletto, called St. Joseph, of which a very large number of copies were attempted, some of them excellent; a fine half-length Portrait, by Vandyke, from the collection of the Duke of Sutherland; a large picture of Live Fowls, beautifully executed, by Hondekoeter; "Theory," an ideal composition, by Sir J. Reynolds; a small Landscape, by Berghem; and Wilson's "Rome," of which last no copies were attempted, probably on account of the difficulty of reproducing the peculiar effects of the painter. The copies which were made from the abovementioned pictures were for the most part in oil colours; and they, generally speaking, evinced considerable talent in imitation of the colour and effects of the respective masters. There was also a few miniature copies by ladies, which were by no means second to the former in a proper appreciation of the qualities of the originals. On the whole, the exhibition was an exceedingly interesting one.

BRONZE CASTING.—The chest of the colossal statue of Bavaria was lately cast at the Royal Foundry at Munich, amidst public rejoicings at the execution of so great a work; and the Bavarian journals boast of it as the largest fusion of metal ever achieved in modern times—being 40,000 lbs. of brass, which required forty hours to liquefy. Now the equestrian statue of the Duke of Wellington, for the gate at Hyde-park-corner, contains much more than double the quantity, and each of the two principal runs has been equal to the Munich performance; and the metal was in the furnace for a week before it was in a state to flow into the mould. Thus do we magnify foreign arts, and neglect those at home.

HONOUR TO ART IN BELGIUM.—The King of the Belgians has created M. Wappers, the most eminent of living Flemish artists, a baron; and conferred the order of the Legion of Honour on M. Hubert, the promoter of the Wilhelm System of Musical Education among the people.

Of the pictures in the exhibition, about 100 have been sold, and the total value of which is about 2,400*l*.—*Liverpool paper*.

FRENCH SCULPTURE.—M. Petitot has been elected professor of sculpture in the School of Fine Arts, Paris, in the room of the late Baron Bosio.

FATHER MATHEW.—Mr. Leahy, the distinguished artist, has been deputed by the munificent Dwarkanauth Tagore to his native city, Cork, to paint for him a portrait of another of its prominent characters, Father Mathew, the apostle of temperance.

MUSIC.

THE CHORAL HARMONISTS

Commenced on Monday evening their pleasing annual series of concerts, under the direction of Mr. H. WESTROP. The selection included HUMMEL'S Mass in B flat (No. 2); MOZART'S noble motet, *Splendente te, Deus;* an air from Dr. CROTCH'S Oratorio *Palestine* (carefully sung by Miss LOCKEY); a charming sacred air by ANDRE, admirably given by Miss STEELE. In the Miscellaneous Act (which always forms a part of these concerts), Mr. and Miss LOCKEY elicited a rapturous *encore* by their performance of Dr. BOYCE'S charming, though somewhat pedantic duet, *Together let us range the Fields.* A clever madrigal by Mr. COOPER, the librarian and organist of the Society, was robbed of a like honour by its unhappy union with SAVILLE'S hackneyed "waits;" the A B C of madrigalists. The concert concluded with a selection from HAYDN'S *Seasons*, in which Miss STEELE, by her *soprano*-singing, afforded another instance of the erroneous system, or want of judgment, which existed in the Tenterden-street school of vocalization, where she was trained as a *contralto*. We hope that the testimony which her audience on this occasion bore to her aptitude for a *higher* range of lyrical duties, will go far to induce her to abandon her former course of practice. The band of this Society is deficient in stringed instruments, while it superabounds in the brazen department, in which *noise* is permitted to banish *tone*. Mr. DANDO, who has long led, and we hope will long continue to lead, at these agreeable reunions, should look to this defect. We would suggest, as an experiment, that the trombones should be played at the next concerts, in their respective bags. We hope from the full attendance that we may infer a great increase in the number of subscribers. We know of no concerts at which a more careful and judicious selection of standard music is systematically made than at those of the Choral Harmonists.

M. Duprez has left Paris to pass a few months in Italy, for the benefit of his voice, which has suffered serious deterioration at that grave of fine voices, the Académie Royale. He sang, we understand, one night on his way at Lyons, but with less success than might have been expected; for Duprez, though not himself, is very far superior to the host of *soi-disant* first-rates who generally pass current in Lyons and other provincial cities as miracles of vocal art.

THE DRAMA AND PUBLIC AMUSEMENTS.

PRINCESS'S THEATRE.—An exceedingly effective drama was produced here on Tuesday evening, and met with the complete success it merited. It is obviously a translation from the French, but by no means the worse for that circumstance. The title is *The Violet;* the plot runs somewhat thus:—Eighteen years before the commencement of the piece, the son of the Marchioness d'Orvilliers, who had already deeply aggrieved his parent, a haughty denizen of the Fauxbourg St. Germain, by entering the service of Napoleon, in which he had attained the rank of general, confirmed her displeasure by marrying "a low person;" the Marchioness had thereupon departed for Russia, that elysium of aristocrats, determined never again to return to degenerate France and her degenerate son. Some months, however, previous to scene 1, act 1. of our drama, affairs have called her back to Paris, and she there finds that her son died on the field of Waterloo; that his wife had followed him to the tomb within a month after hearing of his death, leaving a daughter, an infant, to the care of the wife of André, an honest working jeweller at that time living near Valenciennes. Further inquiries inform her that André is at this time living in Paris, a widower, with two daughters. Her ladyship's jeweller, M. Trenquet, readily gives her the address of the honest fellow, who happens to be in his own employment, and, we may incidentally mention, in his debt to the extent of near a thousand francs, by reason of a diamond of M. Trenquet's which had been stolen while in the charge of André. And now, the curtain drawing up, we see the two daughters in question, *Blanche* and *Blanchette*, each at her work-table, the former very *triste*, for she has a lover, whose father would not hear of their marriage; and the latter outwardly very gay, though she, too, has a lover, who cannot marry her, by reason of his high rank, for he is a real duke; but, though a real duke, and she a maid of low degree, fervently attached to her, *tout de bon*. The former has consented, on promise of marriage, to run off with her lover—no other than *M. Trenquet's* son, *Armand*—that very evening; the latter has rejected her admirer's overtures to the same effect, and has only the more enchanted him with her virtue, and he has agreed, at her earnest entreaty, to appease his friends by accepting a wife proffered him by his aunt, the marchioness aforesaid. And now in comes *André*, radiant with joy, for an anonymous friend (none other than the duke) has enclosed him the amount of *M. Trenquet's* demand. The poor fellow's joy, however, is all turned to sadness, when the marchioness comes in and demands one of his daughters. She does not know which, nor he, for his

wife had died on the road to Paris, and forwarded him no indication by which to distinguish the one from the other—the real daughter from the adopted. Thereupon ensues much distress on all sides, but eventually a violet marked on the neck of *Blanchette* identifies her as the rich heiress, and the discovery takes place time enough to enable her to marry her devoted *Duke*. A dowry which she gives *Blanche* removes the objections of *M. Trenquet*, and *Blanche*, too, is made happy with her dear *Armand*. Of all the party poor *André* alone, thus at once deprived of both his children, is unhappy, but *Blanche* entreats him to live with her still, and *Blanchette* promises to come and see him every day, and this consoles him. WALLACK filled the part of *André* with his usual ability, and Mrs. STIRLING, as *Blanchette*, was the same genuine actress as ever, full of nature and feeling. A young lady of unannounced name made her first appearance in the part of *Blanche*, and afforded very great promise of future excellence; her manner is easy, her voice good, her delivery clear, harmonious, and discriminating. The other entertainments were the amusing *Jack o' Both Sides* and *Le Diable Quartre*, which promises to have a long run. Mr. MACREADY will not appear again until after Christmas, his provincial engagements calling him away. He performed *King Lear* on Wednesday, *Hamlet* on Friday, drawing crowded houses on both occasions.

ST. JAMES'S THEATRE.—There was a large attendance here on Saturday last, to witness an amateur performance in behalf of the Sanatorium, which beneficial establishment it is desired to place on a firmer and more extended basis. The audience consisted of wellnigh all the fashionable world now in town, and of the *élite* of our intellectualities. The occasion was, indeed, an inviting one, and the performers were some of our most eminent men in literature and art, as thus: The play being *Every Man in his Humour;* DICKENS was *Bobadil;* JERROLD, *Master Stephen;* MARK LEMON, *Bramwell;* FORSTER, the accomplished critic and biographer, *Master Kitely;* LEECH, *Master Matthew;* LEIGH, the author of the *Comic Latin Grammar*, among other excellent works, *Cob;* FRANK STONE, the graceful artist, *Mr. Justice;* and so on. The play was acted, we have no hesitation in saying, to perfection, each man having a thorough appreciation of every point in his part. We could have wished to dwell on DICKENS'S masterly delineation of the part of *Bobadil;* the thorough discrimination evinced in his delineation of the change from the rampant bully to the detected and thoroughly crestfallen craven; we should have specified JERROLD'S entire comprehension of Rare BEN'S idea of *Master Stephen*, and Mr. FORSTER'S most scholarlike, most artistic study of the difficult part so worthily assigned him. But where all was so excellent, and under the circumstances, moreover, it were invidious to speak of one performer more than of another. The play, we hear, is to be repeated for Miss KELLY'S benefit. Heartily sorry are we that this amiable woman and most accomplished actress should need a benefit; but as it is, we are right glad that men so competent to make the benefit beneficial have taken up the matter.

HAYMARKET.—A new and original comedy, in five acts, was produced here on Wednesday evening, from the pen of Mr. RICHARD BRINSLEY KNOWLES, a son of the admired dramatist. The title is *The Maiden Aunt;* and the plot, which is meagre more than enough, is to the following effect:—*Percy Sage*, the nephew of *Sir Simon Sage*, has taken it into his head to fall desperately in love with a damsel, of name unknown to him, just at the point of time when *Sir Simon* has determined upon marrying him to the daughter of his old friend, *Master Peter Wilmot*. Upon the young man's refusal to accept his uncle's choice, *Sir Simon* casts him off, and instead of marrying *Sir Peter Wilmot's* sister, *Mistress Sarah*, as previously determined upon with *Peter*, resolves to espouse his younger relative. By a coincidence not unheard of in dramatic literature, the fair *Mistress Catharine Wilmot* is none other than *Master Percy Sage's incognita*. The interesting fact, however, remains unknown to the youthful couple until the arrangements between the elders have made formidable progress, and then a lover's quarrel carries the matter on till wellnigh the end of the comedy. Then, the quarrel being made up by the mediation of the maiden aunt, comes the question how to get rid of the silly old man. *Mistress Sarah* (a kind soul, and with a pique of her own to satisfy, for *Sir Simon* has made much love to her meanwhile), after adequate meditation, devises a plan, and thus it is carried out. When the ancient bridegroom comes to wed, during a pause occasioned by the arranged delay of the priest, his fears was so worked upon, necessarily, by *Mistress Sarah* herself, and by three of her friends instructed to that end, who tell him that his bride has gone mad, and proposes to kill him at the first convenient opportunity, that he readily gives up the fair *Catharine* to his nephew, and himself proposes to espouse *the Maiden Aunt*, who, however, counsels him to the wiser course of continuing only her friend; and so concludes the comedy. The period of the play is Elizabeth, or thereabouts, as we imagine from the doublets and trunk hose; the plot we have sketched; the style is that of Sheridan Knowles, with a difference as to quality; but then the father is a practised writer, and the play before us a first effort. We may quote the following as a favourable specimen. *The Maiden Aunt* and her niece are discoursing of love:—

Cath. Wilmot. There are more wonders yet.
An old maid talking of love!—I always thought
The mention on't would turn their faces sour,
And nothing pleased them half so much as hearing
Of faithless husbands and tormenting children.
Fie on you, aunt! 'tis time you had forgotten
Such matters.
Mistress S. Will. Yet I have not, nor will ever;
But just as eagerly as e'er I did,
Could hearken now to stories of true love,
Or note them from the dawn of the first blush
To the meridian of the marriage feast.
Perhaps it may be folly at my years,
But so I loved the sunny side of life,
That when I turned the hill, I faced about
Resolved to keep in view what rays of light
Might peer above its top; and thus it comes,
Despite my years, I have a youthful spirit,
And where love is, do love the sight of it;
Whether it languish in a fair round form,
Or give, from eyes of thoughtful loveliness,
Dark lustre; or, in rougher-natured man,
Disport through all his strange varieties;
From the lorn swain that drowns in his love's eyes,
To him that woos her with such conquering speech
As makes her fain to pray in turn to him;
No matter where, when honestly confess'd
And felt i' the heart, 'tis generosity!
Unselfish—or that selfishness which finds
Its best of pleasures in another's pleasure,
And gives a current to the sea of life,
Which else were frozen, bleak and comfortless.

Mrs. GLOVER, we need hardly say, did the very utmost with her part, and was most energetically supported by FARREN, as self-conceited *Sir Simon Sage*. The comedy was given out for repetition every evening till further notice.

ADELPHI THEATRE.—The best proof that can be given of the excellent management of this theatre is, that we find, week after week, and month after month, equally large houses collected to witness the same piece which in the first of these weeks we found ourselves called upon to notice. We looked in the other evening, and there was *The Green Bushes* going on, with as much freshness and spirit as ever, though we believe it has been acted some hundred and fifty nights, and there was a crowded audience, brimful of enjoyment. All our wonder is, that the performers can keep their parts in their heads so long. When RICH was manager of Drury-lane, he reproached one of his men for deficient memory, in that on the 243rd night of some popular piece, he left out some speech: "Zounds!" remonstrated the blamee, "You cannot expect a man to remember a thing for ever!" The Adelphi people do. Then there is *Taming the Tartar*, an admirable burlesque on *Le Diable à Quatre*, and a laughable farce, *Seeing Wright;* if these be not matter wherewith pleasantly to fill up a theatre evening, where shall they be found?

COVENT-GARDEN,—This theatre opened on the 15th inst. for M. JULLIEN'S Annual Promenade Concerts, one of the most agreeable entertainments in London, and the cheapest. By various arrangements, which have been judiciously carried into effect, the stage and pit have been considerably enlarged, so as to afford some chance of accommodation for the hundreds of persons who last year found no place wherever to set their feet (not to speak of *promenading*, an achievement totally out of the question), and were of consequence inhospitably turned away from the doors. Now there is much more room for the company, and more company for the room. The decorations are in excellent taste, and the musical arrangements complete. There is JULLIEN for conductor, as earnest and effective as ever; with TOLBECQUE and NADAUD for his leaders—better men none; HOWELL, the English DRAGONETTI, leads the contrabassi; and the orchestra is competent to any thing it may undertake. The whole thing, in short, is perfect in its kind, which is saying a great deal.

ADELAIDE GALLERY.—Herr KELLER and his assistants continue to form an attractive feature at this now well-managed establishment. The groups he arranges are perfectly classical, and as such worthy the attention not merely of the artist and the more refined observer, but of the public at large, whose conceptions of the grand and of the beautiful cannot fail to be enlarged by such studies as these living embodiments of the noble marble monuments of ancient art which have come down to our times. Herr KELLER'S form is particularly fine, and the expression of his face and his attitudes highly effective; he is quite a MACREADY in action. We shall recur to this subject.

CORRESPONDENCE.

THE WANDERING JEW.

TO THE EDITOR OF THE CRITIC.

SIR,—I have frequently found difficulty in procuring suitable catalogues from which to select books for libraries of various descriptions, and beg humbly to suggest that a column, or part of one, of THE CRITIC might be very usefully occupied in presenting weekly a list of books, stating the *size, number of pages*, and *price* of each; and annexing C. to such as are adapted to congregational libraries, S. to Sabbath schools, M. to Mechanics', Sub. to Subscription and Cir. to Circulating libraries, &c. &c. If judiciously done, and I know of no one better qualified than yourself to do it so, I am persuaded that column would be eagerly consulted by most of your readers. The publishers' names annexed would no doubt be advantageous; but as that would subject to advertisement-duty, perhaps you could give the name of the town or city, when out of London, which would facilitate the procuring of the books. If you consider this suggestion worthy of attention, your giving it publicity might produce improvements upon it by those who experience similar difficulties.

I am, &c. L. C.

[The suggestion of our correspondent is useful. But it could only be done effectually by booksellers and publishers framing such catalogues, and advertising them in the regular way, for which THE CRITIC offers peculiar facilities by its moderate charges.—ED.]

TO THE EDITOR OF THE CRITIC.

SIR,—In No. 46 of THE CRITIC, p. 576, you notice the translation of *The Wandering Jew*, published by Bruce and Wyld, and call it "the entire novel, . . . in a faithful and spirited translation, *unabridged*." Now, if you will refer to the original, or to the translation by Chapman and Hall, you will find that it does not contain one half of the original.

Yours, &c.

SCRUTATOR.

[Our correspondent is right. The notice was written without sufficient examination.—ED. CRITIC.]

CRITIC OF TRADES, INVENTIONS, ETC.

[Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

THE METROPOLITAN SEWAGE MANURE COMPANY.

WE continue our account of this interesting enterprise, and proceed to describe the means by which it is proposed to convey the manure into the country.

The value of sewage water as a manure is no new discovery. It has been long recognised, and numberless propositions have been made for applying it to profitable purposes;—boats, water-carts, and similar conveyances, have been suggested in turn, and abandoned on account of the cost.

The merit of Mr. MARTIN'S plan—that which this company is formed to carry out—lies in its entire removal of this difficulty, and the application of a very cheap mode of conveyance. The only surprise which every person feels on hearing of it is, how a method so obvious and simple should not have been before adopted. But so it is with almost every useful and practicable discovery; its excellence is its simplicity, and its very simplicity is the very reason why it was overlooked.

It was a happy thought that one day darted into the brain of Mr. MARTIN: "We throw away into the Thames every year manure to the value of a million, while we send to the other side of the world to fetch other manure not more valuable. But how to carry away the contents of the sewers,—there's the rub. Boats won't do; carts are out of the question; will machinery help us?" It is not recorded what incident suggested the true plan, but suddenly the idea flashed upon him—"What cannot steam do? Let me see; my house is supplied with an inexhaustible stream of water, even to the atticks: that water is sent to me from a river that runs some miles distant, and is carried in pipes over hill and dale, and through the streets of London, and into my house, and climbs up my walls; and the cost of all this machinery amounts only to a fraction of a farthing per gallon. Why should not the same contrivance—the same sort of steam-engine and pipes that send the pure water from the country to London, send it back saturated with fertilizing qualities into the country, to the enrichment of the soil that surrounds the metropolis? What the water companies effect so easily, a sewage company may accomplish as easily, or more so, for they will have no houses to climb."

Here, then, was the difficulty vanquished at once; and not by a mere project, which might or might not succeed, but by a method that was in practical operation then, and had been for years past; every detail of which had been tried and proved; the cost of which could be calculated to a fraction. This is that plan:—

A district of sewers is taken, and a cross-sewer intercepts them at their mouths, conveying their contents into one deeper one. Into this a suction-pipe is plunged; a steam-engine pumps up the water, just as do the engines of the water companies, and conveys it by pipes, laid along the highways to a covered reservoir, upon a hill, at a convenient distance from town, whence, by its own weight, it is distributed by branch pipes through the surrounding country, following generally the public roads, but taken into any estates adjoining whose owner or farmer might desire to have a tap for his own use upon the land. From the main pipes in the roads it can be carried by carts; but the cheapest mode will be to take a pipe directly into the farm; and then by service pipes, laid at the distance of a quarter of a mile apart, the entire land may be kept continually manured with the most trifling amount of labour; for, by the use of the flexible hose piping, it has been proved that a single man will be enabled to throw the liquid upon the surface of an entire estate, without horse, cart, or assistance of any kind, and at the rate of two or three acres in a day.

But we must defer the continuation of this interesting topic until another week.

JOURNAL OF MESMERISM.

[We shall be obliged by contributions of interesting cases and noval phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mesmerism, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures of philosophical Mesmerists which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mesmerism throughout the world to make this a complete record of the progress of science.]

CLAIRVOYANCE.

(*From the Cheltenham Examiner, of Nov.* 12, 1845.)

THE MIRACLES OF MESMERISM.—We are authorized to publish another wonder of clairvoyance, which cannot but interest believers, and even unbelievers, on account of the position in society of the persons with whom that strange faculty was exercised; and as in the case of Col. Gurwood, which lately we inserted in our columns, it vouches for the strict truth of the relation. Mrs. J. S. Wood, one of them, is a lady of great intellect and lofty ideas, sister to the learned chief magistrate at Bow-street police-court, and mother of the Hon. Mrs. Leicester Stanhope; and many of our readers are doubtless acquainted with Miss Jane Roberts, by reading the novels and miscellaneous writings for which we are indebted to her distinguished pen. Mrs. H——t an English lady, had had given to her by a clergyman in 1787, a lock of the hair of King Edward IV. cut from his head when his remains were looked into at Windsor. This, she (Mrs. H.) had placed in a handsome locket, clustered with brilliants; and in 1845, on being taken by her friend Mrs. J. S. Wood, to a mesmeric *séance* at the Marquise de San Mitan Tecmen's, in Baker-street, the locket was given by Mrs. Wood to Miss J. Roberts, who had been *en rapport* with La Marquise, when she, after a longer period than she usually takes (the hair being under glass), exclaimed "It is the hair of a *tall* man, with a large and clever, but not moral head." Miss Roberts looked towards Mrs. Wood to know if it were correct. Mrs. Wood nodded assent. La Marquise then proceeded "he (the owner of the hair) looks as stiff and cold as marble, and insects are crawl-

ing about and in his eyes, he looks like a statue." Miss Roberts again looked at Mrs. Wood, who said in a *sotto voce* "It is very likely true;" and ere she finished the sentence, the Marquise in agony, screamed, went into hysterics, flung the locket on the carpet, and exclaimed "You have given me the hair of a dead man; *oh, mon Dieu!* why did you do so?" and for four or five minutes it required all her mesmeriser's energies to sooth and appease her. N.B. She always, or generally goes off into hysteria, whenever the hair of a deceased person is put into her hand while in the trance. This is a most curious case, which, in addition to so many others daily spoken of, will strongly contribute to establish the belief in the phenomena of mesmerism.

SIR,—I beg to certify to the correctness of the above report.

Yours, &c. T. PURLAND,

59, Mortimer-street, Cavendish-square.

TO BOOKSELLERS.—*A stamped copy of* THE CRITIC *sent regularly to any Bookseller, for his own use, at the cost of stamp and paper only, on prepayment of* half a year's subscription, at least (4*s.* 4*d.*), *which may be transmitted in penny postage stamps.*

BOOKSELLERS *and Keepers of Circulating Libraries are requested to communicate to* THE CRITIC *the results of their experience as to books and classes of books most in demand, and other similar information. Books wanted to purchase inserted in the weekly list without charge.*

BOOKSELLERS' CIRCULAR.

THE request preferred last week has been, it will be seen below, complied with by many, and we hope more will follow the example.

In reply to one of the circulating-library-keepers, who expresses a wish that he could find in THE CRITIC the advertisements of all forthcoming works of fiction, we can only say, that it lies not with ourselves, but with the publishers, to comply with the request. It seems, however, from the inquiries we have made, that the latter are yet ignorant of the fact that THE CRITIC is really the guide of so large a proportion of the circulating libraries and book-clubs, both in Great Britain and Ireland; and therefore they frequently omit to send to it their new books for notice, and very seldom use it for their advertisements, although a review and an announcement here, from the very nature of the circulation, would be of more service to a publisher than in all the other literary journals put together.

But doubtless they will soon begin to find this out. Their travellers will tell them that they rarely go to a bookseller's in the country where they do not see THE CRITIC upon the counter, and a number of such testimonials as those below will further shew them where their true interest lies.

OPINIONS ON THE CRITIC.

TO THE EDITOR OF THE CRITIC.

SIR,—I beg to assure you that in all matters relating to literature, the opinions of THE CRITIC are held in high estimation in this neighbourhood.

Its reviews of new works are looked upon as fair and impartial, and the opinions expressed, whether favourable or adverse, most materially influence its numerous readers in their selection of new publications. I am, &c.

Redditch, Nov. 15, 1845. JNO. OSBORNE, Bookseller.

TO THE EDITOR OF THE CRITIC.

SIR,—I have been a constant reader of your Journal for twelve months, and consider it a candid and able review, better adapted than any periodical with which I am acquainted to guide booksellers, librarians, and members of book-clubs in their choice of new works. I have been engaged in the bookselling business many years, and have a highly respectable book-club attached to my shop, therefore consider myself qualified to form an impartial opinion of the merits and utility of your publication.

I am, &c.

Whitchurch, Salop, Nov. 17, 1845. HENRY NEWLING.

TO THE EDITOR OF THE CRITIC.

SIR,—I am a subscriber to THE CRITIC; it is my confidential guide to my circulating library, and my favourite weekly gossip touching literary matters in general. The current number is quite a treat.

Excellent, however, as THE CRITIC undoubtedly is, its utility to librarians, like myself, would be vastly increased, for future reference, as well as present purchase, if, under your heading of "Fiction," you would give us a brief explanatory notice of every new novel and romance, good, bad, or indifferent, that you can get a sight of. If, in addition to this, you could present us with the earliest trade announcements of works of fiction, which, from interested motives, we eagerly look for, instead of advertisements foreign to literature, THE CRITIC would indeed be perfect.

I am, &c.

136, Long Millgate, Manchester, R. W. PROCTER.

Nov. 17, 1845.

TO THE EDITOR OF THE CRITIC.

SIR,—We have much pleasure in bearing testimony to the usefulness of THE CRITIC as a guide in the selection of books, not only for the bookseller, to stock his shelves with good works, but also to enable the librarian to choose such publications as are likely to circulate amongst his subscribers, and keep his library free from the numerous trashy novels, &c. that predominate in the present age.—We are, &c.

Bible and Crown, Leicester, BROWN AND HEWITT.

Nov. 18, 1845.

TO THE EDITOR OF THE CRITIC.

SIR,—Having been subscribers to THE CRITIC from its commencement, we beg to acknowledge the very great pleasure and benefit we receive from the perusal of its columns; we every way hear it highly spoken of as a correct and impartial guide to the literature of the day.—We are, &c.

Newcastle-on-Tyne. WILLIAM AND JOHN BELL.

TO THE EDITOR OF THE CRITIC.

SIR,—I have shewn a few of the back numbers of THE CRITIC to an acquaintance or two highly competent to form correct opinions of its merits, and they agree with me that its notices of books are decidedly valuable to purchasers, and the ability displayed in the selection of *extracts*, together with the *Literary Intelligence* of this and other countries, and the excellent *Original Contributions*, render it highly interesting to the general reader.

I am also of opinion it is a very suitable medium for *Publishers' Advertisements*, and in support of this opinion I may state the fact that within the last three weeks I have procured four books from London, the orders for which I received through shewing the advertisements of them in THE CRITIC.

Wishing it the support of which it is worthy, I am, Sir, yours, &c. WILLIAM GOODMAN, Bookseller.

Loughborough, Nov. 19, 1845.

TO THE EDITOR OF THE CRITIC.

SIR,—Permit me to express to you the high estimation in which THE CRITIC is held by self and others in this town, not only for the information so valuable to librarians which it contains, but its general tenour and the respectable manner in which it is conducted. As to its ultimate success I do not entertain a doubt. I am, Sir, yours, &c.

WILLIAM BIGGAR, Bookseller.

Paisley, Nov. 18, 1845.

TO THE EDITOR OF THE CRITIC.

SIR,—I beg most respectfully to inform you that THE CRITIC is held in the highest estimation both with me and others with whom I am connected as being an unerring guide to the character and worth of the different works which are from time to time reviewed. One excellent feature has of late appeared in it which I think is very good, particularly to second-hand booksellers, *and that is*, the insertion of lists or catalogues of new and second-hand books.

I am, Sir, yours, &c.

Burnley, Nov. 18, 1845. JAMES NUTTALL, Bookseller.

TO THE EDITOR OF THE CRITIC.

SIR,—I have much pleasure in stating that I am greatly pleased with THE CRITIC, and consider it a faithful guide in the choice of books. I am, Sir, yours, &c.

JOHN DAVIS WHITE, Librarian.

South Tipperary Library, Cashel, Nov. 18, 1845.

TO THE EDITOR OF THE CRITIC.

SIR,—I have much pleasure in stating that I have the greatest confidence in the honesty of THE CRITIC as a book guide, and am generally influenced by it in my selection of new works.

The healthy and vigorous tone assumed by THE CRITIC on all matters connected with religion and morality, render it peculiarly acceptable to the right-thinking classes of the community.

I am, Sir, yours, &c.

Enniskillen, Nov. 19, 1845. NEWPORT B. WHITE, A.B.

TO THE EDITOR OF THE CRITIC.

SIR,—I feel much pleasure in informing you that THE CRITIC is read by many of my customers, and it is had by the members of the Literary and Reading Society of this place, at their quarterly meetings, to help them in their choice when they order fresh books.

THE CRITIC is taken in at the library and promenade-room at that fashionable watering-place, Bournemouth, where it is much read by the visitors.

I have had many books ordered from the opinions given of them in THE CRITIC.

If new publications were advertised in THE CRITIC, I think it would be advantageous to the publishers.

I am, Sir, yours, &c.

Poole, Nov. 19, 1845. JOHN SYDENHAM, Bookseller.

LITERARY INTELLIGENCE.

From Paris, we learn that M. de Caligny has deposited in the Library of the Institute the first instalment of a publication long since announced, as we then informed our readers. It consists of the first four volumes, complete, of the *Oisivetés inédites de Vauban*—whose contents were hitherto known only by the titles given by Fontenelle—and the first volume of the unpublished Memoirs of the illustrious Marshal on foreign fortresses and the organization of armies, extracted from the papers of the engineer Hüe de Caligny. From the same capital we hear that M. Eugène Delacroix has completed the paintings for which he had a commission in the Library of the Chamber of Peers. On the cupola, he has represented the elysium of great men described by Dante. Dante himself is there, led by Virgil for presentation to Homer, Horace, Statius, and others.—The statue of Queen Hortense has arrived at Rouen. According to the description, her Majesty is kneeling in the attitude of prayer; and the youthful face is beautiful in its expression of mild contemplation. The costume is not historical:—a large veil falls, hood-wise, over the head; and the form is clothed in a Roman tunic, which leaves the arms bare, and is fastened round the waist by a *cordelière*.—*Athenæum*.

BRITISH ARCHÆOLOGICAL ASSOCIATION.—On account of the increase of communications made to the central committee, it has been found advisable, in addition to the fortnightly meetings of that body, to hold on alternate weeks evening *reunions* of the members for the examination and discussion of antiquities forwarded to the association. The opening meeting will take place in the theatre of the Western Literary and Scientific Institution, in Leicester-square. Mr. Mark Antony Lower, of Lewes, has forwarded a highly interesting paper, with illustrations, on the discovery of the remains of Gundreda and the Earl de Warenne.

From St. Petersburg, we find it mentioned that the Emperor has conferred the decoration of the Imperial Order of Saint Wladimir on M. d'Orbigny, President of the Geological Society of Paris, for his share in the *Geology of Russia*, publishing by the Russian government.

REGISTER OF NEW PUBLICATIONS,

From Nov. 15 to Nov. 22.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded by letter will be duly inserted.*

LIST OF NEW BOOKS.

Arnold's (Rev. Thomas) Sermons, Vol. III. 3rd edit. 8vo. 12s. cl.—Arnold's (Rev. T.) Christian Life, its Hopes, &c. 4th ed. 8vo. 12s. cl.—Arnold (Rev. T.) Wiley and Putnam's American Library, "The Wigwam and the Cabin," First Series, 12mo. 3s. 6d. cl.—Wilson's (Rev. S. S.) Agnes Moreville, the Victim of the Convent, fc. 8vo. 6s. cl.—World of Wonders, edited by Albany Poynts, 8vo. 12s. cl.

BOOKS WANTED TO PURCHASE.

No charge is made for insertion in this list. Apply to the Publisher of THE CRITIC, stating prices.

Newman's Lectures on Romanism and Popular Protestantism, 8vo. four copies.

The same, uncut and new.

Marryat's Masterman Ready, 3 vols. (second hand.)

Southey's History of the Peninsular War, 8vo. vols. 5 and 6.

Townley Mysteries, published by the Surtees Society.

Bacon's Works, Vol. I. published by Parker Society.

D'Israeli's Curiosities of Literature, 3 vols. 8vo. First series.

GLEANINGS,

ORIGINAL AND SELECT.

SLOW PROMOTION.—It was the custom of an old officer to make his children read a chapter in the bible every Saturday afternoon. Upon mention being made in the book of Kings of Nebuzaradan, captain of the guard, coming to Jerusalem, he stopped the reader, and cried out, "Dear me! is that man still a captain? Why, he was a captain when I was a little boy."

A Spanish journal mentions a veteran of the army of Spain who was born in 1731, and consequently is now a hundred and fourteen years old. He remained in the army till he was promoted to the rank of sergeant, and afterwards received his discharge. In 1815, at the age of eighty-four, he married a young woman of twenty-one, by whom he has one child. He is said to be still so strong and active, that no one would think him to be more than seventy: his only infirmity is total deafness.

A NOVEL WINTER RESIDENCE.—A few days since the servant at Ynscreigog, a farm belonging to the Rev. Lewis Davies, in the upper part of Cardiganshire, went to the turnip-field, and a hare suddenly started as if from under his feet. Upon examination it turned out that puss had selected a large turnip, and had carefully scooped out its inside, having taken possession of it for her winter residence.—*Welshman*.

M. Barruel conceived the ingenious idea of making a medal from the iron which might be collected faom the blood of a subject. The wife of one of the celebrated members of the Ecole de Médecine of Paris wears a ring made of iron which was extracted from blood taken from her husband during the course of a severe disease.—*M. Colombat*.

A NOVEL PISCATOR.—A cat belonging to Mr. Monkhouse, of Rein House, Castle Sowerby, has brought home within the last fortnight no less than five trouts; and, what is more extraordinary, they were all alive. One of them measured 10 inches, and weighed upwards of half a pound. The nearest brook or rivulet from which it could obtain them is more than a quarter of a mile from the house.—*Carlisle Journal*.

To Readers and Correspondents.

G.—*"Jenny," can, we believe, be procured at* 1s. *per volume.*
J. W. H.—*Webster's.*
E. M. R.'s *poem is too long for us.*
T. H. P.—*We should be glad to receive his views on this interesting subject. Could he not send us a short paper of them? The remarks on the potato disease are not exactly suited for us.*

ERRATUM.—In Journal of French Literature, p. 581, for *bourgeois* read *bourgeoisie.*

ADVERTISEMENTS.

The following is the moderate scale of charges for Advertisements adopted by THE CRITIC:—

For 6 lines and under..... 5s.
For every three lines above ..... 1s.

The volumes of THE CRITIC *neatly half-bound, as completed, for* 4s. 6d. *each, if the numbers be forwarded to the office. The stamped edition may be sent by post with the ends open, and a letter of advice should contain directions how it is to be returned.*

A portfolio, on a novel and convenient plan, for preserving the numbers of the current volume of THE CRITIC *may be had at the office, or by order, of any bookseller in the country, price* 4s. 6d.

THE CRITIC *may also be had in monthly parts, sewed in a wrapper price* 1s. 6d. *each.*

ADVERTISEMENTS.

NEW WORK ON COLOUR.
This day is published in 8vo. with Fourteen coloured Examples.

THE PRINCIPLES of BEAUTY in COLOURING SYSTEMATISED.
By D. R. HAY,
Author of "A Nomenclature of Colours," "The Laws of Harmonious Colouring adapted to Interior Decoration," "An Essay on Ornamental Design," &c. &c. Bound in a new and elegant style, price One Guinea.
William Blackwood and Sons, Edinburgh and London.

POPULAR LIBRARY FOR THE PEOPLE.
Now publishing in Numbers, varying from 6d. upwards,

BURNS' FIRESIDE LIBRARY; a series of Cheap Books for popular reading, suited to the Fireside, the Lending Library, the Steam Boat, or the Railway Carriage.
The above are elegantly printed, and profusely illustrated; and are done up in handsome Illuminated Wrappers. They combine cheapness, valuable matter, and a style of getting up hitherto unattempted.
New Volumes published this day.
THE WHITE LADY, illustrated by Pickersgill. 9d.
THE TWELVE NIGHTS' ENTERTAINMENTS, 5 cuts. 2s.
THE SHEIK OF ALEXANDRIA, by Hauff, illustrated by Scott. 1s.
LIVES OF CELEBRATED GREEKS, illustrated by Pickersgill. 1s. 9d.
TALES BY THE BARONESS FOUQUE, illustrated by Franklin, 1s. 3d.
HOUSEHOLD TALES AND TRADITIONS, 21 cuts. 2s.
Lists of the previous volumes may be had on application.
"This Library cannot fail to receive extensive patronage, if good print, good paper, good works, pretty illustrations, and low prices have any claim to it."—*John Bull.*

TONIC MILK OF ORANGE,
A DELICIOUS CORDIAL,
AND SWEETENER OF THE BREATH.

Patronised by the Royal Family and Nobility,
And recommended by the most eminent of the Faculty.

The MILK OF ORANGE (warranted to be extracted from fruit) warms the stomach, creates an appetite, digests the food, strengthens the lungs, clears and improves the voice for singing, enlivens the spirits, dispels nervous debility, clears the blood, and combines with these admirable properties the inestimable advantage of being the most efficacious agent yet offered to the public for purifying and perfuming the breath.
It should be taken in the proportion of a wine glass-full twice a day, and is particularly recommended to gentlemen on leaving home in the morning or after smoking a cigar, while to ladies it will be equally grateful on going to a party or a ball, for its invigorating influence on the mind and spirits, and its refreshing effect on the organs of health. It may be added, that as a lively but gentle stimulant wholly unmixed with spirituous ingredients, it will prove extremely grateful to that numerous class of persons, who, on principles of abstinence, refrain from all intoxicating drinks.

Prepared (as per Recipe purchased of the former Proprietor, Mrs. GULLY,) by

A. ROWLAND & SON,
20, HATTON-GARDEN, LONDON.

Just published, foap. 8vo. 7s. 6d.

PLAIN SERMONS, addressed to Country Congregations.
By the late Rev. EDWARD BLENCOWE,
Curate of Teversal, and formerly Fellow of Oriel College, Oxford.
"REALITY, I think, appears to be the most conspicuous feature of the Scripture method of instruction; the second, perhaps, is AFFECTIONATENESS."—*Miller.*
"The discourses are plain, interesting, and pre-eminently practical."—*English Churchman.*
"Simple, intelligible, and affectionate, and well adapted to family reading."—*Church and State Gazette.*
George Bell, 186, Fleet-street.

THE SOLICITORS' and GENERAL LIFE ASSURANCE COMPANY.
(Registered Provisionally.)
Capital 1,000,000*l.* in 20,000 Shares of 50*l.* each.
Deposit (in compliance with the provisions of the statute 7 & 8 Vict c. 10, under which the Company is provisionally registered) 5s. per Share.

PRELIMINARY PROSPECTUS.

It is certain that most of the Life Insurances in the United Kingdom are effected through the medium of the Solicitors. But the Solicitors receive only a very small proportion of the great profits they bring to the Insurance Companies—a trifling Commission being all that is allowed to them.

A plan has been matured and approved by the members of the Profession *for securing to the Profession by whom the business is obtained a portion of the profits of that business*, and at the same time for offering to their clients and the public all the security and advantages of an Office conducted upon the most liberal, but safe, principles which experience has proved to be practicable.

The plan is this:—

The Assured to have the Security of a Capital of 500,000*l.* in 10,000 shares of 50*l.* of which, however, not more than 5*l.* per share will be required to be paid up, probably not above 2*l.* 10s.; deposit 5s. per share. On the Capital advanced the Shareholders are to receive Interest at the rate of 4 per cent. per annum, *certain*, and, in *addition* to this, a *dividend of one-fifth of the profits*, after deduction of 10 per cent. therefrom, to be applied to the Widows' and Orphans' Fund afterwards mentioned. Provision will be made paying off the shares at any time that it may be deemed expedient by the Profession so to do, at their then market value.

Three-fifths of the profits of the Insurance branch of the Office will be divided triennially among the Assured, in the form of bonuses, as customary with other offices.

The REMAINDER OF THE PROFITS, subject to a deduction of ten per cent. (to be applied to the Widows' Fund), will BE DIVIDED ANNUALLY AMONG THE SOLICITORS BY WHOM THE BUSINESS HAS BEEN TRANSACTED, in rateable proportion to the sum paid by each during the year for which such profits are calculated; or, at the option of the party, policies may be taken in lieu of such share of the profits.

This share of the profits to be *in addition* to the usual commission, which will be allowed on all transactions.

It is further proposed to secure for the Profession an advantage it has long wanted; namely, to connect with the establishment a Widows' and Orphans' Fund, or Nominee Society, by which Solicitors may secure Annuities for their families in case of death. It is to the increase of this Fund that the deduction of ten per cent. from the profits to be divided among the Shareholders and Solicitors is to be applied.

The Scale of Premiums will be the same as that adopted by the safe and respectable offices.

The Solicitors' Office will avail itself of all the arrangements which, in other offices, have been found to offer conveniences to the assured.

It will make Loans on Deposit of Policies.
It will grant Annuities.
It will purchase Reversions and Policies of Insurance.
It will Insure specially on Special Risks.
It will grant Endowments for Children.
It will meet the difficulties so often experienced by insurers, in consequence of the necessity for fixed Annual Payments required under all circumstances, or forfeiture of the Policy, by a plan that permits the Premium to be varied according to the necessities of the assured; and by which, even if the payment should cease, the policy would not be forfeited, but the value of that actually paid would be secured to his family.

The Profits of an Insurance Office being wholly dependent upon the *amount* of business, it is obvious that if the Solicitors of the United Kingdom will avail themselves of *their own Office* for the purpose of *securing to themselves the large profits they now take to others*, the business of their Office must speedily exceed that of all other offices in the kingdom; and the profits will, consequently, be so great, that the division of them between the Assured and the Solicitors in the manner proposed will secure to both advantagessuch as could be offered nowhere besides.

It may be added, in conclusion, that this plan has been long in preparation. It has been already submitted to the Profession and received their warm approval. The Shareholders incur no risk, for interest will be allowed upon their advances from the date of payment; and the arrangements of the Office, and the names of the Directors and Officers, will, it is believed, be such as to guarantee the utmost respectability and the most prudent management,

As it will be desirable that as many shares as possible should be taken by the Solicitors, preference will be shewn to them in the allotment; and, in order to extend the allotments over as many applicants as possible, no more than fifty shares will be allotted to any one person.

Applications for Shares to be made in the usual form, with address and references, to Messrs. WATTS, GALSWORTHY, and GALSWORTHY, 19, Ely-place, Solicitors to the Company.

GIFT-BOOKS FOR 1846.

FISHER'S DRAWING-ROOM SCRAP-BOOK, 1846. By the Hon. Mrs. Norton. Containing Thirty-six highly-finished Engravings. Quarto, elegantly bound, one guinea.

FISHER'S JUVENILE SCRAP-BOOK, 1846. By Mrs. Ellis. With Sixteen Plates, elegantly bound, 8s.

THE SACRED GIFT, — Second Series. By the Rev. Charles B. Tayler, M.A. Author of "May You Like It," &c. &c.; with Contributions from the Rev. Chancellor Raikes, Rev. Hugh McNeile, Rev. Hugh Stowell, and others. Illustrated with Twenty Engravings after the Great Masters. Imperial octavo, elegantly bound, 21s.

December 1st will be published,

THE SNOW STORM, a Christmas Story. By Mrs. Gore. Illustrated by G. Cruikshank, Esq. Cloth elegant, 5s.

FRANCE ILLUSTRATED, from Drawings by T. Allom, Esq.; Descriptions by the Rev. G. N. Wright, M.A. Vol. I. containing Thirty-three Plates, elegantly bound, 21s.

Just published,

BROWN'S SACRED ARCHITECTURE, in One handsome Quarto Volume, illustrated with Sixty-three Engravings, shewing the Character of the various Styles of Sacred Architecture. Neatly bound in cloth, 42s.

"The work is framed in that catholic spirit which may render it acceptable to all sects and denominations; and in a style simple, concise, and scriptural. Seven hundred and fifty-eight prayers form a large volume, and one which is highly deserving of attention."—*Tait's Magazine.*

On the 1st December, cloth gilt, price 3s. a New Edition of

SONGS OF THE PRESS, AND OTHER POEMS, relative to the art of Printers and Printing; also of Authors, Books, Booksellers, Bookbinders, Editors, Critics, Newspapers, &c. Original and Selected. With Notes, Biographical and Literary. Edited by C. H. TIMPERLEY.

Fisher, Son, and Co. Angel-street, St. Martin's-le-Grand, London.

In Two Volumes, cloth, 21s.

LOOK TO THE END; or, the Bennets Abroad. By Mrs. Ellis.

"'Look to the End' is really more likely than any other work of a similar class to prove beneficial to the reader. Mrs. Ellis is undoubtedly a Christian as well as a charming writer; and whether we read her 'Family Secrets,' her 'Women of England,' her 'Wives, Mothers, or Daughters of England,' we trace in each and all a chasteness of principle, a purity of motive, and a keen perception of rectitude."—*Wesleyan.*

"Few moralists have been able to give reproof and admonition with so good a grace as Mrs. Ellis, and none have possessed more accurate views of what is requisite to elevate the character and advance the usefulness of her sex."—*General Advertiser.*

"We can assure our readers that if they will 'Look to the End' they will not be disappointed. The volume is as rich in moral and religious sentiment, as it is in vivid description and poetic beauty."—*Evangelical Magazine.*

Fisher, Son, and Co. Angel-street, St. Martin's-le-Grand, London.

INDISPENSABLE TO ALL PERSONS SPECULATING IN RAILWAYS.

The REGISTRATION of ELECTORS ACTS, incorporating the Reform Acts, with Introduction, Index, and Notes of all the Cases Decided on Appeal to the Common Pleas. By Edward W. Cox, Esq. Barrister-at-Law. Price 5s. boards.

Law Times Office, 29, Essex-street.

NEW MORNING NEWSPAPER. (Registered Provisionally.)—Capital 400,000*l.* in 40,000 Shares of 10*l.* each. Deposit (as fixed by the Act of Parliament) 1s. per Share.

A general desire has long been expressed among all classes for the establishment of a *Morning Newspaper*, which should rival in all its departments the greatest of its competitors. But the impossibility of finding any one individual wealthy enough to advance the necessary capital for such an enterprise has hitherto prevented the accomplishment of an object universally admitted to be desirable, and allowed to be certainly profitable.

Arrangements are now being made for the formation of a Company for the purpose of establishing a thoroughly honest and independent *daily morning newspaper*, which in every department shall be as complete as skill and capital can make it. To the commercial affairs of the country, its railroads and public works, it will pay special attention, and it is designed that no expense shall be spared to make it in all respects the *Leading Journal of Europe.*

The great profits of such an enterprise, if successful, are too well known to need description.

The title of this newspaper to be "THE MORNING MAIL."

Its principles to be strictly constitutional, but keeping pace with the spirit of the age; at the same time to be entirely independent of party.

That there is ample field for another great Morning Journal will be evident from these facts: That though readers have multiplied tenfold, there are no more morning papers now, than twenty years ago. That the advertisements so crowd the existing papers that they are obliged to resort to the inconvenient practice of supplements to contain them, and that the day mails have everywhere substituted the morning for the evening papers.

The shares are fixed at so small a sum as 10*l.* in order to interest as many persons as possible in the prosperity of their journal, and to secure its more certain independence of all party or personal interests. It is calculated that not more than 5*l.* per share will ultimately be called for, and the calls after the first will be made in sums not exceeding 1*l.* per share, and at intervals of not less than three months.

The shares will be allotted in the order in which the applications are received; but a preference will be given to Auctioneers, Solicitors, Directors of Companies, Booksellers, Hotel-keepers, and other large Advertisers.

In order that there may be the widest choice of Directors, the list will not be made up until the applications for shares are received. But in the mean while as a guarantee to the public that it is a substantial and respectable enterprise, it may be stated that the scheme was suggested and is conducted by the Proprietors and Editors of The Critic, whose character is pledged to see the enterprise properly conducted to the point when the formation of the Company will place it in the hands of the Shareholders, and under the protection of the Act of Parliament which provides so amply for their security.

The deposit of *one shilling* per share, prescribed by the statute, being so trifling, it is presumed that those who really feel an interest in the success of the enterprise will not object to the advance of this sum for the purpose of meeting the necessary preliminary expenses. It is therefore requested that every application for shares may be *accompanied with payment of the deposit of one shilling per share,* which may be forwarded, if in sums of less than ten shillings, in penny postage stamps; if in larger sums, by Post-office order, made payable to Mr. Crockford, the Publisher of The Critic. And the Proprietor and Editors of The Critic pledge themselves to the Shareholders that all the deposits so transmitted shall be strictly accounted for, and that a debtor and creditor account of the sums received and paid shall be published in The Critic from time to time as the work proceeds.

As it is desirable to ascertain as speedily as possible what encouragement the proposition is likely to receive, persons purposing to take shares are requested to forward applications, in the following form, to The Critic *Office, 29, Essex-street, Strand, London.*

FORM OF APPLICATION FOR SHARES.

To the Directors of the Morning Mail Newspaper.

Gentlemen,—I request you to allot me shares in *The Morning Mail* Newspaper, and I undertake to accept the same, or any less number you may appropriate to me, and to pay the deposit, and sign the necessary legal documents when required; and I hereby transmit* the sum of being the deposit of 1s. per share, as prescribed by the Act of Parliament, to be applied towards the preliminary expenses.

Dated this day of 1845.

Name .....

Address.....

* This may be sent either in penny postage stamps if less than 10s.; or if above 10s. by Post-office order, payable to Mr. Crockford, the Publisher of "The Critic."

THE CRITIC,
And Journal of Literature.

SATURDAY, NOVEMBER 29, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

JOURNAL OF ENGLISH LITERATURE.

HISTORY.

A History of England, from the First Invasion by the Romans to the commencement of the Reign of William the Third. By JOHN LINGARD, D.D. A New edition, corrected and considerably enlarged. In 13 vols. London, 1845. Dolman.

THE three concluding volumes of this learned and eloquent History of England are now before us in the more convenient and cheaper form of a duodecimo, beautifully printed with a clear bold type, and embellished with a few excellent engravings. Dr. LINGARD has been already subjected to the ordeal of formal criticism by the reviewers of every class, quarterly, monthly, weekly, and daily; it would therefore be a needless labour on our part to go over the ground so often trodden before. Both his merits and his defects are sufficiently known to our readers, and his place as an historian is now pretty well ascertained by the common consent of the literary world. In judging him, it is necessary to bear in mind that he writes with a purpose,—as, indeed, what English historian does not? He is a Roman Catholic; and deeming that Protestant historians had dealt unfairly with many of the great national events marked by conflict between Catholicism and Protestantism, asserting that his predecessors had suppressed some facts and misrepresented others that told either in favour of their own sect or against their opponents, Dr. LINGARD has endeavoured to present the Catholic account of the same events, and doubtless with a similar leaning towards his own party which he had complained of in his rivals. Indeed, such is the unavoidable consequence of writing history as a partisan; it would not be in human nature to resist the temptation to make out a case. He who takes up a subject as an advocate will treat it with an advocate's onesidedness, whatever his good intentions. It is not the fault of Dr. LINGARD alone; in this he but shares the weakness of all other historians. The fact teaches us, not that we should neglect his or any other partisan history, but only that we should hear both sides, read both, and from their conflicting views strike out a middle path for our own judgment, which will probably conduct us very nearly to the truth.

For this reason we would recommend Dr. LINGARD's *History of England* to the careful perusal of every student of our annals, as presenting the other side of many of the most important questions upon which, if he trusts to one historian alone, he will be sure to form very erroneous opinions. He will reap some advantage also from the mere habit of hearing both sides, and exercising an independent judgment. For the rest, he will find in Dr. LANGARD a vast store of information gathered nowhere beside, and always, when sectarian feeling does not bias him, he is remarkable for the largeness of his views, a rightmindedness that commands respect, and a fairness in the treatment of men and motives, that deserves the highest commendation. His style is simple, but there is a power in it that approaches occasionally to grandeur: his language is very Saxon, and therefore very graphic and forcible. He excels in description, and exhibits a great deal of that faculty found in the old chroniclers, and which may be termed the picturesque. Therefore it is that no reader can fail to be charmed with his pages. They bring such vivid images into his mind that he seems to be holding intercourse with the very past, and not merely listening to the narrative of an historian.

The Philosophy of English History yet remains to be written; it has not been so much as attempted by any of our historians, and certainly not by Dr. LINGARD; but he equals the best of his predecessors in all the other departments, and in some he excels them all. Therefore he should be read with attention, as he is sure to be with pleasure, by all who recognise the maxim "*Audi alteram partem.*"

BIOGRAPHY.

The Life of Carl Theodor Körner (written by his Father), with Selections from his Poems, Tales, and Dramas. Translated from the German, by G. T. RICHARDSON, F.G.S. In 2 vols. 8vo. pp. 754. Second Edition. London, 1845. Nutt.

AMID the pressure of new publications we may not with justice enter upon a lengthened review of a work which has been long and favourably known to the public, however tempting the theme, and a more tempting one could not be presented than the life of the hero-poet KÖRNER, as written by his father, faithfully translated by Mr. RICHARDSON, and introducing some before unpublished anecdotes of SCHILLER and GOETHE. The merits of this contribution to the English library are best proved by the fact, that the first impression has been long ago exhausted, and that there was a call for a second edition. Doubtless, to very many of our readers these volumes are already familiar; but, to those whose notice they may have escaped hitherto, we shall be excused for stating that they contain the memoir of the poet by his father; translations of his poetical and prose works, and a biography of the father; some conversations with the mother of KÖRNER, reminiscences of SCHILLER and GOETHE, and a collection of letters of the poet, his friends, and family. Thus it will appear that the information is various, as undoubtedly it is interesting. Mr. RICHARDSON has thoroughly caught the spirit of the original, and rendered the thoughts, rather than the very words, and so performing the office of translator, not servilely, but with a just appreciation of the duties he had undertaken, which were to convey the poet's mind as the primary object, and, as a secondary purpose only, to exhibit, where practicable, the peculiarities of his manner and phraseology.

KORNER's place, as a poet, is already assigned in the literature of Europe. He is the CAMPBELL of Germany, but with a difference in favour of our own countryman. In fire and energy they are almost equals; but in the art of poetry, and in the power both of imagination and of expression, CAMPBELL bears away the palm. Both have a strong tinge of nationality, which will make them ever dear to the children of their fatherlands; and KORNER's fame as a poet is so mingled with his fame as a patriot, that it is difficult to dissever the two, and determine how much is due to the one, and how much to the other. His prose writings, as they appear in this translation, are inferior to his verse; and it is plain that he would never have achieved much in this species of composition. Nay, we doubt whether, even if he had lived, he would have carried his fame higher by any after efforts in verse. His genius was not of a varied character. The path in which he excelled was not one of those that yield an infinity of subjects, nor had he the play of fancy that could give novelty to old themes by a new manner of treating them. Perhaps it was well for his fame's sake that he died thus early, and in such a cause; for age would have tamed much of the fire that kindles our emotions, without supplying in its stead the philosophy that speaks to the reason, and the tenderness that steals away the heart.

To those who desire to make acquaintance with his works, this edition by Mr. RICHARDSON may be cordially recommended as the best with which our literature has yet been supplied.

The Life and Times of Aodh O'Neill, Prince of Ulster; called by the English, Hugh, Earl of Tyrone. By JOHN MITCHELL. 12mo. pp. 252. Dublin, 1845. Duffy.

IN his preface Mr. MITCHELL expresses great anxiety lest it should be considered that in this biography of an old Irish Chieftain there is a lurking purpose to revive old national enmities, and fan the embers of a strife which ought long ago to have been buried in oblivion. It is evident his conscience tells him that such a construction may, not unjustly, be put upon his choice of such a theme at such a moment, when the

NEWSPAPER STAMP THE CRITIC

resolve of those with whom he is avowedly acting is to inflame animosities that should have been extinct long ago, and whether for ambition's sake, or a dreamy patriotism which savours of the worst spirit of the French Revolution, to stir up civil war, and hazard its multiplied miseries in pursuit of a shadow, for the realization of a phantasy.

What of that, says Mr. MITCHELL; "as to the narrative itself, undoubtedly the only question ought to be—is it *true?* And if so, is the truth to be told or hidden? Is it not at all times, in all places, above all things, desirable to hear the truth instead of a lie?" But does Mr. MITCHELL really impose upon himself, or does he seek only to impose upon others, by this stale fallacy? Indeed, the truth is always to be spoken instead of a lie when there is a need for it. But will Mr. MITCHELL contend that every fact is to be asserted every where, and at all times, and whether called for or not? Does he, forsooth, acting upon the principle he puts forth as the reason for his writing an inflammatory book, make it a rule ever to go about proclaiming, unasked, that which in his own mind he is assured of as a truth? Does he greet his acquaintance A, with "Sir, you are a fool!" or his friend B with "You're a puppy!" If two of his neighbours had quarrelled many years ago, and done each other mutual wrongs, as enemies will do, and afterwards they had been reconciled, and become united in common interests, and visited and shook hands, and were gradually forgetting their foolish feuds, and the consequences, would Mr. MITCHELL, we ask, feel it incumbent upon him, merely because it was *true*, to write for their edification a history of the quarrel, and to set down all the hard words and harder blows that had passed between them, and the injuries each in his rage had inflicted on the other? Surely *this* is not the meaning of the command to speak the truth always, nor does any man practically so construe it. When it is necessary to speak at all upon any matter, then at all hazards speak the truth. This is the plain meaning of the rule,—this is Mr. MITCHELL's reading of it when it is not needful to cover a purpose that would not bear to be avowed in its nakedness, and to deck a vice in the robes of virtue.

But Mr. MITCHELL affects a resignation to events which it is evident he does not feel. He confesses to sympathy with the old Milesian race retiring slowly before "what is called civilization;" this is natural, and not to be blamed; but why add, "and the instinctive and unrelenting insolence of English dominion." Why talk of the "robber standard of England?" What means the expression "that combination of force, and fraud, and treachery, which has always characterized the onward march of English power?" And is it not a pitiful excuse for using "with bitterness" the word "Saxon," or "Englishman," that Mr. MITCHELL should do so, not because it is deserved now, or because he feels it in his own proper person, but that he, as author, views events as a contemporary, and therefore uses the language "that fitted the time, and might have lain in the mouth of a clansman of TYR-EOGHAIN."

True, Mr. MITCHELL proceeds to say, that "the struggle is over, and can never, on that quarrel, be renewed;" "the Anglo-Irish and Scottish Ulstermen have now far too old a title to be questioned." Why, then, revive the memory of the feuds, if not with a secret purpose to revive the feud itself, or the bitter feelings that attended it. But shortly afterwards the truth peeps out; the design *is* avowed, spite of the opening disclaimer; the reader is expected to arrive "at the conclusion that the bitterest, deadliest foe of Ireland (however peopled), is the foul fiend of English imperialism;" and that "at any time it only needed Irishmen of all bloods to stand together—to be even *nearly* united—in order to exorcise that fiend for ever, and drive him irrevocably into the Red Sea." In plain terms, that a rebellion would be successful, and therefore should be attempted.

Whatever the merits of the biography thus prefaced, and whose purpose is thus avowed,—and many it has, for it is a curious record of a past state of society,—we should be ill discharging our duty as Christians, believing all war to be wicked and civil war more especially so, were we to help its circulation by any words of recommendation. At another season, when passion was less inflamed, and no such combustibles existed for it to fall upon, this book might have been read with interest, and the reviewer might have given to its industrious collection of materials and occasional eloquence the praise to which they are entitled. But, at this time, a work written with so unChristian an object ought to be avoided; as bearing in itself the seeds of a pestilence which might result in more woes to the world than centuries could repair.

Lives of Englishmen in Past Days. Third Series. 12mo. pp. 139. London: Burns.

ANOTHER volume of the series so often before introduced to our readers under the attractive title of *The Fireside Library*. It contains the lives of WALTON, WOTTON, Sir RICHARD and Lady FANSHAW, the Earl of DERBY, Lord COLLINGWOOD, Sir T. S. RAFFLES, and Lord EXMOUTH. These biographies are brief, of course, but they shun the usual fault of brief narratives; they are *not* mere catalogues and chronologies. The author has supposed himself to be engaged in narrating to a fireside circle the histories of the personages named above, and he makes the most prominent parts of his discourse the incidents best calculated to win attention or to serve the purpose of instruction by example. This volume is not the least valuable of the series to which it belongs.

VOYAGES AND TRAVELS.

A Pilgrim's Reliquary.

(SECOND AND CONCLUDING NOTICE.)

IT was stated that Mr. WHITE had appended to his tour some very curious and interesting extracts from the unpublished papers, written sixty years since, of an accomplished English ecclesiastic, principally referring to the territory of Savoy and its vicinity. We have reserved a few passages from these for a distinct notice, and it must be confessed that the unaffected narrative of the old clergyman contrasts agreeably with the piebald composition that precedes it.

The first letters are dated from Chambery, the capital of Savoy, whence he had made an excursion into Bouget, a small neighbouring province of France, in company with the Baron de Chatillon, a young Savoy nobleman, of whom he presents this pleasing portrait:

He is about eight-and-twenty, with the most manly and graceful person, and a countenance as bright and open as the day: to all the politeness of the French, and all their quickness, he unites the frankness of an Englishman, and the insinuating softness of an Italian: his natural talents are highly cultivated, and excellent: he has read much, discriminated much, and seen much: he is a great proficient in music, and speaks the Italian language with as much elegance and fluency as the French. He made us promise to follow him into Savoy, to pass the vintage there with him at his country seat, and spend a part of the winter at Chambery, where he has his town residence, and where his mother and two sisters reside.

The castle of this young nobleman was most picturesquely situated.

As we advanced, the Castle of Chatillon rose proudly as it were from the bosom of the lake, eminently situated on the top of a rocky mount, fringed with underwood, and domineering over the water on one side, and an extensive and lovely vale on the other. You will suppose from its name that it belongs to my friend, and gives him his title; it was once a powerful fortress, and is now a majestic ruin. Its date is very ancient, and it was spacious enough in the time of Bertoldus, the first Duke of Savoy, to contain him and all his train, it still looks sternly from its mouldering battlements and ivied towers, and seems to bid a haughty though vain defiance to the hand of time, which has destroyed its strength without destroying its spirit, and which has given it in interest what it has taken from it in grandeur, by leading and leaving amidst its ruins all the desolate graces. We slept there one night, it proved a most tempestuous one. I lay in a vast, lofty, and comfortless chamber, and felt a new and indescribable pleasure in listening to the storm that beat against the crazy windows, and murmured in all their crevices. All the spirits of the lake seemed up in arms, and tilting in the furious winds. It was consistent with the style of the old castle, and sleepless as my night was, I preferred it to the calmest repose on a down bed, amidst all the luxurious concomitants of modern elegance and ease.

He rested for a night at the monastery of St. Sulpice, whose inmates gave unmistakable tokens of good living. Here he fell in with an interesting personage, whose confidence he obtained, and this was

THE STORY OF THE YOUNG MONK.

But amongst the sleek and pampered brotherhood, on whose full cheeks glowed the purple shades of a smiling autumn, I distinguished one who had scarcely passed the spring-tide of his days, but whose blossoms seemed untimely withered in his cheeks, and in whose eyes sat pensive care; he interested me, and he observed it. The conversation turning on pictures, my friend begged me to produce my little resemblance of Mrs. Siddons, as a proof of the skill of our miniature painters; it passed from hand to hand; the suffrages of the others in its favour were loud and prolix; but the young monk regarded it with fixed and silent attention, and with a rising tear, that shewed it made a deeper impression on him, and recalled painful ideas to his heart. After we had risen from table, he took an opportunity to invite me to his neat apartment, where, opening a little cabinet, he drew from a secret drawer a miniature picture, which he pressed (with eyes lifted to heaven, and a quick flush) to his bosom, and then, with a sigh that spoke more eloquently and touchingly than all language, put it into my hand. It represented a beautiful young woman, with the complexion and somewhat of the features of Mrs. Siddons, I read in it the cause of his emotion, he saw it, and said, "But for that lovely creature, I never should have renounced all the pleasures of the world, and shut myself up within the walls of a convent." I supposed that she had jilted him. "Oh no!" he cried, with emphasis, "she was as amiable as she was beautiful, and hence my deep sorrow, which seven years' penitence and prayer have not been able to erase. I am the son of a rich merchant at Lyons, I passionately loved this charming girl, and won her heart, she was of equal birth, our families approved our choice, and the day was fixed for our nuptials; in the mean time one of my relations gave a ball, at which we danced together, with all the joy of young and heedless minds, that give themselves up to the transports of ardent affection, which meets no contradiction, and dreads no reverse. After a long and fatiguing dance, oppressed with heat, she went into the room where refreshments were served, and desired me to procure her some warm wine and water; I passed through the crowd to get it, in the hurry and confusion they put a glass of cold lemonade into my hand, which, through a carelessness I never shall pardon myself for, I did not observe; the object of all my wishes drank it eagerly, clasped her hands to her head, gave one groan, and dropped dead upon the spot." Tears choked his utterance, I need not tell you mine flowed with them. All I could say was, that it was not for man, but Heaven to give him comfort. He clasped his hands together, and with a mixture of energy and humility in his countenance replied, "It has taught me resignation, but can it teach me *forgetfulness?*" He afterwards moved his lips in silent prayer, composed his countenance, and conducted me back to his merrier and happier, but less amiable and interesting brethren.

Very graphic is his sketch of

THE PEASANTRY OF SAVOY.

The dress of the peasants in these mountains is as singular as their situation; there has been, time immemorial, a pragmatic rule observed amongst them, which forbids the slightest alteration or difference from each other in their garb. I was present at one of their great Jours de Fête, and saw at least six hundred peasants assembled, in and about a little rustic church, built on a pleasant hillock between two rugged rocks. They were in their holiday clothes, all precisely the same as to materials, colours, and form; those of the men were not very remarkable; one of the women's I shall describe to you. Upon her head a cap of red cloth, exactly the form of a child's skull-cap, and bordered with a tawdry green and gilded ribbon; her hair, that shone with oil, was combed straight back, and was curled up under her cap before and behind in tight tresses, about the size of a common sausage, then formed into circle within circle, flat upon the head, as broad as a plate; a vest of green cloth, faced with red, sat tight to her shape, over which was a loose jacket of red, with short wide sleeves; under this she wore a petticoat of puce-coloured stuff that reached to her ankles, bordered with two rows of red between two of green, a wide collar of coarse linen, edged with a broad flaring lace, with meshes as large as those of a garden-net. It fell back over her shoulders, and left her sun-burnt neck bare, which was adorned with a large yellow metal cross. If I was amused with their habits, they were not less so with mine. Three arch and pretty girls, that were huddled together under the shade of a walnut-tree, did not cease tittering and blushing at my English dress, a wonder which they had never seen before.

He and his friend took for the summer a country house near Vaucluse.

The great charm of our little habitation is a green drawing-room, embowered in shade. The little grove of elms, planes, and flowering limes, which veil the windows with their abundant and graceful foliage, are vocal with the pensive melody of nightingales, and the livelier notes of the thrush and blackbird, with other sweet woodland choristers. Between the various and irregular trunks of the trees the pure waters of the Sorgue are seen flowing, their murmurs from a little fall just opposite, and their dashings and sparklings from a large wheel that supplies the house with water, are equally grateful to the eye and ear, and highly refreshing to the sense; the very motion of the wheel has a happy effect, caught partially through the branches, and a soft daisied turf appears with delicious verdure beneath the shade kept fine by the farmer's sheep. A shepherd-boy often leads them hither, they frisking and frolicking about him while he plays on his pipe. I cannot say his notes are entirely Arcadian, but there is something wonderfully pleasing in them, rustic and unmodulated as they are, from their assimilation to the surrounding objects. Such is our green pavilion. Little rambles about the adjacent country, reading, writing, and conversing about absent friends, past scenes, and future pursuits, divide our hours, and empower them to glide calmly and sweetly away. I should have told you, however, that we do not want neighbours, and that those neighbours are English.

Can words convey a more vivid picture of a town and the country round than this of

HIERES.

About ten miles from Toulon is Hieres. The town is like most other French towns, nasty, gloomy, and of little note, but nothing can be imagined more enchanting than its environs, defended by grand and finely-featured mountains from every nipping blast, and only open to the genial breezes of the south,—spring, summer, and autumn, like the sister Graces, live there in eternal amity. Winter seldom dares shew his rugged face in those happy shades, or should he approach them with hostile step, would, like Hannibal at Capua, presently feel his rigour softened, and sink, dissolved in pleasure, under the zephyrs, that sport for ever among the branches. Imagine numerous groves, formed wholly of orange, lemon, and citron trees, formed into walks many hundred yards in length, over which the stately trees form a perfect canopy, glowing with fruit, and embalming the air with their flowers. Hills of various cultivation, and rich with wine and oil, are drawn round on each side, while the more distant landscape in front offers to the delighted eye villages and cottages scattered amidst the verdure of meadows that stretch to the sea, whose curling bosom is finely broken by several islands, and animated by vessels of all dimensions, and almost all nations, passing to and fro between Italy and France. The common hedges about this favoured spot stand thick with myrtles, tamarisks, and pomegranates, the latter were laden with fruit, through whose cloven sides the bright scarlet seeds within tempted alike the palate and the eye, and though they could not vie in value, at least vied in beauty with the neighbouring golden groves; I may well call them *golden*, as while they delight the possessor's eye and charm his sense, they attach him still more powerfully by filling his purse with that kind of gold which is so much more necessary in the world, and is the master-spring of all its actions. One of these gardens alone, we were assured, yielded a clear revenue of *fourteen hundred pounds a year* to its owner. From these a great part of France, Savoy, and Switzerland are supplied with essences and fruits.

While resident in the south of France, he made acquaintance with

LAVATER.

His face is pale and penetrating, like Sterne's monk, but not mild; keen and eager attention and observation hurry about his thin lips, and in his eyes, which search you to the soul, and are yet tempered with so much benevolence, that you are not afraid of their fire. Every motion, every look, every gesture, and almost every word marks enthusiasm engendered by glowing fancy, active knowledge, and exquisite sensibility. Intense thought has forestalled time in furrowing his cheeks, and the fervours of an ardent imagination, continually kindled by new and deep researches, seem to have consumed his flesh, and burned up his colour to ashes. His manners are at once open, vivacious, and simple, with the information of a first-rate understanding, and the captivating cordiality of a warm and good heart, disdainful of little forms, but from right feeling never neglecting those more essential points, that win your confidence and respect. You will not laugh at me for being earnest to hear this extraordinary genius preach, though wholly ignorant of the German language. Do the voice, the air, the eyes, the gestures, of such a man say nothing? yes! they speak always in the most forcible, and often in the most intelligible language. Mr. Lavater was born an orator—he seems to move the passions at his pleasure. His tones are finely varied according to his feelings, and when turned to the pathetic, are irresistible. His action is equally animated and graceful; so far from being affected and studied, to set off

his own eloquence, and work upon the feelings of others, it apparently proceeds from the impulse of the moment, and his natural fire and sensibility. As he preached without notes, his hands were at full liberty; he used them just enough and no more, without flourish of false pathos, or one wild gesture of flaming enthusiasm. How did I regret that I could not comprehend his words; but I have been well informed that his style is what I suppose it, eloquent, energetic, and full of fire. In short, of all the preachers I ever saw in the pulpit, he came the nearest in my idea of apostolic dignity and inspiration. He has been a voluminous writer, but his favourite, most extraordinary, and most celebrated work is that on physiognomy, which he has reduced almost to a system.

And how picturesque is this description with which the fragment concludes.

A HERMITAGE.

Near Soleure, and deep in the shady dells of Mount Jura, we visited a hermitage happily placed under the protection of a bold and bare rock, adorned with a tufted topknot of firs. Another rock of similar height and feature, leaned forward as if to meet it on the other side, and a murmuring brook of limpid water edged the narrow path between them with its winding course. A chapel, of different features, springs as it were out of the side of each rock, to one of which we mount by a light bridge thrown across the stream; and by a steep flight of stone steps to the other.

One of these houses of piety was laboured out of the very bosom of the rock, by the first hermit who fixed on this sweet solitude, and is of considerable depth; the entrance roomy and lofty, but narrowing and lowering as we advance to what may be called the choir.

I fear the fervour of my devotion would ill defend me from the humidity of the spongy roof and walls. A little platform at the entrance, which is covered with a portico, supported by four light columns, has a most pleasing effect. Nor less picturesque is the bell which appears at the summit of the cliff, suspended in a turret which peeps partially through the dark shade.

Hard by, and beneath the arching extremity of the same rock, is an oratoire enclosed with palisades, within which are seen full-length figures of our Saviour and his apostles, reclining on a bank of moss, with miniature models of the Old and New Jerusalem over their heads. The lamp depending from the roof, has a soothing and solemn effect, especially in the evening.

A little wooden bridge, with a picturesque portal, and a fountain at its threshold, leads over the brook to the hermit's simple cell, and to a little walled garden overshadowed by a few old walnut-trees. An aged dog and two hens compose his entire establishment, the sole companions of his melancholy hours. His costume much resembles that of an ordinary rustic; he is far advanced in years, and his manner is simple and subdued.

The winding path which leads to this romantic retirement, the deep impressive shades around, the solemn moaning of the wind, and the plaintiff cadences of the streamlet, enhanced by an *échappée de vue* between the rocks of a few quiet pastures, quickly shut in by the semicircular heights of Mount Jura, altogether perfectly realize our conceptions of eremitical solitude, and its sublime repose.

After perusing these charming passages our readers will regret with us, that Mr. WHITE has not thought fit to publish more of them. Why does he not print the entire MS.? We doubt not it would obtain a larger sale than nine-tenths of the inanities of modern tourists. We are sure it would deserve it.

FICTION.

Honour and Shame: a Novel. In 3 vols. London, 1845. Bentley.

MANY of the keepers of the circulating libraries who have certified to the fact that they have entirely adopted THE CRITIC as their guide in the choice of the books for their shelves, have requested that we would endeavour, if possible, to oblige them with a short notice of every new novel that appears, in order to protect them against the serious losses to which they have been hitherto subjected for want of an honest adviser, as also to enable them at once to procure the really good fictions for the entertainment of their customers. With this request it will be the endeavour of THE CRITIC to comply as far as may be; but there is a difficulty which will sometimes stand in the way of an immediate notice of a new novel. Very few of the publishers send their fictions to THE CRITIC. If they are at all dubious of their worth they withhold them, well knowing that here they will be treated according to their deserts, and prudently enough they seek to escape notice here altogether, by keeping the questionable publication from our sight. We have made arrangements to obviate something of the difficulty thence arising, and which is the penalty a literary journal must always pay for honesty and independence, by procuring the new novels not sent by the publishers from a circulating library; and there they cannot always be had immediately, being occasionally engaged elsewhere. We trust, however, that very few will ultimately escape, and we will endeavour, by making the notices as brief as is consistent with the expression of a fair opinion, to find room for all without trespassing upon the other departments of a literary journal.

Honour and Shame is one of the novels that has *not* been sent to us, and the reason is very obvious—it is a *doubtful* novel. We do not mean to say that it is one of that numerous class of *trash* which may be unanimously rejected as unworthy of a place in *any* library, but it is certainly not one that recommends itself to universal circulation, and which every librarian can order with safety. The authoress possesses some qualifications for her task. She is fertile in incident, is mistress of the art of stage-effect, making telling points, and devising good *situations*. There is also a spice of the dramatic in her dialogues, which *are* conversations, and not disquisitions or narratives. Her faults are, a too obvious attempt to point the moral, which should always be understood, not uttered; and she seeks to teach religion too, but she does it by phrase and cant, and not by the silent infusion of its spirit. The purpose of the novel is commendable; it is to shew that the path of duty is the path of happiness, even though that duty should clash with present prospects of advantage. Indirectly, also, it is intended to teach that devotion to literature by a lady is not desirable. But this is a question purely of degree. Nobody will deny that literary tastes are an ornament alike to woman and to man; it is only the "too much" that is to be avoided. But where does this "too much" begin? Until that problem is resolved we can apply no test, and we fear that the consequence of crying down literary pursuits in women is to lead to a neglect of all mental accomplishment, and to keep them the frivolous, mindless, ball-room butterflies the majority of them now are. We cannot give a better abstract of the improbable story of this novel than in the language of *The Spectator*. "The father of Isabella Loraine, the heroine, is a scamp, who has squandered all his wife's property he could get at, and gone abroad, where he is supposed to have died some twenty years before the tale opens. At this time Isabella is introduced to Rollo Melville, the hero and an engagement follows. Every thing is fairly settled, day fixed, and all that; when up starts Captain Loraine in a dark wood, and confronts Isabella, with portraits of her mother and himself, and family papers. The object of this worthy is money and secrecy. He swears his daughter to the latter, and half-extorts, half-wheedles her out of the needful, on various occasions, to nearly the full extent of her fortune. What is worse, these secret meetings give rise to scandal. Isabella (under oath) refuses all explanation to her betrothed, his mother, her uncle; the match is broken off; her character is talked about; the distress is worked up quite to a climax; and the reader is led to suppose that Isabella is going to America with the wreck of her fortune, to devote herself to her father—when that gentleman quarrels with a confederate, who has egged him on to all his villanies, and is shot out of the way in a duel."

Such being the character of *Honour and Shame*, we cannot recommend it to the shelves of libraries that do not order largely. In a selection it should not be included, but it need not be rejected by the great establishments as absolutely worthless. Many will read it in lack of better winter fare.

Dunster Castle: an Historical Romance of the Great Rebellion. By J. T. HEWLETT, M.A. late of Worcester College, Oxford. In 3 vols. London, 1845. Colburn.

DUNSTER CASTLE is situated in one of the most picturesque spots in Somersetshire. Upon a knoll in the midst of an undulating park that recedes without a boundary into dark heathery hills, with the Quantocks on one side and the sea on the other, it possesses all the charms that should stimulate the fancy of the writer of romance. Then it is intimately associated with many of the most stirring events of our history. Its recollections are of the civil wars, and of the rebellion of

Monmouth, in both of which it bore a conspicuous part. It is the very place for the scene of an exciting novel, and it was with eagerness that we took up the one whose title-page is given above, anticipating a couple of evenings' revel in a real romance.

What was our disappointment, to find such rich materials worse than wasted through the entire incompetency of the author to make use of them! A tame, dull production is this of Mr. HEWLETT. It wants the spirit of the romance; the glow of imagination, the play of fancy, the copiousness of invention, the earnestness and inspiration, as it were, without which no romance can be successful, are entirely absent from *Dunster Castle*. The reader, instead of being carried away by the story, so that he never knows when to break off and go to bed until the expiring candle warns him of approaching darkness, is content to close the volume and throw it down at any moment, and upon the slightest summons, and he will scarcely care to resume it. The cause of this is not that Mr. HEWLETT has written carelessly, or has neglected to acquaint himself with the history, and costumes, and customs, and manners of the age he has undertaken to depict, but that he is by nature deficient in the peculiar faculties that go to form the writer of romance. He is a narrator, not a creator; he writes history, not fiction. His personages do not come palpably before us, living, and moving, and breathing, so that we think of them afterwards as of persons whom we had some time seen and known, but we are never for a moment permitted to forget that they are fictions; there is no speculation in their eyes—they are puppets, not men—and, more provoking still, they are played so clumsily, we cannot help seeing the strings that move them.

The plot of such a romance it would be a waste of room to analyse: enough to say to the circulating libraries, that it is one of those new novels which must not be ordered on the strength of its name. The very large libraries, who have readers more voracious than choice, might place it on their shelves, because worse novels are published every week, but they who exercise a selection in their orders should certainly pass over *Dunster Castle*.

POETRY.

Household Verses. By BERNARD BARTON. London, Vertue. 1845.

THERE is a class of poetry which it sorely perplexes us to review, because, if it exhibits little to praise, it offers still less for objection: the poet has attained to the utmost skill in the mechanics of his art, but he wants the natural genius that can alone stir the hearts of men, "as 'twere a battle drum," and become the heritage of all after generations. Of such "respectables" of literature what can be said by the critic other than that praise which attaches to respectability everywhere?

Mr. BERNARD BARTON is one of this class. He is not a poet in the proper meaning of that term, but a sentimentalist. He excels in prettinesses, which he clothes in becoming language, and moulds into unquestionable metre and rhyme; and inasmuch as those sentiments are in strict accordance with morality, and never run counter to conventionalities, the writer is sure to command a certain amount of popularity from those who are pleased to see their own notions so aptly expressed, and applaud accordingly.

BERNARD BARTON is, as our readers are aware, a Quaker, and the sober livery of his sect is apparent in his poems. They are gentle, unimpassioned effusions, not thrown off in the fury of imagination, "conceived in rapture and in fire begot," but made by measure and rule, composed with slow and laborious effort, and polished with care and deliberation. The utmost to which he attains is an occasional pretty thought or elegantly-turned sentiment. That is certainly as much as most readers look for, or can comprehend; and hence the temporary popularity that generally attends poems like these; and it is probable that Mr. BARTON will enjoy a much more extensive circulation, and more immediate fame, than would a real poet of grand but irregular genius, destined to be read and honoured when his more successful contemporary has passed away and is forgotten.

The striking defect of the volume before us is the absence of *power*; the want of it is felt when many of the poems are read in succession and we begin to be weary of mere prettiness and truisms, however elegantly worded. This defect is not so evident when a few only are read in extract. It is when they are perused in succession that the mind becomes conscious of a certain sameness of thought and equality of execution, which, were it but for variety's sake, it would gladly exchange for the utmost niggardness of versification and occasional faults. For the reasons above stated, it does not admit of elaborate criticism, and we can do no more than illustrate these few comments by some extracts, which, while exhibiting Mr. BARTON in the most favourable aspect, will make our meaning clear to those who read with a recollection of the comments we have adventured.

A pleasing feature of these poems is the wholesome and genuine religious feeling that runs through them, apparent everywhere, but nowhere thrust forward obtrusively as in the poems of Mr. ROBERT MONTGOMERY. Here is one—

TO THE DEAD IN CHRIST.

Ye are gone from the saddened hearth,
Your time hushed tones are stilled;
Ye are gone from the bowers of earth,
From the homes your presence filled.

Ye are gone to the spirits' land,
And we miss your looks of love;
Ye have joined that happy band
Who rejoice in light above.

And our spirits yearn below
For the music of your voice;
For our longing hearts would know
That which bids you rejoice.

Ye have done with sin and sorrow,
Ye are freed from care and pain;
Ye dread not the coming morrow,
Ye never can fear again.

Ye have laid down those mansions of clay
Around which sad memory hovers;
And your spirits have winged their way
To scenes their pure vision discovers.

The golden bowl is broken,
Loosed life's silver cord;
And your spirits, by angels spoken,
Rejoice with Christ the Lord!

Another of seasonable interest is

ON THE GOING OUT OF THE OLD YEAR.

Eighteen hundred forty-four!
Soon thy twelve months will be o'er;
And thy memory only be
All that shall survive of thee!
Every year that hurries by,
Though it wait not for reply,
Brings, as plainly as it can,
Serious questions home to man;
Tells him that he is but dust;
That he holds his life "IN TRUST!"
And that trust's discharge demands
Sober reckoning at his hands.

Ask we, then, of by-gone years,
What their true result appears?
Some of us have known enow
To write wrinkles on the brow:
What of wisdom have they taught?
What true pleasure have they brought?
What of real growth in good?
Questions these—in thoughtful mood
It becomes us oft to ask,
Not to turn from as a task:
Life's best boons we all confess,
Wisdom, virtue, happiness.

Is the world much WISER grown,
When the surplice and the gown,
Turning east, or turning west,
Are of magnitude confest,
And, in days of fearful signs,
Dwelt upon by grave divines?
Shall we never comprehend
That Religion's aim, and end,
In such things can have no part,
But appeals unto THE HEART?
There would rear her hallowed throne,
Rule and reign by love alone!

Are we HAPPIER? Truest bliss
Surely should consist in this—

In the happiness of ALL,
High and low, the great and small!
What though every rising sun
See new wreaths by science won;
Though the arts their trophies show,
And the rich may richer grow;
Science, commerce, wealth, and art,
Leave ungladdened many a heart?
Are there more, or are there less,
Who *now* share in HAPPINESS?

Are we BETTER? Growth in good,
Truly felt and understood,
Means a growth in every grace,
Shining in its proper place:
It implies a growth in love
Unto Him who reigns above!
Love to all His creatures here,
Rendered, for his sake, more dear?
Tried by this unerring test,
Genuine goodness is confest;
Heavenly in its aim and birth,
It would make a heaven on earth!

If such questions, and replies,
Bid misgiving doubts arise;
May those doubts but urge us, still,
So to weigh the good and ill
Of our daily walk in life,
That it be not found at strife
With His merciful intent
Who another year hath lent:
But, with humbled, grateful hearts,
May we so perform our parts,
That in each God yet may give,
We wiser, happier, better live!

The sentiment of another poem is remarkable for its liberality, while it approaches nearer to poetry than any thing we have found:—

STANZAS

Suggested by a beautiful copy of the Madonna and Child, presented to me by my friend Mary Frances Fitzgerald.

I may not change the simple faith
In which from childhood I was bred;
Nor could I, without scorn or scathe,
The living seek among the dead;
My soul has far too deeply fed
On what no painting can express,
To bend the knee, or bow the head,
To aught of pictured loveliness.

And yet, Madonna! when I gaze
On charms unearthly, such as thine;
Or glances yet more reverent raise
Unto that infant so Divine!
I marvel not that many a shrine
Hath been and still is reared to thee,
Where mingled feelings might combine
To bow the head and bend the knee.

For who, that is of woman born,
And hath that birthright understood,
Mindful of being's early morn,
Can e'er behold with thoughtless mood,
Most pure and perfect womanhood?
Woman—by angel once addressed;
And by the wise, the great, the good
Of every age accounted blessed!

Or who that feels the spell—which Heaven
Casts round us in our infancy,
But, more or less, hath homage given
To childhood—half unconscious why?
A yet more touching mystery
Is in that feeling comprehended,
When thus is brought before the eye
Godhead with childhood strangely blended.

And hence I marvel not at all,
That spirits *needing outward aid*,
Should feel and own the magic thrall
In your meek loveliness displayed:
And if the objects thus pourtrayed
Brought comfort, hope, or joy to them,
Their error, let who will upbraid,
I rather pity, than condemn.

For me, though not by hands of mine
May shrine or altar be upreared;
In you, the *human* and *Divine*
Have both so beautiful appeared,
That each, in turn, hath been endeared,
As in you feeling has explored
Woman—with holier love revered,
And God—more gratefully adored.

And better still is

ONE MORE TRIBUTE TO MY FAVOURITE OLD ABBEY AT LEISTON, SUFFOLK.

The breath of Spring has o'er thee blown,
For thou canst yet her blessing share,
Decking, with beauty not their own,
Those walls, which else were bleak and bare;
The ivy's twining wreath is there,
And, brighter from that ivy's gloom,
Shedding its perfume on the air,
The wall-flower's golden bloom.

And thine is music, even now,
Which suits thy hoary ruins well:
The blackbird on the ivy-bough,
The bee that comes to store its cell,
Throw round thee music's sweetest spell;
While its yet deeper charm is found,
When ocean's billows proudly swell,
In listening to their sound.

Thus, even in their drear decline,
Though thou art crumbling in decay,
Beauty and melody are thine
Which cannot, will not pass away:
With every bright and balmy May,
And each successive leafy June,
Thy walls in loveliness are gay,
Thy harmonists in tune!

But not in man's declining years,
Alas! can each revolving spring
To dimmer eyes and duller ears
A sense of fresh enjoyment bring:
Alike round peasant and round king,
When these approach life's closing stage,
Wants and infirmities must cling—
Nature can not assuage.

Has Nature, then, done more for thee
Than Nature's God would do for man?
Oh, surely not! With eyes to see,
And grateful hearts aright to scan,
His mercy's comprehensive plan,
We, too, when health and strength decay,
Might find He gives to life's last span
More than He takes away.

The deathless wreath by wisdom twined
Of thankful thoughts and feelings high
Beyond the ivy's we should find,
Though thine be lovely to the eye:
While hopes of immortality,
Far brighter than the wall-flower's bloom,
In darkest hours would still be nigh,
To cheer us through their gloom.

And sweeter far than bees' glad hum,
More rich and full than Nature's choir,
Would sound, though all on earth were dumb,
From gold harps touched by heavenly fire,
Glad songs of praise! Hope's strong desire
To faith would kindle at their sound;
That faith in triumph might expire,
And mightier love be crowned!

Do not these amply justify the remarks which, as honest reviewers, we were bound to make?

EDUCATION.

English History for Children. Pp. 292. London, 1845. Burns.

THE purpose of this work is to give to children a Churchman's view of the history of their country. Upon principle we object to all books that profess to narrate facts, not as they were, but according to the writer's political or sectarian views of them. It is impossible but that the truth must be often perverted or concealed, and always coloured in accordance with the design to which it is subservient. The effects of such publications are most mischievous in education; they are false teachers—practical impostures,—and the first duty of the reviewer is to warn the public against the use of them.

Lays of Faith and Loyalty: or, Narratives in Verse, selected from History. By EDWARD CHURTON, M.A. London: Burns.

A VOLUME of ballads, the subjects taken from memorable or romantic events of history; respectably written, and, as inculcating faith and loyalty, likely to be useful as well as interesting to the young, for whom it was composed.

MISCELLANEOUS.

Heath's Book of Beauty for 1846. Edited by the Countess of BLESSINGTON. London: Longman and Co.

THE remarks we last week made upon the literature of the *Keepsake* are equally applicable to the *Book of Beauty*, which is superintended by the same editress. It will not, therefore, be necessary to repeat them.

We find, also, almost the same names in the list of contributors, with two or three additions, as Mr. SIMMONS, Mr. MICHELL, Miss MUNRO, Miss AGUILAR, Hon. GEO. SMYTHE, and Captain MARRYAT. Nothing remains but to present the readers of the CRITIC with two specimens of the best of this miscellany.

First let us take a cleverly told anecdote entitled

THE OLD BROWN COAT.

BY CAPTAIN MARRYAT.

"I reckon you see nothing very particular in this, do you?" said an American acquaintance of mine, bringing out the cuff of an old coat, and holding it up before me, dangling it between his finger and thumb.

"I can't say that I do," replied I, "but I presume it has some secret merit, which remains to be explained."

"Ex-act-*ly*," replied my acquaintance, pronouncing each syllable of the word apart; "yet the coat, of which this is the remaining cuff, was the occasion of my being just now pretty considerable well to do in the world; I guess I'm right, ain't I?" continued he, appealing to his wife, a very pretty young woman, who stood by him.

"So you seem to think," replied she, smiling, "but I am not convinced, so far as I am concerned in the business, that the coat had any thing to do with it."

"Well, then, I shall just tell my story, and leave you to decide," said he, turning to me. "You must know that there was a time when I was rather hard up, and how to go ahead was the business. I had tried at mercantile speculation, and sunk an immensity of dollars. I had turned lawyer, but that would not answer in any way. I took to farming—no luck there. Went out supercargo; ship went on a reef, and lost cargo. Returned to New York, speculated a long while upon nothing; didn't lose much, that's certain, but didn't realize; at last I gave up business, and resolved to amuse myself a little, so I went south, and joined Bolivar. I fought with him for three years, and a good officer he was; but he had one fault as a general, which was, that his army never got paid. I wanted my three years, and finding that there was neither pay nor plunder, I got tired of it, and made my way home to the States, and at last arrived at the capital, with only one extra shirt and not a cent in my pocket. I happened to meet with a tailor, whose customer I had once been, when I had money and paid my bills; and he observed that my coat was rather shabby and that I could not appear in it. I knew that very well, and that all he wanted was an order for another, but as I had no chance of paying him, I thought it advisable not to take the hint. 'I think,' said I, 'that with a new velvet collar and brass buttons, it might do very well for an evening party.'

"'I see,' says he; 'that's an old country custom wearing an old coat at a ball; I guess you're going to Mr. T.'s to-morrow night. A regular flare-up, I am told. President there, and every body else. It's hardly worth it,' continued he, touching the threadbare cuff.

"'Yes, it is,' replied I; there'll be a regular jam, and a new coat would be spoiled. I'll send it to you to night, and you must let me have it in the morning; so good-bye.'

"Well, the coat came home the next day, not early in the morning, as I expected, but past meridian, and I walked up and down my bedroom in my trousers, thinking what I should do. At three o'clock I called upon Mrs. T. and left my card; went back again, and waited two hours for the invitation—no invitation. Called again at five, and left another card, telling the nigger that I had not received an invitation, and that there must be some mistake; whereupon an invitation came about an hour after my return, just as I was putting my hat on to call again, and leave another card, in a very fierce manner, I reckon. Well, I went very early to the ball, and my coat looked remarkable gay. You could see that the velvet collar was new, and the buttons glittered famously, but you could not see that the cloth was not a little the worse for wear; in short, my brown coat looked very smart, and I was a considerable smart fellow myself just at that time.

"Well, I stood near the door, looking at the company coming in, hoping to know somebody; but I presume that I had grown out of all recollection, for nobody knew me; but as the company were announced I heard their names, and if they did not know who I was, at all events I found out who they were.

"This won't do, says I, as the rooms became quite full. I may stick against this wall till daylight, but I shall never go ahead; so at last perceiving a young lady speaking to the daughter of the Secretary of the Navy, after they parted, I went up and bowed to her. Having heard her name, I pretended to be an old acquaintance, and accused her of having forgotten me. As I was very positive and very bold, she presumed it was the case; and when I gave her my name, which I refused to do till we had been talking for some minutes, as it happened to be a very good one, she considered that it was all right, and in another quarter of an hour we became very intimate. I then asked her if she knew Miss E——, the daughter of the Secretary of the Navy. She replied that she did, and I requested her to introduce me, and offering her my arm, we walked up to the young lady together, and I was introduced. Now, thought I, I am going ahead a little. After the introduction I commenced a conversation with Miss E——, and a gentleman fortunately relieved me of my first acquaintance, whose arm I had dropped. I continued my attentions to Miss E——, exerted myself to the utmost, and on the strength of my introduction and my agreeableness, I was soon intimate with her, and she accepted my arm. As I paced her up and down the room, I asked her if she knew the daughter of General S——, who was near us. She replied in the affirmative, and I requested an introduction, which was immediately complied with, and I offered Miss S—— my other arm, and paraded them both up and down the room, making them laugh not a little.

"Now, I'm going ahead, thinks I, and my old brown coat looks remarkably well.

"'Here is the President coming up,' said Miss E——. 'Do you know him?'

"'I did once, a little, but he must have forgotten me since I have been in South America so long.'

"The President came right up to us and addressed the young ladies; I made a sort of half bow.

"'You don't recollect Mr. ——?' said Miss S——.

"'I recollect the name well,' replied the President. "You are well supported, Mr. ——; you have the Navy and the Army on each side of you.'

"'And the Highest Officer of the State before me,' replied I, with a low bow. 'I ought, indeed, to feel proud. It makes amends for all the privation that I underwent in my last campaign with General Bolivar, for the general and his aide-du-camps fared no better than the meanest soldier.'

That last was a hit. I did not say that I was aide-du-camp to Bolivar, but they thought proper to fancy so; the President made me a bow, and, as it appeared, he wanted to have some information from that quarter; and he asked me many questions, all of which I was able to answer with precision. After a quarter of an hour's conversation, during which the whole room were wondering who it was that was so intimate with the President, and many were trying to catch what was said, the President presuming, as Bolivar's aide-du-camp, that I could give him information upon a certain point, and not wishing to have the answer public, said to the young ladies, 'I am going to do a very rude thing; I wish to ask a question, which Mr. —— would not like to reply to except in strict confidence; I must take him away from you for a minute or two. I beg your pardon, Mr. ——, but I feel and shall be truly grateful for the great sacrifice you will make in giving up for one moment such charming society.' 'I fear the loss will only be on my part,' said I to the young ladies, as I dropped their arms and followed the President to a vacant spot near to the orchestra. The question which the President put to me was one which I could not well answer, but he helped me out of my difficulty by answering it himself according to his own views, and then appealing to me if he was not correct. I replied, that I certainly was not at liberty, although I had left the service of General Bolivar, to repeat all that I knew; 'fortunately,' continued I, bowing, 'where such clear-sightedness is apparent, there is no occasion for the question being answered.' 'You are right, Mr.——, I wish all those about me had your discretion and high sense of honour,' replied the President, who had one of my new brass buttons between his thumb and finger; and I perceive by your reply, that I was also right in my conjecture. I am much obliged to you, and trust I shall see you at Government House.' I bowed and retired.

"I am going ahead now at all events, thought I, as every one was looking as I retreated. I had been walking arm-in-arm with the daughters of the two first officers of the State, I had

been in confidential communication with the President, and that before all the *élite* of Washington. I can now venture to order another suit of clothes, but never will I forget you, my old brown coat.

"The next day the tailor came to me, he had heard what had taken place at the ball, and I amended my wardrobe. Every body came to me for orders, and I ordered every thing. Cards were left in showers; I was received everywhere, the President was my friend, and from that moment, I went ahead faster and faster every day, till I am, as you now see, well off, well married, and well up in the world.

"Now I do pertinaciously declare, that it was all owing to the old brown coat; and I have kept this cuff, which I shew now and then to my wife, to prove I am grateful, for had it not been for the old brown coat, I should never have been blessed with her for a companion."

"But, ——," said his wife, round whose waist he had gently encircled his arm, "the old brown coat would have done nothing without the velvet collar and new brass buttons."

"Certainly not, my dear."

"And they would not have effected much without they had been backed by——"

"What?"

"*Impudence*," replied the lady, giving him a slight slap on the cheek.

And now for an extract from some notes in Brittany by Mrs. TORRE HOLMES.

MARRIAGES IN BRITTANY.

In the neighbourhood of Quimper, the marriage-ceremonies are singular, and somewhat burlesque. The village tailor bears a most prominent part on these occasions. He appears in Brittany greatly to resemble the barber of the old French comedy. Frequently deformed in person, and (owing, no doubt, to his sedentary occupation) he is a gossip, a go-between, a poet; the favourite of the women, whose repasts he shares, and the ridicule of the men.

It is not, perhaps, generally known, that in Brittany the females of a family dine after and apart from their male relations: indeed, nowhere is the inferiority of woman more strongly expressed and dwelt upon, and nowhere is her subjection greater, than among the Breton peasantry. *Before* marriage, the tender *tutoiement* may be used in speaking to the bride; *after* the wedding-day, this endearment ceases, to give way to a more reserved and despotic form of address, as if marriage were too serious to retain any of the frivolities of love, and the woman was to learn at once that all equality between her and her partner was at an end for ever.

When a Breton peasant has marriage in view, he charges the tailor to visit the young woman; who always refers him to her parents; and, if their reception to his proposal is favourable, he returns to his employer. The tailor then, bearing in his hand a branch of the *genêt*, or broom, from which, like our Plantagenets, he derives his name of Bazvalen (*baguette de genêt*), and dressed in a singular manner, with one stocking red and one purple, accompanies the young man and his nearest relative to the bride's house. While the parents arrange mere worldly matters, the young couple are allowed an hour of uninterrupted conversation; after which, hand in hand, they approach the table round which their relatives and the important Bazvalen are already seated. The young couple eat with the same knife and drink with the same glass, and are considered *fiancés*. A day is appointed for a meeting of both families; which always takes place at the bride's house, and is called the *velladen*, or the beholding. On this occasion the young girl appears in her gayest attire,—her scarlet bodice, with worked eyelet-holes, laced with gold or silver; the embroidered apron, snow-white cap, and all the finery of the Breton peasant. The young man's large-bordered hat is ornamented with ribands of several colours, and the full trousers and bright blue jacket complete his costume: the jacket is often such a masterpiece of finery that the tailor's name is embroidered in coloured worsteds on the breast, as an artist writes his name on a precious painting which he deems worthy of immortality. At this meeting, the farmhouse is in all its glory. The beds, which close with doors like wardrobes, are resplendent with wax and rubbing; the rafters are hung with hams; the old black coffers you always see in Breton houses disclose their riches; linen, lace, counterpanes, blankets, all the wealth of the family, are displayed; and horses and cattle are inspected. Above all, the bee-hives are decorated with scarlet and yellow ribands; for the bees are supposed to be particularly tenacious of respect; and, if they are not put into mourning at a death, and adorned in token of rejoicing for all fortunate occasions, they immediately take flight, choosing to be treated as the friends and confidants of the family they enrich by their labours, or certainly to punish ingratitude by desertion.

As soon as the day of marriage is fixed, which is generally about a week after the *velladen*, the young girl, accompanied by her bridesman, or garçon d'honneur, and the young man by his bridesmaid, go with a white stick in their hands from door to door, inviting to the wedding. The invitation is given in verse, setting forth the period of the marriage, the place appointed, and the name of the aubergiste or traiteur who provides the dinner. Sometimes six or eight hundred persons assemble on these occasions, and seldom less than three or four hundred; and as no guest goes empty-handed, but all take presents of flax, corn, honey, and sometimes of money, these gifts form a material addition to the resources of the young housekeepers; and many people marry with but little more than these friendly contributions and their own labours to rely on for subsistence.

Stable-Talk and Table-Talk; or, Spectacles for Young Sportsmen. By HARRY HIEOVER. London: Longman and Co.

THEY whom business or pleasure may induce to perambulate the streets at the west-end of London must have noticed a certain class of youths and old boys who rejoice in a peculiar costume; a jockey coat, a showy neckcloth, a waistcoat of many colours, a hat singularly round and flat-brimmed; they carry a hunting-whip, sometimes wear spurs, walk with a loose, shambling gait, and patronize cigars.

This is the class for which the volume before us must have been written. Their discourse is ever about horses; their elysium is TATTERSALL'S; their table-talk is stable-talk; and our author, catching their spirit, has put their bald, disjointed chat into a book, which will have more attractions for the members of this class than for the general reader. Therefore we shall deal with it very briefly; it is not after our taste, and we hope it is not such as our subscribers would approve.

Not that it is altogether wanting in wit, in intelligence, or in amusement. A good deal of agreeable matter might be extracted from it, both by way of anecdote and of information. Being in good humour at this moment, we will take two of the best things that present themselves, that it may be seen in its most favourable aspect. Here is a well-told

ADVENTURE IN FRANCE.

Riding one evening after dark along the same delectable road, on a favourite English horse, down he dropped as if he had been shot, sending me over his ears *en avant courrier*. This mishap had arisen from my (Englishman-like) taking the side of the *pavé* in preference to the middle af the route. A drain had been left open of about two feet deep, into which my horse had gone. He was up in a moment; I remounted, and what I said about French high-roads was bad enough then; but when I examined my horse's knees by the first light I came to, and found two concavities made in them something the size of a teacup, I fear what I said was ten times worse. I really now thought that, from this trap having been left open, and holding myself a loser of about thirty pounds each knee, some redress would be afforded me. I found, however, that redress, something like promotion or reward for services, was likely to be some time in coming; for I was first told I had no business riding where I did; and, secondly, from whom was the redress to come? Before this could be got at, it was necessary to find who made the drain, and it behoved me to find that out. "Did Monsieur know who it was?" Of course Monsieur did not. I saw my chance was out; but, to render assurance doubly sure, out came again the infernal "Il faut qu'il l'apprenne donc." The prayers of the wicked are sometimes heard: I prayed for a chance to return all favours to Monsieur le ——, and it came. I learned that his lady had taken a mania for riding *en Amazon*, and that her lord and master would give any price for a perfectly broke English horse accustomed to carry a lady. Just before I left England, a very beautiful horse that had been carrying a friend of my wife's had unfortunately gone badly broken-winded, so much so as to be useless. I started my groom off for this said horse, and he brought him back in blooming condition, and looking worth as much as any lady's horse could be, and only six years old. I got the daughter of a friend of mine, a girl nine years of age, to ride him about the town, taking care he should be seen by the lady and her good lord. The beauty and docility of the horse in carrying a mere child could not be resisted; so a note arrived filled with apologies for asking if I would sell "le beau cheval," in which case I was begged to name a price, and to pass my word that he was as docile as he appeared. Monsieur would only ask leave for a friend to look at him in the stable, who would bring the "argent comptant." I replied by saying I would sell the horse, that on my honour he was "doux comme un agneau," a hundred and fifty Napoleons his price, and that Monsieur's friend was quite welcome to see him, assuring Monsieur "de ma parfaite considération," &c. &c. Yes, thinks I to myself, you are welcome to *ma parfaite considération*, but I

suspect you will not get much *considération* for your hundred and fifty. I have the "Il faut qu'il l'apprenne" fresh in my memory—"chacun à son tour!" I have not spent so much money about horses without being able to make a broken-winded one fit to be examined by your friend. The "ami" came; the "valet d'écurie" came; the saddle and bridle (such a saddle! a kind of "demi-pique" resuscitated), the bridle half red velvet and silver buckles, came—no matter; the money came. Out of kindness to the horse, I desired the French groom not to give him any cold water that day. Those initiated in such matters will know why; the groom did not. "Il faut qu'il l'apprenne," thinks I. The groom mounted, rode off "en dragon," stiff as a poker, Monsieur "l'ami" walking by his side, and as I saw, Frenchman-like, stopping ten times in the street to shew le beau cheval to some friend. "Tout à l'heure, tout à l'heure," thought I. The next evening "l'ami" waited on me, begging I would go with him to look at the horse. "Volontiers, Monsieur;" and away we went. I found him of course blowing away like a blacksmith's bellows. What was de mattere? vas de horse indisposé? "Eh, non; Monsieur says il est poussif; voila tout." "Poussif, poussif?" cried Monsieur le ——. "Sacré ——! do I hear you right? you say de hors is what you call broke in de vind,—do I hear dat?" "Yes," said I, "you do;" and thinks I to myself, Madame will hear it too *occasionally*, if she rides him. Monsieur assured me he had no idea of the horse being so when he bought it. I freely expressed my conviction that this was correct. Vat was he to do? "Ce n'est pas mon affaire cela," said I. Doubtless my reader has seen two Frenchmen in a passion; but to see two most passionate ones in a regular white-heat rage is really a treat. Now, says I, for the *coup de théâtre*. I reminded Monsieur of the broken-gig and broken-knee decisions; he recognised me in a moment. "Now, Monsieur," says I, "what have you got to say? You wanted 'un beau cheval,'—you have him; you wanted a docile one—you have that also; I said nothing about his being sound; you have no fault to find with me." "Mais, mille tonnères! I no vant de hors broke in de vind, dat go puff puff all de day long." 'C'est possible," says I; "mais cela m'est parfaitement indifférent. You trusted to your friend's judgment." "Bote my friend have no jugement for de horse." "Il faut, Monsieur," said I, making my bow, "qu'il l'apprenne donc."

The author exhibits an unusual frankness in his comments on

THE HUMANITY OF SPORTSMEN.

The huntsman, the jockey, the steeple-chase rider, the bull-baiter, and dog-fighter—even the gentleman, if he is merely a "bookless sauntering youth, proud of the scut that dignifies his cap"—will all deny that there is a particle of cruelty in any of their several occupations; while the man of sense will candidly admit the charge, but may very justifiably add, that if we do not let a selfish thirst for amusement benumb or obliterate our feelings of humanity, the great source of amusement arising from sporting, and also the great advantages a large portion of the community derive from it, overbalance the trifling cruelty we inflict in its pursuit; and this is the only true state of the case. No man can attempt to deny that to turn out a stag merely for the pleasure of hunting him is gratifying ourselves at the expense of a harmless animal; it would be folly to deny it: still, I hunted seven seasons with stag-hounds, and must allow I never thought of any thing but keeping as near to the hounds as a sportsman ought to be. Foxes are vermin, some will say, therefore we ought to kill them: "so where's the cruelty?" This is all nonsense. If there is any cruelty in hunting, whether it be the fox or the hare, the thing is the same; and for this reason, a gun would be a quicker mode of ridding ourselves of the one and of possessing the other. It is always bad policy to pertinaciously defend a bad cause, or to attempt to controvert that which in itself is incontrovertible. Let us allow therefore, like honest fellows, that there is some cruelty even in fox-hunting, but that it is so born with those of the right sort, and is so fascinating in its pursuit, that death would almost be preferable to resigning it. Then fill a bumper to fox-hunting, and I will be as vociferous in the three times three, and again, again, again, as the loudest of you all. That fox or stag-hunting is the frequent cause of a great deal of cruelty and suffering to horses is quite clear; that is, when they get into certain hands. I have some years since seen the hon. Mr. P. with his horse spurred from shoulder to flank, and that because, from want of common sense and judgment in the early part of the day, he had beaten a good horse before it was half over. If this is not cruelty, I do not know what is. Depend upon it, the man who would be guilty of it towards his horse, would be equally the brute to his wife or child. God forbid that he should ever have the one or the other! Let no man tell me that enthusiasm in the chase is an excuse for premeditated and wanton cruelty. I maintain it to be wanton cruelty to butcher a good horse, when the only plea we can produce for so doing is a wish to see more of the end of the run, as if a man could never see another during his life. I can assert from experience and observation—and have had no small share of the former, or want of opportunity for the latter, in these matters—that I never knew one of these real butchering riders in the field who was not a brute in all his relative connections in society. Let it not be supposed that I mean in any way to infer that riding straight to hounds necessarily involves cruelty to a hunter; quite the contrary. I am perfectly satisfied, and I am sure the best judges in these matters will agree with me, that the man who rides straightest to hounds, generally speaking, distresses his horse the least: he keeps near enough to watch the leading hound, or couple or two of hounds, by which he is enabled often to avail himself of sound ground instead of heavy, and perhaps cuts off the whole angle of a fifty or sixty-acre field. If the hounds throw up their noses for only half a minute, he can give his horse the full benefit of that half minute; and half a minute, ay ten seconds, is an age to a horse all but blown. When they hit it off, he is off with them; they don't gain an inch on him: he has no ground to make up, for he is ready to take his place. Long may he keep it, both here and in his chase through life!

JOURNAL OF FRENCH LITERATURE.

The Rejected and the Elect. By EMILE SOUVESTRE. 4 vols. 1845.

THE idea of this work was excellent, and, with one-half the power displayed in the volumes before us, either as regards invention or imagination, it might have been ably carried out. But M. SOUVESTRE has failed, and, in our opinion, most signally failed, in working out his purpose nevertheless. He professes to have derived his first intention of producing the book from listening to the narration of a *klourck*, or student in theology, who, as is usual in Brittany, entertained the circle of his host with a religious apologue, which went to shew that the angel of death, having separated his day's harvest at the foot of the judgment-seat, according to the decision formed by the world upon the merits of the different individuals, was enlightened as to their real deserts by having their hearts laid open before him, and discovering that several of those belonging to the "elect" were occupied by a serpent, while among those of the "rejected" he discovered many which were lighted by a star. These serpents, as he was informed, were hidden vices, which had imprisoned all the apparently virtuous lives of their entertainers; while the stars were emblems of some equally hidden virtue, which had redeemed their more prominent faults. The world, according to its wont, had judged wrongfully, and confused alike the sinners and the saints.

It was then to prove (what no one will be tempted to deny) its persistence in this wrong-headed system, that M. SOUVESTRE, as we have stated above, set himself to write the lengthy work before us. He has, however, ended by proving nothing; for his "rejected" are in truth such unmitigated, incorrigible villains, that there is no hope of the existence of a hidden star in any of their hearts; and, indeed, in one or two cases, we can fairly see the serpent writhing upon the surface, while, in the case of his pure and virtuous heroine, although she is sorely tried throughout all the four volumes, yet, as at the end of the concluding one we leave her in a position to be "happy ever afterwards," we do not think that he can claim for her the title of the world's "rejected." The plot of the work is so hopelessly involved, that we shall not even affect to give our readers an idea of it. Its ingredients are, moreover, so incongruous and so multitudinous, that we could never hope to induce the least interest in its involutions by the necessarily imperfect digest which our space would enable us to give. Suffice it, that it occupies the energies of a marquis, a couple of counts, a country physician, a female farmer, an idiot, a housebreaker, and an old Jew hawker, in addition to sundry other personages equally ill-assorted. As regards the fable itself, then, we condemn it altogether; for with all the *argot* of the "Mystères de Paris," all the low-lived licentiousness of "Jack Sheppard," and nearly all the poisoning of "Madame de Brinvilliers," it is painfully and unnecessarily improbable in itself. The gentle and beautiful heroine, the daughter of a fair and highborn mother, turns out to be the child of a galley-slave; and that mother herself dies poisoned by her sister's husband, who has already disposed of his wife by the same means: ensured the idiocy of his only child by a

fiendish series of concealed cruelties, and who, with the cognizance of the reader, prepares a deadly drug for his mother-in-law, which, being dissolved in wine, excites the covetousness of the mad boy, who, seizing his opportunity, swallows it and dies; and ultimately bribes two hardened ruffians to drown the heroine, who stands between himself and a large inheritance.

Now here, we contend, is crime enough to condemn the whole shelf of a circulating library. It is so monstrous that it becomes disgusting; and these are, moreover, only the feats of the head villain of the tale—the Lucifer of the fabled pandemonium, which is well furnished with minor imps, only the more virtuous because they are the less powerful. In short, we may truly say, *Longa est injuria, longæ ambages.*

Such being the case, but feeling that the style and power of M. Souvestre deserve to save the book from utter condemnation, we shall do him the best service by making a few extracts, which will enable our readers to appreciate the extent of his talent.

A MONOMANIAC.

The Marchioness de Biezi had married a very wealthy Italian, a fanatical tourist, who was to be seen every where save at home. He had overrun successively the five divisions of the globe; not in order to study them, or even to see them, but for the purpose of visiting the most inaccessible mountains—that was his mania. In 1816 he had climbed Mont Blanc; in 1818 he had accomplished the ascent of the level of the cedars in Lebanon; in 1821 he had explored the Kûmberg, at the Cape of Good Hope; in 1823 he had succeeded in traversing the Andes. But he had still to scale the Dawalagiri, elevated 8,529 metres above the sea. Without that of the Dawalagiri, all his other ascensions were useless; the Dawalagiri alone could make of him the first mountain climber in the civilized world. He hesitated for a considerable time, withheld by the difficulties of such an enterprise, and excited by the glory of its accomplishment. At length the thirst of glory decided him, and he departed for Thibet, carrying with him the good wishes of the marchioness, and a memorandum for the purchase of six Cachemire shawls.

THE HUNCHBACK AND THE GRISETTE.

Master Bronsmiche, surnamed the Mountain, was a little hunchback, who performed the duty of porter to a house in the *Rue des Morts*. Condemned to ridicule by his infirmity, Bronsmiche had taken life in a spirit of resignation: it would have been difficult to find a more conciliating and inoffensive creature. As, according to his own declaration, no woman had ever been able to look at him without laughing, he had made up his mind to a life of celibacy, and had concentrated all his affections on a cat and a goldfinch, Lolo and Fanfan, which formed his substitute for a family. Unfortunately, all his efforts to establish a fraternal friendship between his two *protégés* had hitherto been unavailing, and he saw with sorrow a renewal of the history of Cain and Abel acting before his eyes. Several times already Fanfan had nearly fallen into the claws of the fratricide, and Bronsmiche had just discovered a fresh act of feline delinquency, as a young female in a cap, and wrapped in a tartan shawl, entered the lodge with a bandbox in her hand.

She found the hunchback standing before his cat, to whom he was addressing the most pathetic remonstrances on this new crime.

"Oh, fie!" she exclaimed, as she paused at the door; "has that monster of a Lolo been endeavouring again to tear out the feathers of the goldfinch?"

"Do not speak of it, Madame Charles," said the hunchback, raising his hand to his Greek cap, with instinctive politeness, "the wretched animal will make me die of grief."

"You should beat him well," said the grisette, approaching the delinquent, as though she would have added example to advice.

"I ask your pardon, Madame Charles," interposed the porter, extending his hand sententiously; "but you know that blows do not enter into my ideas of education."

"Nonsense!" laughed his companion, "the education of a cat! You have too much respect for animals, Monsieur Bronsmiche!"

"In any case, I am not the only one," replied the hunchback, who prided himself upon his reading, and who had, above his stove, a shelf covered with dilapidated volumes; "the Egyptians of the Pyramids adored all descriptions of animals."

"Really?" interrupted Madame Charles.

"Oh, we ought to be surprised at nothing," said Bronsmiche, indulgently; "we still see things quite as odd. You know that the English, for example, are a people who may be considered as civilized."

"I should think so! Our best needles come from there."

"And the knives, too? And the fruit? We are indebted to them for the English pears."

"Well, and what then? Do you mean to say that they adore animals?"

"Not exactly; but I was reading the other day, in a newspaper, that they have a law which forbids coachmen to flog their horses."

"Is it possible! Then how do the hackney-coaches get along?"

"The animals exhibit great delicacy, do you see, Madame Charles; speaking to them is enough. You cannot imagine how very susceptible animals really are. They are like women,—without comparison—but, dear me, I am leaving you standing there, without either offering you a chair, or even taking your bandbox."

This is very life-like and pleasant writing, and, moreover, perfectly true to nature. We shall follow the grisette to her garret-home, and teach the reader to know her better; only prefacing her reappearance by informing him that she has fallen a victim to the passion of a selfish and avaricious banker, of high fashion, who is the father of her child, and who has presented himself to her under the double disguise of sordid habiliments and a false name, in order to pass as the junior clerk in a mercantile house, and thus avoid the necessity of contributing to her support, and that of the infant.

RICH AND POOR.

Madame Charles, as Mademoiselle Francoise was commonly called, was a handsome young woman of about three-and-twenty, in whom every thing announced health, strength, and goodness. Although her figure was slight, her features delicate, and her complexion of the fairness and polish of velvet, there was, nevertheless, in her bearing something so calm, so simple, and so awkwardly graceful, that it gave her a sort of peasant beauty. It was only requisite to look at her to feel convinced that she was incapable of the most innocent coquetry. This native uprightness gave her a charm that was quite refreshing. You felt, as you gazed upon her, the same soft and tranquil sensation which is induced by the aspect of a lake, whose peaceful waters reflect the woods, the flowers, and the heavens.

After having hastily arranged her hair, Francoise put on a muslin dress with pink sprigs, and a white cape, whose simple elegance harmonized charmingly with her innocent countenance. Then she hung round her neck a little gold cross, suspended from a narrow black velvet; added to her earrings two mother-of-pearl pendants, and clasped round her wrists two bracelets of coral. Thus adorned with all that she possessed which was most valuable, for she was expecting her lover, she turned herself round and round before her little dressing-glass of a foot square, in order to convince herself that all was neatly arranged, passed her hand several times over her hair, and, satisfied at last, hastened to put every thing around her in its place. * * * She had just opened the door when she heard, at the foot of the stairs, a voice speaking to the porter: eagerly she leant over the bannisters; a step which she recognised at once made the stairs creak; and with the joyous exclamation of "Charles!" she rushed to meet him.

"Here I am, my lady-bird," said the visitor, as he applied a sounding kiss to the cheek which the grisette turned towards him. "You received my letter, of course?"

"Oh, yes; I was expecting you; but come in as fast as you can, there is a great draught on the landing, and you look very cold."

"It is the fog," said the lover, following Francoise into the room; "it is so dark, that one cannot tell a rag-merchant from an omnibus. Fortunately, I had put on my caoutchouc great coat and my comforter. Prrr!—Wait an instant, lady-bird; wait till I pull off my wraps."

He withdrew the lambswool cravat, in which he had been enveloped to the very ears, threw off his outer garment, and laid aside his hat; while, after having assisted him in these arrangements, Francoise hastened to draw towards him the only arm-chair that she possessed, and into which he sank gently down, while she placed herself before him on her knees upon a foot-stool. "This street is at the world's end," he said, drawing a long breath.

"Why did you not come in the omnibus?" asked Francoise, as she passed a handkerchief over his forehead.

"Nonsense, I am recommended to take exercise," said the banker, shaking himself; "besides, I had my evening to myself, and I wanted to see you."

"It is so long since you were here before, Charles."

"What can I do? We are overwhelmed with work; besides, you had nothing particular to say to me, had you?"

"Nothing! Do you really believe so?" asked the grisette, with a face beaming with joy; "well then, sir, you are wrong; I have received news from Normandy."

"Ah!—and the child?—Is he well?" asked her companion, with a little confusion.

"Yes; but that is not all."

"What is there more?"

"Do you not guess?"

"No."

"Well—he has begun to talk!" From the glow of happiness which spread over the features of Françoise, as she pronounced these words, it was evident that she anticipated a cry of joyful surprise from her listener; but the latter was perfectly calm, and only remarked,—

"Ah, indeed! So he has begun to talk." A shade passed over the brow of the young mother.

"Does it not make you happy, Charles?" she asked, with a slight accent of reproach.

"Certainly," replied her visitor; "but you expected it, I imagine? It was clear that the boy was not to continue dumb."

The grisette felt surprised as well as grieved. In her simple mother's heart she could not understand that the progress of their child should not delight its father as it did herself.

"I thought to give you such good news," she said sadly.

"So you have;" replied the banker, passing his hand through his hair; "only, from the manner in which you announced it, I thought it was question of a telegraphic despatch which would raise the funds."

"He is your own son, Charles;" said Françoise, as she buried her face on his shoulder. "Ah, if you could only know all my plans for him!"

"Let me hear your plans."

"In the first place, Jules must not be a workman; he must have an education, and be capable of filling some situation in an office."

"Why so?"

"Because I should not like you to be ashamed of him—as you are of me."

"Do you reproach me, Françoise?"

No, Charles, no; I know that if you walked out with me, or if I went to see you at your lodgings, it might do you an injury; therefore I do not complain; it is not your fault; but I would spare Jules such a mortification."

"And how can you manage it, my poor girl? The education of a boy is expensive."

"Oh, I know how," smiled the grisette, triumphantly; "I have made inquiries; in the first place a neighbour has promised to give him his earliest lessons."

"And afterwards?"

"I will pay a master."

"Where is the money to be found?"

"It is here;" she answered joyously. "Ah, you never suspected it. You thought that all my time was taken up in making artificial flowers; but you are wrong, sir; I have studied business, too, and I have prepared a speculation. By depositing 100 francs in the chest of the 'family tontine,' on every 1st of January for ten years, I shall be able to secure an education to Jules."

"Perhaps so: but the 100 francs must be had."

"I have them," said Françoise, running to her cupboard, and bringing out a purse. "Look, sir, five new golden coins!"

"I'faith, so there are; but where did you get them?"

"That is the secret; I have found out a way; but I would not tell you until I had got the whole sum, and it has required eleven months of economy."

"And how the devil have you contrived to economise five louis?

"By doing away with superfluities."

"In what?"

"Oh, in many things. In the first place I used to breakfast on coffee, which is said to be very unwholesome; I have left it off. Then I discovered that by dressing a little warmer I could do without a fire in the winter; and, finally, I calculated that by getting up earlier in the morning I should have time to wash instead of paying a laundress. All that seems very trifling, does it not? Well, do you know what I saved by these means, sir? At least six sous a day; yes, six sous! which makes more than 100 francs a year, and pay the tontine."

"Embrace me, Françoise;" cried the banker, evidently more astonished at the cleverness of the grisette than affected by her self-abnegation; "you are a good girl, and deserve to be encouraged; so I will help you in this undertaking—I will go myself and inquire if this family tontine is safe."

"Oh, thank you Charles!"

"And moreover;" added the man of money-bags, who, though he had no natural feeling for the child, was secretly ashamed: "I will also do something for Jules—I will give 100 francs like you."

"Oh, no, no; eagerly interposed Françoise; "indeed you shall not; you are obliged to incur expenses. A man cannot deny himself comforts like a woman; he must do as others do; you cannot save any thing, Charles?

"How do you know that?"

"You have often told me yourself that it was as much as you could do to live;—besides, love," she added with an expression of tenderness, "it would destroy all my delight; it would indeed! I want to feel that I brought up my boy without taxing you—without asking you to do any thing but love him. This may be pride, but you must forgive it, for it is a pride which gives me courage, and makes me happy. Let me bring him up, and when he is a man, and can do you honour, then you shall claim him. Do not refuse me this, Charles."

"Can I refuse you any thing!" exclaimed the banker, as he drew her towards him; "you know that your will is always mine."

Our limits warn us to conclude, but we cannot forbear making another extract, which will shew the power of M. Souvestre over the terrible as favourably as those which we have given display his knowledge of human nature. The Count de Luxenil, to whom the heroine has been united against her will, and who, after dissipating the greater portion of her property, and compelling her by his insults to fly from his roof, accidentally discovers her retreat; a little fishing-village on the lip of the Bay of Cancale. Of this shore, the author remarks,—

At a certain hour all is deserted, silent, and motionless in the arid sand-plain; but wait only a few minutes and a murmur will arise in the distance, a white line will shiver along the horizon; and this murmur is the voice of the sea; this white line is the fringe of the advancing tide: you have scarcely had time to recognise and to name them ere the level plain has every where disappeared; and the mountain which only just before dominated a stretch of shore, now seems to ride upon the waves. In a few instants the continent has become an island.

In this romantic spot the Countess is accompanied by the friend of her youth—the chosen one of her heart—who is insulted with injurious suspicions by her husband, and finally challenged. The parties are to meet at dawn the following morning, and meanwhile the convict-father of the heroine, having convinced himself that his daughter, whom he idolises, is sincerely beloved by De Gausson, undertakes to arrange the affair of the duel in his own way. To avoid exciting the suspicions of the family, De Gausson, who is familiar with the neighbourhood, leaves the house first, accompanied by the two seconds; and ultimately Mark the convict undertakes to conduct the Count de Luxenil to the place of rendezvous.

A DUEL.

The old convict entered the room. He was wrapped in a goat-skin cloak, and carried a lantern. "Is M. de Luxenil ready?" he asked in a sharp voice.

"You see that I am waiting for you," said Arthur, who was buttoning his gloves.

Mark threw the street-door wide open, and stepped out. De Luxenil ignited a cigar, and followed. The first streaks of light lay white upon the sky; the sea-fog covered the shore; and the path was almost invisible. Mark went first, holding the lantern low to light his companion. They walked to the bridge of Conesnow, and then reached the sands.

The wind was chill and damp, and De Luxenil involuntarily quickened his pace. The duel which he was about to fight was so unlike those in which he had previously been engaged, that he could not help feeling, in spite of himself, somewhat of that irritable impatience common to men on the approach of danger. His blood circulated more rapidly, and he longed to converse, for the silence of his companion oppressed him. At length, despite his repugnance to do so, he addressed him.

"Are we far from the spot where M. de Gausson is waiting for us?" he asked.

"No," answered his guide.

"I am afraid that we are not in the right road," he said, a minute after; "the sand gives way under my feet."

"Make yourself easy, sir," replied Mark, gazing upwards; "we shall arrive in time."

The count, annoyed by the laconism of his guide, threw away his cigar with an angry gesture, and walked still faster. The first rays of the sun were darting through the fog which veiled the shore; the wind freshened; the sound of the waves became more distinct, and the sands less steady. De Luxenil, who could scarcely retain his footing, and who was looking on all sides for his adversary, suddenly stopped.

"On my soul," he said, "if we had taken the right road, we can now see to such a distance that I must have distinguished M. de Gausson."

"Do you see nothing, then?" asked Mark.

"Nothing, but an unsteady white line yonder, against the horizon."

"And do you not guess what it is?"

"Not at all, unless it be a rock or a sandbank glistening in the sunshine."

Mark, who had also stopped, shook his head. "It is neither rock nor sun," he said, "for the line widens and comes nearer."

"What is it, then?" exclaimed the count.

"Death!"

Arthur drew back.

"I wished to deliver the woman who bears your name," said the ex-convict, "and to restore her to liberty, that she might yet have a chance of happiness."

"Wretch!" cried De Luxenil, "you are then an assassin!"

"No," said Mark, calmly, "it is a duel, a duel to the death for both of us, for neither can now escape from this spot with life."

"You lie," shouted Arthur, glancing about him; "yonder is the mountain; I can yet find a path."

He would have sprung forward in the direction of the mount, whose sombre mass was becoming visible through the vapour; but he had scarcely taken a dozen steps, when the sands gave way beneath his feet. The billows rushed on like race-horses; the slender line had widened, and swelled into a grim, ever moving mountain-chain of foam, which rolled towards them with a deafening roar. The separate waves could be distinctly distinguished, and the spray reached them where they stood.

The hair of Arthur rose upon his head; the saline foam suddenly dashed into his face; and he uttered one cry, so wild and loud that it was audible above the fury of the sea. The pride upon which his courage had been based was prostrate; he saw nothing before him but a horrible and unexpected death, and he was afraid. "In Heaven's name, save me!" he cried madly; "I will renounce all my rights over Honorine—I will renounce my vengeance on M. de Gausson—save me, and I will give you all I have, Oh! quick, quick—see! the waves gain upon us. Oh! I beseech you with clasped hands. What you are doing is infamous, treacherous, and cruel.—You seek a duel, you say; deliver me from this scene of horror, and I will meet you—on your own terms—you shall be satisfied—as you seek my death—but let it not be such a death as this—not this! Ah!—I am lost!

He had grasped the arm of the old man, who, leaning against a hillock of sand, had hitherto resisted the action of the waves, and who made no effort to shake him off.

"Do not waste your last moments in idle words," he said solemnly, "No human power can save us now."

"No, no," shouted M. Luxenil, as he grappled with the billows, "I will not die here!"

He loosened his hold on Mark, and would have endeavoured to swim towards the shore, but the convict seized his hand and held him fast, as he uttered the word "Pray!" and rising from the sand, which had hitherto sustained him, he abandoned himself to the waves, which were awaiting their prey.

Once or twice the head of the erring but devoted father, and that of the inhuman husband, appeared above the crest of the billows in an atmosphere of foam, and then all disappeared, and nothnig could be seen but the mighty sea rolling its long fold over the beach which it had invaded; while the fog passed off into the blue sky, and the sun illuminated the bay with its splendid beams.

JOURNAL OF GERMAN LITERATURE.

England und Schottland im Jahre, 1844. Von Dr. C. G. CARUS, Leibarzt Sr. Majestät des Königs von Sachsen, &c. &c. Erster Theil.

England and Scotland in 1844. By Dr. CARUS, Physician, to his Majesty the King of Saxony, &c. &c. Vol. I. 8vo. Berlin, 1845: London, D. Nutt.

WHEN this work was first announced we had some misgivings as to its author. Could it be a contribution to literature from the King of Saxony, or was it exclusively the production of Dr. CARUS, or of *Ego et Rex meus?* We are bound to state, upon perusal, that it is the entire property of Dr. CARUS. Accustomed to take notes of the cases of his patients, the Doctor has been beguiled into the same plan for his travels, and sooth to say he has written them much in the same style. If formerly he wrote "visited L. C. aged 50,—face flushed,—tongue furred,—symptoms morbid," he now writes, "visited Cologne,—saw the Dom,—built 1248,—free from houses, impressive on the spectator,—plan of the nave and right tower now more clearly seen,—admirable gallery," and then dismisses the cathedral with a gentle pun and expression of his assured hope for its full and perfect restoration. Then we have notes on the weather: "the morning was fine but cold,—the afternoon hot though dusty,—that he travelled all night in the carriage,—found it roomy,—slept soundly, and awoke much refreshed in the morning." Followed by "dinner at the palace,—fifty guests,—wines flowing,—appetite good," with a slight expression of surprise at the lateness of the hour at which he afterwards returned home. "Eleven o'clock the hour," as Master Ford has it. Now we do not say this is bad, but it is very M.D.; it is the fact drily noted, the weather as habitually discussed, the patient's night recorded; the tone, the manner, and the gentle levity of the sick-room, very appropriate, perfectly adapted for families, and not entirely uninstructive. Such a work, however, it is obviously unnecessary strictly to criticise, we are in such case sworn of the peace, and as the Doctor has doubtless shewn himself to be a patient physician, so we trust his narrative will obtain, what we think it deserves, what we feel it requires, a somewhat patient reader. This premised we shall commence our extracts with

THE BEGUINAGE AT GHENT.

From thence we drove to the *beguinage*, a remarkable demi-conventual corporation of women, which has come down from the thirteenth century to the present times, like one of those old melancholy-looking gable-houses among the elegant buildings of recent days. This description of society was by no means rare even in Germany from the twelfth century; they were called *Beguines* (also *Begutten*, or *Soul-women*), and probably took their origin in those times of war and disturbances when so many women were deprived of male protection, and because the religious tendencies of the age demanded and promoted the formation of such congregations. The foundation in Ghent is probably the largest and most complete existing. The number of small houses, which are surrounded by an old enclosure usually shut, is very considerable, and in each of these houses, furnished with large glass windows, five, or six, or more sisters live together. Their dress consists of a simple blue-gray gown, with a large white head-dress. The most of them appeared already advanced in life; the one who conducted us round was very loquacious. We saw the arrangement of their dwellings, which is simple enough. They dress their food in the kitchen of each house in common, but each eats apart before and on the falling leaf of a sort of small cupboard, with the face towards the wall. The produce of their work, whatever it may be, goes to the benefit of the community, and they are also ready to attend and nurse the sick when applied to for that purpose. The first year after entrance is a noviciate, and during this period they are allowed to leave the society at any time; and even at a later period, when fully admitted, they may depart from the institution under certain conditions. After having taken a hasty view of the whole, it leaves behind a weak and strange impression. We passed, too, for a moment into the old church, which stands opposite the dwellings of the sisters, and belongs to the foundation. The beguines appeared there like spectres, with their large white head coverings—what means their devotion?

We are at the present time all fully aware of the benefits derived from the study of the classics. From the days of WOOTTON to those of the late respected Canon TATE, opinion upon this point has become extended and confirmed, and the subject indeed hardly requires an argument in its behalf. But few, even the most enthusiastic of our readers, convinced as they may be of the salutary influence of Greek authors on the mind, will be prepared for the following remarkable instance of their beneficial effect upon the body. Indeed we hardly know how to head it, but trust we shall not wrong Dr. CARUS by citing the passage with which we commence our extracts, as

THE STOMACH-ACHE CURED BY PLUTARCH.

Yesterday, for the first time, whilst we were in Brussels, I experienced what for a long time I have been free from—much internal derangement. My nights were restless, almost sleepless, but relieved by the perusal of the *Timoleon*, in Plutarch. How powerful is the influence of the "Spiritual" over the "Material!" Sufferiŋg last night, I sought my Plutarch for relief. Alas! there was no book at hand but "The Travels in England of Von K——," and I cannot describe how every bad symptom was increased by its perusal, especially by the details relating to Manchester and its prisons; but the spirit of Plutarch again breathed o'er me, as healing as (Friar's?) balsam, and I was soon quite well.

These "Travels of Von K——," we suspect to be "The Travels of J. G. KOHL," and we feel it our duty to warn our readers of the effect produced by their perusal—when taken at bed-time; how far, on the contrary, the *Timoleon* may be curative, we do not dare aver, but suspect this is the first instance on record of PLUTARCH taken medicinally, and of a classic being classed with rhubarb.

The following is equally classic, and rather more obvious :—

DEPARTURE FROM OSTEND.

I was during this night often disturbed by the howling of the wind and the roaring of the sea ; and the weather, which yesterday was fine and sunny, seems now to have become both cold and windy. Nevertheless, we still think of embarking before seven, and I shall then see whether the wish for my favourable passage will be realized according as my friend Regis expressed it, in his recent letter,

> Sic te diva potens Cypri
> Sic fratres Helenæ, lucida sidera
> Ventorumque regat pater,
> Navis ; O *Carum* mihi !
> Quæ fers.

As we have Dr. CARUS bearing witness to what PLUTARCH can effect, we trust he fully enjoyed his voyage, strengthened, as he doubtless was, by his friend's "Extract of HORACE."

But we must quit this for more serious themes, and would especially direct the attention of our readers to the chapter on the physical and geographical structure and position of England, with the remarks on climate, vegetation, and the inhabitants, and subjoin the following on the

CHARACTERISTICS OF THE ENGLISH.

Besides the race and the external circumstances, there is yet another element, which has always appeared to me of great importance in every attempt to illustrate the nature either of individual man or of whole nations ; and this is indicated by the question—only to be answered after mature inquiry and reflection—to what age does the person or the people as a whole correspond ? By what age can it be regarded as, in some measure, represented ? There are men who, from their very childhood, are endowed with the wisdom and sobriety of age, who have, properly speaking, no youth ; who are always characterized by the anxieties, doubts, want of vigour, avarice, ceremony, and other signs of advanced age. There are others who never, at any age, lose the characteristics of childhood, never grasp a weighty or important idea, and always indulge, and amuse themselves with, trivial pleasures, and are interested in what is trifling and new. There are some, again, who, by the prevalence of headstrong passions, may be regarded as the representative of adolescence ; and others as the type of mature age, by the strength of their resolution and the vigour of their minds, even from their earliest years. With their necessary modifications, such comparisons, by which objects are gradually made clearer, may be applied to whole nations also. If we ask now, adopting this method, how are the English people to be characterized ? there can be no doubt, that after a very short observation of their whole mode of action and conduct, they must be characterized by the mature, late, but still vigorous age of man. A firm adherence to principles once adopted, a quiet historical foundation and development, a decisiveness and vigour, a Catonian severity of morals, but together with these, a great measure of pedantry, and, even as a people, conspicuous and unconcealed egotism are precisely the very circumstances and conditions which must soon impress themselves upon the mind of the observer, and become consolidated into a firm and decisive judgment, such as that already expressed. It is, undoubtedly, something beautiful to see a man, as well as a nation, still in a full state of manly vigour, still grandly following out the development of his destiny, or, properly speaking, creating his own destiny ; and it is, therefore, easy to perceive the reason why personal observation and contemplation of the English people, with all their manly consistency, their tenacious firmness, their clear perceptions, their contempt for all prolixity, and their decisive practical nature, is so peculiarly interesting, and calculated to produce such a powerful influence on the mind. The most important aid to the full understanding of this sketch of character, which we have compared to that of vigorous manhood after the middle age of life, is to be derived from a consideration of the naval power of England, which results, as I have already shewn, from the nature of the country, and its capacities.

At this period too, when "La jeune France," and "Le brave Joinville,"

> Threaten to put off in
> Flat-bottom boats, with threats to make
> Each British ship a coffin,

the author's opinion upon this point will be read with additional interest :—

THE BRITISH NAVY.

The navy, as it is called, the development of an immense sea force, in whose proficiency and might the highest as well as the lowest take interest and delight—which even engages the very spirit of dilettantism displayed in the numerous yacht-clubs—it is this which represents the first condition of the trade and manufactures of England, and forms the strongest support of her universal dominion. It is only by reference to this, that it becomes possible to solve the problem, how 26,000,000 of Englishmen are able to rule 200,000,000 of foreigners. And the navy continues to be the source and instrument of her continually increasing wealth, of which some idea may be formed, when I state that, according to Mr. Porter's reports, the savings-banks of England alone, in the year 1841, contained above 24,000,000*l.* sterling ; that the number of ships was above 30,000, of which 900 were steamboats ; and that more than 80,000,000*l.* sterling were invested in railroads alone. The navy, therefore, which works all these wonders, which engages men in a continual struggle with a dreadful and unruly element of nature, which accustoms them to live in their frail houses on the rolling main, and to be *always ready*, for life or for death—it is this, especially, which imparts cool and manly courage to the people as a whole, and elevates them in every practical relation far above all other nations of the earth.

We regret we cannot find space to insert the description of the various country seats the author visited, although this will not, we think, prove the least attractive to the reader. At Buckhurst, the Doctor adds,—"I strolled into the library, and looked through a splendidly illustrated work on one of the late court-balls, at which the company were all dressed in ancient costume, and then turned over the catalogue, in which I looked in vain for the works of GOETHE and SCHILLER among the foreign books which it contained." Now there is no complaint more common, so generally preferred by German travellers, as that they cannot find these works in public and private libraries in England ;—a complaint which, at the least, in this case, it is somewhat ungracious to print, since Dr. CARUS was under the pleasing obligation of much courtesy from Lord DELAWARR. We trust, therefore, he he has by this time remedied the deficiency of which he complains by the transmission of these works as a present. As illustrative, however, of the general style of this portion of his work, we insert the description of

REDLEAF.

The name of the gentleman who owns the mansion is Wells. He has made an immense fortune in India, by ship-building, and now lives in this beautiful place alone, in dignified retirement, surrounded by a tasteful collection of choice trees, plants, and pictures. He is a friend of Landseer, the painter, and his collection contains many admirable pieces by that artist. Immediately at the entrance I was struck with the picture of two large dogs ; one a yellow-coloured dog, lying down and being licked by a large grayish-brown greyhound. They were represented as if lying in an empty chimney, and the picture was placed on a level with the ground, in a flat, blind, chimney-piece. The effect was admirable ; the treatment of the subject extraordinarily able and bold. Then followed a whole series of pictures by the same skilful hand—"The Dog at the Shepherd's Grave," and others, already so generally known from the engravings. Having previously seen so many engravings and copies of his pictures, I here for the first time saw the originals. In a true conception of nature, Landseer is undoubtedly the first of all painters of animals. I know of none who has so thoroughly conceived, and so faithfully portrayed as he has done, the fine shadings of the human intelligence and disposition, so remarkably embodied in an animal. His "Jack in Office," his "Fireside Party," and his "Honourable Member of the Humane Society, what fine striking characteristics do they contain !

Now to other rooms in which remarkable treasures are literally heaped, in agreeable apartments, whose large windows everywhere look upon the magnificent park. I can merely name the beautiful pictures of Wouvermann, Du Jardin, Vander Velde, Netscher, Mieris, Terbourg, Gerard Dow, and others, which it would require much time to describe. Besides these, there is a "St. Cecilia," by Domenichino, engraved by Sharp, and a (somewhat doubtful) Guido Reni. Then again, a beautiful piece by Ruysdael—dark and deep standing water, with large oaks. Further, two excellent pictures by Hobbema, a large poetical landscape by Claude, with a certain noble and clear severity, which almost reminds one of the tone adopted in the "Coasts of the Cyclops" in our Dresden Gallery. In another apartment we saw a large portrait of Walter Scott, by Landseer. The poet is represented as a sportsman, with a gun and some dead grouse at his side. A picture by Webster was almost still more remarkable than this. It delineates two rows of children at school, one placed above the other. In one case the poor little ones are terrified, half weeping and trembling—their tyrant, the schoolmaster, is ill-humoured and morose ; in the other the children are happy and delighted, and diligent withal, for the teacher is full of kindness and affection. It is impossible to avoid making many useful applications on looking at the picture, so admirable and impressive are its characteristics.

At length, in this magnificent collection, I found among many other modern pictures, some of Wilkie's. The largest among them was his "Distraining for Rent." A farmer's family in the utmost distress and anxiety how to pay their rent. The execution is very careful; the colouring weak and cold in tone; and the whole conception of the picture inferior in depth and in details to that of the "Rent-day." Next to Landseer, Wilkie was the most original painter in England; he had a very deep and firm conception of life, and the art of fixing its moving scenes upon the canvass. How singular is it that at a later period, as if weary of the prose of English family life, he threw himself headlong into the forced French romance, as in his "Maid of Saragossa."

After this, Dr. CARUS visited in London several of our public buildings, but as his details on these points possess but little interest, we prefer presenting to our readers his descriptive sketches of some of the very eminent men with whom he became acquainted. First,

THE EMPEROR OF RUSSIA.

"I have not much the air of a sick man," said the Emperor to me, when I was presented to him, and he discoursed with me upon his plan of proceeding to Kissingen, a remark I can fully confirm. He is strong and well proportioned, stout and broad shouldered; the head expressive and well balanced, but devoid of any remarkable formation of the frontal regions. His hair was brown, almost bald at the crown; his features large, regular, calm, and not without a certain refinement and mildness. His carriage was military, his manner quick and decisive, his gestures unconstrained and impressive. He wore at the review the uniform of the dragoon guards, green, with white trousers, and the helmet with horsehair. His costume for the soirée was that of a Kosack general, dark-green kurtka, with silver tissue scarf, short curved sabre, and cap surmounted with heron's plumes, in his hand. He speaks French with great purity, English less readily; the tone of his voice is sonorous and musical, his expression clear, resolute, and full.

To this sketch Dr. CARUS has appended some reflections which we omit, and pass on to that of

SIR ROBERT PEEL.

Apparently fifty; the head well-formed, strong, and tolerably large, exhibiting rather breadth than heighth. The relations of its three divisions, so far as one may judge by a general glance, and through the yet strong dark iron-gray hair, tolerably good; the middle part, as is commonly the case with heads of even broader form, depressed. His features express much firmness, blended with something thoroughly *prosaic*, yet deeply intelligent. In conversation with men of elevated positions his manner is mildly deferential, and with others invariably refined, circumspect, and restrained. I noticed he was always dressed in black, with white neckcloth, and no orders of any kind. In his daily intercourse he is considered cold and proud, and without many personal intimate friends.

THE DUKE OF WELLINGTON.

The very image of an old soldier. Stiff, deaf, but animated; we see at a glance that he must have been once, what we term a well-made, handsome man. The form of his head and face is oblong, the upper part not particularly expressive, but the forehead and back part tolerably high. White hair, still rather bushy when compared with others, and considering his age. The orbits of his eyes broad, and decidedly conveying the impression, the Duke is to be considered as a man acting more from what he sees, than what he hears,—an impression upon which his life forms the best commentary. I saw him generally in uniform, with various decorations. He led his own regiment at the review, and notwithstanding that a few years since the windows of his house were broken by the mob, he seems still to be the man of the people, for whenever he was seen, we invariably heard, "The old Duke, hurrah! hurrah for the old Duke!"

We trust that we have not done Dr. CARUS injustice by our translation of the above craniological sketches, nor the very eminent men whom he thus converts into phrenological studies. The collections of heads at Windsor, seem to have possessed a peculiar interest to him, independent of the position and character of their owners, and are apparently second only for their instructive purposes to that formed by Mr. DEVILLE. We have long thought it would be desirable to have a state phrenologist, to whom the heads of kings and ministers might be submitted, and their capacities for government thus ascertained, before power was conceded to them, and we can conceive no man better suited for this office than our author. Clothing and skulls, indeed, occupied at intervals exclusively his attention, and the form of the head, the uniform, and the orders, seem all he could remember of the man. Observations of this nature were not, however, confined to the "great,"—the "little" had their share; and as from the sublime to the ridiculous it is but a step, we present our readers with the Doctor's portrait of

TOM THUMB.

I next saw an *anthropological curiosum*, Tom Thumb, the most diminutive of men, thirteen years old, twenty-five inches high, and fifteen pounds weight. I have altogether met with many more small than great men, but one of this kind never. A veritable remnant of the pigmies. He is delicately formed, and his well-rounded head, prominent child's forehead, and quick glancing eyes, indicate his intelligent and self-contented disposition. He creates on the spectator the impression of an elaborate piece of clockwork, as he struts up and down the table, imitates the manner of Napoleon, or sings a sea-song as the pilot of a vessel.

ADMIRAL CODRINGTON.

Of rather large stature. The emperor said to him, "*Vous avez engraissé;*" and, in fact, there is considerable *embonpoint* in his figure. Of the three divisions of the brain, the middle and back parts are more considerable than the front; the form of the whole, as is usual with the English, rather long than broad. His head is nearly bald. In his face, his nose seems to project with a sort of sensual characteristic, and the eyes are rather too near one another. The expression of his countenance is cheerful. He was dressed in black, with several orders.

We must conclude our extracts with one on

ASCOT RACES.

It was towards one o'clock when we drove to Ascot races. These are among the most celebrated in England, and to-day the Queen's plate was to be run for. We drove again through the park, and several more splendid trees, particularly beeches, met my view. Soon after we had left the park and approached the race-course, the number of carriages and riders increased; at length the vast heath with its various roads opened upon me, which was already covered with a vast number of persons. Amidst loud cheering the court, in fourteen carriages, drove along the race-course to the pavilion specially erected for the Queen. On the top of this pavilion was a comfortable roof, from which a good view of the heath could be obtained. There were, perhaps, from 25,000 to 30,000 persons present. These took up their positions partly on both sides of the course, partly in various houses and on scaffoldings. A number of policemen were employed in keeping order. Round about were masses of tents, and numbers of carriages, covered with human beings. Thimble-riggers and gipsies were not wanting. Among the spectators were a great many ladies and people of the best ton. The place itself is to a certain extent waste, really a heath, here and there stony; all this presented a remarkable picture under a grayish, rainy-looking sky, very different from that given by an imitation of an English race, that I had seen three years before, in the Cascini, near Florence.

The course was now cleared, and the race began. The first time the race was only along the course, as far as the little wooden house with the loophole, by means of which, and a tablet placed exactly opposite, the judges determine which horse first passes the line of vision. A brown horse, long and slender and quite young, like all these racers, ridden by a jockey with orange colours, was the one which gained the prize on this occasion.

The court now retired to lunch, which was served with great profusion in a large tent-like space, and then again ascended the flat roof, upon which loud cheering followed. Indeed, when this cheering began, I could not help thinking of the public at the theatre calling for a favourite actor after the play. Here also the royal personages present were called for singly, and as they appeared were greeted with loud cheers; first the Queen, then the Emperor, the King, Prince Albert, the Prince of Wales, and, finally, the Duke of Wellington. As often as any distinguished person appeared, the hurraing and waving of hats began, accompanied sometimes with clapping of hands. A sharp wind and some rain did not at all interfere with all this, and even umbrellas were not suffered by the people, inasmuch as they hindered the view of the rest.

Now began a new race, according to the programme upon the printed cards which had been previously distributed; and this time the horses ran along the whole course, and then in a wide circuit round the heath back again to the goal. This time, too, a jockey in orange was in advance; but a green one kept close behind him, and was evidently holding in his horse. When not far from the winning-post, the latter gave his horse head, and urged him with the spur to his greatest speed, so as to reach the goal first, amid great cheering from the crowd. Such chances and sudden changes undoubtedly possess a certain interest and

amusement, and I could easily fancy that such scenes, often repeated, serve to excite the people, raise the interest of the thing itself, and give occasion to the most extravagant betting! For my part, I could not consider it otherwise than as an interesting thing to have obtained, in so convenient a manner, so good an idea of this national sport; but the sport itself could never have any great charms for me personally.

Such is the work written as descriptive of the King of Saxony's visit to England. Those who expect royal ideas of government, conversations of royal personages, or details of the courtly ceremonies of crowned heads, will be disappointed. It is a plain matter-of-fact detail of incidents common to every traveller, though not generally in such elevated circles, and in this, and the opinions exercised upon this, the value of the work consists. With a little more curiosity the Doctor had been more piquant; with a little more imagination, a trifle more enlivening; and with a little less in his note-book, rather more progressive in perusal. From observation and reflection we are inclined to believe the appearance of some "Young Rapids" would not be unattended with good results in Dresden. There is a tranquillity which is torpidity, a research which is wearisome, a correctness of detail very painfully accurate, combined with a habit of speculative inquiry, ending in obscurity; and we have at times suspected this style circulates (if it can circulate) chiefly through the pens of German authors. Dr. CARUS is not averse to this school; we do not say he is of it, but merely inclined thereto. His time, however, was limited; he was probably restrained by his position in what he wrote; still his book is decidedly interesting, and his acknowledged scientific acquirements entitle him to every considerate respect. Some of his reflections are not, we think, what he intended them to be—amusing. He sees Netley Abbey through a telescope, and adds, "There, no doubt, might studies of *great importance* have been made. He thinks the English Hurrah unmusical, and prefers the German Hoch; or rather, as indeed it is—a prolonged Ho-ho. His opinion of Sir JOSHUA REYNOLDS will hardly pass the Academy; and his criticism on the Queen's piper, however just *quoad* piper, should hardly have led him to assert, "this is not the only proof that the English are prone to mistake mere noise for music; it is confirmed by the chimes of the Castle, which, morning and evening, produce the most disagreeable effectt upon a musical ear." There are many mistakes in names of persons and titles, which we trust to see corrected in the translation announced by Messrs. Chapman and Hall, to appear in the "Foreign Library," a series already well known to our readers for the valuable works it contains.

JOURNAL OF AMERICAN LITERATURE.

Tales from the German of Heinrich Zschökke. By PARKER GOODWIN. 8vo. pp. 213. London and New York: Wiley and Putnam.

THERE is in these tales a fertility of invention that will astonish the reader accustomed to the paucity of incidents that can be concocted by the duller imaginations of our own fiction writers. Some are humorous, others romantic, others again faithful pictures of society; but all are pervaded with a profound spirit of religious philosophy, and aim at a distinct moral purpose. No two of the tales bear the slightest resemblance, save in their lavish fancy and ever-flowing eloquence. "The Fool of the Nineteenth Century," is a delightful composition, and "Jack Steam," is a THEODORE HOOK improved. We regret that there is no one narrative in the volume brief enough to be transferred entire to our columns, and no extracts or passages severed from their contexts would convey the slightest idea of the worth of the entire work, which we can well advise the book-clubs to order, for it contains more invention than a dozen of our ordinary novels. What a fertility of fancy is displayed in the "Adventures of a New Year's Eve."

ART.

A Treatise on Painted Glass, shewing its applicability to every style of Architecture. By JAMES BALLANTINE. 8vo. pp. 51. Edinburgh. London, Chapman and Hall.

MR. BALLANTINE is quite an enthusiast in his art. His notions of the capacities of painting on glass are magnificent; —according to him, it will accomplish as much as canvass, or more. It is "a medium for expression worthy of the energies of genius"—expression being the very particular in which hitherto it has been thought most to fail. His purpose is "to shew its applicability to every style of architecture,—to clear the way, in short, for the improvement of an art remarkable for the elegance and beauty of its expression."

We do not quarrel with Mr. BALLANTINE for maintaining such exalted hopes of his art. It is by such enthusiasm that progress is made and its true powers developed, and Mr. BALLANTINE has done good service to the cause to which he has so manfully devoted himself, by this successful endeavour to diffuse more widely the principles and practice of glass-painting. He takes as the foundation of his teachings the heterodox, but as we think truthful, position, that the greatest triumphs of art are successful imitations of nature, and its chief aim to achieve such imitations; that as the most beautiful combinations of form and colour are to be found in nature, so will decorative art, as it improves, more and more approach to nature; and that the notion is fallacious, that mere combinations of colours, without regard to form, is the primary purpose of painted glass.

These views he carries out in practical teachings illustrated with many coloured plates, and which must be of extreme value to all practitioners of the art, as they are certainly instructive and interesting to amateurs.

Two small paintings (on panel) were recently purchased for a few shillings, of Mr. Fenton, broker, of this town, and were sent to Mr. Abrahams, of London, to be cleaned, when, on removing the thick incrustation of dirt, they were discovered to be originals of Charles the First and his Queen Henrietta, by Vandyke. They are in the possession of Sir Thomas Cullum, Bart., and are supposed to be worth 500 guineas.—*Bury Post.*

MUSIC.

The Liburnum and Lilac: a Duet, from the "Songs of Spring," by Mrs. E. DARBY. Music by OBERTHUR.

A PLEASING addition to the *Musical Bouquet.* The words are very pretty, and the music has more of originality about it than we are wont to find in the songs of the day. This duet will please the most unlearned by its melody, while to the musical scholar it recommends itself by the science that lurks under its seeming simplicity.

THE SOCIETY OF BRITISH MUSICIANS

Drew together a very crowded audience at Erat's Saloon, Berners-street, on Monday evening. The selection for the evening did not comprise so many novelties as on former occasions—a manuscript sonata (in A) by WALTER MCFARREN, and a quartet (in F), also MS., by CHARLES J. STEPHENS, being the only *new* native productions. The former of these has many agreeable points, and much scholarship; but it is so redundant in iterations, that passages with which the ear has been at first pleased, are made to cloy and weary it by "vain repetitions." The finale, *Vivacissimo,* although strongly impregnated with this defect, was the most satisfactory part of the composition. Mr. STEPHENS exhibited in his quartet (played by Messrs. PATEY, WHEATLEY, WESLAKE, and W. L. PHILLIPS) more than his ordinary ambition, with less than his ordinary success. We would entreat the directors, or those under whose superintendence the programme of the evening is arranged, to avoid, if possible, such a disadvantage as that to which the composition of Mr. STEPHENS was exposed. It is not fair towards a young writer to place his work after such an admired and well-known model as MOZART'S quartet in G (No. 1, op. 10), with which the concert was opened. Miss CALKIN, aided by Messrs. CLINTON, KEY, CALCOTT, WINTERBOTTOM, and C. SEVERN, gave ONSLOW'S sestet for the pianoforte, flute, clarinet, horn, bassoon, and contra-basso, with brilliant success. The vocal portions were sustained by the Misses PYNE and Mr. CALKIN, who gave among other *morceaux,* with great effect, a trio, *Ti Prego, o Padre eterno,* by CURSCHMAN.

Mr. John Terrail, the well-known vocalist, died last week, in Gray's-inn, aged sixty-one, very much regretted by his professional friends.

CROSBY HALL.—A selection of sacred music was performed at Crosby Hall on Saturday night last, the object being to give a public exhibition of the talents of Miss Flower, a lady who has long enjoyed considerable repute in musical circles as a composer of taste and imagination. The examples which were made upon this occasion gave indubitable proof that her abilities had not been over-praised, for the programme contained a variety of vocal solos and concerted pieces highly creditable as works of art, illustrating an amount of originality of thought, and scientific acquirement, not often encountered in compositions proceeding from a female pen. What we heard tended to give us an exalted opinion of Miss Flower's skill and powers of invention, and to confirm the impression which the perusal of certain of her published works had led us to entertain as to her merit and intellectual discernment. The vocalists employed in this interesting demonstration included Miss Cubitt, Miss Thornton, Miss Sabilla Novello, and Mr. Alfred Novello, supported by an efficient chorus.

MUSICAL GOSSIP.—The cantata written by Liszt, the celebrated pianist, for the Beethoven inauguration at Bonn, will shortly be executed at Paris, Jules Janin, an intimate friend of the composer, having made a French version of the poetry of Dr. Wolff. The cantata will also, in all probability, be heard in London in the ensuing season. A Miss Hayes, a soprano vocalist, native of Ireland, has made a great sensation as *prima donna* at the Scala (Milan). She debuted in the *Sonnambula*. Mr. Henry Russell has been giving his entertainments at the Saturday evening concerts, Liverpool, to crowded audiences. M. Benedict and Signor Costa were among the associates lately elected by the Philharmonic Society. Leopold de Meyer, the pianist, has made a great sensation in New York. The examination for the King's scholarships of the Royal Academy of Music is fixed for Friday, Dec. 19. The Sacred Harmonic Society give their second performance on Wednesday, the 26th instant, at Exeter Hall. *Israel in Egypt* will be repeated.—*Musical World.*

THE DRAMA AND PUBLIC AMUSEMENTS.

FRENCH PLAYS, ST. JAMES'S THEATRE.—Several very pleasant things have been produced here since our last notice; and first, there is *Clementine*, the story of a girl who, daughter of a washerwoman, and having herself pursued that cleansing, but not the more refining, occupation, has suddenly come into the possession of some six hundred a year, and is intent upon improving her mind by all sorts of studies, to make herself more worthy of her lover, a young barrister. The *plot* more immediately turns upon the jealousy of *M. Albert*, the lover in question, who has found out that, at a certain hour every day, a young man is admitted, by an *escalier dérobé*, to his mistress's boudoir. He watches the approach of his supposed rival, and is about to inflict condign chastisement upon him, when *Clementine* explains that it is her writing-master whom he is assailing, and not an *inamorato*. Hereupon *Albert*, all tenderness, undertakes himself to teach her caligraphy, and the affair ends pleasantly for all parties except the poor writing-master, thus deprived of his pupil, when, after twenty-four lessons, she was just achieving a capital capital O. Mademoiselle ANNA GRAVE fills the part of the amiable heroine with great nicety of perception, and the teacher of writing, a pacific soul, utterly amazed at the attack made upon him by the enraged Corydon, is capitally represented by M. NARCISSE. Then there is *Le Marin, ou les Deux Ingénues*, also an amusing affair, done full justice to by LAFONT and the two ladies who, with him, constitute the *dramatis personæ*—Mesdemoiselles ST. MARC and LEROUX. Next we may notice *Père et Fils*, a capital vaudeville, wherein LAFONT, with utterly astounding versatility, appears both as father and son, as *Mathias, père*, a fine-hearted, sturdy, independent old grazier, filled with the most hearty contempt for all counts and barons, and such like, as such—for scores of them have cheated him out of his money, and turned out as insolent debtors as they were cringing solicitors,—and as *Mathias, fils*, a silly oaf, whom his father supposes to be at college, but who, under the name of the Baron de Muldorf, is about to marry an old countess he has got acquainted with. We have no space to go into the details of the piece, but we strongly recommend our readers to go and see it for themselves when it is repeated, for it is an excellent comedy, excellently acted by LAFONT and Mademoiselle ST. MARE in the principal parts, ably supported by Madame CROSET, M. PLUNQUET, &c. *Le Lansquenet*, too, is very amusing; M. DUMERY, a recent appearance, fills one of the chief parts satisfactorily. LAFONT impersonates the hero of the piece, a harum-scarum, devil-may-care, good-hearted *Répétiteur de Droit*, capitally; his *polkaing* with another limb of the law into a *salon* where he has no sort of business, is one of the richest things we ever saw. CARTIGNY represents a pseudo-philanthropist, whose false benevolence is strictly limited to the worthless, with great unction, with a perfect conception of the character.

HAYMARKET.—Mr. RICHARD B. KNOWLES'S comedy is played here every evening. It improves greatly upon acquaintance, and, above all, gives promise of much good hereafter. Its defects are of a character which experience may well rectify; its good points are remarkable in a maiden comedy, the easy flow of the writing more especially. We gave last week some specimens of the verse; the following extracts will doubtless also be acceptable to our readers. The old bachelor, *Sir Simon Sage*, thus dwells upon the comforts of connubiality:—

> "Yes, a world of comfort
> Lies in that word, wife. After a bickering day
> To come with jaded spirit home at night,
> And find the cheerful fire, the sweet repast,
> At which, in dress of happy cheeks and eyes
> Love sits, and smiling, lightens all the board."

And again; the heroine of the comedy thus discourses of chance:—

> "What an uncommonly strange thing chance is!
> What heaps of sins, like charity, it hides,
> Or, rather, altogether blots them out!
> For who's to blame for that he had no hand in?
> Which was not meant—was never once foreseen—
> Which happened—some way—as a thing might drop
> Out of the clouds; though very strange to say,
> It always falls exactly where we'd have it.
> Chance is a scapegrace, who, in all his life
> Did never do a proper action yet.
> He puts his hand to nothing but he blunders;
> Mistakes his neighbour's pocket for his own;
> Ruins good causes without fault in the pleader;
> Gives the wrong medicine and kills the patient;
> And, like an awkward knave, makes poor young ladies—
> The least designing creatures in the world—
> Meet the same man, at the same place, and hour,
> Day after day, who never for a moment
> Dreamt in their walks to meet with any thing
> But fields and trees and charming scenery."

This is in the best vein of SHERIDAN KNOWLES himself.—A new farce was produced on Thursday. We will notice it next week.

SURREY THEATRE.—The lovers of melodrama, in the intensest sense of the term, may experience a fine treat by witnessing the production just brought out here with the title of *The Beggar's Petition, or a Father's Love and a Mother's Care.* It is founded on the well-known ballad, immortalized in Speakers and spelling-books, commencing "Pity the sorrows of a poor old man." The nature of the piece—but let us turn to the playbill: "All must remember having learnt, and heard others repeat, that sweet and interesting piece of poetry, in which are all the materials for a domestic drama—the farmer losing his land by ill-success, and the rapacity of his landlord—the seduction of his daughter by a wealthy villain—his being reduced to acts of mendicity—his begging at the gates of the proud and the unfeeling, and having to suffer the taunts of the 'pampered menials,'—losing his wife, 'the partner of his cares,'—and his invisible appeal to the feelings of the humane. This is embodied in a drama, embracing all the events of a beggar's life, each act being an era,—the vacancies between the acts being ten years each. To draw life as it really is, describing all the good and bad passions of the human heart—their operation on the rich and poor—to excite the hearty laugh at folly and eccentricity, and cause the tear to flow at the distress of the good, is the true purpose of the stage." And this purpose is fully carried out by the piece. The tears of the audience *do* flow at the distress of the good—and there is no small allotment of that commodity in the drama; and the hearty laugh *is* excited at folly and eccentricity. The characters are nearly to a man well and efficiently sustained. Mr. FREDERICKS enacts the "wealthy villain" of the piece, losing his title to that epithet, in the end, by repenting on a sudden, somewhat inexplicably. Mr. SHEPHERD is the virtuous farmer who cannot pay his rent—people on the stage are always virtuous on such occasions—and then there is Mr. N. T. HICKS, the representative of a gentleman also of a most noble nature, and with only the trifling drawback of being a housebreaker and a murderer. But, however, he has a remarkable affection for his old master, the farmer; and this "one touch of virtue" in the eyes of the audience well balances the thousand crimes of his profession. So *Dick Darkly* is applauded rapturously. Mr. HICKS enacts the character well—evidently quite at home in the vulgarity of the part. The farmer's (*alias* the beggar's) wife, *Maud Brightwell*, has an able representative in Mrs. SHEPHERD—the Mrs. POPE of other days; and the part of *Polly Marl*, the coquettish housemaid at

Wilton Hall, always holding her hands in her apron pockets, and talking of being married, is given in the most approved manner by Miss MARTIN. Altogether the piece is first-rate of its class, and has met with great success. Some of the situations are tremendous in effect; in particular, the scene where *Jane Brightwell* (Mrs. HENRY VINING) is instigated by her lover, *Sir Edgar Grantley*, "the wealthy villain," who will not marry her unless she accuse her parents of stealing from her a ring, and where the mother, seeing the motive, in order to save her daughter from disgrace, criminates herself. Then, again, the audience are drawn to a high pitch of admiration, when at the end the old beggar solicits alms of the "wealthy villain," who insultingly orders him "a crust of bread and a horse-cloth from the stable," which are given to him by Sir Edgar's little son. The son gives but half the horse-cloth, and on being interrogated, says, "I have preserved the other half, father, against a day when you may be in the same condition as this poor man." The villain quails. Another version of the French farce, recently Anglicised at the Lyceum, with the title of *Next Door*, has also been produced here under the title of *Popping in and out*. It differs very slightly from the other version, and was enthusiastically received.

COVENT GARDEN.—M. JULLIEN'S concerts proceed triumphantly, a huge audience filling every nook night after night. An attempt was made some evenings ago, by a party of young men, to be more frisky and polkaish than suited the decorum or comfort of the company, but the effervescent offenders were promptly placed in charge of the police, and, on a subsequent introduction to the magistrate, expiated their *escapade* by fine and imprisonment. A very proper example.

ROYAL POLYTECHNIC INSTITUTION.—Amongst the means of instruction and entertainment provided for visitors to this Institution, such as the model Atmospheric Railway, the Chromatrope, Physioscope, Proteoscope, and Dissolving Views (which are most particularly interesting, as they represent views of the places visited by her Majesty during her late tour in Germany), we have valuable experimental lectures by Doctors RYAN and BACHHOFFNER. Dr. RYAN, lecturing on the potato disease, points out the means of extracting starch as an article of food, although the potatoes may be in the worst stage of decay. The Doctor thinks the disease probably arises from cold and damp, which have always acted most destructively to vegetables Dr. BACHHOFFNER explains the principle of the atmospheric railway, a model of which is at work daily. COLEMAN'S new American locomotive engine for ascending and descending inclined planes. The diver and diving-bell are not the least attractive in this exhibition. The diver, among other things, exhibits a life-preserving coat, by which he can keep three people above water, with perfect ease and safety. The musical department, under the direction of Dr. WALLIS, deserves especial commendation.

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

Sketches in Erris and Tyrawley. By the Author of "Sketches in Ireland," &c. Second edition, 12mo. pp. 418. Dublin, 1845. Curry and Co.

As this work has been for some time before the public, and a second edition attests that its merits are known and appreciated, we must not do more than announce the fact, and recommend it to those who purpose taking a tour in Ireland, as a truly accurate and most readable guide to the districts named on the titlepage. The author's descriptions of scenery and his personal sketches, are very graphic, and prove him a keen observer and an agreeable story-teller.

CORRESPONDENCE.

TO THE EDITOR OF THE CRITIC.

SIR,—Although a constant reader of your favourite periodical from its commencement, I do not remember to have seen in it a review or notice of a Terrestrial Atlas. As I make THE CRITIC my guide in my purchases of books, and am in want of such a book, I shall esteem it a favour if you will, in your next number, inform me what Atlas you consider best for general use, and also, if possible, please to state the price.

I am, Sir, yours, &c.

Worcester, Nov. 24, 1845. T. S.

[The Atlas of the Society for the Diffusion of Useful Knowledge is undoubtedly the best we possess. But it is expensive. The exact price we do not know.—ED. CRITIC.]

ORIGINAL CONTRIBUTIONS.

THE MOORISH MUSTER.

(*From the Spanish.*)

Renowned Osmanlis! quick press to the strife,
Loud shouting our watchword, war, war to the knife!
Ye sons of the Prophet! whose blood and whose breath
Are spent in the all-hallow'd combat of death.
Ye suppliant pilgrims at Mecca's famed shrine,
Descend like the storm on the infidel's line!
Infuse in their breasts pale affright and deep awe,
As they gaze on the cohorts of Mahmoud Pacha!
Behold how the blaze of the crescent hath riven
Their souls, like the all-vivid lightning of Heaven!
Ah! soon shall we teach the proud Giaour to know
The valour that lights up the Moslemite foe!
Soon, soon shall our banners, wide floating on high,
Proclaim to the Christian that havoc is nigh!
Quick press to the conquest of Granada's plain—
Made sacred to Mahmoud by infidels slain—
By massacred chieftains of Spain's proudest band,
All scattered to death on fair Araby's strand!
Alla, il Allah! firmly grasp the good spear,
And the Prophet's green standard triumphantly rear;
Contemning soft hours of womanish life
For conquering glory's exalting career!
THEN shall the RED CROSS pale its dim, waning light
'Fore the thunder and brightness of fierce Moslem might!

Dublin. HENRY SPILLAN GERALD.

CRITIC OF TRADES, INVENTIONS, ETC.

[Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

VALUABLE DISCOVERY.—A French mechanic formed the idea that by subjecting iron-dross to the slow cooling process which is known to produce a total change in the nature of glass, a new and useful species of stone might be obtained: and as iron-dross, such as the large furnaces yield, is a wholly useless substance, the announced successful result of his persevering attempts cannot but be matter of great interest, more especially at the present time, when the smelting furnaces of England are in a hitherto unknown state of activity. The object which the Frenchman sought to accomplish was, to impart to iron-dross the compactness and hardness of granite, and at the same time to save the cost and labour which the hewing of the real stone requires. To this end he contrived to let the iron-refuse, while in a fluid state, run into iron forms, which were previously brought to a red heat by being placed so as to receive the superfluous flame which issues from the mouth of the furnace; and, in order to ensure the slow cooling, these forms are provided with double sides, between which sand is introduced, which is well known to be a bad conductor of heat; the whole is then brought again to a glow heat, and in like manner again cooled off. By this procedure, it is asserted, the ingenious discoverer had succeeded in forming paving-stones, flags, large building-blocks, and even pipes, of any given form, of a degree of hardness and polish, equal, if not superior, to the best hewn natural granite, and at the most trifling conceivable cost.

ARTIFICIAL FUEL.—A great improvement in the production of an artificial fuel concrete is stated to have been made and exhibited by a Mr. Parsons.

LIFE PRESERVERS.—A public exhibition lately took place, off the Old Ship, Brighton, of a life-preserver, the invention of Mr. G. R. Pigot, of Hammersmith. The preservers are made of a kind of macintosh cloth, air-tight, and are of various forms, one being in the shape of a gentleman's stock with large ends covering the shirt bosom, a second resembling a shirt bosom itself, and a third kind resembling that article of ladies' attire which is, we believe, designated a pelerine. The article weighs only a few ounces, and might without inconvenience form part of the dress. The buoyant properties are given by inflation, which is easily accomplished through a small tube con-

structed for the purpose. Two men, with a preserver of a different form, plunged into the water a few yards from the shore, where there were several hundred spectators, and played a variety of antics, and among other things, in order to shew the effect of the preserver, wore their hats, smoked short pipes, and drank from a bottle, and this notwithstanding that there was a considerable swell at the time.

JOURNAL OF MENTAL PHILOSOPHY.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mental Philosophy, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mental Philosophy throughout the world to make this a complete record of the progress of the science.]

RELIEF OF PARALYSIS BY MESMERISM.

TO THE EDITOR OF THE CRITIC.

SIR,—In the latter part of September, my *protégé*, Henry, told me of a poor but honest family, residing in an obscure court near St. James's, suffering much privation and grief from the affliction of the father, who had for nearly a year been so entirely prostrated by paralysis, as to be disabled from rising in his bed, and from uttering any sound beyond a monosyllable. From the account Henry gave of the case, and the earnest manner in which he begged I would go and try if Mesmerism would relieve it, I went with him one evening, and found things precisely as he had described them: the patient utterly helpless and in pain (having been discharged from one of the hospitals some time before as incurable), and the family of five depending for support upon the scanty earnings of his wife (by washing) and of the eldest son, a youth of seventeen, as a slater's servant.

My passes soon threw the poor man into a deep magnetic sleep, from which he ultimately awoke, much astonished to find that it had given him the power of rising in bed and talking, the first time he had been able to do one or the other since the commencement of his illness. After I had mesmerised him the evening before, I am told he got out of bed and said his prayers quite aloud and distinctly. Visiting him once or twice more, and being then about to depart for the country, I gave instructions to the son (an earnest, healthy, and rather intelligent boy for his station) to continue the manipulations daily.

Hearing no more of the case till my visit to town at the end of October, I called to make inquiry, and found the patient with his clothes on, lying on the bed, from which he sprang with an alacrity that astounded me, and shook my hand, with many expressions of gratitude and joy. He was evidently considerably better for Mesmerism; but his son having been compelled to leave home, the process had unfortunately been discontinued, and I was naturally somewhat afraid of a relapse. Having, however, just incidentally heard that he has since continued steadily to improve, and that his son has returned and resumed the manipulations, I feel very anxious to have the case watched by some faithful and philanthropic Mesmerist, if among your London readers there should be any one so qualified and disposed. I give you privately the address of the poor deserving family with this view—not publishing it, lest it should lead idle or curious persons to interfere with the case from any other motive than the "luxury of doing good;" and shall be happy to correspond on the subject with any kind and intelligent party in town, since my engagements in the country will not allow me to attend upon it personally for some time.

I am, Sir, yours, &c.

Lansdowne Lodge, Leamington, Nov. 24th, 1845. SPENCER T. HALL.

NECROLOGY.

JOHN BACKHOUSE, Esq.

With sincere regret do we record the death of John Backhouse, esq. late under-secretary of state in the foreign department. He died at his house in Hans-place, having suffered long from a fatal illness, which a tour last year to a milder climate could not remove. Severe application to his official duties was probably the proximate cause of this malady, for a more diligent and assiduous public servant the country never possessed. Mr. Backhouse's entry into political life may be dated from the election of Mr. Canning for Liverpool, from which city he removed to London, to act as the secretary for its gifted representative, and take care of the important parliamentary business connected with its vast mercantile interests. In this situation he so highly recommended himself to his principal as soon to be advanced by him to trusts of a more general national character; and thus in a short time to become the holder of an office of the utmost confidence and responsibility. In every point of his useful career, Mr. Backhouse shewed himself to be eminently worthy of this preferment; and we may safely state, that the conduct of no man in such a station ever gave more satisfaction to his employers, or contributed more essentially to the prompt and judicious administration of affairs than was the result of Mr. Backhouse's faithful labours.

His attachment to literature was a prominent part of his life; and readers may remember the interesting manner in which he edited the Narrative of the American Sailor, Robert Adams's residence in the Interior of Africa, at Timbuctoo, &c. We have reason to believe that Mr. Backhouse wrote frequently in several of the most popular periodicals, and also assisted in other literary undertakings of considerable interest. He was in every relation of society most highly and deservedly esteemed.—*Literary Gazette.*

TO BOOKSELLERS.—*A stamped copy of* THE CRITIC *sent regularly to any Bookseller, for his own use, at the cost of stamp and paper only, on prepayment of* half a year's subscription, at least (4s. 4d.), *which may be transmitted in penny postage stamps.*

BOOKSELLERS *and Keepers of Circulating Libraries are requested to communicate to* THE CRITIC *the results of their experience as to books and classes of books most in demand, and other similar information. Books wanted to purchase inserted in the weekly list without charge.*

BOOKSELLERS' CIRCULAR.

THE voluntary witnesses to the real extent of the circulation, influence, and character of THE CRITIC, who have so kindly appeared in every part of Great Britain and Ireland; with intent thereby to prove to the publishers, booksellers, and advertisers, that it is in very truth what it professes to be, the accredited *Guide to the Book Club and Library and the Booksellers' Circular*, we repeat that this mass of evidence, now in course of publication, has already proved of essential service. It has induced many, who before had scarcely deigned to open it, to look more closely into its contents, and they have expressed their surprise to find here a synopsis of Foreign as well as English literature, such as exists nowhere besides, and was never so much as attempted before in this country. Others who had deemed it too youthful and uncertain of existence to claim either their advertisements or publications, have been satisfied by the wide range as well as by the number of those testimonials, that it has really taken a firm hold of the public favour, and has become the recognised organ of a class upon whom the publishers are almost entirely dependant,—to wit, the circulating-library-keepers, and members of book-clubs. The fruits of all this must be apparent ere long, and we must again request those of our readers, belonging to the same classes, and who have not already favoured us, to add their testimony to the list of opinions which we hope may be continued for some weeks to come.

In these busy times, men can only be moved by repeated calls, and half-a-dozen columns of such notes as have appeared in the last and present CRITIC, will receive more attention, and prove more serviceable, than five hundred advertisements.

OPINIONS ON THE CRITIC.

TO THE EDITOR OF THE CRITIC.

SIR,—I keep THE CRITIC always lying on my shop counter; it is often taken up by teachers and others, and books ordered from it, which I get through the Messrs. Chambers. I do not give out books on the old penny a vol. system. I tried it, and had to give it up, as in a town of the size of Kilmarnock books were lost or stolen, though looked after with the most careful accuracy. I now give out only to quarterly readers. The books in demand with that better class of readers are all of what is vulgarly called the *crack* kind. The "O'Malleys," "Lorrequers," "Hintons," "Handy Andy," "Arthur O'Leary,"

"O'Donoghues," and all that class. It is a great matter to be successful in procuring "Ten Thousand a Year." Again readers —those who read with avidity—ask after Cooper's novels, Marryat, Chamier's, Mrs. Trollope's, Bulwer's, &c. &c. Miss Edgeworth, Miss Martineau, nobody will have; and you dare hardly mention the name of Mrs. Radcliffe, Mrs. Meeke, Monk Lewis, or any of that *wonderful* class. My shelf of Galt's works is very seldom touched, although I often recommend that best of all novels that ever was written, viz. "Laurie Todd." Shelf of Scott's works has always some book out of it. I recommend Professor Wilson's works, but even the sweet tale of "Margaret Lindsay" readers will not take, although it might well be read half-a-dozen times. Of poetry I have little or none in the library; but the less the better, although the respectables in and around this district patronize literature exceedingly well, witness 1,000 and 1,500 subs. for the last three years for the "Ayrshire Wreath," and this year nearly 1,000 for a poetical work immediately to be issued, "The Home of the Heart," by Miss Aird. I am, Sir, yours, &c.

JAMES C. W. KIE.

Kilmarnock Journal Office, Nov. 24, 1845.

TO THE EDITOR OF THE CRITIC.

SIR,—I have much pleasure in informing you that I have found THE CRITIC of very great service in the selection of books for sale, and that in my opinion it is an impartial guide to the literature of the day. I am, Sir, yours, &c.

Devizes, Wiltshire. HENRY BULL.

TO THE EDITOR OF THE CRITIC.

SIR,—I have much pleasure in bearing my humble testimony to the excellence of THE CRITIC, as a guide to book-buyers, and at the same time as a medium of communication, and I hope soon to see concentrated in its columns every advertisement connected with the trade, which will alike promote the interest of the advertiser and the convenience of the readers of THE CRITIC.

Wishing you the success you deserve,

I am, Sir, yours, &c.

Cupar, Angus, Nov. 18, 1845. W. H. LIDDELL.

TO THE EDITOR OF THE CRITIC.

SIR,—Ever since the first publication of THE CRITIC we have taken it, and have very great pleasure in informing you that its request is increasing amongst our numerous customers, who constantly look forward for its perusal as we receive it, to see the opinion it has upon works, previous to their ordering, being governed by it as to whether they will have the publication or not, having such confidence in its opinions generally.

Sincerely hoping it may increase in its profits to you, as it has done in its usefulness, We are, Sir, yours, &c.

H. WHITE and SONS.

Library, Carmarthen, Nov. 19, 1845.

TO THE EDITOR OF THE CRITIC.

SIR,—I feel the greatest pleasure in giving my testimony as to the utility and entertaining character of THE CRITIC. I am convinced that a better medium for advertising new works does not exist, inasmuch as the high character it bears as a review must of necessity secure it a very large circulation.

I am, Sir, yours, &c.

Droitwich, Nov. 25, 1845. EDWARD SMITH, Bookseller.

TO THE EDITOR OF THE CRITIC.

SIR,—As you ask of Booksellers and Library-keepers, who are subscribers to THE CRITIC," their opinion of its value to them, I think it just towards the proprietors of that Journal publicly to state, on my part, that I set a high value on its criticisms, and am very much guided by it in the purchase of books.

I am surprised the publishers of books have not more generally used it as a medium of advertisement.

I am Sir, yours, &c.

Hastings, Nov. 27, 1845. W. ARUNDALE.

REGISTER OF NEW PUBLICATIONS,
From Nov. 22 to Nov. 29.
NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY, 14, Waterloo-place, Pall-mall, London.

THE CHISHOLM, Chairman.
WILLIAM MORLEY, Esq. Deputy-Chairman.

GREAT ADVANTAGES OFFERED TO POLICY HOLDERS BY THIS INSTITUTION.

A large and immediate accession of Assurances by the transfer of the Policies of the "Achilles British and Foreign Life Assurance Society."

PROFITS.—The whole of the Profits divided annually among the members, after the payment of five annual premiums.

An ample guaranteed capital, in addition to the fund continually accumulating from premiums, fully sufficient to afford complete security.

CREDIT.—Credit given to members for half the amount of the first five annual premiums, without security.

Credit allowed to members for the whole of the first five annual premiums, on satisfactory security being given for their payment.

Transfers of Policies effected and registered (without charge).

LOANS.—Loans granted upon approved security.

Claims on Policies not subject to be litigated or disputed, except with the sanction, in each case, of a General Meeting of the Members. Loans granted upon approved security.

An extremely low rate of premium, without participation in the profits, but with the option, at any time within five years, of paying the difference between the reduced rates and the mutual assurance rates; and thus becoming members of the society, and entitled to a full participation in the profits.

Extract from the Reduced Scale of Rates, for an Assurance of 100*l.* for one year, seven years, and the whole term of Life.

TONIC MILK OF ORANGE,
A DELICIOUS CORDIAL,
AND SWEETENER OF THE BREATH.

Patronised by the Royal Family and Nobility,
And recommended by the most eminent of the Faculty.

The MILK OF ORANGE (warranted to be extracted from fruit) warms the stomach, creates an appetite, digests the food, strengthens the lungs, clears and improves the voice for singing, enlivens the spirits, dispels nervous debility, clears the blood, and combines with these admirable properties the inestimable advantage of being the most efficacious agent yet offered to the public for purifying and perfuming the breath.

It should be taken in the proportion of a wine glass-full twice a day, and is particularly recommended to gentlemen on leaving home in the morning or after smoking a cigar, while to ladies it will be equally grateful on going to a party or a ball, for its invigorating influence on the mind and spirits, and its refreshing effect on the organs of health. It may be added, that as a lively but gentle stimulant wholly unmixed with spirituous ingredients, it will prove extremely grateful to that numerous class of persons, who, on principles of abstinence, refrain from all intoxicating drinks.

Prepared (as per Recipe purchased of the former Proprietor, Mrs. GULLY,) by

A. ROWLAND & SON,

THE CRITIC,

And Journal of Literature.

SATURDAY, DECEMBER 6, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

THE MORNING MAIL.

SINCE our last report the deposits have been received on forty-five shares. No further outlay has been made, the supply of prospectuses not being yet exhausted. The account, therefore, stands thus :—

RECEIPTS.	£	s.	d.
By deposit on 269 shares subscribed....	13	9	0
PAYMENTS.			
As before announced	4	17	0
Balance in hand.....	8	12	0

When the present panic has a little subsided, the efforts to procure shareholders will be renewed. In the mean while it is most prudent to advance through the medium of THE CRITIC only, which costs nothing. The applicants who have not paid their deposits should, however, do so as soon as possible.

JOURNAL OF ENGLISH LITERATURE.

PHILOSOPHY.

Principles of History. By L. RAYMOND DE VERICOUR. 12mo. pp. 40. London, 1845. H. Baillière.

ALTHOUGH such a very little book, it contains more of original thought, profound philosophy, and practical wisdom, than any dozen of the tomes that used to be inflicted upon the world by pedants dreaming themselves to be sages. A subject of the mightiest importance is submitted to the thinking portion of mankind in a new aspect. Hitherto the philosophy of history has been but imperfectly cultivated among us, for it has been ever subject to the curse which has been, and still is, the bane of all philosophy in England,—the invincible tendency to deal with it in the spirit of partisanship, political or sectarian. An Englishman appears to think it necessary to set forth upon the pursuit of truth with certain dogmas in his brain, to which he will persist in shaping the results of his investigations. Be he Tory or Whig, Churchman or Dissenter, all truth must be moulded to his particular *ism*, or it is rejected without remorse; while a falsehood that favours his prejudice is readily embraced with only the pretence of an inquiry.

Thus has history been written; thus has its philosophy been treated of by our countrymen; and therefore it is that we are indebted to a foreigner for giving us the first rational exposition of the principles of history. To these we invite the serious attention of our readers, as we endeavour to present an abstract of that which is already so brief.

What is history?

"It is the infinite multitude of various actions by which man manifests his passage upon earth."

These present to the unreflecting gazer neither regularity nor stability—without permanent connection and without order.

But to the thinking mind, under this seeming irregularity and confusion, there is a providential law that governs and guides all.

That law is "THE LAW OF PROGRESS."

M. VERICOUR remarks that this word progress belongs to modern civilization; it was, indeed, used by the ancients, but it had a different signification. The idea it conveys to us was unknown to them :—

The true idea of Progress is the offspring of Christianity. It is the consequence of Christian tuition—the spirit of which is, that we are all children of the same Father—that we are all members of the same community—that the day will come when there will be but one flock—one Pastor—when the human races will form, not only a unity, but a Society.

To Christianity, then, are we indebted for the recognition of a Providential Law ruling human actions in the concrete, and "from Christianity emanated the two principles unknown to the ancients—that of *Human Unity*, and that of *Historical Unity*."

All men, generations, and nations, whether in past or future ages, are united by the common link of reciprocal dependance and by a community of functions and of responsibility. Thus, they form a Society that embraces all Times. In other words, there exists in the human species, at all times, and in all places, a continuous link of spiritual or intellectual relations, in virtue of which individuals and nations multiply, succeed, and replace each other.

Thus viewed, the whole human race is a society, and the history of Society is explained by the Law of Progress :—

Progress alone resolves all difficulties—all objections. It is a fertile principle in all the ramifications of History. It throws streams of light on the days of Genesis. It has referred to the religious tradition the loftiest discoveries of Modern Sciences—Geology, Natural History, and Natural Philosophy.

Progress, therefore, explains the phases of History. They are the result of the nature of man, individually speaking—of the functions of societies, and of the succession assigned to the acts of Humanity itself. The conviction of the Progressive working of Humanity can alone meet the restless yearnings which characterize the modern nations and the ardent wishes of the masses for better days.

The fact is thus shewn :—

Let us admit as a principle, that the human species has not created itself—nor given itself to the world—nor made itself progressive; it has not established the laws of its acts—nor that of its relations—nor, lastly, its End. God has created all, the world and man. To the latter, He has revealed the End, which is to urge him on through all ages—through all the obstacles of Nature. The idea of Progress thus defined—studied in its corollaries, leads straightway to the belief that has generally been admitted by all human generations, namely—that man has received from God himself, the Revelation of his duties or of his functions.

Nor is the doctrine incompatible with free-will in the right sense of that term.

Humanity has great faith in liberty and its fruits; indeed, without those feelings which are inherent in man, our actions would be incoherent—they would not conform to our mission on earth. Very few would have the courage to execute that which is ordained by the law of mere duty. Very few would find in Self the heroism of Sacrifice. We all need the conviction that our devotion will not be lost to humanity; indeed, devotion is only possible on those conditions. This conviction is graven on all hearts, although it supposes something beyond the mere liberty of man, namely, that we have faith in a power which gives an impulse and movement to all the actions of human liberty, which makes them tend towards an object that escapes us all.

If man, therefore, is free with regard to his actions, he is not so with regard to the consequences of those actions. They escape him, and fall under the law of necessity. You are free as to whichever side you may throw the stone you hold in your hand; but when you have thrown it, no human power can prevent it from obeying the laws of gravitation.

Every being gifted with reason uses his liberty: he gives way to his judgment as if he were alone in the world—as if others like him did not exist. Nevertheless, all those actions and efforts, apparently diverging, tend towards a common end. A secret harmony exists under the most contradictory appearances.

Thus viewing nations, we shall find that each has had a characteristic feature—a special function in the work of progress.

The Phenicians were pre-eminent, and flourished through industry and commerce. The mission of the Jewish nation seems to proclaim the unity of the Deity, and to preserve the communications in which it was revealed. Literature and the fine arts characterized the brilliant Athens—martial activity, the indomitable Sparta. Rome, during the whole of her existence, breathed but for one thought, one object, one ambition—the conquest of the world. Every nation has had some duty, some function to fulfil upon earth; and each has derived from it the elements of its national activity.

A common end in the movement and advancement of societies is the condition of their existence, else why do men unite and work together, and recognize an object that all pursue apart from the special pursuit of each individual.

There exists, however, another law which regulates the various relations of Man, namely—the functions of man with reference, 1st, to God; 2ndly, to his fellow-creatures; 3rdly, to himself; 4thly, with reference to the Physical World, living or material. Without this divine law, the End of Activity of Societies is a dead letter. Without it, they can neither possess the energy indispensable to Unity nor the power of preserving it. In one word, the End of humanity cannot emanate from Human Will. Its basis must be far more solid. It must be a duty ordained by God, and it is called Morality.

Morality is the great law that regulates all human relations. It points out or banishes all changes and ameliorations. It incessantly urges man and societies to perfection. It teaches man how to improve his organization, so as to become a fit instrument in his earthly functions; it teaches him his duties with regard to the special perfection he must attain—with regard to his duties towards God; lastly, it tells him what he is with regard to the world, and what power of action he has over it.

Hence the study of the moral, religious, and political modifications of nations unravels the various ends they have hitherto attained. Morality and religion are the fundamental laws of all societies.

The activity of societies has its agencies in the successive laws of individual activity. In the analysis of the latter will be found the laws of the former:—

Societies have their faculties as well as individuals. The sense attached to the word Faculty with reference to Humanity is easily understood. It refers to the forces and means it possesses. Thus, the discoveries in science,—the results of industry,—the organization of public institutions, are alike elements in the amount of this force. Herein, the alphabet—Algebra—Steam, are the details—the new powers of action, or new faculties acquired to the human species.

As man has a twofold life, the spiritual and the material, so are societies subjected to a double sway, that of *Moral Duties*, and the necessity of a *Political Organization*. In these we have the means to the great end, the study of which is the object of history.

The same order of development of the faculties manifested by individuals is exhibited also by societies:—

During the first period, Feeling predominates. The people must receive the moral and religious doctrines which are the agencies of their activity; such were the middle ages.

Later, Reason acquires its full power, and when the time of its development is arrived, it grows and extends rapidly; the work of Science acquires the highest importance. It was the case with Europe at the close of the 13th century.

Lastly, comes the period when the object is realised. The Social organization is established according to the laws of morality. Human nature is modified and perfected; its action over the world is manifold and multiform. The earth itself changes its aspect. Such is the period commencing in our time.

Christianity has done much, but its end is yet far from being accomplished; that end being "to bring the whole world under one common law—to unite by one common duty of fraternity—by feelings of universal sympathy—the most divergent and remote nations."

History, therefore, is an account of the progressive phases of some one or more of the great national Societies of the human race; it does not only relate the existence of States and Governments, and of the individuals who constitute them, with their passions, and actions, and their abuses in the name of the State, for selfish purposes; nor does it consist merely in the vicissitudes of the past, so often beautifully recorded by great Historians; or, in the wars of the human race, so carefully preserved when every thing else has perished. That part of History, with its outward nature, its picturesque attraction, has justly been called, material History.

But societies, we have said, have two distinct parts in their working, namely, the *moral duties* and *political organization*; these form the inward life, which is the soul of history,—which determines the external life and material history. Their progress is what is called civilization.

History, thus viewed, assumes a new character of grandeur and utility. "It engenders resignation in better days, courage in the struggles, confidence in futurity."

History teaches that man is not born for self only; it teaches to all their duties, and however arduous may be those duties, it gives the courage to bear their momentary weight without groaning, and, above all, without waiting for a salary. Every man who studies history, learns to do his best according to his means;—he learns how to live and improve himself; he learns to sympathize with his fellow-creatures, and learns, also, to die in the place assigned to him by Divine Providence.

M. De Vericour laments that a science of so much importance should be treated with such entire neglect in England, although he expresses a hope that better days are dawning. Should The Critic continue to grow in favour of the public, we trust that it will do something towards the advancement of this as well of the other branches of philosophy, which it was one of the main purposes of its establishment to encourage and diffuse. The task is slow and toilsome, and urged amid many discouragements, but with such an end in view, we go on in good heart and with resolve to struggle manfully for success, confident that a good and honest purpose zealously pursued rarely fails to find favour at last.

But there is another vital element in the natural life of nations—those economical questions which, though they form apparently but a subordinate science in their relation with the supreme political questions, become of the highest vital and moral importance.

Political Economy, therefore, is not a mere science of material interests or of statistics; many of its questions are of another paramount importance to a nation, so much so, that they often decide its moral and political condition, its welfare or its misery; such are, for instance, the commercial laws of a country, and those which have caused such a febrile sensation in our own time, namely, taxation. Political Economy is the great science which History has to trace in its progress, and to mark in the horizon as portending the great object of a morally civilized nation; namely, of procuring the greatest happiness to the greatest number. The importance of its mission is evident; but it cannot advance without the two principles of equality and order. Order, above all, so indispensable to the successive and continued regulation of progress.

What mean we by equality? Of rank? By no means. Of franchises? Not so. Of social intercourse? Certainly not. But the equality which history recognises as an element in Progress, is equal liberty to develop the faculties of mind and body, and to use them the most advantageously to ourselves, and to our fellow-creatures.

Liberty thus defined, advances hand in hand with political economy—for the man who is hungry, whose constitution, moral and intellectual, is depressed by the cravings of nature, is not free. He cannot make free use of his faculties; he can neither exercise them, nor develop them. Morally speaking, he is brutalised. Intellectually speaking, he falls into a state of inactivity and torpor. Political economy, therefore, in its widest sense, is a noble part of history. * * * History has, therefore, to mark what has been done in various countries, and at different periods, for all the classes of a society. It has to shew how the principles of equality before the law, and many economical and political advantages have often been promulgated, and often with salutary results; and also, how the middle classes have chiefly grasped at those advantages, whilst the working classes have been too late in claiming them, or have been overlooked by their promulgators. The mission of history, therefore, is to conduce through all the phases of past ages to the present condition of the human race, leaving to the student the consoling spectacle of its future welfare and perfectibility.

Thus do economical questions rise into the highest political and historical interest. And this is being recognised more and more every day. In them all other questions have merged; they occupy the foremost place in the thoughts of all governments, and lesser differences are forgotten by the people in their pursuit of this one great object.

M. De Vericour then takes a rapid glance at the progress of political economy, viewed as a prominent feature of history, beginning with feudalism. He traces a steady improvement in the condition of the masses, simultaneously with the better recognition of economical principles, and this is the result:—

But now, we all believe that the day will come when no human being will be without his share of comfort and liberty. The general diffusion of that conviction, however, can only be the result of historical studies which shew how, in the field of civilization, generations have advanced through numerous efforts and conquests. Let the people judge what remains to do, by

what has been done; and when we behold the labouring class escaping Roman bondage to take refuge in Feudalism; then organizing itself in corporations; afterwards, venturing on the seas, stimulated by the instinct of commerce; and lastly protected by political liberty, we all understand that Political Economy is not a science of words and numbers, but that it is the mission of history to analyze firmly its march and progress through nations and ages, indeed, to adopt it as one of the fundamental elements that constitute its Being.

The other branch of the Philosophy of History is that of *Political Organization*, through which it exhibits the movements and the progress of liberty.

In this point of view, History is the protestation of humanity against the tyrannies and iniquities that have assailed it; we behold in it the supreme reign of the soul, the triumph of the infinite over the finite, the human mind struggling to develop itself, and exulting in its victory. The fact is, that if a day came when such a thing as liberty could be eradicated from the human heart, from that day History would become a dead letter; it would cease to exist.

Man has a history, because he is subject to a Law of Progress. He advances, and every step he takes is added to those already taken towards the end. "History, in short, is an incessant revelation of God."

And how should this philosophy be employed?

In our opinion, the use or the philosophy of History must be closely blended with History itself: it is nothing more after all than a morality of History, and it ought to gleam in every page of the historian, and breathe in every word of the teacher of History.

To conclude in the eloquent language of the author—

Historical studies abundantly supply all its yearnings—they teach love and virtue; not confined to a narrow circle of kin or country, but to extend over all and everywhere, like the sun. Finally—those who will study the History of a country, will never close that study without having a loftier idea of their mission on earth—without having a greater faith in the final reign of justice and reason—without feeling more devoted to liberty and to their fellow-creatures.

BIOGRAPHY.

Lives of Celebrated Greeks. 12mo. pp. 152. London, 1845. Burns.

This new contribution to the *Fireside Library* consists of a collection of lives of famous Greeks, based upon Plutarch. They are introduced by a brief sketch of the geography of Greece, and historical sketches of Athens and Sparta.

VOYAGES AND TRAVELS.

Rambles in the United States and Canada during the Year 1845, with a short Account of Oregon. By Rubio. 8vo. pp. 259. London, 1846. Clarke.

The author of the *Rambles* can boast, at least, of one virtue,—he is a good hater. The Americans, and all that belong to them, find no favour in his eyes; he hates every thing he sees, and hears, and tastes, with a hearty uncompromising hatred, that disdains disguise, and rejoices to give it vent in language as expressive as his feelings are fervid. Taking Mrs. Trollope for his model, the anonymous tourist has infused her spirit into the larger subjects to which a man's attention was necessarily directed, and made an indiscriminate attack upon manners and morals, climate and houses, the busts of the ladies and the shoulders of the gentlemen, the steamboats and the clergy, the wine, the markets, the newspapers, the land and the literature, hotels, and railways, conducted much after the miscellaneous fashion in which we have stated them.

Now, however this sort of one-sidedness in a book may amuse the reader, it detracts much from its intrinsic worth. It is impossible to put faith in any thing proceeding from a source so tainted by partialities, or to receive with respect a narrative coloured by such an *animus*. This is to be regretted, for the *Rambler* is a man of lively perceptions, well informed, and on all subjects where his prejudices do not overpower his judgment, exhibiting a certain strong good sense, that, but for the feeling with which it is associated, would have made his observations a valuable accession to the library. Moreover, his style is peculiarly racy and vigorous; he writes with a sharp firm pen, so that there is no haziness about his ideas, and his meaning can never be mistaken. What he intends to say is said without circumlocution; he does not hint and hesitate, but speaks out boldly, with a bluntness that startles at first, but soon pleases by its novelty. Indeed, there is in the entire work, in its plain speaking, its heartiness of hatred, its bustling energy, and its overflowing prejudices, an incarnation of *John Bullism* which will recommend it to popularity, and will please even those who may condemn while they read.

The *Rambler* opens by informing us that the maxim of the Americans is that "roguery is the best policy;" that the men are remarkable for "their vulgarity, hypocrisy, ignorance, and dishonesty;" that the inhabitants are "hypocrites in the northern states, rogues in the middle, and ruffians in the south;" that "no honest man can be president of America again;" as for the climate, "I consider it to be the worst in the world;" "you look in vain for the comforts, enjoyments, and luxuries of life;" and these are selections from the first chapter of ten pages!

A tour commenced with such a spirit—the result either of the not uncommon narrow-mindedness that vilifies as bad whatever differs from its own habits, or of some personal dislikes, extended from an individual enemy to the nation to which that enemy belongs,—another not rare weakness of human nature; we say, whatever its excuse, observations made through eyes so discoloured must be received with suspicion, and read, if at all, for amusement only, and not in any manner as a chronicle of facts. So viewing it, and admitting to the full its claims in other respects to critical approval, we shall content ourselves with this protest, and proceed to shew the author's better characteristics by a few extracts which have attracted us by the novelty of their matter, or the spirit of their manner. Here is a clever, but manifestly caricatured, sketch of

A BREAKFAST IN NEW YORK.

Though every one must admire the early hours and temperance of the Americans, yet only imagine a Londoner, and an old hand, not used to any thing much worse than the shady side of Pall-mall, assembling at six o'clock at the noise of a great bell—washed and shaved, mind, by six o'clock—to look at an immense rump-steak at the head of the table swimming in fat, not half-cooked; then lower down a dish of enormous salt mackerel, one of which would make two of our English mackerel; then some Halifax salmon just as taken from the barrel, and as salt as brine; then two or three smaller dishes, some with mush, a food for pigs, and others with hommaney, only differing from mush in that this last is *white* maize ground and boiled in water, whilst *mush* is *yellow* corn ground and boiled. As this sort of food is not known in England, thank God, except in the penitentiaries, I have been rather particular in describing it. No caution is required to my countryman to avoid it, because the very sight of it will be enough to make him sick. The remainder of the table was filled up with some warmed-up tough old hen, called chicken fixings, all washed down with the most execrable coffee in the whole world. I used to think that England might defy all creation for bad coffee, but the Americans beat us hollow. It is all that abominable trash from Rio, costing there about twopence halfpenny per pound by the cargo; and as the Americans really seem to be no judges, even of things they are constantly putting into their mouths, or else so careless that they care nothing about it, whether it be good or bad, all is Brazilian coffee bought by the boarding-house keeper, ready ground, and of course, as the Americans adulterate every thing, ready mixed.

He adds, however, a compliment upon the butter, which in every part of America is excellent. At this time, when there is so much talk about the admission of Indian corn, our author's description of it as a food will interest:—

There is also at the breakfast-table a profusion of nice-looking hot yellow cakes, called, I believe, Johnny cakes, made of Indian corn, but they are like mush and hommaney—only fit for pigs or prisoners. This valuable grain, which is one of the greatest gifts of nature, and which is more extensively cultivated in the States than in any other country, under the single name of *green corn*, forms a delicious dish of vegetable at dinner, little inferior to green peas, but in *every other shape* or manner of preparation it is perfectly execrable, and would scarcely be eaten by a Scotchman, although accustomed to his oatmeal porridge.

In the same style is his picture of

THE MEN AND WOMEN OF AMERICA.

The men have no shoulders: they are tall and lathy like corn-stalks, and under the nape of the neck they are sometimes as

narrow as a female. The ladies of New York have been through all time, which means about fifty years, so famous for their beauty, that I know I shall be accused of heresy, envy, hatred, malice, and all uncharitableness, if I say that it is entirely a mistake. But the truth must be told, and I have seen more pretty women in London in one day than ever I saw during all my rambles in the United States. That *prominent* point of female loveliness, and which the whole English race so much excel in, is entirely wanting in the American ladies: they are as *flat* as their own horrid sea-coast; and though they artfully endeavour to conceal this national deficiency by a peculiar, newly-invented, and really very ingenious corset, yet it will not do; our imaginings return unsatisfied, and our worst suspicions come back confirmed.

But it must be confessed, that what they want in busts they make up in bustles, and to an excess that shocks an English female, and which is so glaring and preposterous as to be downright indelicate.

The pure red and white of English complexions must not be looked for in any part of the States. The lilies and the carnations are not of American growth; the men are sallow, and the women tallow.

The hotels maintain the reputation of their order throughout the world. At one of them he was charged *thirty-five shillings* English for a bottle of port! the duty on importation being one halfpenny per bottle. Now for

CHEAP LITERATURE IN AMERICA.

The Americans are certainly a nation of readers, and it is always amusing to walk the principal streets and see what a large traffic is carried on in the cheap publications. The "Last of the Barons," or the "Smugglers," is no sooner arrived in New York than one publisher strikes off 50,000 copies at threepence each, and a rival printer a better edition at 6d. and 1s. The respective authors, however, need not reckon much on this cheap immortality; the books are thrown by as soon as read, like their halfpenny newspapers; in a little time, if you ask where are they, "Echo answers, Where?" There are no private libraries in America, nor are there any circulating libraries, for it is cheaper to buy than to borrow. The London picture newspapers form an item, also, very considerable; and you see "Punch," "Pictorial Times," and "Illustrated London News," in the shop windows for sale, as abundantly as they are in London. This is not confined to New York, but pervades the entire Union, as far as New Orleans; and, whilst the boat was getting up her steam at St. Louis, at the junction of the two mighty rivers Missouri and Mississippi, we had nearly a dozen boys on board, with great bundles under their arms, singing out, "Last Lecture of Mrs. Caudle" only one halfpenny; No. 20 of the "Wandering Jew," and all Bulwer's and James's novels, at a shilling each! The boys drive a very lucrative trade in these amusing wares; one youth told me that he cleared ten dollars a-week on a capital of only ten dollars!

ADVERTISING.

The country papers advertise for almost nothing. A man gives notice that he will advertise in one hundred and twenty of the leading journals of the State of —— for less than a penny each, if inserted for three months, and he will receive payment in wheat, maize, rye, pork, bacon, whisky, feathers, bees'-wax, tobacco, hemp, shoes, tinware, or eggs!

Here is a scrap of seasonable advice:—

But if this plan of universal temperance has not yet been thoroughly organized in the American army and navy, there is to every reflecting Englishman great satisfaction in observing that by a late Act of Congress flogging has been entirely abolished in American ships, as well in those belonging to the State as in those belonging to the merchant service. It would have been more agreeable, perhaps, if Great Britain had been foremost in this just work, but it is an example that must soon be followed by our own legislature; for nothing can be more impolitic on our parts than to leave any thing *to be envied* by either British sailors or British colonists in the laws, customs, or institutions of our Republican neighbours; but, on the contrary, it should be the aim in Downing-street, if possible, to make every thing British or Canadian the envy of the Americans!

The author excepts from his detestation one feature in the American character, their temperance. In this they might well offer an example to us.

He warmly recommends Canada to the emigrant. While at Montreal, he observes—

Thinking I was going to settle among them, I had daily offers of beautiful farms, more or less improved, some as low as 10s. per acre, up to 5*l.* and 10*l.* an acre, whilst 20*l.* per acre was asked for some suburban spots on the plank road. The buildings about the towns and along the roads all seemed warm and substantial, though it was a pity to see such hundreds of pretty places for sale, and no buyers! This can only be owing to a falling off of emigration, occasioned by the late Canadian troubles, which are not likely to occur again, and therefore the field of enterprise, being so unlimited in Western Canada, there is no doubt the roaming portion of our English emigrants will prefer that country, especially as they can get the English newspapers only a fortnight old, by way of Boston, which is a great advantage over every other colony, and there will be a constant demand for all their surplus wheat, ashes, and timber.

And again—

I repeat, therefore, that if my countrymen of England will emigrate, don't let them throw away themselves and their scanty means by going to the Cape of Good Hope, or *any of the Australian Colonies*, or New Zealand; but, by all means, go to the best parts of *Canada West*, where they will find the soil fertile beyond their expectations, the seasons certain and regular, and the climate healthy; besides which it is a cheap and abundant country, without taxes; whereas, if they should emigrate to the United States, which is called the land of freedom, they will be insulted for being Englishmen; where taxes are high, clothing very dear, produce very low, and nothing but fever and ague to welcome the settler; and, the best of the joke, not half so much freedom as in Canada.

Behold a picture of

A SPEAKER.

I made an acquaintance here with a mean-looking young man who was squirting his tobacco saliva in every direction,—one of the most frequent and odious nuisances in the United States,—when, to my astonishment, he told me he was Speaker of the House of Representatives! Had he been speaker at the debating club at the Pig and Whistle, it would have been a grave announcement; but to find my friend exercising such high legislative functions as Speaker of the House of Representatives was what I was not prepared for.

Our rambler very sensibly rebukes the absurd expense of English funerals, and compares it with those of America.

The friends assemble in their usual dress, and by a numerous muster, rather than by their inky habiliments, testify their regard to the memory of the defunct. As for hearses and mourning coaches, plumes, cloaks, and hatbands, with all the other tricks of undertakers to make out a long bill for funeral expenses, all such nonsense is unknown in America; whilst the act of sepulture is performed with as much propriety and decency as in London, and probably does not cost more than a sovereign! And why should it? This is one of the most glaring follies of my countrymen, and it is to be hoped their good sense will not much longer submit to the tyranny of undertakers.

A geographical sketch of the Oregon territory is appended, and at this time it will be both useful and interesting.

New Zealand and its Aborigines, &c. &c. By WILLIAM BROWN, lately a Member of the Legislative Council of New Zealand. London, 1845. Smith, Elder, and Co.

THE official position occupied by Mr. BROWN in the colony argues a considerable acquaintance with its characteristic features, and with the condition, capabilities, and prospects of its people. How far this very advantage of opportunity is marred by a partiality unavoidable in such a case is a problem we will not venture to solve. The reader will, however, act prudently to bear in mind the temptations to over-colouring on the one side, or under-colouring on the other, inseparable from the descriptions of a partisan, and make sufficient allowance for it as he proceeds.

Indeed, this volume is not altogether a descriptive work. There is about it a great deal of the political pamphlet. It reviews the topics that attracted so much attention in Parliament during the last session; but inasmuch as with these we have no concernment, we shall pass them by, and confine our regards to the matter of more freshness, which narrates Mr. BROWN'S experiences of the aborigines. A few passages will suffice to exhibit the sort of information conveyed in this volume, and the author's manner, which, it will be observed, has the fault of being too wordy. He wants condensation of thought and of expression; but these will come with practice.

He presents but a sorry and unpromising picture of the

DOMESTIC LIFE OF THE NEW ZEALANDERS.

The New Zealanders do not seem to possess the domestic affections in an eminent degree. In general they appear to care little for their wives. Not that they are unkind to them, or that

they deem them inferior, and therefore not worthy of attention, but it seems to result rather from a want of that sympathy between the sexes which is the source of the delicate attention paid by the male to the female in most civilized countries. In my own experience, I have only seen one instance where there was any perceptible attachment between husband and wife. To all appearance they behave to each other as if they were not at all related; and it not unfrequently happens that they sleep in different places before the termination of the first week of their marriage. It is a very rare occurrence indeed for husbands and wives to quarrel, and still rarer for a husband to beat his wife. They have no courtship, nor any marriage ceremonies beyond the mere conducting of the lady by her lover to his hut. A chief can, in effect, take any unmarried female he may choose. Their laws do not openly acknowledge his power to do so, but they permit him to take her by force if he can, and she then becomes his lawful wife. If she, however, is aware of his intentions, and does not think proper to yield, her friends will protect her as far as they can. Parents not unfrequently betroth their children in infancy, and a woman in such a case becomes tapued to her future husband, and to him alone; nor can any other person make proposals to her even though he should die—a law which has a considerable influence on the population. In these cases of forced marriages, the females are not beaten or maltreated as the New Hollanders are under similar circumstances. On obtaining his wife, it is a common practice for the husband to make a present to her parents, whether the marriage has been a forced or a voluntary one. The slaves are allowed to marry as they please, but they are not permitted to take wives by force, this privilege being reserved for their masters alone. Wives are usually chosen from a different tribe, partly from inclination, and partly with a view to the increase of the power and influence of the individual, as the husband is always considered to belong to his wife's tribe, and may rise from inferior to superior rank accordingly. A chief is permitted to have as many wives as he thinks proper, a license which is very generally taken advantage of. The Christian natives have been induced to put away all the supernumeraries; indeed, some of them have become such sincere converts as to preach as well as practise the duty of entire celibacy. However many wives a chief may have, there is always one amongst them who is the favourite or wife-in-chief; or should rival claimants divide the empire, separate establishments will be provided for them. In this there may seem to lurk the seeds of jealousy; but the wives appear to make no objection to the number of their competitors; not because they cannot prevent it, but because they are destitute of those feelings which characterize the females of other countries. Chastity is not deemed one of the virtues; and a lady before marriage may be as liberal of her favours as she pleases without incurring censure.

And again:—

It is easily seen that they are only acting a part; and it is frequently ludicrous to observe the difficulty that some of them find in forcing out these crocodile tears. A proof of this is seen in the immediate change which takes place in their appearance as soon as the "tangi" is over, when they at once begin to laugh and talk with the greatest animation, thus precluding the supposition that they can have felt even the slightest emotions of grief. Show and ceremony appear to be a main feature in the native character; so much so that even grief is universally simulated. The only wonder is, that vanity should lead them to the affectation of such a noble and refined feeling as sympathy; and it affords the most unequivocal evidence of the superiority of the New Zealanders and their susceptibility of the highest improvement. They think the white people cold hearted; and say, that when they meet they shew no more regard for each other than so many dogs. In stature, the New Zealanders are rather above the middle size, and some are very tall, six feet to six and a half. They are very muscular and well formed. Very many have mild, pleasant, and highly intelligent countenances, and their predominant feelings are easily distinguished. This is owing, in some measure, to their being less accustomed to conceal their feelings than people more civilized; but doubtless, in a still greater degree, to the natural conformation of their minds. The slaves have a very different appearance. They seem formed of far inferior materials; the very texture of their skin is coarser. Neither are they so tall and well proportioned, though they are more muscular. Their countenances are much less expressive, clearly denoting that they are much more beasts of burden, and less accustomed to mental exertion. Of course, this is no more than the circumstances would lead a person to expect. Slavery produces its natural results in New Zealand, as well as in other places. The poor slave labours that his master may live in idleness, and give him leisure to expand his mind, and enable him, by his superior knowledge, to bind the fetters of his slave the faster. It is due to the New Zealanders, however, to state, that they behave, in general, with great kindness and consideration towards their slaves, who enjoy the utmost freedom, frequently possessing land as well as their master. Indeed, he freely distributes his land amongst them, well knowing that his interest and power lie in conciliating their good will. It should be remarked, that this description of the degraded appearance of the slave class only applies to a certain portion, for many of them having been taken in war, and from being chiefs themselves reduced to a state of slavery, are in every respect equal to their present masters.

He entertains a hope that the New Zealanders will be exempted from the extermination which has been, as if by the operation of some natural law, the fate of all savage nations upon the invasion of a civilized people upon their haunts.

It must be gratifying to the friends of the helpless aborigines of new countries, who have hitherto melted away at the approach of civilized man, to know that there are especial reasons for believing that the New-Zealanders are reserved for a better fate. One of the most prominent causes of our failure, in respect of other demi-savages, will be found to exist in the vast inferiority of their minds generally; or, at least, in the entire dissimilarity between the two races: but this does not hold with regard to the New Zealanders. On the contrary, their natural capacities, mental as well as moral, are of a high order, and eminently fit them for amalgamating easily, at no distant period, with their civilized brethren. Their pursuits, too, it should be remembered, are very much the same: the New Zealanders rather exceeding the Europeans in their love of trading and other commercial pursuits. Neither are they, like other savages, devoted to war, leading a wandering life, and existing by fishing and hunting. They would most eagerly abandon the few warlike habits they may still possess for the security afforded by the Europeans; and, for their subsistence, would be equally willing to cultivate the ground, as they have been in the practice of doing from time immemorial. Another reason for the probability of this amalgamation exists in the fact, that the New Zealanders have been recognised as the rightful owners of their own lands, and therefore entertain no feelings of hostility or hatred towards the settlers.

Theft appears to be a national custom.

NEW ZEALAND THIEVES.

Next deserves to be noticed their singular custom of robbing (the singularity rather consists in the occasion), and the *sang froid* with which the parties submit to be plundered. It is in fact the usual method of punishing all offences real or imaginary. There is certainly nothing new or extraordinary in depriving an individual or a tribe of their property, on the violation of any law or custom; but civilized people would certainly not voluntarily submit to such a loss; far less would they refrain from using every exertion to secrete as much of their property as the circumstances would admit of their doing. Not so with the New Zealanders, however; they will calmly and unconcernedly sit by and see themselves plundered of every thing. Nay, it is even customary to give the individual warning; but even then he will not put away his property, as this would be termed an act of cowardice. I knew a case where a party of natives went to rob a chief of the name of Koinaki, in consequence of his wife having committed adultery. On that occasion they took from him a fine double-barrelled gun (an article at that time in great estimation, and very expensive, worth from 10*l.* to 12*l.*), all his blankets, a trunk containing clothes, and other articles, he looking on calmly all the while; indeed, he was on the best of terms with them, and after the affair was over entertained them in his house for three days, the weather not permitting them sooner to depart. Robbing is a punishment for all descriptions of offences: indeed, unless under peculiarly aggravated circumstances, a payment will compound for almost any offence, whether the culprit be a native or pakeha (as the white people are termed). In these robbing excursions they do not always confine themselves to the property of the offender, but constructively implicate the whole of his tribe, and indiscriminately carry off all they can find. I witnessed a practical illustration of this in the case of a tribe living a few miles off from the place where I resided. A young chief having taken undue liberties with the wife of another chief of the same tribe, the old chief Kanini assembled a few of his followers, and not only stripped the youthful delinquent but many others of his tribe, not omitting the injured husband himself. They carried off all the provisions that could be found, as well as three canoes. It is a common practice to rob a new-married couple immediately after their nuptials, and not unfrequently to give them a good beating into the bargain. It was at one time customary to rob a person on the occasion of any accident, such as his being burned, the bursting of his gun, &c. &c. Towards Europeans they adopt the same method of punishment; but they have not been able to get our countrymen to submit with a like good grace; they, of course, resisting whenever they can, and ill-feelings are consequently engendered on the part of the English by

the loss sustained, and the very natural supposition that the natives have some ill-will towards them. But such may not be the case. The natives think nothing of being robbed themselves, and do not appear to entertain the least anger towards each other on such occasions; and this should, therefore, be kept in view by the Europeans in judging of the conduct of the natives. Of course it can never be expected that Europeans will be reconciled to such a perversion of the natural laws of *meum* and *tuum*, but it is at least so far gratifying to think that, in such cases, the natives may only be acting in strict accordance with their own customs, rude although they be, rather than from ill-feeling towards the sufferers.

Yet, upon the whole, Mr. BROWN forms a high estimate of their general character, and anticipates their speedy addition to the ranks of civilization. This is his sketch of the

CHARACTER OF THE NEW ZEALANDERS.

The analysis which has been given of the character of the aborigines exhibits them in the first stage of social existence, and proves that their domestic affections are much less powerful than we are accustomed to find, not only among civilized, but even in other demi-savage nations; while, on the other hand, their ties of tribe or clanship are much stronger than amongst European nations. For instance, we see that the smallest affair affecting the interests of one member of the tribe is deemed of sufficient importance, not merely for the notice, but even for a long and serious discussion by the whole tribe. If a death occurs, the grief is not merely shared by the tribe with the relations of the deceased, who are commonly the least affected by the event. In enumerating, however, the peculiarities of temperament on which these characteristics depend, we find that the New Zealanders have the fighting or opposive propensity very moderate, their angry or vindictive feelings also small, and easily allayed even when excited. We further find that they are not naturally cunning, but open; while we see too, on the one hand, that they are a nation of traders, exhibiting the utmost eagerness to possess the goods of others, they are scrupulous as to the means—using honest and even laborious industry, where others might not even hesitate to steal. Combined, however, with this powerful desire of accumulation, we find that they have kind and generous natures, and part with their acquisitions with as much readiness as if they were the recipients rather than the givers. We also see that they are not proud and distant, but affable, courting eagerly the praise and good opinion of others. It should also be remembered, that this good opinion is sought in respect of the higher moral qualities, and not as one might have expected in the case of a demi-savage people, as a tribute to the intensity of hate and revenge—to the possession of the greatest number of wives—to skill in the practices of deceit. Neither is it asked on the score of the native being the best boxer, the deepest drinker, or the most accomplished profligate;—characters which are, even to this day, not altogether expelled from civilized society. No; the cannibal New Zealander, in despite of many evil practices, emulates higher virtues, the chief of which are bravery and generosity, the absence of hatred and anger, and the evenness and placidity of a temper regulated by the dictates of reason. Whatever falling short in the case of individuals, or even of masses, there may be in the attainment of these virtues, it is encouraging, as affording the best grounds for anticipating great advantages, to find that there is no part of what may be styled their code of morality, or what they deem it any honour to aspire to, that is not really estimable in itself. It is true that they are very deficient in conscientiousness, which must operate very injuriously; but they may easily, by the stimulation of the good qualities they possess, be led to do what is right, if not for the right's sake. In this recapitulation of their peculiarities must not be omitted their powerful religious tendencies, though I feel very certain that these will not continue to have an influence equal to that which they exerted while the minds of the natives were ignorant and superstitious; but this only points out one of the many applications which a knowledge of their real character should direct us to make. It shews that the missionary must not be contented with merely communicating religious knowledge to the natives, but he must, by example as well as by precept, train to activity all their best faculties to ensure moral conduct—nay, even to keep that conduct up to its present standard. To this enumeration of the motives of conduct and action in the New Zealanders it remains to add, that their intellect fully equals that of our countrymen; and while their genius is eminently of a practical nature, and they are keenly alive to their own interests, the fact ought never to be lost sight of, that their feelings or motives to action are in a remarkable degree subservient to the dictates of their reason, which is saying more for them than could be affirmed of most civilized nations. With such capabilities, therefore, there never was a better—nay, never even so good an opportunity afforded to the religious, or even to the mere natural philosopher, for trying the experiment of raising a savage into a civilized being—a heathen into a Christian. And if our government are really actuated by the humane feelings which they have expressed, and truly desire to see the grand experiment practically made, they have only to use the means, and they may rest satisfied that the result will be most satisfactory.

And here we close a volume, over which we have perhaps already lingered too long, considering the small quantity of matter it contains calculated to interest the general reader, who takes no part in colonial squabbles.

A Pastor's Memorial of Egypt, the Red Sea, the Wildernesses of Sin and Paran, Mount Sinai, Jerusalem, and other principal Localities of the Holy Land, visited in 1842; *with brief Notes of a Route through France, Rome, Naples, Constantinople, and up the Danube.* By the Rev. GEORGE FISK, L.L.B. Prebendary of Lichfield, &c. Third edition. 8vo. pp. 461. London, 1845. Seeley, Burnside, and Co.

THIS third edition, being a *verbatim* reprint, we reluctantly resist the temptation to review it at some length, and cull some passages from the abundance of interesting matter its ample pages yield. But new works claim all the space we have to spare, and more, and therefore we must invariably dismiss second editions with a brief passing welcome and congratulation. Mr. FISK's description of his adventures in the route set forth upon his title-page are extremely graphic, shewing him to be an accurate observer, and to have entered upon his tour with a resolution to see every thing that he could reach, without sparing labour or time. His previous studies had specially qualified him for travelling in the Holy Land, and everywhere he makes good use of them, always tracing in the scenes he beheld the localities famous in Scripture; thus his volume possesses something more than the interest of a book of travels; it is a practical Bible commentary, and will be found of infinite service to all who study the word of God with a desire fully to understand every portion of its history as well as of its precepts. Being such, we can heartily recommend this portly volume to the book-club, and even to the family library.

FICTION.

The White Lady: a Romance. From the German of C. VON WOLTMANN. Translated by JAMES D. HAAS. 12mo. pp. 64. London, 1845. Burns.

Select Popular Tales from the German of Wilhelm Hauff. London, 1845. Burns.

Two delightful importations from that land of romance, Germany, with its great gloomy forests and black hills, with their superstitions, begotten in the fancies of the most imaginative people of Europe. Both belong to the *Fireside Library*, and are well entitled to the name, for more pleasant reading on a winter's evening it would be difficult to find. *The White Lady* is a romance of absorbing interest.

Miriam; or, the Power of Truth. A Jewish Tale. By the Author of "Influence." Eighth edition, 12mo. pp. 388. London, 1845. Hatchard and Co.

AN eighth edition of a fiction proves that it must possess some at least of the qualifications for popularity, and that implies the presence of characteristics that appeal to our common nature, and therefore proceed from sincerity of purpose in the writer. *Miriam* is a religious tale, written with a distinct and avowed purpose, and this may be one cause of its great success; but that alone would not have carried it through eight editions, and we find, in fact, that it is interesting in its story, and eloquent in its language; and though to us it appears to be too much amplified, and might be improved by the curtailment of many of the dialogues and descriptions, and the omission of some obtrusive reflections and sermonizing; still to other tastes this has proved to be no objection, and success is a fair test of fitness to please the public.

The Mysteries of the Heaths. From the French of FREDERICK SOULIE.

Pauline Butler. From the French. London: Bruce and Wild.

THESE form the 80th part of *The Novel Newspaper.* We are glad to see that the spirited proprietors are directing their attention to foreign literature. A huge field is there open to

them. Germany would supply a hundred volumes, and France as many. Why do they not give us the best novels of PAUL DE KOCK and ALEXANDER DUMAS, and others that have been recorded in the *Journal of French Literature*, that adorns the pages of THE CRITIC? How much more popular would these be than the stupid novels borrowed from America! Query—Would not a similar collection of the best voyages and travels, foreign as well as home, be a profitable speculation? We recommend it to the consideration of the proprietors. The two fictions here contained are well chosen and wonderfully cheap.

POETRY.

Poems. By ALLEN PARK PATON. London, 1845. Saunders and Otley.

THERE is little in this volume to praise or to condemn. It is one of those works particularly puzzling to a reviewer, since there are no passages in it which have caught the light of genius, and none which are below the average of the poetry of the day. The character of present poetry (we use the word poetry merely as an expression for verse) is obstinately mechanical and even in its course. The poetic mind is struck down to a monotonous level, like a bird that flutters his wings in mid air, as if he made progress, but which keeps the same position. It is a few degrees above the hopelessly bad, and many degrees below the hopefully good. In consequence of this, we believe that poetry will be longer gaining its ascendancy. Critics generally cry out on the low state of the poetic mind. Comparing it with the times when BYRON, WORDSWORTH, COLERIDGE, and their glorious contemporaries wrote, and whose splendours still tinge the world, they do not judge the poetry of the day according to its abstract standard. It is not the low state of poetry that we lament, but rather that it is too nicely poised between the good and the bad. We receive hosts of poems which may be termed *respectable* performances, as far the *art* of poetry is concerned, but the spirit of poetry is wanting in them. They are dead exhibitions of skill, but not living, pulsatory evidences of genius. They are like withered boughs, which hold no communion with that warmth of the sun by which alone they can bud and vegetate. This position of poetry is fatal to its complete restoration, because it is deceptive. Readers, who perform in themselves the office of the critic, detect nothing absolutely despicable in the compositions of the poet, and in the false security of reading nothing unworthy they put criticism aside, and thus mediocrity is perpetuated from author to author. A poem of average merit, such as we have described, is more likely to be exalted than depressed by casual readers. It is the same with poetry as with national distress. That state of a country in which the people's distress does not amount to actual destitution is further from healing than when such destitution is seen in every street. The legislator looks upon the distress of a tradesman who is not virtually a pauper as a reader looks upon a poem whose faults are not conspicuous. Judging, then, from analogy, the poetry of the day is too good to promise for the present anything better. It is an historical fact that the greatest literary geniuses have always emerged from the midst of the lowest literature. We have now poet rising upon poet so much alike in quality, that they all seem to belong to one family. Genius is afraid to shew his face among them lest he should be taken for one of the kin—lest the world should mistake genuine poetry for polished versification. Our remarks shew that the art of verse-making is cultivated too much. It is now perfect—so much the greater evil—and it pushes itself forward under the name of *poetry*. It contents itself with wearing the outward semblance of that which is infinitely above it in soul, as the slave CLEMENS usurped the character of a king.

Our remarks have sprung from what in the commencement of this notice we asserted as a fact, viz. that we can see little in Mr. PATON'S poems to praise or to condemn. We try all authors by an impartial standard, and the circulation of THE CRITIC is secured by that impartiality. Mr. PATON will see that our opinion is, that his poetry is *not* below the average poetry of the day. This to a man who does not pant for universal fame will be a consolation, and perhaps an encouragement. But it must not be understood that all the poems in the volume before us are of the same precise quality. The "Vision of Want" is a poem generously conceived and skilfully executed. The "Monster-Affectation" is another poem as useful as it is humorous, but each of them is too long for our columns. We close this notice with some lines which are a just eulogy of the bard of whom they speak.

ON SEEING TENNYSON'S PORTRAIT.

The man I fancied. 'Tis my thought I see.
Tennyson is what Tennyson should be.
Belonging not unto that doubtful kind
Of bards, whose features seem to mock their mind;
Who differ so much in their living looks,
From what men would suppose them by their books,
That a suspicion through the breast will steal
Of their ne'er having felt what makes us feel:
Doubts whether these same strains are from the heart,
Or but created by some trick of art;
Writ in "a player's passion" duly wrought,
Not the true music of the wind-like thought,
Which, wheresoe'er it listeth, comes or goes,
Dies unexpected—unexpected blows;
Whether their word-streams have a natural source,
Or play into the air through foreign force;
Come from lead pipes, and marble founts, or roll
Fresh from the springs and geysers of the soul.
No doubting here, for I can almost trace
The poet's writings in the poet's face!

Sonnets, and other Poems. By Mrs. JEVONS. London: Simpkin and Marshall.

THESE poems are chiefly devotional. Many of them have appeared in "Poems for Youth," the "Sacred Offering," and in other annuals. There is the softened, hallowed tone of religion in all the writings of Mrs. JEVONS. It should be the design of the poet to teach the understanding, and to cast a light upon the darkest shadows of the heart. Poetry is the sister of religion, and, when it is used to increase love and charity, for the loftiness of the object we can overlook the slight errors of composition. But we cannot allow that the sacredness of poetry should be destroyed by using it as a prop for any creed whatever. And it is because Mrs. JEVONS has preserved inviolate the high character of poetry, her muse never dealing out the gall and wormwood of dogmatism, that we are inclined to speak favourably of her writings.

Mrs. JEVONS is profuse of sonnets. We have before expressed our opinion that the sonnet is a faulty kind of verse; that it is an opposition to the freedom of poetry. The sonnet is the working out of a single thought, and unless it can be proved that every thought requires the same amount of language to unfold itself, we deny that the sonnet is the best medium for any thought whatever. MILTON and WORDSWORTH did not establish the sonnet as a superior mode of poetic expression, they merely proved through it their own superiority. We regret that Mrs. JEVONS has been so haunted by the genii of fourteen lines. She has imposed needless fetters on herself, and although she moves in them with ease and grace, yet there is no doubt that she would move with increased ease and grace in lines not subject to numerical rules. But, to shew our readers that Mrs. JEVONS has to a great degree been successful in the sonnet, we shall take a couple from the volume before us.

SONNET.

See! from his eastern couch the Sun arise
To run his glorious race, and scatter round
His heavenly rays to earth's remotest bound,
Whilst songs of praise and joy salute the skies.
Image of one more beautiful! whose light
Can know no change—whose living glories shine
In human hearts that kindle at his shrine.
The Heathen worships thee—and shall thy bright
Unspotted beams awake my eyes in vain
To this fair world of harmony and love,
Nor yet a holier joy my bosom move,
To raise a voice of praise in nature's fane,
And bless the light that scatters mental gloom,
And sheds a deathless radiance o'er the tomb.

SONNET.

I saw thee, Virtue, weeping o'er thy woe,
Yet lovely in thy tears; unnumbered sighs
Burst from thy heaving bosom, and the glow
Raised by the worldling's scorn, thy pale cheek dyes.
And thou wert long a mourner—haunted still
By the base throng that bow at Mammon's shrine.
Ambition mocked thee from her loftiest hill

With idle threat, and Pleasure's taunt was thine.
I see thee now—how changed, how beautiful!
The Christian's hope is kindled in thine eye,
Immortal hands the fadeless wreath shall cull,
That on thy spotless brow will ever lie;
Whilst Faith points smiling to those realms above,
Where angels wait thee, and a Father's love.

Petra, the City of the Desert; and Nehemiah: Poems. By JAMES TALBOYS WHEELER. Oxford: Shrimpton.

WE have here two short poems, the former of which is on the same subject as the Oxford Newdigate Prize Poem for the present year. The idea of lost pomp and grandeur, which haunts us like a melancholy spirit as we gaze on the ruins of what were once triumphal arches, glorious altars, and magnificent thrones, tempers the mind into that soft and yielding state on which the impression of poetry is soonest received. Poetry is not for all seasons and times, but, like religion, the heart receives it more sensibly and healingly in particular moments of life. Commerce is only in part the offspring of poetry; and now, when memory turns to "the City of the Desert," it is rather to muse on pyramids, and obelisks, and tombs, than to remember the caravans of valuable merchandise which rolled into Petra from distant quarters of the world. Yet all the associations of Petra have their share of poetic fact and fiction.

Mr. WHEELER had written his poem of *Petra* before the appearance of the Oxford Prize Poem, but however suggested, or whenever executed, can be of little consequence, since the work is creditable to any poet.

The City of the Desert, as well as *Nehemiah*, bear the undoubted marks of careful finish. The heroic verse is handled skilfully by Mr. WHEELER; it is seldom frittered away into mere polish, or suffered to remain in unartistic inelegance.

EDUCATION.

The Christmas Annual. Glimpses of the Wonderful. 1846. Harvey and Darton.

HERE is, at last, a good, sensible, rational annual for children—just the book for a Christmas prize or a New Year's gift. It has all the outward attraction of the most gaudy of its butterfly rivals, an elegant binding, good paper, choice typography, and a profusion of engravings; and its substantial merits are vastly superior. Instead of stupid stories, and bad poetry, and essays that no child will care to read, this volume contains amusing, and, at the same time, instructive accounts of the wonders of the world, each illustrated by spirited wood engravings. It will be received with a shout of welcome wherever it appears.

PERIODICALS AND SERIALS.

THE new number of *The Westminster Review* maintains the new reputation at which this periodical has been aiming. Formerly it was the most speculative of the quarterlies; the vehicle for all fresh and startling doctrines; sceptical in religion and extremely radical in politics. Under its new management it has changed all this. Its aims are now eminently practical. It specially deals with the business of life, with the commercial affairs of the country, and passing events. Its principles are liberal still, but subdued and moderated, just such as are held by the most enlightened of all parties. Withal it has lost no jot of its ability or eloquence. The articles are remarkable still for their vigour and learning; and it has thus succeeded in reaching the happy medium that pleases both the philosopher and the man of the world—sufficiently original for the former, and quite practical enough to engage the attention of the latter. Hence its great and growing popularity. The number before us is admirable in this respect. The subjects handled are few, but all are interesting, and they are treated with a care that must command at least a respectful hearing. Foremost is an essay on the great topic of "Railway Investment," evidently written by one thoroughly at home with his subject, and which will be read with eagerness by thousands anxiously seeking a guide amid present perplexities. "Imprisonment for Debt," and the various schemes afloat relative to the Law of Debtor and Creditor, are then reviewed. There is a long notice of the "Life of the Rev. Joseph Blanco White." An article on "The Papal States" describes minutely their constitution and government. "Scandinavia" is the theme of another essay, and then the "German Theology and the Priest Ronge," a topic at this moment foremost in the public mind, is handled with a temperate examination of the present state and prospects of the new Reformation. "The exploring Expedition of the United States" is the remaining review, and agreeably varies the solid character of the essays with which it is associated.

The Dublin University Magazine for December opens with the first part of a tour in Portugal in the spring of the present year, written with great liveliness, and having the recommendation of novelty. In the way of fiction there is a sort of elaborated historical anecdote, entitled "Madame de Sorverne," and a continuation of the novel of "The Whychcots." Of reviews we are presented with one only—an excellent article on the "Didactic Irish Novelists." CARL LUDWIG FERNOW has contributed some comments on "Raphael's Tapestries," marked by a profound knowledge of art. A fifth number of the "Poetical Remains of the late Mrs. JAMES GRAY," contains some very beautiful poetry, that serves only to shew what a genius has been lost to the world. There is also a third article on "Ireland and her Church," and a political essay, entitled "Protestant Union," warmly advocating the revival of the orange lodges.

The Prospective Review, a Quarterly Journal of Theology and Literature for November, contains some papers of extraordinary ability, and a higher class of subjects than is usually found in English periodicals. "The New German Catholic Church" is first considered, both as to its causes and consequences, and very ably is the topic handled. "Reform of the Church of England," as connected with recent events, is then considered. "Rome and its Environs" is a learned essay, and will interest the lovers of classical literature. A valuable contribution to philosophy is the article on "The Elements of Morality, including Polity." There are many shorter reviews of more or less merit.

Simmonds's Colonial Magazine for December is the best of the many colonial magazines. It contains not only all kinds of information relating to the colonies, but some admirably-written tales, and very respectable poetry. "The Emigrant" is a novel of no common ability, now appearing in its pages.

Dolman's Magazine for December.—The new number of this monthly magazine of the Roman Catholics is creditable to the body from whom it proceeds. "The Manor of Summerdale" is an interesting tale; the "Chapter on Music" exhibits taste and good sense; but most interesting of all will be W. T. OAKELEY'S "Letter on Submitting to the Catholic Church," containing the reasons for his quitting the English Church and embracing Catholicism.

Sharpe's London Magazine, Part II. for December.—A sort of *Chambers's Journal*, with the addition of engravings. The selected matter is very much better than the original contributions, and we would advise the editor to exclude the latter altogether.

The Art-Union Monthly Journal of the Fine Arts for December contains many articles interesting to the lovers of art, upon which it presents every kind of information, gathered from all parts of the world. These are illustrated by numerous engravings. "Visits to Private Galleries" is an article that contains much novelty, and the notice of the exhibition at Munich will be read with eagerness.

Mores Catholici, or Ages of Faith, Part XIII. is as curiously learned and powerfully eloquent as were its predecessors.

The Connoisseur for December contains a lithographed portrait of JULIO ROMANO, an original piece of music, and many articles on art and music.

Knight's Political Dictionary, Part X. continues the article "Life Insurance," and proceeds to the word "Marriage." It is a very valuable work.

The Pictorial Penny Balladist, Part III. presents us with many fine old ballads, illustrated with engravings. It is neatly printed, and very cheap.

POLITICS AND POLITICAL ECONOMY.

The History and Power of the Ecclesiastical Courts. By Edward Muscutt. 8vo. pp. 52. London, 1845. Snow.

All agree that the Ecclesiastical Courts are an abuse that ought to be abolished; that the system is disgraceful to our age and country. Every party in the state has, by turns, endeavoured to destroy it, and yet have all been baffled, and the abuse still flourishes. We fear that what Ministers have attempted in vain, even with the aid of parliamentary majorities, will not be accomplished by the pen of Mr. Muscutt, though it proclaims truths that are unquestioned and unquestionable. The fact is, that the interests involved in the maintenance of the abuse are more powerful than the love of abstract justice that governs the reformers. It is not one of the evils that directly affects the masses, and they will not be moved to the exertion needful to rid themselves of it. Whether Mr. Muscutt may succeed in rousing some inert minds to effort by the powerful picture he paints, remains to be seen; but certainly he has ably performed his task, and his pamphlet will interest the reader and reward perusal.

RELIGION.

Plain Sermons, addressed to a Country Congregation. By the late Rev. Edward Blencowe, M.A. Curate of Teversal, Notts, &c. 12mo. pp. 412. London, 1845. Bell.

The most difficult, as it is the most rare accomplishment of authorship, is to write anything plainly. Nor are sermons an exception, as is proved by the paucity of really plain sermons to be found amid the crowds that continually come from the press. We do not remember ever to have heard half a dozen plain sermons, nor to have seen so many.

There is nothing about which the misunderstanding is so universal as the meaning of that word "plain." Plainness does not consist in coarseness or vulgarity of speech, as some think; nor in commonplace thoughts, as others suppose. It is simply the possession of clear ideas in the first place, and then the power to express them in language intelligible to every capacity. The plain writer or speaker has a distinct thought in his own mind, which he desires to convey to the minds of others. This clear thought naturally takes a clear form, and would always be clearly comprehended but for one obstacle which education produces, and which can only be overcome by an effort. The scholar is too apt to forget that he speaks a language unknown to the common people; that half his words are as strange to them as if he were uttering Chinese. If, then, he express his ideas, however clearly they may be conveyed to those as learned as himself, in language unfamiliar to the multitude, it will not find its way into the heart, and his labours will be ever in vain. He must, on the contrary, forget his scholarship, cast aside the dialect of the schools, imagine himself again a child, and address his hearers in words which are familiar to them as the current language of their country; and if he have occasion to use a "dictionary word," as they would term it, invariably to accompany its use with an explanation of its meaning.

In this Mr. Blencowe appears to have succeeded beyond any preacher we have met with for many a day. It is rarely, indeed, that we find in his pages words that would perplex the most uneducated. And yet he never lapses into vulgarity, nor reduces simplicity to childishness. The subjects of his discourses are well chosen for such a congregation as was his. He deals with them in a like manner, shunning over-refined divisions and strained types and analogies, in every thing following the natural order of thought and the suggestions that the text might be fairly expected to summon into the mind of the pious and reflective. Hence do these discourses really deserve their title of *Plain Sermons*, and that is the very highest praise that could be awarded to any.

MISCELLANEOUS.

Fisher's Drawing-Room Scrap-Book for 1846. By the Hon. Mrs. Norton. 4to. London: Fisher and Co.

The numerous and beautiful engravings of this superb volume have been already noticed in their proper place. To its literature the same remark applies as to the other annuals. It is altogether subordinate to the main design, and therefore must not be judged with the same strictness. If an author be tied down to a particular subject, called upon to write something upon an engraving, it will be impossible for him, whatever his genius, to be brilliant and original; nay, the more his genius the greater his difficulty; the true genius will not be chained to a task; it must choose its own field for exercise, or it will fold its wings and descend sullenly to the earth. Mrs. Norton has proved this here. She has done her best to write some verses to accompany each engraving; but that best is not her best, and the greater portion of them are just such as might have been anticipated from the circumstances under which they were produced. A few of the poems are pretty, and some are provokingly commonplace; but still, as we have said before, it would be unfair to judge her by what she has here done. The destination of this volume is the drawing-room; this she knew, and she knew also that for such a place her loftiest efforts would be wasted. The pages of this beautiful book are for the enjoyment of the eye, and to delight the taste for art rather than to claim literary admiration. Nevertheless, she has done all respectably; there is no bad poetry, if there be no fine flights of the muse; and the *Drawing-Room Scrap-Book* is not, therefore, the less deserving of its reputation as by far the most gorgeous of the annuals, and the most attractive for the purposes for which these works are produced.

Forget-me-not: a Christmas, New Year, and Birthday Present for 1846. Edited by Frederick Shoberl. London. Ackermann and Co.

Not having seen or heard aught of this eldest born of the annuals for three or four years past, we feared that it had shared the fate of its many younger sisters. But though out of sight it was not out of mind. It was linked in our memory with a thousand pleasant associations. It used to come to us in our young days freighted not alone with poetry that entranced and tales that enthralled, but bearing on its handsome envelope of green and gold, intimations that Christmas was nigh at hand, and home and holiday were thenceforth inestimably associated with the charming visiter. Glad are we to hail once more the old familiar name; it was with a joy almost as that of yore that we greeted its smiling face again, even although it bore traces of the innovating spirit of the age, and changes which some will call improvements have been effected in its form. The binding of glossy green paper, for whose better preservation a case was supplied, has been superseded by a substantial binding of cloth of a rich hue, most elegantly adorned with golden ornaments. The engravings are larger and more numerous than formerly, but of these we have spoken elsewhere. The paper and print are equally choice, and in all mechanical aids the *Forget-me-not* of 1846 outshines that of 1826.

But we cannot give the same laud to the literature. No improvement is visible there. It has shared in this the fate of the other survivors. But withal is the *Forget-me-not* in this respect very superior to any other of the annuals. It has more of variety and more of real ability in its pages. Indeed it is edited with more taste and discrimination. For whereas, the rest seem to choose their contribution for the sake of the writer's name, utterly regardless of intrinsic worth, Mr. Shoberl gathers for the *Forget-me-not* with an eye to the literary character of his volume, and he will admit no trash merely because it is the production of a lord or an honourable. Hence is this volume agreeable reading, and something better than a drawing-room table ornament. Among the contributors are such genuine authors as Mrs. Sigourney, the late T. Hood, the late Miss Jewsbury, the late Mrs. James Gray, Calder Campbell, Eliza Cook, Charles Swain, Miss Gould, Miss Pardoe, &c. The tales are real tales, containing a definite plot, and all the poetry is respectable, much of it above the average.

We have not read for many a day so interesting a narrative as "The Bivouac," by Miss Pardoe, and very beautiful is the fiction entitled "Sarah Burnett," from the lamented Mrs. James Gray. For specimens we are more perplexed by the number that offer themselves, than by any difficulty to find that which will do no discredit to the book whence it is taken. We select two little poems which will please every body, and following the example of the Editor, we shall take them on account of

the intrinsic worth of the composition, without reference to the writer's name.

And first, some anonymous stanzas on

SPRING.

Is spring a time to mourn?
When by deep glens, and by the silver streams,
The flowers once more return;
The crocus with a starry splendour gleams,
And the pale snowdrop's fragile bells of white
Reflect a tenderer light.

'Neath leafy beech or pine,
Listening, I hear the voice of birds again;
Wandering, where fragrant shine
Fresh budding trees in April's passing rain;
And Nature everywhere lifts up her voice,
Bidding us all rejoice.

How lovely life appears,
How much of Paradise seems left on earth!
Yet thoughts which waken tears,
Shadowing all glad emotions in their birth,
Can fill my spirit with discordant sadness,
E'en midst earth's vernal gladness.

Another year has fled,
Alike to all with joy and sorrow fraught:
How many mourn the dead;
How many—sterner, sadder lessons taught—
Gaze on the future that before them lies,
With cold and careless eyes!

Yes, storms and clouds depart,
And golden skies and verdure come again;
But to the saddened heart
Long will the winter of the world remain—
The glory lost its opening prospects wore,
Which time can ne'er restore.

Yet deeper truths I feel,
While month succeeding month is rolling by;
Closer around us steal
The shadows of the grave, where all must lie!
And oh! while yet the day to us is given,
Let each prepare for heaven!

The other, a fine and solemn melody, by one who has since followed to the tomb the friend she thus mourns in strains of truest poetry.

THE ANNIVERSARY OF DEATH.

BY THE LATE MRS. JAMES GRAY.

We keep an anniversary to-day—
But not as those who mark with festal mirth
The victories of ages passed away,
Or sweet home-time of marriage or of birth—
We wear the mourner's robes, we hush our breath:
Ours is an anniversary of death!

Oh, how this day recalls the bitter past!
This summer day, our loved one's last of life;
And this deep midnight hour, his very last
Wherein she slumbered from the final strife;
Even *now* the death-damp crept o'er every limb,
Even *now* her gentle eye grew glazed and dim.

Methinks I see her yet—that fairest creature—
Panting her very life in fever forth;
I see her yet, with every lovely feature,
Bearing the propheey of "earth to earth:"
Yet with her soft, deep-loving eyes, whose meekness
Looked gratefully around through all her weakness.

I see her yet, as on her death-bed laid,
Her face all still, yet mutely eloquent—
A solemn twilight, that was scarce a shade,
Showed on her brow the fulness of content—
The small, white, drooping hand, the braided hair,
The stirless lip, the cheek so calmly fair.

One year ago, this night, my hands for her
Performed the last sad offices of love;
Still, 'midst my task, I dreamed her pulse must stir,
My straining eyes *saw* those dark tresses move!
But the white morning broke upon thy brow,
Beloved and lovely one, and what wast thou?

A rigid corpse—a marble image, changed
From slumber's likeness to a sculptured form,—
A something sadly from our dreams estranged,
That looked as though with life 'twas never warm,
That seemed our hearts instinctively to draw,
Yet thrilled them with a deep, mysterious awe.

Sweet one, thou liest in thy lowly tomb.
We ask not of thy mortal relics now—
They perished, like the wild flower's summer-bloom;
Yet are they garnered, as the seed we sow,
From whose corruption God's great power shall bring
An incorruptible and holy thing!

Said I that we should *mourn?* The thought I call
Back to my heart—we keep no *mournful* day—
Let there be high and solemn festival,
As for the saints of old, who passed away;
The Church of God marks each returning year
With joyful reverence and hopeful cheer.

We celebrate a victory,—o'er the earth,
Its tribulation, its decay, its sighs—
We celebrate a glorious day of birth,
An entrance on a life that never dies—
We keep a marriage-feast—her darksome tomb
Is but a passage to the Bridegroom's home!

JOURNAL OF FRENCH LITERATURE.

LITERARY GOSSIP IN PARIS.

(*From our Correspondent.*)

We are, as yet, by no means rich in literary news. A few *mots* are going the round of the *salons artistes* of different degrees of merit, but we have no practical novelty. Poor M. D——, a co-editor of the *Revue Indépendante*, hung himself lately to the head-bar of his bed, and was not discovered until life was perfectly extinct. We trust that suicide is not about to become a literary epidemic here. Considerable sensation has been created among the painters, both professional and *cognoscenti*, by a communication made at the last sitting of the *Académie des Beaux Arts*, that a letter had been received by M. R. Rochette, the secretary, from M. Jesi, the celebrated engraver, containing the information that a fresco of immense dimensions, and in admirable preservation, had been recently discovered in the refectory of a convent at Florence, which was suppressed at the close of the last century. It had always been supposed to be a work of Perrugino, and represents the Last Supper; but, on cleaning it a short time since, the name of Raphael, with the date 1514, were discovered on the drapery of one of the figures. The great painter must consequently have been in his 21st year when he produced the work, and as this is the period of his life about which Vasari, as well as other writers on art, appear to be the worst informed, the resuscitation of this fresco is the more valuable, from its filling a portion of the blank.

I have, by the way, another extraordinary suicide to announce to you. The young, rich, powerfully-built Duc de Saulx Tavannes, Peer of France, who appeared to possess within himself every requisite for a long and prosperous life, was discovered suspended by the neck by a friend who went to visit him. Every means was resorted to in order to restore vitality to the body, but all was vain. Rumour is busied in assigning causes for this desperate act, and it would appear that one of a very melancholy nature has been too readily found.

But I promised you the last new *mot*. Here it is:—

M. de F—— was complaining that an unscrupulous journalist had adopted one of his own most witty remarks. "You have reason to feel aggrieved," replied Madame de V——, to whom he had addressed himself; "in my opinion theft is never so reprehensible as when it is exercised upon the poor."

The "Musqueteers, or Twenty Years Afterwards," of M. Dumas, has just been dramatised by M. Auguste Maquet, and represented at the *Ambigu Comique* with complete success; a triumph the more astonishing when I tell you that the performance, which commenced at half-past six, did not finish until past one o'clock in the morning! So admirably, however, had the romancer and the dramatist worked together, that no symptom of weariness was visible in the audience.

M. Jules Talma, the son of the great tragedian, who was a cornet of Spahis, has just obtained his lieutenancy, and the decoration of the Legion of Honour, for his gallantry during the late engagements in Algiers, and particularly for having recently, in company with five other comrades, cut off an Arab convoy, and, under the sharp fire of the enemy, captured 400 camels. This gallant feat, of which General Cavasgnac was an eye-witness, has been entered in the Book of Orders.

In the middle of October, the publication of a newspaper was commenced at St. Helena. The schoolmaster is indeed abroad!

The king has caused an electrical telegraph to be established between the palaces of St. Cloud and Versailles, by which means he can, from his cabinet, issue his directions to the artists and operatives employed in restoring and embellishing the magnificent residence of Louis XIV.

The president of the Monetary Commission has just ordered a s ries of the finest coins in the collection of the mint, and of the French medals, to be struck, as a present to — POWELL, Esq. assistant-solicitor and inspector of the English mint, in acknowledgment of the zeal and promptitude with which he discovered and seized the machinery for coining French money, which was in the use and possession of certain individuals in London.

The island of St. Margaret, near Cannes, has now become a complete Arabian colony. For several years all the prisoners of war have been landed there, while the delinquents have been consigned to Brescom, between Cette and Adge. In the island the number of Arabs now amounts to about 500. Among them are several of the chiefs of the rebellious tribes, of whom the most conspicuous is the aunt of ABD-EL-KADER, who was made prisoner at the taking of Smala.

The authorities allow them the greatest liberty on the island; they inhabit the fortress of the "Iron Mask." They have been permitted to erect tents according to their own fashion; they have erected some small mosques; and the animals which are intended for their consumption are delivered to them alive, in indulgence of the law which forbids them to partake of dead flesh. They have solemnly elected a chief; their marriages are celebrated before a marabout, chosen by themselves; their feuds are settled by recognised cadis, and all the formalities of Arab life are strictly observed.

You will meet with few more interesting spectacles in the south than this Arabian colony.

JOURNAL OF GERMAN LITERATURE.

THE WORKS OF DICKENS.

(*Continued from page* 564.)

WE will not here investigate how far the real conception of humour may be involved. It might be fixed at something lower than real art, using this term with the same feeling that we do in painting; or we may mean by it only the lively and vivacious manner of its representation, or the comicalities of many of its incidents. Lastly, the mere material richness of his descriptions and sketches may procure for the author the reputation of a humorist—a style which is particularly to be met with among the English writers, who, indisputably of realist tendencies, are very much disposed to neglect the ideal, as that which of itself is clear to comprehension. Passing over all this, we will set before us the recognition of humour, such as we deduce it from JEAN PAUL'S *Vorschub*.

With such an idea, then, it cannot be denied that DICKENS evidences great powers of this kind. He has a genuine and more than usually vivid sympathy with all human doings, as such, in all the details and confusion of daily life. A tendency like this points directly and decidedly towards the humorous; for if we stand in the midst of business, and even take part in it, it cannot but appear an earnest matter to us; and so it really is; each one does what he can to the utmost of his abilities, and finds in this his only comfort when his plans fail before him. But, as the failure of life by far outweighs its success, and where success is apparent it is found to be perfectly independent of all merit, so must the course of the world, regarded *in toto*, appear throughout almost ridiculous. Every one will turn away from its contemplation who is not armed with a good store of heartfelt love and cheerful freshness of mind, which, when met with in unusual measure, are frequently manifested in a riotous enjoyment of folly itself, such as we find so delightfully represented in a JEAN PAUL or a STERNE. With the advantages of more decided cultivation, the latter divides itself into two elements—a love of the fantastic, or even absurdly wonderful, such as in Germany was carried by T. HOFFMAN to its extreme point; and a gloomy fantastic trifling with idiotcy, of which, perhaps, the best illustration may be found in the *Titan*. Both are to be met with in DICKENS. The raven in "Barnaby Rudge" is particularly in connection with its idiot master, whose weakness he, by his cunning, brings into stronger relief, while at the same time he raises him, by the feeling that he, the deeper mind, is subordinate to the weaker, is a happy example of the first. Of the second an illustration is to be seen in the history of the man who runs mad from the idea that he has inherited madness; a fruitful theme, to which only a more important sequel should have been added.

Many have regarded the perpetual repetition of one trait, which generally with DICKENS replaces the regular painting of character, as an evidence of humorous talent. It is, however, nothing but the genial, though at the same time wearisome, characteristic with which we see many persons in general society contrive to make themselves more tedious than agreeable. Under the term "the one peculiar quality," which the old well-known definition ascribed to all humorous objects, something else is comprehended; namely, the particular and remarkable colouring given to the entire external life of an individual, which, while this is suffered to proceed in proper proportion, cannot be portrayed by one trait alone; and also the capability of seizing upon the *complete* individual. The same may be said with regard to the want of historical relation. It is true that, strictly speaking, no humorist can invent or contrive a plot. A humorist has no conception of what is necessary to a plot. As an example let us think of the *naïveté*, as SOLGER calls it, of JEAN PAUL in seriously persisting that the plan of *Titan* was remarkably well designed. The humorist is too whimsical to bind himself to any thing like consistency; for him consistency does not exist. But this is not a *want*, neither is he who cannot comprehend consistency a humorist on that account alone. The law of the exercise of his art *requires* that there shall be no regular historical order—the common order of things is by him *persiflé*. And in this STERNE is greatest. We have, too, in JEAN PAUL, innumerable instances of this consistent inconsistency. DICKENS pursued a somewhat similar course in the introduction of the correspondence in *Master Humphrey's Clock*. But he soon loses breath in these airy flights, and may thank his genius as soon as he again touches the *terra firma* of a common romance. *Martin Chuzzlewit*, his last work, has proceeded on rational grounds, but of this we shall speak more particularly.

DICKENS is especially wanting in a free play of his materials. Now this is precisely the point of art which, when made good use of, bespeaks the humour of an author. It is difficult also to believe that he possesses only so much as he shews; for the deeply prosaic background of his sketches is in itself quite remarkable and worthy of consideration. The conventional anxiety which pervades all Englishmen, in opposition to their decided liberalism of life and literature, never leaves him for a moment. The preface to the *Pickwick Papers* assures the public, that nothing shall appear in the forthcoming work which shall hurt the delicacy of the "most sensitive persons." In the story of the young man who goes mad because he believes madness to be hereditary in his family, it is repeatedly enforced that this is an erroneous idea, an exceptional case—is this in the fear of the book falling into the hands of any one whose grandfather has chanced to die mad? Yes, even when he draws a ridiculous clergyman, he does not fail to introduce a clause, to the effect that he does not mean to condemn the whole class! This of itself is sufficient to deprive him of the title of a genuine humorist. The true humorist needs not to excuse himself, for he is conscious beforehand of his own good will. DICKENS is only a satirist. He himself acknowledges the practical aim of many of his representations. At the close of *Nicholas Nickleby* there is a note to the purport that the frightful treatment of the children in the so-called "Preparatory Establishment" is only too near the truth; he regarded it as his duty, when proceedings of this nature came to his knowledge, to hold them up to universal horror.

There is a point, too, which we must endeavour to investigate, namely to what class or country our author spiritually belongs. Political life, he has, by a thousand slight touches, proved to be an object of his ridicule, the election of a parish beadle, in the *Sketches*, is one of the most laughable scenes in the whole collection. But it is not the less a fundamental point in his view of life. Among the English, where by means of the press every one daily and hourly can address the public, satire is not what we are accustomed to regard it, from association with the authors of the Roman empire,—namely, something subjective; it is irresistibly felt to be serving no party spirit, but to be borne by the whole nation, and exercised for it at large. The Englishman is accustomed to, and authorized in, exercising such a survey; with him it is not denunciation. Similar to DICKENS'S exposition of the education system in Yorkshire, was the appeal of SMOLLET on the sacrifice of the English at Cartagena Nuova, in 1741, which he also made in a novel; and we know that GOETHE regarded the expressions of BYRON'S misanthropy in the light of so many restrained parliamentary speeches.

Viewed from the æsthetic side, we hardly think the sentence we have passed can be altered. With an evident regard to practical effect, the sharpest outlines, the harshest colours, are unscrupulously made use of; the elements of character are enlarged to caricature, which, by-the-by, is cultivated among the English with extreme predilection, especially in the department of painting and drawing. We may refer to the illustrations which accompany DICKENS's writing as being so many specimens of this gross branch of art. In fact, DICKENS is only humorous when he has to do with superficialities—with follies that are easily overcome; for instance, the "History of the four Misses Willis," or "The Childbed-linen Monthly-loan Society." In general, he finds himself carried away by whims and caprices, which the depth of his mind is not sufficient to carry out; and thus it is that in most cases he does not, like STERNE, picture an innocent folly as something highly ridiculous, but he fixes upon some unfortunate idiosyncrasy, which in itself is rather tragic than comic, and makes it the subject of his satirising pencil. We are as capable of enjoying a hearty laugh as the rest of the world, and without any, even the slightest, philanthropic *arrière pensée* disturbing our pleasure. We can laugh, too, over many of DICKENS's characters; but, again, at others we can laugh as little as at a drunken man rolling about the streets; and then, again, we might perhaps laugh at this, were it represented by a Dutch painter. Here lies the enigma: the Dutchman would shew us the man in his comic side; but DICKENS gives us the object in its full and bold reality, so that, if we add the laugh, it would be as when the tables turn against ourselves. DICKENS may have laughed, but then he had it all to himself, and has given us the epigram without the point. A fool, who is absolutely nothing more, is strictly speaking a madman. The individual who for a space of twenty years sits by the hearth of old Willet and repeats one and the selfsame story—Willet himself, too, who for the space of five years still stares at the empty caldron—and many other similar forms in the other tales, follow us like spectres, which we know all the time to be only so many lies to reality, but to which we cannot for our lives say—*avaunt!*

We find nothing more perfectly represented in our author than the midnight darkness of a soul which sees itself hopelessly standing on the abyss of moral and conventional destruction; we know it must have been so with them, when they gradually awoke to consciousness. Think of the suicide of Ralph, in *Nicholas Nickleby*, or the same in the *Sketches*, or the flight and death of the murderer in *Oliver Twist*. Before all, the scene where one's hair stands on end, where old Rudge, when, after twenty-three years, he again hears the bell which had never sounded since the man whom he killed seized and rung it, is certainly the greatest which has been or can be written on such a subject. The waves of existence close over the criminal; once perhaps he rises—the lights upon the shore gleam sadly upon him, and he sinks; the circles formed by the plunge in the stream soon disappear, and the cold night-wind steals over its surface. The word is *destruction*, utter destruction: no beam of hope penetrates our hearts.

It is not as if we desired a religious comfort. In Nelly Trent this only gives us a stronger feeling of reality, and is consequently unæsthetic. But we desire quite as little that the villain should make a sudden reformation; a poet's creation should depart in due order. Neither does it shock us to see evil in its nakedness; the simple innocence of a young maiden is like the descriptions of the same in DICKENS's works, not less interesting and insipid. But in his compositions this is a discord which must resolve itself. If no proper reconciliation can be made with evil,—and this can only be accomplished through the individual himself, not represented by another,—so also an æsthetic reconciliation should be effected with the frightful. This failing proves that DICKENS is not an exception to the great mass of modern authors, who alternate the hideous with the beautiful, and fancy they are thus producing an artistic work. We cannot say of DICKENS that he unites therewith the design of rousing the sleeping senses of the age; we cannot say this, because he never makes use of the indecorous; and if he did, he would lose that share of humour which is not to be denied him. This æsthetic wandering manifests itself in the ground plan of many of his works, which are often based on the persecution of some innocent child. It is certain that in the tumult of a city like London, individualities become frightfully sharpened; but in the representation of wickedness pursuing innocence into every corner of the three kingdoms, there is something really painful.

And with this does our critique of DICKENS's works come to an end? After having taken from him all claims to æsthetic merit, do we close with accusing him of sins against the holy spirit of beauty? We should gain little in the way of thanks. The reading world would not cease to be delighted with him, and those who could not answer our imputations would at least be of opinion that the question was by no means settled there.

Nor is it. There remain many merits which have hitherto been unmentioned by us. And as the more important faults are more easily to be discovered, so we must conclude, from the applause which he has hitherto met with, that they will, during his entire career as an author, occupy a distinguished place. To none more than to the writer does the remark apply, that while we form our virtues, we appear at the same time to be cultivating our faults. What, then, is the virtue to which all these errors owe their origin?

To the poet the whole spiritual world lies open, when his tone of mind does not abstract him from its impressions. The varieties of poetic individuality are known to be innumerable. The one, like GOETHE, will, through a series of utterly distinct works, make himself, and his inner life, the foundation of the whole; a SHAKSPEARE investigates the phases of the relationship of man to man; of DANTE it might be said, that all things were seized by him, only as they would be seen when viewed in one peculiar aspect. Thus it is necessary, when we would characterize a poet, or artist, to discover, before all things, in what he is peculiarly at home. We shall say, then, that the individuality of DICKENS lies in this, that in him surrounding circumstances are represented individually and figuratively.

We have before alluded to the *Sketches* as a collection of paintings, in which, without reference to any thing else, he followed only the bent of his talent. But their excellence does not alone consist in this, that he has not compressed their fragmentary form into any external junction; they are in other respects the original phenomena of his mind; they make no concealment of the fact, that London and its condition are alone the parent ground where such moral formations can find nourishment.

We observed, jestingly, that after the single gentleman had shewn himself to be the brother of the curiosity dealer, and Master Humphrey declared himself to be the single gentleman, that DICKENS must next legitimatize himself as Master Humphrey. The love of surrounding objects,—the clock gave the name to the tale,—the fine sense for their peculiarities, the capability of drawing thoughts and feelings from them; lastly, and chiefly, the wandering about the streets of London, not merely to see, but to observe—all this we must in the highest degree ascribe to DICKENS himself. It does not affect this idea that with Humphrey there are things which cannot be applicable to DICKENS. Humphrey is deformed and sickly; so he turns himself to the inanimate things around, because mankind always stands far from him. In great cities every thing is driven to the extreme point; this is the excuse we are bound to offer for DICKENS's exaggeration. When his characters fail, it is because they are carried out to an excess, and degenerate into caricature. It is the same with the town trifles, which he paints so fearfully true to nature; they are only to be found in their overgrowth in large cities, for they do not consist in the devotion to particular interests. We see this in all mankind—but in the overweening importance ascribed to them. For this reason DICKENS delights in drawing a political meeting in the suburbs of London. But in the inner life of the great city he is not less at home.

"'Tis strange," says he, "with how little notice, good, bad, or indifferent, a man may live and die in London. He awakens no sympathy in the breast of any single person; his existence is a matter of interest to no one save himself, and he cannot be said to be forgotten when he dies, for no one remembered him while he was alive."

In all this and the numberless details of crime, folly, and destitution leading therefrom, DICKENS has the deepest insight; but he is himself influenced by this great-town life; it has not left him time to look within himself; and for this reason we meet with no satisfactory psychology, no regular de-

velopment of place. He knows mankind only externally, from appearance. This is *his* solitude amidst multitudes. His studies, like those of Humphrey, have consisted only of going through the streets.

More, perhaps, than any other writer, DICKENS represents the visible in his works. Not only does he begin every scene with a close description of the locality, so that we are indisputably *there;* he seems also to have a very spirit of communion with the old ruinous houses, in which so many of his tales enact their scenes. As in Master Humphrey, he listens to the mysteries told to him in a broker's room, and holds a dialogue with the objects near him in the harbour. How idyllic is the history of the shop which gradually sinks into the hands of poorer and poorer people; how elegiac the story of the proud family seat of ancient days, now descended to common uses! There never was a writer who evidenced so fine a perception of the physiognomy of daily life. The hammer-strokes of Master Varden, in the forty-first chapter of *Barnaby Rudge*, bring before us, with a magician's wand, a whole street full of sun-light and active business.

In fact, the physiognomy of externals is with DICKENS so vivid, that one almost wonders not to see them start into animation. The secret of his most successful characters is this, that they are the very souls of their physical situation, gathering together in deserted houses, and being deserted with them, like the Hamadryad dying with their dwelling-place; or, when he paints certain classes, as in Sam Weller the omnibus driver, it is not that he brings before us an abstract idea, but rather what the ancients called the genius of a definite existence,—the living essence and individual vivification of the omnibus drivers.

Thus is explained the want of development in his characters; at the same time, their want of unity. *Situation* gives them their existence,—this cannot then be changed without becoming another. A *genius loci* remains ever the same, for the external relations which it represents are and must be immutable.

Of all that comes under DICKENS'S eye, humanity clearly has the deepest interest for him; the *form* of humanity, for in great cities, where we daily behold great masses of individuals, of whose minor existence we know nothing, we become accustomed only to consider them generally, forgetting that each contains within him an inestimable self. But this evil is indirectly replaced. Those who pursue certain occupations must, at certain hours of the day, habitually meet the same persons. In small places they are known, or soon identified; but in larger districts one is reduced to guessing what they are from their appearance or manner; we consider who or what they may be, and deduce as much of their history as we can. Thus we see DICKENS introduce all his persons with a lengthened detail as to their externals.

After all this, is DICKENS a humorist? Not rightly, for humour finds its subject in man himself, but with him it is something incidental. In the style of his productions he is connected with the humorist, for all descriptions of life in details are mixed with a certain self-irony, and for this reason we style the Dutch painters humorists.

So much for the sound foundation and domestic tone upon which DICKENS'S works rest. These remarks gain corroboration from the works which were written away from his native land. The *American Notes* are throughout sound, natural subject-matter, and for the reason that beyond the ocean he learnt to know things which he had not been in the habit of observing from his youth up. We may from the period of this journey date a new period to his authorship. It is not our design to penetrate with old saws and world-wise remarks into the personal development of a man so talented as DICKENS; our only concern is with the æsthetic character of his works. If we grant that their characteristics rest upon the vivid seizure of externals, we may perhaps refer their failings to the fact that the author remains too near his subject. He does not convert them into humour from his want of sufficient freedom; he is not purely artistic, because he does not labour sufficiently to combine his materials with freedom of action. A temporary absence from the scene of his descriptions, the contemplation of nationalities which stand in direct opposition to the systems he observes at home, must be of incalculable benefit to him, in enabling him to attain a step yet higher. At all events, *The Life and Adventures of Martin Chuzzlewit* evidence to us a better and a nobler spirit. The elements of painting and description begin here to be penetrated with something deeper. The devotion to self in the various persons, and the national characteristics of the Americans, seem to form the groundwork of the book. The individuals have flesh and blood—even the young maiden, Mary Graham—a point in which DICKENS did not before distinguish himself from the other romance writers of England. Tom Pinch, the oppressed, is not so helpless as such characters usually are; he has friends, all who know him, love him. Lastly, Mark Tapley is no mere block, on whom the author hangs all sorts of notions, but he is a genuine humorist. All this justifies us in the hope that if DICKENS has hitherto pleased himself in publishing his single studies, he will, from this time, devote himself, if not to such voluminous contributions to the public pleasure, to such as answer more closely to the higher demands of art.

WILHELM DANZEL.

JOURNAL OF ITALIAN LITERATURE.

Arnaldo da Brescia: Tragedia di GIO-BATISTA NICCOLINI. Firenze, 1843.

Arnold of Brescia: a Tragedy. By JOHN BAPTIST NICCOLINI. Florence, 1843.

IT is a rare thing, even in these days of universal printing and almost universal authorship, for a book to appear which creates a powerful sensation, much more one which agitates a whole country. The six thousand new books which the fair at Leipsic annually exhibits to the world, might all be withdrawn from circulation the year following without much loss, and almost without inquiry. A book therefore, which, to use the powerful language of CHARLES LAMB, *is* a book, ought to be approached with respect and handled with reverence.

Such a book is that which we are about to introduce to the notice of our readers—it has fallen upon Italy like a spark among tinder, and its effects will be long, very long, felt.

In order, therefore, rightly to appreciate the poem and its author, we must first advert to the civil and political condition of modern Italy, and remember that the central part of that peninsula is under a government perhaps the very worst the world can exhibit. Rome, even in her best days the very model of stern and uncompromising oppression, has now lost her external strength: she is no longer regarded with terror by those without, and while she fetters the minds as well as the bodies of all within her reach, she becomes only the more despotic as her despotism is reduced within a smaller circle. Relying on foreign support, and looking perpetually to Austria for assistance, she attempts to stifle all expression of public opinion; and the silent atmosphere of her moral and intellectual world is but too fitly represented by the deadly and melancholy air of her desolate *Campagna*.

Yet it is scarcely possible to take up a modern Italian book without perceiving a vivid spirit of patriotism and love of liberty. We have noticed this, and shall have to notice it again, in considering the novels which every year make their appearance at Florence and Milan, and the only reason that Italy is not free, is that *Italians are not united*.

The tragedy of *Arnaldo da Brescia* is an exhibition of this spirit in a concentrated form; and yet, while so intense it is perfectly calm and philosophical. No sooner had it appeared than it excited the terror of Rome, and within three days after the first copies were given to the world an order was obtained for its prohibition. But the Tuscan government, more enlightened than their southern neighbours, connived at its sale, and upwards of six thousand copies have been disposed of—a circulation, for an Italian work, utterly unprecedented. It is not saying too much to assert that there is scarcely a thoughtful mind in Italy that has not perused it. What then is the work about which so much interest has been excited, and so much pains taken for its suppression? and who is NICCOLINI, the author?

NICCOLINI is a man who has passed his sixtieth year, the heat and enthusiasm of youth has been long over, he has been a hard student, a man of high moral character, of rational, but genuine, religion, not given to dabbling in small politics, and somewhat of a recluse. Hence his opinions have been for a quarter of a century much looked up to, and his character highly es-

teemed. And who was Arnold of Brescia, the hero of this drama? He was a martyr—a man who perished for exposing the corruptions of the Roman Church, and attempting to give liberty to the Roman people. He opposed the pope, because he oppressed the Church, and corrupted the creed, and deteriorated the morals and enslaved the minds of the west. He opposed the emperor, because Italy was not intended to be a province of the German empire, and thus he brought on himself at once the hatred of one of the most powerful emperors, Frederic Barbarossa, and one of the most able popes, Adrian IV. He had been a pupil of Abelard, and so learned was he that when Abelard was accused of heresy, and called on to defend himself before the council of Sens, Arnold was the only person whom he sought to assist him. St. Bernard gives his testimony to the zeal and erudition of the scholar by assigning to him a place above his master, and calling on all Christian kings and princes to seize and punish him. This call two, viz. Adrian and Frederic, willingly heard, and, after many vain attempts, the pope seized him, had him privately strangled, his body burned, and his ashes thrown into the Tiber, lest they should be gathered by the people, and treasured as holy relics. That Arnold of Brescia was a thorough Church reformer, in an age when the Church was thoroughly corrupt, and that he was an ardent advocate of liberty when freedom was scarcely understood, is clear from the statements of all who mention him, nor is it less evident that he was a man of immense attainments and great virtues. His popularity may be judged of from the precautions which the pope thought necessary to take with regard to his remains, and his moral character, from the absence of any charges against him, save those of heresy. Such was the man who died in his endeavours to restore purity to the Church, and liberty to the states of Italy. Such is the hero of NICCOLINI'S poem; and it is in an age when the pope and the Austrian emperor divide Northern and Central Italy between them, that there appears, in the Austrian capital of Tuscany, the tragedy of *Arnaldo da Brescia*.

Regarded as a poem, it is undoubtedly a fine one, and though its length precludes it from representation as well as its subject, and though it is wanting in that dramatic tact which characterizes ALFIERI, as well as in the fervid and fiery genius of the great Italian dramatist. Still it is poetry of a high order, and the work is at once attractive and likely to endure.

The tragedy opens by a scene near the Capitol, for the whole action takes up but three days, and passes at Rome, and the characters introduced are few. The personages first introduced are Giordano, the Patrician, and Leoni Frangipani, an adherent of the pope. These address the populace in turn, one upholding the papal claims, and the other urging the people to resist, on the ground that, till Innocent III. had robbed them of their rights, the people of Rome had the privilege of joining with the conclave of cardinals in the election of the sovereign pontiff. Most striking are the following lines:—

> Awake—arise, our very blood is bought;
> Within yon temple, gathered in its walls
> Are the dark band of cardinals—they meet
> To clothe with the great mantle one wolf more,
> Whom they call shepherd.

There is much force, too, when speaking of Gregory VII. He calls that pope, a "surpliced Cæsar." After much recrimination between Giordano and Frangipani, the latter retires from the contest, and Giordano taking the people to the brow of the hill shews them Arnaldo, whom they suspected to have forsaken them, received with thundering applause. Arnaldo addresses them in a burst of vivid eloquence, and reminding them of their ancient glories, urges them to resist the sovereignty of the pope; they wish to confer on him the title of "*Tribune of the People*," but he replies that for himself he seeks nothing.

> Nor think that thus I seek to raise myself
> As consul or as tribune. Gold and purple
> May cover him who succeeds Constantine,
> Rather than Peter.

He urges unity among all Italians, and finally calls forward two thousand Swiss troops whom he has brought from Zurich, a circumstance which Niccolini endeavours in a note to show to be within the limits of possibility at least; and with the chorus of citizens and soldiers the first act closes. And here we enter at once our protest against the employment of choruses after the ancient Greek manner in modern tragedies. NICCOLINI has marred, by their introduction, some of the finest parts of his fine drama.

The second act brings us into contact with the pope, who, in a conversation with Guido, one of the cardinals, exposes the dangerous condition in which Rome then stood; he touches on the more than doubtful friendship of Frederico Barbarossa, and hints at a reconciliation with Arnold. It is impossible to say whether Adrian really ever contemplated such a step, but it is by no means unlikely; and if such were the case, what a change would have been wrought in the destinies of Europe! A reform of the Roman Church would have strengthened at that time the power of the pope beyond all computation—would have enlightened centuries, and been the cause of more benefit to Southern Europe than any student of probabilities can calculate. But if this power of influencing the world for ages was given to Adrian by the occurrence of such an idea, certain it is that it was not embraced. Guido attempts to dissuade the pope from the design, and even hints that it was beyond the papal power to reconcile a man excommunicated by a council. The reply of the indignant pontiff is very characteristic: that his one day old infallibility should be questioned even by a cardinal appears monstrous.

> What sayest thou?—
> I CAN DO ALL THINGS! dare the too bold limbs
> Rebel against their head? In these my hands
> Are not the keys which Christ to Peter gave?
> And Heaven repeats the sentence of her God
> That *my* word here shall bind, and here shall loose!
> Arnold himself has never doubted this;
> He but disputes my earthly power; but thou
> Art further even than he is from the Church!

Adrian determines to see Arnold, and to try to reconcile him with the Church in her corrupt state, and in the attempt he fails. Arnold refuses all overtures save on perfectly honest and honourable grounds, proves himself to be no self-seeker, and is sent to prison. In the mean time a riot occurs on the Capitoline Hill. The Cardinal Guido is struck by a stone and killed, and the act closes by the solemn pronouncing of an interdict on the city of Rome until the blood of Guido shall have been expiated. The third act is occupied by the escape of Arnold from Rome, during the panic occasioned by the interdict, and his reception by Count Ostasio in the Campagna. In the fourth act the emperor appears, and we have two reception scenes, one in which Frederic, after some hesitation and some rough plain-speaking, receives the pope, but refuses to perform the customary homage of holding the stirrup while the pope alighted, which at last, however, he is induced to do, and one in which he sends back the republican ambassadors with great severity, after having been by them plainly told that he may expect their hostility. In the course of this act, too, an agreement is made, by which Frederic undertakes to obtain possession of Arnold, and to deliver him up to Adrian. The fifth act shews us the fulfilment of this contract, and is chiefly remarkable for a most magnificent soliloquy by Arnold, of which, however, our limits will not allow us to offer a translation. After the death of Arnold, which is not exhibited, and indeed took place secretly in the dungeons of St. Angelo, we have one or two short scenes, and then a chorus of mutual congratulation between the adherents of the pope and those of the emperor closes the tragedy.

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

THE same correspondent to whom we have been indebted for several communications relating to New South Wales has forwarded us the following extract from the *Sydney Herald*, describing a visit to the Abercrombie Caves and tunnel, near Bathurst:—

Friday, the 30th of May.

We were stirring early; it had been raining occasionally during the night, and showers still were hovering round us; but unable to damp our spirits or check our sport. After breakfast

we started for the caves, and passed over a bleak and dreary country most part of the road. We pulled up at a steep declivity, at the foot of which was the tunnel, and the party left their vehicles and horses and walked down, each carrying something for the benefit of the rest, as we were to have our noon repast below. A walk of about half a mile brought us to a mass of rocks, towering far above our heads, and presenting their sharp conical points to the clouds; rounding the hill, and following the course of the creek, the opening of the tunnel burst upon our view in all its native grandeur. A single arch of a hundred feet span, and sixty or seventy feet high, shewing a recess as dark as midnight, the front part of it ornamented with stalactites, varying in length from twenty to thirty feet; masses of stone and lime concretions in every fantastic form and varied hue—the brilliant white, the delicate pink, the heavenly blue, and dull grey, all formed a picture so magnificent and so gorgeous that I feel convinced no pen or pencil could adequately describe the same. We at first simultaneously held our breath, and the deep solitude of the silent bush was only broken by the ejaculations—Beautiful!—Splendid!—How magnificent!

The tunnel forms a segment of a circle, and is supposed to be about 700 feet in length. The dome of the tunnel is much greater in the inside than at the openings, and is calculated at from 120 to 150 feet in height. The sides are principally formed of marble of the purest white and finest grain; masses of which weighing many tons have to be clambered over to reach the galleries which form the principal attraction of the tunnel, and where nature seems to have let loose the genius of sculpture! One of the galleries on the left side as you enter the north arch is difficult of access, and somewhat dangerous—it was explored by several gentlemen with lights, and the scene from the opposite gallery was most interesting. The pigmy figures of the men when contrasted with the magnitude of the cavern—the glimmering lights rendering darkness visible—the reverberating echoes of shout and laugh, altogether formed a scene which will not be easily effaced from the minds of those present.

We visited two of the dark caves, into one of which several of the ladies accompanied us, and on a tablet of marble, scratched with the point of a stone, are recorded the names of the visitors.

About two hundred feet within the north entrance of the tunnel, is a small pool of water as clear as crystal, and as still as death—looking into the pool and seeing the reflection of the tunnel, with its thousand pendant beauties—the opening of the cavern, and the distant sky, all clearly reflected as in a mirror—it appeared like one of the fairy scenes in the Arabian Nights, the depth appeared interminable, and one almost longed to plunge therein and visit the world of spirits—far beyond. A vessel dipped for water to make the tea caused its eddying circles to dispel the dream, and once more found us denizens of the world—ready to do ample justice to a good lunch.

It was then the opportunity was embraced by Mr. Suttor, in a neat and appropiate speech, to propose the health of the discoverer of these caves—Mr. W. R. Davidson, who returned thanks in a modest and graceful manner. Others have claimed the merit of the first discovery, it was Mr. Davidson who first made them known, and the party who could have seen and explored them, and then have kept silent on the subject, must have been as devoid of feeling of the grand, the beautiful, and the sublime, as the senseless marble on which he trod.

After spending about five hours on the spot, taking a glimpse at the wonders it contains, and which it would be useless for my feeble pen to attempt to describe—we once more ascended the mountain on which the servants had kept our horses, and reached the sleeping destination a little before sundown, when the incidents of the day formed the main topic of conversation after dinner, and the evening was passed in the same gay and merry manner as the preceding one, thanks to a gentleman who accompanied us, and whose budget of songs was so voluminous that there appeared to be no end to them; he actually kept the party in a roar of laughter the greater part of both evenings.

Plenty of clean straw, with blankets thereon, formed our beds, and pleased with each other, gratified with the scenes we had visited, and happy with ourselves, we needed nothing to make our pillows easy and our slumbers sound.

I have given you a faint outline of three days of pleasure, never as yet surpassed in a sojourn of fifteen years in the colony, and all I can say is that parties who come to Bathurst, if they can possibly spare the time, ought not to omit visiting the Abercrombie Tunnel and Caves; they will be amply repaid for loss of time and the trouble of going, and if they can only make up a party as jovial, as happy, and as united as the one I accompanied, they may think themselves fortunate indeed.

ART.

Forget-me-not for 1846.

The ten engravings that adorn the present number are all of them in the first style of art. *The Reverie*, by Drummond, is a beautiful picture of a fair girl musing upon a night scene. It is exquisitely engraved by Cochran. C. Smith's *Choicest Flask* is an alehouse scene full of expression—the aspect are very drunk, and contrast admirably with the calm figure of the fair girl who is supplying them with more wine. One of Prout's truthful bits of street painting from *Verona* has been admirably engraved by J. Carter. Then we have a *Sketch from Nature*, by G. E. Hering; a scene by McIan, called *The Penitent and his Penance;* and *The Bivouac*, by Lear, a picture that cleverly tells its story, and exhibits some clever effects of fire-light, which the engraver, Carter, has well succeeded in catching. Colin's *Silent Avowal* is another excellent work of art, also abounding in expression, and, as a composition, of uncommon merit. We are not so well pleased with Stephanoff's *Imogen*, and we must again repeat our surprise at the popularity of this painter with those who cater for the annuals. He has no nature in him, and his style is fast growing out of favour. This is stiff and theatrical, like all his productions. Compare it with the *Portrait*, by Chisholme, which next follows, and our objection will be apparent. Here is life and truth. Altogether the engravings in the *Forget-me-not* are remarkably choice, and it is a very fair specimen of the state and progress of the art in this country.

Sale of Property of the late Mr. Wm. Beckford, the celebrated Author of "Vathek."—Since Friday last a considerable interest has been excited among the residents of Bath and Bristol, in consequence of the disposal of Lansdown Tower, with a large portion of the rare and valuable property it contained, which was commenced on that day by Mr. English, auctioneer, of Milsom-street, Bath. During the several days of the sale, a very fashionable company attended, among whom there was a most active and extraordinary competition for the different lots, which, in general, fetched high prices; a great portion, as was stated, having been purchased, through their agents, for the Grand Duke Constantine of Russia, the King of Bavaria, the Duke of Beaufort, the Marquess of Northampton, the Marquess of Lansdown, the Earl of Shrewsbury, the Earl of Warrington, the Earl de Grey, &c. and also for the British Museum. The following are the sums at which some of the lots went:—The Tower with the Gardens, 8,415 guineas, and which, it is said, cost the wealthy owner above 20,000*l.*; Albert Cuyp, 175 guineas; the Building of Babel, by Welckenberg, formerly in King Charles's gallery, 130 guineas; a grand mass in the interior of St. George's Chapel, Windsor, West, 108 guineas; a portrait of Philip IV. of Spain, Velasquer, 64 guineas; the Pursuit of Love, Domenichino, 109 guineas; View of the Dutch Coast, Cuyp, 183*l.* 15s.; interior of a handsome parlour, decorated with flowers, Gonzales Cocques, 162*l.* 12s.; a view at Venice, Canaletto, 215*l.* 5s.; the interior of a Cathedral, Peter Neefs, 137*l.*; Poultry amidst a beautiful landscape, Hendekœter, 193*l.* 5s.; a landscape, rocky and romantic, Francisco Mole, 147*l.*; a vessel endeavouring to enter a harbour on the approach of a storm, 152*l.* 5s.; &c. &c. The pictures were sold for a sum of nearly 3,000*l.* several of them realizing the prices they were knocked down at from the circumstance alone that they had been in possession of the owner of Lansdown Tower. On this account, several china plates fetched from 30 to 36 guineas the dozen, and cups and saucers from three to four guineas each. There are yet to be disposed of a variety of extremely rare and unique Etruscan vases, besides coins, which were the currency of the most ancient nations—the Greek, the Roman, the Assyrian, the German, the British, &c. &c. Several artists have attended the sale who are in the employment of some eminent porcelain and china manufacturers, to sketch the designs on the different vases, &c. and which are of the most exquisite character and finish.

THE DRAMA AND PUBLIC AMUSEMENTS.

Haymarket Theatre.—There is a work by Mr. Beresford, entitled "The Miseries of Human Life," the first volume of which is one of the most amusing books extant, crammed full of distresses that make one's side ache with laughing at them; there is a French *vaudeville*, pleasantly known to the frequenters of the St. James's Theatre as *Les Petites Misères de la Vie Hu-*

maine, and now we have at the Haymarket a farce, also "very pretty to observe," under the title of *The Miseries of Human Life*. M. De la Rochefoucauld lays it down that there is something in the misfortunes of our fellow-creatures which, whether we confess it or not, gives a feeling of secret pleasure to the best of us. The distresses of *Mr. Ally Croaker*—for so is named the hero of Mr. Webster's amusing farce—may fairly be taken as matter for mirth of the most benevolent. When we see him everlastingly tormented by nothings, because his coat is too large, or his boots too small, because he misses his dinner, because it rains, because it shines, and so on, we look on with infinite complaisance at his weaknesses, and laugh hugely, as though there were no moral in the farce, which, if applied where due, might touch all of us more or less closely. Mr. Webster is a capital impersonation of the new *Heautontimorumenos*, and he is excellently supported by Tilbury and Mrs. Humby. It is obvious that so mere a sketch requires no delineation of plot on our part. As little *argument* need be set forth touching another novelty at this theatre—*Railway Bubbles*, a trifle light as air, and as pleasant as good air. It is the production of Mr. Stirling Coyne, and is of sterling coin merit, full of hits, more or less laughter-moving according to circumstances, at the railway mania, and men of the day. Mr. Hudson plays a *Mr. Hudson*, who is passed off as the *Railway King* upon infinite tartar-catching provisional committee-men, and puts forth no end of impossible schemes. Mr. Hudson took up the part allotted him in great style. Tilbury is very amusing as a *General Bungalow, one of the Provisional Directors of the North African Direct*. The whole affair, to those to whom such hits do not seem personal, is very rich.

French Plays, St. James's Theatre.—A comedy, new to this theatre, but popular in Paris, was produced here on Monday. It is entitled *La Mère au Bal et la Fille à la Maison*. The hero, a *M. Alfred de Soligny*, is a young gentleman, *fort inconséquent*, who, while paying great court to a *Comtesse de Mirval*, has a decided tendency for her daughter, the *naïve Ernestine*, whose uncle, a bluff vice-admiral, has demanded her for his young friend, *Amede de Saint-Almon*. On the evening supposed to be occupied by the piece, there is a grand ball at the *Princesse Owinska's*, to which both mamma and daughter are invited, but, in consequence of *M. Alfred's* designedly dilating to the Comtesse upon the sensation *Ernestine* will produce, mamma discovers that her daughter has a very bad cold, and orders her to remain *à la Maison*, while she herself repairs *au bal* with *ce cher Alfred*. The gay Lothario makes a pretext for returning to the house, and finds poor *Ernestine*, habited in her gay ball-dress, dancing by herself for want of a partner. (The charming girl is charmingly represented by Mademoiselle St. Marc.) At the same moment *Le Baron*, her uncle, comes in, and indignant at his sister's wanting to exclude his niece from company, takes her to the *Princess's* with him. There *Alfred* again meets her, and recognizing her, despite her mask, makes a declaration; it is overheard by mamma; there is a terrible scene, the result of which, however, is satisfactory to the morally disposed, for the nefarious *Alfred* slinks off, and *Ernestine* is bestowed by her repentant mamma upon the eligible *Amede*. Lafont played the hero of the piece as Lafont always plays, capitally. He acted the same evening in two other deservedly popular pieces, *Père et Fils* and *Le Lansquenet*, respecting both of which we have already written. The capital comedy, *Le Chevalier de St. Georges*, is, we are glad to perceive, in rehearsal.

Jullien's Concerts, Covent Garden.—We looked in here on Tuesday evening, and found a numerous crowd assembled, not much in the promenade part of the house, but in the boxes, dress, first circle, and second circles, and in the gallery. The programme embraced a variety of excellent compositions, done full justice to. Jullien's new quadrille *The British Navy*, from first to last a most stirring affair, was received with perfect enthusiasm. Mr. Richardson was to have performed a solo on the flute, but he was indisposed, and in his place Baumann gave us a solo on his bassoon, a detestable instrument in itself, to our ears, but which he has certainly a most surpassing command of. The worst of these solos is, that the performer seems never to know when to stop; each successive burst of applause, and every body now-a-days applauds every thing, induces another five minutes *variation*, and the orchestra is fain to support him, to save appearances. We hope to have the Irish, Welch, Scotch, and English quadrilles and other favourites of last year played soon; there is no time to be lost, for the present is the last week but two of the season, much to our sorrow, for there is no pleasanter place than Covent Garden, with these Promenade Concerts at which to spend an hour or two.

Royal Polytechnic Institution.—The school for instruction of naval officers and others in the economy and uses of steam, and the management of steam-engines, at this institution, is, we are glad to find, in a flourishing condition. It is indeed a sign of the times that so many distinguished naval men should devote their leisure moments to the study of steam navigation, and that the Admiralty should insist upon such a step prior to granting an appointment to a steamer. We find also that the spread of railway locomotion has aroused among all classes a desire to understand the powers of the steam-engine, and therefore not only are the private courses of instruction given by Professor Ryan numerously attended, but his public lectures on the steam-engine are crowded by ladies and gentlemen, who anxiously listen to his popular explanations of its wondrous powers. The optical department is also carried on with great activity, and therefore deserves particular notice, and among them is an instrument called the Chromatrope, which is shewn in the theatre. It consists of a series of beautiful concentric circles of various colours exhibited upon a white ground or disc. These revolve rapidly, presenting a most singular appearance. The circles seem at times to be moving independently of one another, and often in opposite directions, and at such times the general effect is similar to the engine-turning on the back of a watch, the rings being divided into little compartments, although still maintaining their concentricity of colour. Another very striking peculiarity of this exhibition is the undulation of the colour, which seems to possess a centrifugal motion, yet without confusion. The colours of light seem to emanate from a central nucleus, and assume in succession the colour of the various rings through which they pass. The phenomena are like what might be expected if a kaleidoscope were put in rapid revolution, the arrangement and combination of colours being varied at pleasure.

Rubini and his Tempters.—Mr. Lumley, who is still in Italy, has been on a short visit to Rubini, at his chateau at Romano, and has, it is understood, been endeavouring to tempt the *gran' tenore* to one more "last engagement" at her Majesty's Theatre in London. The terms offered by this prince of *impresarii* to the prince of tenors are described as simply—a blank sheet of paper, to be filled up altogether by Rubini, on whatever terms he chose to propose—a truly regal mode of doing business. We have not yet learned the result.—*Galignani's Messenger*.

CORRESPONDENCE.

TO THE EDITOR OF THE CRITIC.

Sir,—Having in page 571 of The Critic extracted a notice on the authorship of the Letters of Junius, I would call your attention to the *St. James's Chronicle*, Nov. 20—22, page 3, col. 3, as well as to *Prior's Life of Doctor Oliver Goldsmith*, vol. i. p. 149—152, on this point.

Among the many suggestions which appear in your valuable jouanal, might I add one which would save much trouble to the London and country booksellers, and would afford great convenience to the reading public generally.

In applications for a pamphlet on any interesting subject of the day, unless you forward the name of the publisher, the chances are considerably in favour of a reply from your bookseller that he cannot ascertain the name of the publisher.

The formation of a general registration office of all works published both in town and in the country, with the price, publishers' names, &c. would facilitate the sale of books in many ways, and would form a very useful depository for reference to the book-trade generally.

If these remarks are considered worthy of attention, their insertion in The Critic will oblige,

Sir, your obedient servant, L. L. H.

ORIGINAL CONTRIBUTIONS.

ERINNA.

[Erinna, the Ionian poetess, is said to have been chained by her mother to the spinning-wheel, and to have pined away under the confinement.]

What ails thee, golden tress'd one, Ionian sea-side pearl,
That like a weeping-willow droops that labyrinthine curl?
That, like a miracle of rain forth-gushing from the skies,
Dissolve in dews of bitterness thy lustrous violet eyes?
It cannot be the breath of love thy heart has blighted yet,
For the suns of thrice five summers on thy bloom have scarcely set;
Nor art thou yet an orphan—for thy warrior sire's afield
Gathering the prunings of the vines in the hollow of his shield;
And thy mother sits beside thee—beside thee, yet apart—
Her coldness cannot brook the throb of thy torrid poet-heart;
For thou art one to whom the gods that doubtful boon have given,
To breathe and work through scenes that irk with brain and heart in heaven.
Thy mother is not cruel—no! thy mother is but cold,
And knows the power of wealth and dower, and loves the glittering gold.

It is not that she loves thee not—'tis for thy very weal
She chained thee there to her low chair, beside the spinning-wheel.
And she would have thee what she is—her nature is to pore
O'er spiritless monotonies—to be, and nothing more;
And her eye lights up with joy and pride if haply thou hast done
Work that a score of weaving worms as deftly would have spun.
Thy suffering silent eye declares thou bearest her no grudge,
In sooth it was no fault of hers thou wast not born a drudge;
And willingly and lovingly thou followest her behest,
With a watery radiance in thine eye, and a fire within thy breast.
She gazes on thee sadly, for she deems thy mind distraught,
And holds her breath to watch the death of thine immortal thought;
That thought, unlike the grosser fire that perishes confined,
Consumes its prison-house by stealth, and Matter yields to Mind.
It needs must be thou wilt be free—thy soul will be unbound
From hands that fare in clammy air, and feet that press on ground.
Electric rapture seizes thee—thou feel'st a friend at hand,
Thy case to mend, the only friend who such can understand;
He warms the flood of thy young blood—he thrills thy faltering breath,
The only friend thy woes to end, he seeks thy bosom—Death!
An embryo thunder-storm blocked up within a cavern-cell,
At the bottom of a loathsome mine a melancholy well;
An osprey caged in wicker-work, who sees but prison-bars,
Instead of ocean's azure world, and a thousand thousand stars;
A sleeping Ætna's might that wakes, and shakes, nor bursts the ground;
A plunging ship by its oaken lip to a patient anchor bound;
An Afric barb beneath the yoke; a bounding Alpine roe
Locked in a drift it cannot lift of numbly slaying snow:
Such images, thou poet-child, betoken thy distress,
That human kind thy glowing mind was chartered but to bless
Hath bade it measure out the yarn that twines the wearying reel,
And killed thee there, in thy mother's chair, beside the spinning-wheel.

G. C. SWAYNE.

NECROLOGY.

PROFESSOR BADHAM.

Dr. Charles Badham, who has been long known as one of the most learned and accomplished members of the medical profession, died on Monday morning last, having been removed to town many weeks since, by easy stages, from Rome.

Having completed his medical education at Edinburgh, he entered a gentleman commoner of Pembroke College, Oxford, in which university he took with honour the degrees of B.A., M.A., and M.D. He commenced his professional career in London as a medical lecturer by succeeding Dr. afterwards Sir A. Creighton, when he went to Russia, and evinced considerable talent. About this time he published his excellent and original treatise on Bronchitis, which went through two or three editions, and has ever since attracted the attention of all medical men who are well read in the literature of their profession. Not long after the publication of this treatise he became a fellow of the College of Physicians, and a friend of Sir Henry Halford, a man of kindred taste and accomplishments. Dr. Badham's fondness for travel, in which he spent nearly the half of his days, and his taste for classical literature, were unfavourable to his attaining that notoriety and that extent of practice which, had he remained in town, would, with ordinary diligence, assuredly have been his portion. But he preferred the more easy, though less lucrative occupation of travelling physician of persons of high degree to the labours of professional life.

About the year 1815 he gave to the world a forcible and eloquent translation of the *Satires of Juvenal*, in which he displayed a thorough knowledge of his author, and so much poetical talent that even Dr. Gifford, who was then editor of the *Quarterly*, and the severest critic of his time, himself the author of a translation of the same satirist, felt himself obliged to admit that though, in the tenth satire, Dr. Badham had to contend with Dryden, he had "well sustained the contest." This translation, we believe, has been recently republished, with considerable corrections, in the *Family Classical Library*.

Upon the occasion of the medical chair becoming vacant in the University of Glasgow, in 1827, Dr. Badham was recommended to the Duke of Montrose by Sir Henry Halford as one whose talents and accomplishments would tend to increase the fame of a rising university. And although Scotchmen were not pleased at having an Englishman preferred before them, his lectures displayed so much ability that they soon discovered that they had reason to be proud of the services of so brilliant and remarkable a person. He was a contributor to *Blackwood's Magazine* in its best days; and one of the most classical poems we ever remember to have read, entitled "Lines written at Warwick Castle," appeared in the April number of that periodical in the year 1829.

Professor Badham was twice married; in early life to the beautiful Miss Campbell, first cousin of the poet, and for whose hand the poet is understood to have been an unsuccessful suitor. Two sons, a married daughter, and a brother, survive him. His eldest son was recently the Radcliffe travelling fellow from the University of Oxford. About twelve years since Professor Badham married the eldest daughter of Admiral Sir Edward Foote, who, with several children, survives him.—*Herald*.

MRS. JEVONS.

The obituary chronicle of the week includes the name of another among the children of William Roscoe. His eldest daughter, Mary Anne, wife of Mr. Thomas Jevons, of Liverpool, passed through the last stage of a most suffering disease, and died, in London, on the 13th of this month, aged fifty. "Mrs. Jevons," says a correspondent, "was known for several successive years as editor of the 'Sacred Offering,' and as the author of many poems in that little work, which have since been selected from it, and printed in a separate form, with some beautiful additions. In her native town and its neighbourhood she was beloved and admired in no common degree. Her benignant countenance, beaming with animation and kindness, was always welcomed with delight. Her pure benevolence, sweetness of manner, her sympathy with every form of goodness, her tenderness to the erring, her kind efforts to amend the condition of the distressed, and to raise and refine those who were of low estate, have made the deeper impression, because of the peculiar quietness and modesty with which her good deeds were performed. Who that remembers her when, in her young days, she adorned her father's happy dwelling—who that afterwards saw her as one of the chief supporters of his adversity and old age—or, in later times, has known her as the wife and mother, the consistent devout Christian worshipper, the cultivated, developed woman, rich in beautiful tastes and yet more rich in good works, but will think with sorrow on the vacant place she has left?—*Athenæum*.

ALEXANDER DEUCHAR.

Our northern capital last year lost a man who had attained to an extraordinary proficiency in heraldry and genealogy, and has left behind him some singular monuments of his industry. Alexander Deuchar, while conducting the business of a seal-engraver, gave a large portion of his time to the collection of memorabilia respecting families and their armorial bearings, particularly those of his own country. The consequence was his publishing, in 1817, a well-known work on *British Crests*, in 2 vols. 8vo. He also contributed the Scottish portion of Robson's *British Herald*, a large work published at Sunderland, in 1830. His remaining MS. collections, however, infinitely exceed all he gave to the world. Amongst these are, a collection of English surnames, with all their various spellings, with references to places where their arms are to be seen; a collection of family armorial bearings from all imaginable sources, and about 10,000 in number, pasted into a volume; notes and documents respecting genealogies, filling *hundreds of volumes*; many volumes containing armorial bearings, chiefly printed. Mr. Deuchar, having succeeded a father of similar taste, this collection may be said to have been eighty years in progress.

RHEINHARDT.

From Copenhagen, we hear of the death, at the age of sixty-one, of the learned Danish naturalist, Charles Frederick Rheinhardt, Professor of Zoology at the Royal University of that city. The Professor was a Councillor of State, Member of the Direction of Public Instruction, and author of many important works of his own, as well as of a Danish translation of those of Cuvier. He has left his valuable library, as well as his museum of objects of natural history, to the University of Copenhagen.

COUNT CASSINI,

The astronomer, and last of the famous name, member of the Academy of Sciences, formerly director of the Royal Observatory of Paris, chevalier of the order of St. Lewis and Legion of Honour, died on the 18th ult. at his château of Thury sous Clermont (Oise), aged 90.

CRITIC OF TRADES, INVENTIONS, ETC.

[Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

At the evening parties of the Marquis of Northampton during the last season, great admiration was excited by Mr. Goadby's beautiful anatomical preparations of the lower classes of animals, prepared in fluids, discovered by him after years of laborious and expensive experiments, and displayed in glass cases, also of his own invention and manufacture, admitting of the full examination of the animal either by the eye or microscope. These preparations on more than one occasion attracted the especial attention of his Royal Highness Prince Albert, whose knowledge of natural history enabled him to appreciate their value. They were also seen and much admired by Sir Robert Peel; and it is with the utmost satisfaction we are enabled to state, that, with the discriminating patronage of science and its cultivators which distinguishes him, he has recently presented Mr. Goadby with 150*l.* from the Royal Bounty Fund, as a reward for his labours in this department of natural history.—*Morning Post.*

CORKE'S PATENT FUEL.—We had the gratification, a few evenings since, of witnessing a variety of experiments in the presence of a number of scientific and practical gentlemen, at No. 3, Trafalgar-square, with the patent firing, and all were of opinion it was the best material as yet produced both for durability, economy, speedy and certain brilliancy in burning. The fuel consists of blocks of various sizes, which ignite on being touched by a lighted match or candle; the light from it is so exceedingly brilliant that it reminds us, in that particular, of Cannell-coal, but it is more powerful and lasting, and does not fly in the least. We understand from the proprietors that one farthing's worth of fuel will boil four quarts of water, and will also be sufficient to light a fire, thereby completely saving wood. This will prove a great boon to the poorer classes, particularly in hot weather, when firing is required only for the purpose of cooking. The following are the directions for use:—Well cover the bottom of the grate with cinders, take one or two blocks and break them in pieces and distribute them over the cinders, apply a lighted match, taking care that a draught through the fire be maintained. When the blaze has nearly abated gently use the poker to increase it, and the result will be a red-hot and lasting fire. For bachelors or persons living in chambers it will be found particularly useful, as they can light their own fires in a moment. The fuel is the invention of a Mr. PARSONS, and Mr. CORKE is the patentee; the latter gentleman having extended his right over England, Scotland, Ireland, France, Belgium, Holland, Russia, Austria, Prussia, Norway, Sweden, Spain, Portugal, and America.

JOURNAL OF MENTAL PHILOSOPHY.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mental Philosophy, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mental Philosophy throughout the world to make this a complete record of the progress of the science.]

The Curative Power of Vital Magnetism, verified by actual Application to numerous Cases of Disease. By Mrs. LAVINIA JONES. London, 1845. Baillière.

THIS little pamphlet is a collection of cases of cures of disease by the agency of Mesmeric treatment, and incidentally a record of some curious and interesting phenomena observed during the process. The cures embrace the usual classes of nervous disease as epilepsy, catalepsy, hysteria, paralysis, headach, deafness, and diseases of the eye. But the same treatment was also found serviceable in other diseases, whose primary cause was probably a disordered state of the nervous system, preventing the due operation of the organic functions.

Commending this pamphlet to all who feel an interest in a subject of very great importance, we will make two or three extracts from cases that illustrate the phenomena of vital magnetism, and which were elicited accidentally in the course of treatment for disease, and therefore are the more valuable evidence.

The case of ELIZABETH ———, aged thirteen, displayed he faculty of reading with closed eyes, as somnambulists did tong before Mesmer wrote.

I asked her to let me tie a handkerchief over her eyes, and she would see then. I did so, and took care to have it well folded and placed as perfectly over the eyes as possible. She then took up the book, read it all through with the greatest ease and rapidity, and told me to fetch her a book out of my box. I went down in haste, and carried her up a hymn-book, one she had never seen. She read several hymns, and one in manuscript, and then sung several she had read without any fatigue. This went on for about an hour, and she awoke quite astonished to see the place strewed with books. She had no recollection whatever of what had passed.

Another extremely curious case was that of an epileptic lunatic restored to reason and almost cured of her fits. She exhibited all the phenomena in great perfection. At first she was a mere animal, subject to violent passions, and entirely ungovernable, but by management these were subdued, and she is now a sensible, well-behaved girl. Some of her doings are extremely interesting, and were very carefully noted by Mrs. JONES.

One of her propensities was an inordinate desire to eat. When magnetised and in the somnambulist state, she was so clairvoyant that they could not hide eatables in any part of the house but she at once discovered them. More than this, she never failed to tell what was in the cupboards of Mrs. JONES's house. One day she was violently demanding some jam.

I began now for the first time to try to arouse some moral action, and told her the jam cost money, and asked her if she had any. At this she was very silent for some time, reflecting deeply; at last she sighed, threw herself down on the pillow, and said, "Then I have no money belonging to me." But she soon began again—"Ah, but there is a jar on the shelf. I can see it." "What is in it?" "I don't know." "Can't you see a jar? I can see plain enough; it is black things like plums. They aint plums either; the jar is tied, and is covered with brown. I can see the black things under though." It was pickled walnuts. "No—they cost money too—you must work hard and get money, and then you can choose whether you will buy them." At this she lay quietly for a second, and burst into a loud laugh. "I can see the dog; I can see the cat." "What is the dog doing?" "Lying in a corner fast asleep—the cat is running about—I can see your fine room, too—there is your fine carpet." "What colour is the carpet?" "What colours, you should say—why red, blue, black, green, all manner of colours, and fine flowers; there are your fine chairs, and your fine books and pictures in the closet. I am in the closet; I can see all the newspapers too: what lots of books, to be sure! And there is *his* coat, and his scarf, and his gloves." "Where are his boots?" Silence for a few seconds—"Why, in t'other cupboard. Do you think I can't see?" "What sort of a fire is there?" "A very bad one." "Go into the kitchen, and tell me if the kettle is on the fire." She laughed heartily. "Why the kitchen fire is near out." All this occurred in an upper room; the child was lying on the bed.

Like somnambulists, she sees perfectly in the dark.

She learnt the 53rd chapter of Isaiah during sleep, and retained it when awake. Needlework she does most beautifully; but she complains that the light teases her. I have had a room darkened on purpose for her convenience, and have been very careful to shut out every crevice, so that it is as perfectly dark as it can be made. Here she sits, dresses her doll, sorts silks, reads, can write and copy, tells us what is passing in the street, and is constantly saying how happy she is, and how clearly she can see. She made one little bag very neatly indeed, putting double strings, and placed a small note inside to be presented to the gentleman who had helped to darken the room for her.

Again—

I nearly forgot to record that once Emily told the colour of a piece of cambric which was placed within a book. The book being held fast closed and handed to her, requesting her to look inside and tell the colour, she very soon said "green," which it was.

Let Mrs. JONES continue thus to note down facts without speculating upon them, and she will perform an essential ser-

vice to science, which only now needs a vast array of observations to arrive at something like an explanation of phenomena which they only have a right to deny who have tried to produce them and failed. But there are none such, because to try is to succeed.

BOOKSELLERS' CIRCULAR.

It will be seen that a correspondent proposes a register of all new publications at a common centre, whence they may be transcribed into the lists weekly published by the literary periodicals, and which at present are but very imperfect. Such a register we propose to keep at The Critic office, and a book lies there for that purpose; and country booksellers need but to transmit the names, size, and prices of their publications, to have them entered and copied into our weekly list; and if the town publishers would follow their example, it might be made very useful and complete.

There is another department of The Critic which has not yet been so employed as its utility deserves; we allude to the list of *Books wanted to Purchase*. Passing as does The Critic into the hands of a large proportion of the booksellers in the United Kingdom, this list affords an unequalled opportunity for procuring works and odd volumes that cannot be obtained at the publishers; and as no charge is made for insertion in this list, we suspect that it has been overlooked by many of our subscribers, or more would have made use of it.

It will be seen that the letters kindly forwarded by so many of the booksellers and library-keepers, by whom The Critic is used as their guide and circular, have already proved serviceable. We ask a like favour from those who have not yet aided The Critic in this most effective manner; it being our purpose to include them all in a prospectus to be widely circulated at the beginning of the new year and the new volume.

OPINIONS ON THE CRITIC.

TO THE EDITOR OF THE CRITIC.

Sir,—It is with great pleasure that we bear testimony to the very impartial manner in which the Critic has been conducted, and have frequently regulated our purchases by its reviews: our subscribers and readers being on the increase, evidently shews that the Critic has given general satisfaction. Wishing every success may attend it, We are, Sir, yours, &c.

Clarke and Walter.

Circulating Library, King-street, Jersey, Nov. 29, 1845.

TO THE EDITOR OF THE CRITIC.

Sir,—I have the pleasure of bearing witness to the value of your impartial work. I have several times received orders by its means. This past week I have received orders for the "Sacred Gift," altogether from the high tone in which you spoke of it. I hope this will be of use to you, and that others will follow my example. I am, Sir, yours, &c.

J. Beamish Hamilton, Bookseller.

Drogheda, Nov. 22, 1845.

TO THE EDITOR OF THE CRITIC.

Sir,—Having been a subscriber to the Critic from its commencement, I beg to acknowledge the very great pleasure and benefit I receive from the perusal of its columns. It is my confidential guide to my circulating library, having bought all my books of late from the opinions given of them in the Critic; a better guide for the selection of new publications cannot be. I am also happy to inform you that the Critic is read by all my subscribers. Wishing it the support of which it is worthy,

I am, Sir, yours, &c.

Circulating Library, Portshead, E. Richards, Librarian.
near Bristol, Somerset, Nov. 25, 1845.

TO THE EDITOR OF THE CRITIC.

Sir,— I willingly give my testimonial to the benefit the Critic has done me, and consequently the publishers. I am in the habit of circulating the copy I receive amongst my customers, for their perusal, and I am perfectly aware that I have had many orders for books which I should not have had but for your favourable notice of them. I am, Sir, yours, &c.

Robt. Taylor, Bookseller.

High-street, Chepstow, Nov, 19, 1845.

TO THE EDITOR OF THE CRITIC.

Sir,—I cheerfully add my name to the list of those of your subscribers who have expressed the pleasure and the advantage they have derived from the perusal of your columns.

The suggestions of some of your correspondents, if carried out, would add greatly to the utility of your paper, especially the giving of the name and place of abode of the publisher, in the case of works published in the country, in addition to the title, size, and price, as now contained in your weekly list of new publications. This, however, I am aware, would subject the announcements to advertisement duty. I am, Sir, yours, &c.

Sevenoaks, Nov. 26, 1845. J. Payne.

TO THE EDITOR OF THE CRITIC.

Sir,—I like The Critic; it brings me into good company, and makes me acquainted with authors and books of which otherwise I should know nothing; and I should like it still better if publishers and booksellers were more liberal with their advertisements, because that would be to my advantage as well as theirs; for I frequently find that when one copy of a good book has been sold, more copies of the same work are ordered. I think that if authors and publishers who are about to print an interesting work in numbers and small parts were to print a few extra of the first for the purpose of being sent to country booksellers to send into the villages or lend from house to house, it would be a good plan, as many would then be sold, instead of lying as dead stock on the publisher's shelf. As I live in a small country-town, where most of the people are of the working class, I find that small cheap books sell the best—say from one penny to two-and-sixpence. Books for the million should seldom be sold above that price. I have sold more of *Chambers's Tracts* and shilling volumes than any other; and next to them, the numbers and parts of the *Family Herald*. I am, Sir, yours, &c.

R. A. Jacques, Bookseller.

Mountsorrel, Dec. 3, 1845.

LITERARY INTELLIGENCE

Junius.—An article has been circulating lately through the daily channels of information, that Sir David Brewster is supposed to have discovered Junius in Mr. Lachlan Macleane, who figured among the bustling class of politicians in the early part of the reign of George III. This idea is not new, having been broached above sixty years ago, but we think it clearly settled in the negative by Prior, in his "Life of Goldsmith," vol. i. pp. 149—152, where there is the only account of him we remember to have seen. It appears that having been educated in Trinity College, Dublin, he was entered there as "Filius Johanni *generosi*" (not implying that his father held any clerical employment), went into the medical service of the army, obtained the patronage of the well-known Colonel Barré, and, after various vicissitudes, became successively private secretary to Lord Shelburne, and Under-Secretary of State for the Southern Department, retiring from office with that nobleman on the dissolution of the Grafton ministry. Now it is familiar to the readers of Woodfall's "Junius," that abusive strictures on Lord Shelburne by this celebrated writer, under other signatures, commenced about the time Macleane stood in the above relations to him; and it would, therefore, imply unusual moral obliquity, if not the grossest ingratitude and treachery, thus covertly to assail his patron, whose loss of office, be it remembered, necessarily involved that of himself and, with it, all his importance, and, in great measure, his income. This, we think, were there no other evidence, would settle the point. But he hated, abused, and challenged Wilkes, a long letter connected with which appears in the newspapers of that time; and Junius ridiculed him in March 1771, when writing under the signature of Vindex (Woodfall's edition, vol. iii. p. 343); added to which, there was nothing known of his character to warrant so serious an imputation upon it. His future career, as given by Prior, exhibits the usual transmutations of a political adventurer. He wrote largely in pamphlets and newspapers, but could not speak, from an impediment in utterance; in May 1771, he received the appointment of Superintendent of Lazarettoes from Lord North; soon afterwards, that of Collector of Philadelphia; then a situation in India, where he became a kind of agent to Mr. Hastings—brought home that gentleman's resignation (afterwards disclaimed by the Governor-General)—proceeded again to India, intending, as was said, to call him to a severe account for his conduct, but perished, with all on board, on the passage out. He was a friend of Mr. Burke's, who thought highly of him, and through their means aided Barry, the painter, in some of his difficulties, when abroad.

Antiquities.—M. Lottin de Laval, charged with an archæological mission in the East by the French government, writes to the *Journal de Constantinople* that a corner-stone has been recently found in Babylon (a thing of exceeding rarity in that ancient city of bricks), having two fine inscriptions in the arrow-

headed letter. This he has purchased; and he has likewise taken casts of a score or so of bricks from the Mujellibe and Birs-Nimrod, of which Europe had as yet no impressions. In the same letter the writer speaks of a new process of moulding which he has invented; enabling him, by means of a substance very light and malleable, to take impressions in plaster as fine as by the ordinary process—while the model of a bas-relief weighing thirty thousand, will not exceed fifteen or twenty, kilogrammes. "I bring with me," he continues, "thirty-eight figures from Persepolis, several groups from Shapoor, and nearly two hundred inscriptions. I have applied my new process to the inscriptions, and am no longer in danger of seeing my labours destroyed by the rains—as happened to me last winter, in the mountains of Kurdistan and the plains of Upper Assyria, with my paper impressions. Now, the substances which I use have scarcely one-tenth more weight than paper, and take up less room."

SINGULAR DRAMATIC DISCOVERY.—A few weeks ago a very curious document was discovered among some old family-papers belonging to an ancient family in Kent. It is a play called *Wit and Wisdom*, and is supposed to be the earliest drama in which a foreigner is introduced speaking broken English. The liberal owner has given permission for its publication, and it will be shortly printed by the Shakspeare Society under the editorial care of Mr. Halliwell.

COLLECTION OF AUTOGRAPH POEMS, LETTERS, &c. OF GRAY.—During the last few days the auction-rooms of Messrs. Evans and Son, in New Bond-street, have been crowded by eminent bibliopolists to witness the disposal of a portion of the library of a gentleman containing a collection of autograph poems, letters, and books, with curious and elaborate manuscript notes, by Gray, the poet. The style of writing of the deceased poet excited the admiration of all who beheld it, the writing being very small, but most clear and distinct, having more the appearance of engraving than pen and ink. Many of the books (which were first sold) containing merely the autograph of Gray, fetched large sums; and of those books interspersed with notes by the poet, the following are worthy of notice:—Lot 538, Shakspeare's works, in 8 vols. wanting vol. 2, with Notes by Theobald, and MS. corrections of the Text by Gray, sold for 12 guineas. Lot 541, "London and its Environs Described," with numerous MS. notes by Gray, 15 guineas. Lot 597, Milton, 2 vols. interleaved, with numerous MS. notes by Gray, 33*l*. Lot 598, "Linnæi Systema Naturæ," 2 vols. in 3, interleaved with MS. notes and beautiful pen-and-ink drawings of birds and insects by Gray, 40 guineas. Lot 602, "Gray's Elegy in a Country Churchyard," in his own handwriting. This manuscript contains five stanzas omitted in all the editions of Gray's poems, and the names of Milton and Cromwell are substituted for Tully and Cæsar. The original title given to the Elegy in the manuscript is "Stanzas wrote in a Country Churchyard." The competition for this manuscript was most spirited, and it was knocked down for 53*l*. but there being a dispute as to who bid that sum, it was again put, and was eventually knocked down to Messrs. Payne and Foss, of Pall-mall, for 100*l*. The two following lots, an "Ode on the Installation of the Duke of Grafton at Cambridge," and "The Fatal Sisters," an ode in the handwriting of Gray, sold for 22 guineas. Lot 605, "A Long Story," in Gray's handwriting, with a complimentary letter to him from Miss Speed, 45*l*. Lot 614, A playful letter to West, containing a supposed dialogue between some books in his library, and a letter of Gray to West, containing a poetical translation from Statius, 27*l*. Lot 615, Satirical Verses, on the Heads of Houses at Cambridge; Humorous letter to Dr. Wharton, from Florence, by Gray, 30 guineas. Lot 622, Three pen-and-ink drawings, and four insects painted on vellum by Gray, 10*l*. Lot 621, Epitaph on a child, in verse; a song beginning "Thyrsis when we parted swore," and transcript Latin verses; letter of Gray to Mr. Stonehewer on the death of his father. Bought by Sir G. Bright for 40*l*. Lot 626, Seven small note-books containing memoranda by Gray, made during his tours in England and on the continent, sold for 30*l*.

ETHNOLOGICAL SOCIETY.—The first meeting for the season, which was very well attended, was held on Wednesday evening, at the rooms of the society in Sackville-street. Admiral Sir Charles Malcolm, the president, congratulated the members on the success which had attended the proceedings of the Ethnological sub-lecture at the late meeting of the British Association at Cambridge. The subject of Ethnology was also making great progress both in France and America; and amongst other interesting circumstances which would be brought forward the present season, General Briggs would introduce his researches on the aborigines of India, in which he had proved that the tribes who inhabit the hills were very distinct, both in habits and religion, from the Hindoos, who appear to have been the conquerors of the country. Dr. Hodgkin stated some curious facts regarding the inhabitants of St. Vincent's, one of the Cape de Verd Islands, which exhibited a remarkable instance of the deterioration of the people, who, once civilized, had been reduced to a very degraded state. In connection with the paper, Dr. Hodgkin mentioned the interesting circumstance of Latin and Greek being taught at some of the Hottentot schools, and acquired by the children with great avidity.

THE COLLEGE OF CHEMISTS has been authorized to take the title of *Royal*; and Prince Albert, besides accepting the office of president, has presented a donation of 100*l*.

GRESHAM COLLEGE.—The total number of persons who attended the lectures of the various professors in this college during the late term was 3,040.

REGISTER OF NEW PUBLICATIONS,
From Nov. 29 to Dec. 6.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded by letter will be duly inserted.*

LIST OF NEW BOOKS.

Animal Topography, square, cl. with a Zoological Map of the World, in case, 4s. 6d.—Allen's (John) Daily Monitor, 16th thousand, 32mo. 1s. cl.

Bunbury's (Miss) Star of the Court, new edit. fc. 8vo. 3s. 6d. cl.—Bible Stories for Very Little Children, Second Series, 2nd ed. square, cl. 2s. each.—British Minstrel and Literary Miscellany, Vol. III. royal 8vo, 6s. cl.; ditto, complete in 3 vols. 17s. 6d. cl.

Christian Family Library, Vol. XLVII. "History of the Church in the Middle Ages," fc. 8vo. 6s. cl.—Chambers's Miscellany of Useful and Entertaining Tracts, Vol. VII. 12mo. 1s bds.—Combe (Dr. A.) on the Management of Infancy, 5th edit. royal 18mo. 6s. cl.—Churches of the United Kingdom, edited by A. Leighton, Volume I. "The Scottish Church," fc. 8vo. 4s. bds.—Christison's (J.) Easy Grammar of the Italian Language, 18mo. 1s. 4d. cl.

Elinor Wyllys, a Tale, edited by J. F. To Readers and Correspondents.

C. B. *requests the name of a good work on Science and Literature. The question is somewhat general, so must be our reply—the* Encyclopedia Britannica.

J. G.—Inquiry shall be made.

If the Authoress of H. and S. will favour us with her address, in strict confidence, *it will give us pleasure to comply with her request.*

C. H.—*We are not aware of any English edition of the work named; a Memoir of Fichte had previously appeared in our columns, hence we do not repeat it.*

THE CRITIC,
And Journal of Literature.

SATURDAY, DECEMBER 13, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

JOURNAL OF ENGLISH LITERATURE.

HISTORY.

History of the English Revolution of 1640: *from the accession of Charles I. to his death.* By T. GUIZOT. Translated by WILLIAM HAZLITT. 8vo. pp. 488. London, 1845. Bogue.

THIS is the second volume of that extraordinary enterprise, the *European Library*, of which an account was given in our columns a month since. In pursuance of the design to present the standard works of every literature, Mr. HAZLITT has crossed the Channel, and imported from France a work of first-rate interest and importance, the production of her most famous historian and statesman, and which offers the twofold attraction of a home subject and foreign composition. The revolution of 1640 is, indeed, too intimately associated with present party and sectarian principles to permit of being handled with perfect fairness by an Englishman. The calm judgment of a foreigner, viewing the facts apart from all prejudices, is likely to be more just, and is certainly far more instructive, than can be looked for from an English pen. But the History of M. GUIZOT has peculiar claims to notice from certain special merits of its own. It is not only a laborious collection of facts, many of which are gathered from exclusive sources, but it contains a great deal of the philosophy of history both in its application to, and as it is to be deduced from, the events of that remarkable era. Moreover, it is singularly eloquent, studded with lively sketches of men and incidents that indicate genius in the artist, and without which there can be no true historian. And this delightful and instructive work is admirably translated by Mr. HAZLITT, beautifully printed, well indexed, and sold at a price so trifling, that all but the poorest may become possessors of it. It is a very miracle of publishing.

BIOGRAPHY.

Oliver Cromwell's Letters and Speeches, with elucidations. By THOMAS CARLYLE. In 2 vols. London, 1845. Chapman and Hall.

ALTHOUGH these volumes have been withheld from us, so that we have been compelled to borrow them for the purpose of review, the motive certainly was not, as usually it is, a consciousness that it would not endure honest criticism. This is in truth a valuable contribution to the stores of English History. It serves to throw a blaze of light upon one of the most perplexing, and least understood, characters among the men who have made themselves famous in the annals of our country. Mr. CARLYLE is well known to be given to hero-worship; it is a boast and pride with him; he has made it the subject of a book that is among the most eloquent and deep-thoughted in our language. But his hero-worship in the case of Cromwell is enthusiastic beyond measure, and carries him as far on the other side of extravagant and indiscriminate laudation as it has been the faulty fashion with his predecessors to discredit and decry the man who was at once dissenter, republican, and triumphant. Pleasant as it is to find earnestness anywhere; readily as we can pardon the rare error of too much enthusiasm on behalf of greatness bayed at by a pack of curs who snarl at what they cannot comprehend; still the calm judgment of the critic is compelled to protest against even a one-sidedness so generous as that visible everywhere in these pages, and to pronounce the result to be not so much a history, or a biography, as a panegyric.

But Mr. CARLYLE is himself an original man; a genuine, true-hearted, out-speaking man. He loves and hates, and he avows it fearlessly; and he has reasons wherewithal to justify his feelings, and he asserts them boldly, however much they may shock the conventional notions of his generation. He may not be, and he is not, always right in the emotion, or the reason for it, but he maintains his position with a courage and an eloquence that win upon those who do not set watch and ward upon their judgments. His style at the first falls harshly upon the ear, because it is strange, and his language is apt to repel the curious eye that glances over his pages, for the words are not always of the purest English, and the spirit of Germanism has so imbued his mind that he cannot express his ideas otherwise than in the formulas familiar to our neighbours, though uncouth and sometimes unintelligible to us. But a very short acquaintance serves to remove these difficulties; soon the meanings of the odd phrases come out; the eye is familarized to the words of strange shape; the curiously constructed sentences fall into melody; and ere long the reader has learned to like the freshness of speech, and to recognise it as a fitting medium for the utterance of thoughts as fresh.

Mr. CARLYLE has contrived to carry his characteristics even into a collection of the letters and speeches of his hero; and this, not only by an Introduction of upwards of 150 pages, in which he presents a sort of biographical sketch of the man, some notes on his family, a pungent criticism on his biographers, but by an essay intended to be a sort of summary of his own views of the letters and speeches that follow.

Mr. CARLYLE'S estimate of the character of CROMWELL is already familiar to the reading world, through his "Lectures on Hero Worship," and, we believe, an article in the *Edinburgh Review*. It has been the fashion with our historians to treat him as a hypocrite—a man of pretences and shams, assumed to cloak his ambition; but Mr. CARLYLE contends, and we think truly, that CROMWELL was, in truth, a sincere and earnest man; that his aims were not selfish but patriotic; that circumstances forced him into the positions that have been the grounds of offence; that when he said he was commissioned to do the Lord's work, he so believed. And if his career be traced impartially, from his first appearance upon the stage of life as the stern and resolute country gentleman, to his death as the first magistrate of a country whom his energy and wisdom had made to be respected abroad and prosperous at home, we shall, in fact, find that he preserved his character unchanged through all the changes of his eventful career—always hopeful, always resolute, always putting his trust in God, always using the same phraseology, always recognising the presence of a greater power, of whom he deemed himself but the humble instrument. It is not thus with the hypocrite: he is never the hypocrite always: the real man will betray himself sometimes, if not in moments of defeat, certainly in the hour of victory. Whatever uses he had found for his cant, if such indeed it was, while he was aiming to rise, he needed it not when he had risen; nay, to the Lord Protector it was rather an impediment than otherwise. Then, at least, the hypocrite would have flung it aside and rejoiced to be himself. Nay, nay, only prejudice or thoughtlessness could pronounce CROMWELL a hypocrite.

But enough of comment of our own: we will not longer detain the reader from the specimens of Mr. CARLYLE'S labours, which we have selected as best calculated to illustrate our remarks, and to please by their intrinsic worth. We regret only that we are compelled by the pressure of other claims to be so brief. But it is a work which every book-club should order, and without which no historical library will be complete.

Mr. CARLYLE shall describe in his own words the editorial system he has adopted.

I have (he says) corrected the spelling of these letters; I have punctuated, and divided them into paragraphs, in the modern manner. The originals, so far as I have seen such, have in general no paragraphs: if the letter is short, it is usually found written on the first leaf of the sheet; often with the conclusion, or some postscript, subjoined crosswise on the margin—indicating that there was no blotting-paper in those days; that the hasty writer was loath to turn the leaf. Oliver's spelling and pointing are of the sort common to educated persons in his time; and readers that wish it may have specimens of him in abundance, and of all due dimness, in many printed books: but to us, intent here to have the letters read and understood, it seemed very proper at once and altogether to get rid of that en-

cumbrance. Would the rest were all as easily got rid of! Here and there, to bring out the struggling sense, I have added or rectified a word—but taken care to point out the same; what words in the text of the letters are mine, the reader will find marked off by single commas: it was of course my supreme duty to avoid altering, in any respect, not only the sense, but the smallest feature in the physiognomy, of the original. And so, "a minimum of annotation" having been added, what minimum would serve the purpose,—here are the *Letters and Speeches of Oliver Cromwell;* of which the reader, with my best wishes, but not with any very high immediate hope of mine in that particular, is to make what he can.

The following passage, though long, contains the substance of CARLYLE'S views of the revolution and its authors.

I will venture to give the reader two little pieces of advice, which, if his experience resemble mine, may prove furthersome to him in this inquiry: they include the essence of all that I have discovered respecting it. The first is, By no means to credit the wide-spread report that these Seventeenth-Century Puritans were superstitious crack-brained persons; given up to enthusiasm, the most part of them; the minor ruling part being cunning men, who knew how to assume the dialect of the others, and thereby, as skilful Machiavels, to dupe them. This is a wide-spread report; but an untrue one. I advise my reader to try precisely the opposite hypothesis. To consider that his Fathers, who had thought about this World very seriously indeed, and with very considerable thinking faculty indeed, were not quite so far behindhand in their conclusions respecting it. That actually their "enthusiasms," if well seen into were not foolish but wise. That Machiavelism, Cant, Official Jargon, whereby a man speaks openly what he does *not* mean, were, surprising, as it may seem, much rarer than they have ever since been. Really and truly it may in a manner be said, Cant, Parliamentary and other Jargon, were still to invent in this world. O Heavens, one could weep at the contrast! Cant was not fashionable at all; that stupendous invention of "Speech for the purpose of concealing Thought" was not yet made. A man wagging the tongue of him, as if it were the clapper of a bell to be rung for economic purposes, and not so much as attempting to convey any inner thought, if thought he have, of the matter talked of,—would at that date have awakened all the horror in men's minds, which at all dates, and at this date too, is due to him. The accursed thing! No man as yet dared to do it; all men believing that God would judge them. In the History of the Civil War far and wide, I have not fallen in with one such phenomenon. Even Archbishop Laud and Peter Heylin meant what they say; through their words you do look direct into the scraggy conviction they have formed: —or if "lying Peter" do lie, he at least *knows* that he is lying! Lord Clarendon, a man of sufficient unveracity of heart, to whom indeed whatsoever has direct veracity of heart is more or less horrible, speaks always in official language: a clothed, nay, sometimes even *quilted* dialect, yet always with some considerable body in the heart of it, never with none! The use of the human tongue was then other than it now is. I counsel the reader to leave all that of Cant, Dupery, Machiavelism, and so forth, decisively lying at the threshold. He will be wise to believe that these Puritans do mean what they say, and to try unimpeded if he can discover what that is. Gradually a very stupendous phenomenon may rise on his astonished eye. A practical world based on Belief in God; such as many centuries had seen before, but as never any century since has been privileged to see. It was the last glimpse of it in our world, this of English Puritanism: very great, very glorious; tragical enough to all thinking hearts that look on it from these days of ours. My second advice is, Not to imagine that it was Constitution, "Liberty of the people to tax themselves," Privilege of Parliament, Triennial or annual Parliaments, or any modification of these sublime Privileges now waxing somewhat faint in our admirations, that mainly animated our Cromwells, Pyms, and Hampdens to the heroic efforts we still admire in retrospect. Not these very measurable "Privileges," but a far other and deeper, which could not be measured; of which these, and all grand social improvements whatsoever, are the corollary. Our ancient Puritan Reformers were, as all Reformers that will ever much benefit this earth are always, inspired by a Heavenly Purpose. To see God's own Law, then universally acknowledged for complete as it stood in the holy Written Book, made good in this world; to see this, or the true unwearied aim and struggle towards this: it was a thing worth living for and dying for! Eternal Justice; that God's Will *be* done on Earth as it is in Heaven: corollaries enough will flow from that, if that be there; if that be not there, no corollary good for much will flow. It was the general spirit of England in the Seventeenth Century. In other somewhat sadly disfigured form, we have seen the same immortal hope take practical shape in the French Revolution, and once more astonish the world. That England should all become a Church, if you like to name it so: a Church, presided over not by sham priests in "Four surplices at Allhallowtide," but by true god-consecrated ones, whose hearts the Most High had touched and hallowed with his fire:—this was the prayer of many, it was the godlike hope and effort of some. Our modern methods of Reform differ somewhat,—as indeed the issue testifies. I will advise my reader to forget the modern methods of Reform; not to remember that he has ever heard of a modern individual called by the name of Reformer, if he would understand what the old meaning of the word was.

The first letter is introduced with a picturesque sketch of the town of St. Ives, the birthplace of Cromwell.

St. Ives, a small Town of perhaps fifteen hundred souls, stands on the left or North-eastern bank of the River Ouse, in flat grassy country, and is still noted as a Cattle-market in those parts. Its chief historical fame is likely to rest on the following one remaining Letter of Cromwell's, written there on the 11th of January, 1635-6.

The little Town, of somewhat dingy aspect, and very quiescent except on market-days, runs from North-west to South-east, parallel to the shore of the Ouse, a short furlong in length: it probably, in Cromwell's time, consisted mainly of a *row* of houses fronting the River; the now opposite row, which has its back to the River, and still is shorter than the other, still defective at the upper end, was probably built since. In that case, the locality we hear of as the "Green" of St. Ives would then be space which is now covered mainly with cattle-pens for market-business, and forms the middle of the *street*. A narrow steep old Bridge, probably the same which Cromwell travelled, leads you over, Westward, towards Godmanchester, where you again cross the Ouse, and get into Huntingdon. Eastward out of St. Ives, your route is towards Earith, Ely, and the heart of the Fens.

At the upper or North-western extremity of the place stands the Church; Cromwell's old fields being at the opposite extremity. The Church from its Churchyard looks down into the very River, which is fenced from it by a brick wall. The Ouse flows here, you cannot without study tell in which direction, fringed with gross reedy herbage and bushes; and is of the blackness of Acheron, streaked with foul metallic glitterings and plays of colour. For a short space downwards here, the banks of it are fully visible; the Western row of houses being somewhat the shorter, as already hinted: instead of houses here, you have a rough wooden balustrade, and the black Acheron of an Ouse River used as a washing-place or watering-place for cattle. The old Church, suitable for such a population, stands yet as it did in Cromwell's time, except perhaps the steeple and pews; the flag-stones in the interior are worn deep with the pacing of many generations. The steeple is visible from several miles distance; a sharp high spire, piercing far up from amid the willow-trees. The country hereabouts has all a clammy look, clayey and boggy; the produce of it, whether bushes and trees, or grass and crops, gives you the notion of something lazy, dropsical, gross.—This is St. Ives, a most ancient Cattle-market by the shores of the sable Ouse, on the edge of the Fen-country; where, amongst other things that happened, Oliver Cromwell passed five years of his existence as a Farmer and Grazier. Who the primitive *Ives* himself was, remains problematic: Camden says he was "Ivo a Persian;"—surely far out of his road here. The better authorities designate him as Ives, or Yves, a worthy Frenchman, Bishop of Chartres, in the time of our Henry Beauclerk.

Oliver, as we observed, has left hardly any memorial of himself at St. Ives. The ground he farmed is still partly capable of being specified, certain records or leases being still in existence. It lies at the lower or South-east end of the Town; a stagnant flat tract of land, extending between the houses or rather kitchen gardens of St. Ives in that quarter, and the banks of the River, which, very tortuous always has made a new bend here. If well drained, this land looks as if it would produce abundant grass, but naturally it must be little other than a bog. Tall bushy ranges of willow-trees and the like, at present divide it into fields; the River, not visible till you are close on it, bounding them all to the South. At the top of the fields next to the Town is an ancient massive Barn, still used as such; the people call it "Cromwell's Barn;"—and nobody can prove that it was not his! It was evidently some ancient man's, or series of ancient men's. * * *

In fact, there is, as it were, nothing whatever that still decisively to every eye attests his existence at St. Ives, except the following old Letter, accidentally preserved among the Harley Manuscripts in the British Museum. Noble, writing in 1787, says the old branding-irons, "O. C." for marking sheep, were still used by some Farmer there; but these also, many years ago, are gone. In the Parish records of St. Ives, Oliver appears appears twice among some other ten or twelve respectable rate-

payers; appointing, in 1633, and 1634, for "St. Ives cum Slepa" fit annual overseers of the "Highway and Green:"—one of the Oliver Signatures is now cut out. Fifty years ago, a vague old Townclerk had heard from very vague old persons, that Mr. Cromwell had been seen attending divine service in the Church, with "a piece of red flannel round his neck, being subject to inflammation." Certain letters, "written in a very kind style, from Oliver Lord Protector to persons in St. Ives," do not now exist; probably never did. Swords, "bearing the initials of O. C.," swords sent down in the beginning of 1642, when War was now imminent, and weapons were yet scarce,—do any such still exist? Noble says they were numerous in 1787; but nobody is bound to believe him.

Mr. CARLYLE has put in a sort of pleading for CROMWELL, in the form of an address supposed to be spoken by himself, and really in part made up of extracts from his letters and speeches, and interspersed with interjections, supposed, in like manner, to be uttered by his commentators. From this curious document we must take a few passages. It opens thus:—

I was by birth a Gentleman; living neither in any considerable height, nor yet in obscurity. I have been called to several employments in the Nation: To serve in Parliament, 'and others;' and,—not to be over tedious,—I did endeavour to discharge the duty of an honest man, in those services, to God and His People's Interest, and to the Commonwealth; having, when time was, a competent acceptation in the hearts of men, and some evidences thereof. I resolve not to recite the times and occasions and opportunities, which have been appointed me by God to serve Him in; nor the presence and blessings of God therein bearing testimony to me. [*Well said, and well foreborne to be said!*] Having had some occasions to see, together with my own brethren and countrymen, a happy period put to our sharp Wars and contests with the then common Enemy, I hoped, in a private capacity, to have reaped the fruit and benefit, together with my brethren, of our hard labours and hazards: the enjoyment, to wit, of Peace and Liberty, and the privileges of a Christian and a Man, in some equality with others, according as it should please the Lord to dispense unto me. And when, I say, God had put an end to our Wars, or at least brought them to a very hopeful issue, very near an end,—after Worcester Fight,—I came up to London to pay my service and duty to the Parliament which then sat; hoping that all minds would have been disposed to answer what seemed to be the mind of God, namely, To give peace and rest to His People, and especially to those who had bled more than others in the carrying on of the Military affairs,—I was much disappointed of my expectation. For the issue did not prove so. [*Suppressed murmurs from Bradshaw and Company.*] Whatever may be boasted or misrepresented, it was not so, not so! I can say, in the simplicity of my soul, I love not, I love not,—I declined it in my former Speech,—I say, I love not to rake into sores, or to discover nakedness! The thing I drive at is this: I say to you, I hoped to have had leave, 'for my own part,' to retire to a private life. I begged to be dismissed of my charge; I begged it again and again; and God be Judge between me and all men if I lie in this matter? [*Groans from Dryasdust, scarcely audible in the deep silence.*] That I lie not in matter of fact, is known to very many ["*Hum-m-m!*" *Look of "Yea!" from the Military Party*]: but whether I tell a lie in my heart, I say the Lord be Judge. Let uncharitable men, who measure others by themselves, judge as they please. As to the matter of fact I say it is true. As to the ingenuity and integrity of my heart in that desire,—I do appeal as before upon the truth of that also! —But I could not obtain 'what I desired,' what my soul longed for. And the plain truth is, I did afterwards apprehend some were of opinion (such the difference of their judgment from mine) that it could not well be. I confess I am in some strait to say what I could say, and what is true, of what then followed. I pressed the Parliament, as a member, to period themselves;—once and again, and again, and ten, nay twenty times over. I told them,—for I knew it better than any one man in the Parliament could know it; because of my manner of life, which had led me everywhere up and down the Nation, thereby giving me to see and know the temper and spirits of all men, and of the best of men,—that the Nation loathed their sitting. [*Haselrig, Scott and others looking very grim.*] I knew it. And, so far as I could discern, when they *were* dissolved, there was not so much as the barking of a dog, or any general and visible repining at it! [*How astonishing there should not have been!*] You are not a few here present who can assert this as well as myself. And that there was high cause for their dissolution, is most evident; not only in regard there was a just fear of that Parliament's perpetuating themselves, but because it 'actually' was their design. 'Yes,;' had not their heels been trod upon by importunities from abroad, even to threats, I believe there never would have been 'any' thoughts of rising, or of going out of that Room, to the world's end. I myself was sounded, and, by no mean persons [*O Sir Harry Vane!*], tempted; and proposals were made me to that very end; That the Parliament might be thus perpetuated; that the vacant places might be supplied by new elections;—and so continue from generation to generation. I have declined, I have declined very much, to open these things to you. [*What nobleman would not, your Highness?*] But, having proceeded thus far, I must tell you 'this also:' That poor men, under this arbitrary power, were driven, like flocks of sheep, by forty in the morning; to the confiscation of goods and estates; without any man being able to give a reason why two of them had deserved to forfeit a shilling! I tell you the truth. And my soul, and many persons, whom I see in this place, were exceedingly grieved at these things; and knew not which way to help them, except by our mournings, and giving our negatives when occasion served. I have given you but a taste of miscarriages 'that then were.'

He asserts that he summoned the short Parliament, for the purpose of settling the Nation, and laying down the power which circumstances had thrown into his hands. But their distractions, weaknesses, and jealousies incapacitated them to meet the exigencies of the times, and to save the nation from anarchy he was compelled to dissolve it.

A desire perhaps, I am afraid, sinful enough, To be quit of the Power God had most clearly by His Providence put into my hands, before He called me to lay it down; before those honest ends of our fighting were attained and settled.—I spy, the Authority I had in my hand being so boundless as it was,—for, by Act of Parliament, I was General of all the Forces in the three Nations of England, Scotland, and Ireland; in which unlimited condition I did not desire to live a day,—we called that Meeting, for the ends before expressed. What the event and issue of that Meeting was, we may sadly remember. It hath much teaching in it, and I hope will make us all wiser for the future! But, 'In short,' that Meeting not succeeding, as I already said unto you, and giving such a disappointment to our hopes, I shall not now make any repetition thereof: only the result was, That they came and brought to me a Parchment, signed by very much the major part of them; expressing their re-delivery and resignation of the power and authority that had been committed to them back again into my hands. And I can say it, in the presence of divers persons here, who do know whether I lie in that [*Hum-m-m!*], That I did not know one tittle of that Resignation 'of theirs,' till they all came and brought it, and delivered it into my hands. Of this also there are in this presence many witnesses. [*Yes, many are convinced of it,—some not.*] I received this Resignation; having formerly used my endeavours and persuasions to keep them together. Observing their differences, I had thought it my duty to give advice to them, that so I might prevail with them for union. But it had the effect I told you; and I had my disappointment. When this proved so, we were exceedingly to seek how to settle things for the future. My 'own' Power was again, by this resignation, 'become' as boundless and unlimited as before; all things being subjected to arbitrariness; and myself, 'the only constituted authority that was left,' a person having power over the three Nations, without bound or limit set;—and all Government, upon the matter, being dissolved; all *civil* administration at an end—as will presently appear.

In this singular strain of Carlylism is the death-warrant of CHARLES THE FIRST commented upon:—

"*Ipsis molossis ferociores*, More savage than their own mastiffs!" shrieks Saumaise; shricks all the world, in unmelodious soul-confusing diapason of distraction,—happily at length grown very faint in our day. The truth is, no modern reader can conceive the then atrocity, ferocity, unspeakability of this fact. First, after long reading in the old dead Pamphlets does one see the magnitude of it. To be equalled, nay to be preferred, think some, in point of horror, to 'the Crucifixion of Christ.' Alas, in these irreverent times of ours, if all the kings of Europe were to be cut in pieces at one swoop, and flung in heaps in St. Margaret's Churchyard on the same day, the emotion would, in strict arithmetical truth, be small in comparison! We know it not, this atrocity of the English Regicides; shall never know it. I reckon it perhaps the most daring action any Body of Men to be met with in History ever, with clear consciousness, deliberately set themselves to do. Dread Phantoms, glaring supernal on you,—when once they are quelled, and their light snuffed out, none knows the terror of the Phantom! The Phantom is a poor paper-lantern with a candle-end in it, which any whipster dare now beard.

A certain Queen in some South-Sea Island, I have read in Missionary books, had been converted to Christianity; did not any longer believe in the old gods. She assembled her people; said to them, "My faithful people, the gods do *not* dwell in that burning-mountain in the centre of our isle. That is not God;

no, that is a common burning-mountain,—mere culinary fire burning under peculiar circumstances. See, I will walk before you to that burning-mountain; will empty my wash-bowl into it, cast my slipper over it, defy it to the uttermost, and stand the consequences!"—She walked accordingly, this South-Sea Heroine, nerved to the sticking-place; her people following in pale horror and expectancy: she did her experiment;—and, I am told, they have truer notions of the gods in that Island ever since! Experiment which it is now very easy to *repeat*, and very needless. Honour to the Brave who deliver us from Phantom-dynasties, in South-Sea Islands and in North!

This action of the English Regicides did in effect strike a damp like death through the heart of Flunkeyism universally in this world. Whereof Flunkeyism, Cant, Cloth-worship, or whatever ugly name it have, has gone about incurably sick ever since; and is now at length, in these generations, very rapidly dying. The like of which action will not be needed for a thousand years again. Needed, alas!—not till a new genuine Hero-worship has arisen, has perfected itself; and had time to degenerate into a Flunkeyism and Cloth-worship again! Which I take to be a very long date indeed.

Thus ends the Second Civil War. In Regicide, in a Commonwealth and Keepers of the Liberties of England. In punishment of Delinquents, in abolition of Cobwebs;—if it be possible, in a Government of Heroism and Veracity; at lowest of Anti-Flunkeyism, Anti-Cant, and the *endeavour* after Heroism and Veracity.

We must not omit the beautiful and affecting picture of this great man bowed down by grief at the death of a beloved daughter, when all the world was awed by the vigour and splendour of his rule.

The Manzinis and Ducs de Crequi, with their splendours, and congratulations about Dunkirk, interesting to the street-populations and general public, had not yet withdrawn, when at Hampton Court there had begun a private scene, of much deeper and quite opposite interest there. The Lady Claypole, Oliver's favourite Daughter, a favourite of all the world, had fallen sick we know not when; lay sick now,—to death, as it proved. Her disease was of internal female nature; the painfullest and most harassing to mind and sense, it is understood, that falls to the lot of a human creature. Hampton Court we can fancy once more, in those July days, a house of sorrow; pale Death knocking there, as at the door of the meanest hut. 'She had great sufferings, great exercises of spirit.' Yes:—and in the depths of the old Centuries, we see a pale anxious Mother, anxious Husband, anxious weeping Sisters, a poor young Frances weeping anew in her weeds. 'for the last fourteen days' his Highness has been by her bedside at Hampton Court, unable to attend to any public business whatever. Be still, my Child; trust thou yet in God; in the waves of the Dark River there too is He a God of help!—On the sixth day of August she lay dead; at rest forever. My young, my beautiful, my brave! She is taken from me; I am left bereaved of her. The Lord giveth, and the Lord taketh away; blessed be the Name of the Lord.

"His Highness," says Maidston, "being at Hampton Court, sickened a little before the Lady Elizabeth died. Her decease was on Friday, 6th August, 1658; she having long lain under great extremity of bodily pain, which, with frequent convulsion-fits, brought her to her end. But as to his Highness, it was observed that his sense of her outward misery, in the pains she endured, took deep impression upon him; who indeed was an indulgent and most tender Father;—his affections" too "being regulated and bounded by such Christian wisdom and prudence, as did eminently shine in filling up not only that relation of a Father, but also all other relations; wherein he was a most rare and singular example. And no doubt but the sympathy of his spirit with his sorely afflicted and dying Daughter" did break him down at this time; "considering also,"—innumerable other considerations of sufferings and toils, "which made me often wonder he was able to hold up so long; except" indeed "that he was borne up by a Supernatural Power at a more than ordinary rate. As a mercy to the truly Christian World, and to us of these Nations, had we been worthy of him!"—

The same authority, who unhappily is not chronological, adds elsewhere this little picture, which we must take with us: "At Hampton Court, a few days after the death of the Lady Elizabeth, which touched him nearly,—being then himself under bodily distempers, forerunners of that Sickness which was to death, and in his bedchamber,—he called for his Bible, and desired an honourable and godly person there, with others present, To read unto him that passage in *Philippians*, Fourth: '*Not that I speak in respect of want: for I have learned in whatsoever state I am, therewith to be content. I know both how to be abased, and I know how to abound. Everywhere, and by all things, I am instructed; both to be full and to be hungry, both to abound and to suffer need. I can do all things, through Christ which strengtheneth me.*' Which read,—said he, to use his own words as near as I can remember them: 'This Scripture did once save my life; when my eldest Son' poor Oliver 'died; [date and cause unknown, but probably slain during the first Civil War, in which he served] which went as a dagger to my heart, indeed it did.' And then repeating the words of the text himself, and reading the tenth and eleventh verses, of Paul's contentation, and submisssion to the will of God in all conditions,—said he: 'It's true, Paul, *you* have learned this, and attained to this measure of grace: but what shall *I* do? Ah poor creature, it is a hard lesson for me to take out! I find it so!' But reading on to the thirteenth verse, where Paul saith, '*I can do all things through Christ that strengtheneth me*,'—then faith began to work, and his heart to find support and comfort, and he said thus to himself, 'He that was Paul's Christ is my Christ too!' And so drew waters out of the well of Salvation."

We might gather half-a-dozen CRITICS full of passages of equal interest, but these will suffice to tempt the reader to turn to the volumes for the rest.

VOYAGES AND TRAVELS.

Visit to the Portuguese Possessions in South-Western Africa. By G. TAMS, M.D. Translated from the German, with an Introduction and Annotations, by H. EVANS LLOYD, Esq. In 2 vols. 8vo. pp. 557. London: Newby.

THIS work comes opportunely, just as a solemn decision of the assembled judges of England has pronounced that the treaty with Brazil for the suppression of the slave-trade is waste paper; and it is apparent that, if the object is still to be pursued, it must be by some other means than any that have yet been tried. The fact has long since been ascertained that, notwithstanding the gigantic efforts and enormous sacrifices which Great Britain is yearly offering at the shrine of humanity in her endeavour to destroy the traffic in human flesh, that traffic has increased, is increasing, and the prospect of its suppression is seemingly as far off as ever.

It is certain, then, that ere long the question will be forced upon the British public for decision, whether we shall retire from the struggle in despair, or adopt other modes of warfare with the fiend who now laughs at and eludes our vain blows. To help that decision there could not be a more valuable witness than Dr. TAMS—well-informed—impartial, thoughtful, suggestive, a keen observer, a profound thinker, at once a man of the world and a philosopher.

This work of his is the latest account that has come to us of the condition of the slave-trade in the extensive regions possessed by the Portuguese in South-Western Africa, the result of personal inspection during a visit, brief indeed in point of time, but copious in its information.

The sum of Dr. TAMS's observations upon the present state of the slave-trade in that district is that it is really monopolized by a few individuals, many of whom "are not natives of Portugal, but have been sent to those colonies as convicts, often of the deepest dye; that they are not subject to any control or restriction, but are at liberty to direct every effort to one sole object—the rapid acquisition of wealth; that the slave-trade alone paralyzes every endeavour to improve the boundless commercial advantages which might be derived from the infinite variety and excellence of the natural productions of the country; and that this dominant evil reduces these colonies, which might become the most flourishing in the world, to a state of dependence on Brazil, and even on Europe, not only for many of the luxuries, but even for the daily necessaries of life.

The first step to the reform of this state of things must be the entire abolition by Portugal of the traffic now carried on in her colonies, and the propagation there of Christianity. The translator, in his preface, hints the propriety of the purchase of these territories by Great Britain; but this is a sacrifice that can scarcely be hoped for in present circumstances at home.

With this brief summary of Dr. TAMS's views upon slavery and the slave-trade, we turn to the very interesting and instructive narrative he has preserved of the incidents of his visit, abounding as it does in vivid descriptions of the country and its productions, vegetable and animal, the people, their manners, customs, and characteristics. It would be quite beyond our limits to trace his progress step by step; we shall best consult the amusement of our readers, and best exhibit

the worth of the volumes, by extracting some of the passages that appear to possess the most novelty, commending the inquiring to the work itself for further information. Suffice it to say, that the author departed from Altona on the 28th of June, 1841, and reached San Antonio on the 5th of August following, where he was hospitably received by Mr. FONSECA, the Portuguese agent.

Here is unexpected proof of the progress of

NEGRO CIVILIZATION IN THE CAPE DE VERD ISLANDS.

We scarcely had time to allay our thirst, when a well-drest, corpulent negro bustled into the hut, and demanded "which of us was the doctor to whom he had yesterday sent an invitation?" On the intimation that I was the person, he cordially grasped my hand, and led me in haste through the crowd. By the obsequious manner in which all made way for him, and the aristocratic air with which he returned their salutations, I soon perceived that he was one of the chief people of the place. On reaching the high thick wall which surrounded his house and garden, the gate was opened by a negro servant, one of the few slaves that are to be met with in San Antonio. The garden was planted chiefly with capava, oranges, and guavas; all the trees were laden with fruit, but only the cocoa-nuts and a few bananas were ripe. We proceeded to the house, which, like all the rest, lay at the further end of the garden, through a fine avenue of ancient dates—palms, plantains, and cocoa-nut trees. The beautiful order, both of the house and garden, indicated the wealth and taste of the proprietor. On entering, he immediately conducted me, with an air of conscious pride, to a large old-fashioned Nuremburg clock, which sounded "Cuckoo" every hour, and which he positively assured me was the only one in the island. According to the custom of the country, he then paid me the compliment of placing every thing at my disposal, and concluded by saying, "While you continue under this roof, I shall have the honour to be your guest, and you will be my host." The great man then ordered breakfast to be prepared, and a large table was immediately covered with refreshments. A messenger was despatched for Mr. Wrede and Mr. Grossbendner, our two naturalists, who were still at the inn; a crowd of people followed them uninvited, and, utterly regardless whether or not the company was agreeable to the master of the house, were resolved to have their share in the ample collation which he had provided.

Every luxury which the island afforded was displayed in great profusion; and our host not only set us a good example himself, but was unwearied in inviting us to partake of the good things which were spread out before us. Our repast would have been nowise inferior to an excellent European breakfast, if good potatoes had been substituted for the roasted bananas, and foreign wines for the execrable beverage of the country. We had no bread, but small Brazilian biscuits were handed round, with very fair European butter; and a great variety of preserved tropical fruits, especially oranges, were also passed round with every dish.

Our jovial friend successively drank the health of his guests with extraordinary rapidity; according to etiquette, we were obliged to empty our glasses, and, in proof that we had duly performed our part, we had to sound them upon the table. I must confess, that I was greatly surprised at the decorous behaviour of every person present; and although a great deal of wine was drank, no one appeared to be in the least affected by it.

When our host rose from table, most of the company retired, but he invited me to follow him to that part of the house where his wife and daughters lived in complete seclusion. The separation of the two sexes, and the consequent timidity of the females in the presence of a man, naturally excited my astonishment, because this practice seems wholly at variance with the manners of an insular people, whose chief attraction is a childlike simplicity, and innocent freedom from conventional restraint. This Mahometan institution was introduced into the Cape Verd islands by their intercourse with the countries along the northern coast of Africa, which was formerly much more frequent than at present. Polygamy has not, however, followed as a consequence; at all events is not tolerated here.

On the 11th of October they sailed into the harbour of Benguela, one of the finest on the coast of Western Africa; and there landing, the Doctor found himself for the first time in a country inhabited by negroes. "It was not without repugnance," he says, "that I got upon the back of a sturdy black fellow, whose face was striped with red earth, and held fast by his disgusting greasy hair, till we were fairly on *terra firma*."

Nor were these first impressions effaced by subsequent acquaintance. The Portuguese governor had been sent thither for some misdemeanor, and he appeared to wield his power with little care for aught but his own emolument. The days are scorching; the evening only permits out of door exercise, and then what horrible nights. As witness:—

As soon as darkness sets in, all hurry anxiously home; even the negroes desert the street, or lie round a blazing fire in front of the dwellings, or, if obliged to be abroad, carry lighted torches in their hands to scare away the wild beasts. "Darkness seems to be alive," for the silence of night is broken by the cries of ravenous beasts of prey, chiefly the hyena, whose presence in the town is immediately announced by the howling of the dogs, which slink away in evident terror.

While the European stranger is filled with apprehension at the proximity of such neighbours, the inhabitants, who are accustomed to it from childhood, are almost indifferent to it, although it is by no means unusual for men to fall a prey to these ravenous creatures. Indeed, only a few days before our arrival, a female slave was devoured by a lion close to the town, at noon-day.

Let us subjoin the graphic picture of

A DAY AT BENGUELA.

The terrors of the night are quickly dispelled by the transcendant beauty of the morning. Earth glows in her primeval beauty, all nature smiles in the loveliest verdure, and the delicious coolness of the atmosphere invites every one to enjoy the early dawn. From half-past five till eight o'clock, when the sun gradually dispels the silvery mist that is spread over the earth, is the busiest part of the day, and the time most enjoyed by the European; the merchant then attends to his business, the physician visits his patients, and the negro goes a fishing, or looks to his maize and tapioca, when he cultivates any, which is not often the case.

Suddenly the whole scene changes; the sun begins to shoot down his vertical rays, and the European, who dreads the fierce magnificence of this glorious luminary like the pestilence, retires to his house for the day, while the negro lies down before his hut, smokes tobacco, and basks in the sun; but neither dance nor song is heard. The numerous birds disappear; the little parroquet and the African humming-birds seek the thickest shade; the songsters of the woods are mute, and the plants, which but a moment before looked vigorous and fresh, languidly droop their leaves. The pulses of nature seem to be stopped; every sound is hushed; there is not a breath, not a motion in earth or sky; an unearthly deathlike stillness prevails, which, combined with the oppressive heat, is more trying to bear than all the terrors and discomforts of the night.

All the slave dealers here are Portuguese, and so flourishing in the trade that in the year 1838 nearly 20,000 slaves were exported.

The custom of the negroes is to burn their dead; but this duty is intrusted to one negro. By the existing laws this burning cannot take place till after sunset; then his life is in danger from wild beasts, and he is obliged just to fire the pile and run for it. The flames usually perform their work but imperfectly, and the hyenas do the rest. Of this beast of prey Dr. TAMS gives some interesting particulars.

THE HYENA.

These animals are so numerous in Benguela and its environs, that it is no difficult matter to find hundreds of their holes in the space of half an hour; and not a night passes without their proximity being betrayed by their disagreeable howl. By dint of exertions, the hyena is able, in the course of a few hours during the night, to burrow into the loomy soil, which is hardened by the heat of the sun, and to prepare for itself a subterranean dwelling. In the most busy parts of the town, such pits or burrows are often found in the morning, left in an unfinished state, the animal having been disturbed by the noise of the stirring population. The aversion of the hyena from the light of day is so great, that you may tread upon a pit or den in which it is reposing, without any apprehension; nay, we were not even able to induce it to leave its den, either by hallooing or throwing stones, while four or five of us stood prepared to receive it with our pieces ready cocked.

The mouths of these dens are three or four times as large as a fox's burrow, and run from ten to fifteen feet under ground, when they make a turn, so that it is impossible to reach the animal, while it is crouched in its lair, by stones or shot. The hyena very rarely makes its appearance in the day-time; but during our stay in Benguela, one of them actually lay down in an open space in front of our house, which was situated in the very heart of the town, and was shot at five o'clock in the afternoon. After it was shot, it bit the iron lance which was thrust into its jaw, with such fury, that it broke three of the strongest grinders in pieces.

It strikes me that the hyena is unjustly charged with great cruelty; I made many inquiries, but nobody could adduce a proof to substantiate the accusation. From the concurrent testimony of the inhabitants, the hyena, when not provoked or assailed, never attacks a living man; but the churchyards are its favourite resort, and corpses its favourite food.

The religious ceremonies are curious.

A NEGRO MARRIAGE.

Eight days prior to the marriage, the bride is brought to a solitary hut, where she is daily visited by a negro saint, and anointed with oil over her whole body. This office of the negro saint, though not prevalent in every village, is to give his *protégée* practical instruction in all her future matrimonial duties, and by the performance of various religious ceremonies, to secure for he a happy marriage and a numerous progeny. At the expiration of these eight days, the bride is taken to another dwelling, where for the space of three days, she is treated by her relations and acquaintances like a queen, and receives numerous presents of ornaments and articles of dress; the dowry given by her parents, being chiefly of the latter description. During this time, the bride is entertained with divers religious practices, and especially with dances, which, for the most part, are initiatory to her approaching union; at the expiration of these various rites, the bridegroom takes her to his own home. The whole of the marriage ceremony is distinguished by the name of "Lembamento."

But it is on the occasion of a death that superstition assumes its most hideous form.

An almost universal belief prevails among the negroes, especially in some districts of Benguela, that death is not a natural event; but that the soul of a person previously deceased, or the Fetish of some one still living, has carried off the soul of the individual just departed. In order to obtain certain information on this point, various manœuvres are practised with the corpse, and the most devout and clear-sighted among the natives are consulted for the purpose of ascertaining who was the murderer of the deceased. Suspicion at length falls on the Fetish of some negro, and not unfrequently of a whole family, all of whom must then atone for the crime, either by death or slavery. In some cases, the body is borne by two negroes past every dwelling in the village, till the corpse itself is said to point out the hut of the murderer; and the bearers affirm that the dead man will not suffer himself to be carried any further. Any desire of vengeance, which may have been rankling in the breasts of the relations of the deceased, now acts most powerfully, and woe betide him who has been an enemy to the family. The suspected man cannot even prove his innocence by showing that he was absent at the time of the death; because it is taken for granted that his Fetish is not confined to time or place.

There is, however, a means of justification among the negroes, by which every accusation may be cleared away. It is called "Imbolungo," from the name of a plant whose roots contain a narcotic poison: the accused takes some of this, and the poison either excites vomiting, without any deleterious effect, or narcotic symptoms, in which latter case he is declared guilty of the crime imputed to him, and, as a condemned man, he soon dies from the effects of the poison, unless a well-known antidote be administered, or he is stoned to death.

The Cabindian negroes consult an idol, which they keep in their houses for the purpose. The ceremony is thus performed:—

The negro, seating himself cross-legged on the ground, takes up in a prescribed manner, with his right hand, this idol, or manipancha, as it is called by the Cabindians. It is a small human figure, wretchedly carved in wood, and generally clothed in dirty rags. A glass of brandy or of water is then presented to him, a small portion of which he takes into his mouth, and splutters at his manipancha, in order to dispose of it by this libation for the desired communication. He now commences a low murmuring of unintelligible prayers, and then holds the manipancha to his left ear; after a few minutes, he repeats in a loud voice, the petition or question he has put up to the idol. If his manipancha is not disposed to answer him immediately, which is frequently the case, he again repeats his prayers in the same low tone of voice, and he puts his idol to his ear, to ascertain whether any answer will be accorded.

When the god is won, the negro is seized with violent convulsions, and then he relates to the spectators the communications he has received. The manufacture of these idols is confined to a peculiar class of workmen, who, while engaged upon it, are not allowed to follow any other employment, or to hold intercourse with any of their relations and acquaintances.

At Loanda, Dr. TAMS was introduced to the wife of the Portuguese physician resident there, a Spanish lady, who lived in great luxury. He describes her treatment of her slaves as most cruel. The following statement reverses a trait of human nature usually observed in civilized countries, namely, that a servant makes a bad master:—

The notion which is almost universally prevalent in this country, that the negroes are not men, but, as the Portuguese usually say, *sao macacos* (monkeys), may be a principal cause why the slave in very rare cases only, meets with humane treatment from Europeans; but Donna Catarina, the wife of the physician, seemed to feel a real pleasure in standing in the balcony, and with a fiendish smile, looking upon the poor wretches writhing under the whip. Hence it was, that every one in Loanda preferred purchasing slaves which had been disciplined under the eye of Donna Catarina, and paid a higher price for them than for those which were trained in other houses.

I remarked just now, that the European seldom treats his slaves with lenity; nay, I must candidly confess, that I met with very few instances of the kind; whereas, the native, whom worldly success has made the owner of slaves, never practises such inhuman cruelty; at any rate a case of this kind never came under my notice, either in Benguela or Loanda, although some of the wealthy slave-owners in both towns, who were themselves formerly slaves, have a great number in their immediate service. Thus, for instance, Donna Anna Oberthaly frequently expressed her disapprobation of the cruelty of my hostess, and observed, that there would be no surer means to induce her to amend her conduct, than to receive a severe castigation herself.

Donna Anna was born in the interior of Africa, and brought as a slave to Loanda, where she now lives in great style, and carries on a prosperous trade in slaves; but I must do her the justice to say, that she practises no wanton cruelty, but, on the contrary, treats her dependants with great humanity. None of her numerous slaves bore upon their backs any traces of having suffered punishment; and whenever a grievous fault was committed, she endeavoured to sell the culprit rather than inflict a severe chastisement. Notwithstanding this mild treatment, her people were well trained, and very skilful in all domestic duties.

One of the most curious sights at Loanda is the entrance of

A CARAVAN.

I have often seen caravans, consisting of more than two thousand persons, every one of whom carried some kind of wares. This vast influx of people, from different quarters, their motley appearance, the variety and abundance of their merchandise, their strange dialects, and singular manners, present an ever-changing scene, and give to the streets of Loanda the greatest animation.

However extensive the caravans may be, the people invariably walk in single file, partly on account of the narrowness of the paths, but chiefly from prudential motives, because, if they were at all scattered, a wild beast might easily seize a victim. The negroes who head the caravans always have bells hanging about them, which make a tingling noise at every step, and startle or frighten any wild beast that may happen to be lurking by the road-side; the rear is also brought up by men wearing bells.

It is not always easy, at first sight, to distinguish the few slaves who are intended for sale; they are frequently mixed with the caravan, walk in the line with the rest, and, like them, carry goods; but sometimes they follow the train with their hands tied behind their backs, or with ropes round their necks. If the caravan consists of only a few individuals, conducting a large body of slaves, they are compelled to adopt measures to ensure their own safety, and to provide against running the risk of being murdered in their sleep. In such cases, the slave-leader is provided with a long pole, which is furnished with a kind of fork at the end, into which the neck of the slaves is fixed, the other end is fastened to the body of the leader, who, in this manner, always remains at a safe distance, so that he can, without apprehension, lie down to sleep; at which time the hands of the slave are bound behind his back, that he may not take the opportunity of relieving himself of the fork about his neck.

If the slaves are very numerous, they are fastened to each other with chains or ropes about their necks, and their hands bound; the drivers are of course always well armed, and, on the slightest appearance of danger, will save their own lives by sacrificing those of their slaves.

But we are tempted too much by the novelty and liveliness of these agreeable pages, and already we have trespassed beyond our proper limits. With one more extract we conclude. It is a sketch of

A GOVERNOR'S BALL.

A heterogenous throng of blacks, whites, and mulattoes, all

equally proud of the honour which they enjoy, are here mingled together; among the characters in this motley group, we find a female richly adorned with gold and jewellery, who came to these shores not many years ago, from a province in the interior, as an unhappy slave, and subsequently, by her beauty and her wiles, obtained both liberty and riches. Here was a man who had received his first and only education as a cabin-boy or sailor, and came as a prisoner on board a slave-ship to this coast, where he soon made his fortune. A third, banished from Lisbon for some piece of roguery, and who had been educated and trained in the streets of his native town, here recovered his character, and acquired so much property that he thinks himself entitled to assume great importance. A fourth had his reasons for running away from a company of strolling actors in Madeira, and now carries on a more lucrative kind of trade here. There were possibly some among them whose mind and understanding were rather more cultivated; but at all events, these were so few in number, that they exerted no visible influence on the company.

And here reluctantly we conclude, recommending this narrative to the Book Club and the Library. The first volume alone has yielded the above passages, and the second is equally rich.

FICTION.

La Soubrette; or, the Adventures and Recollections of Theresa Dornay. A narrative founded on facts. In 3 vols. London, 1845. Madden and Malcolm.

We presume that the facts upon which this novel are alleged to be founded are not the adventures of the heroine, but the characters and some of the incidents introduced, the author making the fiction the medium for recording divers persons and scenes witnessed in the course of his personal experiences, and also for the advancement of that which appears to be his main purpose, namely, to exhibit the condition of governesses, and the treatment to which they are subjected. The story opens with an extremely romantic narrative of the loves of Theresa's parents, which are only exceeded by the variety of fortunes that attend herself, from her appearance as a lady's maid, and progress through the different stages of servitude in the condition of a governess, until at last she marries a duke, and becomes a real duchess. But, before the author conducts her to this lofty position, he bids us accompany her into a multiplicity of adventures, some grave, some gay, some painful, some pleasant, and introduces us to many odd and good and bad characters, which bear upon them the intrinsic evidence of verisimilitude, and doubtless were *the facts* alluded to in the title-page. It would be impossible to make any thing like an abstract of a story so abounding in incident, and therefore we will not anticipate the reader's interest by the attempt. The writer, whether lady or gentleman we know not, is evidently unpractised in authorcraft; but there are traces of ability and power which, with practice, will not improbably secure for him a very respectable place among the novelists of the age. He has a quick eye for character, a fertile invention, a plain but vigorous style, and a good sound moral aim, which, rightly and laboriously cultivated, can scarcely fail to accomplish much better things than *La Soubrette*. But this, if it be not among the first of the novels of the season, is certainly entitled to a second place; and if it do no more, it will be sure to interest the reader in the fortunes of the heroine, and tempt him to pursue them to the end. It may be placed upon the list that is not required to be very choice indeed.

Forest and Game Law Tales. By Harriet Martineau. In 3 vols. Vol. I. 12mo. pp. 252. London, 1845. Moxon.

Miss Martineau informs us in her preface that a change in the Game Laws being inevitable, it was considered by some of her friends that such change might be more easily and safely accomplished "if a clear knowledge of the operation of the present system on all the parties concerned were more general than it is found to be." And it was at their instigation that she was induced to give her aid towards the advancement of that object, by means of the instrument which she had before wielded so effectively—didactic fiction. Hence the idea of the series of tales, the first volume of which now lies before us.

Miss Martineau has selected three epochs of our history for her illustrations of the Game Laws, and their practical effect upon the population among whom they prevail. This first volume is devoted to the old forest laws of Canute, and those still more stringent enacted by the Norman Kings, and which endured until swept away by the torrent of public indignation in the revolution of 1640. The forthcoming volumes are to illustrate the operation of the milder system that prevailed from the revolution of 1688 to the change of the law in 1831; and an exposition of the working of the existing system, as it affects all the parties related to it.

The first tale is entitled "Merdhin," and is intended to shew the nature and operation of the Forest Law forced upon the Saxons by their Danish conquerors. The second, named "The Manor and the Eyrie," is laid in the times of the early Norman Kings. The third, "The Staunch and their Work," descending somewhat later, exhibits the ultimate effects of those harsh laws upon the happiness of the people; and the fourth, which closes the volume, and is entited, "Old Landmarks and Old Laws," traces the still more remote consequences to the point where endurance had been carried to the utmost, and humanity was about to rise in rebellion against intolerable oppression.

As a literary production, independently of their political purposes, these tales are, in all respects, worthy of the past fame of the authoress. Like her other works of the same class they have an interest as fictions, perfectly apart from the lessons they are designed to teach. Indeed, so excellent are the narratives, that we are apt to forget the moral intended to be taught in the absorbing attraction of the story. Whether the reader will draw for himself the conclusions designed to be impressed upon him is a problem that might admit of doubt; but there will be no question as to the great ability with which Miss Martineau has accomplished her task, nor that this new series of didactic fictions will command a popularity scarcely less than that enjoyed by its predecessors. Whatever the reader's individual opinions upon the subject to which they are devoted, he cannot fail to reap both instruction and amusement from the perusal of these *Forest and Game Law Tales*, which may be safely ordered by all book-clubs, and even placed with advantage in circulating libraries.

Elinor Wyllys: a Tale. Edited by J. Fenimore Cooper, Esq. London, 1845. Bentley.

This, too, is a borrowed book, but it has less cause to fear or shrink from the notice of an honest adviser of the circulating-library-keepers than some others that are withheld from us. We have already, more than once, denounced the system of "editing" novels, as intended to impose upon the unwary through a mistaking of the name of the editor for that of the author. Although this is really not Cooper's, but the production of a lady friend of his, still it is not less obnoxious to the complaint. A novel is not a work to be edited. What does the editor do, or add, or change, or write? Nothing. He but lends his name to the title-page. With what intent? Can any body doubt? In this instance it may have been to serve a friend, as in others there is the disgraceful bargain of a sale of the name for so much hard money. But although this alters the complexion of the business as between the parties, it by no means changes its character in relation to the public.

However, *Elinor Wyllys* is really better than most of those introduced to the world in this discreditable fashion. It is a tale of American middle-class life, not remarkable for novelty of plot, incident, or character, but written with an easy, and almost graceful pen, exhibiting a good deal of sentiment, conveying a sound moral, and marked throughout by good taste. It is one of those average productions which admit neither of praise nor censure; which has no special claims upon the circulating library; which it would be wise not to order unless in lack of novelty more attractive; but which will pass muster, and even hold a respectable place among, the multitudes on the shelves.

The Chainbearer; or, the Littlepage Manuscripts. Edited by the Author of "The Spy," &c. In 3 vols. London, 1845. Bentley.

Another of Mr. Cooper's foster-children, obnoxious to the same remarks as *Elinor Wyllys*. But there is a grave

objection to this work, which our librarian readers will thank us for pointing out to them. Would it not appear from the title-page that this is a novel, and might not some be tempted to order it as such? Now, what is the fact? It is no novel at all. There is a sort of tale that occupies about one volume, and the remainder is filled with essays on American society, manners, scenery, &c. &c. very little interesting to the English reader, and certainly possessing no such merits as compositions as to entitle them to preservation in a collected form. Great would be the grumbling of the subscribers to the library were this work to be sent them as the last new novel, and great would be the indignation of the librarian if he had ordered it in ignorance of the true nature of its contents. If THE CRITIC do no more, we shall save him many pounds a year, simply by guarding him against deceptive title-pages and advertisements.

The Young Baronet: a Novel. By the Author of "The Scottish Heiress," "The Young Widow," &c. In 3 vols. London, 1846. Newby.

The Young Baronet amply redeems the promise contained in the author's previous publications. "The Scottish Heiress" was especially rich in auguries of the future, when experience should have come to the aid of genius, and age have somewhat tamed the exuberance of fancy, and checked the overflowing of words. In every particular where it was needed is improvement visible here; and that without any sacrifice of real merits. We can have no hesitation in pronouncing *The Young Baronet* by far the best of the author's fictions, whether in its plot, its portrait-painting, its descriptions, or its dialogues. As with its predecessors, the scene is laid in Scotland, with whose people the author is evidently familiar. The time is our own epoch, the year of grace 1832: the incidents are such as may be found continually enacted in the world we live in; the characters such as we meet or might find if we looked for them. Nothing is far-fetched or extravagant either in the story or its telling. The author is evidently a keen observer of men and things, although we should surmise, from the manner in which some scenes are handled, not one who has enjoyed a very extensive intercourse with society; life has not been seen in all its forms, and a few of those attempted to be depicted are manifestly rather pictures of the fancy or copies after books than sketches from nature. But when the subject admits of a personal inspection, nothing can be more vivid and truthful than the drawing the novelist takes of it: the landscape lives before us; the man moves and speaks. The oft-told tale of an election is repeated in these pages, but the author has contrived to throw into it a fresh interest, and to present it in a new aspect, perhaps because the opportunity has been taken to infuse the realities of the Reform Bill and Scotch Kirk agitations into the business of the scene.

We had some thought of presenting a short outline of the plot, but upon reconsideration we have determined not to do so, inasmuch as it greatly mars the reader's pleasure, and can be of little real service to the author. Nor would extracts interest without the contexts; nay, scarcely could they be made intelligible. Thus, to present isolated passages from scenes is unfairly to place the author before the public for judgment; and to take scenes entire would be foreign to the plan of THE CRITIC, and an encroachment upon its space, which other claims would not permit. Nor in this case is any such exhibition of style needful, for the author is already familiar to most novel-readers; no other introduction can now be required than of the name of any new work from that well known pen, with the expression of such a general opinion as may serve to guide the circulating libraries in their orders and the reader in borrowing, and to both we can with confidence recommend *The Young Baronet*.

Household Tales and Traditions of England, Germany, France, Scotland, &c. &c. 12mo. pp. 188. London, 1845. Burns.

THIS volume of the *Fireside Library* will be welcomed by the young people every where, and if others retain the same love as we do for the fictions that charmed their boyhood, by men and women too, as a gathering of the tales and traditions now dimly dwelling in the memory, or only to be found scattered about in numerous volumes, or in stranger languages. No less than fifty-two of these fine old fictions are here presented, tastefully printed, and embellished with spirited woodcuts, and who is there who will not be pleased to renew his acquaintance with them in such an attire? It will not be the least acceptable volume of this unique series.

POETRY.

St. Lawrence's Well; a Fragmentary Legend of the Isle of Wight. By HENRY BRINSLEY SHERIDAN, Esq. London, 1845. Madden and Malcolm.

IN external beauty this volume is unique: it is the most chaste and elegant specimen of binding we have seen, and the typography exhibits equal taste. For this alone, and as a mere ornament for the drawing-room table, it will deserve attention and command a sale. As for the poetry, it is of the class that calls for no special comment, either in the way of applause or censure. It is of the average quality of amateur verses. The author has no pretensions to the title of a poet in the true sense of that term; but he composes very respectable rhymes, unimpeachable metre, and in these he clothes his legend, which he tells very much as it would be told by any educated person accustomed to composition, but without any of the original thoughts which, when the eye lights upon them, the mind instantly recognises as the utterings of genius, the flash of inspiration.

The Maiden Aunt: a Comedy. By RICHARD BRINSLEY KNOWLES. 12mo. pp. 63. London, 1845. Moxon.

OUR dramatic record has already given an account of the plot of this drama and its reception. Perusal of it does not change the opinion there given. It is not quite a failure, and yet it is not successful; but something of this may be due to youth and inexperience. It wants the fine bits of poetry that continually flash upon us in the works of the father, and too often it descends into *very* commonplace. There is promise in it, however, and with study and perseverance Mr. KNOWLES may yet maintain the reputation of his name as a dramatist. But we would advise him, before he again appears either upon the stage or in print, to submit his manuscript to a judicious friend, with absolute power to alter or expunge. Had he so done with this, it would have given less occasion for critical comment, and might have secured more applause.

RELIGION.

The Plea of Conscience for seceding from the Catholic Church to the Romish Schism in England. By W. SEWELL, B.D. *To which is prefixed, An Essay on the Power of Conscience.* 8vo. pp. 53. Oxford, 1845. Parker.

THIS is the substance of a sermon preached before the University of Oxford, on the 5th of November. The subject, as its title implies, is the melancholy one of the recent secessions from the English Church. Mr. SEWELL, it will be remembered, was one of those who, at the commencement of the movement, materially helped it onward by his advocacy; but instead of going forward upon the path himself had opened, he has been one of the first to turn back. His orthodoxy having been thus exposed to suspicion, he appears to have taken the opportunity to re-establish himself by attacking those who, if misled, were so by him and with him, and they have been made peace-offerings for the security of his own fellowship and other good things, which seem to have turned the scale in his mind when balancing between his faith and his fortunes. The *Plea* is eloquently written, for Mr. SEWELL is really a very able man; but we must confess that it comes with an ill grace from him. Still, it cannot fail to attract all who have interested themselves in the recent schism.

MISCELLANEOUS.

A Gallery of Literary Portraits. By GEORGE GILFILLAN. 8vo. pp. 443. Edinburgh, 1845. Tait.

IF these *Portraits* have not already appeared in some periodical, they ought to have done so; for, read singly at intervals, they would have shewn to more advantage than in this their collected form. The idea is not a novel one; it was

first started, we believe, by HAZLITT, in the *Examiner*, and its popularity has led to countless imitations, with which newspapers and magazines were deluged for many years. Of late, however, they have gradually passed out of fashion, or at least, out of sight, and Mr. GILFILLAN'S volume really took us by surprise, for we had scarcely expected again to meet with such, after the contempt into which a design, not in itself a bad one, was brought by the caricatures of GRANT.

Now Mr. GILFILLAN is really very superior to his immediate predecessor in the same walk: he is no penny-a-liner; he does not take his portraits after the fashion of the reporters of the police-offices; unlike Mr. GRANT, he does not exhaust the dictionary in describing the cast of the features, and the cut of the clothes, and the peculiarities in the speech and motions of his subjects. The mind is his study; his purpose is to measure the capacities of the genius of each of his heroes as deducible from his acts, and speech, and writings. This is a more exalted aim; it is high art; a large intellect is required in the limner who could successfully accomplish this: he must possess acute perceptions, and comprehensive powers of reasoning; he must be well versed in the physiology and philosophy of mind; he needs extensive experience of the world and of men, with courage to express his opinions, and eloquence to maintain them.

Mr. GILFILLAN has some of these qualifications. He can read a man's book, and say to what mental faculties its various features are due. He readily recognises the excellences and the defects of whatever is submitted to his contemplation. He is wanting chiefly in the wisdom which only age and experience can bring to a man. In his preface he remarks truly, that the life of every thinking man may be divided into three eras,—the era of admiration, the era of action, andthe era of repose. His is evidently that of admiration; and hence he sometimes colours too warmly, and forgets the shadows. Still there are undoubted evidences in this volume of an ability, which, when he arrives at the era of action, will make him a useful and a prosperous man, provided that he will really pass from contemplation to action, and keep the ideal under subjection to the practical; not expelling it altogether, for that would be to err the other way; but using it for the embellishment of his life, and not for its business.

But this by the way. *Our* business is now with his volume, which contains some six-and-twenty pen-and-ink portraits of the most distinguished literary characters of our age, some of them having the further attraction of a lithographed portrait. They all exhibit both the merits and the defects we have described above, but all are interesting, and will reward perusal, if the reader will but take care not to read too many in succession; for then there is a certain reiteration of phrase and uniformity of feature, unavoidable we admit, but still somewhat wearisome. It would not suit our space to examine the correctness of the judgment he passes upon the various intellects over which his glance is cast. To many we can cordially subscribe; from others we should entirely dissent. This must be the amusement of the reader, who will doubtless enjoy the task of comparing the estimates of Mr. GILFILLAN with his own, and correcting his opinion by such sufficient reasons as he may find adduced in these pages. It is a work very well calculated for the book-club, where a variety of tastes are to be consulted; for every body will here find something said about somebody in whom he feels an interest. We must content ourselves with a few miscellaneous extracts, that will best shew the manner of Mr. GILFILLAN'S composition, and bear witness to the justice of the comment we have ventured.

ROBERT HALL'S WIT.

We must not omit, while enumerating his intellectual qualities, to notice his wit, which, we think, discovers the fertility and power of his mind, more than his serious writing. We find striking specimens of it in the conversational fragments which have been preserved, and also in his political writings and his reviews. It is as sparkling and pointed as Johnson's, and far more broad and daring. He carried it with him to the madhouse. It is told, that when visited in his confinement by some person he did not like, and who asked him in a whining tone of affected condolence, "What brought you here, Mr. Hall?" Touching his brow, Hall answered, "What'll never bring you, sir,—too much brain." Sometimes his love of point hurried him to the brink of the profane. Talking of Dr. Ryland, he said once, "Why, sir, Dr. Ryland's all piety; all piety together, sir. If there were not room in heaven, God would turn out an archangel for him." No one save Hall could or would have said this: "Is it true, Mr. Hall, that you are to marry Miss So-and-so?" "I marry Miss So-and-so! I would as soon marry Beelzebub's eldest daughter, and go home and live with the old folks." Frequentlyhis repartee is as happy as it is bold. That in calling Dr. Owen a "continent of mud," he has only stated the truth, will be owned by most who have tried to flounder through his intolerable tediousness. And what can be better than his reply to Horsley, who, for his political opponents, had offered up a prayer in the spirit of an indictment: "Miserable men, they are yet in the gall of bitterness and in the bond of iniquity." "Plenty of the first article," he says, "they must have, after he has distilled his own; and if the bonds of iniquity are not added, it is only because they are not within the reach of his mighty malice." Many other specimens, published and unpublished, might be given, but let these suffice.

DR. CHALMERS.

His appearance and mode of speaking have been often described. His eye, especially when excited, has a gray glare of insanity about it; his brow is broad rather than lofty; his step quick and eager; his accents fast and hurrying; his pronunciation barbarous; his gesture awkward; his delivery monotonous; but, need we say? all these defects are forgotten and drowned in the fierce and rapid stream of his eloquence. We have seen his face flushing up, like crystal goblet when filled with wine, as he warmed with his theme: his eye the while almost starting out of its socket, as if determined, in spite of itself, to become eloquent. No one quotes poetry with more effect, and we have heard him give to a doggrel hymn an effect almost sublime. In private he is the most benign and cordial of men; a generous critic, and a warm sympathizer with every species of genuine excellence. Altogether, with many of his peculiar views we do not coincide; though with the flatteries of his parasites we do not agree; though we do not think him a Jeremy Taylor, nor a Barrow, nor a Chrysostom, nor a Burke; we are free to confess, that he is a good, a wise, an honest, and a great man.

THE GENIUS OF THOMAS CARLYLE.

Carlyle is a Scottish German: he has grafted on a strong original stock of Scottish earnestness, simplicity, shrewdness, and humour, much of the mysticism, exaggeration, and eccentricity of his adopted country. Even though he had never read a page of the Teutonic grammar, he would have been distinguished as a man of original powers, profound sincerity, and indomitable perseverance. But, having studied and swam, for years together, in the sea of German learning, like a levinthan, he has become a kind of literary monster, German above, and Scottish below. The "voice is Jacob's, the hands are Esau's." He is a hybrid. The main tissue of his mind is homely worsted; but he has dyed it in the strangest colours, derived from Weimar and Bayreuth. Endued by nature with a "strong in-kneed soul," and fitted to be a prose Burns, he has become a British Richter. We have sometimes doubted if he did not *think in German*. Assuredly, he writes in it, uses its idioms, practises its peculiarities of construction; not merely defends, but exemplifies its most daring liberties, and spreads his strong wing over its glaring defects. Although possessed of unbounded originality, he long contented himself with being a gigantic echo-cliff to the varied notes of the German lyre, rendering back its harsh discords, as well as its soft and soul-like sounds. And here lies at once the source of his defects and his merits. One who is unacquainted with German authors reads Carlyle with the utmost amazement: he is so utterly different from every other writer; his unmeasured sentences; his irregular density; his electric contrasts; his startling asseverations; his endless repetitions; the levity in which his most solemn and serious statements seem to swim; the air of mild, yet decisive scorn, with which he tosses about his thoughts, and characters, and the incidents of his story; the unearthly lustre at which he shews his shifting panoramas; his peculiar, and patched-up dialect; the singular terms and terminations which he uses, in unscrupulous abundance; the far and foreign strain of his allusions and associations; the recondite profundity of his learning, and those bursts of eloquent mysticism which alternate with yet wilder bursts of uncontrollable mirth and fuliginous irony,—produce an "altogetherness" of impression exceedingly startling. But, to one acquainted with German, the mystery is explained. Some, at least, of the peculiarities we have mentioned, are seen to be those of a whole literature, not of a solitary *littérateur*; and he who laughs at Carlyle must be prepared to extend his derision to the sum and substance of German genius. Still we doubt, along with Johnson, Foster, and critics of equal name, if any human understanding has a right to form, whether by affectation, or imitation, or translation, a dialect entirely and ostentatiously singular. A peculiar diction, it is true, has been considered by some one of the immunities of intellectual sovereignty; but he who adopts a uniformly uncommon mode of enunciating his ideas, and, still

more, he who transplants his style from a foreign country, does it at his peril, subjects himself to ugly and unjust charges, injures his popularity and influence, and must balance the admiration of the initiated few, with the neglect or disgust of the ignorant or malignant many.

But the defects to which we have referred, being chiefly of style and manner, rarely of substance, and never of spirit, form but a feeble counterpoise to his merits; his "pictorial omnipotence;" his insight into the motives and minds of men; his art of depicting character, often by one lightning word; his sardonic and savage humour; his intense hatred of the false, and love of the true; his bursts of indignant declamation and spiritual pathos; his sympathies with all power which is genuine; all genius which is unaffected, and all virtue which is merciful; his philosophy, at once mystic and homely,—obscure, indeed, in its premises, but most practical in its results; and, above all, that almost religious earnestness, which casts over all his writings the shadow of deep seriousness. We know not what Carlyle's creed may be, but we honour his reverence for the religious principle in man. No one has a deeper sense of the Infinite and of the Eternal; no one has knelt with more solemn awe, under the soul-quelling shadow of the universe, or looked up with a more adoring eye to the "silent Immensity and palace of the Eternal, of which our sun is but a porch-lamp." No one has expressed a higher reverence for the "Worship of Sorrow;" and it was "worth a thousand homilies" to hear him, as we were privileged to do, talking for four miles of moonlit road, with his earnest, sagacious voice, of religion, baring, ever and anon, his head, as if in worship, amid the warm, slumberous August air.

And thus of a kindred spirit,—

RALPH WALDO EMERSON.

Perhaps of a higher order than any we have named, is Ralph Waldo Emerson. He is the most original mind America has hitherto produced. After centuries of imitative slavery, it has at length born a native man. He has come straight from the wilderness, dripping with the dew of the aboriginal woods, and touched with their mild and solemn darkness. He is the first of a brood of Titans, who, in his own words, shall yet "laugh and leap on the continent, and run up the mountains of the west on the errands of Genius and Love." His province intellectually has been, to try to map out the domains of "Cloudland," and from the thick darkness of mysticism to protrude certain sharp points and brilliant edges of meaning. He has united in his single self much of the abstruse conception of the German, the ethereal subtlety of the Greek, and the practical acuteness of the American understanding. His insight is quiet and keen, may be called rather a mild, warm breath of enthusiasm passing over all things, and solving them as it goes by. He sees because he has first loved, and to this soft key what lock but must yield. His utterances are abrupt, and scattered amid much surrounding darkness, and remind you of those tongues of flame which you sometimes see high up amid the smoke, and cut off from the fire beneath. On the wide moor of his thought stands up, every now and then, a little sentence, like a fairy, and tells us the way. His power comes and goes, like spasms of shooting pain. But then, how lucid are his intervals! They are like those intense bits of blue we catch through summer clouds. To be so oracular in his power and mystery, and so practical withal—to be at home in the rarest regions of thought, and yet have an eye so keenly alive to the proprieties of every-day life, and the niceties of domestic economy—to have written at one time the "Oversoul," and at another "Prudence"—is the highest praise we can bestow on Emerson. His scenery has a fearless Americanism about it. He hates to talk of "Alps and Apennines, the Pyrenean and the river Po." His own woods, that seem to "wait" till he has passed that they may resume their mystic converse—the clouds forming themselves into cherubic shapes above his lonely walk—the wind coming to him from the depth of the forest, with music and meaning on its wings—are dearer far to him; and sweet to his ear is the rustle of his own green or yellow corn.

From these partial extracts it will be seen that in his composition Mr. GILFILLAN shews the usual faults of young writers,—exuberance of similes, and an occasional inflation of style, as if sounding words were great thoughts, and to pile up epithets were to produce the expressive or the sublime. But these are defects which age and practice will certainly cure, and which, in the youthful, lean to virtue's side.

The Ecclesiastical Architecture of Ireland anterior to the Anglo-Norman Invasion; comprising an Essay on the Origin and Uses of the Round Towers of Ireland, which obtained the gold medal and prize of the Royal Irish Academy. By GEORGE PETRIE, R.H.A. V.P.R.I.A. Second Edition. Dublin, 1845. Hodges and Smith.

THE Round Towers of Ireland have been a fruitful theme for speculation among antiquaries, and numberless are the conjectures that have been hazarded as to their age, their origin, and their uses. Some have attributed them to the Danes, others to the earlier Pagans, others have called them Phœnician or Eastern. They who maintain their Pagan origin assert that they were either fire-temples, or places from which to proclaim Druidical festivals, or astronomical observatories, or Phallic emblems or Bhuddist temples. Then, again, it is contended by another section of inquirers, that these towers are of Christian origin, and five conjectural uses have been assigned to them:—1. That they were anchorite towers; 2. That they were penitential prisons; 3. That they were belfries; 4. That they were keeps, or monastic treasure-houses; 5. That they were watch-towers, or beacons.

Mr. PETRIE reviews at some length each of these hypotheses, and shews conclusively that it cannot be supported either by known facts or by reasonable argument; and then he proceeds with a statement of his own opinion, and adduces a vast mass of evidence, historical, topographical, and architectural, upon which it has been based.

He appears to have proceeded upon the only satisfactory plan, a careful examination of all the existing Round Towers, with the purpose of noting their peculiarities, both of position and form and structure, and, by comparison, discovering in what particulars they agree or differ. He has then searched the ancient records, and every other probable source of information, for such facts or notices as might contribute to throw light upon their history. He has done more: he has examined, also, for the purpose of comparison with the towers, not only all the vestiges of early Christian architecture remaining in Ireland, but those of monuments of known or probable Pagan origin.

The results of this singular industry and research are now before us in a large and handsome volume, abounding in novel and curious learning, handsomely printed and illustrated, with numerous engravings, and altogether forming one of the most remarkable contributions to the archæology and the early history of Ireland, which has ever been offered by any of her sons.

The conclusions at which Mr. PETRIE has arrived from his laborious researches are thus stated:—

I. That the towers are of Christian and ecclesiastical origin, and were erected at various periods, between the fifth and thirteenth centuries.

II. That they were designed to answer, at least twofold use; namely, to serve as belfries, and as keeps, or places of strength, in which the sacred utensils, books, relics, and other valuables were deposited, and into which the ecclesiastics, to whom they belonged would retire for security in cases of sudden predatory attacks.

III. That they were probably also used, when occasion required, as beacons and watch-towers.

These conclusions, which have been already advocated *separately* by many distinguished antiquarians—among whom are Molyneux, Ledwick, Pinkerton, Sir Walter Scott, Montmorenci, Brewer, and Otway—will be proved by the following evidences:—

For the FIRST CONCLUSION,—namely, that the towers are of Christian origin:

1. The towers are *never* found unconnected with ancient ecclesiastical foundations.
2. Their architectural styles exhibit no features or peculiarities not equally found in the *original* churches with which they are locally connected when such remain.
3. On several of them Christian emblems are observable, and others display, in the details, a style of architecture universally acknowledged to be of Christian origin.
4. They possess, invariably, architectural features not found in any buildings in Ireland ascertained to be of Pagan times.

For the SECOND CONCLUSION,—namely, that they were intended to serve the double purpose of belfries, and keeps, or castles, for the uses already specified:

1. Their architectural construction, as will appear, eminently favours this conclusion.

2. A variety of passages, extracted from our annals and other authentic documents, will prove that they were constantly applied to both these purposes.

For the THIRD CONCLUSION, namely, that they may also have been occasionally used as beacons and watch-towers.

1. There are some historical evidences which render such an hypothesis extremely probable.
2. The necessity which must have existed in early Christian times for such beacons and watch-towers, and the perfect fitness of the round towers to answer such purposes, will strongly support this conclusion.

These conclusions—or, at least, such of them as presume the towers to have had a Christian origin, and to have served the purpose of a belfry, will be further corroborated by the uniform and concurrent tradition of the country, and, above all, by the authentic evidences which shall be adduced relative to the erection of several of the towers, with the names and eras of their founders.

We can confidently recommend this very learned and curious work as indispensable to the historical and topographical library.

JOURNAL OF FRENCH LITERATURE.

The Cross of Berney (*Roman Steeple Chase*). By the Viscount CHARLES DE LAUNAY, MERY, THEOPHILE GAUTIER, and JULES SANDEAU. 2 vols. 1845.

THIS is, in every respect, an extraordinary performance; strange in its subject, in its construction, and even in its title, which it may be as well to observe, *en passant*, has nothing to do with the work whatever. The four gentlemen whose names figure as its authors are all popular writers, and are all easily recognised by their style. The book consists of a collection of letters, each writer having adopted a personage whom he carries out to the end. M. DE LAUNAY is readily detected by his Anglophobia; M. MERY, by the almost singular fact among his contemporaries, of the appropriate and correct application and orthography of an occasional English word; M. GAUTIER, by his affectation of universal travel; and M. SANDEAU by delicacy of sentiment, and a perfect knowledge of the female heart.

The story—what there is of it—is as amusing as it is impossible; while it is evident that those who wrote it have been, in this instance, resolute literary wrestlers, each trying his strength against the other, and bringing to bear in the combat all his resources of style, study, and observation; leaving the fable to work itself out as it could in the struggle. There is strong evidence upon the face of it, that its actual catastrophe was not originally contemplated.

The heroine, Irene de Chateaudun, bereft, at the age of eighteen, of the duke-marshal, her father, the duchess, her mother, and all her property, has hired a garret in the Marais, where she supports herself, as she best may, by her pencil. As it is necessary, in order to accomplish this somewhat difficult undertaking, that she should labour throughout a great portion of the night, she at length becomes interested by perceiving that a second lamp, burning late and early like her own, is visible at the narrow window of another garret, separated from her own by a garden, whose tall trees form a screen between the two lights. She gradually compels a wild sort of companionship from this circumstance; and, eventually deciding that the attic must be inhabited by some poor and painstaking student, she falls deeply and hopelessly in love with the vision of her own fancy. She even walks out in the twilight to endeavour to identify the house, in which she of course fails; and when, at the end of two years, she regains possession, by some extraordinary chance which is left in mystery, the whole of her enormous fortune, and returns to the world from which her previous misfortunes had banished her, she carries with her to the chaperonage of her mother's friend the Duchesse de Langeac, as pretty a passion as ever was engendered by a phantasy. Her antecedents, by another unrevealed singularity, remain undiscovered by society, and she consequently appears, in the very centre of fashionable life, a novelty and a problem to every one.

In the first ranks of the *élite* of Parisian light figures, at this particular period, a certain Prince Roger de Monbert, about whom the reader knows precisely as little as the French public know of Mademoiselle de Chateaudun. There he is, however, just returned from travelling over the whole globe, and walking to and fro upon the earth. He is a personification of twenty rabid travellers rolled into one—a *consommé* of tourists—and a formidable rival to Messrs. VAN AMBURGH and CARTER in his struggles and triumphs over the brute creation. Here is his description of Irene on her first appearance in public:—

A NEW BEAUTY.

She was seated in a box on the lower tier, and the natural distinction of her attitude was the first thing which struck me. Placed in the centre of admiration, she bore her triumph with the ease of a woman habituated to her beauty. In order to put every one at their ease, she had, with considerable art, assumed a position of artistic contemplation. You might have believed her to be really absorbed by the music, or following the advice of the Tuscan poet:

> Bright Angel, lingering here below,
> Let others gaze, but gaze not thou.

From the distance at which I was seated I could only distinguish the outline of her figure, for I look upon the rise of a *lorgnette* in such a case as a rudeness of a polite kind. Nevertheless, she appeared to me to justify the concert of admiration which eyes and lips had alike raised around her. Once, for a moment, the fair unknown leant gracefully towards the lower stalls, and protruded her face beyond the shadow of the box into the full blaze of the gas-lights; and it seemed like a vision, which, by an optical delusion, approached and dazzled me. * * * Beside the beautiful stranger I saw a large fan opening and shutting with a certain affectation; but it was only at the tenth evolution of this fan that I raised my eyes to the face of the woman who carried it. This woman was my nearest relative; consequently it was the Duchesse de Langeac. The fair unknown was therefore a friend of the Duchess. Another instant, and the termination of the act would place me in a position envied by all the people in the Opera.

When the curtain fell I left my box, and walked hastily for a moment in the lobby before I presented myself. My reception over, the Duchess at once placed me at my ease by addressing me abruptly, as she had guessed my embarrassment. Women, moreover, have an exquisite and supernatural perception of all that relates to love. Every thing, they divine every thing; it is frightful!

The Duchess named Mademoiselle de Chateaudun and myself to each other, as if to terminate with all speed the ceremonies of a presentation, and touching a chair with the end of her fan,

"My dear Roger," she said, "it is easy to perceive that you have have just arrived from every where except from the civilized world. I had addressed twenty salutations to you, and you had not done me the honour to return them. The music absorbed you, did it not? The savages do not perform *La Favorita*, so they continue savages. How do you like our baritone? He sang his *aria* with a sensibility that was adorable."

While the Duchess was speaking, I glanced twice at Mlle. de Chateaudun, and I understood the admiration which she excited in the house. * * * After exchanging a few more of those unmeaning words which are the skirmishers of conversation, we began to chat as people do between the acts when they are conscious that all the eyes in the house are on their box, compelling them to think of themselves, and to affect at the same time an utter ignorance of all that is going forward beyond it. In order to conceal my agitation, I had given a light tone to our conversation, of which it will suffice for me to give you one short specimen.

"Yes, mademoiselle," I said, in reply to some incidental question; "music has become in our time an universal want. It is France which is commissioned to amuse the human species. Suppress our theatre, Paris, and the Opera, and the universe would sink into an incurable lethargy. You cannot form an idea of the *ennui* by which the world's map is overrun. Happily, Paris sends to the province of the two Indies all the charming noise that it makes when it dethrones a king. One day Calcutta was at the point of death; it was about to expire of *ennui*. The East-India Company is rich, but it is not amusing; with all its treasures it could not purchase a smile for Calcutta. Paris sent out *Robert le Diable*, *La Ninette de Portici*, and some plays by Hugo and Dumas; Calcutta forthwith began to recover, and is now perfectly well. Chandernagor, its neighbour, was saved too into the bargain. In 1842, when I left the island of Bourbon, the playbills announced *La Favorita*, and the population awoke to life with delight. *Guillaume Tell* saved Madras from the spleen. When an equinoctial city is attacked by consumption, it turns to Paris with a hand outstretched, to receive both charity and cure, like a pauper at the door of a rich physician, and Paris forwards to that client beyond seas a bundle of scores, of books, and of journals. Paris does not seem to be aware of this fact. Its self-abnegation is stoical. Paris says a thousand bitter things of itself every day; it declares itself to be in a state of decay, and to be inferior to the Paris of former days, particularly during the Great Century: it asserts that it has lost all influence

among the nations: it exclaims that it is in the state of the Lower Empire: it builds up four-and-twenty leagues of fortification to sustain a siege against Mahomet II.: it weeps over its decay: it accuses heaven of having refused to all its children of 1844 genius, intellect, and talent, which used formerly to be rained down in prose and verse. The universe alone does not agree with Paris. You may consult the universe; I myself know it, for I have just returned from thence."

Ex pede Hercules! We have here introduced our reader to the hero as well as to the heroine. Was not this a pretty, puerile, pitiful prattle for a prince? was not this a romantic veil to cast over the "agitation" which he was anxious to conceal? And Mlle. de Chateaudun, within a couple of months, was his affianced wife, so well did she relish the taste which she had of his wit. Did she then love him? What had become of the "slave of the lamp?" To the first query we answer "no," but his addresses flattered her vanity. She thought that she should like to be the wife of a man who had hugged bears in Greenland, escaladed harem walls in Turkey, lighted his pipe at the crater of Vesuvius, cooled his claret in the snows of Mont Blanc, been dug from under an avalanche at the Great St. Bernard, eaten horseflesh in an Indian wigwam, and tried the real Hottentot ointment "upon the spot." He was handsome, too, and rich, and a prince: and Irene was vain, and, as her story betrays, egotistical to a wonder. And thus, as she probably felt that *Pierre vallait bien Paul*, she consented to become Madame la Princesse de Monbert.

The Bude light of the *Chaussée d'Antin* had eclipsed the humble night-lamp of the *Marais*. Such love as this could not, however, be suffered to "run smooth;" and accordingly Mademoiselle de Chateaudun conceives the idea of a game at hide-and-seek with her affianced lord; and, informing her chaperon that she is about to visit a sick friend, she suddenly leaves Paris, and resuming the feigned name by which she had seen fit to pass during her years of poverty, she starts by the diligence to the little town of Pont-de-l'Arche, in the department of the Eure, accompanied by her old nurse, on a visit to the postmistress, who chanced to be her landlady in the Marais. Here the beautiful heiress submits to all the privations of a scanty income, and to the contact of very undeniable vulgarity, in order to convince herself that the roving prince is possessed of sufficient energy to commit some act of despair on her disappearance; and, meanwhile, she makes a conquest in the diligence of the young lord of the manor, who, to his mamma's extreme uneasiness, persists in carrying his own letters to the post, and in making warm love to the young widow, Madame Albert Guérin (for such is her chosen pseudonyme). As, however, the passion of M. de Meilhan only forms the amusement of a few of her hours, and as she finds the time hang heavy in the dull little town, she falls back, as a matter of course, upon the lamp of the Marais. Pages upon pages of sentiment does she write upon this subject to a chosen friend who is in her confidence, and who appears from certain allusions to the advice which she gives (for her letters are suppressed), to be a very sensible, plaingoing mother of a family; in short, the poor prince is soon sadly at a discount, and she herself more than ever enamoured of the ideal of her own imagination.

At length she does indeed meet "the spirit of the lamp;" and, as a natural consequence, when the fine, dark-haired, magnificent cavalier, and the fair and wealthy lady come in contact, they at once recognise the object of the spell by which each has been so long bound; but the gentleman sees only in Irene the beautiful, but plebeian, young widow labouring for a subsistence; and very rationally resolves not to disclose to her this romantic link which he has himself, without knowing why, established between them, but at once to leave the neighbourhood, rather than involve himself in at attachment which his family would never be induced to recognise. The modern Ariadne is in despair, and she flits to Paris in order to watch the prince, all whose love does not prevent his presenting himself at the theatre, in very equivocal company, in the next box to herself; and then back again to Pont-de-l'Arche, where his friend Edgar de Meilhan is, in his turn, in despair at her abrupt disparition; for it must be explained that De Monbert, De Meilhan, and De Villiers, the old student of the Marais, are sworn friends, and that it is through the medium of their respective correspondence that the world has been admitted to a knowledge of the present history. While the two latter are searching in all possible and impossible places in order to discover the retreat of Mlle. de Chateaudun, and to reveal it to their disconsolate friend; he is eager, on his side, to encourage them to persist in their pursuit of the pretty plebeian Madame Guérin.

De Villiers, however, who is the "perfect monster" of the book, and who formerly inhabited the garret in the Marais, from the simple fact that he had sacrificed his fortune to save a friend from bankruptcy, and who had (like Irene herself) still retained the key from a feeling of sentiment difficult to understand, even after his friend had contrived to realize an enormous fortune in railway speculations, and to return the loan, poor De Villiers, with all his high-mindedness, cannot overcome his passion for the pretty widow; and as, in such a mood of mind, society is hateful to him, he repairs to his old haunt, curious to see if his instinct had guided him aright on their first interview, or whether the little flame would still burn on. It does; for Mademoiselle de Chateaudun, somewhat alarmed at the vehemence of M. de Meilhan's admiration, and the right which he asserts that she has given him by her encouragement, to claim a return of his passion, once more vanishes from Pont-de-l'Arche, and, as a safe retreat, ensconces herself in the rival attic. Light looks on light; the trees in the garden have been felled; the lovers recognise each other on their romantic watch, and De Villiers can resist no longer the fascinations of the beloved one. The scene which ensues is the best in the book. It is described in a letter from Mdlle. de Chateaudun, to her confidential friend.

AN EXPLANATION.

He has told you of his delirious joy when he recognised me at the window, but he has not told you, and he could not tell you, my uneasiness, my frightful suspicions, my despair when I discovered him in that garret. Our position was not the same; that which both astonished and delighted him necessarily astonished me also, but was only calculated to alarm me. He believed me to be poor, he found me in an attic; that was simple: the only astonishing part of the business consisting in the fact that the said attic in which I had taken up my abode, should chance to be in his precise neighbourhood. But, as regarded myself, I knew him to be rich, I knew that he was called the Comte de Villiers, I knew his noble and ancient family—I knew, by a thousand details of conversation, that he had travelled in Italy in the style consistent with his rank; I had seen him at Rochefort, alike elegant and liberal in his habits. It is true that there was great simplicity in his manners, but it was the simplicity of conscious station. In short, every thing told me that he had no business to be living in a garret, and that if I saw him there, I did not see him in his home! Remember Valentina, that for the last two months I have lived in the midst of deception. I have inspired the most variously-exhibited despair, I have induced the most picturesque consolations. I have seen myself *wept* at the Adéon in a box with courtesans—I might once more see myself *wept* at Paris in a garret with a *grisette*. Oh misery! in that single instant of doubt all the daggers of jealousy pierced my heart at once; but, on this occasion, I felt no indignation; I did not murmur; I thought that I should die. And I believe that, had I not at the moment met his delighted look; if I had not seen the purest joy irradiate his noble countenance; if I had not in one second comprehended and divined every thing, I believe that I should have thrown myself from the window, in order to escape the unknown torture, which made my brain reel, and that I neither could nor would support. But he appeared too happy to be guilty. He made a sign to me, and I understood that he was about to come to me. I awaited him—what a watch! My hair was unfastened, and I called my good Blanchard to help me tie it up, and to dress myself. My voice was so faint that she came running in terror, believing that I had been suddenly taken ill. A thousand conflicting thoughts rushed across my brain; one alone remained clear and steadfast. I had found him—I should again see him. When I was dressed—Oh, I cared little about my toilette that day!—I seated myself on the sofa in my poor little room; and there, pale with emotion, and almost afraid to breathe, I listened with feverish impatience to the different sounds which reached me. Soon I heard the bell: the door opened; a voice exclaimed, "You! my lord count!" He did not wait to be announced; he entered the room, and approached me. He was so joyful to have found me; I was so happy to look on him again; that, for the first few minutes all explanation on either side was unnecessary. It was evident that he was at liberty to love me, since he exhibited so much delight; it was apparent that I was equally unshackled, as I met him again with such undisguised pleasure. When at length he spoke, "It was indeed you then," he said, "who were the beloved star so dear to me for two long years!" Suddenly my doubts returned upon me, and I exclaimed in my turn: "It was you then who were

the mysterious beacon. But why were you there? Why did the Comte de Villiers become the inmate of a garret?"

Then, dear Valentine, he told me his noble story. He acknowledged to me, with some embarrassment, that he had become as poor as myself; very poor, having given up the whole of his fortune in order to save the honour of one of his friends, M. Frederic B——. Oh! how I wept as I listened to this affecting narrative, full of ingenious grandeur, sublime simplicity, and careless generosity; this story would have compelled me to adore him, had I not already loved him madly; while he was speaking I thought of the wife of the unfortunate Frederic, of her anxieties, her mental torture both as wife and mother, when she believed her husband to be ruined, and her children beggars —of her astonishment, her rapture when she beheld them saved —of her deep and eternal gratitude! And then came the reflection—How should I delight to know this woman, that I might talk with her of Raymond!

I wished, in my turn, to tell him my history, but he refused to hear it, and I would not urge him. Besides, I was anxious to shew my generosity, and to suffer him for a short time longer to believe that I was poor and humble. He was so happy in the thought that he was about to make me noble and wealthy,—I had not the courage to disenchant him.

Nevertheless, yesterday I was compelled to avow all. In his impatience to hasten our marriage he spends the whole morning among bonds, deeds, and contracts; and for the last two days he had been tormenting me to give him my family papers, that he might put them in order, and find my baptismal certificate which would be demanded by the Mayor. I resisted until yesterday; but yesterday he assumed his most gentle voice, which is his tone of command, and I found it necessary to prepare him for the terrible surprise which awaited him. I accordingly told him that these papers were in a secretary in the inner room, and I requested him to accompany me to seek them.

At the sight of the great family portraits, by which the walls of the little cell are covered from top to bottom, he suddenly stopped in astonishment and alarm, and examined them with evident uneasiness. Upon some of these portraits may be read the name and titles of the illustrious personages they represent. On reading the name of Victor Louis de Chateaudun, Marshal of France, he remained motionless, and looked at me with an extraordinary expression; then he remarked a magnificent likeness of a woman, beneath which he read this inscription:—

MARIE FELICITE DIANE DE CHATEAUDUN,
DUCHESS OF MONTIGNAN,

and instantly turning abruptly towards me, with a livid brow, he exclaimed, "Louisa!"

"Not Louisa," I replied, "Irene ——," and all the pride of my high blood spoke in my accents, as I asserted myself to him.

He was silent for a moment. A bitter sadness spread over his features. I was not alarmed. "It will pass by," I thought, "it is only envy. It is hard for a man who feels that he is generous to be vanquished in generosity. It is painful, when he expected to give all, to find that he is about to receive millions; it is cruel, when he had dreamt of the voluptuousness of his sacrifices, like the hero of a novel, to be compelled to the insipid arrangement of a lucrative money-matter, like a banker of an exchange-broker.

But Raymond was more than sad; and his countenance, almost severe, alarmed alike my affection and my dignity. He seated himself at a distance from me. I approached him, trembling with emotion, and with tears in my eyes.

"You love me then no longer," I said.

"I dare not love the betrothed wife of my friend."

"Do not mention to me either the prince, or your own scruples. He would not understand them."

"But he had told you that he loved you, *Mademoiselle*. Why did you desert him so abruptly?"

"I doubted the strength of his attachment, and wished to test it."

"Well; and what is the result of the trial?"

"He does not love *me*, and I despise *him*."

"He *does* love you, and merits your respect."

Then it was that, in order not to enter into painful explanations, or to condescend to justify myself, I put into his hands a long letter which I had written to my cousin, and in which I informed him of my accidental recognition of the Prince de Monbert at the theatre; the society in which I saw him, and the profound disgust with which his conduct had inspired me. In conclusion, I begged her to read this letter to the Prince himself, who was at that moment her guest; in order that he might understand, from the decision of my tone, that my resolution was taken; that I did not love him; and that the best thing he could do was to forget me. * * * I had left Raymond alone, engaged in the perusal of the letter, and had returned to the front room to weep. I could not support his severity towards me; I suspected that he accused me of caprice and inconsistency; the idea of having displeased him for a moment overwhelmed me with wretchedness. I do not know if the contents of the letter served to justify me in his eyes; if he considered it sufficiently sincere, sufficiently dignified; but, so soon as he had read it, he called me to him. "Irene," he said, and I was agitated with delight on hearing him pronounce my real name for the first time; "pardon me," and as he spoke he took my hand; "for having for an instant believed you capable of caprice and levity. I can easily forgive *you* for causing me to appear in odious light to my friend." Then, in a more tender accent, he told me that he could understand my motives, and that I had done right, for that where a woman was not certain of loving her affianced husband, or of being beloved by him, she was justified in making trial of his affection; and ultimately he asked me with a smile if I did not also wish to test his own passion, and to part from him for a month or two, in order to ascertain if I were really loved. "Oh, no, no," I exclaimed, "I have faith in you; I will not let you leave me. Oh! where love really exists who could live apart the one from the other? Who would dare to fling away a single day of happiness?" * * * *

The saddening sensation which the discovery of my identity had produced upon him was the only cloud that passed over our happiness; and all was soon once more bright and happy about us.

The sequel is readily guessed. The extraordinary lovers are married; and a week does not elapse before the Prince de Monbert and M. Edgar de Meilhan draw lots to ascertain which shall be the principal and which the second in a duel, when they decide that one or the other of the combatants shall remain upon the field. The long straw falls to the lot of the latter, who sends a ball through the heart of the bridegroom, and so satisfies the wounded vanity both of himself and his friend. The lady dies, as a matter of course. In fact, there was nothing else left for her to do, after turning the heads of the three most distinguished men in France; and so ends the book.

In conclusion, we would merely remark that a vast quantity of extremely good writing and ingenious argument has been wasted in these volumes; of which the composition has evidently afforded infinitely more amusement than will ever be derived from reading them. With all the ability displayed, the result is alike uncertain and unsatisfactory.

JOURNAL OF AMERICAN LITERATURE.

*The Library of American Biography: Gammell's Life of Sir Roger Williams.** Boston, 1845. Little and Brown.

This volume of Mr. Sparks's *Library of American Biography* contains memoirs of three persons who, though for very different reasons, deserve to be ever freshly remembered by the American people. They are Roger Williams, Timothy Dwight, and Count Pulaski. Especially are we pleased to see a new life of Roger Williams, ably and tastefully written by Professor Gammell, of Brown University. Before the appearance of this biography, the only memoir of Roger Williams of any value was that by the late Mr. Knowles. He was the first American writer to do justice to the great merits of the founder of the State of Rhode Island. His work, elaborately though not elegantly written, minute in its details, and learned in the knowledge both of its subject and of early New England History, left to the subsequent biographer but little chance of throwing additional light upon the life or character of Williams. Mr. Gammell, though he has consulted all the works of our colonial history relating to his theme, has not found occasion, in any important points, to correct the statements made, or, in the main, to vary from the opinions expressed, by his predecessor. The memoir which he has prepared, as its position in a series of popular biographies required, is more brief, and more closely confined to the life of the individual. The writer has shown more skill in the selection and arrangement of his materials, equal soundness of judgment in the views of individual character and of colonial policy, and very commendable impartiality in the narration of events the history of which has been too often distorted and coloured by prejudice or malevolence. The style is remarkably well suited to a work of this kind. It is chaste, easy, and animated, shewing the taste and skill of an accomplished and accurate scholar. The portrait of the character of Williams gives us a vivid and distinct conception of the man in

* From the *North American Review* for July 1845.

the different stages of his eventful career, and in his various relations to the times in which he lived; and it deserves—much more, we suspect, than the delineation of his features on the title-page of this volume—to be hung up in no inferior place among the illustrious figures which compose the gallery of early American history.

According to traditions which seem to be entitled to credit, Roger Williams was born in Wales, in the year 1599, and of parents in the middle ranks of life. He early removed, however into another part of England, bearing with him, no doubt, pleasant recollections of a boyhood spent among the mountains. The eager, inquisitive boy is said to have attracted the favourable notice of Sir Edward Coke, and to have been educated by him at the University of Oxford. This connection, it is believed, continued for a long time, and Williams afterwards corresponded with a daughter of the great jurist; but his opening mind certainly could not have received the seeds of his subsequent opinions from intercourse with one who openly declared that "to advise toleration was little short of high treason." Under the direction of this distinguished patron, Williams is reported to have turned his attention to the study of the law; but he afterwards relinquished it for the more congenial profession of divinity; and, before leaving England, was admitted to orders in the established church, if not appointed to the charge of a parish.

Williams did not come to this country until he had passed the thirty-first year of his age. His early life, accordingly, was spent amid the stirring scenes which were then fast preparing the way for the outbreak of the Revolution. He grew up as the friend of Cotton and Hooker, and the contemporary, if not the associate, of Vane and Cromwell, to the latter of whom he is reported to have been distantly related. The principles of religious freedom inculcated by Wickliffe, and the seeds of political liberty planted during the latter year of the reign of Elizabeth and the early part of the reign of James, were then rapidly springing up in the form of new opinions and new institutions. The English Anabaptists, inheriting the germs of their free opinions from the Lollards, had declared, in a confession of faith published as early as the year 1611, that "the magistrate is not to meddle with religion, or matters of conscience, nor to compel men to this or that form of religion; because Christ is the King or Lawgiver of the church and conscience." Many of the Puritans had already asserted, that "the ministers of the gospel ought to be maintained by the voluntary contributions of the people, and that the civil power had no right to make or impose ecclesiastical laws." From the moment that James crossed the Tweed, the Catholics, as well as the Puritans, ceased not to harass him with petitions for religious toleration. In Scotland the clergy were discussing the authority of civil magistrates, inculcating principles of resistance to despotic sovereigns, and endeavouring to establish a republican form of church government. In the neighbouring kingdom of Holland, the Arminians were openly disputing the supremacy of the established faith of Calvin, and filling the public ear with new notions respecting grace and predestination, universal redemption and free will. And in the new world recently discovered across the ocean, there had just been established an asylum for the fugitives from religious and political persecution in Europe.

Growing up to manhood under influences like these, Williams was early prepared to maintain the peculiar principles which afterwards governed his life; and when the good ship *Lion*, with "Mr. Williams, a godly minister," on board, anchored at Nantasket, on the 5th of February, 1631, he was ready to assert, to its fullest extent, the inalienable freedom of conscience in his new home.

The settlements then forming the Colony of Massachusetts Bay had been made two or three years previously. The civil code established by the colonists was founded on the institutes of Moses; crime was punished according to the laws of Scripture, rather than the laws of England; and though a republic in form, the infant state was governed by the spirit of the Jewish theocracy. The state was secondary to the church. Its principal use was considered to be that of securing the privilege of religious worship, and maintaining the purity of Christian faith. Every inhabitant was compelled to contribute, in proportion to his ability, to the support of religion; and very soon after the founding of the colony, it was "ordered and agreed, that, for time to come, no man should be admitted to the freedom of the body politic, but such as are members of some of the churches within the limits of the same." Thus church and state were closely united.

Such were the fundamental principles of the community of which Williams became a member on landing upon these shores. His own opinions on the subject of civil and ecclesiastical government were, in many particulars, directly at variance with them. Nor was it long before his peculiar views were boldly set forth. A few weeks after his arrival, when he was invited to become an assistant to the pastor of the church at Salem, the Colonial authorities remonstrated against the appointment, on the ground, that "Mr. Williams had refused to join with the congregation at Boston, because they would not make a public declaration of their repentance for having communion with the churches of England, while they lived there; and besides, had declared his opinion that the magistrate might not punish a breach of the Sabbath, nor any other offence, as it was a breach of the first table." What his views were on the first of these points is not exactly known. The Puritans of Massachusetts Bay had never formally renounced their connection with the church of England. Some of them, up to the period of their leaving that country, though opposed to the ritual, and grieved at the corruptions of the mother church, had not become open separatists; while others, even at the moment of their departure, had gratefully acknowledged themselves as her children. They had, in fact, all dissolved their connection with the church at home by coming to this country; but they had never publicly testified their repentance for the previous existence of such a connection. Nor does there appear any good reason why they should have done so. It seems to us, supposing the account we have of the matter to be correct, that Mr. Williams, being a new comer, may well be considered as having shewn a disposition to meddle in matters without the limits of his responsibility, when he insisted that this step should be taken by the Massachusetts churches. The second charge against him, of advocating the doctrine of the freedom of conscience, was certainly well founded; but it will not, at the present day, be imputed to him as a fault.

The remonstrance of the magistrates did not change the minds of the church at Salem; and Williams was settled as their minister on the 12th of April, 1631. In the month following, say both of his biographers, he took the usual oath of allegiance prescribed on the admission of freemen to the colony. But this statement, we think, must be a mistake, Williams regarded the taking of an oath as an act of worship, which a Christian might indeed perform of his own accord, but to which he could not be compelled by the civil magistrate; for, said he, "persons may as well be forced unto any part of the worship of God as unto this." Besides, it was at the meeting of the Court on the 19th of October, 1630, almost four months before his arrival in the country, that the name of Roger Williams appears on a list of one hundred and eight persons "desiring to be made freemen." Upon this list, all who were ministers had the title of "Mr." prefixed to their name, while that of Roger Williams was not so distinguished. We think there must have been another person of the same name, who came over in 1630, and was one of the fifteen persons, mentioned in the Colony Records, who composed the jury empannelled to inquire into the circumstances of the death of one Austin Brutcher.

Mr. Williams's stay in Salem was short. Though respected and beloved by his congregation, he was constantly harassed by the magistrates and elders of the colony, on account of his obnoxious sentiments; and therefore at the expiration of a few months, with the hope of finding elsewhere a more agreeable field of labour, he removed to the neighbouring colony of Plymouth. This settlement was much more liberal in its policy than that of the Bay; the Pilgrims had purified themselves, after their connection with the English church, by a residence in Holland; and Williams was therefore well received by them. However, he soon found himself, by reason of his peculiar opinions, ill at ease as an assistant to the Plymouth pastor; and receiving, in 1633, an invitation to return to his former charge in Salem, he asked for his dismission. Though several persons were anxious not to be deprived of his accept-

able ministrations, yet, as he was beginning to be suspected of "Anabaptism," his request to be dismissed was not denied.

The second residence of Williams in Salem was made more uneasy than the first. Re-established in the office of an assistant to the pastor of the church, he began with setting his face against a meeting of the ministers of the Colony, who were in the habit of assembling for mutual improvement,—fearing, as it was said, "that it might grow, in time, to a presbytery, or superintendency, to the prejudice of the churches' liberties." The apprehension in this particular case was groundless; though it must be confessed that a person of Williams's strong democratic opinions might reasonably have looked with suspicion upon an association of ministers who had so much to do with politics, as had those of the Massachusetts colony. Another matter which involved Williams in difficulty with the colonial government, was a treatise which he had written at Plymouth, and presented to the governor and council; wherein, says Governor Winthrop, "he disputed their right to the land they possessed, and concluded, that, claiming by the king's grant, they could have no title, nor otherwise, except they compounded with the natives." This treatise, written in another colony, and retained in the privacy of his own desk, Williams was required to submit to the governor of Massachusetts for his examination; and was afterwards summoned to appear in Court to receive censure for the same. Contrary to what might have been expected, he obeyed this order, and offered his manuscript to be burned, though he must have thought that the conduct of the authorities was in the highest degree inquisitorial and despotic. It was also objected to him, that he preached upon the duty of women's wearing veils in church; and that, by a discourse on the unlawfulness of all Popish symbols, he instigated Mr. Endicott, one of the Salem magistrates, to order the cross to be cut out of the king's colours. But the most serious charges brought against him were made after he had been raised to the office of teacher of the church, on the death of the elder pastor, Mr. Skelton. At that period, hardly a session of the court took place, but that he was summoned before it to give an account of his opinions, or to receive censure for them. At one time, it was for calling in question the validity of the king's patent; at another, for "usual terming the churches of England antichristian;" then, for publicly teaching, that "a magistrate ought not to tender an oath to an unregenerate man," and opposing the introduction of the unlawful "Freeman's Oath." While the Bay churches still maintained a connection with the mother church of England, we find him pronouncing its "bloody tenet of persecution most lamentably contrary to the doctrine of Christ." When the authorities enacted a law requiring every man to attend public worship, and to contribute towards its support, he asserted that the civil power "extended only to the bodies, and goods, and outward estates of men." The Court unjustly refusing to allow a claim of the people of Salem to a certain tract of land, Williams appealed from their decision to the people, and, in conjunction with his church, wrote "letters of admonition unto all the churches, whereof any of the magistrates were members, that they might admonish the magistrates of their injustice." In the issue of this matter, the town having been disfranchised for its independent course, Williams, more moved than became his office or himself, declared to his people, "that, if they would not separate as well from the churches of New England as of Old, he would separate from them." And finally, when the Boston ministers sent a committee to Salem "to deal" with him, he disputed their ecclesiastical jurisdiction; and instead of retracting his principles, boldly told them that he was "ready to be bound, and banished, and even to die in New England."

The difficulties between Williams and the colonial authorities were thus brought to a crisis. The people of Salem refused to follow him in his extremity of opposition to the government; and even his wife, disapproving of his course, assailed him with reproaches; his health, also, seemed about to fail. Summoned before the General Court, he was charged with maintaining, "First, that the magistrate ought not to punish the breach of the first table, otherwise than in such cases as did disturb the civil peace; secondly, that he ought not to tender an oath to an unregenerate man; thirdly, that he ought not to pray with such, though wife, child, &c.; fourthly, that a man ought not to give thanks after sacrament, nor after meat." Upon this accusation no verdict was rendered until the next session of the Court, that Williams might have time to repent, and mend his life. But he stood firm on what he conceived to be the "rocky strength of his grounds;" and having been found guilty of having "broached and divulged divers new and dangerous opinions against the authority of magistrates; as also writ letters of defamation, both of the magistrates and churches," he was finally sentenced to leave the colony within six weeks. Though sentenced, Williams was not silenced. He withdrew to the sanctuary of his own house, and there set forth his obnoxious doctrines to all comers,—and they were not a few. At length, it being rumoured that he had planned the founding of a colony upon Narraganset Bay, the government determined to send him forthwith to England; and, for the execution of this purpose, again ordered him before the Court at Boston. Williams refused to obey the summons, alleging his ill-health as a reason. Thereupon a pinnace was sent round to Salem, with orders for his apprehension and conveyance on board a ship then ready to sail for England. It was too late. When the officers arrived at his house, the object of their search was already a wanderer in the woods, and a pensioner upon the bounty of the red men.

The course of Williams at Salem cannot be altogether justified. He was unbecomingly forward in requiring the congregation at Boston publicly to acknowledge the sin of having been united with the Church of England, as a condition of his communing with them; and he manifested a contentious temper in urging his people at Salem to withdraw from all fellowship with their Christian brethren of the colony. But on the other hand, it cannot be said that Williams committed any *crime* against society. It was not for any *overt act* that he was banished, but for the *expression of opinions*. He had preached against Popish symbols, but he had not cut the cross from the king's colours; he had advised his flock to withdraw from the communion of their sister churches, but he had not instigated them to revolt against the state; he had insisted that the king's patent could not confer a perfect title to lands in this country without some compensation to the natives, but this view did not militate with the general practice of the New England settlers. If he had not approved of the meeting of the Massachusetts ministers for spiritual improvement, neither had he disturbed it; and if he had insisted upon the duty of women's wearing veils, it was no more serious an offence than that committed by such good citizens as John Eliot and President Chauncey, both of whom had inveighed, with no less fervour, against the practice of men's wearing wigs. His offence consisted in asserting—with vehemence, we grant, with unyielding pertinacity, with little regard of consequences to others as well as himself; but no more nor less than asserting—the great truth of the *freedom of conscience*. Though he was charged with defaming the character of the churches or denying the power of magistrates, or wishing to restrict the liberty of individuals, the head and front of his offence really consisted in advocating the doctrine of "soul-liberty."

But it has been said, that the opinions of Williams tended directly to undermine the foundations of the government of the colony; and therefore that his conduct was in a high degree criminal. The premise may be true, but the inference is illogical. It may be true, that the church and state were so closely allied, and so dependent upon each other, that their severance would, possibly, have been fatal to both; but the principles of truth are insurrectionary only when the foundations of government are unsound. Roger Williams did but proclaim a great moral law when he asserted that the civil magistrate has no right to intermeddle between God and men's consciences. He was in the right, when he declared, that "the civil magistrate might not intermeddle even to stop a church from apostasy and heresy;" and when the authorities banished him for the utterance of this sentiment, they were in the wrong. Men have no right to construct society on the narrow, arbitrary system of a close corporation. They are bound to make it conformable to the essential requirements of humanity; and in doing this, they certainly cannot overlook so urgent a want, experienced by every enlightened mind, as that of worshipping God according to the dictates of conscience. If the Massachusetts colonists erected their civil and ecclesiastical organization on an illiberal basis, they, and not Roger Williams, must be held responsible for the bad conse-

quences which might have resulted to it from his proclamation of a vital principle.

(To be continued.)

ART.

Anglican Church Architecture, with some remarks upon Ecclesiastical Furniture. By James Barr, Architect. 3rd edition. 12mo. pp. 217. Oxford, 1846. Parker.

Mr. Barr has treated the entire subject of Church Architecture with great taste and knowledge of art. He has evidently mastered the principles on which it should be based; he has studied the sentiment intended to be conveyed by every part of the building and its furniture, and advises accordingly. The volume is beautifully printed, profusely illustrated with woodcuts, and will be a valuable acquisition to all who interest themselves in the subject to which it is devoted.

FREEMASONS OF THE CHURCH.

On Tuesday, Oct. 11, the 11th chapter for 1845 of this college was held at half-past 8 o'clock, when an unusually large number of gentlemen were present, besides its members, among whom are included a considerable body of the clergy, and numerous amateurs and patrons of the art of high standing. One of the chaplains occupied the chair, opening with a short collect the business of the evening, at the conclusion of which a lecture on the subject of "Illuminated Books in their connection with Architecture," was delivered by Mr. W. Harry Rogers, who endeavoured to trace the progress and successive changes exhibited in manuscript architecture, from a very early period to the middle of the sixteenth century. For this purpose about forty large diagrams had been prepared from manuscripts in the British Museum, the Bibliothèque Royale, and other important libraries, both public and private, which covered a large portion of the walls. Mr. Rogers, it appears, had, on a previous occasion, shown the origin of enriching manuscripts with pictorial illustration, and followed the development of the art through Egypt, Greece, Italy, Syria, Ireland, Britain, Lombardy; he therefore now only wished to represent the advantages offered by the examination of the subject to every individual connected with the arts and particularly to the student of medieval architecture. "And it is interesting," he observed, "to watch the development of each particular style as it supplants its predecessor, to trace the lingering remains of Roman taste and feeling in the earlier Anglo-Saxon productions, merging into a style of which short-stunted columns and a multiplicity of arches are the principal characteristics; the bold and massive Norman gradually give place to the long and elegant columns of the 'Early English' period, and the latter as soon followed by the crocketed pinnacles of the 'decorated' and the elaborate tracery of the 'perpendicular.' And no less are these changes to be perceived in the pages of medieval volumes than in the sculptures of our national cathedrals and the ruins of our once glorious monasteries. But as in the middle ages, that propriety which regulated the designs for every species of decoration was never intruded upon; as the glass-stainer never executed ornaments which would be entirely suitable for the purposes of sculpture, nor the auricifer subjects which might be copied for monumental brasses, so the borders, majuscules, and paintings, which tended to make volumes from the fifth to the fifteenth century so exquisitely beautiful, were of a style peculiar to themselves, and even when architectural features were introduced into a miniature, they assumed a character which approached only to a certain extent those edifices which at the same period were being raised by the inexhaustible piety of the middle ages." With others of extreme antiquity, the capital of the column was enlarged from a specimen in the celebrated "Durham book," and had a singularly original effect. While describing it, the lecturer endeavoured to account for the continual introduction of the dog in decorations of Irish and Anglo-Saxon volumes, by ascribing it to the remains of Phœnician paganism. The ancient ornamental doorways in the wooden churches of Norway were also referred to, as exhibiting a very similar character to the works in question. A suggestion was made, that the shortness of ancient Saxon columns is attributable to the prevailing ideas of durability, but that the taste of the period have preferred them of an inordinate length. This was substantiated by a number of drawings, which had been enlarged from manuscript architecture of the Anglo-Saxons, the columns of which, in more than one instance, were shewn to be formed of two parallel lines, and eighteen times the width of their diameters. Having traced his subject through every century of the middle ages, Mr. Rogers closed his remarks by alluding to the gradual advancement and eventual supremacy of the Italian school, influenced to a no inconsiderable extent by the discovery of the baths of Adrian, in Rome. This department was illustrated by some exquisite arabesques and ornaments, enlarged from various manuscripts, &c. The beautiful volume by Veronese, once Mr. Esdaile's, and now in the collection of Mr. Jarman, occupied a prominent position in the elucidation of the art of this period. A large collection of valuable manuscripts was placed upon the tables for the evening, from many public museums, as well as from the libraries of private collectors and amateurs.

The Royal Irish Academy has elected the poet Wordsworth an honorary member of its body; a distinction which it conferred likewise, at the same time, on M. Leonville, of Paris.

MUSIC.

Crosby Hall.—On Wednesday last a performance took place of music selected from the compositions of Miss Flower, a lady we believe but little known to the musical world, and not at all to the miscellaneous public. Some time ago a work called *Adoration, Aspiration, and Belief* was published and received great praise from the best critics, and from this many of the pieces were selected; but a considerable number we are informed are yet in the MS. condition in which after Wednesday's performance they cannot be suffered to remain. Perhaps there is no department of Art in which genius has been more grandly exerted than in Sacred Music, and it is a bold attempt for any one, and, according to ordinary opinion, particularly so for a woman, to enter a field in which such men as Bach, Handel, and Mozart have gained such enduring fame. When we reached the hall we found it fairly filled with an audience among whom were discernible some of the most distinguished men of the day, and it was evident that in some quarters, at least, considerable expectation had been excited. The performance commenced with an anthem "Holy, holy, holy, Lord God Almighty, who wert, and art, and art to come," in which was a simple sublimity that reminded one of the early masters, and at once made a forcible impression upon the audience. The succeeding pieces told with increasing effect, the audience becoming accustomed to the style, and an enthusiastic encore was given to Miss Thornton, who sang with exquisite feeling a beautiful devotional melody entitled "He sendeth sun, he sendeth shower," every voice concluding with a response from the chorus. We have not space to particularize the various pieces which pleased us; but must mention "Darkness shrouded Calvary." Commencing with an appalling grandeur, worthy of the greatest master, the darkness was not physical only, the very soul seemed dark; and then "Came a voice like light athwart the skies" (to quote the words by the authoress of "Vivia Perpetua"). "To-day thou'lt be with me in Paradise," in which the melody was most touching and appropriate. Miss Cubitt gave the first part alone, with a dramatic power of which we had not known her capable; great as we feel was the genius of the music, it is not too much to say this young lady did full justice to it, and we hope often to hear her again in the same piece. It concluded by a chorus well worthy of the commencement. In the second part were several encores. The audience were particularly struck with "Beneath this starry arch," "More sweet than odours," "and, "When wild winds shake the elder-brake." We must not conclude without mentioning the "Cloud cap'd towers," in which the immortal voice of Shakspeare for the first time has been adequately expressed in music. You seemed to see "the unsubstantial pageant fade;" earth's glories, its gorgeous palaces and solemn temples rose before the eye, and then came the feeling that we are indeed "such stuff as dreams are made of." At the conclusion was a national air, "Now pray we for our country," which stirred the audience almost to a frenzy of enthusiasm, so that they rose *en masse*, and continued standing during its repetition, which was followed by loud and continued applause. The principal parts were sung by Miss Cubitt, Miss Thornton, Miss Sabilla Novello, Alfred Novello, Mr. Lockie, and Mr. Rowe, assisted by a very efficient chorus, and all acquitted themselves extremely well.

THE DRAMA AND PUBLIC AMUSEMENTS.

We have absolutely nothing to report respecting the past week's proceedings of the various theatres.

Drury Lane.—The opera of *Maritana*, and the ballet of *Le Diable à Quatre*, have occupied the stage exclusively through the past week. *Maritana* grows in public favour. The novelty of the music at first took the ear by surprise, and the audience went away not quite sure whether they ought to be pleased or no; for your opera-goers are a race who dare not have an opi-

nion of their own, but follow the fashion. When, however, the better judges pronounced the composition good, the echo was taken up by the crowd, and applause has grown from night to night, until at length it is acknowledged that in *Maritana* we have a production of no common merit, and which indeed almost deserves the name of genius. We recommend all who have not yet heard it to take the earliest opportunity for a visit to Drury Lane, and they will be sure to come away highly gratified. The ballet, too, is lively and pregnant with a good plot and some excellent scenery. Altogether Old Drury has not been so attractive for a long period as at this moment.

At the FRENCH PLAYS, LAFONT has appeared, admirably supported, in PICARD'S excellent comedy, *La Petite Ville*, and has repeated several of his popular representations. Our readers, by the way, should lose no time if they desire to see M. LAFONT, for his present engagement terminates in another week.

At the HAYMARKET, *The Maiden Aunt* is repeated every evening with the farces mentioned in our last number.

At the PRINCESS'S, the well-merited success of *The Violet* precludes the necessity of Mr. MADDOX'S having recourse to fresher novelties. The *Diable à Quatre*, too, retains all its attractions.

THE ADELPHI.—*Green Bushes* promises to be an evergreen. It is still played here night after night with undiminished audiences, who gaze at it, and alternately laugh and cry at its pathos or its fun, scarcely conscious that they are doing so for the one hundred and thirty-eighth time. Nor is this so surprising when the extreme interest of the story, the originality of the characters, and the inimitable acting are considered. Mrs. FITZWILLIAM'S *Nelly* is perfect, and WRIGHT is beyond himself. A sort of burlesque on *The Devil to Pay* follows, and is really much less tedious than the original; there is fun as well as dancing. This theatre, under the management of Madame CELESTE, more than supports its old reputation.

The management at the SURREY has engaged the *Infant Sappho* for a limited period; she is well worth hearing, and retains her infancy in a most astonishing manner.

At COVENT GARDEN, JULLIEN continues to draw together larger houses than ever Covent Garden saw assembled within its walls for any other entertainment, not even excepting the meetings of the Anti-Corn-Law League. On the 22nd inst. M. JULLIEN gives his annual masqued ball, which, judging from the announcements, promises to be better this year even than on former occasions—*experientia docet*.

And now, to proceed from things that have been and are, to things that are to be, we have to repeat that a new theatre is about to be added to the number of those already existent. The project has been for some time entertained, and the *locus in quo* marked out, but it is only of late that the plan has assumed a definite and practical form. The theatre is to be erected by a subscription capital of 30,000*l*. in debentures of 250*l*. and 100*l*. each, entitling the shareholder to a free admission for each debenture, and five per cent. The site of the theatre is Leicester-square, and the edifice is to be completed, under covenant, on or before September 1847, the architect being Mr. Parkinson, of Sackville-street. As the drama and all that affects it is highly interesting to the public, we will make some extracts from the prospectus before us:—

"At no period of the dramatic history of this country have the prospects of the legitimate drama been so gloomy as at the present time. Those lofty edifices, the theatres of Drury Lane and Covent Garden, raised in honour of the histrionic art, and associated with the proudest names of its professors, have either been partially closed, or are desecrated by appropriation to purposes foreign to their professed object. After a variety of vicissitudes, equally disastrous to the hopes of the drama, Covent Garden has been occupied by a political party, and identified as the arena of its operations; and in consequence, it is believed, has lost not only the countenance of royalty, but a great portion of noble and public patronage.

"As far, therefore, as the interests of the Drama are concerned, one of the principal establishments devoted to its representation has become virtually extinct. In respect to Drury Lane, that theatre has been for some seasons past devoted to Opera and Ballet, to the great benefit of the many foreign artistes employed; while the manager, supported by the proprietors, has publicly avowed his intention of continuing the same course of amusement. Without deprecating the motives of either party, the result must be considered as one for public lamentation. In a country possessing the noblest drama in the world, a fitting temple for its representation can now hardly be said to exist. It must either take refuge in distant parts of this great metropolis, or seek an asylum on foreign shores. The lyric muse of Italy possesses a noble fame consecrated to her service, with noble patronage for its support. The School of Germany and the Opera of Brussels have also been nourished and encouraged, while the French Drama has found a fitting home, and has become naturalized amongst us; but the art which Shakspeare and his contemporaries have rendered immortal, and which Otway, Cibber, Congreve, Farquhar, and Sheridan, amongst the dead,—and Knowles, Bulwer, Talfourd, and Jerrold, amongst the living,—have adorned and rendered classic by their wit and genius, has been banished from the temples raised to its honour, while the histrionic representative of its immortal character has shared in its involuntary exile.

"While the foreign *artiste* is caressed and enriched, we deny to our own countrymen and countrywomen the bare opportunity for the exercise of their profession; and, in consequence, many of the highest order of English performers have, from want of encouragement at home, been driven across the Atlantic, and the public lost the enjoyment and gratification of their talents. It is not, however (as has been most erroneously supposed), to the caprice of the public, or to the decay of taste for dramatic performances, that this catastrophe is to be attributed. The national theatres, as they have been called, independently of the causes already referred to, from their great dimensions, involve nightly so ruinous an expense, that even the most munificent patronage cannot sustain them; while, on the other hand, what are called the minor theatres rarely devote their resources to the highest order of dramatic entertainment. The necessity, therefore, for a theatre, sufficiently large for that purpose, and yet not incurring disproportionate expense, is obvious, and has suggested this proposal.

"The improvements aimed at will not be confined to the stage alone, but novelties will be introduced before the curtain. The fatigue of sitting out an evening at the theatre operates with manyas a reason for never entering one: by ladies, in particular, its irksomeness has been severely felt. To alleviate this as much as possible, it is intended that a corridor shall be constructed round the dress circle of the boxes, to be fitted up as a conservatory, and embellished with sculpture and works of art, so as to form an inviting promenade between the acts. The most vigilant precautions will be taken to prevent the introduction of improper persons of either sex into this part of the establishment, and the general arrangements will, in other respects, remove another great objection which has been felt to have had much influence on the prosperity of dramatic establishments.

"In stating that the theatre has already found a lessee who will take it a fair and remunerating rent, the project ceases to be a mere speculation, as the security of the shareholders is placed beyond a doubt; but in naming the gentleman to whose talent and experience this great enterprise is confided—Mr. Buckstone—the proposers of this undertaking feel that they shall have a still larger claim on the public confidence. As a favourite performer, unrivalled in a particular class of character, as the author of very many successful works, Mr. Buckstone unites the character of dramatist with that of actor. These qualifications, with his experience in the business of theatres, will be ample security that the expectations of those who look forward to the resuscitation of the National Drama by the establishment of this Theatre will be fully realized."

THE COLOSSEUM.—This magnificent exhibition continues to attract crowds of visitors. And where can a more enjoyable evening be spent than in its unrivalled sculpture gallery, the ear regaled with the choicest music of the old masters, performed upon the fine organ that has been erected there, and the eye wandering among some of the proudest efforts of modern British art; or in the conservatories, with their fountains, and birds, and flowers, or gazing upon the mimic representation of Mont Blanc, or looking with never-flagging admiration on the gorgeous and lifelike spectacle of London by night, with its moving waters and starry sky, or indulging the less intellectual appetite with the lavish stores of the refreshment-rooms. Undoubtedly there is no such public exhibition in Europe, and they who have not seen should go forthwith. They who have once been there will be sure to go again.

THE DIORAMA.—This is a veritable pictorial prodigy. To all who feel an interest in the wonder-working of art, nay, to those who can feel an interest in the beauties of nature, this exhibition will be an unqualified delight. It is certainly the most singular deception, for it is difficult to convince oneself that the scene before us is really a picture; the change of lights, from day to darkness, from winter to summer, is made so imperceptibly, that the keenest eye cannot trace it. No person should come to London without visiting this its most beautiful and curious sight.

ROYAL POLYTECHNIC INSTITUTION.—If our readers wish to enjoy an intellectual treat, they will profit by our recommendation and visit this popular institution. As during the approaching session of Parliament we may expect discussion respecting the various plans proposed for producing locomotion on railways, we are glad to find that the directors of the Royal Polytechnic Institution are making every arrangement for exhibiting on a working scale every suggested improvement. Our readers are already aware that there has been for a length of time in that institution a working model of Clegg and Samuda's Atmospheric

Railway, and, during the sitting of the committees last session, counsel frequently availed themselves of the practical instruction to be derived from an inspection of the models. The directors therefore are fitting up in this establishment various descriptions of railway carriages to be propelled by steam and other agents. In order to shew the vast advantages of Coleman's engines for ascending and descending inclined planes an extended line of railway is being constructed, so as to afford the patentee an opportunity of more fully exemplifying the ingenuity of his invention. Doctor RYAN'S lectures on the potato disease continue to draw full audiences daily, who appear to appreciate the admirable manner in which the lecturer illustrates his discourse. Doctor BACHHOFFNER also attracts attention by his admirable lectures on Experimental Philosophy.

CRITIC OF TRADES, INVENTIONS, ETC.

[Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

THE TAUNTON SAUCE.—We have three reasons for inviting attention to an advertisement of this preparation, which will be found in our columns of this day. The first is, on the principle that the merits of a good thing cannot be too extensively promulgated; the second is, that the sauce is the invention of a lady, widely and flatteringly known throughout the west of England for her culinary ability; and the third results from a belief that both the public and the inventress will equally benefit by the making of it known—the former by the acquisition of a zestful and innocuous condiment, and the latter by that of an income, which shall support the decline of life, and make some compensation for the loss of an affluent position of which misfortune and not misconduct has unhappily deprived her. Judging the Taunton Sauce, however, purely by *its own merits*, we are fully justified in according to it unqualified commendation; a more delicately flavoured, yet at the same time rich and piquant condiment we never before tried. There is a similarity, more or less, in the numerous class of sauces, that proves their close relationship, and how difficult it is to be original, even in this as in other things. Yet the sauce under notice is undoubtedly a novelty. To our own opinion in its favour we may add the unanimous praises of all to whom we have offered it, including a connoisseur in science *à la cuisine* of high authority. For these reasons we recommend the Taunton Sauce, in the full confidence that on trial it will be found deserving of even a higher encomium than it has received at our hands.

UNIVERSAL MAGNETISM.—ROYAL INSTITUTION.—At the monthly meeting of the members on Monday, Mr. Faraday, the Fullerian professor, continued his announcements by giving the heads of a new discovery in magnetic science, so general as to reach to all matter. Briefly, his statement was, that all matter not magnetic, as iron, was subject to magnetic force, and produced dynamic effects perfectly distinct from, and in contrast with, those of magnetic substances. Thus the prism of heavy glass, with which he had succeeded in magnetically affecting light, suspended freely between contrary magnetic poles, was acted upon, and arranged itself equatorially, or directly across the ordinary magnetic curves. This action he resolved, by experiment, into a direct repulsion, exerted between the glass and either or both poles of the magnet; and he further stated that all matter not magnetic, as iron, possessed this property. The investigation of this subject has been carried to a great extent with powerful instruments, as well also as new investigations of the relations of bodies magnetic in the ordinary manner, and fresh facts are daily being elicited. These, with the important conclusions to be drawn from them, will be sent immediately to the Royal Society in one or two papers, and be communicated to the members of the Royal Institution at some of their approaching evening meetings.

MAPS IN RELIEF.—An ingenious work of art and science, by M. Sené, a citizen of Geneva, is exhibiting in Paris—and about to be inspected by a committee of the Academy of Sciences. This work represents, by means of sculpture in wood, the chain of Mont Blanc and its neighbouring mountains, on a superficies of 25 square mètres—the lengths being given on a scale of 1 in 10,000 and the altitudes of 1 in 6,000—and the forms and colours of their many peaks, all their glaciers, valleys, watercourses, chalets, and even their firs (no less than 500,000 of which are represented) being rendered with a fidelity which constitutes, it is said, a complete illusion. The effect attained is pleasantly described by the *Moniteur des Arts*:—"In the compass of an hour, how charming a journey may be made, under the guidance of M. Sené around this relief! You arrive at Chamouny by Saint-Martin, or by the Baths of Saint-Gervais, and alight at the Priory. After having taken a general view of the valley, you mount successively from station to station—visit the *Mer-de-glace*—pass, if you will, the *Col du Géant*—climb Mont Blanc—nay, look down even on this "Monarch of Mountains," by ascending a gallery, which is erected at a little distance. The ascent completed, you make what is called the tour of Mont Blanc; arrived at Martigny, passing by the *Col du Bonhomme*, the *Col de la Seigne*, the *Allée Blanche Courmayeur*, the hospital of Saint Bernard, the *Val Ferret*, or the *Val d'Entremour*. And, finally, from Martigny, you return to Chamouny, either by the *Tête Noire* or by the *Col de Balme*—and reach Geneva by the *Col d'Anterne*—without fatigue and without danger—without cloud and without rains—and at the small outlay of two francs."

JOURNAL OF MENTAL PHILOSOPHY.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mental Philosophy, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mental Philosophy throughout the world to make this a complete record of the progress of the science.]

A Lecture on the Nature of Miracles, delivered at the Literary and Philosophical Institution, Cheltenham. By the Rev. F. CLOSE, A.M. London, 1845. Hamilton and Co.

BUT a few months ago a fierce and uncharitable attack was made on Mesmerism, and those who inquired into it, from the pulpit, by one of the fashionable preachers of the day. He gravely asserted that its phenomena were the result of Satanic agency, and of a consequence denounced all experimenters as dupes of the devil. This was followed by the publication of an article much to the same effect, by a writer well known in the religious world, under the name of CHARLOTTE ELIZABETH. That these denunciations greatly retarded the progress of Mesmerism, by closing the minds of such as cannot, dare not, or are too indolent, to reason for themselves against every kind of argument in its favour, is undeniable. Many serious people, too, who are well enough able, and but for this would have been disposed, to examine and judge for themselves, finding their prejudices interfered with by the reports, which from all sides reached them, of the wonders Mesmerism was unfolding, were too ready to rely on the authority of these writers as an excuse to their consciences for avoiding inquiry into a subject which at the first step carries the mind beyond the boundaries which for six thousand years have been supposed to be its limits. Pushing the argument *ad absurdum* in the eyes of unprejudiced parties, a third writer appears, who prints and circulates widely a tract called "A Dialogue between a Christian and a Mesmerist!" as though the latter were an unclean spirit, who should be rebuked and exorcised accordingly. Meanwhile the Mesmerists, relying upon the force of truth eventually to compel belief, looked calmly on, amused at the length to which bigots in their blindness can run, and deprecating the insane folly of the many, who, without reflection, follow them. Argument was there none to combat; the very case of the denunciators, considered by a dispassionate and philosophical mind, defeated their purpose. Respect the motives of these writers we do, for it were to treat them as uncharitably as they have treated the Mesmerists to say their intentions were not pure, and for the best; yet this is all that can be said in their behalf, while we must stigmatize them for a subjection to prejudice which unfits them to judge fairly of the question, or pity them for a narrowness of apprehension that is incapable of admission of a great truth. The innate force and activity of Truth, however, is daily becoming more visible; the mountain of disbelief under which she lay begins to crack and tremble, and eventually, in all her beauty, she will stand before the world. Assisting to disengage her are some of

the most powerful and reverend minds in Europe. Philosophers, statesmen, lawyers, divines, are inquiring and busy; that the result will be for the benefit of mankind no sane man can doubt.

The leader of the clerical Anti-mesmerists is Mr. HUGH M'NEILE; against him the Mesmerists place Archbishop WHATELEY, a man whose capacity rivals that of BACON, and who is confessedly the ablest metaphysician of whom this country at the present time can boast. Between these, who that is too indolent to examine for himself, can hesitate for a moment on which to pin his belief.

Though last, by no means least of the clergymen who have had the moral courage to maintain before the public a belief in Mesmerism (for, after what has been said against it, boldness was really necessary), is the Rev. FRANCIS CLOSE, a minister known throughout the country for the penetrating sagacity of his mind, the soundness of his views, and for the zeal and success which mark his labours in the ministry.

This gentleman, in a lecture delivered to the members of the Cheltenham Church of England Reading Association, on the Nature of Miracles, took occasion to express his views of Mesmerism; this he did in a manner which proved that he had given to the subject the most thoughtful consideration. We accept his testimony, as far as it goes, with unfeigned gladness, for we believe his opinion carries with it a force which will overcome the obstructions piled against Mesmerism to bar its admission into the religious communities, where, above all other circles, it is most desirable it should be known, since, rightly understood, it must tend to advance the interests of true religion, while it opens up fields of psychology of a grandeur equally astonishing and expansive to the human mind. We extract the following from Mr. CLOSE'S lecture; it will be read with interest, as the views it offers are those of a man who has from time to time given pledges to the world of sound judgment and character.

There was another subject to which he would call their attention for a moment, because it was nearer home. They were upon the subject of miracles—supernatural interferences through spiritual and physical causes. Now he might be asked what he thought of the astonishing phenomena of Mesmerism. Were they miraculous, or were they not? This seemed at first sight a very hard question to answer; but if he approached that mysterious subject well armed with all the truths which he had endeavoured to bring before them, he thought an easy solution might be given to the question. He met it with a direct negative. However extraordinary the various phenomena might be, —and upon the merits of particular experiments he offered no opinion—he affirmed, and he had not heard of any sane person connected with that mysterious science who contradicted his assertion—that there were no supernatural causes hitherto developed: that whatever they were, they were physical or metaphysical—they were some of nature's secrets, whose laws and principles were not yet fully revealed or discovered. He had no hesitation in saying thus far,—he spoke not of any particular exhibitions, but he spoke of the mesmeric power in the abstract, —and he felt constrained to acknowledge that there were some facts in the science of Mesmerism which he was bound to believe, upon the same kind of testimony as that on which he believed the miracles of the Scriptures themselves; namely, upon the credible testimony of those whose word, and understanding, and principles, he could not suspect. He was one of those who were utterly fearless as to the result of faithful inquiry into the secrets of nature; he knew, indeed, that while truth was in the course of discovery, the most crude and foolish theories would be started; and much mischief might be occasioned, yet eventually truth must come out of nature's ample bosom; and ere long it would be proved whether there was not some subtle principle or principles to be discovered; whether there was not some mysterious power or agency whereby mind and matter were connected as by a subtle thread, and whether that delicate and invisible thread, which bound the soul and body of man, might not bind the souls and bodies of many men together in the same mysterious manner. Let them only keep it well in mind that the phenomena of Mesmerism were not miraculous, that there was no Divine interference, but that they are purely physical discoveries of hidden and unexplored properties of nature. Let them keep to that, and *then*—why they had better be minding their own business than speculate on things they did not understand! *(Laughter.)* Let us leave them to the learned before we took upon ourselves to act and appear in the experimental drama. And here he would venture to say a few words if he might be allowed, to his fair friends. He would recommend the ladies to leave Mesmerism alone, for it appeared that their nature was peculiarly sensitive to the mysterious power of Mesmerism. He would therefore recommend them to wait a while, until the stronger heads of the nobler part of mankind (he hoped they would forgive him) had searched a little more deeply into the matter; and when the doctors and philosophers had brought before us something like a classification of the phenomena, and had approached a little more towards the structure of a system, then it might become more popular. But at present he was sure that he knew enough of this subject most seriously to assure them that Mesmerism was not a thing to be trifled with, either physically, mentally, or spiritually; a wild and injudicious pursuit of this subject might terminate, as it had already done in one instance, in insanity! He said not this in condemnation of Mesmerism, he knew it was only an abuse of it. But he did warn them against trifling with it, playing with a power, like a child playing with some unknown and dangerous weapon, he knew not what the effect might be. He took that opportunity to deliver his opinion on that debatable topic, only adding one word more; as he felt persuaded that there was nothing miraculous in Mesmerism, so he was certain that there was no interference of the evil spirit in Mesmerism. Satan had nothing more to do with Mesmerism than he had to do with us in every thing else. Never would he grant this vantage ground to the prince of darkness, or suppose that he exercised mesmeric power. True, we could not explain the phenomena—nor see the beneficial object of them—but therefore to conclude that they are diabolical, appeared to him to be the most inconclusive argument that he had ever met with.

ELECTRICITY AND HEAT.

TO THE EDITOR OF THE MORNING HERALD.

SIR,—I am very much obliged to you for the insertion of my last letter; and will, if it please you, notice a few consequences of the connection therein mentioned, which may be interesting to your readers:—

In the first place, light, electricity, and heat being so closely dependent, that it is reasonable to suppose that all present anomalies will vanish before accurate investigation, it follows that the conflicting theories with regard to animal heat and respiration of combustionists and electricists will resolve themselves into altercations of words.

Secondly, it being remembered that chemical affinity is electricity, the formative or growing principle in vegetables and animals becomes plainly identified with that wonderful energy of galvanism which forms the crystal into its myriad shapes, so various, yet so fundamentally simple; for where is the boundary which divides the three kingdoms of crystals, vegetables, and animals, impassably and distinctly?

Thirdly, another and more wonderful may be added to the already numerous and wonderful family of electrotypes, I mean neurotypy, or science of nervous impressions, which, or I mistake greatly, will ere long go far to explain the phenomena of what is termed mesmerism.

For, to suggest no impossible experiment, suppose the retina, optic nerve, and brain, prepared as the daguerreotype plate is prepared, only by a more delicate means; then consider the probable result of images or perceptions impressed on the sensorium, and so with respect to the other senses. For if light, which is electricity, be the medium of communication with the organs of vision, it is probably so with the other senses (Sir John Herschel, in his beautiful discourse on the study of natural philosophy, section 85, stating, with respect to sound and light, that "there can hardly remain any reasonable doubt of their ultimate coincidence in one common phenomenon, the vibratory motion of an elastic medium"); and we then see how the motions, sensations, impressions, nay, even the thoughts, for they are accompanied by cerebral motion, may be communicated from one individual to another, at the greatest distances.

I say, Sir, that for a man in the present state of science to assert this to be impossible, is to display shallowness, and not profundity of intellect.

Only it seems to me that there is a tendency at present to split science into unsatisfactory divisions and fractions that, instead of generalizing and simplifying particular laws, serve to make general and simple laws more complex, by inventing new distinctions, or continuing old ones, for branches and principles proved identical.

To hear many philosophers discourse no one would suppose that electricity, heat, light, chemical affinity, and gravity had any intimate and important dependence; whereas it seems all but certain that one great principle of force pervades the entire universe—the sceptre in the right hand of the Almighty.

I am, Sir, yours, &c. HENRY VERLANDER.

7, Harriet-street, Montpelier-square, Brompton.

I may here suggest that as all crystals may be formed by the slow action of galvanism, here is not only a connection between the electricity and polarized light, but, through optical and electrical experiments on crystals and their constituent elements, a means of ascertaining the extent of that connection.

To Booksellers.—*A stamped copy of* The Critic *sent regularly to any Bookseller, for his own use, at the cost of stamp and paper only, on prepayment of* half a year's subscription, at least (4*s.* 4*d.*), *which may be transmitted in penny postage stamps.*

Booksellers *and Keepers of Circulating Libraries are requested to communicate to* The Critic *the results of their experience as to books and classes of books most in demand, and other similar information. Books wanted to purchase inserted in the weekly list without charge.*

BOOKSELLERS' CIRCULAR.

The publishing season has begun, and although it has done little as yet in the way of performance, there is a great promise, if we may credit the printers, who tell us that they are busier than usual. It is to be feared, however, that political agitation, and the money panic, and the potato disease, will combine to check these buds of promise ere they bloom; for it is a well-known fact, that the book-trade is the first to feel bad times. Men begin to economize by resigning their mental pleasures; they do not curtail their bodily comforts till necessity compels. On inquiry we learn that the greater portion of the work upon which the printers are engaged is the of reprints. Of new books there are but few in progress; and glancing over the publishers' advertisements, there is little of substantial attraction to be found. The truth is, that literature is at a very low ebb among us, lower than it has been for half a century.

May we ask those of our booksellers and librarian readers who have not yet obliged us, to follow the example of the correspondents who have so kindly favoured us with their opinions of The Critic, and transmit a similar document, if they can do so conscientiously, in the course of the next week, as we are desirous of including them in a prospectus to be issued preparatory to the commencement of a new volume with the new year, when we hope to welcome a large accession of new subscribers.

OPINIONS ON THE CRITIC.

TO THE EDITOR OF THE CRITIC.

Sir,—I take The Critic because I consider it the most valuable journal published for Booksellers, and Librarians especially.

The entire arrangement of it is new and useful. The classification of its Literary Department, under the heads of the countries in which the works reviewed were produced, is quite a distinguishing feature of the work. Its "Record of Inventions" and "Register of Books wanted to purchase," are found of great utility. The trade, too, is more liberally dealt with by The Critic than any periodical I am acquainted with.

I am, Sir, yours, &c.

Andrew Buchanan.

Newtown, Limavady, Dec. 4, 1845.

TO THE EDITOR OF THE CRITIC.

Sir,—Most willingly I beg to add my testimony to the usefulness of The Critic, as a guide to country booksellers in selecting for their shelves or libraries; and independent of the pleasure to be derived from reading those brief extracts it contains, they have very often been the means of obtaining orders for books which otherwise would probably be overlooked in many instances.

I am, Sir, yours, &c.

Richard Milloy.

Tipperary Town, Nov. 25, 1845.

REGISTER OF NEW PUBLICATIONS,

From Dec. 6 *to Dec.* 13.

NOTICE TO BOOKSELLERS.

A Register lies at The CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* The Critic, *and no charge will be made either for registration or for publication in* The Critic. *Particulars forwarded* by letter *will be duly inserted.*

LIST OF NEW BOOKS.

Alphabet of Quadrupeds, 24 Pictures from the Old Masters, royal 16mo. 4*s.* 6*d.* cl.—Affection's Parting Gift, 32mo. 1*s.* 6*d.* cl. gilt.

Booke of Christmas Carols, illuminated from MSS. in the British Museum, small 4to. 1*l.* 5*s.* extra bds. gilt.—Bray's (Mrs.) Novels and Romances, Vol. VII. "Trials of the Heart," fc. 8vo. 6*s.* cl.—Banking Almanac and Directory for 1846, 8vo. 5*s.* cl.—Brief Memoir of T. F. Buxton and Elizabeth Fry, 18mo. 1*s.* cl.

Cross's Initia Latina; or, Guide to Latin, for Beginners, 12mo. 3*s.* cl.; ditto, Initia Græca, 12mo. 3*s.* cl.—Copley's (Esther) Housekeeper's Guide, fc. 8vo. 4*s.* 6*d.* cl.—Christison's (J.) Easy Grammar of the Italian Language, 18mo. 1*s.* 4*d.* cl.—Circle of English History, a Game, square, 3*s.* 6*d.* cl.—Crowned Heads; or, Contemporary Sovereigns, a Game, 4to. 7*s.* 6*d.* cl. case.

Dickenson's Guide to the Quarter Sessions, by Talfourd and Tyrwhitt, 6th edit. royal 8vo. 1*l.* 16*s.* bds.

European Library, Guizot's (F.) "History of the English Revolution," post 8vo. 3*s.* 6*d.* cl.—Events in Sacred History, 24 Pictures from Holbein, Raffaele, and Albert Durer, royal 16mo. 4*s.* 6*d.* cl.—Edinburgh Tales, Vol. II. royal 8vo. 4*s.* 6*d.* cl.

France Illustrated, from Drawings by Thomas Allom, esq. with Descriptions by Rev. G. R. Wright, Vol. I. 4to. 1*l.* 1*s.* cl. elegant.—Faery Tales and Ballads, Fourteen Pictures by Eminent Artists, royal 16mo. 4*s.* 6*d.* cl.—Freemason's Calendar and Pocket-book for 1846, 3*s.* roan tuck.

Gore's (Mrs.) Snow Storm, illustrated by George Cruikshank, fcp. 8vo. 5*s.* cl.—Goodnatured Bear, a story for Children of all ages, Four Pictures, by F. Taylor, small 4to. 3*s.* 6*d.* cl.—Gumersall's Interest and Discount Tables, 17th edition, 8vo. 10*s.* 6*d.* cl.

Hare's Illustrated Engineer's Almanack for 1846, on sheet, 1*s.*—Hood's (Thos.) Dream of Eugene Aram, Seven Designs, by W. Harvey, new edit. crown 8vo. 1*s.* swd.

Jelf's Greek Grammar, chiefly from the German of Kühner, Part I. "Accidence," 15*s.* cl. completing the work.—Juvenile Englishman's Library, Vol. IX. "The Charcoal Burners," 18mo. 1*s.* 6*d.* cl.

Lawrence's Stories from the New Testament, illustrated, square 16mo. 3*s.* 6*d.* cl.

Mann's Planetary and Stellar Universe, with numerous Diagrams, 12mo. 5*s.* cl.—Murray's Colonial and Home Library, Vol. XIII. "Life of Louis, Prince of Condé," post 8vo. 6*s.* cl.—Murphy's (Dr. E. W.) Lectures on Parturition, 8vo. 9*s.* cl.—Metrical Version of the Hebrew Psalter, with Explanatory Notes, small 4to. 7*s.* 6*d.* cl.—Meek's (Rev. R.) Reasons for Conformity to the Church of England, 18mo. 2*s.* 6*d.* cl.

Neison's (F. G. P. esq.) Contributions to Vital Statistics, 2nd edit. 4to. 1*l.* 1*s.* bds.

Pinnock's Ciphering Books (Key to), 5th edit. 12mo. 3*s.* 6*d.* cl.—Payne's (G.) Elements of Language and General Grammar, fc. 8vo. 2*s.* 6*d.* cl.—Practical Sermons, Vol. II. 8vo. 7*s.* cl.

Rodwell's (G. H.) Hand-Book of the Violin, imp. 12mo. 1*s.* swd.—Railway Speculator's Memorandum Book and Ledger, oblong, 3*s.* roan tuck.

Standard Novels, Vol. XCIX. Cooper's (J. F.) "Jack O'Lantern," 12mo. 6*s.* cl.—Spackman's (W. F.) Analysis of the Railway Interest of the United Kingdom, royal 8vo. 5*s.* cl.

Tams's (G., M.D.) Visit to the Portuguese Possessions in South-Western Africa, 2 vols. post 8vo. 1*l.* 1*s.* cl.—Trench's Hulsean Lectures, 8vo. 5*s.* bds.

Whittaker's Catechisms, "Chess," 18mo. 9*d.* swd.—Wordsworth's (Rev. Dr.) Theophilus Anglicanus, 4th edit. post 8vo. 8*s.* 6*d.* cl.—Watts's (Dr.) Psalms and Hymns, royal 32mo. 2*s.* cl.

Young Baronet (The): a Novel, by the Author of the "Scottish Heiress," 3 vols. post 8vo. 1*l.* 11*s.* 6*d.*

BOOKS WANTED TO PURCHASE.

No charge is made for insertion in this list. Apply to the Publisher of The Critic, stating prices.

Carrington's Dartmoor, with Notes and Preface by W. Burt, esq. Published 1826.

LITERARY INTELLIGENCE.

A Translation a Violation of Copyright. — The Royal Court of Rouen has decided, on an appeal from the inferior tribunal, that the translation of a work into another language is still a violation of the law of copyright. In the case before the Court, some French lectures on chymistry had been translated into Spanish. The publisher of this translation was sentenced to pay 1,000f. fine, and all the copies were ordered to be destroyed.

The Jewish Reform Committee, sitting at Frankfort, have decided upon a change, which marks strongly the rapid emancipation of the Hebrew mind from the mere letter of ceremonial. This body has decided that, henceforth, the Jewish Sabbath shall be observed on the same day with that of Christendom. The Israelite community, in the same city, have been inaugurating the new building which they have erected for their general school, with honours, in which the senate of Frankfort, the high civil and military functionaries, and many Christian ministers and professors took a part. The choral singing on the occasion was executed by the 520 children, who are pupils of the schools; and it is remarked that the procession of the scholars and their chiefs through the streets of Frankfort is the first Jewish ceremony which ever took place publicly in that city.—*Athenæum.*

Miss Mary Flaherty has made Lord Brougham residuary legatee; which, says the *Post*, is tantamount to leaving him 20,000*l.*

THE CRITIC,
And Journal of Literature.

SATURDAY, DECEMBER 20, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

JOURNAL OF ENGLISH LITERATURE.

PHILOSOPHY.

Ultramontanism; or, the Roman Church and Modern Society. By E. QUINET, of the College of France. Translated from the French by C. COCKS, B.L. 8vo. pp. 184. London, 1845. Chapman.

THE revival of Jesuitism in various parts of Europe, and especially in France, appears to have excited a serious alarm for the safety of modern civilization. It is even thought by some, and those, too, minds of the foremost order, accustomed to look calmly upon the current of events, and from a review of the past to prophesy of the future, that there is imminent danger of the restoration of the reign of Priestcraft, and consequently of a return to the mental and spiritual night of the middle ages. It is difficult for us, who can espy no traces in our own country of any such tendency, save in the rise and progress of Puseyism, to understand the terrors that have taken possession of many of the loftiest intellects of continental Europe. Nay, that very event which at the first seemed to indicate the advance of Jesuitism here, as in other countries, has served only to manifest beyond all question the firmness of the hold which the principle of Protestantism has taken in the national mind, and the hopelessness of any attempt to spread Ultramontanism here, at least during the existence of the present generation.

Still the fact remains, and it is both important and interesting, that in infidel France there is not only a fear of Ultramontanism, but an actual danger of it. The cause, *we* believe to be, that England opposes *a religion* to the progress of Priestcraft, while France has no such safeguard. Here the minds of men are already preoccupied with *a faith*; there they are open to the first influences that appeal to the heart, in which the sense of religion, as implanted by nature, although it may be hidden can never be destroyed.

But, however this may be, the fact is certain, that the spirit of Jesuitism is growing among our neighbours, and has already assumed so formidable a front that the foremost of their historians and philosophers have deemed it incumbent upon them to come forward with the most solemn and earnest exhortations to their countrymen to beware of the dangerous enemy that is lurking among them and to expel him ere it be too late. We have lately reviewed at some length the singularly eloquent and powerful appeal of M. MICHELET, entitled *Priests, Women, and Families*, and now the translator of that extraordinary work has favoured us with an equally spirited translation of a series of lectures by another historian, M. QUINET, on the same exciting theme, as earnest, as eloquent, but wanting some of the more popular characteristics which recommended the former production to the regards, not of France only, but of all Europe.

The lectures before us are no common-place compositions, nor are they calculated for the sofa-lounger. They require the active exercise of thought in the perusal; they are learned in their facts and profound in their arguments. To attempt to follow them consecutively, would be foreign to the duties of such a literary journal,—they would demand the ample space and leisure of a quarterly review, by some of which, no doubt, justice will be done to the multitudinous suggestions for thought with which these pages are crowded. We can but indicate an outline of the contents of the volume, and by a few choice extracts convey to the curious reader a general idea of its scope and composition.

The subject is treated of in eight lectures. The first is entitled "The Superlatively Catholic Kingdom of Spain," and is a review of the present state of Catholicism in that country. M. QUINET's opinion, contrary to the prevalent impression, is, that the power of Catholicism is really less in Spain than in other countries. It seems that he has visited that country purposely to observe the state of the public mind in this respect.

His notion is, that when Priestcraft was defeated by Science elsewhere, it took refuge in Spain.

The Spanish Church wished to be alone, without any one to contradict her. She succeeded in making a desert around her. Philosophy, Protestantism, dissenting minds, science,—every thing was cursed by her, and every thing was sacrificed to her. But it happened, that these men of the past lost themselves in this absolute loneliness; they wished to sterilize the modern world; and the sterility began in themselves. In delivering themselves from their adversaries, they became severed from life; and in pretending to kill the new man, their blows fell upon themselves.

And not having yielded to the spirit of the age, she has been defeated by it and trampled upon.

The second lecture treats of the "Political Results of Catholicism in Spain." Why has religion so firm a hold, and yet the Church so weak? Because the Spanish people have a *faith*; they have an idea of Christianity apart from Catholicism. It has been handed down to them from the time when they fought for that faith against the assaults of Islamism.

In presence of the Koran, the Spanish people identified themselves with the Gospel; they considered themselves, in the manner of the Hebrews, as the chosen people. In the sierras of Andalusia, the mountaineers, wishing to know whether I spoke Spanish, asked me whether I *spoke Christian,—habla Christiano?* During that struggle of eight centuries against Islamism, every man had been accustomed to consider himself as a champion of Christ. My guide, in order to ask a question of a goat-herd, called out to him from the top of a rock, Chevalier! *Caballero!* and the echo from a Moorish tower answered that the nobility of that man dated from the duel between Christ and Mahomet. When God himself is the subject of dispute, what becomes of the differences of fortunes and social conditions? All men are brothers upon a field of battle; but if the field be a whole country, if the battle last eight centuries, and the cause be that of Christ, around whom generations watch like sentinels, it is evident that the sentiment of equality under the banner of the Eternal, that of communion by blood, must be impressed in an indestructible manner upon the heart of that people, and become the very basis of their nature. All the gold of Mexico has been unable to change it.

There is a moral grandeur about those Spaniards, after all. There is great hope for a people whose public assemblies are thus conducted:—

I have been present at warlike discussions where there was not only a question of life or death, but of a duel between royalty and one man; frenzy, fury, and menaces were at the bottom of every heart around me; for a whole week one party beset and provoked their opponents, with cold, bitter invectives. All that time the other half of the assembly, those men whose political life was thus being tortured to the death, did not allow a single syllable to escape them. They remained as silent as marble statues. Those whose coolness began to waver were contented to retire quietly from the hall. You would have fancied them to be resigned or indifferent; they were, on the contrary, at the very extremity of agony. This impassibility lasted till the moment when the greatest orator of Spain, rising in their name, and gathering and storing up all those passions, all those pent-up cries, hurled upon that assembly, for two whole days, the thunders of a speech which still burns in my memory.

And whose public men can thus bear themselves:—

Even on those occasions, when menaces and fury raise a tempest in the air, each, at the moment of voting, rises, and pronounces his vote with a loud voice, adding only the monosyllable *Yes* or *No*, *Si* or *No*. The first time I saw, in the most perilous circumstances, and amid the deadly clamours of the tribune, each of these men, with his head erect, publish his opinion so bravely, that sight filled me with sympathy and respect. Really there was something grand in it, which brought to mind the noble pride of the old Cortes of the middle ages. What is excellent is, that the idea never seems to strike anybody that it is possible for the vote to be influenced by fear.

The third lecture discourses of "The Roman Church and the State," and traces the struggle between them for ascendancy. To this moment the latter has succeeded in preserving her place; but a great effort is being made to restore the

dominion of the former, and the trick by which this is sought to be effected is that of calling the latter atheistical if it pay not homage to the former as its mistress.

The fourth lecture reviews the relationship of "The Roman Church and Science," which has been always, still is, and ever will be, one of antagonism. Science is, in fact, the most dangerous foe of priestcraft; hence, from the time of GALILEO downwards, the latter has always persecuted and opposed the former. When GALILEO first revealed the mechanics of the heavens to man, he was, in fact, preparing a revolution. The formulas of the school divinity were at once proved to be false and foolish; science became the patrimony of mankind, and not the property of monks only; the consciousness of independent thought in one matter led to liberty of opinion in others; the infallibility of the priesthood was overthrown; their power was shaken to the base. What wonder that they sought to extirpate so terrible a foe,—that they put the author of this mischief to the torture, and ever since have proscribed and persecuted his followers. M. QUINET concludes this brilliant lecture with a reflection, severe, but just:—

The Church disavowed in Galileo the instruction of the spirit, and fell into the snare of the senses. From that moment, for two hundred years, she often persecuted the Christian movement of the mind, by the Inquisition and violence. It was necessary that an awful chastisement should suddenly come from above, to warn her that she had mistaken her road. Providence sent her that sacred chastisement in hurling upon her the French Revolution. Heaven could not speak louder. Was it heard and understood? How is it that the Church, which commands us, with good right, to allow ourselves to be instructed by every blow of fortune, repudiates, for her part, this divine lesson, when she is the party struck? Will she deny the chastisement? That is impossible. Will she pretend that what is true for others is not true for her? She cannot do so either. Has the warning not been severe enough? Must God repeat the lesson? She thinks so still less.

The fifth lecture treats of "The Roman Church and History." There is a passage of great power and beauty in this lecture, which we must extract:—

There is another philosophy of history. In the most profoundly Christian point of view, Providence acts in a much more intimate manner; God no longer inhabits the invisible heights alone; nor does he any longer act by sudden fits and starts. He is become incarnate; he is made man, and lives in the hearts of nations and states. In this sense, history is an eternal Gospel, wholly filled with the inward God; he it is who speaks and moves in the vast bosom of nations; he acts outwardly from within, uninterruptedly; he dwells in the heart of things, he fashions the inward spirit of empires, and events are nothing more than the consequence which he abandons to man; ever-living, he communicates life. In human things, he is the spirit of development and progress supplanting immutability and despotism.

"The Roman Church and Law" is the subject of the sixth lecture. Its purpose is to shew the effect of infusing into the law the spirit of Christianity, and, by comparing it with the law as wielded by the spirit of Romanism, to prove that they are not identical, or even in alliance, but rather antagonists.

The seventh lecture discourses of "The Roman Church and Philosophy," more often on terms of friendship than science, but at times in fierce collision. Into this learned and curious inquiry we cannot attempt to follow, but we recommend the entire of this essay to the careful perusal of the reader.

The eighth lecture is devoted to the subject of "The Roman Church and Nations," and it concludes with this energetic appeal:

You fear the pope; there is a way to dispossess him without insulting him as our kings did in the middle ages. Be, in the management of the world, more Christian, more universal than he; have towards nationalities that charity which he has not had. Try some day to raise up the dead he has made! Open the gates of the city of life, and no longer for a small number of predestined only. Spain has been the right arm of Rome, be then the right arm of humanity. In one word, try a policy more elevated, more sacred and more divine than that of the pope; you will legitimately inherit his strength, and you will fear him no more: it is a sure way to conquer him without fighting.

"The Roman Church and the Universal Church," is the title of the ninth and last lecture. It is not the least interesting of the series; but already we have dwelt, perhaps, at too great length on so small a volume, which, however, offers this excuse for us, that it contains more wisdom and more matter for thought than most books of tenfold its bulk.

BIOGRAPHY.

Memoirs of the Jacobites of 1715 *and* 1745. By Mrs. THOMSON, Author of "Memoirs of the Court of Henry VIII." &c. &c. In 2 vols. 8vo. London, 1845. Bentley.

THE memoirs, with which Mrs. THOMSON has ingeniously contrived to fill two portly volumes, are seven in number; to wit, the Earls of MAR and DERWENTWATER, the Master of SINCLAIR, the Earl of NITHESDALE, Viscount KENMURE, Sir JOHN MACLEAN, and ROB ROY MACGREGOR, the latter being indebted for his introduction into a work that claims to be history on account of the celebrity given to him by the fiction of SCOTT.

Mrs. THOMSON is familiar to most novel-readers for a series of historical romances that have proceeded from her pen, and which have attained a certain degree of popularity not altogether undeserved. In a more aspiring mood, she has now, for a second time, adventured upon history. In this she has succeeded better than they are wont to do who have turned from fiction to fact. She has bridled her imagination, and forbidden it to colour sober realities too highly. She has exercised uncommon diligence in rummaging old state-papers, mouldering family-chests, and black-letter books in the British Museum, and exhibited good taste—a woman's innate sense of the agreeable—in the selection of materials calculated to amuse and make her biographies readable. Minutiæ that a man would have passed over as too insignificant for notice, such as small gossips, little family anecdotes, and incidents of personal adventure, she has boldly seized upon and worked into her narratives, thus giving to them a reality which the most solemn periods of the formal historian never could have produced. Hence is this, although a veritable contribution to the historical library, an agreeable sofa-book, pleasant fireside reading for a winter evening, and we suspect more truly instructive than a more regular history, because it brings men, and places, and events more home to the mind; conjures up definite ideas of them, and impresses them there indelibly. Mrs. THOMSON'S experience as a novelist has enabled her, as it were, to dramatize her story, to perfect her descriptions; and although these advantages have been purchased at the price of some prolixity, the exchange is certainly to the advantage of the present reader, however it may operate to the prejudice of her claims to a place among what are termed the standard historians.

At this season, when so many new works demand notice, we cannot attempt to follow her through each of the biographies she has completed. It must suffice that we cull, from the ample choice offered, some of the passages containing the most novelty, as specimens of what the reader may expect from the perusal of a work which will undoubtedly be a desirable addition both to the book-club and the circulating library.

From the biography of the Earl of MAR, we extract this

PORTRAIT OF THE CHEVALIER.

In person, James is reported by the Master of Sinclair to have been "tall and thin, seeming to incline to be lean, rather than to fill as he grows in years." His countenance, to judge by the most authentic portraits of this prince, had none of the meditative character of that of Charles the First, whom the Chevalier was popularly said to resemble; neither had it the sweetness which was expressed by every feature of that unhappy monarch, nor had his countenance the pensiveness which wins upon the beholder who gazes upon the portraits of Charles. The eyes of the Chevalier were light hazel, his face was pale and long, and in the fulness of the lips he resembled his mother, Mary of Modena. To this physiognomy, on which it is said a smile was rarely seen to play, were added, according to the account of a contemporary, "a speech grave and not very clearly expressive of his thoughts, nor over much to the purpose; his words were few, and his behaviour and temper seemed always composed."

And this is the Earl of MAR'S description of the same personage:—

People every where, as we have come along, are excessively fond to see him, and express that duty they ought. Without any compliment to him, and to do him nothing but justice, set aside

his being a prince, he is realie the finest gentelman I ever knew. He has a very good presence, and resembles King Charles a great dele. His presence, tho', is not the best of him; he has fine partes, and dispatches all his buissiness himself with the greatest exactness. I never saw any body write so finely. He is afable to a great degree wtout loqscing that majestie that he ought to have, and has the sweetest temper in the world. In a word, he is even fitted to make us a happie people, were his subjects worthie of him. To have him peaciblie settled on his thron is what these kingdomes do not deserve; but he deserves it so much, that I hope ther's a good fate attending him."

And he adds,—

The king wears paper caps under his wige, which I know you also do; they cannot be had at Perth, so I wish you could send some on, for his own are near out.

His reception at first was enthusiastic.

On the second of January, 1715-16, the Chevalier proceeded to Brechin, and thence to Kinnaird; and on Thursday to Glammis Castle, the seat of the Earl of Strathmore. On the sixth of January he made his public entry into Dundee on horseback, at an early hour. Three hundred followers attended him, and the Earl of Mar rode on his right hand, the Earl Marischal on his left. At the suggestion of his friends, the prince shewed himself in the market-place of Dundee for nearly an hour and a half, the people kissing his hands. The following extract from a letter among the Mar papers affords a more minute and graphic account of the Chevalier's demeanour than is to be found in the usual histories of the day. "I hear the Pretender went this day from Glams to Dundee, and comes to Scoon to-morrow; and I am shourly informed that your old friend Willie Callender went to Glams on Wensday and kissed the Pretender's hand, of whom he makes great speeches, and says he is one of the finest gentlemen ever he saw in his life. Its weell that his landing is keept up from the army, for he has gained so much the good will of all ranks of people in this country that have seen him, that if it was made publick it's thought it might have ill effects among them. He is very affable and oblidging to all, and great crowds of the common people flok to him. When he toke horse this morning from Glams, there was about a thousand country people at the gate, who they say gave him many blessings; he has tuched several of the ivil, as he did some this morning. He is of a very pleasant temper, and has intirely gained the hearts of all thro' the places he has passed. He aplyes himself very closs to business, and they say might very weell be a secretarie of state. He has declared Lord Marischall one of his bedchamber."

But his haughty and forbidding manners speedily extinguished the zeal of his followers.

The enthusiasm which was at first displayed towards the chevalier was soon cooled, not only by his grave and discouraging aspect, but by his fearless and impolitic display of his religious faith. He never allowed any Protestant even to say grace for him, but employed his own confessor "to repeat the Pater Nosters and Ave Marias:" and he also shewed an invincible objection to the usual coronation-oath, — a circumstance which deferred the ceremony of coronation,—Bishop Mosse declaring that he would not consent to crown him unless that oath were taken. This sincerity of disposition, for it cannot be called by a more severe name, especially diminished the affections of the Chevalier's female episcopal friends, who had excited their male relations to bear arms in his favour. But the circumstance which weighed the most heavily against James, was the order which he published, on hearing that the Duke of Argyle was making preparations to march against him, for burning the towns and villages, and destroying the corn and forage, between Dumblane and Perth. This act of destruction, from the effects of which the desolate village of Auchterarder has never recovered, was determined on, in order that the enemy might be incommoded as much as possible upon their march; it added to the miseries of a people already impoverished by the taxes and contributions which the Jacobites had levied. It appears, however, from a letter of James's, since discovered, or perhaps only suppressed at the time, to have been an act which he bitterly regretted, and the order for which he signed most unwillingly. He was desirous of making every reparation in his power for the ravages which were committed in his name."

In another biography Mrs. THOMSON introduces a graphic picture of the state prisons of that time. It is extremely curious, and will be read with great interest.

The subsequent sufferings of these brave men [the Jacobites of 1715] were aggravated by the abuses which then existed in the state prisons of England. The condition of these receptacles of woe, at that period, beggars all description. Corruption and extortion gave every advantage to those who could command money enough to purchase luxuries at an enormous cost. Oppression and an utter carelessness of the wellbeing of the captive, pressed hardly upon those who were poor. No annals can convey a more heart-rending description of the sufferings of the prisoners confined in county gaols, than their own touching and heartfelt appeals, some of which are to be found in the State Paper Office.

In the Tower, especially, it appears from a diary kept by a gentleman who was confined there, that the greatest extortion was openly practised. Mr. Forster and a Mr. Anderton, who were allowed to live in the Governor's house, were charged the sum of five pounds a week for their lodging and diet; a demand which, more than a century ago, was deemed enormous. Several of the Highland chiefs, and among them the celebrated Brigadier Mackintosh, were "clapped up in places of less accommodation, for which, nevertheless, they were charged as much as would have almost paid the rent of the best houses in St. James's Square and Piccadilly." Mr. Forster, it must be added, was obliged to pay sixty guineas for his privilege of living in the Governor's house; and Mr. Anderton to give a bribe of twenty guineas for having his irons off. A similar tax was made upon every one who entered, and who could pay; and they were thankful to proffer the sum of twenty guineas, the usual demand, to be free from irons. It was, indeed, not the mere freedom from chains for which they paid, but for the power of effecting their escape. Upon every one who did not choose to be turned over to the common side, a demand was made of ten guineas fee, besides two guineas weekly for lodging, although in some rooms men lay four in a bed. Presents were also given privately; so that, in three or four months' time, three or four thousand pounds were paid by the prisoners to their gaolers.

Many of the prisoners being men of fortune, their tables were of the most luxurious description; forty shillings was often paid for a dish of peas and beans, and thirty shillings for a dish of fish; and this fare, so unlike that of imprisonment, was accompanied by the richest French wines. The vicious excesses and indecorums which went on in the Tower, among the state prisoners, are said to have scandalized the graver lookers-on. The subsequent distress and misery which ensued may, of course, be traced in part to this cause.

Lord Derwentwater, ever decorous and elevated in his deportment, was shocked at the wayward and reckless conduct of some of the Jacobites on their road to London, and told one of the king's officers at Barnet, that these prisoners "were only fit for Bedlam." To this it was remarked, that they were only fit for Bridewell. Whilst hopes of life continued, this rebuke still applied. The prisoners were aided in their excesses by the enthusiasm of the fair sex. The following extract from another obscure work, "The History of the Press-yard," is too curious to be omitted. "That while they [the prisoners] flattered themselves with hopes of life, which they were made to believe were the necessary consequences of a surrender at discretion, they did, without any retrospect to the crimes they were committed for, live in so profuse a manner, and fared so voluptuously, through the means of daily visitants and helps from abroad, that money circulated very plentifully; and while it was difficult to change a guinea almost at any house in the street, nothing was more easy than to have silver for gold to any quantity, and gold for silver, in the prison,—those of the fair sex, from persons of the first rank to tradesmen's wives and daughters, making a sacrifice of their husbands' and parents' rings, and other precious moveables, for the use of those prisoners; so that, till the trial of the condemned lords was over, and that the Earl of Derwentwater and Viscount Kenmure were beheaded, there was scarce any thing to be seen among them but flaunting apparel, venison pasties, hams, chickens, and other costly meats, with plenty of wine."

Lord DERWENTWATER appears to have been universally lamented, and his memory is still held in veneration. It is a tradition in the family that

On the day of the execution, Mary, Countess of Derwentwater, accompanied by another female, dressed herself as a fishwoman, and in a cart drove under Temple-bar, having previously bribed some people to throw the head of her lord into her lap as she passed under the pinnacle on which it was placed.

Of the Laird of LOCHIEL some interesting incidents were given to Mrs. THOMSON in a manuscript of the late Mrs. GRANT, of Laggan. The race of the Lochiels were remarkable for their swarthy complexions, and a prophecy was current in the clan, that whenever a chief should be born with a fair complexion, misfortune would come upon them. The issue is thus narrated:

At length, after the birth of twelve daughters, a son and heir made his appearance. But the satisfaction of the clans was

dashed by hearing that the ill-starred little laird was fair, like his sisters. The prophecy that a fair Lochiel should never prosper was recalled with dismay; and, unhappily, the fears of superstition were too mournfully realized by fact. The young Cameron was named Donald; his birth was followed by the appearance of two other boys—Archibald, afterwards the ill-fated Dr. Cameron, and John, who was called Fassefern, from an estate. "The proud prediction of their father," continues Mrs. Grant, "was soon amply fulfilled with regard to the daughters of this extraordinary family. Their history," she adds, "unites the extravagance of romance with the sober reality of truth." The twelve daughters of Lochiel were admirably educated, and the fame of their modest virtues soon extended through the Highlands. The great point in matrimonial alliances in those rude regions was to obtain a wife well born and well allied; and little fortune was ever expected with the daughter of a chief. Ancestry was the great point with a Highlander, for he believed that defects of mind, as well as of person, were hereditary. All, therefore, sought the daughters of Lochiel, as coming of an untainted race. The elder ones were married early, and seemed, as Mrs. Grant expresses it, by the solicitude to obtain them, as ever to increase, like the sibyl's leaves, in value as they lessened in number. Of the daughters, one, the youngest and fairest, was actually married to Cameron of Glendinning in the twefth year of her age. She became a widow, and afterwards married Maclean of Kingasleet, so that she was successively the wife of two heads of houses. Another, Jean Cameron, who was the least comely of her family, but possessed of a commanding figure and powerful understanding, was married to Clunie, the chief of the clan Macpherson. She is said to have been celebrated in the pathetic poem, entitled "Lochaber no more;" the poet, who laments his departure from Lochaber, and his farewell to his Jean, having been an officer in one of the regiments stationed at Fort William. By the marriage of his twelve daughters with the heads of houses, the political importance of Lochiel was considerably enhanced, and a confederacy, containing many noted families who were bound together by opinion and kindred, formed a strong opposition to the reigning government. The sons-in-law of Lochiel were the following chiefs: Cameron of Dungallan, Barclay of Urie, Grant of Glenmoriston, Macpherson of Clunie, Campbell of Barcaldine, Campbell of Auchalader, Campbell of Auchlyne, Maclean of Lochbuy, Macgregor of Bohowdie, Wright of Loss, Maclean of Ardgour, and Cameron of Glendinning. All the daughters became the mothers of families; "and these numerous descendants still," observes Mrs. Grant, "cherish the bonds of affinity, now so widely diffused, and still boast their descent from these female worthies."

We conclude with the minute account which has been preserved of

THE DEATH OF ROB ROY.

His deathbed was in character with his life: when confined to bed, a person with whom he was at enmity proposed to visit him. "Raise me up," said Rob Roy to his attendants, "dress me in my best clothes, tie on my arms, place me in my chair. It shall never be said that Rob Roy Macgregor was seen defenceless and unarmed by an enemy." His wishes were executed, and he received his guest with haughty courtesy. When he had departed, the dying chief exclaimed, "It is all over now—put me to bed—call in the piper; let him play *Ha til mi tulidh* (We return no more) as long as I breathe." He was obeyed; he died, it is said, before the dirge was finished. * * * When dying, he shewed that he entertained a sense of the practical part of Christianity, very consistent with his Highland notions. He was exhorted by the clergyman who attended him to forgive his enemies; and that clause in the Lord's Prayer which enjoins such a state of mind was quoted. Rob Roy replied, "Ay, now ye hae gien me baith law and gospel for it. It's a hard law, but I ken it's gospel. Rob," he said, turning to his son, "my sword and dirk lie there: never draw them without reason, nor put them up without honour. I forgive my enemies; but see you to them,—or may—"—the words died away, and he expired.

SCIENCE.

Explanations: a Sequel to "Vestiges of the Natural History of Creation." By the Author of that Work. 12mo. pp. 198. London, 1845. Churchill.

No book, within our recollection, has made so much noise in the world as "Vestiges of the Natural History of Creation." It has passed, with a rapidity unprecedented in scientific publications, through we know not how many editions. It has roused the wrath of divines and philosophers; it has been preached against from pulpits, written against in pamphlets and reviews; abused without mercy by some, as extravagantly praised by others, and read by everybody. The public voice has certainly declared for the author, whose identity is still a problem.

For our own part, without subscribing to the theories of the author, or even admitting all his facts, we rejoice in the appearance of his book, and the attention it has attracted. Scientific men have a great tendency to dogmatism; they dread innovation on established doctrines; it puts them upon the defensive, compels them to assign a reason for the faith that is in them, which it is not always easy to do; and, above all, it offends their pride by the implication that some other person is better informed than themselves. The use of such daring and dashing intruders as "The Vestiges," lies in this,—that it prevents the sages from going to sleep under their laurels, and flattering themselves that no more remains to be discovered. By overthrowing the old landmarks, it forces thought to wander about in search of a path; and thought, once set a-going, is pretty sure to arrive at the discovery of some new truths. The author of "The Vestiges" may be as wrong in his conjectures and facts as was asserted in the clever article in the *Edinburgh Review*, but that does not disentitle him to the thanks of those who think that to stimulate inquiry is to ensure progress, and that he has done more to this end than any other writer of our day will be acknowledged by his most bitter opponents.

The volume before us is a sort of defence of the views put forth in the "Vestiges" against the attacks made upon it by its numerous critics. The author asserts that many of its positions were misunderstood; we should rather say, that they were misrepresented. He resumes his pen to supply some defects, and reassert and confirm what had been unjustly challenged; and, with a good taste that it would be well if his antagonists would follow, he overlooks the uncivil expressions applied to him and his work, and strictly confines his discourse to fact and argument.

The first misstatement has been as to the general argument of the Vestiges, and therefore he repeats it in more explicit terms. One of the most salient points for attack was the nebular hypothesis. On this subject some extremely curious experiments, by Professor PLATEAU, of Ghent, are produced, and which our readers will peruse with great interest.

Placing a mixture of water and alcohol in a glass box, and therein a small quantity of olive oil, of density precisely equal to the mixture, we have in the latter *a liquid mass relieved from the operation of gravity*, and free to take the exterior form given by the forces which may act upon it. In point of fact, the oil instantly takes a globular form by virtue of molecular attraction. A vertical axis being introduced through the box, with a small disc upon it, so arranged that its centre is coincident with the centre of the globe of oil, we turn the axis at a slow rate, and thus set the oil sphere into rotation. "We then presently see the sphere *flatten at its poles* and *swell out at its equator*, and we thus realize, on a small scale, an effect which is admitted to have taken place in the planets." The spherifying forces are of different natures, that of molecular attraction in the case of the oil, and of universal attraction in that of the planet, but the results are "analogous, if not identical." Quickening the rotation makes the figure more oblately spheroidal. When it comes to be so quick as two or three turns in a second, "the liquid sphere first takes rapidly its maximum of flattening, then becomes hollow above and below around the axis of rotation, stretching out continually in a horizontal direction, and finally, abandoning the disc, is *transformed into a perfectly regular ring*." At first this remains connected with the disc by a thin pellicle of oil; but on the disc being stopped, this breaks and disappears, and the ring becomes completely disengaged. The only observable difference between the latter and the ring of Saturn is, that it is rounded, instead of being flattened; but this is accounted for in a satisfactory way.

A little after the stoppage of the rotatory motion of the disc, the ring of oil, losing its own motion, gathers once more into a sphere. If, however, a smaller disc be used, and its rotation continued after the separation of the ring, rotatory motion and centrifugal force will be generated in the alcoholic fluid, and the oil ring, thus prevented from returning into the globular form, divides itself into "*several isolated masses, each of which immediately takes the globular form.*" These are "almost always seen to assume, at the instant of their formation, a *movement of rotation upon themselves*—a movement which constantly takes place *in the same direction as that of the ring*. Moreover, as the ring, at the instant of its rupture, had still a remainder of velocity, the spheres to which it has given birth tend to fly off at a tangent; but as, on the other side, the disc, turning in the alcoholic liquor, has impressed on this a movement of rotation, the spheres are especially carried along by this last movement, and

revolve for some time round the disc. Those which revolve at the same time upon themselves, consequently, then present the curious spectacle of *planets revolving at the same time on themselves and in their orbits*. Finally, another very curious effect is also manifested in these circumstances: besides three or four large spheres into which the ring resolves itself, there are almost always produced one or two very small ones, which may thus be compared to satellites. The experiment which we have thus described presents, as we see, an image in miniature of the formation of the planets, according to the hypothesis of Laplace, by the rupture of the cosmical rings attributable to the condensation of the solar atmosphere."

The elaborate and triumphant reply to the geological objections put forth by the Edinburgh reviewer are much too elaborate for extract, and we pass on to the more questionable hypothesis of the occasional production of organic beings otherwise than *ex ovo*. In another place we have extracted passages from the letters of Mr. WEEKES, fully substantiating the statements of Mr. CROSSE relative to the acarus produced under the galvanic battery, and to the existence of which we can also vouch from personal observation of Mr. CROSSE's experiments long before they were made known to the public. In that, as in every question of fact, the proper course for those who deny will be to make trial of the experiment, and if it fail, they will then be entitled to an opinion, but not before. To answer a fact by a theory is most unphilosophical, and yet it is the almost universal mode of attacking new discoveries. When will the world pass out of its leading-strings?

The question is thus candidly stated:—

The question is, to which view does the balance now incline? Whether is it most likely that the Deity produced Being and its many-staged theatre in the manner of order or law, or by any different mode of a more arbitrary character; whether, consequently, we are to regard him as ruling the affairs of the world in the manner of an invariable order or otherwise? I say likely—because are we not to expect on any such questions the absolute demonstration which attends a mathematical problem or an unchallengeable writing. We must be content if we only can see a preponderance of reasons for regarding the universe and its Author in one or other of these lights.

The author then proceeds to shew the self-contradictions of those who maintain the principle of divine governance by law in every part of creation, and yet introduce special interposition into some one or more of the fields of nature. One by one these supposed exceptions have been proved to be within the rule, until so few are left that already many of our ablest authors are adopting in its entirety the principle of governance by law. This is the present position of the question.

The whole question, then, stands thus. For the theory of universal order—that is, order as presiding in both the origin and administration of the world—we have the testimony of a vast number of facts in nature, and this one in addition,—that whatever is reft from the domain of ignorance and made undoubted matter of science, forms a new support to the same doctrine. The opposite view, once predominant, has been shrinking for ages into lesser space, and now maintains a footing only in a few departments of nature which happen to be less liable than others to a clear investigation. The chief of these, if not almost the only one, is the origin of the organic kingdoms. So long as this remains obscure, the supernatural will have a certain hold upon enlightened persons. Should it ever be cleared up in a way that leaves no doubt of a natural origin of plants and animals, there must be a complete revolution in the view which is generally taken of our relation to the Father of our being.

Another much disputed proposition of our author is thus defended:—

The hypothesis is, that, as a general fact, the progress of being in both kinds has been from the sea towards the land. Marine species of plants and animals are supposed to be, in the main, the progenitors of terrestrial species. Life has, as it were, crept out of the sea upon the land. This of course leads us to consider the distribution of vegetable and animal forms in the sea, and the effect which these may have had in determining the Flora and Fauna of particular detached provinces. We would necessarily suppose that any particular Flora or Fauna occupying a certain geographical area in the ocean, would be apt to become the common source of the Flora or Fauna of any masses of land adjoining to it. Now we shall see how the facts harmonize with this view. Wherever there is a group of islands standing much apart, its plants and animals are never found allied to those of any remote region of the earth, but invariably shew an affinity to those of the nearest larger masses of land. Thus, for example, the Galapagos exhibit general characters in common with South America; the Cape de Verd islands with Africa. They are, in Mr. Darwin's happy phrase, satellites to those continents in respect of natural history. Again, when masses of land are only divided from each other by narrow seas, there is usually a community of forms. The European and African shores of the Mediterranean present an example. Our own islands afford another, of far higher value. It appears that the flora of Ireland and Great Britain is various, or rather, that we have five floras, or distinct sets of plants, and that each of these is partaken of by a portion of the opposite continent. There are, 1st, a flora confined to the west of Ireland, and imparted likewise to the north-west of Spain; 2nd, a flora in the south-west promontory of England, and of Ireland, extending across the Channel to the north-west coast of France; 3rd, one common to the south-east of England, and north of France; 4th, an Alpine flora developed in the Scottish and Welsh Highlands, and intimately related to that of the Norwegian Alps; 5th, a flora which prevails over a large part of England and Ireland, "mingling with the other floras and diminishing, though slightly, as we proceed westward; this bears intimate relations with the flora of Germany. Facts so remarkable would force the merest fact-collector or species-denominator into generalization.

Lastly, he defends his hypothesis from the charge always brought against new discoveries in science, that it is opposed to religious truth; but this weapon has been used so often that it has almost lost its edge. We cannot, however, omit the eloquent and powerful conclusion of this volume, which scarcely needs a recommendation to the reader.

I am not to attempt a particular defence of the new view of nature from various odiums thrown upon it, for this can only be rightly done when time has abated prejudice, and shewn more clearly the relation of this philosophy to all other views cherished by civilized nations. But I may meanwhile remark its harmony with the great practical principle of Christianity, in establishing the universal brotherhood and social communion of man. And not only this, but it extends the principle of humanity to the meaner creatures also. LIFE is everywhere ONE. The inferior animals are only less advanced types of that form of being perfected in ourselves. Constituted as its head—with a peculiar psychical character and destiny by virtue of that position—we are yet essentially connected with the humbler vehicles of vitality and intelligence, and placed in moral relations towards them. We are bound to respect the rights of animals as of our human associates. We are bound to respect even their feelings. And from obeying these moral laws, we shall reap as certain a harvest of benefit to ourselves, as by obeying any code of law that ever was penned. The rule of force and of cruelty has hitherto prevailed in this department of the world's economy as between man and man; but the day of true knowledge will bring a better rule here also, and the many good qualities of these patient and unresisting ministers of our convenience will yet be acknowledged and dwelt on by all with admiration and love.

Is our own position affected injuriously by this view, or can our relation to the universe and its Author be presumed to be so? Assuredly not. Our character is now seen to be a definite part of a system which is definite. The Deity himself becomes a defined, instead of a capricious being. Power to make and to uphold remains his as before, but is invested with a character of tranquillity altogether new—the highest attribute we can conceive in connection with power. Viewing him as the Author of this vast scheme by the mere force of his will, and yet as the indispensably present sustainer of all; seeing that the whole is constructed upon a plan of benevolence and justice; we expand to loftier, more generous and holy emotions, as we feel that we are assential parts of a system so great and good. The place we hold in comparison is humble beyond all statement of a degree; yet it is a certain and intelligible place. We know where we stand, and have some sense also of our chronological place. The years of our existence occupy a space in that mighty series, during some earlier portion of which this globe, since the theatre of glories and of sorrows numberless, was moulded into form. Arithmetic could state, if we knew it, the connection between the birth of a babe which saw the light an hour ago, and the time when the elements of our astral system began to resolve themselves into those countless orbs, one of which is Man's, the stage of his long descended history, and the bounds within which all his secular phenomena must ever be confined. The unit of each individuality, great or humble in social regard, takes a fixed place in that march of life which rose unreckoned ages ago, and now goes on to a "weird," which no wizard has pretended to know. We feel that, amidst all the disgrace of trouble and of trespass, we are still the first form of active being after the Greatest, and therefore may well be assured that, immeasurable as is our distance from God, we are still immediately regarded and cared for by him. Surely there is here much to sooth and to encourage. It may be that the indivi-

dual often suffers innocently to appearance in our present sphere; but then he is part of a system of assured benevolence and justice: having faith in this, he is safe. It may be, as some one has suggested, that there is not only a term of life to the individual, but to the species, and that when the proper time comes, the prolific energy being exhausted, man is transferred to the list of extinct forms. Strange thought, that the beauteous phenomena of personal existence—the thrill of the lover, the mother's smile on cherub infancy, the brightness of loving firesides, the aspirations of generous poets and philosophers, the thought cast up and beyond the earthly, that petard which breaks down every door—the tear of penitence, the meekness of the suffering humble, the ardour of the strong in good causes, all that the great and beneficent of all ages have felt, all that each of us now sees, and muses on, in his home, his people, his age,—that *all these* should be thus resolved; passing away whole "equinoxes" into the past, as far as we particular men are concerned, still passing further back as respects the larger personalities called nations, and still further in inconceivable multiplication with regard to the species—gone, lost, hushed in the stillness of a mightier death than has hitherto been thought of! But yet the faith may not be shaken, that that which has been endowed with the power of godlike thought, and allowed to come into communion with its Eternal Author, cannot be truly lost. The vital flame which proceeded from him at first returns to him in our perfected form at last, bearing with it all good and lovely things, and making of all the far-extending Past but one intense Present, glorious and everlasting.

A Natural History of the Mammalia. By G. R. Waterhouse, Esq. of the British Museum. Parts I. to III. London: Baillière.

This is one of the most valuable and attractive additions to natural history which has issued from the British press for many years. Mr. Waterhouse has prudently devoted himself to one branch only of a subject too large to permit a single hand to do justice to it. He is thus enabled to it with the minuteness requisite to a perfect disourse on natural history, and to illustrate every part of it with engravings, without which descriptions, however precise, are almost unintelligible. Thus he enters upon the comparative anatomy of each order, and the peculiar structure of individuals. The three parts already published are occupied entirely with the order *Macropodidæ*. They are illustrated with nine steel engravings, and a multitude of woodcuts are interspersed through the text. Additional value has been given to the work by observations on the geographical distribution and classification of the various animals, and accounts of the leading characters of the extinct species.

The plan intended to be pursued is to commence with the lowest species, and to trace through them to the highest the various modifications of structure and functions. Thus, the early numbers will contain accounts of some of the most interesting of modern discoveries amongst the mammalian forms.

It is perfect in its typography.

A Family Medicine Directory. By Charles Dinneford, Family Chemist to her Majesty, the Queen Dowager, &c. 12mo. pp. 125. London: Simpkin and Co.

This appears to be an extremely useful little volume, and a valuable addition to the family medicine-chest. It contains a tabular list of medicines, setting forth their proper doses for adults and for children, the proper vehicle and period of repetition, their effects, and the diseases in which they are useful. Then there is an alphabetical list of domestic medicines, shewing at length how they are to be compounded and applied, and for what ailments they may be employed. A Domestic Pharmacopœia follows; then a collection of useful recipes for the composition of articles in general use, as perfumes, cosmetics, sweet bags; then particulars relating to factitious mineral waters; then a series of humane resources in cases of accident by fire, poisoning, &c.; then recipes for broths and beverages; and, lastly, a collection of facts in domestic chemistry. We have seldom lighted upon so much useful information compressed into so small a compass; and albeit averse to domestic medicine generally, deeming it most prudent to consult a practitioner as soon as possible, yet there are ailments and times that do not admit of his services, and then this small book will be very serviceable.

FICTION.

Twelve Nights' Entertainments; or, Tales of Various Lands. London, 1845. Burns.

It is stated in the preface that this collection of tales originated in the circumstance of a party of friends meeting and agreeing each to relate a story in turn for the common entertainment. But they are not all original: some are translations of clever foreign fictions, now for the first time introduced to the English public in our own tongue. The volume, which is one of Mr. Burns's excellent *Fireside Library*, contains twelve tales, to wit, a French, Belgian, German, Austrian, Spanish, Welsh, Algerine, Irish, Danish, Lombard, Scottish, and Normandy tale. The contrast of subjects and style forms a curious and interesting feature of this publication. It is like a lecture on national characteristics.

POETRY.

Oliver Newman: a New England Tale (unfinished). By the late Robert Southey. London: Longman and Co.

Southey was a wonderful verse-maker, but he was no poet, in the proper sense of that term. His epics are metrical romances, and, with a slight disarrangement of the words so as to destroy the metre, would be nothing more than eloquent prose. His excellence lay in description; he was a master of language, and possessed a fine sense of the music of speech; and he mistook these qualifications for that loftier creative faculty—that spontaneous flashing forth of new ideas, which distinguishes the poet from the poetaster. This is shewn by the fact that, voluminous as are his verses, scarcely one of them has passed into the popular mind and become a portion of our language and of our thoughts. It is evident that he wrote not from the impulse of inspiration, but deliberately as a matter of business; throwing off his measured lines by hundreds and thousands, with as much facility as if he were composing a novel. Hence it is that already his poetical works are passing into practical oblivion. Who buys—who reads them now?

Nevertheless the present fragment is welcome, though in no manner differing from its predecessors, for it is as a voice from the dead. It revives, if but for a time, the memory of a man who, in his day, filled a large space in the literature of our generation; a man of wonderful industry, extensive learning, amiable feelings, and virtuous intents. If but for his "Life of Nelson," his name will live as long as our language shall endure. Perusing the fragment before us is a recalling of old times, and in itself a sort of homage to the illustrious dead.

An appendix to the fragment describes its origin and design. The subject was suggested by Holmes's "American Annals," where the conflict with Philip, the Red Indian Chief, is proposed as a suitable theme for an epic. Four years after reading this Southey commenced the work, which was continued at intervals until the year 1829, which was the date of the latest editions. To this point the poem was about half completed, nine books, out of twenty-one designed, being perfected by the author.

It seems that it was his desire, in this poem, to attempt an appeal to human interest in human actions and sufferings, conceiving, not untruly, that to their extravagance of supernaturalism, and their dealings with personages with whom his readers could have no sympathies, much of the ill-success of his former epics was to be attributed. In *Oliver Newman* he resolved to deal with man and the ways of men, and he selected a story that offered abundant material for a poet to mould to his own purposes. So far as the plot is apparent in the nine cantos completed, it runs thus. Oliver Newman has quitted England at the request of his dying mother, to go to the protection of his father, who, having been one of the Regicides, had been expatriated, and was living in exile in America. In the bark that bears him to the foreign shore sails also Annabel, the heroine, and her mother. The latter dies, and commits her daughter to the guardianship of Oliver. They touch at Cape Cod, and there, Oliver, influenced by humanity, purchases an Indian woman and her children, who were subjected to great cruelties. They proceed together to Boston, and meeting Leverett, the Governor, who had once loved Oliver's mother; he takes an interest in his affairs, and at tedious length describes to him the condition of the colony.

The ninth canto, and the fragment, concludes with the conducting of Annabel by Oliver to the home of her surviving parent, and at the point where it breaks off it is probable that the interest of the plot was about to begin.

So far, it will be seen, there is little field for poetry. The incidents are few, and the cantos are extended to such a length only by the aid of long and somewhat tedious dialogue and descriptions too prosy and catalogue-like. Here and there we alight upon passages of considerable beauty or eloquence, and some even that almost amount to poetry. We take two or three of the best we can find. The opening is certainly a fine picture of

A FUNERAL AT SEA.

The summer sun is riding high
Amid a bright and cloudless sky;
Beneath whose deep o'erarching blue
The circle of the Atlantic sea,
Reflecting back a deeper hue,
Is heaving peacefully.
The winds are still, the ship with idle motion
Rocks gently on the gentle ocean;
Loose hang her sails, awaiting when the breeze
Again shall wake to waft her on her way.
Glancing beside, the dolphins, as they play,
Their gorgeous tints suffused with gold display
And gay bonitos in their beauty glide;
With arrowy speed in close pursuit,
They through the azure waters shoot;
A feebler shoal before them in affright
Spring from the wave, and in short flight,
On wet and plumeless wing essay
The aerial element;
The greedy followers, on the chase intent,
Dart forward still with keen and upturned sight,
And, to their proper danger blind the while,
Heed not the sharks, which have for many a day
Hovered behind the ship, presentient of their prey.

So fair a season might persuade
Yon crowd to try the fisher's trade;
Yet from the stern no line is hung,
Nor bait by eager sea-boy flung!
Nor doth the watchful sailor stand
Alert to strike, harpoon in hand.
Upon the deck assembled, old and young,
Bareheaded all in reverence, see them there;
Behold where, hoisted half-mast high,
The English flag hangs mournfully;
And hark! what solemn sounds are these
Heard in the silence of the seas?

"Man that is born of woman, short his time,
And full of woe! he springeth like a flower,
Or like the grass, that, green at morning prime,
Is cut and withereth ere the evening hour;
Never doth he continue in one stay,
But like a shadow doth he pass away."
It was that awful strain which saith
How in the midst of life we are in death:
"Yet not for ever, O Lord God most High;
Saviour, yet not for ever shall we die!"

Ne'er from a voice more eloquent did prayer
Arise with fervent piety sincere;
To every heart, of all the listening crew,
It made its way, and drew
Even from the hardy seaman's eyes a tear.
"God," he pursued, "hath taken to himself
The soul of our departed sister dear;
We then commit her body to the deep:"—
He paused, and at the word,
The coffin's plunge was heard.

A female voice of anguish then brake forth
With sobs convulsive of a heart opprest.
It was a daughter's agonizing cry:
But soon hath she repress
The fit of passionate grief,
And listening patiently,
In that religious effort gained relief.
Beside the grey-haired captain doth she stand;
One arm is linked in his; the other hand
Hid with the handkerchief her face, and prest
Her eyes, whence burning tears continuous flow.
Down hung her head upon her breast,
And thus the maiden stood in silent woe.

Again was heard the preacher's earnest voice:
It bade the righteous in their faith rejoice,
Their sure and certain hope in Christ; for blest
In Him are they who from their labours rest.
It rose into a high thanksgiving strain
And praised the Lord, who from a world of pain
Had now been pleased to set his servant free;
Hasten thy kingdom, Lord, that all may rest in thee!

In manhood's fairest prime was he who prayed,
Even in the flower and beauty of his youth.
These holy words and fervent tones portrayed
The feelings of his inmost soul sincere!
For scarce two months had filled their short career
Since from the grave of her who gave him birth
That sound had struck upon his ear;
When to the doleful words of "Earth to earth"
Its dead response the senseless coffin gave:—
Oh! who can e'er forget that echo of the grave?

Equally fine for its minuteness of touch is the description of

THE INDIAN WOMAN AND HER SON.

She led him hastily toward a shed,
Where, fettered to the door-post, on the ground
An Indian woman sate. Her hands were bound,
Her shoulders and her back were waled and scored
With recent stripes. A boy stood by
Some seven years old, who with a piteous eye
Beheld his suffering mother, and deplored
Her injuries with a cry,
Deep, but not loud,—an utterance that express'd
The mingled feelings swelling in his breast,—
Instinctive love intense, the burning sense
Of wrong, intolerable grief of heart,
And rage, to think his arm could not fulfil
The pious vengeance of his passionate will.
His sister by the door,
Lay basking in the sun: too young was she
To feel the burthen of their misery;
Reckless of all that pass'd, her little hand
Play'd idly with the soft and glittering sand.

At this abhorred sight,
Had there been place for aught
But pity, half relieved by indignation,
They would have seen that Indian woman's face
Not with surprise alone, but admiration:
With such severe composure, such an air
Of stern endurance, did she bear
Her lot of absolute despair.
You rather might have deem'd,
So fix'd and hard the strong bronze features seem'd,
That they were of some molten statue part,
Than the live sentient index of a heart
Suffering and struggling with extremest wrong:
But that the coarse jet hair upon her back
Hung loose, and lank, and long;
And that sometimes she moved her large black eye,
And look'd upon the boy who there stood weeping by.

And in the last canto we light upon a beautiful narrative of

A FOREST JOURNEY.

Uneasy now became perforce
The inevitable intercourse,
Too grateful heretofore:
Each in the other could descry
The tone constrained, the altered eye.
They knew that each to each could seem
No longer as of yore;
And yet, while thus estranged, I deem
Each loved the other more.
Hers was perhaps the saddest heart;
His the more forced and painful part:
A sense of proper maiden pride
To her the needful strength supplied.
Then first perhaps the virgin thought
How large a dower of love and faithfulness
Her gentle spirit could have brought
A kindred heart to bless;
Herself then first she understood
With what capacities endued;
Then first, by undeserved neglect
Roused to a consciousness of self-respect,
Felt she was not more willing to be won
Than worthy to be woo'd.

Had they from such disturbant thoughts been free,
It had been sure for them
A gladsome sight to see
The Indian children, with what glee
They breathed their native air of liberty.

Food to the weary with toil forespent
Not more refreshment brings,
Than did the forest breeze upon its wings
To these true younglings of the wilderness:
A happy sight, a sight of hearts content!
For blithe were they
As swallows, wheeling in the summer sky
At close of day;
As insects, when on high
Their mazy dance they thread
In myriads overhead,
Where sunbeams through the thinner foliage gleam,
Or spin in rapid circles as they play,
Where winds are still,
Upon the surface of the unrippled stream:
Yea, gamesome in their innocence were they
As lambs in fragrant pasture at their will
The udder, when to press
They run, for hunger less
Than joy, and very love and wantonness.

From the appendix we learn that divers troubles were to have ensued in the after-part of the poem. The heroine was to be taken prisoner, and of course rescued by the hero, and all was to end according to approved fashion in the marriage of the faithful pair.

The miscellaneous poems subjoined are for the most part of inferior merit, with the solitary exception of a fragment entitled "Mohammed." One curious anecdotical incident here recorded deserves to be extracted:—

Of the other pieces here collected (says the editor), the "Fragmentary Thoughts occasioned by his Son's Death," and the "Short Passages of Scripture," are printed as much for the purpose of giving fresh proof of the purity and elevation of his character, as for their own intrinsic beauty. His son Herbert—of whom he wrote thus in the Colloquies, "I called to mind my hopeful H—— too, so often the sweet companion of my morning walks to this very spot, in whom I had fondly thought my better part should have survived me, and

With whom it seemed my very life
Went half away"—

died 17th April, 1816, being about ten years old, a boy of remarkable genius and sweetness of disposition. These "Fragments" bear a date at their commencement, 3rd May, 1816, but do not seem all written at the same time. The author at one time contemplated founding upon them a considerable work, of a meditative and deeply serious cast. But although he, like Schiller, after the vanishing of his Ideals, always found "employment, the never-tiring," one of his truest friends,—yet this particular form of employment, which seemed at first attractive to him, had not, when tried, the soothing effect upon his feelings which was needful; and in March, 1817, he writes, that "he had not recovered heart enough to proceed with it."

The thoughts so collected are not remarkable either for originality or beauty. We present a few of them.

Thy life was a day; and sum it well, life is but a week of such days,—with how much storm, and cold, and darkness! Thine was a sweet spring holiday,—a vernal Sabbath, all sunshine, hope, and promise.

and that name
In sacred silence buried, which was still
At morn and eve the never-wearying theme
Of dear discourse.

playful thoughts
Turn'd now to gall and esel.

He to whom Heaven in mercy hath assigned
Life's wholesome wormwood, fears no bitterness when
From the hand of death he drinks the Amreeta cup.

Beauties of nature,—the passion of my youth,
Nursed up and ripened to a settled love,
Whereto my heart is wedded.

EDUCATION.

The Students' Help for attainment of the English, French, and Italian Languages. By Guido Sorrelli, of Florence. 8vo. pp. 136. London, 1845. Hatchard and Son.

This book is intended for those who have already gone through the French or the Italian grammar, with the aid of a master or by themselves. The plan is this:—The page is printed in three columns, the English in the centre and the Italian and French on either side. It is used thus: The learner hides the version he is learning, and then endeavours to translate a sentence of the English. After having done so, he compares his translation with that of the text, discovers his errors, and tries again, and so on until he has quite mastered it; when he proceeds with the second sentence, and so forth. The task of the teacher is, first, to hear the pupil read from English into the French or Italian; and secondly (in order to ascertain if the pupil can properly spell the language), to make him write in French or Italian the English sentences the teacher reads. It will be apparent that the plan must be an excellent one, and the volume may be recommended to all students of either language.

The Charcoal Burners; or, The Grateful Artist. Translated from the German, by Miss Matilda Wrench. London, 1845. Burns.

This is a charming book for children; one of those that rivets attention, and which can never be heard or read too often. It is a valuable addition to the Juvenile Library.

MISCELLANEOUS.

Eastern Europe and the Emperor Nicholas. By the Author of "Revelations of Russia," "The White Slave." In 3 vols. (Vols. I. and II.) 8vo. pp. 607. London, 1846. Newby.

The readers of The Critic will not have forgotten the very interesting "Revelations of Russia," some months since noticed at considerable length in these columns. The work before us is the production of the same pen, almost a continuation of the same subject, and scarcely less curious for the novelty and importance of the facts which it has imported from the land where despotism assumes its most hideous features, but has contrived, with consummate art, to conceal them from the gaze of civilized Europe, whose execrations it dreads, and whose applause it courts. The anonymous author of the series of works named above has entitled himself to the respect and gratitude of humanity everywhere by the courage, perseverance, and ability he has displayed in his bold endeavour to tear the mask from the face of autocratic rule, and display to the loathing world the cruelty and corruption that lurk beneath so fair an exterior.

Who is the author, what he is, and what the motive of his warfare, we know not, and we care not. Personal feeling, disappointment, or revenge, as some have insinuated, may guide his pen; probably in some matters he may have exaggerated, in others he may have too readily received rumour as certainty, and adopted tales as truths. He may have played the advocate and presented only the case on one side, omitting altogether the facts that should be thrown into the opposite scale; still, after every allowance made for such biases, enough remains to present the mighty monarchy of Russia as a monster of cruelty and hypocrisy—a huge system of corruption—an avalanche of barbarism hanging upon the borders of civilization, and threatening some day to overwhelm it by its fall.

The objects of the writer are threefold. First, distinctly to point out the frightful nature of the most extensive slavery in the world, and the direct and guilty participation in it of the Russian Cabinet; second, to shew, by recent instances, both in Russia and Poland, that the fearful state of things lately revealed is not a matter of past history, but of present and hourly occurrence; thirdly, to call attention to the vast political changes which, at no distant day, threaten to convulse the whole of eastern Europe.

The author's argument may be thus shortly stated:—All the eastern portion of Europe is divided between four despotisms, held in subjection by a minority, and ruled over by a system of deceit and terror, perpetuated by those governments for their own selfish ends. The great bulk of this population is Sclavonic, to the extent of between eighty-five and one hundred millions, and with them are united, under the same yoke, Finns, Magyars, Italians, Greeks, and Albanians. So long as the various races under the Russian despotism forget their sense of nationality, they may be kept in subjection, but, once awakened to this, they will burst their bonds.

These races, he says, are in antagonism to the Germanic race, which they regard as the accomplice and tool of their tyrants. An outbreak among them would threaten with destruction the Austrian and Turkish empires, and the Prussian kingdom, and it is against this that the rulers of those countries ought to prepare themselves. He points out a fact which has certainly not received the attention it deserves—namely, that Austria and Prussia are really artificial empires; they are not nations of nature's making, but the patchwork of conventions and treaties, which circumstances formed, and circumstances might as readily dissolve; differing in this from France, England, Spain, &c. which, under any changes of government, must still preserve their individuality as nations.

He considers that a convulsion is coming which will solve all these empires of conventionalism into their elements; he asserts that the peoples that have been thus linked together, and held together by force of despotism, are beginning to feel their bonds, and ere long will rise almost simultaneously and demand their freedom from the yoke. It is the author's purpose, in these volumes, not merely to exhibit the existing state of popular opinion and its tendencies, but so to inform the public mind in England, that when the convulsion comes, its sympathies may not be misdirected and a line of policy adopted which might prove injurious alike to the cause of humanity and the interests of this country.

The meaning of this is plainly, that our alliances with Prussia and Austria are worse than useless, for "the events of a single summer may sweep these governments for ever from existence." Already thirty-one millions of restless Italians, Magyars, and Sclavonians are plotting the overthrow of Austria, "whose power reposes on nothing but the tame submission of between five and six millions of Germans, of whom half are colonists, dispersed among strange populations, or mere temporary settlers. The death of Metternich may alone suffice to plunge all these incoherent elements into chaos, and to bring about the dissolution of the empire."

But the author does not assert that entire destruction threatens it. The Austrian Empire, he says, abandoning Italy and its German provinces, may become Sclavonic; gathering, in a constitutionally federative form, all the remainder of its present elements around the nucleus of the Hungarian kingdom, and thus, with a government entirely altered, "exchange a precarious irresponsibility of power for permanent solidity."

Prussia, in like manner, stripped of its Sclavonic subjects, might give to its proper subjects the constitution so long promised, and nationalize the German race.

These are new and startling propositions, but they must strike every reflective reader as having, at least, a basis of probability. Their publication will conduct the thoughts of statesmen and politicians into a new channel, and give an additional value and interest to the facts contained in the volumes before us, upon the contemplation of which they were founded. To these curious facts we now turn; and although limited space compels us to take but few out of the multitude that offer themselves, we the less regret the curtailment, as every book-club and library will of course procure them.

The extreme abasement of the Russian is shewn in the peculiar character of his loyalty.

It partakes, however, even where most deeply rooted, very much more of superstitious awe than of affection. It bears no resemblance to the enthusiastic attachment which is occasionally exhibited in free countries towards popular princes. It has no reference to the individual man, but to his station; and when he dies, is therefore transferred at once, and without regret, to his successor. It is not even sensibly affected by the vices or the virtues of a sovereign, which die with him,—but is based upon the despotism which endures. You never meet with a peasant, who can distinguish the sovereigns under whose reign he has lived in any thing but name. He is alike ignorant and careless of the ferocious insanity of Paul, and of the benevolence of Alexander. Of all who ruled before he himself was born, the names of Peter the Great, and of Ivan the Terrible, alone survive traditionally. The cruelties of the latter—the most sanguinary monster that ever disgraced humanity—cited without reprobation, have earned him this distinction. The ideas which the lower order of Russians entertain of the awful power of their emperor, are such, that they conceive nothing which can resist his authority and command. They have heard, indeed, of foreign states, and of foreign princes, but believe them to be in a state of dependence and vassalage. It is no uncommon thing to hear the travelled peasant, who is the *esprit fort* of his village, whispering in wonder when he sees a *talega* posting by, in which some prisoner is seated beside the field-jager, and suggesting, after he has named the great men of the empire, that it may be the King of Prussia, or of France, or England, sent for to St. Petersburg, or despatched to Siberia or to the Caucasus, by the emperor's order.

The following anecdote is a strange trait of slavery:—

A nobleman, with a small estate, but who had behaved with unvarying kindness to his serfs, was waited on by a deputation of the serfs of a vast adjoining domain, then about to be sold, and of which the full value of his own would not have paid a year's rental. They offered to advance him the money to purchase this,—and of course such an advance from men about to become his bondsmen was a gift. Unhappily, when the negotiation was nearly concluded, he was seized with a violent fit of coughing; it was dreaded that his lungs might be affected, and the opinion of a doctor having confirmed this apprehension, the serfs withdrew their offer. Meanwhile, this people, who had enjoyed for years a state of peace and liberty, which had led to such prosperity, passed with the estate into the hands of an avaricious and eccentric beldame, who on her arrival began by causing several of her people, taken haphazard, to be chastised; to let them know, she said, "that she would not be imposed on, though she was a woman." The second day she amused herself with trying the contents of her English medicine-chest upon her slaves, to ascertain the precise effects of each; and beyond this, the author knows no more of her inauspiciously commencing reign.

A remarkable feature of the Russian people is an aversion to war, nor can all the efforts of the Government conquer it; indeed, it rather grows by the endeavours made to root it out.

Our author flatly denies the great act of heroism for which Russia has been enshrined in history—the burning of Moscow.

It is undoubted that Moscow was not destroyed either by its inhabitants, or with their knowledge or concurrence.

It is the opinion of the inhabitants, even to the present day, that the French themselves set fire to it. The Russian government, for years after, gave this version of the occurrence. Kutusoff, with his army, and an immense rabblement which had fled the city or gathered from the environs, ventured on a dangerous flank march, of which the only object was, to rouse their animosity by leading them for thirty miles within sight of the conflagration, which was carefully pointed out as the work of its sacrilegious occupants. Rostopchin, so far from attributing it to the inhabitants, denies all participation in the event, even for himself or for the government. The fire undoubtedly originated with the criminals let loose by Rostopchin before evacuating the city; but whether executed by his instigation or not there is no means of distinctly ascertaining. It is possible that the governor's sole motive in liberating them may have been the one avowed, of embittering and rendering national the war, by exciting the populace to attack the French armies, thus animating it to reprisals.

As to the character of Rostopchin, whom Sir Walter Scott exalts into a hero, the following anecdote, of which the authenticity has been confirmed to the author by the highest authority, will of itself suffice to stamp its barbarity in the estimation of every western reader.

On the 14th of September, Count Rostopchin being about to evacuate the city, caused the prisoners and criminals to be brought before him. After telling the latter that they were to expiate their crimes by serving their country, he set them at liberty. He then ordered a Russian, named Verechtchaguinn, who had been arrested on the charge of translating into Russ, for one of his friends, a German newspaper which contained accounts of the movements of the French armies, to be put to death, and had him literally hacked to death with sabres before his eyes.

At all events, it is on all hands admitted, that it was not the result of a popular sacrifice. The Russian people never destroyed even a hamlet, unless accidentally, of all the thousands which were burned. Even at the present day, far from glorying in the suggestion, they are rather disposed to be offended at it.

An entire chapter is devoted to "the Poles in their relation to Russia." The atrocious despotism of the latter is familiar in name, but to form a distinct notion of it, some facts are necessary:—

Declaring that the city of Wilna had undertaken to farm the excise at a stipulated sum, a complicated document was sent round, to which the citizens were peremptorily ordered to affix their signatures. Those occupying temporary lodgings, as well as mere travellers, were equally applied to, and did not hesitate to fulfil a formality apparently imposed on every one. At the end

of the year, the produce of the excise had not covered the rent at which the town was said to have farmed it, and the police made those who had signed the declaration responsible for the deficiency. The proprietors of lodging-houses and divided tenements were held answerable for the travellers, tenants, and lodgers who had signed beneath their roof; and thus, most of the owners of houses about the barrier were ruined; their houses being immediately pulled down, and the materials sold to pay their debt. Thus the environs of the cathedral and of the street leading to the suburb of Antokol were cleared.

Whilst this process of destruction was going on, Schlykof was reproached with demolishing and ruining the city, and made answer,—"that it was only necessary that some part of it should remain, as long as he was police-master."

In Volhynia, where no stone is to be found, the streets are covered by a wooden bridge, or causeway, elevated above the soil. The inhabitants are forced to keep in order the part which is opposite to their dwelling, without reference to their means or the width of the street, thus rendering it a serious, and frequently a ruinous charge to the occupants of cottages.

Andreikovitch, the governor of Grodno, having been degraded to the inferior government of Volhynia for his misdeeds, to prove his zeal, ordered all the pavement of Zitomir, its capital, to be renewed. Hundreds of families being unable to comply with this order, the police sold their dwellings and their furniture; and they might be seen reduced to beggary, seeking refuge in holes dug in the clay soil.

In the city of Luck, in the same government, may still be seen whole streets of these wretched caves, which the inhabitants then dispossessed inhabit amidst fresh vexations and oppression.

The military exactions are frightful:—

All is tranquil and unsuspecting, when suddenly the Russian battalions pouring in from several streets, isolate a given portion of the town, and take possession of all the houses. The inhabitants, men and women, the children and the aged, are driven from their dwellings, happy if allowed to carry off a mattress on which to sleep in the open air in some street unguarded by bayonets. The warehousemen, traders, and shopkeepers are seized, and bound to posts, as if in the pillory; as if to be forcedly obliged to witness the ensuing depredation of their property. No one is allowed to penetrate into that quarter of the town as long as it is occupied by the military. The passing traveller is obliged to make a circuit through by-streets, filled by the families expulsed from their homes. Whether or not any smuggled articles are found, the inhabitants must always compensate the revenue agents for their disappointment and their zeal. Even when his liberty and his property are restored to the trader, the latter has always undergone so much of damage and spoliation, that this process a few times repeated, tends to inevitable ruin.

Besides this highway robbery, vexatious extortions on a small scale incessantly exhausted the means of the commercial class.

But the most diabolical scheme for exterminating Polish nationality, is that systematically pursued at this moment:—

An ukase, dated 1832, authorised the police to seize all children who were orphans, or the offspring of poor persons, to internate them into Russia, and bring them up in the Greek religion. In two days, seven hundred were sent off to Warsaw, amidst the despair and imprecations of their parents, who followed till exhaustion obliged them to abandon the convoy.

The children of all those who had fought in the Polish armies were subjected to the same fate, and it is calculated that some thousands of those belonging to individuals who were obnoxious to the government, were seized in the bosoms of their families in a like manner.

Soon after this, a diabolical means was resorted to, of saving the police trouble, which, till known, was used throughout the country, particularly in the large towns.

Scarcity and famine, which embarrass other governments, proved a useful auxiliary to the Russian; and charity was used as the lure to reach its victims. The police declared that they were to draw up lists of the indigent, for the purpose of affording them relief in food, and remitting their burdens. All who were in that condition were invited to declare it. As soon as the lists appeared completed, the police, condemning the applicants on their own shewing, relieved them indeed,—but it was of their children, who were thus collected without trouble. When this experiment was exhausted, razzias were made in all the parochial schools of the large towns,—even in those of charitable institutions, the schools for the soldiers' children, and the foundling hospitals.

This constant drain of the inhabitants, but especially of the youth of the country, proceeds augmenting systematically. A larger number were transplanted in 1843 than in 1842, and a larger number in 1844 than in 1843. It is in pursuance of a plan for transplanting, as far as possible, the Polish population, and dispersing it over Russia. Of these children it is calculated that more than one-third never reach the place of their destination. In 1832 and 1833, before this service was organised, those that fell from exhaustion were abandoned by the road-side, with a few pounds of black bread beside them; and the number confided to the escort was recruited farther on.

Another grand purpose of the Russian demon, whom some Englishmen disgraced themselves by applauding during his recent visit to this country, is a compulsory change of the religion of the people, and no cruelties are spared to accomplish this end:—

He offers by an ukase of the 2nd of January, 1839, *an absolute pardon to all Roman Catholics condemned for murder or theft to capital punishments, on condition of embracing the Greek faith.*

The peasantry were promised their freedom on the condition of apostacy; and a period of famine was taken advantage of, to offer them flour on the condition of their making three crosses on a register, to acknowledge its receipt. This register contained a general recantation, to which their mark was thus surreptitiously obtained; but as after this they were, by the terms of the ukase, considered as belonging to the Russo-Greek Church, from which any departure is capitally punished, they were thus utterly at the mercy of the authorities. In some places whole villages were driven into baths and barns, where they were smoked by lighted straw till they yielded.

A commission, composed of government agents and apostate priests, summoned the inhabitants of the village of Worodzkof to appear before them, where they were sitting, about sixteen miles off. When before the commission they refused to sign their adherence to the new faith, they were ironed, thrown into baths filled with a fetid smoke, but without fire, in the severest weather. Here they were kept several days, without food, beaten and ill-treated, and being constantly informed that they would be sent to Witepsk, to be capitally punished. When many of them had fallen ill, they were forced to sign their adhesion; but immediately on their return exposed these facts in a petition signed by sixty-four of their number, nobles and peasants; but met with no redress; they were considered as irrevocably orthodox.

In one place, some hundreds of the peasantry having obstinately taken refuge on a frozen pond, the soldiers accompanying the Russian missions were directed to break the ice, and the unyielding wretches perished wholesale.

The barbarities inflicted upon the insurgent Poles are scarcely credible, as belonging to this era of civilization. This was the treatment of KONARSKI:—

He was conveyed to Wilna. Prince Troubetskoi, the governor of that place, (a relative of the cowardly Troubetskoi named Dictator in Pestel's conspiracy, still kept in exile by the emperor,) at the interrogation which ensued had the baseness to approach and box the ears of his prisoner, who was heavily ironed. The retribution was such as to satisfy all ideas of poetical justice. Konarski had strength enough to heave up and strike with his ponderous chains the shameless assailant, who staggered beneath the blow, which at first was not considered serious, but of the effects of which he died two years subsequently, when disgraced for malversation.

Konarski strenuously refused to betray any of those with whom he had been in communication, though eight hundred persons were arrested, and many of them confronted with him.

The greater part of what he endured, during his long incarceration, was never known; it was only ascertained, that when found to be mute under the lash, as a means of torture, he was fed on salt provision, and tempted in vain to speak in the fever of burning thirst, by liquids placed before him. The deprivation of sleep was resorted to. When he had been constantly wakened up in his slumbers, burning sealingwax was dropped on to his flesh. When all attempts had failed, and that he was reduced to such a feeble and emaciated condition, that his life became daily precarious, judgment was passed upon him, and he was condemned to death. As soon as his sentence had been pronounced, he turned to his judges, and extending out his hands, burned to the quick, in an affecting speech, which brought the tears into the eyes of many of the bronzed officials, forgave them for all their cruelty towards himself, and prayed for his enemies. So profound was the impression which Konarski's behaviour produced, even on the Russians, that two officers successively refused to shoot him, and from that time disappeared. His death was in this respect remarkable, that of all the Polish victims, his fate alone elicited the sympathies of the Russians; partly, perhaps, through its being so widely bruited, and partly because of its having taken place beneath the eyes of those in whom the tendency to assimilate in feeling with the Poles had already made some progress. The Russian officers secretly purchased his fetters, which were converted into rings, and worn by a secret so-

ciety, discovered shortly afterwards, in which the subalterns of a whole division of the army were compromised. Up to this moment, there are several officers of the imperial guard, who treasure up and shew with mysterious precaution, the author has witnessed, small rings of iron, said to be derived from the same source, and which they regard with all the awe which relics still more equivocal frequently inspire.

The second volume is principally devoted to the literature of Eastern Europe, and this must be the subject of another article. The third volume we have not yet received.

A Brief Plea for the Old Faith and the Old Times of Merrie England, &c. By FRANK FAIRPLAY. 8vo. pp. 81. London, 1846. Dolman.

A PLEA for Catholicism, eloquent, able, and ingenious, addressed to the sympathies, to the imagination, to the poetry of our nature. The author pictures the condition of England as it was, or rather, as our fancies suppose it to have been, before the Reformation, and compares it with its present state; and thinking that he finds the contrast much to the disadvantage of our generation, he at once assigns as its cause the exchange of Catholicism for Protestantism. Some of his views are doubtless sufficiently correct, but he omits much that should enter into the calculation, and above all the true source of every change we behold,—namely, the law of mutation;—we believe it to be the law of *progress*, which is the law of nature.

Slanders of Punch: an Address to the British Public, &c. &c. By JAMES S. BUCKINGHAM. London: Ridgway.

WE must confess that however much we may sympathize with Mr. Buckingham upon treatment which certainly has very much the aspect of persecution, we cannot applaud his defence. It is too much in the nature of a puff of himself and the British and Foreign Institute. Indeed four-fifths of the pamphlet is occupied with a sort of advertisement of the society. Now that, to say the least of it, is bad taste. The gist of the defence lies in a single page. It seems that Mr. Jerrold, one of the editors of *Punch*, applied to Mr. Buckingham to be admitted a member of the Institute. He was proposed, balloted for, and elected; but not paying his entrance fee and subscription, after repeated applications, his name was erased from the list. Hence the series of satires, which always seemed to smack more of personal hostility than public virtue.

Mr. Buckingham has done good service to the world in many ways, and although he is not always so discreet as his friends might desire, the love of fair play, inherent in Englishmen, will not sanction the sort of treatment he has received, especially when it is found to proceed from such a motive. *Punch* owes his reputation to his good-humoured jokes; when he condescends to malice, he will fall like his predecessors.

Memorials of the Highgate Cemetery; with an Introductory Essay on Epitaphs and Gravestone Poetry. By THOMAS DOLLY, Author of "Floreston," &c. London: Masters.

THE title of this little volume will best describe its contents. To all who are interested in the locality it sketches, it will be a valuable and welcome record.

JOURNAL OF GERMAN LITERATURE.

Zwei Frauen. Von IDA GRAFIN HAHN HAHN. Berlin, 1845. (*Two Women.* By IDA COUNTESS HAHN HAHN.)

FRENCH words, and aristocratic fancies have so often been attributed to the Countess HAHN HAHN, as among her little characteristics, that it is unnecessary again to refer to them, and the more so, as remonstrances on the part of the critical world fail to produce any effect, for she continues to write in the same strain and style, and her books are still sought after with the same eagerness and delight. A woman of feeling and reflection, she speaks unreservedly to the reader, precisely as ideas may occur to her; she represents life as her soul sees it, she does not trouble herself about words, the manifestation of the truth is the important point to her. The truth?—What then is true? From every point of view objects present a different aspect; from the mountain heights they appear small; near at hand, large; on the surface of the ocean, gigantic; and we know some protest that all we see and comprehend is but appearance. Concerning the passions, no one judgment can be perpetually maintained; though everywhere fundamentally the same, they are everywhere found to vary; in youth they are one thing—in our grey years another, every age stamps upon them its own distinct impress. The dying butterfly when the down has gone from its wings, laments that there is no more in the world. No one denies that the romance of love is played differently in the cottage and the drawing-room; differently among the working classes and among the idle; that it is influenced as much by social relations as by education; and, according to external circumstances, so is it represented in various lights, and we must be grateful to Madame HAHN HAHN for the fact, that in her tales she only paints those spheres of life with which she is thoroughly conversant, that indeed she never penetrates into regions unknown to her.

The *Two Women* whose fate is thus intwined are twin sisters. We must quote the short description of their mother, and of her system of education:—

> Her life consisted of a pleasing fulfilment of certain duties, shrouded in a light cloud of soft indisposition, as far from the darkness and gloom of decided ill-humour as it was from the golden glitter of imagination and sound understanding. It moved exclusively in the circle of sensibility; in the world of thought it never entered, but now and then perhaps might flutter past it with some quiet question, for which an answer in pious belief, or in passive resignation to the dependence of women, was very quickly found. Doubt, inquiry, and passion reposed afar off, in an immeasurable distance, as unlawful and inadmissible.

In this atmosphere of purity, bounded by a very confined horizon, the quick Cornelia grew up phlegmatic and unimpressionable, the lively Aurora fanciful and enthusiastic. That is to say, each fulfilled her little duties and obligations very willingly, very amiably, very punctually; but like two dear little machines, without any necessity, either in judgment or action, to mark her own individuality. The two sisters marry on the same day; Aurora, Herr von Elsleben; Cornelia, the Graf Sambach. Fate chains them both down to a country life. Aurora's husband is a man of no cultivation; he is an excellent country gentleman, upright in character, and has many admirable qualities. But the imaginative Aurora finds herself not understood, not happy with him; she feels a necessity for occupation, for usefulness, for affection; she seeks contentment from without; begins all possible things, which she gives up immediately after, because they do not and cannot answer her inordinate anticipations. An acquaintance with a poetising captain in the neighbourhood occupies her fancy with visionary woes, without influencing her by any serious passion. In the education of her children she indulges in plans and systems, suffers many disappointments, at last becomes a pietist, and, after having her life long suffered from evils of her own creating, she is, in the end, utterly overcome by her first real grief. After the loss of her children, consumption makes its appearance, and she dies as she had lived, unsatisfied and discontented.

The other sister, Cornelia, is now the legitimate heroine of the romance; in her the entire interest of the reader is centred. Her husband, Count Sambach, was seventeen years her senior, a man of very dissipated habits. A certain prince was privately named as his father. He was the worthy child of that peculiar state of things which had worked its way into, and at length presided at, every court of the last century, and thus preceded the turmoils of the French Revolution. We cannot at this opportunity, refrain from extracting a reflection of our authoress:—

> Since that time, corruption of manners has spread itself into all ranks; there exists at this period no class which, in this respect, can be said to be better than others, only, now that it is universal, individuals are less prominent and less openly depraved. Does not this plainly indicate the approach of an unavoidable revolution, the causes of which are combined with our entire social condition, and are precisely inevitable, because as yet it has not made itself manifest in any decided form; as an epidemic at times will break out in the physical world? In these days, a man like Marshal Richelieu is, literally, not conceivable.

Eustach, Count von Sambach has led a youth of extravagance and dissipation, now he desires rest and quiet, and

therefore he lives with his young wife alone and in strict retirement upon his estate, and his conversation and their mutual occupations cultivate her taste and strengthen her judgment; what he imparted to her she received willingly, she loved him with her whole soul, and felt that her marriage, though childless, was a happy one; she found content within herself, and sought it not without. But the *blasé* husband soon becomes *ennuyé*, and with him she visits the neighbouring watering-place. There the count becomes acquainted with a coquettish Polish lady and makes his court to her. Cornelia's jealousy passes through various phases; we see her suffer, struggle, and at last become physically ill; but Sambach knows well how, by unusual tenderness, to appease her and set her at rest. Being blessed with a son, she becomes reconciled to her lot, and to her husband; but the son dies, and she sinks into despair, while Sambach renews his flirtation with the Pole. In her noble confidence, she invites the false friend to her house. Once more jealousy lays her upon a sick-bed, and once more the husband succeeds, by assertions of his innocence and extreme tenderness, in convincing her of his honour, and once more she turns to him with renewed affection. Then the letter of a young physician, whose sister was in the service of the lady, makes her acquainted with their shameful connection; she perceives that her husband had but acted a part before her, merely to render her more confident that he might pursue his course undiscovered and undisturbed. From this moment she loves him no more. She tells him openly and honestly that her esteem for him is gone, that his power to cause her any future uneasiness is now at an end. It is long before she overcomes the illness brought on by her state of mind. Another son is born to her, whom she names Tristan, and to him she devotes herself; the count cannot rouse any slumbering spark of affection in her heart, although he now devotes himself to her with great assiduity. The Polish lady has disappeared, and so has the happiness of the married pair, never to return; Cornelia is quiet, gentle, and mild, but not loving. At last the count becomes enraged, and makes frequent appeals to her, but Cornelia remains firm by her resolves.

"It is in vain," said she; "our love is gone, all confidence is vanished; and vanished so that I have the full conviction that were I to throw myself on your heart once more, in that same moment you would—deceive me again. I know there are such natures,—whether it be constitution, habit, or character,—enough, they are so created that uprightness only disgusts them, and thus they make a mocking jest of the feelings and relations which others find pure and holy."

"Cornelia!" cried Eustach, angrily, "your hardness to me is unbearable, and the more so because I know it has its origin in your own virtue."

"My virtue!" returned she, shrugging her shoulders, "my virtue, in the sense you mean by it, Eustach, I estimate very humbly. Where there has been no temptation there can be no merit, and you know well that I have never loved any other man but yourself. How, then, should I have been put to any trial?"

Whenever Cornelia uttered a word that referred to her affection for him, when her eyes moistened, or her voice trembled, Eustach would think emotion would get the better of her; but no! Then, cried he one day.

"My patience is exhausted! I will not live in this way with a woman so obstinate, so morose, so unfeminine! this sham-marriage shall be dissolved: come what may out of it, it's all one to me! If you compel me to this course I will at least be completely free."

But the thought that she might be happy with another makes him reject a divorce; they separate; he lives in Paris or Vienna; Cornelia, with her son and a faithful servant, retired and solitary.

And now voices are heard to be raised against Cornelia's conduct, as much among the critics of the work as in the romance itself. A woman has not the right, they say, to withdraw herself from the affection of her husband; neither moral nor physical objections are valid in removing her matrimonial objections; what would be the result were rational and universal bonds to be thus cast aside by every one? A letter to her sister gives the key to her character and the tendency of the novel, therefore we transcribe part of it:—

Dear Aurora! I can only tell you in what light I regard society in general, existing as it does under rational and very comprehensible laws, by making use of a figure, and that figure is a polypus, which one can turn inside out like one's glove, and to which it is no kind of consequence whether it lives on the right or the left side. It is without heart and without marrow; what, then, is to prevent its living so or so? Surely it is flexible enough and easily enough satisfied. To such a polypus-jelly do men allow themselves to be turned and twisted by society, when they only see that they have example or the approbation of the mass in their favour. This is the way of all, this is the conduct of all; thus they all act, think, and determine, it is their last and their only motive of action. The community may work for the furtherance of external aims, but self-reliance is utterly destroyed; for reliance upon outward support and assistance instead of dependence upon ourselves is rendered necessary and habitual. The refined and extreme development of the spirit that animates the community, is called cultivation. Cultivation is a beautiful thing, but it has one great fault—it stifles nature. One condition of nature is the right of each individual to free progression and self development. This constitutes freedom. Nowadays this freedom is only taken into question as an exception; while we cry aloud for freedom of knowledge, freedom of speech, freedom of the press; and mankind has means, faculties, and powers, for speaking, thinking, writing, and doing too—but for *being*, he has none! Slaves of education as they are, how could they be the children of freedom. This is the condition of men! Women, held as they are under strong guardianship and subjection, are naturally slaves also, and, generally speaking, are unconscious slaves. The negative and passive nature of most women enables them to accommodate themselves to externals, and they are, for the greater part contented and satisfied with their condition. Submission has so long been preached to them as the highest of virtues, that they yield without a murmur to the established regulations of society; the one submitting with quiet resignation, and another with the feeling of their utter feebleness. That thousands are thus made completely miserable, exhaust their powers in empty action, in search of pitiable distractions, in anxious seeking after artificial means of development, and yet never attain rest, or inward peace—this must be clear to us all. They would willingly be happy, poor things! and they agitate themselves in vain efforts, after an existence which cannot be for a life without *being*, and can never be a happy one, seeing that there is no other happiness but that of inward satisfaction. For this, and this alone, have I striven my life-long! It can only flourish on a soil of inward contentment, it is no flower-basket full of roses and violets, which one can buy in the market-places and carry home; it is rather a strong green tree, which may often, indeed, be without a single blossom, but the ever refreshing breeze of heaven blows for ever through its branches.

As I have now the full understanding that no relations of life, no individuals, no surrounding on external circumstances, can give this inward content, so I resolved to obtain it from myself alone, to develop it from my own mind. In this labour, which I have carried on in pain and pleasure, in joy and sorrow, and despair, I have come to the conviction that it would be nothing less than madness, were it not that the individual had a holy right to development, and to this right I trusted as the conviction of its justice rose in my mind from a consideration of all the various regulations of nature. That this right may not be misused or degenerated, as you fear it may be, it is held within bounds by duty, and duty is, in my mind, the claims one individual has upon another, which, in constant reaction extends, now in narrow, now in wider, circles, over the whole of humanity. But this would not be sufficient to soften our selfishness—to take the rigidity from right, and the harshness from duty—were it not for love. Love is the eternal mediator of mankind; under her shield we rest from all struggles, all wounds and scars, and rise again like beautiful butterflies from the cold chrysalis of sad and anxious fate. Love makes the heart firm and clear, steady and true; he who can thus preserve his heart from his own and others' weakness, in severe trials, in sensual pleasures, and in the soul's martyrdom; he who is prepared to regard the rights of others as his first and holiest duty—who feels in every sacrifice only the satisfaction of his soul's yearnings, only the uprise of the flames of his own heart, and therefore thinks he is receiving, not giving—he who still holds fast by confidence, reliance, and trust, and is not turned aside by sad experience—he loves! So I loved; and he who so loves is blessed. This feeling lies above that of contentment; indeed, comprehends it within itself; and when the blessedness ceases, we have it in our power to descend from one to the other. Why has it ceased with me? Because of the most unheard of abuse of love and confidence—because of the most disgraceful pursuit of vicious pleasure, which has thrust me back under the banner of that right which I have received from nature; I who imagined I should wander for ever in peace and stillness beneath the ægis of love, and never, never desired more! But legitimate opposition in a strong loving soul begins there, where the first consciousness of degradation also begins; where it must say to itself, If thou yieldest but one step thou wilt be cast into the abyss and trodden under foot. Where this point

has been reached, neither average education nor average laws, nor average customs can apply; for these are ordered and disposed for the generality, and the generality are not pushed to the extreme point; they defend themselves and fight with the same arms. Extremes, I must hope it, only occur to the exceptions; and as no rule was made for them, they cannot refer to any. They have but one forum—their conscience,—and with its sanction they must bear their own banner, and struggle alone through the bloody battle. This I do with unconquerable determination. It is neither from pride nor passion that I thus break through my duties; it is not for enjoyments of any kind that I thus assert my freedom. That I disdain every thing that would bear the semblance of reparation or revenge, you will feel without my assertion, that I desire only to preserve my dignity as a woman—as a human being—and, once more, neither before the eyes or the opinion of the world, but before my conscience and in the eyes of God.

Cornelia has been beloved by two men; the one is the Prince Kallenberg, the other Dr. Brandt. Kallenberg's character is a type of the great world; nothing influences him but the moment; his plans are never to be depended upon, because the slightest accident may give them a new direction. At his first acquaintance with Cornelia he discovered her worth;—saw she was neglected by her husband; saw, also, her grief, and upon it built certain hopes, which, however, could not but fail with one of so pure a heart: he remained friendly to her, and sought her out in her solitude in Zurich, where, for some time time, he enlivened her monotonous existence. When she becomes of his passion for her, she begs him to depart. Dr. Brandt was the brother of her attendant, Dorothea: it was from his letter Cornelia had learnt the faithlessness of her husband. He, born in poverty and in an inferior station in society, had now acquired rank and riches; and when he again sees Cornelia in Zurich, he feels the deepest compassion for the poverty of her situation. Prince Kallenberg had compassionated her for her lonely life. On the deathbed of her child the young physician gave her comfort, and filled up her lonely misery with his care and conversation; the hours passed with him were for her hours of regeneration; he had made himself necessary, nay, indispensable, to her: she suspected his love, and shared it; neither is the confession wanting. But him, also, the loving and beloved, she sends from her because "she has not the conviction of right to support her in yielding to her affections." Brandt has inherited a considerable property from his uncle, on condition that he espouses his unmarried daughter.

Four weeks after the separation from Cornelia his wedding takes place. When Cornelia hears this news she exclaims, "My God! what men hast thou created! Are they really human?—And am I, then, so pitiable, that only pitiable men deign to look at me, and only in the most pitiable way! No one has loved me," said she sadly and resignedly; "but I—I have loved! With this consciousness I may not be happy—ah, no! The bloom, the scent, the light of existence is gone—but not my deep content."

The Count Sambach returns to his wife with the loss of his sight, and requires her attendance on him: a wearisome and thankless office, which she performs cheerfully and gently. He dies, and shortly afterwards Furst Kallenberg again appears; after a year of mourning she marries him. Cornelia had never formed in her own fancy an ideal of a husband; she desired only "one on whose arm she could pass through the joys and pains of life,—on whose breast she could with earnest confidence lay her weary head;" and such a man had she found.

This, then, is the history and the moral of the tale. The rich store of reflection and conversation, the judgment upon existing questions and circumstances, the admirable view of many things in the external world, and their influence upon inward character, and a thousand nameless traits, are calculated to excite either opposition or great pleasure in the reader; and many will probably lay down the book, disapproving and blaming its principles, but certainly not with any feeling of indifference.

GERMAN NEWSPAPERS.—The *Journal des Débats* publishes the following letter from Leipsic, of the 1st of December:—"A catalogue of the periodical German press has just made its appearance in this city, from which it appears that the total number of journals published in the 39 states composing the Germanic Confederation is 1,836, of which number 1,017 are political and advertising, and 819 scientific and literary. This number gives one journal to every 18,000 inhabitants. Of these 1,836 journals, there are published—1. In Prussia 405, or 1 to 34,500 inhabitants; in Bavaria 96, or 1 to 37,000 inhabitants; in Saxony 94, or 1 to 13,300 inhabitants; in Wirtemberg 48, or 1 to 33,000 inhabitants; in the German part of the Austrian states 26, or 1 to 77,000 inhabitants; in Hanover 24, or 1 to 54,550 inhabitants; in the 33 other German states 1,144, or 1 to 8,650 inhabitants. In Russia 12 journals are published in the German language, and in the United States of North America 12 in the same language.

JOURNAL OF AMERICAN LITERATURE.

Gammell's Life of Sir Roger Williams.

(*Concluded from p. 668.*)

WILLIAMS suffered many privations and was exposed to imminent perils during his flight from Salem, of which his biographer has given a very graphic description. For these sufferings, however, the Massachusetts government cannot be held responsible; as it was their intention to have sent him to England,—though, it must be added, on such short notice as would have been very prejudicial to his interests. Befriended by the Indians, whose favour he had secured during his residence at Plymouth, he reached in safety the shores of Narraganset Bay, whither he had been directed by the friendly advice of Governor Winthrop. There he was hospitality entertained in the cabin of Massasoit, and obtained of him a grant of land on the Seekonk river, where, early in the spring, he pitched his tent, and began to plant. But receiving a letter from Governor Winslow, stating that his plantation lay within the jurisdiction of Plymouth, and begging him to remove across the river, that no offence might be given to Massachusetts, Williams, in company with five other persons who had joined him at Seekonk, left the fields which he had planted, and embarked in a canoe for the opposite shore. He finally selected for his new home a spot situated on a sunny slope of the eastern bank of the Mooshausic, and gratefully called it *Providence*.

Williams and his few companions were now beyond the chartered limits of civilization,—in a wilderness inhabited by savages. But these savages were his friends; for, during his residence at Plymouth, he had cultivated with pains and many presents the acquaintance of the two principal chiefs of the Narragansets, Canonicus and Miantonomo. Through their regard for him, he readily obtained a large tract of land upon the fresh rivers of Mooshausic and Wanasquatucket, though "it was not thousands nor tens of thousands of money, that could have bought of them an English entrance into this Bay." The land thus acquired was not appropriated by Williams to making himself, like William Penn, or Lord Baltimore, or Sir Walter Raleigh, the proprietary of a princely domain. On the contrary, though probably purchased at the expense of his entire property, it was distributed in equal shares among the little company of friends; for his own services he received only a few pounds, as a "loving gratuity," and he retained in his possession no more land, or authority, than was given to the others. The same liberality was manifested in the form of government which was established. It was a pure democracy. The following agreement entered into by the settlers constituted the only charter of their liberties.

We, whose names are here underwritten, being desirous to inhabit in the town of Providence, do promise to submit ourselves, in active or passive obedience, to all such orders or agreements as shall be made for the public good of the body in an orderly way, by the major consent of the present inhabitants, masters of families, incorporated together into a township, and such others whom they shall admit into the same, only in civil things.

According to this compact, it will be observed, the inhabitants were to submit to the orders and agreements of the majority *only in civil things*. Thus was fully recognised, in the first form of government adopted by the settlers at Providence, the great principle of religious toleration. The Puritans, who gloried in leaving England because they were persecuted for conscience's sake, established in this country a system of oversight and control in religion, a kind of Protestant inquisition, no less severe, and far more effective, than the Courts of Star Chamber and High Commission. But Roger Williams really founded a "shelter for persons distressed for conscience." No man, whatever were his religious opinions,

was on that account excluded from the settlement. Here many of the followers of Mrs. Hutchinson, exiled from Massachusetts, were "lovingly entertained;" here, Samuel Gorton and his associates—rather harshly characterized by our author as men of "wild and fanatical opinions"—were kindly harboured; here, contrary to the earnest solicitations of the Commissioners of the United Colonies, the Quakers were allowed to find a refuge from persecution; and here, as is fully shewn by Professor Gammell, from that day unto this, have the rights of conscience ever been respected, and no law has ever been passed sanctioning the interference of the civil magistracy in religious concerns.

The church planted by Williams at Providence was established on the simplest basis. Indeed, we discover no traces of any religious institutions in the colony until nearly three years after its settlement. At that period, Williams, having before adopted the Congregational form of public worship and church government, established this free system of ecclesiastical polity in the Plantations. Becoming convinced of the invalidity of infant baptism, and of baptism by sprinkling generally, he was immersed by a layman, to whom he himself afterwards administered the ordinance. Also, after having held the office of pastor of the church at Providence for about four years, he resigned it on the ground that there was then existing in the world no true ministry with authority to dispense the sacraments; and became what, in the language of the times, was called a "Seeker." He still believed in a "ministry of prophecy," who might preach the gospel; but he conceded to them no authority to rule the church, or administer its ordinances, "because it was not derived from the apostles, otherwise than by the ministers of England, whom he judged to be ill authority."

As we have already observed, the government first established at Providence was a pure democracy. For several years, the original settlers, together with those received by them "into the same fellowship of vote," met once a month in town meeting to transact their public affairs on a footing of perfect equality. No power was delegated to any officers. No authority for acting as a corporate body was obtained from the mother country. The "orders and agreements of the majority" passed for law only by general consent of the inhabitants. But this system of pure democracy could not last long. Various differences of opinion, particularly respecting the boundaries of lands, springing up in the colony, it was soon found necessary to incorporate into the system the principle of representative government. Accordingly, in 1640, five "disposers" were chosen, with power, subject to an appeal to the people, to adjust the disagreements which had occurred in the colony; and these persons, together with a treasurer previously appointed, formed the body of town officers. From the first, great jealousy of delegated power was felt in this settlement; and its abuse was carefully guarded against by meetings of the citizens once in three months, and by the occurrence, at the same intervals, of new elections of officers. But with the growth of the Plantations there appeared a number of turbulent spirits, who needed to be restrained by the strong arm of power; and there arose, from time to time, acrimonious disputes, which threatened to rend asunder the bonds of the little community. Sister colonies, also, had been founded on the beautiful island of Rhode Island; associated action became desirable for the protection of the exposed settlers against the hostility of the Indians; and a charter of government was wished by many, that it might no longer be tauntingly said of them by their neighbours, that the men of Providence "would have no magistrates."

Roger Williams was sent to England to obtain from the authorities there a chartered recognition of the Rhode Island colonies. In this attempt he was entirely successful; and he returned in 1644, bearing an Act of Incorporation of the Providence Plantations, which granted to the inhabitants ample powers to establish "such a form of civil government as by the voluntary consent of all, or the greater part of them, they shall find most suitable to their estate and condition." It required all the skill and perseverance of which Williams was master to overcome the mutual jealousies of the different towns, so far as to bring them to unite in organizing a form of civil government under the new charter. This was not accomplished until 1647; and even then, so small was the power surrendered to the Colonial government, that the freemen of the towns, consisting of all persons owning lands within the same, could annul any law of the confederacy. Under so weak a frame of government serious practical difficulties naturally arose between men of independent spirits, or, as they were termed by their neighbours of Massachusetts, men "of all sorts of consciences." Williams, together with the venerable John Clarke, was therefore once more despatched to England to obtain further orders and grants for the establishment of peace and justice in the colony. The negotiations of the two agents finally resulted in obtaining from Charles the Second a new charter of government, better suited than the previous one to the existing state of the colony, and which, in compliance with the desire of the petitioners to "hold forth a lively experiment, that a most flourishing civil state may stand, and best be maintained, and that among our English subjects, with a full liberty in religious concernments," recognised most fully the right of freedom of opinion "in matters of religion."

This is a very brief sketch of the progress of Rhode Island legislation during the life, and under the influence, of Roger Williams. He thought that the best form of government which governed least; but far from being opposed to all magistracy, as was unjustly said of him, he took great pains to prevent liberty running into license, and confined it more and more, as occasion required, within the wholesome restraints of law. And such has ever been the spirit of legislation in Rhode Island. In the history of no state in this union has there been manifested a stronger love of freedom, even from the earliest times. As far back as the year 1765, the government of Rhode Island declared that it was the only body having the right to impose taxes on the inhabitants of the colony—a declaration which went as far, if not farther, than any legislative proceedings of the same date in the country. In the year following, the town of Providence unanimously agreed not to import or use the articles of British manufacture on which a duty had been laid by Parliament, and, also, to encourage home industry. On May 17th, 1774, a few days earlier than the action of any other public body on this subject, the delegates from the town of Providence to the General Assembly were instructed to promote the convening of a Continental Congress; and on the 15th of June, two days before Massachusetts, which has generally been considered the first colony to take this step, the Assembly elected delegates to Congress. The Rhode Island Assembly was the first to recommend the arming and equipping of a continental navy; and by its acts of May, 1776, was in advance of the legislatures of all the other colonies in making a virtual declaration of independence of the King of Great Britain. Equally conspicuous, also, has been the active patriotism of the inhabitants of Rhode Island. In 1757 no persons were before the citizens of Providence in their readiness to enlist against the French, after their invasion of the colonies, and the capture of Fort William Henry. On the 9th of June, 1772, the first blood which flowed in the American Revolution was shed on the waters of Narraganset Bay, in the gallant expedition by which the armed schooner *Gaspar*, sent for the purpose of enforcing the British revenue laws, was boarded and burned.

The conduct of Roger Williams, after his banishment from Massachusetts, towards his persecutors in that colony, was such as to place in a very favourable light the milder virtues of his character. Immedialely after his settlement at Providence, the warlike Pequot tribe attempting to unite with the Narragansets and the Mohegans in a league for the extermination of the English in New England, Williams was the first person to give information of the matter to the governor of Massachusetts, and was most active in defeating the plot. When Sassacus and his warriors undertook to accomplish by themselves the design which they had thus been prevented from executing in concert with others, Williams was again the constant adviser and assistant of the authorities of the Bay, and to his vigilant and self-sacrificing fidelity is to be attributed in great measure the favourable issue of a war, which left not one Pequot to bewail the defeat and annihilation of his tribe. The prevention of the Indian league was not effected by Williams except by "many travels and charges." When he hastened alone in his frail canoe over the waters of the Narraganset, to dissuade Canonicus and Miantonomo from joining the alliance, he had to "cut through a stormy wind and great seas, every minute in hazard of life;" and during the three days and nights passed in the cabins of these sachems, sur-

rounded by the Pequot ambassadors, whose hands were still reeking with English blood, he "nightly looked for their bloody knives at his own throat also." But his services, though gladly received, were never gratefully acknowledged by the Massachusetts authorities. When lavishing their congratulations and civic rewards upon the principal actors in the war, they passed over unhonoured the name of him, who, in preventing the Indian league, performed "the most intrepid and most successful achievement in the whole war; an action as perilous in its execution as it was fortunate in its issue." Governor Winthrop did, indeed, raise the question, whether Williams ought not to be rewarded with some mark of favour, and even recalled from banishment; but it was the opinion of the majority that he should still abide in disgrace at Providence.

This was the first, but it was not the only, occasion on which Williams interposed his friendly services to save the English settlements from the horrors of Indian warfare. It was through his mediation in 1645 that the Narraganset chief Passacus was induced, instead of declaring war, to go to Boston, there to form a treaty which destroyed the independence, and rendered for ever harmless the power of his tribe. Ten years later, his counsels were instrumental in preventing war from being declared by the United Colonies against the natives of the country. And when at length the struggle between the two races could no longer be averted, Williams, though then past his six-and-seventieth year, zealously armed his colony against King Philip, and himself accepted a captain's commission in its militia.

The instance already related is not the only one which illustrates the ingratitude and intolerance of Massachusetts. An obnoxious letter respecting the General Court having been written by some one of the settlers at Providence, it was ordered that if any one of them should be found within the jurisdiction of the Bay, who would not disown the sentiments of the letter, he should be sent home, and be forbidden to return on pain of further censure and imprisonment. When Miantonomo expressed his willingness to visit Boston, as desired, for the purpose of making a treaty with the authorities, provided he might take Mr. Williams with him as an interpreter and counsellor, the condition was not granted. When Williams was so poor that his "time was spent day and night, at home and abroad, on the land and water, at the hoe and at the oar, for bread," he was debarred the privilege of trading either at the principal seaport of New England, or with the Massachusetts Indians, to the loss, as he affirmed, "of many thousand pounds." In 1643 the Indians had become so formidable from the use of firearms bought of the Dutch and French, that a confederacy was formed among the colonies of New England for mutual protection; but the Rhode Island settlements were not invited to join the union; and when, subsequently, they themselves applied for the favour of admission, it was peremptorily refused. Massachusetts even passed laws forbidding the people of Rhode Island to purchase firearms or ammunition within her jurisdiction; and though often solicited to relax the severity of her policy in this respect, she refused to do so, even when the savages were at war with her and her brethren. When three respectable members of the church at Newport, among whom was its minister, the excellent Dr. John Clarke, were once deputed to visit an aged brother of their communion then residing in the town of Lynn, and desiring once more before the close of life to receive the consolations of religion from the lips of some one of his own faith, these persons, while in the peaceful and private discharge of their Christian offices, were arrested by constables, committed to prison, tried in court, and sentenced to be fined or whipped. Nor were petty persecutions, like these, wholly unaccompanied by graver acts of legislative usurpation. While the government of Plymouth laid claim to the island of Rhode Island, Massachusetts extended her jurisdiction over the settlement at Pawtuxet, sent an armed commission to bring the colony at Shawomet into her General Court, and transmitted an order to Williams, then acting as president of the government in the Plantations, setting forth that its whole territory belonged to herself by virtue of a charter alleged to have been obtained from parliament. It may be added, that this charter has never been found among the archives of Massachusetts.

We cannot entirely pass over the conduct of Williams towards the native inhabitants of this country with whom he was brought into contact. Immediately on arriving in New England, he sought, not without success, to cultivate their friendship; and he was never weary afterwards in endeavouring "to do them good." In Plymouth he gained the esteem of the famous Massasoit, who,—to quote the language of Mr. Gammell,—"from the seat of his royal race at Mount Hope, often went thither to brighten, by friendly intercourse, the chain that bound him to his early allies." There, also, he became favourably known to the sage Canonicus, and the high-souled Miantonomo, chieftains of the Narragansets; and in one of his letters he writes, "God was pleased to give me a painful, patient spirit, to lodge with them in their filthy, smoky holes, even while I lived at Plymouth and Salem, to gain their tongue." During his flight from Salem through the territories of the Indians, "these ravens," said he, "fed me in the wilderness." Massasoit welcomed him as a sachem to the royal cabin at Mount Hope; and gave him land, where to pitch his tent and plant his corn. On the banks of the Mooshausic he ever lived on terms of hospitality with his red neighbours, so that Miantonomo sometimes came to his house "to keep his barbarous court;" and there he won the regard of the Narraganset tribe to such a degree, that, when Clarke and Coddington were desirous of purchasing the fair island of Rhode Island, Williams, together with Sir Henry Vane, "obtained it for them by love." Later in life, he was in the habit of going once a month into the Narraganset territory to preach the gospel to the inhabitants; and not long before his death, so great was still his influence among them, that, when some of Philip's forces came to attack Providence, it is said that he took his staff, and went boldly out alone to meet them. The fact that Williams was an exile from the Bay probably went far towards rendering him a welcome guest among the Narragansets; for they hated both the Indians of Massachusetts, and the whites who protected them. But this was by no means the sole cause of his friendly reception. He always maintained their right to the soil of this country. He always made them, in his purchases, such generous compensation as they desired. He "spared no cost towards them, in tokens and presents;" and so much did they rely upon his bounty, that, when the aged Canonicus was about to die, he sent for his friend, Mr. Williams, and "desired to be buried in his cloth of free gift."

It must be added, however, that Williams participated in what is now considered the wrong of Indian slavery. But it was the practice of the times. The articles of the early New England confederacy enumerate slaves among the spoils of war. The noble-minded Winthrop left legacies of Indians to his heirs. In most of the colonies, the Indians taken prisoners by the English were sent out of the country, and sold into perpetual slavery; but at Providence, they were disposed of to the inhabitants, and only for a short period. As early as the year 1652, the authorities of Providence and Warwick passed laws forbidding, under severe penalties, the retaining of slaves longer than ten years, or the selling of them at the expiration of that time; and in 1676, with a philanthropy remarkable in those days, the former Colony enacted, "that no Indian in this colony be a slave, but only to pay their debts, or for their bringing up, or custody they have received, or to perform covenant, as if they had been countrymen, and not taken in war."

The private life and temper, as well as the public services of Roger Williams, are such as his descendants may look back upon with pride and pleasure. We will not deny, that, as he lived in an age of bitter controversies and punctilious observances in religion, he partook of its disputatious character, and sometimes contended needlessly in matters of trifling import. As a dissenter from the opinions of his brethren, both in this country and England, he was not a little pertinacious in the maintenance of his peculiar sentiments. The opposition he met with, first, in founding a new colony, and afterwards in managing the turbulent spirits that resorted to it, caused him often to appear self-willed and intractable. So far, Williams was under the influences of his age and of peculiar circumstances; but his virtues were his own, and they were many. To borrow the language of his biographer, "he was magnanimous and benevolent, patient of suffering, and forgiving of injuries, and unwavering in his devotion to the interests of truth, and liberty, and virtue." The asperities of his cha-

racter were greatly softened down by the experiences of life. No man ever more fully illustrated the Christian doctrine of forgiveness of injuries. If at Salem he was, in any sense, a fomenter of strife, at Providence, on all occasions, he was a friend of peace. He was never free, indeed, from strong antipathies; but the number of his private and public charities more than covered them all. He had a lively temperament and keen sensibilities, united with great stability of character; his disposition was eager and fiery, but controlled by great soundness of judgment and a "rocky strength" of principle. His writings, of which an interesting account may be found in an appendix to the life, are frequently enlivened with flights of fancy and wit; the gravity of theological disquisition is sometimes relieved by learned references to history and occasional allusions to the classics. His poetry is little better than quaint doggerel, and his prose style has all the intricacy and the cumbersomeness of the old Puritan writers; but both manifest qualities of mind, which, under more genial culture, might have commanded the admiration of a more refined and tasteful age.

Viewed as a public character, Roger Williams was one of the most remarkable personages of early New England history. The Puritans of Plymouth and Massachusetts Bay were not behind their age; but he was in advance of it. Other Englishmen had entertained the idea of religious toleration, but he was the first of them to reduce it to practice. He saw this principle clearly, he followed it out consistently, he suffered for it heroically. Jew or Christian, infidel or pagan, Arminian or Quaker, Familist or Tunker, were all welcome in Providence Plantations, "so long as human orders, in point of civility, were not corrupted or violated." The community as first formed by him at Providence was an attempt to shew that every man might be his own ruler, and every man his own priest; though, when the impracticability of the scheme became apparent upon the increase of the colony, he gradually introduced the principle of representative government, and surrounded individual freedom with the salutary restraints of constitutional law. As Americans, desirous of giving to the great experiment of popular institutions a fair trial in this country, we are bound to revere the memory of that man, who was foremost in establishing here those maxims of civil and ecclesiastical law, which have since been universally adopted as the foundations of our liberties.

THE TOURIST.

[All the world travels now-a-days. Great, therefore, will be the utility of a periodical to which every Tourist may communicate such of his experiences as to routes, sights, conveyances, inns, expenses, and the other economies of travelling, as may serve his fellow-tourists. To this design we propose to devote a distinct department of THE CRITIC, and we invite communications of the class described relative to travelling both abroad and at home.]

WE take from the same MS. we have quoted before another chapter of the "Tour, Pictorial, Personal, and Political:"—

GRINDELWALD—THE WENGERN ALP—THE JUNGFRAU—AN AVALANCHE—LAUTERBRUNNEN—THE STAUBACH—INTERLACHEN.

Huge clouds were resting upon the mountains—thick mists lay in the valley,—when we looked out of the window at dawn. Our guide prophesied a wet day, and recommended us not to proceed; some drops of rain descended to second his advice, but we were resolute, and after waiting till late in the day, hoping for a clearance, we started, ladies and all, for the Wengern Alp. The clouds dispersed above us before we had well passed the valley of Grindelwald, but below us the mist continued to lie, veiling every object from our sight. Still we could see the mountain-tops glittering in the sun, our path was bright, and the loss of the view down the narrow valley that stretched before us was comparatively unimportant. We did not regret our resolution, and smiled triumphantly at our guide, who persisted in shaking his head and asserting that we should yet have a drenching.

Again we passed through the magic changes of scenery that had daily called forth our admiration ever since we had been among the mountains. The smiling valley was exchanged for the steep and rugged rock, and the horses of my fellow travellers slipped and stumbled in the rude pathway, and we who went along more easily upon our good feet made ourselves merry with their miseries, and with the aid of our alpen-suchs clambered over places round which the riders were obliged slowly to wind, and as it was very warm we threw off our coats, and when by such stratagems we had gained somewhat upon the rest of the party, we stretched ourselves at length upon the green whortleberry beds, and picked handfuls of the refreshing fruit as we lay, and when the first horse's head came nodding at the bend of the path below, we were up again and onward as if we had been mountaineers by birth.

Thus the steepest of the ascent now was mastered, but not without considerable weariness. The pulse quickened, the limbs laboured, big drops of sweat oozed from every pore, a sort of faintness came over the frame. But these sensations gradnally subsided after the first hour's ascent, the breathing became regular, the limbs lost their languor, the heart beat steadily, the perspiration ceased to flow, and, as if a new life had been infused into the frame, the most difficult places were scaled without any sense of fatigue, and the day's labours were closed with less of actual weariness than attended the task of the first hour. Such was the invariable experience of pedestrian excursions in Switzerland, and I name it that any reader making the attempt may not be deterred by the pains he will certainly feel at the beginning of each day's travel.

At the summit of the first and steepest shoulder of the Wengern Alp there was a single chalet—a miserable place, not much bigger than a pigsty, and almost as dirty. But on a small table at the door—oh! prize for hot and thirsty travellers!—were spread saucers of strawberries and cream—Alpine strawberries—so justly famous for their flavour—and mountain cream. The fellow who thus stood to tempt wayfarers set a great price upon his commodity. But it was forbidden to drink, and this indulgence was harmless. Never was fruit so delicious to my lips as at this moment.

A sort of undulating plain, covered with thin grass and whortleberry bushes, interspersed with rhododendrons, lay before us, over which we hunted the huge grasshoppers at every step. Another short but stiff ascent, then another plain, and again another climb, and we beheld a scene altogether unlike any we had yet witnessed. The snowy tops of mountains were ranged upon our left; before us and far away to the right stretched an expanse of country that instantly suggested to me "the blasted heath" of Macbeth's witches. Over its entire surface are scattered, thickly in some parts, dead pines, skeleton trees, of all fantastic shapes, spreading their seared branches into the air, stripped of their bark, and their trunks exhibiting the whiteness of decay. It appears as if some mighty conflagration had passed along there; or as if the lightnings of some awful storm had withered them all at one stroke. The effect upon the imagination of the whole scene—the dark hue of the heath—made darker by the thickly clouded heaven above, and the volumes of mist rolling over the valley on the other side, and these blasted pines standing like troops of spectres amidst the gloom—was to inspire a sense of awe almost amounting to terror. I moved along as though I were crossing haunted ground.

Scarcely had we quitted this desolate place when we found ourselves in a narrow gorge between two mountains, or rather ranges of mountains, opening before us into a valley whose depth I could not measure for the mist, with which it was half filled. On the right, some way in advance, the top of the Jungfrau was visible, glittering in the sunshine.

While I was gazing with delight upon this scene, my ear was suddenly assailed by the report of a gun behind me. The sound was taken up by the rocks, and hurled from side to side, from cliff to cliff, from mountain to mountain, now with the roar of thunder, now like a low whisper, then again with a clatter as if an irregular volley of musketry, then far down the valley, then near, then on the right, then on the left, repeated more often than I could count, and as if the echo would never end. A man, self-stationed for the purpose of giving this surprise to travellers, came out of the bushes and claimed his reward. It was readily paid, and I was contracting for a repetition of the magnificent concerto, when the ladies, with one voice, exclaimed that it terrified them, and so the opportunity for attentively hearing one of the most remarkable echoes in the world was lost. Really, ladies who are afraid of a gun and an echo should not travel among the Alps.

As we crossed the summit, we saw to our chagrin that the

valley was completely filled with a fog, which rolled up to the base of the Jungfrau, there curled round and round and slowly ascending her sides, hung about them in huge volumes, partially hiding her from our view. Half an hour's walk brought us directly opposite to her, and we took refuge in the chalet erected for the accommodation of travellers.

It was very provoking. There within half a mile of us was the famous Jungfrau, the beautiful, the pure, yet can we see only patches of her snowy charms. Patiently we sat at the window for an hour or two, looking down into the valley to measure the mist, and speculating upon its more or less of density; now peering through the rents of the fog into the mountain-side; and when some rays reflected from the snows broke through it, clapping our hands and exclaiming that soon the Virgin (such is the meaning of Jungfrau) would unveil her charms, and the great object of our day's labour would be attained. But still were we doomed to disappointment; for as fast as the veil was removed from one part it was drawn over another. Still we were not disheartened. Dinner was ordered and provided, and excellent and abundant fare gratified the appetite that was the consequence of our long walk. While we were eating, and ever and anon looking up at the Jungfrau, to give signal when she should appear, there was a sound as of a mighty rushing, as if a million carts were discharging loads of stones at the same instant. "An avalanche!" we shouted in chorus, and ran to the door. We could see nothing for the fog, but the sound continued for two or three minutes. Our hostess informed us that they were very common, and indeed we heard many afterwards, but none so loud as this first one. The solemn silence that generally prevails in the Alps makes the accidental noise of falling avalanches tenfold more startling.

At length our patience was partially rewarded. A great gap in the mist revealed to us the entire form of the Jungfrau, with her pointed summit so exquisitely white, and the glaciers streaming down her sides like a graceful mantle thrown over her shoulders. Here it was that Lord Byron laid the scene of a portion of *Manfred;* this is the spot he has so vividly described:—

> Ye toppling crags of ice—
> Ye avalanches, whom a breath draws down
> In mountainous o'erwhelming, come and crush me!
> I hear ye momently, above, beneath,
> Crush with fearful conflict; but ye pass,
> And only fall on things that still would live:
> On the young flourishing forest, on the hut
> And hamlet of the harmless villagers.
> The mists boil up around the glaciers; clouds
> Rise curling fast beneath me, white and sulphury,
> Like foam from the roused ocean of deep hell.

It would be impossible to convey by words any notion of the magnificence of this mountain. The conical form, the purity of the snows which stream down its sides, the enormous height to which it lifts its head into the sky, the grandeur of the scenery by which it is surrounded, combine to make a deep impression upon the traveller, and when he recals by his fireside at home the visions of his wanderings, the Jungfrau will be among the brightest images daguerreotyped upon his memory.

But brief was our enjoyment of the spectacle. The mist from the valley came marching up, thicker and thicker, beat against the base of the mountain, curled in huge billows round it, rolled over and over in mighty wreaths, until a pile of fog was built up as lofty as the Jungfrau herself, and an impenetrable veil was drawn over her beauties. Our guide warned us that rain was impending, and leaving behind us a portion of our party, who had resolved to spend the night at the chalet in order to view the sunrise, we hurried down the hill, traversing a wood of pines, whence we emerged upon a small cultivated plain, lying between a rent in the mountain, and were invited to halt to listen to a wonder of the place.

A peasant resting upon a fragment of rock with one of the huge wooden horns of the country wound a few harsh notes. A moment's hush, and then, as it were from the caverns amid the far off heights, the notes were sent back—once, and once only—but in a tone so exquisitely musical, so unearthly sweet, that it was difficult to believe that it was really an echo of the hoarse wooden voice of that rude horn, and not the response of some spirit of the glaciers.

While we were listening with astonishment and delight to this wild aerial music, our guide, with a grin of malicious satisfaction, pointed to the dense clouds that had gathered over our heads, and then to the huge splash of a raindrop upon my sleeve. I understood him; his prediction was about to be verified; we were to have a drenching even before we could gain the village that was just visible in the valley far below us. There was no help for it, so we prepared to defy fate and weather, and face the storm without flinching. It was not long in coming, and we were wetted to the very skin.

I had an umbrella with me, and on this occasion it proved serviceable in more ways than one. It should be premised that our friend, the kirk minister, had looked with evident admiration upon one of the Guernsey ladies from the moment of his self-introduction to them in the descent to the Rhone Glacier, as described in a former chapter. By this time he was in love, or very nearly so; being, as I have said, an extremely well-favoured, intelligent, agreeable man, it is not wonderful that the young lady should have become interested in him. In this state of affairs, a steep and difficult descent, rendered extremely slippery by the rain, a pelting pitiless storm, and my umbrella of rather restricted circumference, were delightful. The sustaining arm of the gentleman was continually in requisition to save the lady from a fall, and to shelter her from the rain it was necessary closely to link the supporting and supported arm. Many a jest had we levelled at our friend touching his tenderness for the pretty Miss Le C——. But now it was his turn to laugh, and he did not fail to cast at us triumphant glances as he bore his lovely burden down the hill after the fashion described, sheltered from the rain and rewarded by her smiles, while we were trudging, or rather sliding through the mud, exposed to the pelting of the storm, drenched to the skin, and no bright eye to cheer us by looking "I thank you!" in return for such pleasant toils. Verily he had his revenge.

Exquisitely picturesque must be this valley in fine weather. But we beheld it now half hidden in fog, and drowned in a thick rain. The path grew more and more steep as we approached the village, and in some parts was literally excavated in the side of the almost perpendicular rock, which was covered, nevertheless, with a richly green mantle of shrubs, amid which countless wild flowers were opening their petals to drink the falling clouds, filling the narrow way with many delicious scents.

We were not long in gaining the inn, where we enjoyed a change of clothes, and a refreshing tea, at which the adventures of the day were laughingly reviewed, and many conjectures hazarded as to the doings of those of our party whom we had left upon the Wengern Alp pleasantly wiled away the evening, and when we went to our beds the rain was still falling with unabated vigour.

It was with some anxiety that I drew the curtain at dawn and looked out on the landscape. The storm had passed away; scattered patches of mist hung about the valley; the sky was blue above. But though the heaven was lighted with the glow of morning, the long narrow gorge in which we had slept was wrapped in night. What a cavern it is! A little strip of fertile land lies between two walls of rock, that ascend uprightly to an enormous height, and almost exclude the sun and the wind Even in the summer the rays of the former do not penetrate it till seven o'clock, and in winter he is visible only for a short hour or two. Hence, fogs, damps, rank vegetation, and their attendants, ague, goitre, and cretinism.

We hastened to view the falls of the STAUBACH, famous as being the loftiest in Europe, where the water has an unbroken descent of no less than 800 feet, the effect of this amazing tumble upon the mass of water is singular and beautiful. It is completely beaten into dust (whence its name, which is literally, the Dust-river). It reaches the basin at the base in the form of a minute spray, which is scattered through an extensive arch, speedily wetting the spectator to the skin, while he is scarcely conscious that he is exposed to any moisture, so small are the particles. The general appearance of the waterfall, at a more distant view, is white, wavy, and lace-like. It resembles a stream of very delicate drapery, shaken by a gentle wind. Byron likened it to "the tail of a white horse, such as it might be conceived would be that of the pale horse on which Death is mounted in the Apocalypse. It is neither mist nor water, but something between both: its immense height gives it a wave or curve—a spreading here—or condensation there—wonderful and indescribable." And this

picture he has refined in Manfred, where he has introduced the neighbour of the Jungfrau.

> It is not noon—the sunbows rays still arch
> The torrent with the many hues of heaven,
> And roll the sheeted silver's waving column
> O'er the crag's headlong perpendicular,
> And fling its lines of foaming light along,
> And to and fro, like the pale courser's tail,
> The giant steed to be bestrod by Death
> As told in the Apocalypse.

Wordsworth calls it "a heaven-born waterfall," and so it appears when the clouds lie upon the top of the precipice from which it descends.

As we looked up the valley we could count a multitude of other waterfalls, streaming over the rocky ramparts on either side.

Returning to the Inn, we breakfasted, and then our two Scotch friends joined my brother and myself in a voiture, and we started for INTERLACHEN. The day was cloudless, and the country delicious after the showers of the night. The journey was an interesting one. Our road lay for a time through a bold and romantic country, following the windings of the river that roared in its rapid flight far below us, and thence we entered upon a flat and verdant plain; presently we passed the castle that was the reported residence of Manfred, and now immortalized by the genius of Lord Byron, who made it the scene of one of his finest dramatic poems, a ruinous place, with but a single square tower standing perfect, amid the coppice by which it is surrounded, and presently we found ourselves in the village of Interlachen, where we had some difficulty in obtaining beds, though there are I know not how many immense hotels, besides a multitude of *Pensions*, or boarding-houses—so much is it become the favourite resort of families from all parts of Europe.

And well does it deserve its fame. It lies between the lakes of Thun and Brienz. The Jungfrau and its brother Alps shine in the sun before it. The roads are thickly sheltered by walnut-trees; the meadows around are exuberantly fertile; the buildings beautifully clean, and elegantly ornamented with verandahs, and conservatories, and gardens, combining the luxuries and graces of the town with the charms of the country. The walks are thronged with gay groups of all countries, of all ages. You recognise in a moment the fiddle-faddle Frenchman, the studiously-careless German, the self-satisfied Englishman. The Parisian girl attracts you by her figure, the English maiden there by her face. But all are glad and good-humoured, though it is noon, and a hot day, and all are out of doors, strolling in the shade of trees, or lounging in flower-wreathed balconies. If such be Interlachen at midday, what will it be in the evening? We shall see.

ART.

PORTRAITS OF CHARLES I. AND HIS QUEEN, by Vandyke, are stated, in the *Suffolk Chronicle*, to have been bought for a few shillings from Mr. Fenton, a broker at Bury, and being sent to London and cleaned, are now valued at 500 guineas. They are in the possession of Sir Thomas Cullam.

THE DRAMA AND PUBLIC AMUSEMENTS.

THE past week has been almost entirely destitute of novel features in theatricals. At the St. James's M. LAFONT took his benefit on Wednesday evening. The entertainments selected were ample and excellent, comprising *Clementine*, *Le Hochet d'une Coquette* (in which Mademoiselle MARTELLAN takes the part heretofore filled by Mademoiselle FORGEOT, and moreover without any detriment to the audience), *Père et Fils*, and two acts of *Jean, ou le Mauvais Sujet*, an adaptation from PAUL DE KOCK'S novel. There was a very good house. We may remind our readers that this is the last week of LAFONT'S present engagement. At the Haymarket there has been absolutely nothing new. *The Maiden Aunt* keeping the even tenour of her way with *Railway Bubbles*, and other farces, which have been already noticed. And so at the Adelphi, there is every evening a crowded house to witness *The Green Bushes*, now a more than centinoctrian piece, with *Taming a Tartar* and *Seeing Wright*.

PRINCESS'S THEATRE.—An entirely new go-a-head locomotive extravaganza of the day, entitled *Jeames, the Railroad Footman of Berkeley-square*, was produced at this favourite little resort of the public on Wednesday evening, for the first time, but which we were sorry to perceive contained so little of the *vis comica* either as regards subject, matter, or treatment, as to justify the very general expression of dissatisfaction which was elicited on an announcement of its repetition at the conclusion of the piece. It is founded on some papers which are appearing at the present period, of a somewhat similar title, in *Punch*, the essence of the fun in both cases (in the printed papers as well as the acted play) appearing to consist in an unaccountable *hybrid* mixture of sentiment and slang, violent agitation of the heart and preposterous perversions of grammar, on the parts of the whole *corps dramatique*, but more signally in the person of the illustrious hero himself, *Jeames*, a mode of eliciting a laugh from the frequency of its adoption, which has become now neither novel nor attractive. It is intended as a *hit* at the spirit of the times, but the blow is so powerless that it may be mistaken rather for a *nudge* than a knock. If there had been any utility in the piece at all it would have been allowed to pass muster, for there was a very general feeling of curiosity raised, and a desire to be amused, that if it had contained, *only* in a most niggard quality, the usual good things that are spread before the partakers of enjoyment at this theatre ordinarily, it would have succeeded *nem. con.* It is due, however, to all concerned in the piece, without making any invidious distinctions, to say that each one exerted himself to the utmost, and strived to make the most of bad parts.

COLOSSEUM.—The following distinguished persons visited the above splendid establishment during the past week:—Earl Bathurst, Chief Baron Pollock, Mohun Lal, Count Bathiany, Lady Gurney and family, Lord Curzon, Lord Charleville, Countess Sellers, the Danish Ambassador, &c.

ROYAL POLYTECHNIC INSTITUTION.—As the festive season of Christmas is about to commence, and our young friends are anxiously on the look out for amusement during the holidays, we recommend, as the most profitable place of entertainment, this institution. Amongst the numerous specimens of science and art we observed a most elegant adaptation of pneumatic science, a miniature steam-engine. It has a fountain attached, which plays during its motion, the whole forming an elegant article of virtù. The steam is generated by spirits of wine, and carries out the whole process of a stationary engine, having a cylinder five-eighths of an inch diameter, with pumps, cranks, fly-wheel, &c. complete. The fountain plays in a globe of glass, in which may be placed gold fish. This work was exhibited to his Royal Highness Prince Albert a short time since, who expressed his approbation of the manner in which it had been constructed, as well as for the talent displayed in the invention. It is now deposited in the Royal Polytechnic Institution for public inspection, but here its motion is by atmospheric pressure. We hear that many novelties are in progress, among which are new lectures on Chemistry and Natural Philosophy, by Dr. JOHN RYAN, and Dr. BACHHOFFNER. The dissolving views will also be entirely new, and the musical department under Dr. WALLIS will not be forgotten.

CRITIC OF TRADES, INVENTIONS, ETC.

[Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

ELECTRO-PHYSIOLOGY.—Our readers have heard much of Mr. CROSSE'S famous discovery of the acarus that appeared under the influence of the galvanic battery, and how fiercely the fact has been disputed. Mr. Weeks has tried a similar experiment, and the result is thus stated in the *Literary Gazette*. It entirely confirms Mr. CROSSE.

Thus much is certain, that the acari have invariably appeared in the several solutions under electrical influence, while their absence has been as invariably remarked, in spite of the nicest scrutiny, in all negative tests provided to accompany the respective primary experiments * * * On the second of May, 1842, the apparatus, of which a description has been attempted, was set to work after the following manner:—A solution of ferrocyanate of potass, prepared by carefully boiling two ounces of the salt in sixteen ounces of distilled water, being in readiness for the occasion, ten ounces of the liquid were transferred to the glass jar, and immediately after an elastic metal

pipe, in communication with an iron bottle in a state of white heat, and from which a stream of pure oxygen rapidly proceeded, was dipped into the solution in the jar. In this way the gas, without passing through water, or being brought in contact with any external agent, continued to be supplied to the jar, until the entire atmosphere above the solution consisted of oxygen alone, when the metallic plug was deposited instantly in the neck of the jar, so as to cut off all communication with the external air. The open vessel or tumbler being now placed by the side of the close apparatus, and four ounces of the solution before mentioned having been poured into it, the necessary communication between the two vessels was effected by means of suitable wires, and contact at the same time similarly established with the respective poles of a constant battery of ten pairs. By means of this arrangement, the current entered the open vessel first, and then proceeded through the solution in the close apparatus, in its way to the negative side. I must here remark that the electric current, immediately on its first application, was observed to decompose the solution with such energy, that I deemed it advisable to suspend the operation until the activity of the battery should be somewhat modified; and it was not until the evening of the 6th of May that I could date the commencement of my experiment. A circumstantial record of all important changes connected with this experiment has been preserved, up to the present day, embracing a period of three years and three months. * * *

"1. October 19th, 1843—one hundred and sixty-six days from the commencement of the experiment—the first acari seen in connection therewith, six in number and nearly full grown, were discovered on the outside of the open glass vessel. On removing two pieces of card which had been laid over the mouth of this vessel, several fine specimens were found inhabiting the under surfaces, and others completely developed and in active motion here and there within the glass. Oct. 20th.—Making my visit at an hour when a more favourable light entered the room, swarms of acari were found on the cards about the glass tumbler, both within and without, and also on the platform of the apparatus. At this identical hour Dr. J. Black favoured me with a call, inspected the arrangements, and received six living specimens of the acarus produced from solution in the open vessel. No trace of insect life could at this time be discovered in the close vessel with an oxygen atmosphere. The solution in the open vessel had undergone very slight change of colour, but exhibited a multitude of minute and beautifully-coloured crystals with a prevailing tinge of crimson. The solution beneath the oxygen atmosphere, about ten days after the voltaic current began to traverse it, had assumed a reddish-brown appearance, which gradually darkened in colour, until scarcely any light could be transmitted through it, or the ascent of gas from either of the electrodes perceived.—2. Myriads of acari continued to be developed from the solution in the open vessel until the 20th of August, 1843, when it was found expedient to determine this division of the experiment, and confine the operation of the electric current solely to the close arrangement, in which no appearance of insect life had yet been detected. Before removing the open vessel I had, however, the satisfaction to supply therefrom abundance of living specimens to my friends who had kindly interested themselves on the subject, in various parts of England, Scotland, France, and America.—3. In the beginning of the month of June, 1844, rather more than two years from the commencement of these operations, the solution in the close vessel began to manifest signs of a most remarkable change, the results of constant, slow, and almost invisible decomposition. The apparatus was carefully tested, and found, as at first, perfectly air-tight, and the confined liquid was evidently returning to a paler red colour, as well as a partially translucent condition. These latter appearances rapidly increased, and about the beginning of September, in the same year, the solution had acquired a light amber-colour and perfect transparency, with abundant flakes and scroll-like forms of irregular oxide of iron of a deep orange colour, nearly covering the bottom of the jar. Most of these had, doubtless, been detached in succession from the negative platina spiral, and were conspicuous through the altered solution. It was while engaged in examining this singular accumulation of oxide, by means of an excellent lens, that I saw for the first time an unequivocal proof of the existence of insect life within the close vessel. Several spinous processes of the acari and other remains were detected floating on the surface of the solution, and others attached to the inside of the glass a few lines above the liquid; while, under circumstances somewhat more obscure, several entire dead insects were perceived amidst the flakes resting on the bottom of the jar. An omission, of secondary importance, it is true, was now for the first time apparent in the apparatus: this was the want of a fitting shelf or resting-place for the insects—a circumstance that my kind friend, Andrew Crosse, esq. when he favoured me with a visit a few weeks after, remarked almost immediately, and said, before he knew that acari had already appeared, 'that they would fall in and be drowned almost as fast as they were produced.' Mr. Crosse was right in his conjecture; for, although I have latterly watched the proceeding with diurnal care, I have never identified the presence of more than two living insects at the same time within the close apparatus, and these have as speedily as invariably shared the fate of their predecessors. Notwithstanding the omission alluded to, I enjoy an increase of satisfaction in the knowledge that I have kept from my arrangements any substance which by its introduction might have been suspected of vitiating the results, while the main object of the undertaking has in no wise suffered in its accomplishment. I have only to add my belief, founded on considerable experience and much observation, that insect life was first developed in this division of my experiment some time in the month of July 1844, about two years and two months from the commencement."

The second letter describes the production of *new vegetation* by the similar means of electro-chemical experiment, persevered in since October 1842:

"About the beginning of September 1843, a small patch of fungus, of a peculiar character, was observed to have commenced forming on the outside of the glass, near its lower rim. * * * This substance having, when first seen, a gelatinous appearance, of a dark-brown colour, by slow degrees extended itself round the lower rim of the glass, forming an irregular band or zone, half an inch in breadth, and throwing out numerous protuberances as it approached the positive side of the arrangement. On the 29th of November, in the same year, the following note relative to this singular production occurs among my memoranda; and as I cannot otherwise describe its mature appearance, I shall subjoin the extract:—'The substance of this fungus varies in colour from a light chocolate to that of a dark sanguineous red, and though formerly of a soft texture, it now offers considerable resistance. When viewed with an excellent pocket-lens—the only sort of microscope that can be brought to bear upon it—a most singularly-beautiful species of vegetation is seen to occupy its entire surface, presenting various shades of crimson, green, olive, and green inclining to yellow. In its general apperance it at once suggests the idea of a magnificent forest, consisting of trees and flowering shrubs in miniature. In particular spots, fine, downy, needle-like spires occur in vast multitudes, and these otherwise naked processes rising from the body of the fungus, are surmounted by what appear to be seed-vessels in some instances, and irregular feathery tufts in others.' This experiment was not designed with any reference to my researches on the development of the electrical acari, but swarms of these creatures appeared incidental to its progress, and, at the time the above note was made, many of them were seen inhabiting the miniature forest on the fungus, where they seemed to thrive amazingly, and to attain a larger size than any I have hitherto seen."

This fungus, so produced, is declared to be different from any known species.

JOURNAL OF MENTAL PHILOSOPHY.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mental Philosophy, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mental Philosophy throughout the world to make this a complete record of the progress of the science.]

NATURAL CLAIRVOYANCE.— The autobiography of M. ZSCHOKKE, the distinguished author and Swiss statesman, lately published, contains a most remarkable account of a faculty which he possessed, so identical in its powers with some of phenomena of Mesmerism, that it is impossible to avoid the conclusion that it was a species of *natural clairvoyance*. At all events it is a valuable contribution to the facts of mental philosophy, and coming from a man of such pure and exalted character, its strict veracity is beyond question.

I am, he remarks, almost afraid to speak of this, not because I am afraid to be thought superstitious, but that I may thereby strengthen such feelings in others. And yet it may be an addition to our stock of soul-experiences, and therefore I will confess! It has happened to me sometimes on my first meeting with strangers, as I listened silently to their discourse, that their former life, with many trifling circumstances therewith connected, or frequently some particular scene in that life, has passed quite involuntarily, and as it were dream-like, yet perfectly distinct, before me. During this time I usually feel so entirely absorbed in the contemplation of the stranger life, that at last I no longer see clearly the face of the unknown, wherein I undesign-

edly read, nor distinctly hear the voices of the speakers, which before served in some measure as a commentary to the text of their features. For a long time I held such visions as delusions of the fancy, and the more so as they shewed me even the dress and motions of the actors, rooms, furniture and other accessories. By way of jest, I once, in a familiar family circle at Kirchberg, related the secret history of a semstress who had just left the room and the house. I had never seen her before in my life; people were astonished and laughed, but were not to be persuaded that I did not previously know the relations of which I spoke; for what I had uttered was the *literal* truth: I on my part was no less astonished that my dream-pictures were confirmed by the reality. I became more attentive to the subject, and when propriety admitted it, I would relate to those whose life thus passed before me the subject of my vision, that I might thereby obtain confirmation or refutation of it. It was invariably ratified, not without consternation on their part.* I myself had less confidence than any one in this mental jugglery. So often as I revealed my visionary gifts to any new person, I regularly expected to hear the answer—"It was not so." I felt a secret shudder when my auditors replied that it was true, or when their astonishment betrayed my accuracy before they spoke. Instead of many, I will mention one example, which pre-eminently astounded me. One fair day, in the city of Waldshut, I entered an inn (the Vine) in company with two young student-foresters; we were tired with rambling through the woods. We supped with a numerous society at the *table-d'hôte*, where the guests were making very merry with the peculiarities and eccentricities of the Swiss, with Mesmer's magnetism, Lavater's physiognomy, &c. &c. One of my companions, whose national pride was wounded by their mockery, begged me to make some reply, particularly to a handsome young man who sat opposite us, and who had allowed himself extraordinary license. This man's former life was at that moment presented to my mind. I turned to him, and asked whether he would answer me candidly, if I related to him some of the most secret passages of his life, I knowing as little of him personally as he did of me? That would be going a little further, I thought, than Lavater did with his physiognomy. He promised, if I were correct in my information, to admit it frankly. I then related what my vision had shewn me, and the whole company were made acquainted with the private history of the young merchant: his school years, his youthful errors, and lastly, with a fault committed in reference to the strong-box of his principal. I described to him the uninhabited room with whitened walls, where, to the right of the brown door, on a table, stood a black money-box, &c. &c. A dead silence prevailed during the whole narration, which I alone occasionally interrupted by inquiring whether I spoke the truth. The startled young man confirmed every particular, and even, what I had scarcely expected, the last mentioned. Touched by his candour, I shook hands with him over the table, and said no more. He asked my name, which I gave him, and we remained together talking till past midnight. He is probably still living.

TO THE EDITOR OF THE CRITIC.

SIR,—The following little incident as illustrative of the practical means of inducing the mesmeric sleep may not be uninteresting. John Brooks, whose case has before been mentioned, and who can be thrown into the sleep by a single glance, brought this evening to our cottage one of his young friends, a lad of the name of Henry Francis, 15 years of age, in order, as he said, that we might try and mesmerise him. For some minutes, no apparent effect was produced upon him; when, thinking that if put into communication with Brooks, the mesmeric influence would be transmitted, I mesmerised the latter; and then placing his hand on the head of the boy Francis, I made some passes over Brooks's head, along his arm and hand, and over the head of Francis. In about two minutes Francis was deep in the mesmeric sleep, and exhibited all the phenomenon of catalepsy; we then in the usual way awakened him up, and tried the effect of mesmerising Brooks with his hand in the first instance upon the head of Francis. The result was, that in a moment after the former became mesmerised, the latter was in the same condition. Whilst in this state, and with his eyes perfectly closed, he wrote his name and address. This lad had never before been mesmerised, nor had he ever seen any one who had been. It has occurred to my brother and myself that the course we pursued in this instance may be generally and conveniently used for inducing the mesmeric sleep in new patients, and be the means of producing a state of coma on parties not otherwise susceptible.

Ivy Cottage, Yours, &c.
Lyncombe-hill, Bath. T. W. SAUNDERS.

* "What demon inspires you? Must I again believe in possession?" exclaimed the *spirituel* Johann von Riga, when, in the first hour of our acquaintance, I related his past life to him, with the avowed object of learning whether or no I deceived myself. We speculated long on the enigma, but even his penetration could not solve it.

BOOKSELLERS' CIRCULAR.

POLITICAL agitation, as usual, has put an entire stop to the progress of publication; hence so little of novelty to report, and we fear that for some time to come the stagnation will continue. Fortunately for THE CRITIC, however, this will not much affect its intrinsic interest; for the extensive arrangements made for the supply of information relating to foreign literature will, we believe, render its columns attractive, whatever the lack of literature at home.

As with the new year will commence a new volume, an opportunity is afforded for new subscribers; and we ask our friends everywhere to exert themselves to enlist from among their acquaintances fresh additions to our roll of readers. Especially do we request the booksellers, who can do so much to aid us if they will, to take this opportunity to recommend THE CRITIC to their customers. A prospectus, with all necessary particulars for this purpose, will be ready in a few days.

REGISTER OF NEW PUBLICATIONS,
From Dec. 13 *to Dec.* 20.

NOTICE TO BOOKSELLERS.

A Register lies at THE CRITIC OFFICE, *in which the Publishers of Books, Music, and Works of Art, in town and country, are requested to enter all new publications, with their sizes and prices, as soon as they appear. The weekly list will be regularly inserted in this department of* THE CRITIC, *and no charge will be made either for registration or for publication in* THE CRITIC. *Particulars forwarded* by letter *will be duly inserted.*

LIST OF NEW BOOKS.

Annals of Horticulture, a Year Book of Information on Practical Gardening, royal 8vo. 16s. cl. gilt.—Allen's (A.) Etymological Analysis of Latin Verbs, 12mo. reduced to 5s. cl.—Abbott's (Archbishop) Exposition of the Prophet Jonah, new edit. by Grace Webster, 2 vols. royal 12mo. 12s. cl.

Berens's (Archdeacon) Christmas Stories, 5th edit. enlarged, fc. 8vo. 3s. bds.—Bingham's (J.) Antiquities of the Christian Church, 2 vols. imp. 8vo. 1*l.* 11s. 6d cl.—Brownson's (O. A.) Charles Elwood; or, the Infidel Converted, post 8vo. 4s. cl. 3s. 6d, swd.—Butler's Guide to Knowledge, new edit. 12mo. 1s. 6d. cl.—Brown's (Dr. F.) Philosophy of the Human Mind, 16th edition, with Memoir and Portrait, 4 vols. 8vo. 2*l.* 2s. cl.; ditto, 1 vol. 8vo. 18s. cl.

Clarke's (Mrs.) Complete Concordance to Shakspere, imp. 8vo. 2*l.* 6s. cl. — Connexion between Revelation and Mythology, by Philomathes, crown 8vo. 3s. cl.—Cheever's (Dr.) Lectures on the Life and Times of John Bunyan, with Preface, by Ingram Cobbin, royal 32mo. 1s. 6d. cl. —Chess Player's Chronicle, Vol. VI. for 1845, 8vo. 15s. cl.—Cruchley's Map of the Railways of England and Wales, 2 parts, 2*l.* 5s. in cl. case. —Cotterill's (Rev. J.) Family Prayers, 10th edit. royal 12mo. 7s. cl.—Cotterill's (Rev. J.) Selection of Psalms and Hymns, 34th edit. 18mo. 2s. 6d. cl.

Dickens's (Charles) Cricket on the Hearth, fc. 8vo. 5s. cl. gilt.

Explanations: a Sequel to Vestiges of the Natural History of Creation, post 8vo. 5s. cl.—England's Worthies, during the Civil Wars, 1645 to 1647, by John Vicars, reprint, 12mo. 5s. hf.-bd.

Hamilton's (Rev. R. W.) Sermons, second series, 8vo. 12s. 6d. cl.—Hurwitz's Hebrew Grammar, 3rd ed. revised and enlarged, 8vo. 13s. cl.—Hurwitz's Elements of the Hebrew Language, 3rd edit. revised and enlarged, 8vo. 4s. 6d. cl.—Hurwitz's Hebrew Etymology and Syntax, 3rd edit. revised and enlarged, 8vo. 9s. cl.

King of the Swans, and other Tales, 4 illustrations, square, 2s. 6d. tinted, 3s. 6d. coloured, cl.

Long's Royal Descents, post 4to. coloured, 12s. fancy bds.—Legal Almanac, Remembrancer, and Diary, for 1846, 8vo. 4s. cl.—Lower's (Mark A.) Hand-book to Lewes, 12mo. 2s. cl. swd.—Loudon's (Mrs.) Lady's Country Companion, 2nd edit. improved and enlarged, 12mo. 7s. 6d. cl.

Marriott's (Rev. H.) Roman Catholic Religion judged to be False, by Internal Evidence, fc. 8vo. 2s. 6d. cl.—Missionary Life in Samoa, from the Journals of the late George A. Lundie, 12mo. 4s. 6d. cl.—Musical Treasury, Vol. III. folio, 16s. hf.-bd.

Nursery Rhymes of England, edited by J. O. Halliwell, 4th edit. 12mo. 4s. 6d. illuminated cl.

Prayers and Meditations from the Holy Bible and Liturgy, with the Seven Penitential Psalms, 12mo. 3s. 6d. cl.

Reiner's Lessons on Form; or, Introduction to Geometry, 12mo. reduced to 3s. 6d. cl.—Roscoe's (W.) Life of Leo X. complete, new edit. 2 vols. 8vo. plates and portraits, 1*l.* 4s. cl.—Roscoe's Life of Lorenzo de Medici, 7th edit. 8vo. plates, 12s. cl.

Slade's (Rev. J.) Annotations on the Epistles, 5th edit. 2 vols. 8vo. 18s. bds.—Southey's (the late R.) Oliver Newman, and other Poems, fc. 8vo, 5s. cl.—Suggestions for reducing the Poors'-rate and abolishing Poor-law Settlements, and for relieving the Poor by means of a Parochial Expenditure Fund, and a general and equal system of Rating in England and Wales, by William Foote. Demy 8vo. 1s.

Water Fairy, and other Tales, with 4 illustrations, square, 2s. 6d. tinted, 3s. 6d. coloured, cl.

THE CRITIC,
And Journal of Literature.

SATURDAY, DECEMBER 27, 1845.

THE CRITIC belongs to the new generation; it will endeavour to become the exponent of the spirit and the philosophy of the momentous *present*, and to rally round it the *young* heart and hopes of the country.—*Address*, Nov. 1st, 1844.

JOURNAL OF ENGLISH LITERATURE.

PHILOSOPHY.

The Maxims of Francis Guicciardini. Translated by EMMA MARTIN. *With Parallel Passages from the Works of Machiavelli, Lord Bacon, Pascal, Rochefoucauld, Montesquieu, Mr. Burke, Prince Talleyrand, Guizot, and Others.* London, 1845. Longman and Co.

OF all maxim makers, a race once numerous, now past away with the despotisms and oligarchies out of which they grew, FRANCIS GUICCIARDINI deservedly holds the highest place. Although his fame has been eclipsed by ROCHEFOUCAULD, because the language of France has been more familiar to Europe than that of Italy, he has a better title to reputation, for there is more of sound wisdom, more of practical good sense, and vastly more of substantial morality, in the Florentine than in the Frenchman. The results of a life devoted to statesmanship, in a field where all the art of the courtier and the diplomatist was necessary to acquire and maintain a position in the cabinets of royalty, have been noted down by GUICCIARDINI, in the pithy manner peculiar to this once favourite species of composition, and Miss MARTIN has done good service by introducing them to the British public through the medium of a translation executed with faithfulness, and made more valuable by the introduction of parallel passages from the works of other distinguished statesmen. Thus brought into opposition with like trains of thought in other minds, the maxims of GUICCIARDINI appear to great advantage. It is evident that they were not laboured for purposes of publication, but are really what they profess to be, the jottings down of the results of long years of active experience in human affairs; the legacy of a man, made wise by circumstances, to his successors, who may not have enjoyed his peculiar advantages.

But although these maxims grew out of a close acquaintance with human nature in Italian Courts, where morals were not strict, and in an age when statesmen were not expected to be virtuous, they contain very little that is objectionable in principle. The native worth of the man seems to have saved him from falling in with the laxity of his times, and to have preserved his heart pure amid the general corruption of manners. We select a few which appear to illustrate these brief remarks, and commend the work itself to such of our readers as enjoy compositions of its peculiar class. We prefer to take chiefly from those that relate to public affairs, because they are of the most universal application, and really the most valuable, as the results of actual experience are always more profitable than speculation, however ingenious:—

ORIGIN OF POWER.

All states have their origin in violence, to one who looks narrowly at it, excepting republics; and these in their own country, and no farther; neither do I see any legitimate power, not even that of the Emperor, which is in such great authority that it doth decide upon the rights of others; because there was no usurpation so great as that of the Romans, who usurped the empire: neither do I exempt from this rule the priesthood, whose violence is double, inasmuch as it is doubled in holding men under corporeal and under spiritual authority.

CAUTION.

Let him who would handle treaties and alliances beware that nothing doth hazard them more than seeking to make them overfast; because greater time is needed, and more persons must be dealt with, and more matters are implicated, from which causes such practices always come to light; and we may also believe that fortune, in whose hand are these things, is displeased with those who seek to free themselves from her power and depend upon themselves alone. Therefore, it is safer to execute them with some danger than with over-security.

HOW TO DEAL WITH TYRANTS.

A tyrant will use exceeding diligence in studying to know thy mind, that is, if thou art content with thy estate: he will watch thy carriage and behaviour, seeking to learn from them which frequent thee, and proposing divers courses to thee, and requiring thine opinion and judgment. Wherefore, if thou wouldest not have him compass thee, thou must most cautiously beware of the methods he will use, and of using any phrase of supicion; taking heed how thou dost speak, *etiam* with thine intimates; and conversing and replying to him so that he cannot cavil. This is easy to be done, if thou keep always before thee that he is trying all he can to circumvent and to discover thee.

PROMPTITUDE IN ACTION.

When thou shalt have the opportunity of a thing thou dost desire, lose no time to seize it; for the things of this world change so often, that no man can say he hath a thing until he grasp it. And when any thing which displease thee be proposed, seek to put it off as long as thou art able; for we see every day that time brings forth chances which may free thee from that trouble; and thus is that saying of the sages to be understood, Profit by Time's vantage. And Lord Bacon says:—Fortune is like the market, where many times, if you can stay a little, the price will fall. And again, it is sometimes like Sibylla's offer, which at first offereth the commodity at full, then consumeth part and part, and still holdeth up the price. For Occasion (as it is in the common verse) turneth a bald noddle, after she hath presented her locks in front, and no hold taken.

CHILDREN.

The wish to have children cannot be blamed, because it is natural; yet do I say, that it is a kind of felicity not to have any; for even he who hath wise and virtuous sons, hath, without doubt, more grief than joy of them. I have seen the example of this in mine own father, who was held in his day, yea, as an example in Florence of a father whom Heaven had most richly gifted in his sons. Think, therefore, how it must be with him who hath evil sons.

There is a singular acuteness of observation in the following, which may be called

THE VIS VITÆ.

Those undertakings and affairs which are not to be expected to fall through any sudden shock, but through consuming and wasting away, draw out to a much greater length than is believed at first; because, when men are obstinately determined to endure, they endure and sustain much more than would be believed. Wherefore, we see that a war, which is to be finished by famine, by inconveniency, by lack of money, or the like, runs on farther than would be believed. As it also happens with one who is dying of a phthisic, that his life doth always prolong itself beyond the opinion of the physicians. Thus a merchant, before he fails through being consumed by usury, doth alway stand a longer time than was believed.

Not improbably we may witness a practical illustration of this on the

THE JUSTE MILIEU.

When opinions are contrary in council, if any one come forward with some middle course, it is almost always favoured, not because the middle course be not worse for the most part than extremes, but because the disputants agree more willingly to that than to their opposite; and also the others, either to avoid offence or through want of comprehension, quickly come into that which they think will save dispute.—*Guicciardini*

. . . . Where authority is equal and opinion divers, things are scarce ever well determined on.—*Machiavelli; History of Florence*, book v.

. . . . In affairs of state, the Romans always avoided the middle course, and betook themselves to extremes.—*Discourses on Livy*, book ii. chap. xxiii.

FORTUNE.

I have desired honour and profit, as other men do; and, until now, I return thanks to God, and to my good fortune, I have gained even more than I sought for. *Et tamen* when I have obtained that which I did desire, I have not experienced any of those enjoyments and satisfactions therein which I had imagined to myself; which, if it were well considered, is enough to extinguish many of the desires of men.

Avant de désirer fortement une chose, il faut examiner quel est le bonheur de celui qui la possède.—*Rochefoucault, Maximes Morales. Désir.*

MAKE THYSELF FRIENDS.

Endeavour to gain thyself friends; for they are good in places, times, and chances, which thou wouldest never have thought of; and though this maxim may be of the vulgar, yet none can

thoroughly consider the value thereof but he who hath chanced, in his need, to feel it by experience.

A HINT TO JUDGES.

I have constantly observed this method, in my divers governments, that when a cause hath been brought before me, which, for some sufficient reason, I was desirous to accommodate, I did never speak of accommodation; but interposing different delays and obstacles, I caused that the parties themselves did seek it; thus, in due time I have been besought for that very thing which, if I had proposed it at the first, had been rejected.

SPEAK NO ILL.

Beware of every thing which may do thee hurt, and can do thee no good; wherefore neither in absence, neither in presence of another, ever say, without necessity, things which may displease him; because it is foolishness to make enemies without purpose; and I give thee this maxim because scarce any one but errs in this childishness.

RUMOUR.

When no man can tell me the author of the tidings, and they be likely, or such as are looked for, I give them little faith; because men readily invent that which is expected or is credited. I give more ear to any strange or unlooked-for tidings, because men are less apt to invent or to persuade themselves of that which is in no man's thoughts. I have many times seen proof of this.

PRUDENCE.

I once heard a friar say, that a man should have more credit from one ducat kept in his purse than from ten that he should spend. This saying is to be noted, not to the growing sordid, neither to the failing in honourable and reasonable expenses, but as a bridle upon thee from superfluous disbursings.

RATIONALE OF AVARICE.

There is no doubt but that avarice doth creep the more upon a man the older he doth grow; and the cause is commonly said to be, that his spirit doth decrease; but I think that this reason holds not. For that is a very ignorant old man that doth not see that the older he grows the less need hath he of money; and moreover, I see that the other vices of old men also continually increase. Wherefore I think the true reason to be, that the longer a man lives, the more doth he grow familiar with the things of this world, *et ex consequenti*, the more doth he love them.

The same reason is cause that the older a man doth grow, the more is death irksome to him; and more and more, both outwardly and inwardly, doth he live as he were certain never to die.

BIOGRAPHY.

Carlyle's Letters and Speeches of Oliver Cromwell.

(*Concluded from page* 656.)

WE add a few passages which we were compelled by pressure of other claims to omit last week.

CROMWELL early distinguished himself by zeal for the reform of the Church, and he was especially active in opposition to the abuse of Lay Impropriations. He even formed a feoffee fund for the purpose of buying them up, and restoring the charities to the congregations. Here is CARLYLE'S characteristic account of this incident.

The grievance of Lay Impropriations, complained of in the Hampton Court Conference twenty years ago, having never been abated, and many parts of the country being still thought insufficiently supplied with Preachers, a plan was this year fallen upon to raise by subscription, among persons grieved in that state of matters, a Fund for *buying-in* such Impropriations as might offer themselves; for supporting good ministers therewith, in destitute places; and for otherwise encouraging the ministerial work. The originator of this scheme was 'the famous Dr. Preston,' a Puritan College Doctor of immense 'fame' in those and in prior years; courted even by the Duke of Buckingham, and tempted by the gleam of bishopries; but mouldering now in great oblivion, not famous to any man. His scheme, however, was found good. The wealthy London Merchants, almost all of them Puritans, took it up; and by degrees the wealthier Puritans over England at large. Considerable ever-increasing funds were subscribed for this pious object; were vested in 'Feoffees,'—who afterwards made some noise in the world under that name. They gradually purchase some Advowsons or Impropriations, such as came to market; and hired, or assisted in hiring, a great many 'Lecturers,' persons not generally in full 'Priest's-orders' (having scruples about the ceremonies), but in 'Deacon's' or some other orders, with permission to preach, to 'Lecture,' as it was called; whom accordingly we find 'lecturing' in various places, under various conditions, in the subsequent years;—often in some market-town, 'on market-day;' on 'Sunday afternoon,' as supplemental to the regular Priest when he might happen to be idle, or given to black and white surplices; or as 'running Lecturers,' now here, now there, over a certain district. They were greatly followed by the serious part of the community; and gave proportional offence in other quarters. In some years hence, they had risen to such a height, these Lecturers, that Dr. Laud, now come into authority, took them seriously in hand, and with patient detail hunted them mostly out; nay, brought the Feoffees themselves and their whole Enterprise into the Star-chamber, and there, with emphasis enough, and heavy damages, amid huge rumour from the public, suppressed them. This was in 1633; a somewhat strong measure. How would the Public take it now, if—we say not the gate of Heaven, but the gate of the Opposition Hustings were suddenly shut against mankind—if our Opposition Newspapers, and their morning Prophesyings were suppressed! That Cromwell was a contributor to this Feoffee Fund, and a zealous forwarder of it according to his opportunities, we might already guess! and by and by there will occur some vestige of direct evidence to that effect.

Most sturdy is his defence of the old Puritans. He says:

The Christian Doctrines which then dwelt alive in every heart, have now in a manner died out of all hearts,—very mournful to behold; and are not the guidance of this world any more. Nay worse still, the Cant of them does yet dwell alive with us, little doubting that it is Cant;—in which fatal intermediate state the Eternal Sacredness of this Universe itself, of this Human Life itself, has fallen dark to the most of us, and we think that too a Cant and a Creed. Thus the old names suggest new things to us,—not august and divine, but hypocritical, pitiable, detestable. The old names and similitudes of belief still circulate from tongue to tongue, though now in such a ghastly condition: not as commandments of the Living God, which we must do, or perish eternally; alas, no, as something very different from that! Here properly lies the grand unintelligibility of the Seventeenth Century for us. From this source has proceeded our maltreatment of it, our miseditings, miswritings, and all the other 'avalanche of Human Stupidity,' wherewith, as, our impatient friend complains, we have allowed it to be overwhelmed. We have allowed some other things to be overwhelmed! Would to Heaven that were the worst fruit we had gathered from our Unbelief and our Cant of Belief!

Our generation, wanting the earnestness that inspired that movement of the human mind, cannot understand it, and therefore do we gibe and mock at it, and call it hypocrisy and cant. How it faded away by degrees, let Mr. CARLYLE tell us in his own peculiar, but most impressive manner:—

But the thing we had to say and repeat was this, that Puritanism is not of the Nineteenth Century, but of the Seventeenth; that the grand unintelligibility for us lies *there*. The Fast-day Sermons of St. Margaret's Church, Westminster, in spite of printers, are all grown dumb! In long rows of little dumpy quartos, gathered from the bookstalls, they indeed stand here bodily before us; by human volition they can be read, but not by any human memory remembered. We forget them as soon as read; they have become a weariness to the soul of man. They are dead and gone, they and what they shadowed; the human soul, got into other latitudes, cannot now give harbour to them. Alas! and did not the honourable Houses of Parliament listen to them with rapt earnestness, as to an indisputable message from Heaven itself? Learned and painful Dr. Owen, learned and painful Dr. Burgess; Stephen Marshall, Mr. Spurstow, Adoniram Byfield, Hugh Peters, Philip Nye: the printer has done for them what he could, and Mr. Speaker gave them the thanks of the House; —and no most astonishing Review-Article of our day can have half such "brilliancy," such potency, half such virtue for producing *belief*, as these their poor little dumpy quartos once had. And behold, they are become inarticulate men; spectral; and, instead of speaking, do but screech and gibber! All Puritanism has grown inarticulate; its fervent preachings, prayings, pamphleteerings are sunk into one indiscriminate moaning hum, mournful as the voice of subterranean winds. So much falls silent; human Speech, unless by rare chance it touch on the "Eternal Melodies," and harmonize with them; human Action, Interest, if divorced from the Eternal Melodies, sinks all silent. The fashion of this world passeth away. The Age of the Puritans is not extinct only and gone away from us, but it is as if fallen beyond the capabilities of Memory herself; it is grown unintelligible, what we may call incredible. Its earnest purport awakens now no resonance in our frivolous hearts. We understand not even in imagination, one of a thousand of us, what it ever could have meant. It seems delirious, delusive; the sound of it has become tedious as a tale of past stupidities. Not the body of heroic Puritanism only, which was bound to die, but the

soul of it also, which was and should have been, and yet shall be immortal, has for the present passed away. As Harrison said of his Banner and Lion of the Tribe of Judah: "Who shall rouse him up?"

SCIENCE.

The Note-Book of a Naturalist. By E. P. Thompson. Pp. 275. London: Smith, Elder, and Co.

Amid the piles of stupid fictions, commonplace discourses, untrustworthy histories, and wretched poetry, that crowd the table of the literary journalist, it is refreshing to light upon a volume which breathes of nature, whose contents are taken from the fields and the hedge-rows; that treats of realities, and reports of the world about us in plain unpretending language, without affecting the eloquent, the sublime, the poetical, or the pious. Such a book is this which presents to us the notes preserved by Mr. Thompson during his researches in the realms of nature. He has given us, just as he set them down, his observations of birds and flowers, and trees and butterflies—the *fauna* and the *sylva* of Old England—yet rich in such beyond any other country in Europe. A book like this, wholesome in its spirit, attractive in its theme, pleasant in its construction, will be right welcome to every reader, and should be ordered without delay by every book-club.

It is not, however, a work for criticism. It does not challenge commentary upon its style, for it affects no excellence in this, and its subject is too certainly a good one to be questioned. All that the journalist can do is to select from it a few of the most attractive passages, in order to shew the nature of its contents, and give his readers a taste of the materials in store for them should they follow his advice, and procure the book itself. From its very nature these extracts must be miscellaneous.

THE MIGRATION OF BIRDS.

Previous to the breaking up of the ice in the Gulf of Finland in the spring of the year, they arrive in large flocks, and continue about its edges awaiting its total dissolution, when hundreds may be seen collected together feeding. They are wary, and exceedingly difficult of approach; but I once had an opportunity of getting almost among them. I was shooting wild fowl in the gulf with a friend, one evening in the middle of May, in one of Colonel Hawker's punts carrying a large swivel gun, when, in the middle of our sport, we heard the distant hooping of swans. The inducement to follow was too great; and allowing our canoe to drift towards them, we could soon see that we were approaching a flock of at least one hundred and fifty birds, but, notwithstanding our precautions by lying on our faces, and suffering the boat to drift of its own accord almost, we could perceive that they were alarmed, and not being provided with swan-shot, it was necessary that we should get as near as possible. At last they rose, and I fired, but none fell, though we plainly heard the shot rattle among them. It was beautiful to see them rise on the wing simultaneously, beating the water with their wings for many yards, and throwing up a complete spray before they were fairly in flight. The paddles of twenty steamers could not have made more noise; indeed, the passengers in a steamboat, coming up the gulf at a great distance, distinctly heard the rush, without either seeing them or hearing the report of the gun. As the season advances, they disappear entirely for more northern parts for the purpose of breeding. At this season snipe and woodcock shooting is in great perfection, particularly as they assemble at their breeding-places. The former are by no means solitary in their habits, for hundreds of couples may be found in a morass of thirty or forty acres; and, as regards the latter, the sportsman need only station himself in the centre of a heath common towards evening, when the male birds are making their flights, uttering a kind of bleating sound. Bewick is wrong when he states, that these birds "must have the instinctive precaution of landing only in the night, or in dark, misty weather, for they are never seen to arrive,"—in allusion to the period of their migrating to this country. That a vast quantity do arrive by night is undeniable, for the lighthouse-keepers on the Kentish coast often pick them up dead in the morning, from their having flown against the lights and destroyed themselves—a proof of the rapidity of their flight; and it is a common custom for that dubious race of sportsmen termed gunners to pass under the cliffs at daylight to pick up those birds which, from fatigue, have been unable to clear the heights till they have rested. I have known fourteen couple to be killed of a morning. The birds prefer a moonlight night, with wind at north-east; and with the wind in that quarter, I have often seen them arrive in the daytime. They fly rapidly, and in an undeviating straight line, and apparently regardless of obstacles. One was brought to me which was seen to fly against the banking-house of a firm at Dover, dead, and with its bill broken by the concussion: a bird evidently of unbusiness-like habits, to present its bill in that fashion. Two others, at about the same period, flew so close over the heads of some soldiers on parade, that they involuntarily raised their muskets as they passed over them, to the scandal of the drill-sergeant.

THE HAWK AND THE GUILLEMOT.

A singular circumstance connected with a kestrel occurred at Dover some short time since. The common guillemot (*Uria troile*) breeds in considerable quantities in the cliffs to the eastward of the town, where they are rarely disturbed, excepting by some adventurer lowering himself from above to take eggs, or by some gunner anxious to try his dexterity from below. In the present instance a kestrel, soaring along the surface of the cliff, bore off a squab guillemot from its nest in one of the ridges. This, from the weight of the young bird, was a matter of some difficulty, and enabled the old one, which had taken the alarm and become desperate in defence of its young, to come speedily up to the kestrel, when a sharp contest began between them. The hawk, burdened as he was, and determined to keep his prey, was bent on retreat; the guillemot, therefore, notwithstanding the awkwardness of its flight, was enabled to push him hard, and annoy him so much, that, in self-defence, he was compelled to drop the young one, which fell unhurt on the beach below. Then began the battle in good earnest: in a straight line the guillemot had the decided mastership, by charging the hawk *à posteriori* with its sharp bill, and apparently with some success, as the flying feathers indicated. But these attacks always finished by the hawk soaring upward, and then stooping at its opponent. The watchfulness with which the guillemot avoided these charges, and availed itself of the hawk being again undermost to renew the engagement, was highly interesting; and from the vigour with which it pushed its foe on these occasions the victory seemed to be safe; but, at last, one unlucky stoop made by the hawk from a considerable height, struck the poor guillemot with such violence that it could not recover its flight, and came tumbling to the beach alive and unhurt, but so much exhausted that it was picked up, and now, with its young one, forms a portion of my cabinet.

INSTINCT OF THE DOG.

When coursing on the heath-commons in Surrey, I have often noticed a favourite greyhound take its stand on the top of the highest ground it could find, with its ears erect and its eyes gleaming with animation, watching every movement, and ready for immediate pursuit, availing itself thus of its almost only chance of seeing the hare among the high heath and fern. Other dogs watch on the outside of the copse or shaw for the same purpose. This is a high order of instinct, and sufficiently proves that the animal justly calculates on its own powers, and places itself exactly in the position where they will be available. A black retriever I possessed, one of the almost extinct race, was endowed with more than ordinary sagacity. I directed him on one occasion to fetch me a small billet of wood which was floating on the sea, about twenty yards from the shore, as a buoy to the anchor of a small boat. He tugged and dragged, in vain of course, when suddenly he dived to remove the obstacle, and continued doing so for so long a time, that I saw he was exhausted by his efforts; and not being able to make him hear me, from the noise of the waves, I was forced to launch a small boat and take him in, literally to prevent his becoming a victim to his courage and stanchness.

MEMORY AND REVENGE.

A striking instance in proof of the existence of these faculties in animals occurred some time since at the seat of a noble lord in Surrey. In the park are two large pieces of water, divided by a small isthmus, which widens considerably at one extremity, and at the time in question a pair of swans were the occupants. A doe and her fawn, belonging to a herd of deer in the park, coming down to one of the pieces of water to drink, were immediately set upon by the swans; and the fawn, by their joint efforts, was got into deep water and drowned. After a considerable interval of time, when the swans were one day on the wide part of the isthmus, and thus separated from their element, and at a disadvantage, a rush was made upon them by a number of the deer, which trod under foot and utterly destroyed one of them. The bereaved doe must have had some means of communicating her loss to the other deer, and of urging them to help her in her revenge; and the most remarkable part of the transaction is, that the deer must have had a kind of consciousness of the fitness of the moment, when the swans were to a great extent defenceless, or at least deprived of their greatest advantages, and had no means of effecting their retreat to the water.

NOVEL FISHING.

As a lad in Germany, I and some of my companions hit upon a singular and novel plan of fishing. The Nieda, a small stream

tributary to the Maine, and taking its rise in the Taunus mountains, generally overflows the country to a vast extent after the heavy autumnal rains. The rapid succession of frost quickly changes these inundations into a most glorious expanse of pure, green, and transparent ice. We became soon aware of the large quantities of fish moving beneath the surface; and as the water was not deep, the stubble of the autumn crops and long grass offered occasional resistance to their speed. Provided with a little hatchet and an iron-shod stick, we fairly skated them down, when a hole cut through the ice with the hatchet, and a blow on the head with the stick, would put us in possession of our prey. We could catch thus many pounds weight of pike in a day.

FISHING IN THE NEVA.

Salmon are caught in very considerable quantities in the Neva by seines, which are worked without intermission from the earliest hour in the morning till late in the evening, and there are three considerable establishments alone in the most crowded part of the river, in the centre, as it were of the city. Three seines are in operation at the same time. While one is being landed, a second is being hauled home, and a third is being shot. The rapidity of the current renders this economy of time easy; for, as it is necessary to row high up the stream to shoot the seines, they each follow in a regular succession as they float down; and the tackle being made fast to the respective capsterns, they are hauled in without the slightest confusion or entanglement. There is a curious fashion observed at these fisheries. An elevated platform, or look-out house, commanding the spot, is built for the accommodation of spectators, who speculate on and purchase the chance of the haul, the price varying from three to ten shillings, according to the state of the weather and abundance of fish. By this rule the purchaser is entitled to all that comes up; and on one occasion a singular and unpleasant adventure arose from the practice. A dead body was dragged up, and the fisherman insisted on the party who had bought the haul becoming responsible for it, or, in other words, that the explanation of the matter to the police, and the interment should devolve on him, as the contents of the net, by purchase, belonged to him. This doctrine not being palatable to him, he fairly took to his heels, and a hue and cry was made after him, but unsuccessfully; and thus the obligation remained with the fishermen. A similar circumstance, but without purchase, occurred at another spot. A dead body was fished up, but no person entitled to interfere being present, it was taken lower down the stream and again committed to the water; but by some under eddy it again worked up the current, and was again hauled in, to the consternation of the fishermen, whose superstition was so thoroughly awakened that they resolutely refused to fish any more that day. Smelts—the real cucumber smelts—are in such immense abundance in the Neva in the month of May, that they are caught by thousands in the seines, and the air for some distance around is impregnated with the smell peculiar to them. I have seen them in such vast quantities in the nets, that the fishermen were compelled to ladle them out with purse nets before they could land the seine; and, strange as it is, the fish are hardly saleable, owing to a superstitious idea entertained by the Russians, that they feed at that season an some aquatic herb, which causes the ague to those who eat them.

The tendency of the sheep to "follow my leader" is proverbial. A curious illustration of this instinct was once witnessed by Mr. THOMPSON, in Belgium.

INGENUITY OF A SHEPHERD.

I was much amused once in Belgium at a curious contrivance adopted by a shepherd to extricate himself from a dilemma, and at the readiness with which his sheep obeyed his intentions. Preceding his flock, he was moving them to a fresh pasture, when his progress was stopped by a large cornfield through which there was only a narrow footpath. His knowledge of the habits of his charge made him thoroughly aware of the destruction they would commit if left to follow him at their leisure; so, after a few moments' reflection, he started off at the top of his speed, the whole flock pursuing him at a gallop, and almost in single file, without doing the slightest damage.

VORACITY OF THE GANNETT.

In the herring-season the gannett follows the shoals of that fish from the North Sea into the Channel, where they are not otherwise common visitants. Their voracity and daring are very great; but I never knew a greater instance than happened with the specimen in my collection. A fisherman in his little punt was fishing for whitings at a couple of miles from the shore, and was hauling over the side of the boat a fish he had just caught, when a gannett sweeping by him gorged the fish and continued his flight, drawing the line after him from the astonished fisherman. He, however, recovering his presence of mind, held on by the remainder of the line which was left to him, and began to haul the bird to him, and, after considerable trouble, he succeeded in capturing it. He described the scene to me, and said that the bird offered so much resistance, that he was forced to play it till he tired it.

ATTACHMENT OF MONKEYS.

Among the various animals which I have amused myself by keeping, I had at one time two monkeys—one Asiatic and the other African. Their affection for each other was unbounded, and they were constantly hugging and embracing each other. They were extremely fond of wine, and the sight of a wine-glass drove them frantic with delight. A stupid servant gave one of them a whole glass of brandy, which completely intoxicated it, and brought on apoplexy, of which it died. During its illness the attentions of its companion were most affecting. As if knowing the seat of pain, it sat holding the forehead with its hand, and attempting to induce it to eat; and when at length it died, it held the body so powerfully, that it required force to part it. It never recovered itself, but fairly pined away.

OBSERVANCE OF NATURE.

I am fond of coursing; and although there are many hares in that district of Surrey in which I reside, yet we are so infested with poachers, that there would soon be a scarcity; and I have therefore made terms with these men to give them a fee whenever they can shew me a hare sitting. The price is too tempting for them, as they could not sell the poached animal for so large a sum, and they therefore invariably give me due notice; and, besides, as love of sport is the foundation of poaching, they are much gratified at being present at the course. On one occasion, after a run, they found a very young leveret in its form, which one of them seized, to make use of as a means of catching the old hare. By pinching the young animal sharply in the throat, he succeeded in making it utter the most piercing cries, such as would occur were it attacked by a weasel. The old one came up from its concealment, and would doubtless have afforded a capital run had I permitted it. How much knowledge of nature there was in this manœuvre, and how closely the habits of the animal must have been watched, thus to overcome its natural timidity! By attending closely to the character of animals, many singular traits are brought to light, and many remarkable proofs of instinct discovered. A friend of mine has always contended that a pig is a sagacious beast, and he instances it by the following fact:—He describes himself as having been lost in a very extensive park, the undulating and wooded character of which prevented him from catching any glimpse of the house or of any point of exit; and after riding about till he became even more bewildered, he at last disturbed a pig in a heap of fern. That it was turned out to feed on the acorns and beech-nuts, then thick on the ground, was evident; and it struck him that by riding at it, it would run homewards for protection. It galloped off in a straight line, and, after the run of a mile, brought him to one of the keeper's lodges, which was hidden by trees and ivy.

VOYAGES AND TRAVELS.

Wanderings of a Pilgrim in the Shadow of Mont Blanc. By G. B. CHEEVER, D.D. London, 1845. Wiley and Putnam.

THIS book is not altogether what its title would imply. It is not a regular tour, but rather a series of essays suggested by a residence in Geneva, and observations made during excursions thence into the surrounding country. The author is a well-informed American, attracted to Switzerland by the fame of its scenery, and he avails himself of the opportunities that offered to look also into the character, habits, and conditions, of the people. He is a man of reflection as well as of observation, and the thoughts suggested by what he there witnessed, are presented to the reader, mingled with the descriptions, and the result is a pleasing variety, which keeps alive the attention, and imparts an interest in the work beyond that produced by a mere narrative. Dr. CHEEVER is an enthusiastic lover of nature, and he looks at her with the eye of a philosopher and a poet, recognising beneath the forms that meet the eye a meaning mind only can recognise. From this it will be gathered that he is a religious man; by which we understand, not a sectarian or a formalist, but one who has before him the ever present sense of Deity, and his relation thereto—his duties in time and his destinies in eternity. This gives to Dr. CHEEVER'S descriptions a charm not found in ordinary tourists, and will recommend his book to all lovers of the good and true.

His manifest fault is *wordiness*. Some of his descriptions are too much amplified; some of his reflections are spoiled by

too much expansion. Reflection should always be introduced sparingly into narrative, and only when very apt, and then put in the most terse language, we might almost say in the form of a maxim. It should appear to be thrown in in as a part of the emotion produced by the event, and not as if it had been an after thought, studiously elaborated. Again, a complaint has been justly made of intolerance, such, as from his character in other respects, we should scarcely have expected. Allowance being made for these drawbacks, Dr. Cheever's *Wanderings* may be safely ordered by the book-clubs, as a few specimens will shew.

HOW TO TRAVEL IN SWITZERLAND.

A man should always travel in Switzerland as a pedestrian, if possible. There is no telling how much more perfectly he thus communes with Nature, how much more deeply and without effort he drinks in the spirit of the meadows, the woods, the running streams, and the mountains, going by them and among them, as a friend with a friend. He seems to hear the very breath of Nature in her stillness, and sometimes, when the whole world is hushed, there are murmurs come to him on the air, almost like the distant evening song of angels. Indeed the world of Nature is filled with quiet soul-like sounds, which, when one's attention is gained to them, make a man feel as if he must take his shoes from his feet and walk barefooted, in order not to disturb them. There is a language in Nature, that requires not so much a fine ear, as a listening spirit; just as there is a mastery and a song in religion, that requires not so much a clear understanding, as a *believing* spirit. To such a listener and believer, there comes

> A light in sound, a sound-like power in light,
> Rhythm in all thought, and joyaunce everywhere—
> Methinks it should have been impossible
> Not to love all things in a world so filled,
> Where the breeze warbles, and the mute still air
> Is music slumbering on her instrument.

The music of the brooks and waterfalls, and of the wind among the leaves, and of the birds in the air, and of the children at play, and of the distant villages, and of the tinkling pleasant bells of flocks upon the mountain-sides, is all lost to the traveller in a carriage, or rumbling vehicle of any kind; whereas a pedestrian enjoys it, and enjoys it much more perfectly than a man upon a mule. Moreover, the pedestrian at every step is gaining health of body and elasticity of spirits. If he be troubled with weak lungs, let him carry his own knapsack, well strapped upon his shoulders; it opens and throws back the chest, and strengthens the weakest parts of the bodily system. Besides this, the air braces him better than any tonic. By day and by night, it is an exhilarating cordial to him—a *nepenthe* to his frame. The pedestrian is a labouring man, and his sleep is sweet. He rises with the sun, or earlier, with the morning stars, so as to watch the breaking of the dawn. He lives upon simple food, with an unsuspicious appetite. He hums his favourite tunes, peoples the air with castles, cons a passage in the gospels, thinks of the dear ones at home, cuts a cane, wanders in Byepath meadow, where there is no Giant Despair, sits down and jots in his note-book, thinks of what he will do, or whistles as he goes for want of thought. All day long, almost every faculty of mind and body may be called into healthful, cheerful exercise. He can make out-of-the-way excursions, go into the cottages, chat with the people, sketch pictures at leisure. He can pray, and praise God, when and where he pleases, whether he comes to a cross and a sepulchre, or a church, or a cathedral, or a green knoll under a clump of trees, without cross, or saint, or angel; and if he have a Christian companion, they two may go together as pleasantly and profitably, as Christian and Hopeful in the Pilgrim's Progress.

The following will have an interest for our countrymen :—

THE BISHOP AT GENEVA.

The Sabbath evening before we parted, Mr. Bacon had gone with me to hear the Bishop of Cashel. The service was in the dining-hall of the Hotel de Bergues, a fashionable resort, where there were gathered as many of the votaries of rank and wealth from England as ordinarily are to be found in Geneva on any Sabbath. It was an unusual step for a Bishop of the English Church—a regular conventicle—a Sabbath evening extempore sermon from a Bishop in the dining-hall of the hotel! I love to record it as a pleasant example of a dignitary of the Establishment using the influence of his rank to do good, to gather an assembly for hearing God's word, in circumstances where no one else could have commanded an audience of half-a-dozen persons; where, indeed, the use of the room for such a purpose would hardly have been granted to any other individual.

The hall was perfectly crowded. The preacher's sermon was a most simple, faithful, practical, affectionate exhibition of Divine truth. It was on the subject of Paul's conversion, its steps, its marks, its results, especially the blessed temper—"Lord, what wilt thou have me to do?" He shewed that every creature, who would be a Christian, must be converted, just like Paul; that the change in Paul was no extraordinary case, as it is sometimes viewed, but a case of conversion; and that they must every one be converted, and become as little children, in like manner, saying, Lord, what wilt thou have me to do?

A second Sabbath evening, the good Bishop, having been unexpectedly detained in Geneva, appointed a second service of the same kind. Again the hall was crowded. He took for his subject this time, the conversion of that sinful woman who loved much because much was forgiven; and again it was a most unostentatious, straightforward, practical exhibition of the truth, plain, convincing, humbling, direct to the conscience and the heart. Every person, he told his hearers, needed conversion by the grace of Christ, just as much as this woman. Without that grace, be you ever so refined, so amiable, so upright, so pure, you are just as certainly unfit for heaven, and in the way to perdition, as she was. And you must come to Christ just as she did, be as penitent for your sins as she was, and love your Saviour like her, with all your heart.

Indeed it was pleasant, it was delightful, it was heart-cheering, to hear a Bishop of the Church of England, in the midst of the prevalence of Oxfordism, the resurrection of forms, baptisms, crossings, and not of faith and conversion, take these simple themes, and go with Christ's bare truth straight to the hearts of his hearers. He must have had a unity of design in taking Paul for the first evening and the sinful woman for the second; two extremes of society, two great sinners, high and low; and the grace of Christ equally necessary for both, and for all intermediate characters.

An excursion *round* Mont Blanc will, no doubt become one of the fashionable routes, should Dr. CHEEVER's description of its sublimities and beauties be confirmed by two or three of our English tourists. Here is an account of

THE MER DE GLACE.

Within seven thousand feet above the level of the sea, commences the great ice-ocean that fills the uninhabitable Alpine valleys, unceasingly freezing, melting and moving down. It has been estimated by Saussure and others that these seas of ice, at their greatest thickness, are six or eight hundred feet deep. They are traversed by deep fissures, and as they approach the great precipices, over which they plunge like a cataract into the vales, they are split in all directions, and heaved up into waves, reefs, peaks, pinnacles, and minarets. Underneath they are traversed by as many galleries and caverns, through which run the rills and torrents constantly gathering from the melting masses above. These innumerable streams, gathering in one as they approach the termination of the glacier, rush out from beneath it, under a great vault of ice, and thus are born into the breathing world, full grown, roaring rivers, from night, frost and chaos. A peasant has been known to have fallen into an ice-gulf in one of these seas, near one of the flowing sub-glacial torrents, and following the course of the stream to the foot of the glacier, he came out alive! The German naturalist Hugi, set out to explore the recesses of one of the glaciers through the bed of a former torrent, and wandered on in its caverns the distance of a mile. "The ice was every where eaten away into dome-shaped hollows, varying from two to twelve feet in height, so that the whole mass of the glacier rested at intervals on pillars, or feet of ice, irregular in size and shape which had been left standing. As soon as any of these props gave way, a portion of the glacier would of course fall in and move on. A dim twilight, scantily transmitted through the mass of ice above, prevailed in these caverns of ice, not sufficient to allow one to read except close to the fissures, which directly admitted the daylight. The intense blue of the mass of the ice contrasted remarkably with the pure white of the icy stalactites, or pendents descending from the roof. The water streamed down upon him from all sides, so that, after wandering about for two hours, at times bending and creeping, to get along under the low vault, he returned to the open air, quite drenched and half-frozen."

One of the novel sights he witnesses in this exploration, which lay, as he says, "on the uninhabitable extreme verge of nature's life—wild, awfully sublime, and often dangerous and utterly impracticable," is the *tourmente*, a peculiarly destructive whirlwind, that sometimes visits the sides of the mountain. The following passages vividly describe the scenery of this region.

THE TOURMENTE.

The torrent of water comes down from the glaciers of the Buet, and makes a sudden and most terrific plunge sheer over the precipice into a black jagged mountain-gorge, which the ancients would have celebrated as one of the mouths of hell, with a mighty roar and crash that is almost stunning. On this side

you stand upon a green knoll, a little grassy mountain, of which the verdure is perpetually wetted by the spray, and holding on by your staff firmly thrust into the ground, or by a tree on the borders of the gorge, you may look down into the roaring depths, see the cataract strike, and admire the conflict of the waters. The accompaniments are very grand; hanging masses of verdant forest on either side, but above, enormous snow-covered mountains, out of which, from the mouth of a craggy gorge, bursts at once upon you the raging torrent. In a sunny day you would have rainbows arching the torn rocks, glittering in the spray, and dancing over the impearled grass where you are standing. But even amidst the rain, as I was, in my drab great-coat, it was a scene of great sublimity. Coming to it, my guide carried me along the side of a mountain across the path of a *tourmente*, or mountain whirlwind, the marks of which, in themselves alone, are worth going far to see. A circuitous belt of the largest trees amidst the pine and fir forest that clothes the mountain, are stripped of branches, verdure, and sometimes bark, as if scathed by lightning, while others are broken and twisted, as you might twist a willow sapling. The fury of these *tourmentes* is inconceivable; a traveller overtaken by one of them would inevitably be lost; they would almost tear the crags themselves from the mountains. A similar scene is presented in the valley up which you pass from Chamouny to see the Cascade des Pelerines, marking in this case the passage of an avalanche, of which the wind produced by its swift flight has swept, torn and broken a thousand trees in the same manner. At first you can hardly credit it, but you are convinced that it was the wind, and not the waves of the avalanche, by seeing some trees broken short off, half-way down, as if the storm-angel had twisted and snapped them asunder with careful hands, close beside other trees prostrated and stripped, and others still standing. The traveller gazes upon these mute spectacles—mute, but fiercely eloquent, with deep interest. From the Cascade Barberina we regained, by a romantic path, the grand route, which we could see far beneath us. I was hungry and tired, and it was high time to be so. My guide carried me into a mountain chalet, incomparably ruder than his own, built in the conical shape of a tent, with a hole at the top, so that the smoke might escape without the trouble of a chimney. As I stood to dry my clothes at the verge of the circle of stones where the fire was kindled, the rain came down upon me from the aperture above, demonstrating the comfort of the arrangements, the wigwam was inhabited by a very large family, and they talked in their native patois, of which I could not understand a syllable. They set before me a bowl of boiled milk, with black bread so hard, that one of its large round loaves might have served Achilles for an embossed shield, or Ajax to play at quoits with. Neither had it the property of sweetness any more than of softness, but it is wholesome, and would keep for ages. As we passed on from thence, we could discern a solitary umbrella at the bottom of the valley, with a traveller beneath it; my peasant told me it was the curate of the parish.

From this he emerged upon that most gloomily grand of passes,

THE TETE NOIR.

We were now entered upon the savage grandeur of the pass of the Tête Noire. There is a combination of grand and beautiful elements in this pass, which it is very difficult to array in language, and the painter can transfer to his canvass only little by little the wonders of the scene. Abrupt precipices, frowning at each other across the way like black thunder-clouds about to meet; enormous crags overhanging you so far that you tremble to pass under them; savage cliffs looking down upon you and watching you on the other side, as if waiting to see the mountain fall upon you; a torrent thundering beneath you; masses of the richest verdure flung in wild drapery over the whole gorge; galleries hewn in the rock, by which you pass the angular perpendicular cliffs as in rocky hammocks swung in the air; villages suspended above you, and looking sometimes as if floating in the clouds: snowy mountain-ridges far above these; clusters of chalets almost as far below you, with the tinkling of bells, the hum of voices, and the roar of the torrent fitfully sweeping up to you on the wind; these are the combinations presented to you in the Tête Noir. It is a concentration and repetition in miniature of some of the grand features of the Simplon, but at the same time rich and beautiful beyond description. I enjoyed this passage much, although in the rain; and when I got to the solitary auberge in the midst of all this grandeur, I resolved to go no farther, but to wait one night at least for fair weather. A party of English ladies with one gentleman passed me just then. I told him I did not like to leave such scenery without beholding it by sunlight. You are right, said he, to wait, *being alone*, but we must move on. Poor man! It was but too evident that he envied me my loneliness and independence. Just at this moment he could not well do otherwise; indeed, there *is* a comfort in being alone, sometimes; I certainly congratulated myself that I was not in the place of that gentleman, to go dripping behind the ladies in such a forlorn mist, through some of the finest scenery in the world. Had there been ladies in my case, we too should have had to move on, so there may possibly sometimes be something gained by being a single man. For, if I had been double or triple, the triplicity could hardly have been accommodated, or would have thought it necessary, as this English party did, to go farther and perhaps fare worse. So, on they went, through the mist and rain, doubting whether to admire the scenery or to regret that they could not see it; while for me the good people at the auberge kindled a fire, prepared me a comfortable supper, with plenty of strawberries and cream, and gave me a comfortable bed. In strawberry and cream time, a traveller fares grandly in Switzerland, and I managed to bear the disappointment of a stormy evening with much more equanimity than if I had been clambering the precipices on the way to Martigny.

Among other excursions he crossed the Alps into Italy. At the frontier this adventure befell him with that indispensable accompaniment of all travellers

MURRAY'S HANDBOOK.

The first village from the Hospice is that of St. Remy, where the sentinel of the Bureau carefully examined the contents of my knapsack.

Taking up my crimson guide-book, he remarked, that he supposed it was a book of prayer. I told him no, but shewed him my pocket Epistle to the Romans. John Murray's guide-book might very well be denominated the Englishman's prayer-book on the Continent, for every body has it in his hand, morning, noon, and night. "What does Mr. Murray say?" is the question that decides every thing on the road. At the inns, when you come down to breakfast in the morning, besides a cup of coffee, an egg, and a roll, your traveller has his Murray at his plate, open at the day's route before him. If he is a genuine Irishman, you may expect him to take a bite at it instead of his bread; and when, fatigued, you sit down at tea in the evening, there is John Murray again in his scarlet binding. The book looked very like a mass-book to the sentinel; and certainly, it being always the first thing that met his sight in every pocket, trunk, or knapsack, if he made, with every English traveller that crossed the mountain that summer, the same mistake that he did with me, he must have thought the English a wonderfully devout people.

And soon afterwards he notices this interesting trait of

ITALIAN GIRLS.

At one of the small villages on our route, two young girls took passage for Aoste, whom I could not but admire for the modesty and beauty of their faces and manners. I had taken the front seat or coupé of the coach, for the sake of clear vision; they were obliged to take the same, because there was none other left, the cool night-air keeping the inside seats full. They seemed unwilling to acknowlege any disposition to sleep; but at length the youngest of the two fell asleep on her sister's arms, and the elder reclined and slept against the corner. When they awoke, they betook themselves to their devotions; and it was affecting to witness the simplicity and earnestness with which, whenever we passed an image of the Virgin by the roadside, they crossed themselves and prayed. Is it not sad to have this strong religious tendency, this yearning after the repose of the soul in faith, turned thus from its rightful object, and perverted into a sinful superstition?

The term "sinful," as applied to these poor people, for the worship which they performed in the fulness of their faith, is one of the specimens of the Doctor's intolerance. Let us turn now to a more pleasing theme. Among other friendships contracted at Geneva was one with the historian of the Reformation.

D'AUBIGNE.

I shall not soon forget an evening's walk and conversation of great interest, which it was my privilege to enjoy with D'Aubigné, just before I left Geneva. We passed along the magnificent face of Mont Blanc in the sunset, and returned over the hill by the borders of the lake beneath the glow of twilight, in the deepening shadows of the evening. He spoke to me with the kindest openness, and freedom of his History of the Reformation, especially the part he was then engaged upon, the length of time before he should be able to issue another volume, and the impossibility of pleasing the opposing parties in his account of the Reformation in England. He told me that he was quite beset with the multitude of letters which were sent to him, urging him to set this, and that, and the other points in such and such a light, beseeching him to do justice to the English Church, each man wishing to colour his history through the medium of his own opinions and prejudices. It is not difficult to see on which side the sympathies of the author belong; but the tenour of the history thus far assures us that it will still be strictly impartial and

faithful to the truth. A great work is before him in the history of the Reformation in Geneva; another in France; another in England. How vast the field! how varied the incidents! how full of life and thrilling interest! D'Aubigné spoke this evening with much anxiety of the future prospects of his own country, in consequence of the increase of Romanism, and the incapacity of the Church, in her humiliating dependence on the State to prevent the evils that threaten the Republic. He seemed to feel that the single measure of separating the Church from the State and rendering it independent, would save his country, and, under God, it would. It would put religious liberty in Geneva beyond reach from any invasion of Rome. His conversation on this point was like what he has written in his "Question of the Church." "We are distressed," said he, "and know not whither to turn. All around us Rome advances. She builds altar after altar upon the banks of our lake. The progress is such among us, from the facility which strangers have in acquiring the right of citizenship, that quickly (every one acknowledges it) the Romish population will exceed the Protestant population of Geneva. Let Rome triumph at Rome; it is natural. Let Rome, as she assures herself, triumph at Oxford; the conquest will be great. But let Rome triumph at Geneva; then she will raise a cry, that will echo to the extremity of the universe. Genevese! that cry will announce to the world the death of your country." * * The manners of D'Aubigné are marked by a plain, manly, unassuming simplicity, no shade of ostentation, no mark of the world's applause upon him—a thing which often leaves a cloud of vain self-consciousness over the character of a great man, worse by far than any shade produced by the world's frowns. His conversation is full of good sense, just thought, and pious feeling, disclosing a ripe judgment, and a quiet, well-balanced mind. You would not, perhaps, suspect him of a vivid imagination, and yet his writings do often shew a high degree of that quality. A child-like simplicity is the most marked characteristic to a stranger, who is often surprised to see so illustrious a man so plain and affable. He is about fifty years of age. You would see in him a tall, commanding form, much above the stature of his countrymen, a broad, intelligent forehead, a thoughtful, unsuspicious countenance, a cheerful, pleasant eye, over which are set a pair of dark, shaggy eyebrows, like those of Webster. His person is robust, his frame large and powerful, and apparently capable of great endurance; yet his health is infirm. Altogether, in face and form, his appearance might be described in three words—noble, grave, and simple. The habit of wearing spectacles has given him an upward look, in order to command the centre of the glass, which adds to the peculiar openness and manliness of his mien. He has great earnestness and emphasis of manner in his discourses to his students.

With these extracts, which, we trust, will in themselves entertain our readers, we close this pleasant volume.

FICTION.

The Cricket on the Hearth: a Fairy Tale of Home. By Charles Dickens. London: Bradbury and Evans.

The singularly able essay on the genius and works of Dickens, which appeared in our columns a few weeks since, and attracted so much attention in the literary world, will not be forgotten by our readers. In perusing this, his latest production, the comments of the acute German critic will recur to the mind, and materially aid it in coming to a judgment upon the merits, intrinsic and comparative, of the series of Christmas tales, of which this is the third. The extraordinary beauty of the *Christmas Carol*, his best, wholesomest, most natural fiction, secured for it such a hearty welcome, that nine or ten large editions were exhausted in a few weeks. The success of that tempted the author to a similar enterprise, and in the following year appeared *The Chimes*. But it exhibited the usual inferiority of imitations; it was evidently written with effort; composed, as it were, to order; produced to supply a demand; made for the market. He had laboured for profit, not for fame. It was not the impulse of his genius throwing off its fine thoughts, because there they are, and they will out—but the forced toil-engendered task of a journeyman working for wages, and content with the bare performance of his assigned duty. Passages it had of exquisite beauty, of fine humour, and wholesome impulses; but these were not sufficient to save it from the universal judgment, that, as a whole, it was unworthy the name and genius of Charles Dickens.

After such an admitted failure, it was a bold step to attempt a third in the same strain—bold, because dangerous. Another failure would be of serious damage to the reputation of the author. The public, never slow to turn upon those they have lifted to greatness, would have seized such an opportunity for trampling upon their idol; nor would his previous triumphs have sufficed to redeem the present failures. Happily, for him, however, this third endeavour has been crowned with success. The *Cricket on the Hearth* has vindicated the fame of Dickens, and will re-establish his shaken reputation.

It mingles all the elements of his genius in rich profusion. Here are pathos, humour, poetry, character; here he has put forth the faculty of word-painting in all its power, and here he has taught virtue by example, and wisdom by signs and tokens rather than by precept. In the description of Home scenes Dickens has no compeer, and here he revels in them. But as this is a volume which every body will read, we will not mar the interest of the story by anticipation, nor shall we make many extracts. But some two or three will be necessary to justify the approval we have bestowed upon it. It opens with one of his charming domestic pictures.

THE KETTLE AND THE CRICKET ON THE HEARTH.

The Kettle began it! Don't tell me what Mrs. Peerybingle said. I know better. Mrs. Peerybingle may leave it on record to the end of time that she couldn't say which of them began it; but I say the Kettle did. I ought to know, I hope? The Kettle began it, full five minutes by the little wax-faced Dutch clock in the corner before the cricket uttered a chirp. * * * It appeared as if there were a sort of match or trial of skill, you must understand, between the Kettle and the Cricket. And this is what led to it, and how it came about. Mrs. Peerybingle going out into the raw twilight, and clicking over the wet stones in a pair of pattens that worked innumerable rough impressions of the first proposition in Euclid all about the yard—Mrs. Peerybingle filled the Kettle at the water-butt. Presently returning, less the pattens—and a good deal less, for they were tall and Mrs. Peerybingle was but short—she set the Kettle on the fire. In doing which she lost her temper, or mislaid it for an instant; for the water—being uncomfortably cold, and in that slippy, slushy, sleety sort of state wherein it seems to penetrate through every kind of substance, patten-rings included—had laid hold of Mrs. Peerybingle's toes, and even splashed her legs. And when we rather plume ourselves (with reason, too) upon our legs, and keep ourselves particularly neat in point of stockings, we find this, for the moment, hard to bear. Besides, the Kettle was aggravating and obstinate. It wouldn't allow itself to be adjusted on the top bar; it wouldn't hear of accommodating itself kindly to the knobs of coal; it would lean forward with a drunken air, and dribble, a very Idiot of a Kettle, on the hearth. It was quarrelsome; and hissed and spluttered morosely at the fire. To sum up all, the lid, resisting Mrs. Peerybingle's fingers, first of all turned topsy-turvy, and then, with an ingenious pertinacity deserving of a better cause, dived sideways in—down to the very bottom of the Kettle. And the hull of the *Royal George* has never made half the monstrous resistance to coming out of the water, which the lid of that Kettle employed against Mrs. Peerybingle before she got it up again. It looked sullen and pig-headed enough, even then; carrying its handle with an air of defiance, and cocking its spout pertly and mockingly at Mrs. Peerybingle, as if it said, "I won't boil. Nothing shall induce me!" But Mrs. Peerybingle, with restored goodhumour, dusted her chubby little hands against each other, and sat down before the Kettle: laughing. Meantime, the jolly blaze uprose and fell, flashing and gleaming on the little Haymaker at the top of the Dutch clock, until one might have thought he stood stock still before the Moorish Palace, and nothing was in motion but the flame. He was on the move, however; and had his spasms, two to the second, all right and regular. But his sufferings, when the clock was going to strike, were frightful to behold; and when a Cuckoo looked out of a trap-door in the palace, and gave note six times, it shook him, each time, like a spectral voice—or like a something wiry, plucking at his legs. * * Now it was, you observe, that the Kettle began to spend the evening. Now it was, that the Kettle, growing mellow and musical, began to have irrepressible gurglings in its throat, and to indulge in short vocal snorts, which it checked in the bud, as if it hadn't quite made up its mind yet, to be good company. Now it was, that after two or three such vain attempts to stifle its convivial sentiments, it threw off all moroseness, all reserve, and burst into a stream of song so cosy and hilarious, as never mauldin nightingale yet formed the least idea of. So plain, too! Bless you, you might have understood it like a book—better than some books you and I could name, perhaps. With its warm breath gushing forth in a light cloud which merrily and gracefully ascended a few feet, then hung about the chimney-corner as its own domestic Heaven, it trolled its song with that strong energy of cheerfulness, that its iron body hummed and stirred upon the fire; and the lid itself, the recently rebellious lid—such is the influence of a bright example—performed a sort of jig, and clattered like a deaf and dumb young cymbal that had never

known the use of its twin brother. That this song of the Kettle's was a song of invitation and welcome to somebody out of doors; to somebody at that moment coming on, towards the snug small home and the crisp fire; there is no doubt whatever. Mrs. Peerybingle knew it, perfectly, as she sat musing before the hearth. It's a dark night, sang the Kettle, and the rotten leaves are lying by the way; and above, all is mist and darkness, and below, all is mire and clay; and there's only one relief in all the sad and murky air; and I don't know that it is one, for it's nothing but a glare, of deep and angry crimson, where the sun and wind together set a brand upon the clouds for being guilty of such weather; and the wildest open country is a long dull streak of black; and there's hoar-frost on the finger-post, and thaw upon the track; and the ice it isn't water, and the water isn't free; and you couldn't say that any thing is what it ought to be; but he's coming, coming, coming! And here, if you like, the Cricket DID chime in! with a Chirrup, Chirrup, Chirrup, of such magnitude, by way of chorus; with a voice, so astoundingly disproportionate to its size, as compared with the Kettle; (size! you couldn't see it!) that if it had then and there burst itself like an overcharged gun: if it had fallen a victim on the spot, and chirruped its little body into fifty pieces: it would have seemed a natural and inevitable consequence, for which it had expressly laboured. The Kettle had had the last of its solo performance. It persevered with undiminished ardour; but the Cricket took first fiddle and kept it. Good Heaven, how it chirped! Its shrill, sharp, piercing voice resounded through the house, and seemed to twinkle in the outer darkness like a Star. There was an indescribable little trill and tremble in it, at its loudest, which suggested its being carried off its legs, and made to leap again, by its own intense enthusiasm. Yet they went very well together, the Cricket and the Kettle. The burden of the song was still the same; and louder, louder, louder still, they sang it in their emulation.

What a portrait is this of

TACKLETON THE TOYMAN.

He was a man whose vocation had been quite misunderstood by his Parents and Guardians. If they had made him a Money-Lender, or a sharp Attorney, or a Sheriff's Officer, or a Broker, he might have sown his discontented oats in his youth, and after having had the full-run of himself in ill-natured transactions, might have turned out amiable, at last, for the sake of a little freshness and novelty. But, cramped and chafing in the peaceable pursuit of toy-making, he was a domestic Ogre, who had been living on children all his life, and was their implacable enemy. He despised all toys; wouldn't have bought one for the world; delighted, in his malice, to insinuate grim expressions into the faces of brown-paper farmers who drove pigs to market, belmen who advertised lost lawyers' consciences, moveable old ladies who darned stockings or carved pies; and other like samples of his stock in trade. In appalling masks; hideous, hairy, red-eyed Jacks in Boxes; Vampire Kites; demoniacal Tumblers who wouldn't lie down, and were perpetually flying forward, to stare infants out of countenance; his soul perfectly revelled. They were his only relief and safety-valve. He was great in such inventions. Anything suggestive of a Pony-nightmare, was delicious to him. He had even lost money (and he took to that toy very kindly) by getting up Goblin slides for magic lanterns, whereon the Powers of Darkness were depicted as a sort of supernatural shell-fish, with human faces. In intensifying the portraiture of Giants, he had sunk quite a little capital; and, though no painter himself, he could indicate, for the instruction of his artists, with a piece of chalk, a certain furtive leer for the countenances of those monsters, that was safe to destroy the peace of mind of any young gentleman between the ages of six and eleven, for the whole Christmas or Midsummer Vacation. What he was in toys, he was (as most men are) in all other things. You may easily suppose, therefore, that within the great green cape, which reached down to the calves of his legs, there was buttoned up to the chin an uncommonly pleasant fellow: and that he was about as choice a spirit and as agreeable a companion, as ever stood in a pair of bull-headed looking boots with mahogany-coloured tops.

We conclude with

THE REVERIE OF THE PIPE.

And as he soberly and thoughtlessly puffed at his old pipe; and as the Dutch clock ticked; and as the red fire gleamed; and as the Cricket chirped; that Genius of his Hearth and Home (for such the Cricket was) came out, in fairy shape, into the room, and summoned many forms of home about him. Dots of all ages, and all sizes filled the chamber. Dots who were merry children, running on before him, gathering flowers, in the fields; coy Dots, half shrinking from, half yielding to, the pleading of his own rough image; newly-married Dots, alighting at the door and taking wondering possession of the household keys; motherly little Dots, attended by fictitious Slowboys, bearing babies to be christened; matronly Dots, still young and blooming, watching Dots of daughters as they danced at rustic balls; fat Dots, encircled and beset by troops of rosy grandchildren; withered Dots, who leaned on sticks and tottered as they crept along. Old Carriers, too, appeared, with blind old Boxers lying at their feet; and newer carts with younger drivers ("Peerybingle Brothers" on the tilt); and sick old Carriers, tended by the gentlest hands; and graves of dead and gone old Carriers, green in the churchyard. And as the Cricket shewed him all these things—he saw them plainly, though his eyes were fixed upon the fire—the Carrier's heart grew light and happy, and he thanked his Household Gods with all his might, and cared no more for Gruff and Tackleton than you do.

But enough from a book which ought to be in every house to inspire wholesome sentiment and stimulate to practical virtue.

The Queen of Denmark: an Historical Novel. Edited by Mrs. GORE. In 3 vols. London, 1845. Colburn.

ALTHOUGH one of a class of novels against which THE CRITIC will never cease to enter an indignant protest, as intended to impose upon the circulating-library-keeper and his subscribers, by the unavoidable mistaking of editor for author, it must be admitted that this romance is not obnoxious to the censure usually due to the intrinsic worthlessness of the trash usually sought by this contrivance to be palmed upon the careless public. *The Queen of Denmark* might safely have rested its claims to reputation upon its own merits; it needed not Mrs. GORE as a foster-mother to recommend it to perusal; and Mrs. GORE ought to have known better than thus to sell her name for cash or kindness. It is a disreputable proceeding on the part of an author of established character, which no necessities of purse will justify; here, at least, it will never be noticed, but with the rebuke it deserves; and the numerous letters of our librarian readers will, we hope, satisfy both authors and publishers that, the trick exposed, it will no longer serve their purpose, even as a pecuniary speculation.

So much for Mrs. GORE, the editor, whom we now dismiss, and turn to the author.

From the preface, it seems to be doubtful whether the work is really a romance, or only what the newspapers call "a romance of real life." It is there stated to be "a curious and credible narrative of events of the highest interest, and a truthful picture of the manners of the court of CHRISTIAN VII.—now merely traditional;" and moreover, that the author is "a writer well known to the public of northern Europe." Whoever he may be, certain it is, that he is intimately versed in the historical, courtly, and domestic features of the times he describes; and the picture he has drawn deserves high praise for its singular minuteness and apparent accuracy of detail. But with this its merits end. As a romance—as a work of fiction, tried by the rules of art, it is a failure. The groundwork of the story was all that could be desired by the novelist. There was the substance of a romance of absorbing interest, but the author wanted the genius to convert the facts into a fiction, in such manner that the one should resemble the other, to the perfect delusion of the fascinated reader. He cannot construct an ingenious plot; nor does he possess the scarcely less indispensable faculty of sustaining dramatic incidents by dramatic scenes and dialogues. Whatever he can transcribe from the vast stores of his reading, he can reproduce accurately; but when invention is demanded, he finds himself at fault, and the effort becomes apparent, and the failure painful. The succession of incidents is not evolved naturally; sufficient causes are not assigned for consequences; the motive is not powerful enough for the act; in short, the author is wanting in a knowledge of human nature. We need not enter into details in proof of these positions; they must be apparent to every reader. But spite of these defects, so much curious information is gathered in these pages, that they will repay perusal, as a sort of memoir of the court of Denmark; and as such, but only such, it may be added to the shelves of the circulating library that needs a large store of *new* books: we cannot advise those who must be choice in their purchases to order *The Queen of Denmark*.

POETRY.

Poems and Pictures. 4to. London, 1846. James Burns.

THE numerous and beautiful illustrations of this splendid volume are noticed in their proper department of Art, to which

the reader is referred: here we speak of it only as a contribution to literature.

Poems and Pictures is one of the illustrated works of the season; we hope it is intended to be *an annual*. But departing from the plan of the flimsy publications that claim this title, its literary contents are entirely selected from the best poetry in our language, including translations of the most popular poems of other countries. Upwards of one hundred of these have been printed, with all the adornments described in the notice to which we have above referred, with that perfection of typography for which Mr. BURNS is famous, and bound handsomely, it forms such a volume as we have never seen, —embracing a greater number of attractions than any of its rivals for the patronage of the purchasers of new-year's-gifts. The poems are selected with taste, and variety as well as interest has been consulted. Especially are we presented with many of the fine old ballads—English and foreign—which afford so excellent a field for the artists' fancy; and the poets appear to have stimulated the painters to throw all their powers into an endeavour to prove themselves worthy of their task, by embodying the rich fancies which they were required to illustrate. It will be unnecessary to do more here than describe the work. The poems collected have already passed the ordeal of criticism, and are enshrined among the imperishable records of human intellect. Mr. BURNS deserves the thanks of all lovers of literature for paying to their favourites a homage so acceptable and so well deserved as that which in this bold enterprise he has attempted. We trust it will prove as profitable as it is creditable to him and his assistants; and we are sure, that if our countrymen possess the good taste for which we give them credit, this *Poems and Pictures* will be the most popular book of the season.

Bells and Pomegranates, No. VII. *Dramatic Romances and Lyrics*. By ROBERT BROWNING, Author of "Paracelsus." London, Moxon.

ROBERT BROWNING is a true poet; in every page is the presence of genius; the spirit of song glows within him. Moreover he is an earnest, sincere man; he speaks because he has something to say, and not from any vanity to collect a crowd about him, and make himself the idol of the hour; he has a mind of his own; writes what he thinks in such manner as accords with his mood, and cares very little for the formulas of critics, or the freaks of fashion. He throws himself heart and soul into his subject, and seldom fails to bring out something new. He is one of those whom the more you read, the better you love.

And yet, with these undeniable merits, ROBERT BROWNING is not popular; nay, he is known to and appreciated by but a very narrow circle even of those who call themselves lovers of poetry. For this there must be a sufficient cause, and it may not be labour lost to inquire into it.

Nor need we go far to find it. ROBERT BROWNING has faults—great and obvious faults, which obscure his many beauties to all eyes, not resolutely bent upon piercing the veil which he has himself thrown over his genius. He is a singularly careless writer; he seems to think that manner is of no consequence, and that, provided as man have ideas, it little matters how he expresses them. Again, he is deficient in the musical ear for metre and rhyme which by so many is mistaken for the essence instead of the mere form of poetry. His lines are often loose; he is careless of cadences; he is not choice in the selection of words, but takes the first that offers itself, regardless of its commonplace or vulgarity. Then he *affects* a needless plainness of speech; he aims too obviously at originality, which he seems to suppose to lie in differing from all the rest of the world. He has fallen into the besetting sin of our generation of poets, and *strains* after the simple, which is only pleasing when it is the natural expression of a natural emotion, but becomes almost ludicrous and always offensive when it is the result of art, and produced with effort.

But these are faults which ought not to have militated against his great and many merits to the extent they have done in practice. His works are not read so largely as they should be; his powers are not properly appreciated; his genius is recognised only by a very narrow circle. Even to the literary world he is but partially known. It is the duty of all who have the means to do what in them lies to redress this injustice, to spread his reputation on all fair opportunities, and to give to his productions the welcome to which their intrinsic worth entitles them.

With this conviction we proceed to make better known a very small work he has lately published at a very trifling price, but which contains much genuine poetry. *Bells and Pomegranates* is a sort of poetical pamphlet appearing at uncertain intervals, sold at a very trifling price, and containing a collection of poems various in their subjects, their styles, their verses, their length. The six previous numbers we have never seen, but this seventh part has been sent, and we were really surprised to find how much of real poetry is scattered about its closely-printed pages. Because it consists but of a few leaves, we presume it has escaped the notice of our contemporaries; but as the plan of THE CRITIC is to estimate books by their worth and not by their size, we have deemed it right to bestow more attention upon this than upon many a splendid quarto that has been submitted to our examination.

It contains some twenty poems, chiefly ballads, which have been so much the fashion of late; but it is not a style in which Mr. BROWNING excels. He wants the necessary simplicity of thought and utterance, and his attempts to assume it are so evident as to mar the reader's pleasure in the composition. Compare, for instance, the following, which is among the best, with the lays of MACAULEY, and the inferiority will be apparent:—

I sprang to the stirrup, and Joris, and He;
I galloped, Dirck galloped, we galloped all Three;
"Good speed!" cried the watch, as the gate-bolts undrew;
"Speed!" echoed the wall to us galloping through;
Behind shut the postern, the light sank to rest,
And into the midnight we galloped abreast.

Not a word to each other; we kept the great pace
Neck by neck, stride for stride, never changing our place;
I turned in my saddle and made its girths tight,
Then shortened each stirrup, and set the pique right,
Rebuckled the cheek-strap, chained slacker the bit,
Nor galloped less steadily Roland a whit.

'Twas moonset at starting; but while we drew near
Lokeren, the cocks crew and twilight dawned clear;
At Boom, a great yellow star came out to see;
At Düffeld, 'twas morning as plain as could be;
And from Mecheln church-steeple we heard the half-chime,
So Joris broke silence with, "Yet there is time!"

At Aerschot, up leaped of a sudden the sun,
And against him the cattle stood black every one,
To stare thro' the mist at us galloping past,
And I saw my stout galloper Roland at last,
With resolute shoulders, each butting away
The haze as some bluff river headland its spray.

There is spirit and power, though mingled with a certain questionable quaintness, in this:—

THE LOST LEADER.

Just for a handful of silver he left us,
Just for a riband to stick in his coat—
Got the one gift of which fortune bereft us,
Lost all the others she lets us devote;
They, with the gold to give, doled him out silver,
So much was theirs who so little allowed:
How all our copper had gone for his service!
Rags—were they purple his heart had been proud!
We that had loved him so, followed him, honoured him,
Lived in his mild and magnificent eye,
Learned his great language, caught his clear accents,
Made him our pattern to live and to die!
Shakespeare was of us, Milton was for us,
Burns, Shelley, were with us,—they watch from their graves!
He alone breaks from the van and the freemen,
He alone sinks to the rear and the slaves!

We shall march prospering,—not thro' his presence;
Songs may excite us,—not from his lyre;
Deeds will be done,—while he boasts his quiescence,
Still bidding crouch whom the rest bade aspire:
Blot out his name, then,—record one lost soul more,
One task unaccepted, one footpath untrod,
One more devils'-triumph and sorrow to angels,
One wrong more to man, one more insult to God!
Life's night begins: let him never come back to us!
There would be doubt, hesitation and pain,
Forced praise on our part—the glimmer of twilight,
Never glad confident morning again!

Best fight on well, for we taught him,—come gallantly.
Strike our face hard ere we shatter his own;
Then let him get the new knowledge and wait us,
Pardoned in Heaven, the first by the throne!

The longest of the poems is entitled "The Flight of the Duchess;" and it is the best. It contains more passages of true poetry, with fewer affectations, than are to be found in any equal number of successive lines from Mr. BROWNING's pen. We take two of these.

OUR COUNTRY.

Ours is a great wild country:
If you climb to our castle's top,
I don't see where your eye can stop;
For when you've pass'd the corn-field country,
Where vineyards leave off, flocks are packed,
And sheep-range leads to cattle-tract,
And cattle-tract to open-chase,
And open-chase to the very base
Of the mountain where, at a funeral pace,
Round about, solemn and slow,
One by one, row after row,
Up and up the pine-trees go,
So, like black priests up, and so
Down the other side again
To another greater, wilder country,
That's one vast red drear burnt-up plain,
Branch'd through and through with many a vein,
Whence iron's dug, and copper's dealt;
Look right, look left, look straight before,
Beneath they mine, above they smelt,
Copper-ore and iron-ore,
And forge and furnace mould and melt,
And so on, more and ever more,
Till, at the last, for a bounding belt,
Comes the salt sand hoar of the great sea shore,
—And the whole is our Duke's country!

GIPSIES.

Now in this land, Gipsies reach you only
After reaching all lands beside;
North they go, south they go, trooping or lonely,
And still, as they travel far and wide,
Catch they and keep now a trace here, a trace there,
That puts you in mind of a place here, a place there:
But with us I believe they rise out of the ground,
And nowhere else, I take it, are found
With the earth-tint yet so freshly embrowned;
Born, no doubt, like insects which breed on
The very fruit they are meant to feed on:
For the earth—not a use to which they don't turn it,
The ore that grows in the mountains' womb,
Or the sand in the pits like a honeycomb,
They sift and soften it, bake it and burn it—
Whether they weld you, for instance, a snaffle
With side-bars never a brute can baffle;
Or a lock that's a puzzle of wards within wards;

Or, if your colt's fore-foot inclines to curve inwards,
Horseshoes they'll hammer which turn on a swivel
And won't allow the hoof to shrivel;
Then they cast bells like the shell of the winkle,
That keep a stout heart in the ram with their tinkle:
But the sand—they pinch and pound it like otters;
Commend me to Gipsy glass-makers and potters!
Glasses they'll blow you, crystal-clear,
Where just a faint cloud of rose shall appear,
As if in water one dropped and let die
A bruised black-blooded mulberry;
And that other sort, their crowning pride,
With long white threads distinct inside,
Like the lake-flower's fibrous roots which dangle
Loose such a length and never tangle,
Where the bo'd sword-lily cuts the clear waters,
And the cup-lily couches with all the white daughters:
Such are the works they put their hand to,
And the uses they turn and twist iron and sand to.

And there is nature in these

HOME-THOUGHTS, FROM ABROAD.

Oh, to be in England
Now that April's there,
And who wakes in England
See, some morning, unaware,
That the lowest boughs and the brush-wood sheaf
Round the elm-tree bole are in tiny leaf,
While the chaffinch sings on the orchard bough
In England—now!
And after April, when May follows,
And the whitethroat builds, and all the swallows—
Hark! where my blossom'd pear-tree in the hedge
Leans to the field and scatters on the clover
Blossoms and dewdrops—at the bent spray's edge—
That's the wise thrush; he sings each song twice over
Lest you should think he never could recapture
The first fine careless rapture!
And though the fields are rough with hoary dew,
All will be gay when noontide wakes anew
The buttercups, the little children's dower,
—Far brighter than this gaudy melon-flower!

The Merrythought, for 1846. By WILLIAM GASPEY, Author of "Summer Offerings," &c. London: Willoughby. THIS is another very little book indeed; it contains some small poems, all lively in their strain, some displaying wit and humour. Mr. GASPEY is already favourably known as the author of some pieces that have passed into collections of fugitive poetry, as being in merit above the average of the contents of "Poets' Corners." Take as a single specimen these

RAILWAY LINES.

Oh! we live in an age of improvement,
Old things are forgot like a dream,
And every new-fangled movement
Its origin traces to *steam!*
To excite our surprise wonders cease,
And charity surely is failing,
When the very promoters of peace
Have grown quite addicted to *railing!*

Fresh railroads are forming by dozens,
Predestined to bring, in their train,
Visitations of green country cousins,
To inflict purgatorial pain.
And this wonderful Intellect's march
Is making our journeys laconic,
For we travel through ways that are *arch*,
And the roads are all turning *ironic!*

The box-seat and ribands forsaking.
Our safety to guards we consign,
Who, in spite of teetotal pledge-taking,
Get frequently *over the line!*
Better ride with a "whip" that is "sewn-up,"
Than to risks more alarming surrender,
And, like girls that are love-sick, be *blown up*,
Because we're *attached to the Tender!*

And for towns scarcely five miles in distance,
Projectors plan railway designs,
Glad, like Dryden, to eke out existence
On the profit of *twelvepenny lines!*
Speculation, like Juggernaut's car,
With frenzy infects every quarter,
And that she may *rise above par*,
Wishes many a dutiful daughter!

Alas for the day! when the bubbles,
Exploding, respire their last breath,
When hundreds shall seek for their troubles
A *terminus* gloomy in death!
And of those who survive, what a view in
Prospective for their consolation—
They have travelled the *Railroad to Ruin*,
And the Workhouse will be their last *station!*

The Dusk and the Dawn: a Poem illustrative of the latter Times. By WILLIAM BROCKIE. Edinburgh, 1845. Ziegler.

Mr. BROCKIE's fancy wants taming. It is too fervid; although that is a less fault than too much tameness.

But he has other defects which still more disqualify him for the contest for fame until he shall have improved himself by a great deal more of study and practice than he has yet devoted to his art. His metre is often vile, and his rhyme wretched. However, amid these defects, there are apparent tokens of promise; signs of power, which, with laborious cultivation, may ultimately lift him to a very respectable place among the poets of his time. This certainly is not one of the decidedly hopeless cases of which the literary journalist is doomed to inspect so many.

POLITICS AND POLITICAL ECONOMY.

A Plea for the Abolition of Capital Punishment. By the Rev. THOMAS PYNE, A.M. Incumbent of Hook, Surrey. London, 1845. Gilpin.

A CONCISE statement of all the facts and arguments upon a question in which the reason is so entirely on one side that it is impossible to find or to elicit any thing in the shape of an argument on the part of those who support the existing barbarism. Religion and reason thus united must surely triumph ere long over the prejudice of habit, for it is nothing more. Mr. PYNE will do much to hasten the victory by the plain and convincing form in which he has here offered the subject to the consideration of those of the public who think at all.

MISCELLANEOUS.

Eastern Europe and the Emperor Nicholas. By the Author of "Revelations of Russia," &c. In 3 vols. Newby.

[SECOND NOTICE.]

WE promised to return to this work, and present a short notice of the second volume, which is chiefly devoted to a description of the literature of Eastern Europe.

The author gives many specimens of the poetry of Poland; its characteristics appear to be a certain energy of expression and wildness of imagination; but there is wanting the continuous sustainment of poetry of the highest class; in description it is tame, and of philosophy it has not a trace. The most curious of its productions is, perhaps, "the Infernal Comedy" of Count Krasinski, a description of which, abbreviated from the volume before us, will much interest our readers. It has been elaborately commented upon by Mitzkiavitch, himself a poet of distinction.

"The time, place, and personages of this poem," he observes, "are all essentially of poetic creation. The time has not yet arrived—it is to come. The poet has placed his drama in the future. For the first time an author has attempted to create a prophetic drama, to describe scenes and to bring forward characters which do not yet exist, to relate actions which are still to happen."

The poet supposes the world to be, somewhere about the year two thousand, divided into two vast camps. On the one side has found refuge, all the wreck of an outworn civilization, grown decrepit in its egotism,—with all its old institutions, usages, and traditions.

Princes, priests, nobles, capitalists, and men of science, without the virtues, but with all the narrow views and vices of their respective castes, are assembled beneath the banner of the past, whose associations keep them still together, though its spirit has departed.

On the other side are gathered the long oppressed and suffering millions and masses of mankind.

Full of strength, energy, brutality, and savage disgust, they are animated by an irreconcilable enmity to every form and institution connected with society as it was. These *new men*, as they are called, have risen to overwhelm the *old* or *dead world*, as it is denominated by the poet; and they have swept away all vestiges of the past, with its customs, laws, and prejudices, from every portion of the earth, excepting one remote corner of Poland. Here the last relics of the world of former days still make a desperate stand under the guidance of Count Henry, the hero of the drama, and the son of a long line of illustrious sires—a man whose intellect would lead him to turn willingly from the lifeless form of things that were into a career of progress, but whose feelings and whose recollections connect him indissolubly with the past.

The men of the new world—the coarse brawling, active communists,—the waves of the social deluge which has submerged nearly all the earth, are blindly directed by a terrible leader, called Pancrates.

"This man of the people," says Mitzkiavitch, "this leader of the society of a new era, is drawn in a masterly manner. The poet has been happy in seizing the negatives of the revolutionary tendencies of modern Europe. These tendencies he has identified in the person of one individual; an individual called only to destroy. He is gifted with nothing but intellect. It need not be observed, that all the reforms of this last century sprung from the camp of the philosophers. This man of powerful intellect has succeeded in obtaining unbounded authority; but is, according to the poet, inaccessible to all the feelings of humanity. His very physiognomy accords with such a character. His broad high forehead—his bald head—his cold and impassible eye, and his features which never relax into a smile, recal to one's recollection the portraiture of some personage of the Reign of Terror. He is called Pancrates, because in Greek this name implies the concentration of brute strength of every kind. Κρατια, in all its derivations, signifies an outward material strength, just as ενεργεια indicates internal force."

This Pancrates—a sort of compound of Cromwell, Danton, and Robespierre—full of confidence in his own power to destroy, doubts sometimes of himself, when he reflects on the re-edification of a new social structure.

"The reader may be reminded of the doubts of all those men, who, driven only by fatality, have achieved great things: Cromwell was anxious to conceal the doubts which constantly assailed him. This is why he sought so often to see Charles the First whilst living, and descended into the vault to visit him in his coffin, and to contemplate the physiognomy of the man whose death he had occasioned. Danton is well-known to have uttered terrible self-reproaches. And I remember to have read, in the memoirs of Robespierre, that at the period of his utmost power, he was annoyed because he could not convince his cook-maid of its extent, and especially of its duration. These men, sent by Providence only to destroy, bear within themselves the gnawing worm, which announces to them in the form of a vague presentiment, their own destruction."

Pancrates is a Communist and Pantheist. Count Henry, adhering to the dead and withered institutions of the past, remains true to the undying faith of his fathers. The poet, whilst he draws the characters of the two leaders full of grandeur, depicts in equally sombre colours both their camps. When he describes the coarse brutality of the triumphant masses, the reader cannot help thinking them vigorously painted by the prejudices of a hater of the people; but when in turn the *men of the dead world* are brought upon the scene, they are made to appear so contemptible and odious that he can only conclude the writer to be a cynist. Such is not, however, the case; "The Infernal Comedy" has a profoundly religious tendency, which is clearly developed in the catastrophe of the drama.

Count Henry is the hero of this powerful drama; the scene is Poland as it was in its independence and integrity.

A man is presented to us, whose mind belongs to the future, and who is endowed with greatness, fire and energy of soul. He seeks to penetrate the secrets of providence; he can no longer breathe in the atmosphere of commonplace life, and thus he sheds a sinister light on all surrounding him. * * * "He is a poet in the vulgar acceptation of the word, because the vulgar confer the epithet of poet on every man who leaves the common rut in his progress along the road of life, or who shapes his actions by a sublimer truth than that which the vulgar recognise as the law governing their daily actions."

At length Count Henry marries. The poet espouses the past in the person of a woman, kind, gentle, pious, but who cannot comprehend him. When he says to her enthusiastically, "Thou shalt now be the living song of my life!" she answers placidly:—"I will always be to thee a submissive and faithful wife, as my mother has taught me, and my heart dictates that I should be."

He lives with her for months and years an ordinary and commonplace life. His soaring spirit is fettered. In his person he renews the old story of Prometheus bound. At length, however, he is roused.

At this moment a vision of the ideally beautiful such as his fancy had formerly conjured up and personified, appears to him and beckons him away, and thrusting back his imploring wife, he says:—

"Grovelling child of clay! be not envious, blaspheme not! That which I follow is the ideal, after which God conceived your sex, which letting itself be deceived by the serpent, has become that which thou art!"

The neglect of the husband, and his cold contempt prey on the mind and spirits of the wife, she is led keenly to feel her inferiority, and the want of genius which leaves her hopelessly in an inferior order, without the pale of his love and sympathy. At the subsequent christening of her child, she awakens from her sad reverie to say,—

"I bless thee, oh my child! may the angel of poesy watch over thee, and inspire thee, that so thy father may love thee!"

"At this christening are introduced the friends, the godfather, and the priest. It is an admirable portraiture of a society decomposing and tending towards its end. He who should represent its spiritual principle, the priest, plays but an insignificant part: he is only an automaton, a thing which signs the cross, and recites a hackneyed formula of prayer. He has not understood the relative positions of that husband, whose mind is irresistibly drawn towards the future, who has still a long career to pursue, and of his wife, whose suffering spirit is enthralled by the past. He has not sought to bring them together. He has not looked with a spiritual eye on that cradled child, whose character and destiny its father has already comprehended.

The priest jogs on, indifferent, and unconscious of the impending struggle betwixt the past and future.

The count himself, the chief actor in this story, so accessible to the most profound impressions, and so given to commune with things superior, is intended as the representative of the past. He aspires, indeed, towards the future, but he is still of this present world, which yields beneath his footsteps, because God in illumining his reason has not inspired his heart, but left it cold.

The countess cannot endure this—reason is shaken in its throne—she flies to a mad-house, and the count follows her. The scene there depicted is full of power:—

At length the wife dies in her husband's arms, and of this fated family there remains only a child, destined to die prematurely,—a child whose vivid imagination has destroyed its physical strength. * * * * This drama is not intended for representation,—it contains descriptions and discourses.

Child, why neglect thy toys and dolls? King of the flies and butterflies, the intimate of Pulchinello, what mean thy blue eyes so downcast, yet so bright and pensive, though thou hast only seen the flowers of so few springs? Already dost thou bow thy young brow down, and lean it on thy hand as if in reverie, and thy little head seems filled with thoughts as a flower with morning dew.

When shaking thy fair curls aside, thou lookest up to Heaven, tell me what seest thou there, and with whom dost thou converse? for then thy little brow becomes clouded. Thy mother weeps, and deems thou dost not love her; thy little cousins, and thy friends, are hurt that thou neglectest them; thy father alone says nothing, he looks on gloomily, and silently, till his eyes fill with tears, which he suppresses and turns back into his soul.

And yet thou growest and becomest fair, though without youth's freshness,—without the delicate whiteness of milk,—the blush of the red strawberry. Thy beauty is the beauty of mysterious thought, which breathes upon thy brow, like the shadow of a world invisible; and though the lustre of thy eye is sometimes dimmed,—though thy cheek is sometimes pale,—thy little bosom oppressed, still all who meet thee, pause, and observe, how beautiful a child!"

If a flower when it begins to fade, had a sparkling soul, a breath of Heaven to animate it,—if on each of its petals earthwards borne, there weighed, instead of a drop of dew, an angelic thought, then such a flower would resemble thee, fair child!

The next scene is where the count leads his child to pray on the grave of its mother. Here the first traces of incipient insanity, inherited from its parent, are discovered with singular truth and pathos, in its wild and beautiful departure from the formula of its usual prayer, the Roman Catholic "Ave Maria," derived from the salutation of the angel Gabriel to the mother of the Redeemer.

The child is afterwards struck with blindness, and there follows a consultation between the godfather, the godmother, and the doctor.

"This scene recalls that passage of Shakspeare, wherein Lady Macbeth, after committing the murder, walks about in her sleep, attempting to wash her hands. It is rendered more terrible still by the contrast offered by the doctor, who watches the malady, and judges quite professionally. * * * "Whilst the father seeks to penetrate the decrees of Providence, and asks God how and when his child can have merited such a punishment, the doctor is admiring the strength of the muscles and nerves of the poor child's eyes, which he has just pronounced to be stricken with blindness; and he complacently asks the father whether he would not like to know the scientific name of this infirmity, which is called *αμαυρωσις*.

"One humble personage alone is shewn full of kindness; a woman, a servant-girl, who falls upon her knees, and prays to the Holy Virgin that she will take out her eyes, and restore them to the poor blind child. But this is a daughter of the people, amongst whom traditions of feeling have been handed down."

At length the social storm has burst forth in all its fury,—the well-springs of society broken up, have overwhelmed the world; there is only one town in which its wreck is gathered beneath the banner of Count Henry, and under the protection of his ancestral castle, which is already beleaguered by the multitude.

* * * * * * *

Within the beleaguered fortress, "already the famished people murmur; the soldiers want for ammunition." Their leader is obliged solemnly to adjure them in the name of his former services. He succeeds once more in repressing their internal sedition, and he forces every one, the clergy, the nobility, the capitalists, and the learned, to defend their last hold, and to perish at least with honour.

The count then seeks a last interview with his son. Here the author leads us again into the supernatural world. The child, gifted with the ecstatic faculty of second sight, descends into the castle vaults, and there beholds the shades of departed generations, oppressed and tortured by his ancestors. He witnesses there the scene of the last judgment. In the midst of these terrible images, he recognises his own father, and foretels to him his doom.

The count, however, cursing this prediction, hurries to the castle rampart, where he arrives just as all is lost. A bullet strikes down his son beside him. He presses the blade of his sword to his child's lips, but he sees upon it no traces of respiration. His faithful servant, his last survivor, is next killed by his side; he dies, abandoning his faith, and cursing the obstinacy of his master. The master himself, having no further hope on earth, flings from him his sword, and making a last effort on himself to contain the malediction of despair arising to his lips, plunges into the precipice, and disappears.

The triumphant host enters the fortress from every side. The globe is now conquered by these men, whom the poet calls the *new men*.

A very learned essay on the Sclavonic and Germanic races follows, and the volume concludes with a minute account of the barbarous persecution of the Polish nuns, which has kindled such universal indignation throughout Europe. A few passages from this narrative will interest our readers.

Irena Mieceslas had been thirty years renowned for her charity and benevolence throughout the government of Minsk, as head of the Basilian convent, consisting of thirty-four nuns, in the city of that name. It will be hence at once perceived that she is advancing into the vale of years. The aspect of her countenance, according to the portrait which the writer has before him, is at once noble and indicative of determination. It derives the first expression from the position of the eyes, which is such as we rarely meet with out of the Scandinavian or Anglo-Norman race; viz. obliqued upwards from the outward corners; that is to say, in a direction precisely contrary to the eyes of the feline species, of all Mongolian races, and of many of the inhabitants of southern countries. The finely-chiselled corners of her mouth seem to mark a decision of temper, of which she has given the most heroic proofs in her conduct.

To Semiasko, the Bishop of the province, this good sisterhood of heretics was a perpetual eyesore, and he resolved either to convert or exterminate them. He first employed persuasion, then threats, and gave them three months to consider their determination. On their final refusal to apostatize, he came in person with a detachment of soldiers to turn them out of the convent, and such was the violence used that a sick nun fell and expired on the floor of the chapel, the rest were heavily ironed and marched to Vitepsk, where they were placed in a Russian convent of "black sisters."

In 1839, all other efforts having failed to shake their resolution, they were transferred to another Russian convent of black-sisters, in the city of Polock. Here they met with ten more nonconformist nuns of the same order. The whole number of these women—fifty-seven—were now brought up twice a week, on Wednesdays and Fridays, before a commission of the Russian authorities and clergy, and flogged before them, receiving fifty strokes apiece.

This was continued for months together, till the wounds upon their backs was an open sore, and that pieces of the scabs and then of the raw flesh adhered to the instruments of torture. Three of their number died beneath this infliction.

They were then fed on salt herrings, and refused drink (a favourite Russian mode of torture), except on the condition of apostacy. This punishment, which it appears they found the most difficult to bear, was superseded by a system of starvation. They were only fed once every other day, and driven to eat nettles and the fodder of the convent cattle.

They were employed to dig out clay, and not understanding how to conduct an excavation, the earth fell in and buried five of their number. With incredible barbarity the Russian authorities not only refused to dig them out, but prevented the nuns from attempting to extricate their companions. They perished in this self-dug grave.

The next labour in which the survivors were employed, was to aid the masons in constructing a palace for the renegade bishop.

Some of the Polish gentry, whose spirit no terrors will quell, coming to look on,—one of their number addressed some words of consolation to these poor women. Within four-and-twenty hours, not only this imprudent individual, but all those around him, had disappeared.

The falling of a wall in the midst of the nuns injured many, and killed eight of them outright. A ninth and tenth soon after perished.

These ten bodies were carried off by the people, and hidden where all the efforts of the Russian authorities failed to discover them.

Thinking that their fortitude must by this time be subdued, Semiasko had them dragged to the porch of the church, and there publicly asked them, as his dear sisters, to read their recantation. They refused, and the enraged bishop struck one of them in the mouth and knocked out her teeth. But the crowd applauded the sisters, and the bishop determined to be avenged. Diabolical indeed was his proceeding.

When the Russian soldiers, and the newly-made deacons, had been rendered drunk with brandy, all these helpless nuns were turned out amongst them as incurably obstinate, to treat as they thought fit. Then commenced a scene worthy of Pandemonium, —the shrieks and prayers of the victims mingling with the oaths, blasphemies, and ribaldry of the crowd to whose brutal lust they were abandoned.

When the fury of these demons in human form had been exhausted, it was discovered that two of these unfortunate females were quite dead. The skull of one had been crushed by the stamping on the temples of an iron-plated heel. The other was tramped into such a mass of mud and gore, that even its human character was scarcely recognisable. Eight others had one or several bones or limbs broken, or their eyes torn or trodden out. Of the whole number, the superior, a woman of iron frame as well as indomitable resolution, fared the best; but she was not allowed to attend or console her mutilated sisters except on the condition of apostacy.

They were afterwards marched out of Polock by night on foot, and chained two by two,—even those whose eyes had been torn out, and whose hideous wounds were festering. Those whose legs were broken, or who were lamed, were sent forward in carts under the care of Cossacs.

Here their barbarous treatment was renewed:—

On reaching Medzioly, the nuns were again immured in a convent of the black-sisterhood, and divided into four parties. Here they were put into sacks, and towed after boats in the water, which was allowed to rise to their mouth and nose. Three more of their number perished in this manner, either of cold, or fear, or drowned by incessant immersion. The inhabitants of Medzioly carried off their bodies in the night, as the earthly coil of holy martyrs which men would some day venerate and hold precious.

After two more years' captivity of the fifty-eight nuns (thirty-four from Minsk, fourteen from Vitepsk, and ten from Polock, only fourteen survived, and of these eight were either lame or blinded.

The superior, Irena Mieceslas, who had fared the best, had an open wound, from which she was obliged to extract with her fingers the carious bones, and which afterwards becoming filled with worms, from want of dressing, caused her intense agony.

At length some relaxation of vigilance having opened a prospect of escape, this courageous woman persuaded three of her companions to attempt it with her. In this enterprise these four women all succeeded, enfeebled by disease as they were, and without money or passports, at a distance of between two and three hundred miles from the Austrian and Prussian frontiers.

At the commencement of the present year, profiting by the scene of riot and drunkenness to which the saint's-day of the *protopope* of the convent had given occasion, they effected their escape. Leaping down a high wall into the snow, they alighted in safety, and immediately fell on their knees in thanksgiving. They then separated to facilitate their flight. The superior, in the midst of all the severity of the season, was driven to hide for days together in the woods, without other food than berries, or any thing to quench her thirst but the snow. Once, driven to extremity, she knocked at the door of a wealthy-looking house, and being received with veneration by its owner, was provided with money provisions, and a correct map of her route. She crossed the frontier disguised as a shepherd; but even then was not in security, as the cowardly government of Prussia gives up even its own subjects to the Tsar.

It was not until she had reached Posen, in the midst of a Polish population, that she felt in security; and here she had unobtrusively withdrawn to a convent of the sisters of charity, but she was considered too precious, as a living testimony of the horrors, daily perpetrated in that Golgotha which the frontier of Russia encircles, to be left in her retirement. With her scars, wounds and personal evidence, she has been wisely forwarded to Paris, where a deputation recently waited on her, to express their sympathy with her cruel treatment. From thence she proceeded on the 10th of October to Rome, where she was received in the most distinguished manner by the pope and cardinals. In Posen she had been joined by the sister Wavrzecka, and shortly afterwards learned that the other two had in like manner escaped the pursuit of the Russian authorities, and been safely forwarded by the zeal of the inhabitants to the Austrian frontier.

JOURNAL OF FRENCH LITERATURE.

It was Time. By FREDERIC SOULIE. 1845.

WE are scarcely surprised that the reputation of M. SOULIE should latterly have declined in France. At the period when he shared with M. DE BALZAC the laurels of the *feuilleton*, his conscience was to the full as elastic as his imagination; his entangled plots, unwoven through a maze of vice and crime; his startling dramatic effects, and his energetic language, captivated the fancy, and thralled the reason of his readers. What would have condemned him with an English public, gave him a hold upon his own. The exciting narrative of M. SOULIE followed upon the dulness of the remainder of the journal like a *chasse-café* after a heavy meal. "He awoke, and found himself famous." In those days it was that he produced the extraordinary work to which, in the rapid *aperçu* of French fiction literature, with which we commenced this series, we made allusion; and thenceforth he became the terror of all mothers of families. The "Unknown Dramas" which succeeded were a mere continuation of the "Memoirs," under another name. The same involved fables, the same daring inventions, and the same unscrupulous morality, met you at every page, rendered still more revolting by want of novelty. The reason cannot be twice deluded by the same cheat. The mind requires more to fix its interest than the eternal ascendancy of villany in the one sex, and licentiousness in the other; and it is the more to be regretted that M. SOULIE should have adopted the poor and puerile clap-trap of the monster school, when, as he has lately shewn, he was capable of better things.

As a *feuilletonist* M. DUMAS has shoved both SOULIE and BALZAC from their stools; and although the former still contributes in a minor degree to the journals, his works now exhibit a greater calmness of tone, and delicacy of touch, than they did at the period when he was writing *a tutto volo da penna* by the foot-rule and the minute-hand. The volume before us is a proof of this healthy change. We confess that its name startled us, and that we took it up with some apprehension, but we are bound to add that we laid it down with regret. Like many others, we had attributed a considerable portion of the literary reputation of M. SOULIE, if not the whole of it, to the bold, reckless, vicious pencilling in which he indulged: and we were right; for now, when he appears to have abandoned the unblushing and meretricious style in which he had so long indulged, his *prestige* is gone with the public of whom he was so long the idol.

If he be a wise man he will rejoice at this; for the social effervescence which has for the last few years demanded excitement of whatever description from popular writers, must at last subside. The wholesome reaction of a healthier feeling, or, at the worst, the vapoury sickliness of an over-gorged satiety, will one day work a cure; and it is well for those who ascertain in time the strength of their more legitimate resources. Both the style and the subject of the present work are eminently pure and pleasing. The struggle and ultimate triumph of virtue against wrong and temptation teaches a great moral lesson which every one can lay to heart; it is a sermon in action, over which few, if any, fall asleep—it is the legitimate aim and end of healthy fiction. Its very commencement is a pleasant surprise.

A WATCHER.

One evening, in a garden pavilion, connected with a handsome house by an avenue of lime-trees, was seated a young female of apparently scarce twenty years of age, and who, already arrived at the full development of her beauty, had, nevertheless, preserved on her fair features the ingenuous frankness of a girl of sixteen. The garden-parlour she occupied faced the high-road, which parted at the foot of the terrace on which it stood, so that from its windows you could command for a great distance the carriages and travellers coming from Paris. This pavilion, placed as described, still existed a few years ago, at a short distance from the Cour-de-France.

In the wall of the terrace which overhung the road opened a small door that gave ingress to the grounds, and adjoined a flight of steps which abutted at the little pavilion itself.

The fair woman by whom it was tenanted was seated near a table, upon which some embroidery had been flung in weariness of spirit. Her elbow rested upon the marble, and her head was supported by her hand; her gaze, fixed upon the most distant point of the high-road, appeared to watch for some desired advent; while in the other hand she held a key, which was, with-

out doubt, intended to open the terrace-door. This woman was awaiting some one, and he for whom she watched had probably the right, from whatever cause derived, of joining her in her solitude.

More than once a slight emotion had appeared to announce that her suspense was about to terminate. An almost imperceptible object was no sooner detected at the extreme point of the deserted road, than the eye, which was constantly fixed in that direction, dilated with anxious animation; but this object had no sooner attained a form than the gaze had already lost its hopeful light, and once more become absorbed in its watchful immobility.

This was not the person for whom the fair young creature waited. But, in order to guess so truly and so quickly that her hope was baffled, her gaze must have been keen indeed; for any one, save herself, would have found it difficult to determine whether it were a human being or an equipage which formed that small point at the extremity of the road. Alas! it was not because her eyes saw further and faster than those of others that she distinguished so readily every distant object, it was because for the last two months she had been seated every evening in the same place, awaiting every evening the same visitor; and that she had learnt to recognise by almost imperceptible signs the apparition of him for whom she was still watching; and, moreover, the heart has its own vision as well as the eye; its own perception of sound as well as the ear; hidden faculties which can be awakened only by one aspect and by one voice. At the same distance which a mother would not venture to affirm that she could see a carriage, she will recognise her child leaning recklessly from its window, and hear the joyous shouts or plaintive accents of its voice, while the rattling of the wheels over the paved road is still inaudible.

Madame de Fremery, who had voluntarily become the wife of a man to whom she was almost a stranger, in order to prevent a duel between him and her father, who had felt her dignity to be compromised by the levity of M. de Fremery, had, unfortunately for herself, soon learned to love the husband to whom she had given her hand for so laudable a purpose, and Eugene had accepted the sacrifice when he no longer possessed either the power or the inclination to return her affection. The victim of a coquette in the first serious passion of his life, the unrelenting egotist had thenceforward steeled his heart against the sex and exhausted all his energies in projects of self-aggrandizement. He had married Amelia because it was expedient to do so; and, for a time, her beauty, her tenderness, her submission, and her novelty, almost cheated him into the belief that he loved her. But it was not so. He was no longer capable of prizing any thing which did not emanate from self, or which did not tend to further his one great object of ambition. Impetuous, capricious, dictatorial, and vain, M. de Fremery soon wearied of the gentleness and self-abnegation of his wife; his own hearth afforded no arena for his gladiator-like displays of strength and will. As he encountered no opposition, so he could obtain no victory. Under these circumstances it is by no means surprising the young Advocate-General (for such he was) was soon undeceived as to his affection for his beautiful bride. He was proud of her in society, because she was handsome and admired, and that her conduct was beyond reproach; and, in so far, he probably preferred her to any other woman of his acquaintance as a wife; but this legitimate vanity did not suffice for home-happiness; and he forthwith resolved not to be diverted from his merely personal speculations by any idle strivings after a drawing-room Utopia.

His professional avocations helped him marvellously in his purpose. The jargon of expediency, although it failed to convince Madame de Fremery, sufficed at once to silence her, when he represented the impracticability of her constant residence in Paris, which would necessitate a train of expenses calculated to cripple his efforts at advancement; and suggested her residence at a short distance from the capital, where he could constantly enjoy her society, whenever the cares of his office would admit of his own absence. Obedient and unrepining, and, moreover, governed by the affection which she entertained for her impracticable husband, Amelia had consented to the arrangement without a murmur, although she was conscious that during his residence in Paris her solitude would be almost unbroken, her only neighbours being the Marquis de Lesly, his son, and his daughter, the Duchesse de Fezenzac. In the capital, all idea of intimacy between families so different in rank would naturally have been almost impossible; but in the utter dearth of neighbourhood to which we have alluded, it became less difficult; and when M. de Fremery had paid his respects at the chateau of the marquis, and that the patrician family had become cognizant of the grace and high-breeding of his wife, they met his advances with dignified cordiality, and in their society Madame de Fremery already foresaw a solace and a resource in her wearisome exile. But even this was not to be; for the acquaintance was no sooner made, and the advocate-general enabled to include the noble house of De Lesly among his friends, than he warned his wife against all intimacy with the duchess, of whom he mysteriously hinted strange and dishonourable things, to which, however, he refused to give a tangible and distinct form.

Her situation thus rendered even more hopeless and embarrassing than before, the poor young creature found it difficult to follow the directions she had received to court the good graces of the marquis, who might be enabled greatly to serve the interests of her husband, to make herself agreeable to his son, whom De Fremery was constantly meeting in society, and to shun all intimacy with Madame de Fezenzac. For two months, as we have stated, she had not once seen her husband, and had resisted all the efforts of her noble neighbours to draw her from her solitude; but on the evening in which we have introduced her, weakened by the sickening suspense to which she had so long been subjected, and revolted by a neglect of which she felt herself to be undeserving, she yielded to the renewed request of the duchess, and promised to spend the following day at the Chateau de Lesley. Fears of her husband's displeasure were for a moment overcome by her sense of his injustice, and her pride rebelled against the want of confidence which he had exhibited in his communications regarding her new friend. Had he brought any definite accusation against Madame de Fezenzac, her principles as well as her reason would have decided her to the avoidance which he had striven to enforce; but, in her utter ignorance of the nature of the errors laid to her charge, she felt tempted, while writhing under her own wrongs, to attribute the accusation, be it what it might, to calumny. The duchess had been but recently established under the roof of her father, whence she arrived from Carlsbad, and it was with considerable curiosity that our heroine anticipated her introduction to the object of her husband's mysterious abhorrence.

A BROKEN HEART.

When Madame de Fremery saw her, she felt convinced that she must have been supereminently beautiful; and she was still magnificently handsome. Her features were perfect in their outline, her figure was the very embodiment of symmetry and grace; and all these personal perfections had outlived the life of their possessor; for truth to say, Madame de Fezenzac was dead; or, to speak more categorically, she was the exact image of death. Imagine an exquisitely beautiful woman dying from lack of blood, and on looking upon her a minute after her death, you will have an idea of Madame de Fezenzac. Nothing was either withered or altered in her countenance; a slight attenuation, which left no wrinkles to trace its progress, shewed you at once that misery of mind had caused it. It is impossible to express the thrilling effect produced upon all around her by this white and beautiful statue, going, coming, and speaking, without the vestige of one drop of blood to animate by its passage the marble face. With the pallor of death, her features had also assumed its immobility. Never did a smile pass over her white lips; never did an expression either of joy or sorrow alter their outline; nothing, in short, announced the presence of life in this phantom, save the dazzling lustre of her eyes.

Our readers will be quite prepared to learn that the young Count de Lesly falls hopelessly in love with the neglected wife. We say hopelessly, because the undeviating propriety of Madame de Fremery affords him no opportunity of soliciting a return to his passion. Meanwhile, the advocate-general, in the convenient absence of his wife, forms a *liaison* with a frail and fashionable beauty, from whose position in the world he anticipates benefit and advancement; but, unfortunately for his speculation, he becomes under her roof addicted to high play, and for a time is successful in his ventures; upon the strength of this new resource he increases his current expenditure, becomes reckless as well as profuse, and ultimately, by a change of fortune at the gaming-table, finds himself in a position which threatens to deprive him of his place.

Time, however, has run on while all this is accomplishing. Rumours of her husband's infidelity have reached the deserted wife; whispers of his embarrassments have penetrated to her isolated home; and heartsick and hopeless, she has no friends

on earth to whom to fly for solace, save the inhabitants of the Chateau de Lesly. Then, again, that goddess of the novelist, Chance, is against her. The count saves her life,—the count, always respectful, but always assiduous, is for ever cheering her with hope, and attributing to calumny the tales which reach her of her unworthy husband. He represents to her, with disinterested zeal and well-affected conviction, the numerous and exacting duties of his office; the claims of the world upon all public men, and all the commonplaces which quieted, although they could not convince, his soothed but tearful listener; and it is scarcely wonderful that, unsuspected even by herself, Madame de Fremery at last loved her comforter. What says our author in excuse of his fair and suffering heroine?

LOVE.

Oh! love is a labyrinth much like that in which the Minotaur was hidden, to whom the Athenians sent the most lovely of their maidens: there are a thousand paths by which escape is hoped for, but all these paths, whether followed by chance or adopted after mature reflection, lead to the same point—to that spot where the monster lies in wait, ever ready to devour his victims.

And so it came to pass at last; for Madame de Fremery began to perceive with terror that she was only happy in the presence of M. de Lesly, and that in his absence her whole existence became a blank. Her health gave way beneath the conviction; and when she ultimately lay upon what was considered to be her dying bed, her husband at last found time to visit her. Here follows an admirable scene, which we shall preface by informing the reader that De Fremery, yielding to his thirst for play, has gradually brought himself to endure the degradation of frequenting the lowest hells of Paris, where he has been cheated of a sum of money beyond his means to pay; when, suddenly remembering that his wife still retains in her own power the title to a small estate, of which he has not yet despoiled her, he resolves on responding to the letters that he has received from her medical attendants, and, while performing the duty of a husband by making his appearance beside her sick-bed, to take advantage of her state of physical weakness to induce her to sign away this, her last personal possession.

HUSBAND AND WIFE.

At the voice of her husband, Amelia sat up in bed. The first impulse of her heart had led her to the memory of her wrongs; the second was to tell herself that she had been misled, or that she had misunderstood what she had heard, and that this advent of her husband was a proof of his affection. This fact told volumes. The order in which these ideas had presented themselves to Madame de Fremery, were a complete revelation. In a heart which still loves, the first impulse is for the loved one when he reappears; his errors are only remembered upon reflection. With Amelia it was indignation which spoke first. It was reflection and reason which taught her to seek to perceive in his visit an indication of attachment. Was she conscious of this truth? No; but she acted as those ever do who feel the necessity of being confirmed in a good resolution, which is not strong enough for self-support. She desired that her husband should come to her assistance; she wished to give him every opportunity to justify himself; and in order that he might not delay to do so, she said, in a tolerably firm voice, "I am not asleep, Eugene; I am not asleep." M. de Fremery approached, and any heart save one which had been wounded, might have been deceived by the eagerness of his questions, the earnestness of his caresses, and the expression of his sorrow and anxiety; and perhaps at the moment all this was felt, and was perfectly sincere. But the heart is a deep and mysterious cavern: the same words uttered at its entrance, or in its most hidden depths, have a different sound. Thus, the same words vary in their meaning, in their expression, and in their effect, according as they grow out of mere superficial affection, or emanate from the profound emotions which love alone can stir. And now, nothing was wanting in the tenderness of M. de Fremery—nothing save that which is all, the conviction that it should carry with it. Amelia was not satisfied. * * * * The attendant withdrew, and they were alone. Amelia, doubtful and unhappy, awaited with anxiety one word from her husband, which might silence all her doubts; he appeared to her to look restless and thoughtful. All the charming interest which he had exhibited in the presence of a third person had disappeared. Eugene, satisfied, too easily satisfied, on the score of her health, was pacing to and fro the chamber. The eyes of his wife followed him with sad curiosity. Occasionally a movement of irritation escaped him; and eventually Amelia forgot her annoyance in her fear.

"What is the matter?" she asked. * * * Eugene, too full of his own thoughts to remark the tone in which the question was put, answered abruptly, "We have a serious matter to discuss."

"What can it be?"

"Be, my dear Amelia!" he exclaimed. "Why, I want your signature. You may remember that I have already told you how necessary it was that you should give up your title to the farm which you inherited from your father, in order to make an advantageous use of the capital. Well, I have just found an excellent purchaser and an undeniable investment; and to carry this out—"

"You want—" said Amelia.

"I want your signature."

"To-night?"

"To-night, for I have promised my final answer to-morrow morning. I came down post to save time; the chaise which brought me is still waiting, and I intended to return immediately; but—"

Amelia looked steadily towards her husband, who, as he spoke, did not once venture to raise his eyes towards hers. The anguish that she endured was fearful. It was not that she doubted what M. de Fremery was telling her; it was because she believed him, that she was wretched. This anxiety about his fortune appeared to her so despicable when her life was said to be in danger; this irritation at the dread of not completing an affair of business, when he should have been absorbed by the sufferings of his dying wife! Amelia felt that she was loved no longer. The memory of all that she had heard came back upon her, and she was on the point of giving vent to all her long-pent-up sense of wrong, when she suddenly formed one of those impulsive resolutions by which women so often accelerate their own misery.

She rang, and her maid appeared. "Bring me writing materials," she said calmly.

"Ah, how good, how charming you are!" exclaimed M. de Fremery; "I expected no less from your kind heart."

What did that holy word do there? Madame de Fremery made no reply.

"You have, without doubt, brought with you the document which it is necessary for me to sign," she said, in an altered voice.

"Here it is;" replied Eugene, offering at once the deed, and a pen which he held ready.

She signed her name.

"Oh, thank you, thank you, my dear Amelia!" exclaimed her husband tenderly. * * * "I am now off again to Paris, and to-morrow, to-morrow very early, I will be here again with the physician. I will go at once, in order to return the sooner. Farewell until to-morrow, only until to-morrow."

And without awaiting a reply, either by look or gesture, from his sick wife, M. de Fremery left the room.

Scarcely had he closed the door behind him ere Amelia fell back upon her pillow, drowned in tears. Her husband had thought of nothing, had cared for nothing save the money which he came to seek! Never was a pang at once more acute, and more humiliating inflicted upon a despairing heart. * * M. de Fremery had committed an enormous fault, far more enormous than an infidelity. Ask any woman, and she will tell you that the revelation of his love for Madame de Favieres was, perhaps, a more bitter grief to his wife than the scene which had just taken place, but it had not equally ruined him in the affections of Amelia as what he had now said and done.

Love lives on struggles, and Madame de Fremery had, perhaps, loved her husband with the most ardour at the moment when she was about to lose him; added to which there are rivalries that torture the heart, without humbling the self-respect. The love of Madame de Favieres for Eugene raised him in the eyes of his wife, although it wronged her. He was still the hero whom she had adored, achieving new conquests; but he who who profanes a holy affection by making it subordinate to a vile spirit of gain; he whose tenderness is stifled under a money-bag; he, in short, who abandons his wife, not to pursue a new mistress, but to run after a lawyer, in order to realize a few hundred pounds; such a man is lost, stripped of his poetry, annihilated, in all that can attach the heart of woman. She no longer hates the rival whom he has given her; she abandons him to her willingly, and she finds her vengeance in this thought: she will one day learn that he was not worthy that I should dispute with her the possession of such a heart.

The sequel of such a story may be guessed. Madame de Fremery abandons all—her lover, by whose generous interference the fortunes of her husband are redeemed; her peace of mind, her freedom of action, even her solitude, to save the man to whom she is united from the comments of the world; and it is with a pained spirit that we lay down the story, fiction though it be, and leave her to the cold companionship of the

selfish and heartless being who has built up alike his fortune and his reputation upon the ashes of her blameless and blighted youth.

JOURNAL OF AMERICAN LITERATURE.

Narrative of the United States Exploring Expedition during the Years 1838—1842. By CHARLES WILKES, U. S. N., Commander of the Expedition, &c. In 5 vols. and an Atlas. 8vo. Philadelphia, 1845. Lea and Blanchard.

THE following interesting abstract of a famous expedition is abbreviated from the *North American Quarterly Review*.

The squadron sailed from Norfolk on the 18th of August, 1838. The following day was Sunday, and divine service was performed on board the *Vincennes*,—the shores of the United States being still in sight. Leaving the store-ship *Relief*, a very dull sailer, to pursue her path alone, the remainder of the squadron, on the 16th of September, arrived at Madeira, where they stayed one week. This was a week, no doubt, profitable to the naturalists, who crossed the island, and penetrated into the almost inaccessible recesses among its lofty mountains, where are hidden treasures to reward the venturesome traveller for many years to come. Aided by Mr. Drayton's beautiful views, the "Narrative" does justice to the romantic scenery of the island, though it adds but little to our knowledge of its resources or its inhabitants. Captain Wilkes informs us, that "wine is the staple commodity of Madeira," and that "the language is Portuguese." He might as well have added, that the religion is Catholic, and the climate genial. Madeira is a familiar name, not only to the traveller, but to those also who

> through his peering eyes
> Discover countries.

After leaving this island, the squadron pursued its course to Rio de Janeiro, stopping one day at Porto Praya. Between the northern tropic and the equator, and the longitudes of 20 and 35 degrees west, several rocks or shoals have disfigured the charts of the Atlantic ever since the earliest days of Spanish and Portuguese navigation, though their existence has long been considered doubtful. Passing through this zone, Captain Wilkes extended his vessels so as to cover the largest possible space without separating, and sailed over many of these reported dangers, keeping the lead constantly in the water. These spots will now be erased from the charts, and the seaman will sleep in security, where hitherto he has watched in dread of merchant-marring rocks. The luminous appearance of the sea in this region, the frequent cause of unnecessary alarms, is noticed in the "Narrative." On one occasion, the brilliancy was so great, that the sea "might truly be said to have the appearance of being on fire."

At Rio, it was found necessary to make some repairs, particularly on Captain Hudson's ship, the *Peacock*; and whilst these were going on, a series of pendulum, magnetic, and astronomical observations were made, and the scientific gentlemen were busily occupied in adding to their collections and journals. Mr. Hale, the philologist, obtained some curious information concerning the slaves of Brazil, shewing the marks by which the African tribes are distinguished. This is accompanied in the "Narrative" by woodcuts illustrative of the descriptions in the text, and well deserves attention. The value of the slave in the market is, in a measure, determined by these brands; for long familiarity with this accursed traffic has enabled the slave-dealer to ascertain with precision the characteristic traits of each tribe, and accordingly to determine the employments for which they are best fitted. Some of the officers accomplished the daring feat of ascending the Sugar-Loaf—a conical rock at the entrance of the port, about 1,300 feet high—in order to determine its altitude. Captain Beechey excuses the disagreement between his two determinations of the height of this rock, by saying that it is almost impossible to ascend it. * * * At Orange Harbour (Terra del Fuego), the next stopping-place of the squadron, preparations were made for the first cruise towards the Antarctic. The ample and exceedingly interesting accounts of the Fuegians, by Captains King and Fitzroy, have left but little novelty to be gleaned by future voyagers. One of the natives was detained on board the *Vincennes* a week, and was well clothed and fed; but he was constantly sick, and was glad to return to his savage state.

According to his instructions, Captain Wilkes removed to the brig *Porpoise*, and, taking with him the tender *Sea-Gull*, sailed on the 25th of February towards Palmer's Land, which he approached on the 3rd of March. The weather was thick and tempestuous, the cold very severe, covering the decks and rigging with ice; and the vessel was so crowded with men, that the state of the crew was in the highest degree uncomfortable. These circumstances, added to the lateness of the season, induced Captain Wilkes to return to the northward, which he did on the second day after reaching Palmer's Land. Having narrowly escaped being wrecked on Elephant Island, he anchored in Good Success Bay on the 18th. Lieut. Johnson, in the *Sea-Gull*, stopped at Deception Island for a week.

A month, ending in the middle of September, was employed in a survey of the Paumotu cluster, or Low Archipelago, a cluster to the eastward of the Society Islands, and forming, indeed, a part of this group. The attention of our surveyors had been drawn to it by that distinguished navigator, Admiral Krusenstern, whose notes made a part of Captain Wilkes's instructions. Clermont de Tonnerre was the first island visited. The natives resisted all attempts to land. Captain Wilkes spoke to them through an interpreter, but "the only answer he could get from them was, several of them crying out at the same time, 'Go to your own land; this belongs to us, and we do not want to have any thing to do with you.'" Mr. Couthouy landed unarmed, with presents, but was driven into the water by the inhabitants, who thrust at him with their spears. A useless landing was forced, however, by firing at them with mustard-seed shot, "which caused the chief and all the rest to retreat, rubbing their legs," as the "Narrative" expresses it. Having no skilful surgeon among them to extract these shot, they may be still "rubbing their legs." We learn elsewhere, that one man was shot in the face, and another was wounded twice, once in the breast. Every one must regret to see the first intercourse of Captain Wilkes with the natives of the island marked by an act of unnecessary hostility, that must increase the difficulty of future intercourse. He speaks of the inhabitants as a "fine, athletic race, much above the ordinary size." Communication was held with the natives of several other islands in this group. The people of Raraka were found to be modest, kind, and confiding; and those of Aurora island have been much improved by the missionaries in behaviour, and in the comforts of living. Many could read and write well, and printed copies of several portions of Scripture were seen among them. They were without arms of any kind; a permanent peace, under the missionaries' influence, seems to have succeeded to the constant wars that formerly raged. Two islands were discovered in this group, that were not laid down on the charts; the locality of another, marked on the charts of Arrowsmith, had been previously passed over, and the supposed land proved not to exist,—a fact in navigation second in importance only to a new discovery. In the middle of September, the squadron was united in Matavai Bay, in the island of Tahiti, where Captain Wilkes again set up the observatories. * * * Capt. Wilkes gives a long description of Tahiti, its society, government, laws, productions, and physical features. In a passage replete with interesting information, and written with apparent candour and liberality, he defends the missionaries against the reproaches of their enemies, and points out the great good they have done in their attempt to civilize this savage region, and to root out the crimes and excesses of barbarism, so as to make room for the virtues and graces of Christianity. The missionaries never failed to command his attention, sympathy, and assistance. Though sometimes he blames their conduct, his general manner affords proof that he does so from sincere conviction. Respecting the present profit and future promise of their labours and great sacrifices, a subject regarded by all Christendom with an anxiety proceeding from "the ground of the heart," he holds a language equally creditable to his judgment and his feelings.

The missionaries have introduced the manners, as well as the forms of education and religion, of their own countries. A party travelling in the interior passed a night at the village of Otapuna, in the house of Utami, a principal chief, and governor of the district. His table was set in the European fashion, and he gave them tea made of a native herb. Before retiring to rest, he "read a chapter in the Bible, and made a prayer with much apparent devotion."

(To be continued.)

ART.

Poems and Pictures. London. James Burns.

PERPLEXED whether to class this superb volume under the division of Literature or of Art, we resolved to avoid the difficulty by noticing it in both, a distinction to which its extraordinary beauty, however, well entitles it. In this place we treat only of the Art that so lavishly adorns its pages.

There can be no hesitation in offering this as the most perfect specimen of book embellishment which has ever issued from the British press. The illustrations are from drawings by most of our famous living artists, COPE, CRESWICK, REDGRAVE, SELOUS, TOWNSEND, PICKERSGILL, HORSLEY, ARCHER, E. CORBOULD, &c. appearing in the list. The plan of the work appears to have been this:—A collection was made, by the Editor, of some of the best poetry of our language, and this was distributed among the various artists to be illustrated according to their several fancies. These designs were confided to the most skilful engravers, as LINTON, THOMPSON, GREY, ARMSTRONG, BRANSTON, GREEN, &c. and departing from the ancient fashion of annuals, whose plates are distinct from the text, these are mingled with the text upon the same page.

This arrangement has compelled to other improvements. The paper for such a purpose was required to be of a stouter substance and finer quality than usual, and the effect of this has been to bring the typography to a perfection that of itself is a curiosity, and will delight the taste of all who have an eye for beauty of types and printing. To complete the attractions of this charming volume, each page is surrounded with an engraved border.

Of the *fifty-three* illustrations here presented it would be impossible to speak in detail. All are clever and creditable to the rising school of English art. But those which have most attracted us in turning the leaves are COPE'S *Village Stile*, two sweet bits of the true pastoral; a landscape by LINTON, called *The Bucket*, English in every part; SELOUS'S *Sir Rowland Græme*, a spirited drawing full of life and motion; TOWNSEND'S *Miner*, two clever groups, whose expression tells the tale, and which proves the rapid advance this artist is making towards mastery of the highest class of art. Then there is *John Anderson*, by COPE, the very personification of the poet's ideal. TOPHAM'S *Lucy's Flittin'* is a pretty bit of nature. What a clever street sketch is ARCHER'S *Muffin Man!* HORSLEY has illustrated the ballad of *Cumnor Hall* with the pencil of a master. DODGSON has presented us with two moonlight pieces, of great beauty, to adorn COLERIDGE'S "Nightingale." E. CORBOULD'S *Village Blacksmith* is *an effect* which one is surprised to see so well preserved by the engraver. SELOUS'S *King Arthur* exhibits the energy of life, the visible motion, for which the drawings of that artist are so famous. The same characteristic combined with great power of imagination is shewn in E. CORBOULD'S *Wild Huntsman;* his three illustrations of this ballad are quite original, and worthy of the poet whose fancies he has embodied. COPE'S *Isaac Ashford* is a sketch full of character, and DUNCAN'S *Storm at Sea* is awfully real. Altogether, this is the most attractive, because the most original, of the annuals, if such it may be termed—or rather, as it might be better called, of the new-year-gift books. A person seeking a handsome present would not hesitate to choose this; it will be welcome everywhere and to everybody, for it not only pleases the eye but feeds the mind; it is not a book for the season only, but a permanent addition to the library, when it shall have played its part upon the drawing-room table.

THE NEW PANORAMA.

APPROPRIATELY, at this season of relaxation and amusement, Mr. BURFORD has brought out a powerful and masterly panorama of Rouen—the renowned capital of Normandy. Setting out of view, for the present, the artistic allurements of this picture, the historic associations connected with Rouen, and the picturesqueness of the scenery in which, emulating its beauty, she has grown up, equally combine in making this an interesting and attractive panorama. In the market-place of this city it was that JOAN, the high-souled, enthusiastic Maid of Orleans, perished painfully, yet heroically, in the flames to which she had been condemned. The memories, too, of Norman WILLIAM, and long subsequently of the fifth HENRY and his siege, hold good their place in the annals which relate to our country.

Quitting these considerations to look at the picture as a work of art, it is impossible to withhold from it unqualified praise. The city has all the force and substance of reality; the noble cathedral, the churches of St. OUEN and St. MACLOU, the handsome streets and spacious quays, stand out with a prominence absolutely wonderful. The spectator is so far deceived as almost to question his own conviction, and to doubt that it is a piece of flat canvas on which he looks. The landscape portion of the picture, including the lovely hill of St. Catherine, is also exquisitely painted; the water is flat, reflective, and transparent as nature; the colouring is warm and rich, and the effects are so skilfully thrown in as to enhance very materially the merits of the picture.

Mr. SELOUS, also, has been triumphantly successful in his department. The figures are all characteristic of the place, spiritedly and correctly drawn, and grouped with that striking and felicitous originality which, perhaps, above all other qualities, distinguishes this artist from his compeers.

The following description of the picture we extract from the printed book furnished to such visitors as desire it, as it conveys a clearer summary of the chief objects of interest than we from memory could hope to give:—

The present Panorama, taken from the stone bridge, embraces an extensive and comprehensive view of the city, suburbs, and surrounding country. Towards the north Rouen is seen in its full extent; the line of fine modern buildings on the quays forming a splendid terrace, and partially hiding the more ancient part, the dense mass of houses of strange and picturesque forms on the slope of the hill behind, above which rise, in venerable magnificence, the noble towers of the cathedral, St. Ouen, St. Maclou, and other fine churches. To the right, the high hill of St. Catherine, the boldest and most abrupt feature of the landscape, presents its steep and nearly perpendicular side of bare chalk, spotted in a few places with vegetation and cottages, whilst a mixture of country houses, gardens, and manufactories, at its base, make a pleasing variety, and contrast well with the noble trees of the Cours Dauphin, which add a character of magnificence to the scene. In front is the river Seine, smooth and tranquil, spanned by its two bridges—the one a light and elegant suspension, the other, from which the view is taken, a handsome structure of solid masonry, in the centre of which a fine bronze statue of Corneille forms a prominent object. The river, crowded with ships of considerable burden, imparts a pleasing variety and animation, and the quays, covered with all sorts of merchandise, and a busy population, exhibit marks of active industry and luxurious opulence, and the full activity of commerce and life. Towards the south, the opposite bank of the river is occupied by the extensive and populous suburb of St. Sever; the unpretending steeple of its old church rising amidst numerous tall smoking chimneys of the large manufactories by which it is surrounded. The terminus of the Paris railway is also seen in this quarter, as well as the entrance to the grand cours, the fashionable drive and promenade, the greater part of which is obscured by the trees on the *Ile de la croix*. Above and below the city, the Seine is seen broad and full of islands, gracefully meandering, until lost in the distance, through the richest meadows, and the most fertile and beautiful country, plentifully studded with villages and villas, embosomed in woods and orchards. In the extreme distance on every side the horizon melts into an undulating line of the beautiful and picturesque hills of Normandy.

As this is a Panorama that, both from the historic associations which lend interest to the subject and the unusual artistic merits it displays will give sure gratification to all who see it, we unhesitatingly recommend it to the public support.

MUSIC.

A Song for Christmas, with Chorus. By JOHN LANE, the Music by G. J. O. ALLMAN, Esq. London: Prowse.

THIS is the best of Mr. ALLMAN'S vocal compositions—admirably appropriate to the season—joyous and spirited, and, sung by one who will throw heart and soul into it, the fire-side circle will certainly be moved to an unanimous *encore*. It is sure to become popular wherever it is introduced, and we can recommend it to all who are looking out for new music.

THE DRAMA AND PUBLIC AMUSEMENTS.

ADELPHI.—A new piece has been produced here (from the pen of the indefatigable SELBY), entitled *The Lioness of the North*. The said *Lioness* is the Russian *Semiramis Catherine*, and the story turns upon her falling in love with a soldier of fortune, one *Alexis Romanowski*, whom she, at the time, has mistaken for a cousin of hers, the *Count de Courland*, whom *Alexis*, having effected his escape from the prison in which he himself is confined, has taken the place of, for the nonce. The agent in the escape of the *Count* is the daughter of the commandant, for whom *Alexis* has formed an attachment, returned with full interest by the young lady. In the end, *Catherine*, having discovered the *qui pro quo*, forgives the young man even the crime of not returning her passion, and magnanimously marries him to the object of his choice. Madame CELESTE fills the part of the artful *Empress* with great energy, and she is well acted up to by Mr. WEBSTER, as *Alexis*. WRIGHT, of course, has a buffoonery part stuck in for him. He took upon himself to add a vulgar voluntary of his own at the end of the piece, and got well hissed for doing so; a lesson which this extremely offensive person merits infinitely more often than he receives it.

DRURY LANE.—*Maritana* and *The Devil to Pay* continue to attract crowded houses, and deservedly, for seldom have two such interesting pieces combined for one night's entertainment.

THE THEATRES.—The various Christmas pieces are brought out too late for notice this week, as we always go to press on Friday morning.

JULLIEN'S BAL MASQUE.—This unique and splendid entertainment went off with a success that must have gratified the spirited conductor beyond measure. The theatre on Monday night was a scene of gaiety and brilliancy such as London has seldom witnessed. The boxes were crowded with spectators of the vast assemblage below, who took part in the amusements of the evening. The theatre itself was tastefully decorated; the dancing company numerous, mostly masked, and many in character; the music was such as only JULLIEN can produce, and excellent order was preserved throughout. The company kept up the dance with great perseverance until a late hour. At the conclusion M. JULLIEN was enthusiastically and deservedly cheered, and amid the applause announced that another ball of the same kind would take place shortly.

PROMENADE CONCERTS.—These concerts have been resumed, and will be continued for another week. The enchantment, for it is nothing less, of CAMILLO SAVORI'S violin, is an added attraction which it will be impossible for any lover of music to resist.

THE COLOSSEUM.—No visitor from the country should fail to see this the most *magnificent* public exhibition in Europe, and the night view should be preferred, if possible. It will astonish country folks more than any thing they will behold in this great metropolis.

The ADELAIDE GALLERY.—This agreeable place of mingled instruction and amusement will be one of the Christmas sights, to which the numerous visitors whom the cheap trains will bring to the metropolis during the next week of holiday should not fail to visit. The entertainmtnes there are very various, but KELLER'S *living statues* are of themselves a treat such as is seldom seen.

ORIGINAL CONTRIBUTIONS.

BIRTHDAY THOUGHTS.

BY MRS. VALENTINE BARTHOLOMEW.

Another birthday comes again—
I weep, and yet rejoice;
I weep beneath the weight of pain,
Yet smile, as thy dear voice
Falls on mine ear in loving words,
More musical than song of birds:
Still, still I weep, that I must be
A burden to myself and thee.

But is it good, or kind, or wise,
That I should thus repine?—
Am I not blest beneath the skies
With love all but divine?
And has not that bright mortal love
Taught me to look with faith above?
How dare I say, "I still must be
A burden to myself and thee!"

No! rather let me kiss the rod
Which is in mercy sent,
And bow my stubborn heart to God
For his wise chastisement:
The sorrows that have dimmed my eyes
Have been HIS blessings in disguise,
To make my erring spirit be
More purified for HIM and thee!

JOURNAL OF MENTAL PHILOSOPHY.

[We shall be obliged by contributions of interesting cases and novel phenomena observed by our readers throughout the country; each case must be verified by the name and address of the correspondent for our *private* assurance of its authenticity; but the *name* will be withheld from the public if desired by the writer. The object of this division of THE CRITIC is to preserve a record of the progress of Mental Philosophy, and to form a body of facts from which at a future time some general principles and rational theory may be deduced. But, nevertheless, we shall occasionally give place to any brief comments or conjectures which may appear to deserve consideration or help to throw light upon the subject. We entreat the cordial assistance of the friends of Mental Philosophy throughout the world to make this a complete record of the progress of the science.]

TO OUR READERS.

OUR readers will doubtless have remarked that we have made an alteration in the title of this division of THE CRITIC. Our reason for the change was two-fold: first, because experience had taught us that the phenomena of Mesmerism were but a portion, and a small portion, of that mental physiology of which our present knowledge is so limited, and that a large collection of facts in every branch of that science is essential to progress even in Mesmerism; and, secondly, because, by avoiding a prejudice which has been so unfairly excited against the name, many would be induced to acquire and to supply information relating to Mental Philosophy who want the courage or the confidence in its truth to aid in the development of Mesmerism.

Moreover, by thus enlarging the sphere of observation we supply a periodical medium which has long been wanting for the encouragement and diffusion of mental science generally. Without, therefore, neglecting any of the illustrations of Mental Philosophy supplied by Mesmerism, we shall henceforth invite the communication of all *facts* that tend to throw light upon it in any of its departments, and especially in the practically important branches of Insanity, Crime, Education, and Phrenology.

Thus we hope to add materially to the interest and utility of THE CRITIC, and to supply a defect in our periodical litesature which has been long complained of. It certainly is strange and sad that while the material sciences have their journals, weekly, monthly, and quarterly, to collect and promulgate the facts by help of which alone canadvancement be made, there is not a single journal in Great Britain which devotes so much as a column to the science which, more than all other sciences together, affects the present and future welfare of mankind, and which concerns everybody, and must interest everybody. THE CRITIC will endeavour to perform this office, and it asks accordingly the cordial co-operation of all who recognize its importance and are willing to contribute the results of their observations and reflections.

Practical Instruction in Animal Magnetism; the result of thirty-five years, Practice and Observation. By T. P. F. DELEUZE. *Translated from the Paris edition*, by THOMAS C. HARTSHORN. 12mo. pp. 270. London, 1845. Cleave.

M. DELEUZE is, we believe, esteemed upon the Continent as one of the best authorities on this subject, and a translation of his famous treatise will no doubt be very welcome to all who have interested themselves either in the study or the practice of animal magnetism. As it is a very comprehensive work, and contains a good deal that is new; and as the opinions of a gentleman of such large experience and unquestioned ability cannot but be a valuable contribution to the existing stores of knowledge, we purpose to notice this volume more at length than is our wont, and to follow the author through the principal topics of his treatise, both with commentary and extract.

In a brief but well-written Introduction, M. DELEUZE states the arrangement of his work, concluding with a remark,

which will have the concurrence of all who know the force of prejudice and the habitual hostility of professions to innovation of any kind.

A physician who has already become celebrated would perhaps increase his reputation by publishing a good work upon magnetism. He would call attention to an order of phenomena which belongs to animated nature; he would found a school; he would find disciples among his brethren in the profession. This kind of success is impossible for us. Our adversaries condemn us without examination, and they exercise a great influence upon public opinion. We have no partisans except among those to whom we have rendered service, and the greater part of them dare not raise their voice. Happily their number increases every day; and that should sustain our courage and our hopes. Let us continue, then, to work in concert, to spread abroad the knowledge of magnetism, without disputation, without fear, and without the spirit of system. Let us banish the abuses and the dangers which may attend the use of it. Let us collect the materials of a beneficent science. The time will arrive when a man of genius will re-unite all these materials, and rear an edifice which time cannot overthrow.

The first chapter is devoted to "General Views and Principles." These are stated in the form of axioms, many of which we should be inclined to dispute. But to examine each of the thirty-five would be the work of a dozen articles, and therefore we pass to the second chapter, which treats of the "Processes in Animal Magnetism." He recommends those who have been in the habit of magnetizing to continue the methods to which they have been accustomed: but to learners, he submits the following instructions, the result of thirty-five years of practice:—

Cause your patient to sit down in the easiest position possible, and place yourself before him, on a seat a little more elevated, so that his knees may be between yours, and your feet by the side of his. Demand of him in the first place, that he give himself up entirely, that he think of nothing; that he do not trouble himself by examining the effects which he experiences; that he banish all fear, and indulge hope; and that he be not disquieted or discouraged if the action of magnetism produces in him temporary pains.

After you have brought yourself to a state of self-collectedness, take his thumbs between your two fingers, so that the inside of your thumbs may touch the inside of his. Remain in this situation five minutes, or until you perceive there is an equal degree of heat between your thumbs and his; that being done, you will withdraw your hands, removing them to the right and left, and waving them so that the interior surface be turned outwards, and raise them to his head; then place them upon his shoulders, leaving them there about a minute; you will then draw them along the arm to the extremity of the fingers, touching lightly. You will repeat this *pass* five or six times, always turning your hands and sweeping them off a little, before re-ascending; you will then place your hands upon the head, hold them there a moment, and bring them down before the face, at the distance of one or two inches as far as the pit of the stomach; there you will let them remain about two minutes, passing the thumb along the pit of the stomach and the other fingers down the sides. Then descend slowly along the body as far as the knees, or farther; and if you can conveniently, as far as the ends of the feet. You may repeat the same processes during the greater part of the sitting. You may sometimes draw nearer to the patient so as to place your hands behind his shoulders, descending slowly along the spine, thence to the hips, and along the thighs as far as the knees, or to the feet. After the first passes, you may dispense with putting your hands upon the head, and make the succeeding passes along the arms, beginning at the shoulder; or along the body, commencing at the stomach.

When the magnetizer acts upon the patient they are said to be in communication (*en rapport*).

The above is the mode of magnetizing under ordinary circumstances, but occasionally other methods will be required, and many of them are described by M. Deleuze, for which the reader must be referred to his volume.

M. Deleuze is a supporter of the doctrine of magnetism by an external influence. Our readers are aware that our impression is that it is entirely self-induced, and that the mesmerizer does but fix the attention and suggest the condition of mind necessary to its production.

The third chapter is devoted to "the effects, and their indications." These effects are infinitely various, but some of them will be familiar to every observer. Such are these:—

The magnetized person perceives a heat escaping from the ends of your fingers, when you pass them at a little distance before the face, although your hands appear cold to him, if you touch him. He feels the heat through his clothes, in some parts, or in all parts of his body before which your hands pass. He often compares it to water moderately warm, flowing over him, and the sensation precedes your hand. His legs become numb, especially if you do not carry your hands as low as his feet; and this numbness ceases when, towards the close, you make passes along the toes, or below them. Sometimes, instead of communicating heat, you communicate cold; sometimes also you produce heat upon one part of the body, and cold upon another. There is often induced a general warmth, and a perspiration more or less considerable. Pain is felt in the parts where the disease is seated. These pains change place, and descend.

The fourth chapter treats of "Somnambulism, and the use to be made of it." On this subject M. Deleuze remarks:—

Of all the discoveries which have excited attention from the remotest antiquity, that of somnambulism certainly gives us the most insight into the nature and the faculties of man. The phenomena to which it has drawn our attention demonstrate the distinction of two things; the twofold existence of the *internal* and the *external* man in a single individual. They offer a direct proof of the spirituality of the soul. They make evident the truth known to ancient sages, and so well expressed by M. de Bonald, that *man is an intelligence served by organs*. This advantage cannot be too highly appreciated, especially in an age when audacious minds do not fear to employ the researches of physiology to shake the certainty of the interior sentiment which reveals to us the dignity of man, his supremacy in the order of creation, and his moral liberty; a sentiment which is the basis of social life, and which engages to the practice of virtue, by pointing out to us in a future life the developement of our earthly existence, and the recompense of sacrifices made to obey the dictates of conscience. On the other hand, somnambulism makes known to us the means of curing diseases which are curable, and of relieving those which are not. It serves to rectify the errors of medicine as well as of those of metaphysics.

He proceeds to give elaborate directions for the management of somnambulist patients, which, however, are longer than we can find room for. He recommends that this condition be induced slowly and with caution, and that the patient be gradually accustomed to the use of his new faculties. One observation we must extract, for it squares with the results of our own experience, and is the answer to the objections of Dr. Forbes.

The faculties of somnambulists are limited. Their surprising penetration may be regarded as the effect of a concentration upon one single class of sensations, upon one order of ideas; the more their attention is distracted by various subjects, the less of it will they give to the essential object.

If your somnambulist appears to meddle with things which do not promote his return to health, employ your will to withdraw him from them; do not hear him; and especially do not appear as if you were astonished at the proofs which he affords of his lucidity. You will excite his vanity, and that is very dangerous; for when you have once awakened in him this sentiment, to which somnambulists are in general very much inclined, you can no more depend upon any thing.

This advice is also judicious:—

I have already noticed that it would always be expedient, as far as possible, to let the patient remain ignorant that he has been a somnambulist; and that, excepting certain very rare cases, it is proper never to repeat what he may have uttered. For it would establish between the ideas of the natural state and those of somnambulism a relation which is contrary to the natural order; and which equally alters the habitual faculties and the somnambulic faculties. If you know how to control yourself by your own will, your patient will never be informed of any thing which you think ought to be kept from him.

Here is a fact we do not remember to have observed.

Many somnambulists are endowed with inconceivable address, and can perform certain operations as well as the best surgeons. I am acquainted with a lady, who, in the state of somnambulism, opened a swelling beneath her breast, and dressed the wound until it was healed.

This address of somnambulists can be useful to others as well as themselves, especially when it is accompanied with clairvoyance; there are some cases even, when they can render the greatest service. I will instance a midwife, who having become a somnambulist during a disease for which she caused herself to be magnetized, preserved the same faculties after her restoration

to health. When she is called upon to exercise her profession, if the case appears to present any difficulties, she goes to her magnetizer, who puts her into somnambulism, and opens her eyes. She declared to me that in this state she could act with much more address, strength, and certainty. In January last, she, in this manner very successfully delivered of three children a woman whose state was very dangerous.

Here we pause. We shall resume the review of this volume from time to time, as our space will permit.

NOTES OF CASES IN VITAL MAGNETISM.

CLAIRVOYANCE.—A most remarkable and highly interesting fact of clairvoyance was exhibited in a little patient of mine last August, and which was fully witnessed. This girl, of about fourteen years of age, went into a deep magnetic state; and for some time sat looking very thoughtfully, but with a droll expression on the countenance. After some time I said, "Come, let me know what you are thinking about; I suspect you are planning a little mischief."—"Mischief, indeed! Why, I was only thinking how nicely I could make a doll's cap if I had but a bit of net and some ribbon. There, give me some; you have plenty." This child was a stranger to my drawers, closets, and boxes at this time. "I will see if I have any."—"See, indeed; why, you must know you have plenty of things; but I don't know if there is any net."—"What makes you so sure?"—"Why, *I have been looking into all those boxes*, and you have lots of pretty things." She went immediately into a closet, where she at once selected a portmanteau from among all the rest. I carried it into the bedroom—unlocked it; she sat on the carpet—turned every thing out very carefully; and, naming with the *greatest accuracy* the colours, patterns, silks from velvets, pieces of prints, and never made the slightest mistake, even in the most delicate shades. We were all amazed; her eyes being fast closed. This went on for a long time, when I took up a bundle which was tied and pinned together. "Now, tell me if there is any net in this parcel." She took it into her own hands, pressed it very hard to her forehead, waited nearly ten minutes, and then said, "No, I can't see any net; but there is blue silk. There is black velvet with a gold edge (the selvidge). There is a beautiful green-striped ribbon. Some of your lilac silk gown;—the one I tore for you. There, take it away; I can't see any net." We opened this roll of pieces; what she had said was true; and there was no net. Some papers she found: some she unrolled; others she did not. She pronounced some to be drawings; some maps; some writings. This altogether was a most perfect testimony for clairvoyance, in a very pleasing manner displayed. The contents of the box was a collection of scraps I kept for the purpose of making pic-nics for ladies' bazaars, or such kind of uses. The child had certainly never seen the box when awake. She had been brought to me from a distance, and was taken at once into my room, where I had frequently magnetized her.

I once had in her an example of great difficulty in demagnetizing. I always attend my patients until they wake spontaneously; but I had at this time a sudden call from her, which required instant attention. I ordered her to wake. "No; I shan't wake for you nor no one."—"I desire you to wake."—"You may desire what you like; I shan't wake." I then took her hands in the usual way, and began blowing strongly and smartly on the eyes. "Oh, indeed, you may blow and blow as much as you like. There, blow on; I shan't wake any more for that." This was a provoking, but laughable, firmness in this happy little creature; and I did grieve that the cause was so imperative to get her right before I left her. Therefore I did "blow on," and she suddenly opened her eyes; then in her usual way said playfully, "I be awake now;" not remembering any part of our combat. LAVINIA JONES.

CRITIC OF TRADES, INVENTIONS, ETC.

[Every person feels the want of an *honest* informant to direct him where the best commodities of all kinds are to be purchased. New inventions for use or ornament are daily produced, which would be cordially welcomed if their merits were made known. An advertisement alone cannot be trusted. An impartial reporter is wanted in whom the public can confide. This department of THE CRITIC will endeavour to fulfil that duty. To aid the design, correspondents are requested to inform our readers of any new production for use or ornament they may try and prove, of the places where the best commodities of any kind are to be procured, and so forth. Of course no anonymous communication will be attended to.]

NOVEL FILTERER.—An ingenious, novel, and very efficacious method of filtering water has lately been contrived by a Mr. Truman, who has secured his invention by a patent, and who has been employed at Windsor Castle to produce pure water for the uses of the inmates of the palace. The filterer there used filters 400 gallons of water daily. There is one, on the same principle, being placed in the house of the Duke of Sutherland, in the Green-park, which, when completed, will filter 1,000 gallons of water daily; and the inventor affirms that he will undertake, by his method, to filter any quantity that may be required for extensive consumption, either by brewers, manufacturers, or water companies. The filter or filterer is a cylinder, formed of a porous stone of peculiar quality,—that which is exhibited at No. 70, in the Strand, is 4 inches thick,—through this substance nothing passes but the pure element, all foreign and deleterious substances being stopped. To force a passage for the water, hydraulic pressure is employed at a rate sufficient to cause an incessant and rapid supply. The simplicity of the construction of this instrument or machine is its great recommendation, and in that it is superior to the numerous kinds of filters generally employed, which, though they have their benefits, are, almost all, to a certain degree, complex or defective. This simplicity of contrivance ensures the lasting properties of the filter; indeed, it would appear that it can receive little or no injury from wear and tear, neither does it require to be continually cleansed or put to rights, as it in a manner purifies itself at the same time that it purifies the water that passes through it. The invention has been submitted to the attention of the Lords of the Admiralty, who have had the machine fixed at the Admiralty, and expressed their approval of it. It is, indeed, applicable to the filtration of sea-water, which it purifies with rapidity and makes clear, soft, and fit for drinking, and, in emergencies, would be an excellent apparatus in ships, &c.

METHOD OF FIXING PENCIL AND CHALK DRAWINGS.—For pencil drawings, a thin solution of isinglass answers the purpose. It should be allowed to run over the drawing, or be very carefully applied with a soft camel's-hair pencil. For chalk drawings, make a thin solution of size, put it in a flat dish, pass the drawing from one side to the other under the liquid, taking care that the liquid comes in contact with every part of it. The friction of a camel's-hair pencil would injure the drawing. When it is completely wetted, fasten it to the edge of a table, or to a string, by means of two or three pins, until dry. Crayon or charcoal drawings would be spoiled by this process: and for fixing them, the paper should be washed over with a solution of size, in the first instance. When quite dry, the surface is in a good state for making the drawing; after which it should be inverted, and held horizontally over steam. The steam melts the size, which absorbs the charcoal or crayon, and when it has again become dry, the drawing is fixed. This process may be repeated several times during the progress of a drawing, the effect being increased each time.—*Pharmaceutical Journal.*

BOOKSELLERS' CIRCULAR.

OPINIONS ON THE CRITIC.

TO THE EDITOR OF THE CRITIC.

SIR,—I think your Journal deserves the commendation of all booksellers; inasmuch as, that its character is novel as well as useful. Its principal feature appears to be that of furnishing to the trade a review of the greatest number of works of interest, which in these railway times enables the man of business to read while he runs.

Its criticisms have always been candid, impartial, moderate, and just, according at least to my judgment, and having been in the habit, for some months past, of perusing it, I would not on any account now give it up.

I am, Sir, yours, &c.
ROGER LIDSTONE.
With Mr. Nettleton, Bookseller, Plymouth.

Plymouth, Dec. 17, 1845.

TO THE EDITOR OF THE CRITIC.

SIR,—To me THE CRITIC is very valuable. I select many of the works for my shop and circulating-library from those reviews in your paper, and am seldom, if ever, disappointed by your recommendations. Your lists of "New Books," and of "Books wanted to purchase," are of much importance to booksellers.

The pages of THE CRITIC abound with valuable literary extracts, which editors of newspapers find well calculated for their columns. I am, Sir, yours, &c.

JOHN NELIS,
Bookseller, and Editor and Proprietor of
Omagh, Dec. 16, 1845. the *Tyrone Constitution*.

TO THE EDITOR OF THE CRITIC.

SIR,—We beg to record our approbation of THE CRITIC, as one of the best mediums of communication for the booksellers, and place great reliance upon its candid reviews of new works.

Yours, respectfully,
J. SHAW AND SONS.
Wheeler-gate, Nottingham, Dec. 18, 1845.
